Uartu, ant state in the Middle E., existing 9th–6th cents. BC on the Armenian plateau between the upper Euphrates in the W. and the lakes Urmia in the SE. and Sevan in the NE. Its cap. was Tushpa near Lake Van. In the early 8th cent. U. achieved a dominant position among the states of the Middle E., but later it suffered sev. defeats from the Assyrians and was finally destroyed by the Medes. U. culture was greatly influenced by Assyrian, and in turn influenced the Armenian and Georgian cultures.

Urban, name of 8 popes, 5 of whom deserve particular mention: *Blessed Urban II* (Eudes de Lagary). Cardinal Bishop of Ostia in 1078, he succeeded Victor III in 1088 and *d.* in 1099. The outstanding event of his pontificate was the Council of Clermont (1095), at which U. initiated the first crusade. *Urban IV* (Jacques Pantaléon), pope from 1261 to 1264. Appointed Patriarch of Jerusalem in 1255, he was on a visit to Rome when he was chosen to succeed Alexander IV. In the year of his death he extended the feast of Corpus Christi (q.v.) to the universal Church; but his pontificate witnessed the beginning of French influence in the curia, which led in the following century to the papal residence at

Avignon. *Blessed Urban V* (Guillaume Grimoard, or Grimaud de Beauvoir) succeeded Innocent VI, 1362, and d. 1370. A zealous reformer, he also founded the great medical school at Montpellier. U. was beatified by Pius IX in 1870. *Urban VI* (Bartolommeo Prignano), successor of Gregory XI, was pope from 1378 to 1389. It was his determination to reform the higher clergy that caused the election of the antipope 'Clement VII' and precipitated the Great Schism of the West. *Urban VIII* (Maffeo Barberini), pope 1623-44, successor of Gregory XV. Last of the popes to practise nepotism on a wide scale, he greatly increased the wealth of his family. In the political field U. did much to strengthen Rome and the papal states. Regarding the Thirty Years War as a mere secular conflict, he took the side of France. In 1633, because of a personal grudge, he allowed the condemnation of Galileo. To his credit, however, stand the revised Breviary (1631), the condemnation of Jansen (1644), and the erection of some noble structures in the Eternal City. These last include the College of Propaganda, the Palazzo Barberini, the Fountain of the Tritons, and the baldachino in St. Peter's. See **POPE**, **LIST OF THE**.

Urban District Council, see **LOCAL GOVERNMENT**.

Urbana, city, co. seat of Champaign co., Illinois, U.S.A., 125 m. SSW. of Chicago, in an agric. area. U.'s manufs. include scientific instruments. With adjoining Champaign, U. is the prin. seat of the Univ. of Illinois. Pop. 22,800.

Urbino (Lat. *Urbium Hortense*), It. tn in the Marches (q.v.), built on a hill 19 m. SW. of Pesaro (q.v.). It has a fine 15th-cent. ducal palace of the Montefeltro family, once lords of U., an archiepiscopal cathedral, and a univ. (non-State) founded in 1506. It was once known for its majolica ware. There is a lace and embroidery industry, and a trade in agric. produce and oil. Raphael and Bramante (qq.v.) were b. here. Pop. (tn) 6400; (com.) 22,800.

Urbium Hortense, see **URBINO**.

Urdingen, see **KREFELD**.

Urdu (from the Turkish *urdu*, 'camp,' meaning the 'Camp language' (q.v.)), the official language of Pakistan (q.v.). In fact, it is the Hindi language with intrusion of a great number of Persian (also Arabic and Turkish) words; see **HINDÜSTANI LANGUAGE AND LITERATURE**.

Ure, riv. of the N. and W. Ridings, Yorks, England, which rises 6 m. NW. of Hawes, near the borders of Westmorland. It is about 50 m. long and joins the Swale, forming the Ouse.

Urea, or **Carbamide** $\text{CO}(\text{NH})_2$, compound which occurs in the urine of mammals and of carnivorous birds and reptiles. It forms about 3 per cent of human urine. It may be prepared from urine by evaporation to small bulk and adding strong nitric acid. The precipitated crude U. nitrate is recrystallised from nitric acid and dissolved in water. The solution is then decomposed with barium carbonate, evaporated to dryness, and the urea

extracted with alcohol. In the laboratory U. is more commonly prepared by heating ammonium cyanate. It forms colourless crystals (melting point 132°C.) soluble in water and alcohol, and combines with acids to form salts. It is decomposed on heating, and heated with sodium hypobromite gives off nitrogen. This latter property is used as a method of estimation. U. was discovered in urine in 1773, and was artificially produced by Wöhler in 1828, the discovery being of fundamental importance as the first indubitable example of isomerism (q.v.). This production of urea (an organic compound) from ammonium cyanate (an inorganic compound) led to the abandonment of the 18th-cent. 'vital force' theory, which propounded the existence of a fundamental difference between inorganic and organic compounds. U. is nowadays manufactured on a fairly large scale from calcium cyanamide, for use as an artificial manure; it is also used in the manufacture of a clear synthetic resin, and in the preparation of various drugs, e.g. veronal (q.v.). See also under **PLASTICS**. See E. A. Werner, *The Chemistry of Urea*, 1923; P. Karrer, *Organic Chemistry*, 1947. **Urea-formaldehyde,** see **PLASTICS**.

Urethane, see **HYPNOTICS**.

Urey, Harold Clayton (1893-), Amer. scientist, b. Walkerton, Indiana, educ. at Montana Univ. and the univ. of California (Ph.D.). He was associate prof. of chemistry Columbia Univ. (1929-34), prof. (1934-45), executive officer, dept. of chemistry (1939-42), director of War Research Atomic Bomb Project (1940-5), prof. of chemistry, univ. of Chicago, since 1945. In 1934 he was awarded the Nobel prize for chemistry for his discovery of heavy hydrogen; he is also known for his work on the separation of isotopes, the structure of atoms and molecules, and the thermo-dynamic properties of gases.

Urfa, tn of S. Turkey, cap. of il of the same name. The anc. Edessa, it was cap. of an independent kingdom in 137 BC, and was held by the Crusaders in 11th and 12th cents. AD. The modern tn is a centre of the wheat industry. Pop. (tn) 37,000; (il) 347,712.

Urga, since 1924 **Ulan Bator**, cap. of the People's Rep. of Outer Mongolia, on the R. Tola, 170 m. S. of Kiachta. It was once the residence of the Hutukta Lama, the head of the Mongolian Buddhists. Since Outer Mongolia became independent of China in 1945, the international importance of U. has greatly increased, especially since a new railway between Chining (China) and Kiachta was built in 1955. Pop. 190,000.

Uri, one of the forest cantons of Switzerland, belonging to the 3 original cantons of the Confederation, founded in 1291. It is bounded by the Lake of Luzern and the cantons of Schwyz, Glarus, Grisons, Ticino, Valais, Bern, and Unterwalden. The prin. river is the Reuss, whilst the St. Gotthard Railway crosses the canton. Cattle-rearing is carried on, also cheese-making and bee-keeping, but more than half the surface is barren rock or glaciers. The chief tn is Altdorf (q.v.). Area

415 sq. m.; pop. (1955) 29,600, most of whom are Ger.-speaking Rom. Catholics.

Urial, *Orial*, or *Ovis vignei*, known also as the Punjab wild sheep, a species of the genus *Ovis*, found chiefly in the Punjab, Afghanistan, and Persia.

Uriburu, see ZARATE.

Uric Acid ($C_5H_4N_4O_6$), product of the metabolism of the animal organism, and occurs in small quantities in human urine. It sometimes accumulates in the bladder, forming 'stones,' or is deposited in the tissues of the body (see under GOUT). The excrements of birds (guano) and of reptiles contain large quantities of the acid. Serpents' excrements consist chiefly of ammonium urate, and the U. A. is prepared by boiling with caustic soda, and the clear alkaline solution precipitated with hydrochloric acid. The acid forms crystals which are insoluble in water. Evaporated with nitric acid, a yellow stain is left, which becomes intensely violet on addition of ammonia.

U. A. is a weak dibasic acid, and forms salts which are all sparingly soluble in water.

Urinary Calculus, see CALCULUS, in medicine.

Urine, fluid excreted by the kidneys. It contains a large proportion of water as well as some of the waste products of metabolism. The kidneys (q.v.) extract these waste products from the blood and pour their secretions into the ureter, by which the fluid reaches the bladder, there to be retained for a while until it is discharged to the exterior by the urethra. U. as excreted is normally clear and of straw colour, which may be pale or dark merely from variations in concentration. It is usually acid in reaction, but after a meal there may be an alkaline tide, and the U. after standing will deposit a cloud of phosphates. The sp. gr. of U. varies from 1015 to 1020. In glycosuria (q.v.) the sp. gr. may be as high as 1030.

The most important of the nitrogenous products in the U. is urea $CO(NH_2)_2$, (q.v.), which contains about 90 per cent of the total nitrogen excreted. Urea is formed from the amino-acids resulting from the digestion of proteins. About 4 per cent of the nitrogen in U. is contained in ammonia, which can often be detected by its odour. Other nitrogenous substances present in U. are uric acid, hippuric acid, and creatinin. Concentrated U. may show a deposit of urates, usually coloured pink. It is of no pathological significance. The amount of U. discharged by an adult man is about 2½ pints daily on the average. See also UROLOGY.

Urivontum, see WROXETER.

Urk, former is. in the IJsselmeer (Zuider Zee), Netherlands, now part of the NE. Polder (q.v.).

Urmia, see REZA'YYEH.

Urmston, urb. dist. of Lancs, England, 6 m. from Manchester. It embraces part of the comprehensive industrial estate known as Trafford Park. Pop. 40,000.

Urn Burial, see BURIAL CUSTOMS.

Urn, see VIKING ART.

Urodela, or **Caudata**, name applied to an order of Amphibia which has for its distinguishing characteristics a well-developed tail which persists throughout life and usually 2 pairs of limbs. There are about 100 species, and nearly all occur over the temperate N. hemisphere. Newts, salamanders, and mud-eels are representative of the order.

Urology, study of the diseases of the urinary tract. The chief parts of the urinary system are the kidneys (q.v.), ureters, bladder (q.v.), and urethra. In addition to abnormalities, displacements, and injuries, kidneys may be affected by tuberculosis (q.v.), pyelonephritis, tumours (q.v.), hydronephrosis, calculus (q.v.), and other diseases. The chief abnormalities of the ureters, the ducts conveying the urine from the kidney to the bladder, are dilations and constrictions, abnormal bends and twists; the origin of the ureter from a position too high to drain the kidney; blind endings and the opening of the ureters into parts of the genito-urinary system other than the bladder. Urethritis is frequently associated with infection of the kidney. Not infrequently the passage of the ureter is partially or completely blocked by calculi. Diseases of the bladder are, mainly, cystitis, or inflammation of the bladder, calculus, or stone, in the bladder, and benign and malignant growths (see under BLADDER). Diseases of the prostate gland (q.v.) are in the field of U., and the treatment of adenomatous enlargement of the gland and malignant growths in it form a large part of the work of the urologist. The urethra is subject to inflammation (urethritis), one of the commonest causes of which is gonorrhoea (q.v.). Surgical treatment in urological diseases has made great advances in recent years, and it is now possible to remove the bladder entirely in malignant disease. The antibiotics have greatly simplified the treatment of the urinary tract.

Urotropine, see HEXAMINE.

Urquhart, Sir Thomas (1611-60), Brit. author and translator. He studied at King's College, Aberdeen, his education being completed with the usual continental tour. During the Civil war he was a royalist. In 1653 was pub. the first part of the work that has made his name famous, the trans. of Rabelais, one of the most perfect trans. ever made. It was reprinted in the Everyman's Library, 1929. See J. Willcock, *Sir Thomas Urquhart, Knight, 1611-60*, H. Brown, *Rabelais in English Literature*, 1933.

Ursa Major (the Great Bear), one of the best known of all the constellations, can be easily found, as it is never completely below the horizon in the Brit. Is., though some portions of it cannot be seen at certain times in the most N. parts of Scotland. No one can mistake the 7 stars in this constellation; these are known as the Plough, the Waggon, Charles's Wain, and also as the Dipper in America. It should be noticed that U. M. contains not only these 7 stars but also scores of others, and it is necessary to avoid a common error of identifying 'the Plough,' etc.,

with the whole constellation. The first 2 stars of the Plough, known also as α and β Ursae Majoris, are called 'the Pointers' because an imaginary line drawn through them points to the pole star—the nearest bright star to the celestial pole (it is now less than 1° from it). By prolonging the line through the 2 stars at the other end of the Plough, known as ζ and η Ursae Majoris, it will pass fairly close to the bright star Arcturus in the constellation of Boötes. ζ Ursae Majoris, also known as Mizar, has a faint companion near it which can be detected with the naked eye (see MIZAR). It is remarkable that all the stars in the Plough, with the exception of the first and last, that is α and η , are moving in the same direction, and different stars scattered throughout the sky, such as Sirius, β Aurigae, and others, share in this motion.

Ursa Minor (the Little Bear), small constellation chiefly remarkable for the fact that Polaris (the Pole Star) is situated at the end of its tail (see POLARIS).

Uramar, St. (ζ 713), abbot-bishop of the Benedictine abbey of Lobbes, on the Sambre. He founded Wallers and Aulne, and did important work as regional Bishop in Flanders.

Ursula, St. of Cologne, is said by the ancients to have been put to death at this place some time in the 4th cent. together with 11,000 virgins, her companions. Even in the Middle Ages this popular story was viewed by many with suspicion, and it now universally recognised that the greater part of it is legendary. Her feast is on 21 Oct.

Ursulines, an order of women in the Rom. Catholic Church, founded at Brescia, Italy, in 1535 by St. Angela Merici for the education of girls. St. Ursula was chosen as a special patroness, and hence the nuns came to be called Ursulines. The members lived at first in their own homes; later they lived in a community, and finally the communities were approved as a religious order by Pope Paul V in 1612. This order of St. Ursula, as it was called, was the first specifically teaching order of women. The order spread rapidly throughout every country in Europe and N. and S. America, and later in the other 3 continents. More than 7000 U. are united under a Mother General living in Rome, forming the Rom. union of the order of St. Ursula. In England they have a House of Studies for their student nuns at Wimbledon, and 6 convent schools, at Westgate, Forest Gate, Wimbledon, Greenwich, Chester, and Ilford. There are many autonomous communities of U., while some have joined to form smaller congregations such as Thildonck and Calvarienberg.

Urticaceae, family of dicotyledonous herbs, shrubs, or trees of 500 species, mostly tropical; usually with stipulate leaves, monoecious or dioecious flowers in axillary cymes, 4 or 5 stamens with filaments uncurling suddenly when pollen is ripe; 1-celled ovary and achene or drupe fruit. Chief genera are *Boehmeria*, *Heliconia*, *Humulus*, *Laportea*, *Myrtocarpa*, *Pilea*, *Urera*, *Urtica*.

Urticaria, or Nettle-rash, skin reaction due to various causes. U. is characterised by raised red or white weals similar to those produced by the sting of a nettle, and accompanied by a sensation of burning and irritation, the latter sometimes being intense. U. is a symptom and not a disease. The most usual cause is allergic (see ALLERGY), but it may be toxic, psychological, or endocrine in origin, or arise from a combination of these factors. Among the allergic causes are: (1) inhaled substances, such as pollens, feathers, animal hairs, house dusts, and insecticides; (2) ingested substances, such as foods (egg, milk, chocolate, fruits, fish, and shell-fish) or various drugs, such as aspirin, quinine, penicillin, and the sulphonamides; (3) injected substances, such as serum in serum therapy or blood transfusion, insect bites and stings, and various drugs, such as penicillin, liver extracts, or endocrine substances; (4) allergens produced from bacterial foci of infection in the body, such as septic teeth, tonsils, or sinuses; (5) contact substances, such as various plants (primula, tomatoes, chrysanthemums), touching animals or the products of animals used in clothing, etc., cosmetics, and the dye in clothes; and (6) physical agents, such as light, heat, and cold. U. sometimes follows an emotional upset, such as anger or fright or more sustained states of emotional tension. It may also occur with fatigue. It is apt to occur at puberty or the menopause, when a combination of psychological and endocrine factors operates. U. is not contagious.

Uruguay, known as the República Oriental del Uruguay, smallest rep. in S. America, situated between Brazil and Argentina, on the Atlantic coast. Its area is 72,153 sq. m. and its estimated (1953) pop. is 2,500,000 of which some 770,000 live in Montevideo.

Physical Features. There is a S. fringe of alluvial land bordering the lower U. riv. and the Río de la Plata N. of Colonia, but most of the country is hilly with soils derived from crystalline rocks, while some of the more prominent ridges are crowned with huge granite blocks. On the E. coast there is a zone of lowland, composed of sandy beaches, dunes, and lagoons. Inland from this is a belt of hills extending from S. Brazil south-westward to the S. coast of U. near Montevideo and extending along the divide between the shorter streams flowing directly to the Atlantic and the longer streams flowing westward to the U. river. The summits along the Cuchilla Grande, as the divide is called, reach a height of 2000 ft. Westward from the divide the land slopes gently to the U. riv.; along the divide the valleys are narrow and the streams turbulent, but, lower down, they broaden out, developing small flood plains. The chief rivs. are the U. and the Negro. Vegetation and climate are transitional between the Argentine humid pampa and S. Brazil. Most of U. was once covered with tall-grass prairie; the stream valleys, however, were, and still are, followed by

ribbons of dense forest. In the SE. the grasslands are mixed with scattered palms. Climate is temperate.

Production. The major commercial products in order of value are wool, beef, canned meats, hides and skins, linseed, wheat, sand, and stone. Meat-packing plants have been estab., e.g. the Liebig plant at Fray Bentos. Wool, too, became an important export, and is now the largest single item of commerce. High-grade wool and mutton sheep were introduced in 1840. To-day herds of high-grade merino sheep are a characteristic feature of Uruguayan rural life. Immediately before the Second World War

the great cities of S. America), Paysandú, Salto, Mercedes, Minas, Tacuarembó, Rocha, Melo, Treinta y Tres, Artigas, Rivera, and Fray Bentos.

Administration. The first constitution of U. was that of 18 July 1830, adopted 2 years after the achievement of Uruguayan independence of Brazil. The next constitution, that of 1919, was abolished in 1934, the present constitution being approved by a Constituent Assembly on 18 May of that year. Under the Constitution of 1934, as subsequently modified by the law of 29 May 1942, the president of the rep. is elected by the legislature for a term of 4 years and is

MONTEVIDEO: THE PLAZA INDEPENDENCIA

E.N.I.

U. was credited with nearly 40 per cent of all Lat. Amer. wool exports. While pastoral life and products dominate the economic system of U., there is nonetheless an important agric. zone. There are about 100,000 farms averaging 250 ac. each. In this small well-defined zone wheat covers over half of the land devoted to crops, and half is grown for domestic consumption; flax, linseed, and rice are regularly exported, and oats and maize are grown. Skins of various fur-bearing animals, notably nutria and seal-skin, are collected for mrkt and exported. Whaling is carried on from Montevideo, the winter anchorage of some Brit. and Scandinavian whaling flotillas. Lead, copper, and manganese, and a little gold and silver are mined; also lignite coal and some iron.

Population. U. is divided into 19 depts. The pop. is almost entirely white.

The chief cities and tns are: Montevideo City (cap. of the State and one of

eligible for re-election after 4 years have elapsed since the date when his mandate ended. The executive power is vested in the president, assisted by a council of 9 ministers. The legislature consists of a chamber of 99 deputies and of a senate of 30 members, elected under proportional representation for 4 years. All adult literate citizens male and female have the vote. Parl. and municipal elections are held simultaneously every 4 years. An absolute majority in both houses of Parliament is necessary before fresh taxation can be levied. Revenue bills cannot be originated by Parliament and must be introduced by the gov. U. is one of the most advanced of all the Lat.-American States in the provision of state-controlled social services. There is a supreme court of 5 judges elected by Congress (i.e. the 2 chambers sitting as a national assembly), with the original jurisdiction in constitutional and admiralty cases, and an appellate jurisdiction in cases from the 3

courts of appeal, each of which latter has 3 judges appointed by the supreme court. In Montevideo there are also 3 courts for ordinary civil cases, 7 for commercial cases, and a number of criminal and correctional courts. Each departmental cap. also has a departmental court, and each of the judicial sections into which the rep. is divided has a justice of the peace; and there are also a large number of *alcaldes* or deputy-judges for the trial of dist. cases involving small pecuniary issues.

Religion and Education. The majority of the pop. is Rom. Catholic, but no religion is estab. by the State, and there is complete religious liberty in U. Primary education has been free and compulsory since 1877, and the proportion of illiterates is lower than in most Lat.-American countries. There are 2072 State schools with 299,000 enrolled pupils and about 6700 teachers. The univ. of Uruguay at Montevideo, was inaugurated in 1849.

Defence. The Army consists of the active force recruited on a voluntary basis and its reserves. There are 9 regiments of cavalry, 5 each of artillery and infantry, 1 tank regiment, and 6 pioneer regiments. There is a small naval force, in addition to a small air force.

Finance. Revenue for 1955 was \$454m. and expenditure was stated to be \$509m. The theoretical gold coin monetary unit is the *peso oro*. In July 1950 the rate to the £ sterling was 6.65 and in July 1955, \$11.8 (free market). \$7.84 was the official rate for most goods. In 1955 the country's total imports were valued at U.S. \$218,400,000, and exports at U.S. \$171,900,000.

Communications. The national roads have a total length of 4860 m. and there are also about 21,000 m. of unpaved roads. The roads of U. are amongst the best in S. America. Railways in U. are now all State-owned. The 4 Brit. companies were sold to U. in 1948, and continue under State ownership as a separate administration called the Central Uruguayan Railway. The total railway system open for traffic is 1928 m. of standard gauge. There are 775 m. of navigable riverways. Carrasco is the chief airport.

History. During the colonial period U. was remote from the centres of both Portuguese and Sp. settlements. Yet by 1680 the Portuguese had advanced southward to the Plata shore and built a fortress at Colonia opposite Buenos Aires. Remoteness from the Sp. settlements on the humid pampa was due to the riv. barrier, the Paraná-Plata, wide and bordered by a labyrinth of swamps and shifting channels, making travel impracticable. The E. shore (called the Banda Oriental) of the Plata was occupied by nomadic herdsmen or *gauchos*. Cattle were introduced about 1603 and allowed to run wild and multiply. The institution of land ownership distinct from ranch H.Q. came only gradually, but eventually the landowners replaced the *gauchos* with hired workers and peons. As this type of

rural settlement spread northward small vils. and tns began to be built, generally at road junctions. U. became a country of small scattered ranches. Montevideo was founded by the Sp. governor of Buenos Aires in 1726, and eventually became chief urb. centre of the Banda Oriental. National independence came to U. as a result of influences beyond its borders. When Brazil declared its independence in 1822 U. was included as part of Brazilian national ter. In 1825 an Argentine army invaded the Banda Oriental, drove the Brazilians northward, and gained control of the whole of what is now U. When it looked as if Argentina might be in a position to control both banks of the Plata, the British intervened, and in the subsequent peace negotiations (1828) they secured the agreement of both Argentina and Brazil to the estab. of an independent U. as a buffer state. It is now one of the most prosperous states in S. America. Leading industries, banks, public utilities, etc., have been nationalised. U. declared war on Germany and Japan on 22 Feb. 1945, and later became a foundation member of the U.N. See R. J. Enoch *Republics of South America*, 1913; M. J. G. Ross, *Argentina and Uruguay*, 1917; W. Parker *Uruguayans of Today*, 1921; J. Superriello, *Uruguay*, 1928; E. Acevedo, *Anales Históricos del Uruguay*, 1933; S. G. Hanson, *Utopia in Uruguay*, 1938; P. E. James, *Latin America*, 1942; J. Salgado, *Historia de la República Oriental del Uruguay*, 1943; G. Pendle, *Uruguay, S. America's first welfare state*, 1945; R. H. Fitzgibbon, *Uruguay, Portrait of a Democracy*, 1954.

Uruguay, riv. of S. America, forming, with the Paraná, the R. Plata (q.v.). For the lowest 400 m. of its course of 1000 m. it forms the Argentine-Uruguayan frontier. The Rio Negro is its chief affluent.

Urumohi, or Tihwa, cap. of Sinkiang Uighur Autonomous Region of China, on the E. bank of R. U. in the Dazungarian Basin, N. of T'ien-shan. By the 1881 Sino-Russian treaty it was opened as a trading port. 'Tihwa' was a derogatory name given to it by the Manchus, and it was so called until 1951. It is on the old Silk Route and has good road communications with other cities in Sinkiang and Kansu. The Lanchow-Sinkiang railway, which is eventually to join the Russian Siberian railway, passes U. It is the centre of many air lines in Sinkiang and the refuelling station of liners between Peking and Moscow. The Shakang coal mine is to the W. of the city. Its chief exports are wool, cotton, and fur. Agriculture is well developed. Three newly founded colleges are situated in the city. Pop. approximately 150,000.

Urumia, see REZA'YEH.

Urundi, see RUANDA-URUNDI.

Urville, Jules Dumont d', see DUMONT.

Uryankhay, obsolete name of TUVA (q.v.).

U.S.A. Standards, see METROLOGY.

Usages, see CUSTOMS.

Usambara, dist. of Tanganyika near the Kenya border and also the name of a mt range in the Tanga prov.

Usambara Violet, see **AFRICAN VIOLET**.

Usbegs, see **UZBEKS**.

Usedom (Polish *Usnam*), is. lying between the Stettiner Haff and the Baltic Sea, now divided between the Polish prov. of Szczecin and the E. Ger. dist. of Rostock (q.v.). Until 1945 it belonged to Prussia. The chief tn is Swinoujście (q.v.). Area 170 sq. m.; pop. about 50,000.

Usertsen, see **SESOSTRIS**.

Uses, in law, the benefit or profit of lands considered as detached from and opposed to the legal ownership, or seisin (q.v.). Use implies a trust or confidence reposed in someone for the holding of lands, and all modern conveyances are directly or indirectly founded on the doctrine of U. and trusts, which doctrine has rightly been regarded as the most technical and intricate part of the real property law of England.

The doctrine of U. was a purely equitable one, and was employed by eccles. corporations to evade the statute of mortmain (see **CHARITABLE TRUSTS**; and **MORTMAIN**), and by landowners to evade feudal burdens, or to make land devisable by will at a time when that was impossible by common law (q.v.). The effect of the statute of U., 1535, the object of which was, by *executing* the use or turning it into the full legal estate, to circumvent the above devices, was not what the legislature had hoped; because the courts soon held that only the first and not subsequent *uses* was executed; hence if A left land 'to B to the use of C to the use of D, C had the legal but D the beneficial ownership. These judicial decisions defeated the main policy of the statute, and restored U. under the now more familiar name of trusts (q.v.), and hence brought about the whole modern system of 'equitable estates.' If land be conveyed to A to the use of B, B has the possession vested in him; but if the conveyance be to A, to the use of B *in trust* to permit C to enjoy the profits, B has the *legal*, but C the *equitable*, estate (q.v.). U. apply only to lands of inheritance, and therefore are inapplicable to leaseholds. On the equitable doctrine of the 'separate use' by which property given to a woman was free from her husband's control, see **HUSBAND AND WIFE**; **RESTRAINT UPON ANTICIPATION**; **SCOTS LAW**.

Ushant (Fr. *Ouessant*), is. in the dept of Finistère, France, 27 m. NW. of Brest. It has steep coasts, with a fertile soil; fishing is the chief industry, and the small port of Ouessant on the SW. is the only tn. There are 2 lighthouses and a telegraph and a life-boat station. There were 2 battles fought off Cape U. in the 18th cent. The first was between the French under D'Orvilliers and the English under Keppel in 1778 and was indecisive. The second was fought on the 'Glorious First of June', 1794, when Adm. Lord Howe gained a great victory over the French under Villaret-Joyeuse, capturing 7 vessels. (See **NAVY** and **NAVIES**). Pop. 2200.

Ushas, Hindu goddess of the dawn, to whom Vedic hymns are addressed.

Ushaw College, 4 m. W. of Durham, England, a Rom. Catholic eccles. college, dedicated to St Cuthbert, opened in 1808 to continue the work of the Eng. College at Douai.

Ushba, see **CAUCASUS**.

Ushuala, see **TERRA DEL FUEGO**.

Usk, par. and mrkt tn of Monmouthshire, England, 6½ m. E. of Pontypool and 12 m. SW. of Monmouth, on the site of a Rom. settlement. There are remains of a 12th-cent. castle, and the church was originally attached to a 13th-cent. Benedictine nunnery. Nylon is manufactured, and there is salmon fishing and trade in agric. produce. Pop. 1600.

Usk (Welsh *Wysg*), riv. of Wales, rising in the Black Mt on the boundary between Breconshire and Carmarthenshire. It flows through Breconshire and Monmouthshire and enters the Bristol Channel at Newport. Length 57 m. The U. valley is famous for its scenery, and its upper reaches are included in the Brecon Beacons National Park. Caerleon (q.v.) stands on the riv. near Newport.

Uskub, see **SKOPJE**.

Uskudar, see **SCUTARI**.

Uspallata Pass, also known as *La Cumbre or Bermejo*, pass across the Andes to the S. of Mt Aconcagua. It is over 12,600 ft high, and the tunnel through which the railway runs is about 2 m. long (altitude c. 10,470 ft). Puerto del Inca (Argentina) and Portillo (Chile) are at the E. and W. entrances to the pass. Hero stands the famous Christ of the Andes, commemorating the peace settlement between Argentina and Chile (1904).

Usquesmonds, see **ESKIMO**.

Ussel, Fr. tn, cap. of an arron., in the dept of Corrèze. It has foundries, and hardware manufs. Pop. 7000.

Ussuri, riv. of E. Asia, joining the Amur at Khabarovsk. From Lake Khanka it flows NNE., and for most of its 500 m. divides Manchuria from Russia. The railway to Vladivostok runs along its valley, and the riv. is navigable. See A. Schultz, *Das Ussurieland*, 1932.

Uster, industrial tn in the canton of Zürich, Switzerland, NE. of the Greifen-See. At U. a mass demonstration in 1830 demanding a radical democratic reform to abolish inequality between tn and country and among the working people led to the introduction of more liberal legislation, implying larger popular sovereignty, and to the protection of women and children against industrial exploitation. Pop. (1955) 13,600.

Usti Nad Labem: 1. Region (*kraj*) in NW. Czechoslovakia, bordering on Germany, part of the former prov. of Bohemia (q.v.). It contains the N. half of the Krkgebirge (q.v.), and is watered by the Labe (see **ELBE**) and the Ohře (q.v.). Area 1598 sq. m.; pop. 623,000.

2. (Ger. *Aussig*), Czechoslovak tn, cap. of the region of U., at the confluence of the Labe and the Elbe. It was the scene of a victory of the Hussites (q.v.) in 1426. It is a riv. port and a railway junction; chemicals, textiles, and machinery are manuf., and there is a trade in coal, timber, sugar-beet, and stone. Pop. 56,400.

Ust'-Kamenogorsk, tn on the Irtysh R. in E.-Kazakhstan oblast (prov.) of the Kazakh S.S.R. of the Soviet Union. It has a zinc smelting plant and a large hydro-electric plant at Ablaketta 10 m. to S. Pop. 100,000.

Ust'-Ordynskiy, settlement, former vil., in the Irkutsk oblast of S. Siberia, 43 m. NE. of Irkutsk. It is cap. of U.-O. Buryat-Mongol National Dist. (formed 1937). Pop. (1956) 7000.

Ust'-Sysol'sk, see SYKTYVKAR.

Ustyug Velikiy, see VELIKIY USTYUG.

Usufruct, in Rom. law, the temporary use and enjoyment of lands or tenements, or the right of receiving the fruits and profits of lands or personal property belonging to another, without having the right to alienate or change the *corpus* or property itself.

Usury, formerly denoted any legal interest for the use of money, but in present usage denotes only illegal or excessive interest. Many early laws of the Church prohibited U. of any kind. See INTEREST and MONEYLENDER.

Utah, the 'Beehive State,' since 1896 a state of the U.S.A., and confined by Nevada (W.), Idaho and Wyoming (N.), Colorado (E.), and Arizona (S.). The Wasatch Mts (highest peak Timpanogos, 12,008 ft) shut off the W. section, which belongs to the Great Basin of the continent and consists of highlands running N. to S. separated by valleys of desert wastes from the E., which belongs to the Colorado basin, and is remarkable for its lofty plateau, through which big canyons carve their passage. Zion and Bruce Canyon National Parks are in this area, and in the former evidence of a prehistoric people has been found. The colouring and erosional formation of the canyons are unsurpassed. The Uinta Mts, though an offshoot of the longer range already mentioned, contain the greatest elevations in the state, the culminating summit being Kings Peak (13,498 ft). The climate is dry, rather cold in winter and warm in summer. A notable feature is the Great Salt Lake, 75 m. long, 50 m. wide, and 20-27 per cent salt. Every attempt is being made to reclaim by irrigation the vast tracts of unfertile soil, and total farm land is over 10,000,000 ac., divided among 26,000 farms. Only 3 per cent of the land is arable, and most of this is under irrigation. The chief crops are those of wheat, oats, potatoes, rye, corn, barley, alfalfa (876,000 tons in 1946), and hay; the growth of nursery produce and fruits is also greatly encouraged. Between 1939 and 1947 the state's income from agriculture more than doubled. Cattle and sheep-raising are important. The wool-clip in U. in 1947 yielded over 13,500,000 lb. In 1947 there were approximately 1,646,000 sheep and 550,000 head of cattle. The wonderful development of U.'s agric. resources has almost overtaken the mining industry. Copper, and after that silver, zinc, coal, lead, uranium, vanadium, and gold (in which U. leads), are the most valuable minerals. Mineral production in 1950 was valued at \$229,956,000. Since the Second World

War U. has become an important producer of steel; the Geneva Steel Mills have an ann. capacity of 1,250,000 tons. The manuf. of flour and of railway cars, and also printing, are important, and there are copper and lead smelting works, beet-sugar factories, canning and preserving of fruit and vegetables, grain and flour-mill products, slaughtering and meat-packing, and the manuf. of butter, cheese, and confectionery.

Brigham Young and his 150 followers (see MORMONS) entered Salt Lake Valley in 1847. A year later U. was ceded to the U.S.A. by Mexico, and it was organised as a ter. in 1850. On 4 Jan. 1896 it was admitted as a state into the Union. It is ruled by a Senate and House of Representatives and sends 2 representatives and 2 senators to Congress. 1,774,486 ac. are given over to Indian tribes. School attendance is compulsory between 8 and 18 years of age. There are the agric. college at Logan, the Brigham Young Univ. at Provo, as well as many other colleges. The Latter-day Saints comprise three-fourths of all church membership. Area 84,916 sq. m.; pop. 688,862, the chief cities being Salt Lake City, 182,121; Ogden, 57,112; Provo, 28,935.

Utakamund, or **Ootacamund**, municipality and tn in the dist. of Nilgiri Hills, Madras, India, 36 m. NNW. of Coimbatore. It is 7000 ft above the sea, and is the prin. sanatorium and summer resort of the state. Pop. 29,900.

Utamaro (1754-1806), Jap. artist of the Ukiyo-ye school, b. Yedo, known chiefly by his colour wood-cuts. U. was the first Jap. artist to become well known in Europe, many of his prints being sent there during his lifetime by Dutch merchants resident at Nagasaki. See C. S. Ricketts, *Pages on Art*, 1913; and lives by E. de Goncourt, 1891; J. Kurth, 1907; Y. Noguchi, 1932.

Ute, N. Amer. Indian tribe of Shoshonean stock, with the Shoshone (q.v.) the most war-like of the Plateau Indians. Their effectiveness as warriors was early accentuated by their use of horses. To-day they number about 2200, in Utah, the state named after them.

Uterus, or **Womb**, generative organ in which the development of the fertilised ovum takes place. It is a pear-shaped organ, flattened and about 3 in. long in the non-pregnant condition. Its position is between the bladder and the rectum, with the base directed forwards and upwards; the cylindrical neck or *cervix* is directed towards the vagina, with which it communicates by the *os uteri externum*. This orifice is small and elliptical in the virgin, but after pregnancy remains much wider. The wide portion, or *fundus*, of the U. receives the Fallopian tubes at its 2 upper angles. The fundus is triangular in form, the apex being a constriction called the *os uteri internum* leading to the *cervix*. The walls of the U. consist of mucous membrane as its inner surface continuous with that of the vagina, a thick layer of muscular tissue, and an outer surface of peritoneum. The peritoneum is reflected outward to the wall of the pelvis and forms

a means of suspension for the organ. This arrangement not only provides for a great degree of mobility but also allows for considerable distension in pregnancy. During the period of sexual activity, from puberty to the menopause, the U. discharges about 6 oz. of blood and mucus at intervals of 28 or 30 days. The chief function of the U. is, however, the development of the fertilised ovum. The ova are carried from the ovary to the U. by way of the Fallopian tubes. After the ovum has been fertilised, it depends for the nourishment necessary for development on the U., which is furnished with structures adapted to that end and for carrying away the waste products of the foetus. The U. is the seat of many disorders, which are dealt with in that branch of medicine known as gynaecology (q.v.). Owing to its mobile situation, the organ is subject to many varieties of displacement. Inflammation of the mucous lining of the U. is called endometritis. It is due to the extension of infective inflammation from other structures, or to sepsis following the expulsion of the foetus. The U. is a very common seat of tumours, both benign and malignant. Benign tumours are known as fibroids. Surgical treatment at an early period of the disease often leads to the cure of cancer of the U. See also GYNAECOLOGY.

Uthwatt of Lathbury, Augustus, Lord (1879-1949), lawyer, b. in Australia and educ. at Ballarat College, Victoria, and Balliol College, Oxford. He was called to the Bar in 1904. In 1941 he became a judge of the Chancery Div. of the High Court and, soon after, was appointed chairman of the committee on compensation and betterment set up primarily to ascertain how best to prevent the work of reconstruction being prejudiced by land speculation. The outcome of this committee's work was the Uthwatt Report, which, with the Scott and Barlow Reports, provided a basis for post-war town and country planning (see TOWN AND COUNTRY PLANNING). In 1946 U. was elevated to the House of Lords as a Lord of Appeal in Ordinary.

Utica, anc. city of N. Africa, situated 25 m. NW. of Carthage in the present dist. of Tunis. It was founded by the Phoenicians c. 1100 BC, and after the destruction of Carthage (146 BC) rose to be the first city of Africa, and cap. of the Rom. prov. U. was later immortalised as the scene of Cato's suicide (46 BC).

Utica, city and co. seat of Oneida co., New York, U.S.A., on the lt. Mohawk. It is a railway and canal centre, and has manufs. of cotton goods, hosiery, engines, machinery, iron and brass castings, firearms, furniture, and paper and wood products. The large Welsh pop. holds annual festivals. Pop. 101,530.

Utilitarianism may be summarised by its own catch-phrase, 'the greatest happiness of the greatest number,' such happiness being the criterion of ethical right and wrong, and pleasure and freedom from pain the only desirable ends of life. See ETHICS. The term originated with Bentham as a purely philosophical and

political expression. His *Principles of Morals and Legislation*, 1789, must be regarded as the origin of the movement, which culminated in John Stuart Mill. Mill defined U. as 'the creed which accepts as the foundation of morals utility, or the greatest happiness principle, holds that actions are right in proportion as they tend to produce the reverse of happiness.' A new aspect of U., considered on biological or evolutionary grounds, was pointed out in Darwin's *Descent of Man*, and followed up by Herbert Spencer and Sir Leslie Stephen. The name of Henry Sidgwick (*The Methods of Ethics*, 1874) must also be mentioned in connection with purely philosophical U. See Sir L. Stephen, *English Utilitarians*, 1900; E. Albee, *History of English Utilitarianism*, 1902; J. S. Mill, *Utilitarianism*, 1863 (reprinted in Everyman's Library); J. Plamenatz, *The English Utilitarians*, 1949.

Utility, see FURNITURE.

Utopia, (nowhere; Gk *ou*, not and *topos*, place) name given by Sir Thomas More to the imaginary is. of his *De Optimo Reipublicae Statu, deque Nova Insula Utopia* (1516). From it the adjective Utopian has been formed to mean 'impracticable' or 'ideal.' The most famous utopias or ideal commonwealths are those described in Plato's *Republic*, St Augustine's *City of God*, Bacon's *New Atlantis*, Samuel Butler's *Erewhon*, and William Morris's *News from Nowhere*. A fanciful one is Cloudeuckootown in Aristophanes's *Birds*.

Utraquists, see HUSSITES, WAR OF THE.

Utrecht: 1. Smallest prov. of the Netherlands, lying S. of the IJsselmeer. The soil is sandy and sterile in the E., but more fertile in the W. Dairy products and livestock are important; fruit, vegetables, and cereals are grown. Industries are concentrated in and around the city of U. and Amersfoort. Area 527 sq. m.; pop. (1954) 618,077.

2. Cap. of the above prov., situated on the Old Rhine, 38 m. E. of The Hague. It is a centre of rail and road traffic, and the seat of a Rom. Catholic and of the Old Catholic archbishopric. Among the prin. buildings are the fine Gothic cathedral (damaged by a hurricane in 1674), the univ. (founded 1636), and an archiepiscopal museum. The chief manufs. are cloth, woollen goods, carpets, pottery, organs, chemical products, engineering goods, and gin. An international trade fair is held twice a year. U. is very ancient, being known to the Romans as Trajectum ad Rhenum. The Treaty of U. (1713) was signed here, ending the War of the Sp. Succession. Pop. 246,760.

3. Tn. of Natal, S. Africa. Fruit growing and stock-raising are carried on, wool is produced, and there are rich coal mines. The tn is the cap. of the dist. of U., which was annexed to Natal in 1903. It was formerly cap. of a small rep.

Utrillo, Maurice (1883-1955), Fr. painter, b. Paris. He was influenced at first by the Impressionists, but developed a personal style in painting the streets of

Montmartre, for which he had always a great affection. His street scenes with their white walls and houses belong to what is known as the 'white period' from 1907 to 1910. The so-called 'white and blue period' followed, but from 1917 onwards the calm beauty of his early work was exchanged for strident colour and less careful drawing. His later work disclosed something of a return to the style for which he is most, and highly, esteemed. See F. Carco, *La Légende et la vie de Maurice Utrillo*, 1928; also studies by G. Charensol, 1929, and M. Gauthier, 1944.

Uttar Pradesh (formerly the United Provinces of Agra and Oudh, and earlier NW. Province), state of India in the upper Ganges Valley, bounded on the N. by Himachal Pradesh and Tibet, on the E. by Nepal and Bihar, on the S. by Rajasthan, and on the W. by the Punjab. It is mostly a plain watered by the Ganges, with a spur of the Himalaya enclosing the N. border of the state. The climate is hot in summer, rather cold in winter in the plains; temperate in the hills.

History. U. P. can be called the heart of Hindustan, the most populous and long-settled part of India. It has formed part of every big empire that has held sway over the Indo-Gangetic plain as waves of invaders from the NW—Aryans, Turks, Mongolians, have paused at or near Delhi and built up their positions commanding the routes to the S. and E. Agra was for long the Mogul cap. The Marathas in the 18th cent. gained control of much of Agra; Oudh became an independent kingdom under the former Mogul governor. In 1805–23 the British acquired much of the Ganges Doab (Agra) from the Marathas in the 2nd Maratha War, and the N. dists of U. P. after a war with Nepal. Oudh was annexed in 1856, a contributory factor to the Mutiny. In 1856, this rising was in the U. P.—Meerut, Kanpur (Cawnpore), Lucknow, Jhansi, all being important names in the Mutiny.

The Presidency of Agra came into being in 1833. It was joined to Oudh as the NW. Province in 1856, the name becoming United Provs. of A. and O. in 1902.

Development. Two-thirds of the whole acreage of the state is under cultivation. Rice and wheat each account for 9,000,000 ac. Sugar, linseed, ground-nuts, maize, millets, oil, and cotton are also grown. 'Grow More Food' drives have raised outputs 10–15 per cent. 7,250,000 ac. are irrigated by state projects; 3,000,000 ac. by the Ganges Canals; wells irrigate a further 6,000,000 ac. U. P. is not very rich in minerals—it has some iron, coal, and manganese.

Industrially, Kanpur is one of India's leading cities—wool and cotton textiles and many other factories. Kanpur and Agra produce footwear and leather goods. Lucknow has a precision-instrument factory. Soap and vegetable oils are produced, and there are important local industries, especially metal-work and silk.

Culture. The lingua franca of India, Hindustani, is the language of U. P.—written with the Arabic script and called Urdu, or with the Devnagari script and with a minimum of Persian words and called Hindi. The language was developed around the Mogul Court, and owes much to both Persian and Sanskrit. U. P. thus has contributed to the creation of the language and to its literature. U. P. has 6 univs.: Allahabad, Lucknow, Agra, Koorkee, Benares Hindu, and Aligarh Muslim Univs. U. P. has some of the finest hist. monuments of India (e.g. the Taj Mahal) and many holy places of Hinduism.

Government. The governor acts through ministers responsible to an elected assembly of 430. U. P. has 34 representatives in the Upper and 86 in the Lower House of India's Parliament.

The cap. is Lucknow (pop. 497,000); other big tns are Kanpur or Cawnpore (pop. 705,000), Agra (pop. 376,000), Banaras or Benares (pop. 356,000), and Allahabad (pop. 332,000). Area 113,410 sq. m.; pop. 63,200,000. See also AGRA; OUDH.

Uttara-Mimamsa, see VEDANTA.

Uttoxeter, tn of Staffordshire, England, situated 12 m. NE. of Stafford. Biscuits, dairy produce, and agric. implements are made. Alleyne's grammar school was founded in the 16th cent. Pop. 7740.

Uu Nu (1907–), Burmese politician. He was elected President of the Student's Union 1935, and was a member of the goodwill mission to China, 1939. Interned 1940. He was Foreign Minister under Ba Maw, 1943–5. Vice-President of the A.F.P.F.L., 1945–7; President of the Constituent Assembly, 1947, and Prime Minister, July 1947. Negotiated Treaty with Britain, Oct. 1947. Author of *Burma Under the Japanese*, *The People Win Through*, etc. Chancellor of Rangoon Univ., 1955. Resigned from Premiership, June 1956. Now Prime Minister again.

Uusikaupunki, or Nystad, seaport tn of Finland, 40 m. NW. of Turku on the Gulf of Bothnia, in Turku-Porice. The treaty of Nystad in 1721 gave wide Baltic areas to Russia.

Uusimaa, co. of Finland, with a S. coast on the Gulf of Finland. Land area 4435 sq. m.; pop. 734,600.

Uvea, see LOYALTY ISLANDS.

Uvula: 1. Small cone-shaped hanging process suspended from the middle of the lower border of the soft palate. It is formed by the azygos uvulae, levator palati, and tensor palati muscles, mucous membrane, and connective tissue.

2. Small offshoot of the inferior vermis of the cerebellum, constituting the posterior limit of the fourth ventricle (see also BRAIN).

3. Slight elevation of mucous membrane projecting from the anterior and lower part of the bladder to the urethral orifice. This is known as the uvula vesicae.

Uxbridge, market tn and urb. dist. of Middx, England, situated on the R. Colne, near the Buckinghamshire border. It

had a mkt charter granted c. 1170 and became an important mkt tn and milling centre. Negotiations took place here in 1845 between the royalist and parl. forces in the Old Treaty House, now the Crown Inn. The par. church, mainly 14th and 15th cents., has a good hammer-beam roof. The industries include brewing, brick-making, iron-founding, light engineering, and mkt-gardening. In the urb. dist. are Harefield (q.v.) and Swakeleys, which has a fine mansion built 1629-38, now occupied by the Foreign Office Sports Association. Pop. 56,800.

Uyuni, tn of Bolivia, 125 m. SW. of Potosí; altitude 12,000 ft. It is an important rail junction for Chile and for Argentina. Pop. (mostly Indians) 6000.

Uzbekistan, or Uzbek S.S.R., constituent rep. of the U.S.S.R. The old kingdom of U. was formed of the ters. of Bukhara (q.v.) and Khiva in Central Asia, which, prior to the revolution of 1917, were under Russian suzerainty. In 1925 U. became an equal member of the Soviet Union. U. is bounded N. by Kazakhstan (q.v.), S. by Afghanistan, E. by the Kirgiz S.S.R. and Sinkiang (Chinese Turkestan), and W. by the Turkmen S.S.R. The cap. is Tashkent (q.v.). Other tns include Samarkand, Andizhan, Bukhara, Kokand, and Namangan.

The climate is rather dry, and with extreme variations from summer to winter. U. is a land of intensive farming based on artificial irrigation. It produces some 80 per cent of the cotton output of Central Asia. The irrigated area increased during 1938-40 by over 600,000 ac. The dam in the Katta-Kurgan valley is one of the largest reservoirs built in the world. The rearing of sheep is one of the oldest occupations of the pastoral pop. of U. Some of the collective farms possess up to 40,000 head of sheep and some state farms as many as 100,000. Grain is grown, but not more than sufficient for local consumption. Fruit, grapes, rice, hemp, wool, and silk are also produced. In Kara-Kalpak, in addition to cotton, rice and lucerne are leading crops. The largest cultivated area is around Tashkent; cotton and sugar-beet are the chief crops. There is an abundance of fish in the estuary of the Amu-Darya. Afforestation has been widely carried out. Oilwells have been estab. near Bukhara and in the Fergana valley. The ann. pro-

duction of the Uzbek oilfields now exceeds 1,000,000 tons, half being refined locally. Of the mineral resources, in addition to oil and coal, copper and non-ferrous metals are mined at Amalyk, near Tashkent. Wolfram, molybdenum, and radium are found and ozocerite deposits are also exploited. The most important industries of U. are those based on the products of agriculture, and of these cotton textiles occupy the leading place, the largest cotton mills being those in Tashkent. Begovat is an important metallurgical centre. Other well-developed industries include the manuf. of vegetable oil from cotton seed and agric. machinery at Tashkent; fruit preserving and canning, tanneries, leather and boot manufs. Other industrial products are cement, sulphur, nitrogenous fertilisers, oxygen, paper, jute, and hydro-electric plants. The area is 157,400 sq. m. The pop. numbers 6,360,000, 72 per cent being Uzbeks, and 11 per cent Tajiks. *See also* CENTRAL ASIA, RUSSIAN; RUSSIA. *See* W. Olafsen, *The Emir of Bokhara and his Country*, 1911; E. R. Christie, *Through Khiva to Golden Samarkand*, 1925; A. L. Strong, *Red Star in Samarkand*, 1930; E. S. Bates, *Soviet Asia*, 1942; R. A. Davies and A. J. Steiger, *Soviet Asia*, 1943; Shabad, *Geography of the U.S.S.R.*, 1951.

Uzbeks, or Uzbegs, Turkic people named after Uzbek, a descendant of Genghis Khan. They appeared in Transoxania in the 15th cent., and in the 16th cent. founded the Kingdoms of Bukhara and Khiva. They are now largely concentrated in the Uzbek S.S.R. of the Soviet Union and number about 6,000,000. They are Muslims and speak the Uzbek language, which is now written in the Cyrillic character.

Uzhgorod (Ukrainian Uzhhorod, Czech Užhorod, Hungarian Ungvár), cap. and cultural centre of the Transcarpathian Oblast (*see* TRANS-CARPATIA) of the Ukraine. There is some industry. It has a univ. (1946), and there are 12th-18th-cent. architectural monuments. In the 19th cent. U. was the centre of both the Ukrainian and Russophile movements in Transcarpathia. It has been cap. of Transcarpathia since 1919. Pop. (1958) 43,000, Ukrainians, Hungarians, Jews.

Uznam, *see* USEDOM.

Uzziah, *see* AZARIAH.

V

V, twenty-second letter of the Eng. alphabet, is interchangeable with *u*, *w*, *f*, *b*, and *m*. The anc. Greeks had apparently no *v* sound, but in modern Greek (which has no *b* sound) the letter *beta* is used for the sound *v*. The Cyrillic alphabet (ancestor of the Russian, Bulgarian, Serbian, and Ukrainian alphabets), which descended from the Gk, employed the Gk *β* for the sound *v*, and added a variation of *beta* for the sound *b*. The Romans wrote *V*, which had the value either of the consonantal *v* or the vocalic *u*, although the fact that they employed one character for both *u* and *v* has induced some scholars to think that the Lat. *u* had the phonetic value of Eng. *w*. However, while in the early Lat. script and even the later Rom. monumental character there appears only the letter *V*, having both the phonetic values (*v* and *u*), in the later Lat. cursive scripts, there is only the letter *U*, but also employed either as *v* or as *u*. Only in the later Middle Ages and in modern times is the *v* constantly employed for the consonantal sound, and *U* for the vowel-sound. The interchangeability of *v* with *f* and *w* appears not only in the anc. Lat. alphabet, where the letter *F* was an indirect descendant of the Gk *digamma*, but also in the mod. Ger. alphabet, where the letter *v* is pronounced *f*, and the Eng. sound *v* is generally expressed by the letter *w*. In the Polish alphabet there is no letter *v*, and the Eng. sound *v* is represented by the letter *w*. The Eng. letter *v* is phonetically a pressed or medial labial aspirate, bearing the same relation to *f* that *b* does to *p*. See ALPHABET.

Vaage, one of the Faeroe Is. (q.v.). Area 70 sq. m.; pop. 2260.

Vaagsoy, is. of Norway, 100 m. N. of Bergen. There is a fish-processing plant. Developed by the Germans as a refueling base and radio station after their conquest of Norway, *V.* was the objective of the first Brit. combined operation, on 27 Dec. 1941, simultaneously with a raid on Maaloy. Pop. 3500.

Vaal, riv. of S. Africa, trib. of the Orange R., which rises in Mt Kilipetapel, flows W. and SW., separating the Orange Free State from the Transvaal and crosses Griqualand W. The *V.* Barrage, 19 m. down from Vereeniging, retains the riv. for 42 m. forming a reservoir for 14,000,000 gallons, to implement the Rand water supply. Large areas are also irrigated. The *V.* Dam, 18 m. up the riv. from Vereeniging, forming the largest man-made lake in the S. Hemisphere (1956), is the Rand's main water supply. There are diamond diggings in and near the bed of this riv.

Vaasa: 1. Co. of Finland on the coast of the Gulf of Bothnia. Area 15,062 sq. m.; pop. 628,500.

2. Cap. of the above, a port on the Klemetsö peninsula. There are manufs.

of machinery, woollen goods, soap, and sugar. Pop. 38,900.

Vaca, Alvar Nuñez Cabeza de (1490-11564), Sp. colonial governor and explorer, *b.* Jerez de la Frontera. He is celebrated in the annals of the conquista-dores and was the first European who traversed the ter. later known as New Mexico. In 1528 he took part in the expedition of Pamphilo (Pánfilo) de Narvaez to Florida, in which Narvaez perished. *C.* de *V.* and some 3 companions, however, were cast ashore on the coast of Texas, their subsequent progress forming one of the most remarkable stories of adventure. He was made *adelantado* or administrator of the prov. of Rio de la Plata (1540), and he led an expedition to Paraguay, where he was received as governor (1542-4). Sev. jealous Spaniards intrigued against him, and he was sent to Spain for trial. In 1556 he was acquitted but was not re-instituted in his governorship. His reports of the Narvaez expedition led directly to the expeditions of Niza (1539) and Coronado (1540-2). His *Naufragios* was pub. in 1544 (Eng. trans. by B. Smith, 1851). The events of his S. Amer. expedition are narrated in his *Comentarios*, 1555.

Vaccination (from Lat. *vacca*, a cow), inoculation with cow-pox in order to afford protection against small-pox. The idea of vaccination first occurred to Dr Edward Jenner (q.v.) (1749-1823) in connection with a belief popular in his native co. of Gloucester, that persons infected with cow-pox were thereby rendered immune from small-pox. His views met with opposition among medical men of the best reputation, and it was not until 1798 that he succeeded in demonstrating that vaccinated subjects were immune, at least for a time. *V.* was made compulsory in a number of countries. The opponents of *V.* point, however, to the fact that erysipelas and even syphilis have been caused or communicated by cow-pox inoculation. Now that the use of glycerinated calf lymph is general the danger of syphilis is obviated, and it is generally conceded that the marked good effects produced by the general practice of *V.* more than compensate for the remarkably few cases in which the inoculation terminates unfortunately.

The first *V.* Act in England, that of 1840, provided means of *V.* but left the use of them to voluntary decision. In 1853 *V.* was made compulsory. The Act of 1898 required parents to procure the *V.* of their children within 6 months from birth unless they had within 4 months of birth satisfied a court of petty sessions that they had a conscientious belief that such *V.* would be injurious to the health of the child.

Under the National Health Service Act of 1946, which came into operation on

5 July 1948, V. is no longer compulsory in Great Britain, though it is nonetheless a wise precaution. See SMALLPOX.

Vaccine-therapy, method of curing and preventing infective diseases by inoculation with the causative micro-organisms in a modified form. The theory owes its origin to Dr Jenner's (q.v.) discovery of vaccination (q.v.) in the restricted sense.

As a result of the pioneer work of Pasteur (q.v.) and also that of Sir Almroth Wright, not only has the method been extended to preventive inoculation of a number of other diseases, but patients have been inoculated while they were actually attacked by the disease, and the hist. of the method shows that it is a valuable addition to therapeutics. The danger to health involved in bacterial infection depends mainly upon the production of toxins or bacterial poisons, which in some cases are extremely virulent. The disease is fought in normal cases by the destruction of bacteria (a work in which the white corpuscles are especially engaged (see PHAGOCYTOSIS)), and by the neutralisation of the toxins by substances called anti-toxins, which are elaborated by the body, under the stimulus of the disease-attack. Invading poisons are referred to generally as 'antigens,' and the substances produced in the blood to combat antigens are referred to as 'antibodies.' One injection method involves adding to the anti-toxic properties of the blood by the use of anti-toxic sera (see SERUM THERAPEUTICS). In this method the injected serum contains, not bacteria, but only the anti-toxic substances elaborated by the horse or other animal inoculated with the disease. V., on the other hand, involves the injection of the organisms themselves or their products. The principle underlying the method is the stimulation of the healing powers of the body generally to conquer infection by increasing the antibodies. Normal human serum has what is called an opsonic action on bacteria; that is, it makes them more susceptible to destruction by the white corpuscles. In any particular case of disease the opsonic power of the patient's serum is compared with that of normal serum, the result being a ratio which is called the opsonic index. Inoculation of a vaccine at first decreases the opsonic power—the 'negative phase'—and later increases it, so that a lasting 'positive phase' is induced.

The preparation of vaccines consists in making cultures of the bacteria on a suitable medium, adding sterilised saline to form an emulsion, and subsequently heating this long enough to kill the bacteria. Various chemical agents, such as formalin and phenol, may be employed instead of heat. Before use, the emulsion is standardised by dilution with sterile normal saline until it corresponds with a standard emulsion. Standardisation was originally carried out by counting the number of bacteria per unit volume. When V. was first introduced, autogenous vaccines, i.e. vaccines prepared from the bacteria causing the infection, were generally used; in exceptional cases stock

vaccines were employed. The use of the latter has now become much more general, and is of advantage when the infecting bacteria are of the same strain as those in the vaccine. When different strains, such as those of *Bacillus coli*, exist, autogenous vaccine ensures the use of the right strain; others may be useless and even harmful. Whatever its source, *Bacillus typhosus*, the bacterium causing typhoid fever, yields a vaccine giving immunity from typhoid fever in all parts of the world. *Staphylococcus aureus*, a bacterium causing suppuration, is equally useful in the preparation of stock vaccines, but in many other cases autogenous vaccines are preferable. The prophylactic use of V. was considerably extended during both World Wars, when troops were inoculated against cholera (q.v.), typhoid and paratyphoid fevers (q.v.), and tetanus (q.v.). Vaccines are used also as a preventive against plague (see TROPICAL MEDICINE), whooping cough, colds, pneumonia, tuberculosis (q.v.), and poliomyelitis (q.v.).

In the case of some of the infective diseases, such as cholera and plague, re-inoculation must be made frequently, as immunity lasts for only a few months. V. is also of great value in the prevention of diphtheria (q.v.); the material used for inoculation (immunisation) is *toxoid*, i.e. the toxin rendered less harmful by treatment with formalin. See also under BACTERIA, Immunity.

See C. H. Browning and T. J. Mackie, *Manual of Bacteriology* (11th ed.), 1949.

Vaccinium, a genus of deciduous and evergreen shrubs, family Ericaceae, about 130 species, found in the N. hemisphere, chiefly N. America and E. Asia; *V. angustifolium* is the Blueberry; *V. macrocarpon*, the Cranberry; *V. myrtillus*, the Bilberry or Whortleberry; and others yield edible fruits of some importance. Many V.s are bog plants, and all prefer acid, lime-free soils.

Vachell, Horace Annesley (1861-1955), novelist, b. Sydenham, Kent. He went to Harrow, about which he wrote his famous school story *The Hill*, 1905, and then to Sandhurst, obtaining a commission in the Rifle Brigade. In 1883 he resigned and went to California, where he wrote his first novels. In 1894 he returned to England, and in 1904 scored a success with *Brothers*; among the best known of many other novels are *John Verney*, 1911, *Spruce's Canyon*, 1914, *Quinney's*, 1914, *The Triumph of Tim*, 1916, *Fishingle*, 1917, *The Soul of Susan Yellom*, 1918, *Quinney's Adventures*, 1924, *Joe Quinney's Jodie*, 1936, *Lord Samarind*, 1938, and *Quinney's for Quality*, 1938. He wrote a number of plays as well as dramatising some of his novels. *Fellow Travellers*, 1923, and *Distant Fields*, 1937, are autobiographical, and his hundredth book, *Quests*, a collection of essays, was pub. shortly after his ninety-second birthday. Other late works are the anecdotal memoirs, *Methuselah's Diary*, 1950, and *From Methuselah*, 1951.

Vacuum. A V. denotes a space which is completely devoid of matter, but the

meaning of the term, as used in physics, is extended to any enclosure in which the gas pressure is considerably less than atmospheric. A *high V.* is one in which the pressure is very low, a *low V.* being one in which the pressure is not so low. Methods of obtaining vacua are described under AIR-PUMP (see also CONDUCTION OF ELECTRICITY). Until the time of Galileo, Aristotle's dictum that 'Nature abhors a vacuum' was accepted as a natural principle. The principle was, however, refuted in the 17th cent. through the so-called *Torricellian V.*, though Torricelli's *V.* was really saturated with mercury vapour at a low pressure (see also TORRICELLI, EVANGELISTA). It is impossible to obtain a perfect *V.*, present methods of exhaustion always leaving some residual gas—though the amount may be extremely minute. A *V.* is a non-conductor of heat and will not transmit sound waves. Heat, light, and other electro-magnetic radiations are transmitted through a *V.*, just as they are through interstellar space.

Modern diffusion pumps (q.v.) can reduce the pressure inside a vessel to well below 10^{-6} mm. of mercury, a pressure of the order of 10^{-3} of atmospheric pressure. The vacua obtained by means of pumps can be increased by introducing substances which absorb gases, such as activated charcoal and the best modern methods can produce vacua of approximately 10^{-10} mm. of mercury.

See L. H. Martin and R. D. Hill, *Manual of Vacuum Practice*, 1947; S. Dushman, *Scientific Foundations of Vacuum Technique*, 1949; J. Yarwood, *High Vacuum Technique*, 1955.

Vacuum Cleaners, type of air suction pump used for extracting dust from carpets, furnishings, etc. The first *V. C.s.*, which were invented at the beginning of the present cent., were operated by hand.

VACUUM CLEANER

The modern type of domestic suction cleaner is operated by means of a high-speed electric motor. The nozzle communicates with a dustbag which collects the dust and filters the dust-laden air on its way out into the atmosphere. The fan that produces the suction is situated in the airways and is usually directly coupled to the armature shaft. Domestic suction cleaners may operate at high suction or have less suction and utilise a revolving brush, which beats the surface

of the carpet, distributing the dirt, which is picked up by the air stream and conveyed to the dustbag. A machine of the first type is illustrated. The cleaning nozzle is usually connected to the machine by rods and a flexible hose, thus giving a wide range of use. The dust-laden air is drawn up the rods and hose and through the socket (1) into the dustbag (2), which filters the air, the dust, etc., being retained in the bag and the filtered air passing through the perforated plate (3) into the fans (4) and a stationary air guide (7), from which it is passed around the motor (5) to the air-purification pad (6), where the air is further filtered and purified before passing out of the blowing end of the machine into the atmosphere. The cost of running domestic cleaners is very low, as in most cases they do not require more than $\frac{1}{4}$ kW.

Vacuum Flask, invented by Sir James Dewar to store liquid air. Very little heat enters by *conduction* because glass is a bad conductor, and the vacuum between the glass walls is a worse one. This vacuum, if perfect, would entirely prevent *convection*. Since a vacuum favours the passage of radiation the walls are silvered inside the vacuum; any heat getting into the vacuum is reflected back. The idea has since been commercialised under Thermos and other trade-marks or names. The *V. F.* keeps liquids hot for the same reasons that it keeps them cool.

Vacuum Pump, see AIR PUMP.

Vacuum Tubes, see VALVES; FLUORESCENCE; NEON; SPECTRUM AND SPECTROSCOPE; X-RAYS.

Vaduz, cap. of Liechtenstein. Above the town stands the castle of the ruling house. There are textile manufs., and a trade in corn, wine, livestock, and vegetables. Pop. 2800.

Vág, see VÁH.

Vagrants, in law connote idle and disorderly persons of any of 3 grades liable to various terms of imprisonment. These grades are defined by statute as idle and disorderly persons, rogues, and vagabonds, and incorrigible rogues. In the 15th cent. many laws were passed against vagabonds, as they were generally called, and persons who could not find employment seem to have been confounded with those who preferred idleness and thieving. Laws against vagabonds in the 16th cent. were closely connected with compulsory labour, and under these circumstances harsh and cruel statutes were passed in the reigns from Edward VI to Elizabeth I. In 1713 an Act was passed for reducing the laws relating to rogues, vagabonds, sturdy beggars, and vagrants into one Act and for more effectually punishing them and sending them to their homes, the manner of conveying them including whipping in every co, through which they passed. This Act was repealed and replaced by the Consolidation Act of 1740, which made a distinction between idle and disorderly persons, rogues and vagabonds, and incorrigible rogues. The laws relating to these categories and other *V.* in England were again consolidated and amended in 1822 by a temporary Act

which was soon superseded by the Vagrancy Act of 1824, which, with some amendments and additions, includes the law relating to mendicancy, together with provisions concerning persons deserting or neglecting their families. This Act, in its broad essentials, remains on the statute book to-day, though frequently amended in some of its details. In the category of idle and disorderly persons it includes prostitutes behaving riotously or indecently in places of public resort; pedlars trading without a licence; persons loafing about any public place to beg alms; and others. In the category of rogues and vagabonds are included persons convicted of an offence which, if it had been the first occasion, would have constituted them idle and disorderly persons; fortune-tellers; persons obscenely exposing their persons; persons exposing wounds or deformities to obtain alms; persons who persistently solicit in a public place for immoral purposes; persons armed with offensive weapons with intent to commit a felony; and reputed thieves or suspects frequenting various specified places with intent to commit a felony. The category of incorrigible rogues includes persons convicted a second time as rogues and vagabonds. Offenders in classes (1) and (2) may appeal to Quarter Sessions and those in class (3) from Quarter Sessions to the Court of Criminal Appeal. The penalties under the Act include imprisonment for 14 days (formerly with hard labour), or, if convicted before 3 justices, 3 months, or a fine. The Vagrancy Act of 1873 included in class (2) persons betting in the street or other public place. Numerous Acts dealing with the practice of palmistry and fortune-telling by gipsies were passed at different times beginning in 1530. They were superseded by the Act of 1824. The provisions respecting prostitutes above noted were strengthened by a special Act of 1839 applied to London only for the prevention of loitering for the purpose of prostitution or solicitation to the annoyance of other people. The Vagrancy Act of 1935 amends the Act of 1824 so far as it relates to persons wandering abroad and lodging in barns, tents, etc., 'without visible means of subsistence.' These latter quoted words are repealed, and a person so wandering and lodging will not be deemed a rogue and vagabond unless he fails to apply for, or refuses to go to, a reasonably accessible place of shelter, or persistently wanders abroad notwithstanding that places of shelter are available or, by so lodging, causes damage to property or infection with vermin. A 'place of shelter' in this context means a place where provision is regularly made for giving, free of charge, accommodation for the night. The reference to a person lodging in a tent, etc., does not include one lodging in a tent or in a cart, etc., in which he travels—a concession to the 'hiker'.

Váh (Ger. *Waag*; Magyar *Vág*), riv. of Czechoslovakia, which rises in the Carpathians (q.v.) and flows W. and then S. through the regions of Žilina, Bratislava,

and Nitra (qq.v.) to join the Dunaj (see DANUBE) near Komárno (q.v.). Length 210 m.

Vahram, see **BAHRAM**.

Vair, Guillaume du (1556–1621), Fr. orator and moralist, b. Paris. As a councillor of the parlement of Paris he pronounced his famous discourse which, though apparently an argument for the Salic Law (q.v.), was really an attack on the proposal of the Leaguers to give the crown of France to the infanta of Spain. On philosophy he wrote *Philosophies des Stoïques* and *Traité de la Sainte Philosophie*, in which he abandons the idea of secularising moral philosophy and, anticipating Pascal, urges the necessity of a return to Christian morality as the only means of defeating corruption.

Vaishnavas, sect of the Hindu religion, distinguished from the others by the special worship of Vishnu, who, they hold, is supreme over the other gods of the Trimurti.

Vajda, János (1827–97), Hungarian poet and essayist, b. Pest, where he became a journalist. He married Kóza Bartos in 1880. His reputation is secured by his philosophical and love poetry, which shows little influence of his contemporaries. He d. in Budapest.

Val de Travers, valley of Switzerland in the Jura Alps, 13 m. SW. of Neuchâtel. The well-known asphalt is named after it.

Valaam (Finnish *Valamo*), small is. in the N. of Lake Ladoga with the famous V. Russian Orthodox monastery dating from the 12th or 14th cent., which was an important frontier fortress often ruined by the Swedes. The monastery, with its extremely strict rules and obligatory work, developed model dairy and garden farming and attracted many pilgrims. V. belonged to Finland 1918–40. The monks left V. in 1940.

Valais (Ger. *Wallis*), mountainous canton of SW. Switzerland, occupying the basin of the upper Rhône R. The canton is trilingual, French, Swiss-German, and Italian, according to the district, being spoken by the inhab. It is one of the most picturesque cantons of Switzerland, with lofty mts and numerous glaciers. There are orchards and vineyards, and deposits of limestone, marble, anthracite, lead, and iron. V., though a largely unproductive area, is famous for its excellent wines. The canton is crossed by the Lötschberg and Simplon railways, and roads lead over the Great St Bernard and the Simplon passes to Italy. There are many resorts and sport centres. The canton became a part of the Swiss confederation in 1815. Cap. Sion. Area 2021 sq. m.; pop. (1955) 165,500, mainly Rom. Catholics.

Valdemar I (1131–82), King of Denmark, surnamed the Great, the posthumous son of Canute Lavard. He became king in 1157, and with Absalon (q.v.) ruled the country firmly and well.

Valdemar II (1170–1241), King of Denmark, succeeded his brother, Canute VI, in 1202. He obtained possession of Lübeck and 2 other equally important bishoprics, and by treaty and friendship

with Frederick II, the emperor, obtained all the Wend lands and the lands of N. Germany.

Valdemar IV (1320-75), King of Denmark, came to the throne in 1340. The guiding motive of his policy was to obtain possession of those parts which formerly belonged to the Dan. crown and which were now scattered. By 1360 practically all the old Dan. lands, including Scania, were in his hands.

Valdivia: 1. S. Central prov. of Chile. It is richly stocked with forests, the export of various kinds of timber being a prin. industry. Area 8080 sq. m.; pop. 232,647.

2. Cap. of the above, a commercial port 11 m. up the R. V., founded in 1552 by Pedro de V., the conqueror of Chile. It is situated at the junction of the Ra. Calle-Calle and Cruces, 440 m. S. of Valparaiso by air. Opposite the city is

Swiss National Tourist Office

GRIMENTZ, VAL D'ANNIVILLES

A typical village in the Valais, Switzerland.

Valdenses, *see* WALDENSES.

Valdepeñas, Sp. tn in the prov. of Ciudad Real. It produces a well-known red wine. Pop. 30,000.

Valdes, Juan de (c. 1500-44), Sp. reformer, b. Cuenca. His brother being imperial secretary of state, he obtained the post of secretary to Charles V of Germany, and afterwards acted in the same capacity to the viceroy in Naples. While there he attempted to bring about the regeneration of the Church. He wrote *Spiritual Milk*, *The Christian Alphabet*, and commentaries on the N.T. *See* F. C. Church, *The Italian Reformers, 1534-64*, 1932; G. K. Brown, *Italy and the Reformation to 1550*, 1933.

Teja Is., 3 m. long and over 1 m. wide, where are situated tanneries, shoe and furniture factories, shipyards, flour-mills, sugar-refineries, and breweries. Pop. 45,138.

Valdosta, city of Georgia, U.S.A., on the Atlantic coast. It is the port for the local cotton and fruit trade. It manufs. naval stores, lumber, veneer, boxes, cigars, cottonseed oil, feed, and pecan and metal products; there are also railroad shops. Georgia State Woman's College, Emory Junior College, and Moody Air Force base are here. Pop. 20,046.

Valence, Fr. tn, cap. of the dept of Drôme, built on an escarpment above the Rhône (q.v.), 344 m. S.E. of Paris. It

was once the cap. of the duchy of Valentinois, which Louis XII gave to Cesare Borgia (q.v.). There is a Romanesque cathedral, there are manufs. of foodstuffs, textiles, and leather goods, and there is a trade in agric. produce, wine, and olives. Pop. 40,000.

Valencia, Duke of, see NARVAEZ, RAMON.

Valencia: 1. Region in Spain, on the Mediterranean, comprising the provs. of Alicante, Castellón de la Plana, and V. (qq.v.). It was formerly a kingdom, was taken from the Moors by the Cid (q.v.) at the end of the 11th cent., and was incorporated with Aragón (q.v.) in 1238. It remained a kingdom in name until the 18th cent. Area 8966 sq. m.; pop. 2,341,000.

2. Sp. prov., in the Region of V., with a coast-line on the Mediterranean. It is watered by the Guadalaviar and the Júcar (qq.v.), is mountainous in the interior, and has a fertile, irrigated coastal plain of *huerta* country. Its orange groves are famous, and olives, grapes, mulberries, figs, and rice are also produced. Area 4231 sq. m.; pop. 1,371,800.

3. Sp. tn, cap. of the prov. of V. (and, formerly, of the kingdom of V.), on the estuary of the Guadalaviar. It is the third city of Spain, and has a port, El Grao, and beaches on the nearby Mediterranean coast. The beautiful and productive garden-land (*huerta*) around the city is irrigated by auct canals; these are administered by a court which meets each Thursday at the main door of the cathedral. The Gothic and Baroque cathedral was begun in 1202. There are sev. other fine churches, and there are palaces, mansions, museums, and a 15th-cent. silk exchange. The univ. dates from 1500. There are textile, metallurgical, and boatbuilding industries, and a large trade in oranges, rice, and silk. Pop. 524,800.

4. Tn of Venezuela, on the Cabriales R., 80 m. WSW. of Caracas, with which it is linked both by road and rail, W. of Lake V. It is the cap. of the state of Carabobo. It ranks next to Caracas as a social centre and has a cathedral. There are important cotton mills, soap and cement factories, and an airport. Pop. 88,700.

5. Is. off Ireland, see VALENTIA.

Valency. Expressed in its simplest form, the V. of an element is the number of atoms of hydrogen, or of any other standard univalent element (or radical such as CH_3) capable of uniting with one atom of the element. The elements themselves are termed *uni-*, *bi-*, *ter-*, and *quadi-*valent, according to the number of univalent atoms with which they can unite. Measured by their combining capacity, elements do not always exhibit the same V. Thus 1 atom of phosphorus is satisfied with 3 atoms of hydrogen, but can combine with 5 atoms of chlorine. The V. of an element is therefore often a variable quantity, and, in many cases, dependent upon temp. and pressure. Thus if the compound PH_3 (phosphine) be mixed with hydrochloric acid (HCl) and the mixture subjected to pressure, a

crystalline compound, phosphonium chloride (PH_4Cl), is formed in which the phosphorus atom is *quinqivalent*. Where, in a compound, an atom is not functioning in its highest recognised V., there is a tendency for the compound to unite with additional atoms to form new compounds. Thus carbon monoxide (CO), in which the carbon (a quadrivalent element) is apparently functioning as a bivalent element, unites with an atom of oxygen to form carbon dioxide (CO_2), where carbon exhibits its normal V. In some cases, molecules of different compounds, in which all the atoms are fully satisfied, unite to form other compounds. Thus hydrogen fluoride and potassium fluoride combine to form the compound hydrogen-potassium fluoride ($\text{HF} + \text{KF} = \text{KHF}_2$). In simple cases, the relation

$$V. = \frac{\text{Atomic Weight}}{\text{Equivalent Weight}}$$

holds good. But it is now realised that there is no hard-and-fast definition of V.

Werner's Theory has been especially fruitful in predicting new types of compounds. The Electronic Theory of V. appears to be firmly estab. There seem to be 2 kinds of V. linkage between atoms: (1) polar linkages, binding together atoms electrically opposite in character, e.g. in NaCl ; (2) non-polar links as in most organic compounds, e.g. CCl_4 . The existence of such bodies as $\text{CoCl}_2(\text{NH}_3)_6$ is explained by co-ordinate linkages. The whole question of V. is closely bound up with that of the structure of the atom. See also CHEMISTRY; DIPOLES. See J. C. Speakman, *An Introduction to the Electronic Theory of Valency*, 1935.

Valenciennes (Lat. *Valentianae*), Fr. tn, cap. of an arron., in the dept of Nord. It has fortifications designed by Vauban (q.v.), and sev. fine churches. The museum is rich in Flem. and Fr. 18th-cent. paintings. The tn was badly damaged in the Second World War. It was the bp. of Baldwin I, Froissart, Watteau, and Carpeaux (qq.v.). It has an important metallurgical industry, and manufs. hosiery and glass. The famous lace industry is being revived. Pop. 38,700.

Valens, Flavius (AD 328-378), emperor of the E. During his reign, which began in 364, the Goths were admitted into the countries S. of the Danube. V. was defeated by them on 9 Aug. 378, and was never seen again.

Valentia, or **Valencia**, small rocky is. off the coast of Kerry, Rep. of Ireland, where there are sev. cable and signalling stations, and a small harbour. V. is important as being the site of a meteorological observatory. Pop. 1500.

Valentine, St. priest and physician of Rome who suffered martyrdom probably during the persecution under Claudius II in 269. His feast is on 14 Feb. The custom of sending valentines probably had its origin in a heathen practice connected with the worship of Juno Februallis at the Lupercalia (q.v.), or perhaps in the medieval belief that birds commenced to mate on 14 Feb.; its association with the saint is wholly accidental.

Valentine and Orson, known to medieval romance as the sons of the Emperor of Greece, fortuitously connected with the Charlemagne romances. Their story is of folklore origin, being based on the common folklore legend of a man reared by a bear (Orson = *Ours*son = bear's son). Versions exist in many languages. A chap-book dealing with them was pub. in Glasgow as late as 1850.

'Valentine State,' see ARIZONA.

Valentinian, name of 3 Rom. emperors: *Valentinian I*, *Flavius* (AD 321-75), b. Pannonia, the son of Gratian, whom he succeeded in 364. The frontiers of the empire were exposed to great danger during his reign. Through his gen., Jovinus, he gained a victory over the Alemanni in 366. In 368 the Alemanni renewed their attacks upon E. Gaul, but V. drove them back. This emperor was a man of ability and a wise administrator. *Valentinian II*, *Flavius* (371-92), b. Milan, son of Valentinian I, came to the throne in 375. He was at first an Arian, but later abandoned this heresy. *Valentinian III*, *Placidius* (419-55), son of Constantius III, was created emperor of the W. by Theodosius II, emperor of the E., in 425. Weak and vicious, he was dominated by favourites, and in 455 he was slain by Maximus.

Valentino, Rudolph (1895-1926), Amer. film-actor, b. Castellana, Italy. His full name was Rudolph Alphonso Guglielmi di Valentino d'Antongulella. In 1913 he emigrated to the U.S.A. to take up farming, but became a dancer, partnering Gaby Deslys in London. He was 'discovered' by Rex Ingram, and in 1922 made his first film, *The Four Horsemen of the Apocalypse*. His first performance was in *Monsieur Beaucaire*; other famous films in which he appeared were *The Sheik*, and *Blood and Sand*. His magnetic charm and his vivid rendering of highly romantic scenes won him the adulation of large numbers of women filmgoers. This at times approached hysteria, and there were scenes of frantic grief at his death, his memory becoming something of a cult for a time. See lives by Natacha Rambova, 1927, and S. G. Ullman, 1927.

Valentinus (d. c. 160 bc), one of the most famous of the Christian Gnostics (see GNOSTICISM). b. Egypt. He was educ. at Alexandria, but went to Rome about AD 140. He found many adherents (*Valentinians*), especially in the E.

Valera, Eamon de, see DE VALERA.

Valerian, or Publius Licinius Valerianus, Rom. emperor AD 253-60; gen. and faithful supporter of Gallus, after whose death he was proclaimed emperor by the soldiers. V. took his son Gallienus as colleague, and leaving him in charge of affairs in Europe, set out for the E. to crush the Persian Sapor I (257). After some success he was entrapped by Sapor and kept prisoner till his death. At first tolerant towards the Christians, V. later became hostile towards them. See Gibson, *Dedication and Fall*, chapter X.

Valeriana, or Valerian, family Valerianaceae, genus of perennial herbs and subshrubs, mostly of N. temperate regions, a

few tropical, with cymes of white or pink flowers. *V. officinalis*, common V., Cat's V., or St George's Herb, or All-heal, beloved by cats, and *V. dioica*, Marsh V., are native to Britain, *V. pyrenaica*, from the Pyrenees, is naturalised locally. *V. saluina*, and *V. supina* are rock garden subjects.

Valeric or **Valerianic Acid** (C₈H₇COOH), mixture of acids obtained by distilling the macerated plants valerian or angelica with water. It is an oil liquid with an unpleasant smell (boiling point, 174° C.). There are 4 isomers with this molecular formula, of which isovaleric or isopropylacetic acid and optically active valeric methyl ethylacetic acid are the most important.

Valerius Flaccus, see FLACCUS.

Valerius Maximus (fl. AD 30), Rom. historian and a friend of Sextus Pompeius, whom he accompanied to the E. in 27. His *Factorum et Dictorum Memorabilium Libri IX* is interesting as a specimen of the transition from classical to 'silver' Latin. It has been ed. by C. Kempf (2nd ed., 1888).

Valéry, Paul (1871-1945), Fr. poet, b. Sète of a Fr. father and an It. mother. Educ. at Montpellier, he then studied law. In Paris he became one of the familiars of Stéphane Mallarmé, the symbolist, and proved himself an apt pupil. Some of his prose and verse pieces appeared in magazines, and he worked out a scheme of what he called 'pure poetry' in which the music was far more important than the meaning. In 1917 he collected the verses he had written, and they were pub. under the title *La Jeune Parque*. *Le Cimetière Marin* and *Album de vers anciens* followed in 1920; his prose work, *La Soirée avec M. Teste*, also in 1920, and *Le Serpent*, in verse, 1921. In 1925 he was elected to the Fr. Academy. V. believed that poetry must produce 'enchantment'; to secure this effect the poet must believe in the power of the word and still more in the efficacy of the sound of the word than in its significance.

V.'s famous poems *La Jeune Parque*, 1917, and *Charmes*, 1922, 1926, were so irresistible in their mere incantation that they were soon known by heart. Poetry was for him the expression of intense meditation, and as a result his meaning is often obscure. No Fr. poet, however, could rival his ability in creating a new poetic syntax or in annexing a whole unexplored domain of sensibility. His lyricism, too, was infused into his prose. His *Oeuvres complètes* were pub. in 12 vols., 1931-9. See studies by A. Thibaudet, 1925, and V. Larbaud, 1931; F. Forché, *Paul Valéry et la poésie pure*, 1926; A. Maurois, *Introduction à la méthode de Paul Valéry*, 1933; M. Raymond, *Paul Valéry et la tentation de l'esprit*, 1946; D. Saurat, *Modern French Literature*, 1946; H. Mondor, *Trois discours pour Paul Valéry*, 1948; M. Bémol, *Paul Valéry*, 1949; E. Scarfe, *The Art of Paul Valéry*, 1954; J. Charprier, *Essai sur Paul Valéry*, 1950. Vallette, see VALLETTA.

Valhalla, in Norse mythology the hall (*hall*) in Asgard (q.v.) of the slain (*valr*),

where Odin receives the spirits of dead heroes. These issue forth each morning from its 540 gates to fight and return at dusk to feast, the gods acting as their hosts and the Valkyries (q.v.) as servants. In modern times the word signifies a tomb of illustrious soldiers, as the Pantheon near Regensburg for Germany's heroic dead. See BRAGI.

Valkyries (Ger. *Walküre*), the awe-inspiring maids of Odin who fly over the field of battle choosing those to be slain and afterwards taking them to Valhalla (q.v.). See BRUNHILDA.

Valladolid, see MORELIA.

Valladolid: 1. Sp. prov., in León (q.v.). It is largely open country, watered by the Duero (q.v.) and its tribs. It is called the granary of Spain, and produces, in addition to cereals, fruit, oil, wines, and honey. There are textile, metallurgical, and tanning industries. Area 2923 sq. m.; pop. 351,700.

2. (anc. *Vallata Ualiti*) Sp. tn, cap. of the prov. of V., on the Pisuerga. The archiepiscopal cathedral, begun in 1585, is still unfinished. There are many Gothic and Baroque churches, rich in sculpture, and a univ. (1346). The house of Cervantes (q.v.) still exists. V. was the seat of the court at one time, and Philip II (q.v.) was b. here. Columbus d. in the tn. There are textile, iron, paper, and engineering industries. Pop. 126,350.

Vallata Ualiti, see VALLADOLID.

Valle, Pietro della, or *le Pellegrino* (1586-1652), It. traveller. His journeys in the E. were described in his *Travels in India and Persia* (pub. 1658-63).

Valle d'Aosta, region (*compartimento*) of NW. Italy, bounded on the N. by Switzerland, on the W. by France, and on the S. and E. by Piedmont (qq.v.). It is crossed by the beautiful V. itself, running SE. from Mont Blanc (q.v.) between the Pennine and the Graian Alps (qq.v.); the valley is watered by the Dora Baltea, a trib. of the Po (q.v.). There are passes into Switzerland and France (see ST BERNARD), and on the NE. boundary is the Matterhorn (q.v.). The region has a local autonomy, and is largely Fr. speaking. Agriculture is the main occupation, there are extensive mineral deposits, and there are hydro-electric plants. The cap. is Aosta (q.v.). Area 1259 sq. m.; pop. 97,000.

Valle-Inclán, Ramón María del (1869-1936), Sp. poet, novelist, and dramatist, b. Caramifal. He first attracted attention by his book of poems *Aromas de Leyenda*, 1908, in which he sang the life of the common people. There were in the poems an earthy strain redolent of the soil and at the same time an exquisite refinement more like that of the Fr. decadents. His most celebrated prose piece is his four *Sonatas*, 1902-5, dealing with 4 love-affairs in the career of his hero Xavier de Bradomín, who is V.-I.'s conception of Don Juan. His *Flor de Santidad*, 1904, is a story of Galician peasants, and more realistic in setting. His verse plays, as *Cuento de Abril*, 1910, are delightful; his prose plays, really novels in dramatic form, such as

the *Comedias Bárbaras*, the *Esperpucos*, and *Yarasas*, are written in a style of extraordinary vigour and violence. Eccentric in his character and life, he is one of the most independent, stimulating, and exciting of Sp. writers. See M. Fernández Almagro, *Vida y literatura de Valle-Inclán*, 1944; R. Gómez de la Serna, *Don R. M. del Valle-Inclán*, 1944.

Vallejo, city of Solano co., California, U.S.A., on San Pablo Bay (NE.), 30 m. NE. of San Francisco. It has shipyards and iron foundries, while Mare Is. opposite is one of the H.Q.s of the U.S. Pacific Naval Squadron, with a navy yard, arsenal, dry docks, and a lighthouse. V. is a processing and commercial centre, with flour and lumber milling, meat packing, and dairying. Pop. 26,000.

Valletta, Valetta, or *La Valetta*, cap. of Malta (q.v.), situated on the SE. coast of the is., on a rocky peninsula, Mt Sciebarra (14 m. long, 1 m. wide), which separates Marsamuscetto Harbour (on the W.) from the Grand Harbour (on the E.). It is an important port of call, and is the base of the Brit. Fleet in the Mediterranean. It was founded by Jean Parisot de la Valette, Grand Master of the Knights of Malta (see HOSPITALIERS, KNIGHTS), after the unsuccessful Turkish siege of 1565. It was taken by Napoleon in 1798, but afterwards revolted and was taken by the British in 1800. It was severely bombed by Axis planes during the Second World War. The It. fleet surrendered here in Sept. 1943. The main street of V. runs along the peninsula to the fort and lighthouse of St Elmo. Apart from the prin. thoroughfares, the streets of the tn are steep and narrow. There are many fine buildings, notably the former palace of the Grand Masters (now the governor's residence), the cathedral of St John (1576), which contains some beautiful pictures and tapestries, and the *auberges* (lodges built for members of different nationalities) of the Knights of Malta. Of the *auberges*, the finest is the Auberge de Castille. There is a univ. (1769) and a library containing the archives of the Knights. Pop. 19,100.

Valley. The name given to an elongated depression bounded by higher ground on either side and at the upper end. With few exceptions V.s result from erosion by running water or flowing ice (see RIVER; GLACIERS); Certain V.s, of which the Rift V.s (see below) are most prominent examples, result from fractures in the crust of the earth formed by faulting (q.v.).

Riv. V.s develop through the downward erosion of the stream which tends to deepen the V., and the weathering and collapse of the sides which tends to widen the V. The profile of the V.s results from the interaction of these 2 processes, and is further complicated by variations in the nature of the underlying rock. V.s cut by rapidly down-cutting streams have steeply inclined slopes converging on the water-course itself: a V-shaped cross-section is produced and there is little flat ground in the V. bottom. Such V.s are common in mountainous regions. Particularly steep-

sided gorges result if mt building causes uplift of the V. floor, but is not so marked as to stop the stream. The Arun, for example, has cut a gorge 10,000 ft deep through the rising Himalaya, which it crosses from N. to S. In flatter country V.s are wider and have broad alluvial flats, particularly where the riv. course migrates across the V. bottom in the course of time. Such an arrangement, often accompanied by meanders in the riv., occurs in mature slowly flowing stretches of its course.

Glaciers may move down pre-existing V.s and modify their shape through erosion. The main effects to be expected are the truncation of spurs, the steepening of the V. sides, the widening of the V.

A rather similar fault structure, consisting of uplifted blocks or horsts flanking a sunken block or graben, forms the Rhine V. in W. Germany and the Oslo fjord dist. in Norway.

Many fjords, however, owe their present shape to over-deepening by the passage of ice which has scoured out their base well below sea-level (see FJORD).

Solution V.s occur where underground material has been removed by solution through the passage of ground water. They are usually found in limestone country.

V.s are important to man as natural communications, as fertile readily cultivated ground, and consequently as the homes of civilisation.

Royal Swedish Embassy

VÄLLINGBY, STOCKHOLM'S NEW SATELLITE TOWN

bottom, and the straitening of minor irregularities. A characteristic U-shaped profile is developed by glacial erosion. Tributary V.s may debouch high up on the steepened walls of the major V., giving rise to spectacular waterfalls. Such V.s are termed hanging V.s.

The Rift V. system is one of the major features of the crust of the earth, and extends from the Zambezi V. of S. Africa to the Dead Sea and the Jordan V. It results from a great system of fractures in the crust of Africa and of the uplift of the land on either flank. This has had the effect of leaving a narrow sunken block usually some tens of m. in width bounded at each side by steep faults (q.v.), beyond which lie the uplifted ground. Many of the major African lakes, such as Lake Nyasa, Lake Tanganyika, and Lake Kivu, occupy Rift V.s. Extensive outpourings of lava accompanied their formation, particularly in Kenya and Ethiopia.

The Red Sea occupies a V. of this system, and the Dead Sea is a saline inland sea formed by the evaporation of riv. water unable to escape to the open sea.

Valley of Ten Thousand Smokes, volcanic valley of 72 sq. m. in the Katmai dist. of Alaska. Mt Katmai blew up on 6 June 1912, causing total darkness for 3 days, and depositing 10 in. depth of ash 100 m. away. Shortly before the eruption the valley burst in many places and threw out masses of molten material. These fissures have continued to discharge hot gases, and it is from this peculiarity that the valley has received its name. President Wilson proclaimed the dist. a National Monument in 1918. See R. F. Griggs, *The Valley of Ten Thousand Smokes*, 1922.

Valleyfield, city of Quebec, Canada, on the R. St Lawrence, at the upper end of Beauharnois Canal. There are cotton, woollen, flour, and saw mills, distilleries, etc. Pop. 23,500.

Vällingby, a new satellite tn in Stockholm (q.v.), Sweden. The tn grew up in about 3 years. It is a garden city, situated 10 m. W. of the cap. and houses about 25,000 people, a good proportion of whom derive their living from work within the city of Stockholm.

Vallombrosa, It. monastery, in Tuscany (q.v.), standing in the birch forest of V. in the foothills of the Apennines (q.v.), 13 m. ESE. of Florence. It was founded by St John Gualbert (c. 1038) as the first house of an independent Benedictine (q.v.) congregation, the *Vallombrosans*, but the present building dates from the 17th cent. The monastery was suppressed, and the buildings became a school of forestry after 1869. V. is mentioned by Ariosto (*Orlando Furioso*) and Milton (*Paradise Lost*).

Valmy, vil. in the dept of Marne, France, 6 m. from Ste Menchould. A pyramid (1819) on a hill in the S. commemorates the victory of the Fr. Revolutionists under Kellermann and Dumouriez over the Prussians (1792), a turning-point in the fortunes of the new rep. Pop. 400.

Valois, Charles de, see ANGOULÊME.

Valois, House of, Fr. dynasty, ruling 1328-1589, and beginning with Philip VI (1328-50). On the death of Charles VIII without sons (1498) the crown passed to Louis of Orléans (XII), the first of the Valois-Orléans house. This was succeeded by the Valois-Angoulême branch in 1515, the V. line finally dying out with Henry III, in 1589, when the Bourbons came to the Fr. throne. See G. Dodu, *Les Valois: Histoire d'une maison royale, 1328-1589*, 1934.

Valona, see AVLONA.

Valor Ecclesiasticus, see LIBER REGIS.

Valparaiso: 1. Prov. of Chile, the smallest but most thickly populated. The prin. occupations are centred on agriculture, cattle raising, and fisheries. Area 1860 sq. m.; pop. (1952) 498,186.

2. Cap. of the above, and the prin. port and commercial centre on the W. coast of S. America, 116 m. NW. of Santiago by rail. Copper, wheat, silver, and nitrates are amongst the exports. It lies upon a broad, open, semicircular bay, on the slope of a spur of barren hills forming a rocky peninsula whose promontory affords good shelter from westerly and southerly storms. Costly improvements of recent times, including a sheltering mole, have made the port a more desirable haven from N. gales.

V. was captured in 1578 by Drake, and in 1596 by Hawkins, and in 1600 was sacked by van Noort. In 1866 it was bombarded by the Sp. fleet and devastated, and in 1891 was sacked by the Chileans themselves after the repulse of Balmaceda. It suffered greatly from earthquakes in 1730, 1822, 1839, 1873, while in 1908 it was almost entirely destroyed. But the city was soon rebuilt, with architectural improvements. Not many antiquities have survived the earthquakes or other disasters (though a small part of the old colonial fn exists in the hollow known as 'The Port'), and the palaces, churches, villas, and fortifications are modern. Until recently all buildings were low, as a precaution against earthquakes. Of some architectural interest are the Intendencia, or H.Q. of the prov. gov., the cathedral, the huge Naval Academy, and the Univ. of Engineering. V. has machine and railway workshops;

the local products include textiles, sugar, petrol, paints, varnishes and enamels, shoes, chemicals, leather, pharmaceutical goods, and cottonseed oil. Pop. 218,329.

3. City, co. seat of Porter co., Indiana, U.S.A., in dairy, poultry area 40 m. SE. of Chicago. It manufactures magnets, farm implements, ball and roller bearings, etc., and is the seat of V. Univ. Pop. 12,000.

Valtellina, the valley of the upper Adda (q.v.), in Lombardy (q.v.), Italy, stretching from the Ortler Group of the Alps to Lake Como. It is well known for its wine, and it produces also figs, mulberries, and wheat. The chief tn is Sondrio (q.v.).

Valuation, see APPRAISEMENT; DOMESDAY BOOK; TAXATION; RATING.

Value, in economics, means V. in exchange. The V. of an article is expressed in terms of the article for which it exchanges, price being the V. of an article in terms of money. According to the 'Labour Theory' of V., developed and popularised by Karl Marx, all V. is the creation of labour; but the 'Cost of Production' theory widens the conception to include all the factors of production. Even so, the theory deals only with the side of supply and ignores (utility and) demand. According to the 'Marginal Theory' of V., however, which combines the two sides, exchanges tend to equate marginal cost and marginal utility. Utility is subjective; there is no truth in the view that if one party benefits from an exchange the other must lose, provided the exchange is freely entered into.

Valuyev, Pëtr Aleksandrovich, Count (1814-90), Russian statesman. He was minister of the interior 1861-8, chairman of the committee of ministers 1877-81, and played an important part in the Great Reforms (q.v.), particularly in the estab. of the Zemstvo (q.v.). In 1863 V. put forward a constitutional project which provided for a consultative assembly of partly elected, partly appointed members. This project was again taken up in 1880, but was not implemented. See also ALEXANDER II; LORIS-MELIKOV.

Valves, the two parts into which the pericarp of pods splits open along defined lines to liberate the seeds.

Valves, Mechanical, are devices for controlling the movement of fluids in pipes and conduits or their escape from containers. They may be operated by the flow or pressure of the fluid itself, by the engine of which they form a part, or independently by hand. V. operated by the fluid at low pressure and at appreciable time intervals, as in the ordinary hand pump, may consist of a simple flap hinged at a point of the pipe wall—at the top if the pipe is horizontal—swinging out in the direction of flow and closing on to a seat against flow in the opposite direction, or the flap may be hinged on a diametrical axis, as in the butterfly V. In the case of vertical flow the poppet V. is used. Shaped like a mushroom, it rests with its flat base on the V. seating and its stem in the pipe; it lifts bodily from its seating, and some form of guide is arranged to ensure true working. To limit the lift of the V. a metal or rubber

stop may be provided, or the motion may be controlled by a suitably adjusted spring. Such V. are suitable for higher speeds and pressures, which would rapidly throw a hinge out of action. There is, however, the difficulty of shock to be met, partly by reduction of weight of moving parts, partly by reduction of the area of contact, and partly by reduction of the lift. By providing a double seating, as in the *double-beat V.*, half the lift only is required. *Four-beat V.* are used for powerful engines in extension of this principle. Poppet V. are used in internal-combustion engines, and especially in the ordinary motor-car petrol engine, where they are usually operated by a cam shaft, admitting and exhausting fuel to and from the cylinder. In the Diesel engine (q.v.) a needle V. is used for introducing the oil as a spray into the cylinder. The moving part is a tapering needle, which allows of fine adjustment. In the Pulsometer (see PUMPS) and other high-speed engines a ball is used as a V. For air pumps, V. of rubber are generally used. To avoid the evils of varying boiler pressure, reducing V. are employed. There are sev. kinds of reducing V., but their modes of action are the same. The entering steam passes by the V. closed by a spring to the main throttle V., which it lifts and then acts on the piston.

Safety Valves are attached to boilers or other vessels where the fluid contents may reach a pressure great enough to cause bursting. The *deadweight safety V.* has a spherical V. fixed to a cover piece which can be loaded with weights. These are adjusted so that the V., the shape of which prevents sticking, will lift if pressure through the pipe becomes too great. There is good stability owing to the low centre of gravity. The *lever safety V.* has a conical V., the pressure on which is adjustable by means of a weight acting at the end of a lever. The moment steam escapes, its lifting force varies in a manner differing with the shape of the V. and opening; usually the lift required to keep the passage open is greater than that required to open it, and it would be better if load diminished with opening. The use of springs intensifies this difficulty. In marine safety V. 2 or 3 are placed on the same V. box so as to produce more opening for the lift. Long springs are used and so adjusted that an opening of not more than $\frac{1}{4}$ in. will be necessary, thus reducing the increased load. On locomotives springs are universal, the 'Kamsbottom' being very largely used. Both V. are operated simultaneously by the spring acting on the lever. The fulcrum by its position ensures the lessening of the load if the V. lifts. The extension of the lever provides a means whereby the engine-driver may test either V. for sticking or obstruction. The 'Naylor' contrivance is largely used for spring safety V. The V. is pressed on its seat by means of a spring acting through a bent lever so arranged that the opening of the V. and pressure on the spring alter the leverage, thus not

increasing the load. The *low-water safety V.* used on stationary engines is loaded directly by a spindle with a weight, but negatively by a weight acted on by a float through a lever. If water is too low the float increases in weight and reduces the load on the V. so that steam blows off. There are various ways of arranging that a V. shall not close until pressure is sufficiently relieved; one of the simplest is by shaping the periphery of the V. so that it forms a lip overhanging the orifice; the steam acting on this lengthens the period of lift. In steam engines (q.v.) the V. controlling admission of steam to the cylinder and exhaust are operated by the engine, as the timing is an essential factor. A number of different designs have been produced, and efficient V. gear is of prime importance for efficient working. Hand-operated V. are used for controlling flow in water-supply systems. See E. L. Ahrons, *Steam Engine Valves and Valve Gears*, 1921; P. Youngson, *Slide Valves and Valve Gearing*, 1927.

Valves, or Vacuum Tubes. The first valve, invented (1904) by Fleming (see RADIOCOMMUNICATION), consisted of a vacuum bulb with a heated filament (cathode) surrounded by a cylinder. Electrons were emitted from the filament to the cylinder when this was given a positive potential (anode)—in conventional terms, 'current' flowed from the anode to the filament. No current flowed if the cylinder was negatively charged. On a.c. this 'diode' acted as a half-wave rectifier (q.v.), barring the negative part of the wave if applied to the anode. Using 2 diodes or a diode with 2 filaments, full-wave rectification is obtained (see Fig. 1).

FIG. 1. FULL-WAVE RECTIFIER

In modern diodes the filament is sometimes surrounded by a cathode consisting of a small metal tube coated with a substance rich in electrons which is heated by the filament, and surrounding the whole is the anode. In a normal radio set the diode provides the high d.c. voltage supply for the other valve anodes. In a slightly different form it is used for the rectification of radio frequency signals, and as such becomes a de-modulator or detector. The output is a series of d.c. pulses corresponding to the positive half-cycles, and is proportional to the a.c. voltage at its input. Fig. 2 represents the basic circuit for a radio frequency detector. Lee de Forest (1907) added a third electrode, the 'grid,' making the diode into a triode. Small variations in grid voltage were found to produce large variations in anode current, which, of course, can be trans. into output voltage by a resistance in the output circuit.

Thus a weak 'signal' fed to the grid is 'amplified.' The amplification process may be followed by detection. Under certain conditions a pair of V. may be operated as an amplifier using the non-linear parts of the valve curve. The normal method is called class A, while the latter is referred to as push-pull

FIG. 2. BASIC DIODE DETECTOR CIRCUIT

class AB or class B. The two last named are used when large outputs are required. A basic valve amplifier circuit is shown in Fig. 3. The valve has found numerous applications, further extended by the addition of more grids, in pentodes, heptodes, etc., and the use of cavity resonators (q.v.). The functions of these V. are studied by means of the 'characteristics,' graphs from which the behaviour

FIG. 3. BASIC VALVE AMPLIFIER CIRCUIT

of the valve under different conditions can be studied. The characteristics of the triode are: the anode current I_a as function of grid voltage V_g ; 'mutual conductance,' g_m , or the 'slope'; anode current as function of anode voltage V_a ; this is different for different grid voltages; the inverse value is the 'a.c. resistance,' r_a ; the grid current as function of grid voltage, for different anode voltages. The characteristics mostly consist of a straight portion (constant-position slope), with decreasing slope at higher values. The coefficients are therefore expressed as differentials: $g_m = (\partial I_a / \partial V_g) V_a > r_a = (\partial V_a / \partial I_a) V_g$.

The amplification factor $m = r_a \times g_m$. The characteristics are determined by the geometry of the design. A high amplification factor requires a closely meshed grid and a distance from cathode to anode much greater than the distance from cathode to grid. For the ordinary radio frequency detector, r_a is 20,000–50,000 ohms, the amplification factor is 15–50, and $g_m = 0.7$ – 0.15 mA/V. The amplifier

has $r_a = 4000$ – $12,000$ ohms, amplification factor 10–30, $g_m = 0.9$ – 1.8 mA/V. An output valve may have $r_a = 1000$ – 4000 ohms, 2–10 amplification factor, $g_m = 2$ – 4 mA/V.

The Magnetron is a cavity resonator device used at centimetric wavelengths in Radar (q.v.) applications. The Klystron is also associated with centimetric wavelengths, and its power capacity is more limited than that of the Magnetron. Its main application is in the local oscillator circuits of receivers for use on such wavelengths. The Skiatron is very similar in action to the cathode-ray tube, but, unlike the latter, which produces a lighted trace on the tube screen, presents the phenomena to be examined as a dark trace on the tube face. It is thus very suitable for the display of navigational radar information. See ELECTRONIC COMPUTATION; ELECTRONICS; MECHANICAL DIFFERENTIAL ANALYSER; OSCILLATORS; RECTIFIERS; RADIOCOMMUNICATION; RADAR; TELEVISION; THYRATRON. See also A. J. Starr, *Radio and Radar Technique*, 1952.

Vampire, monster which figures largely in the superstitions of Russia, Serbia, and Poland, and which, with modifications, pervades the folklore of many peoples. It is primarily the spirit of a dead man, which, leaving the grave by night, sucks the lifeblood of sleepers till they waste away and die. See also DEMONOLOGY.

Vampire Bats, which are true blood-suckers, are found in S. America, and belong to the genus *Desmodus* of the order *Chiroptera*. They are small creatures, and suck the blood of man, cattle, and horses. The bats which are found in the genus *Vampyrus* feed on fruit and insects, and have no share in the dietary of *Desmodus*.

Van. 1. Il. of E. Turkey, in the neighbourhood of the V. lake. Pop. 176,203.

2. Cap of the above, on the E. shore of Lake Van. V. has a considerable trade in corn and rice, and manufs. cotton goods. The tn is prosperous and has good cafés, schools, and bazaars. It is supposed to have been a place of residence of Semiramis. There are many antiquities and cuneiform inscriptions of the kings of Ararat. V. is on the site of Thospia, cap. of the ancient kingdom of Blaina. Pop (1950) 13,471.

Vanadium, metallic chemical element, symbol V, atomic weight 51.0, atomic number 23, found in the minerals vanadinite (lead vanadate), pucherite (bismuth vanadate), mottramite (lead-copper vanadate), carnotite (potassium uranyl vanadate), and patronite (impure sulphide). The element is prepared by heating the dichloride in a stream of pure hydrogen. It is a greyish metal with a high melting point (about 1710° C.) and is used in making hard steels. V. forms 5 oxides, corresponding to the oxides of nitrogen, and 3 chlorides. The pentoxide, formed by burning the metal in air, gives rise to the vanadates. Many V. compounds find application in industry; thus the pentoxide is used as a catalyst in the manuf. of sulphuric acid, and in the oxida-

tion of naphthalene to phthalic anhydride, while ammonium vanadate is employed in dyeing leather, etc.

Vanadium Steel, see IRON AND STEEL.

Van Alstyne, Frances Jane, see CROSSBY.

Van Beers, Jan (1821-88), Flem. poet, b. Antwerp. He taught Dutch language and literature in Malines, in Lierre, and from 1860 at the Athenaeum in Antwerp. There is great warmth, vigour, and narrative skill in his songs and ballads, the chief of which are *Jongelingsdroomen*, 1853, *Levensbeelden*, 1858, and *Rijzende Blaren*, 1883.

Vanbrugh, Sir John (1664-1726), dramatist and architect, b. London, was controller of the Board of Works 1702-13. Although entirely untrained as an architect, he designed the huge mansions of Castle Howard (1699-1726), Blenheim (1705-20), Seaton Delaval (c. 1720), and many others; also much of Greenwich Hospital. He was one of the few Eng. architects to follow the Baroque style. As early as 1696, his first play, *The Relapse*, was produced; and this was followed by sev. others, including *The Provoked Wife*, 1697, *The False Friend*

VANCOUVER

National Film Board, Canada

Looking to the north-west from the Hotel Vancouver: an infra-red photograph.

Vanbrugh, Dame Irene and Violet, actresses, daughters of Prebendary R. H. Barnes of Exeter. *Irene V.* (Mrs. Dion Boucicault) (1872-1949) began her stage career at the Theatre Royal, Margate, in the rôle of Phoebe in *As You Like It*. Among her numerous parts were Rosalind in Barrie's play of that name, Agnes Ebb-smith in Pinero's *The Notorious Mrs Ebb-smith*, also Paula in the same dramatist's *The Second Mrs Tanqueray*, and Nina in *His House in Order*. See her autobiography *To Tell My Story*, 1948.

Violet V. (1867-1942) was also distinguished, among her many rôles being Queen Katharine in an all-star revival of *Henry VIII*, and Lady Carfax in *The Knave of Diamonds*. By the command of King Edward VII, she played Portia in *The Merchant of Venice* at Windsor Castle (1905). She also appeared in films, notably *Pygmalion*, 1938.

1702, and *The Confederacy*, 1705. His plays are distinguished by their wit and skill of situation, and he was a master of satire, which he used with great effect against the Puritans in *The Relapse*. V. was knighted in 1714. An ed. of the *Complete Works* in 4 vols. was pub. in 1927, the dramas ed. by B. Dobrée and the letters by G. Webb. See studies by C. A. Barman, 1924, and L. Whistler, 1938.

Van Buren, Martin (1782-1862), 8th President of the U.S.A., b. Kinderhook, New York, of Dutch descent. He devoted himself from early life to law and politics, and attached himself to the Democratic party, being elected to the U.S. Senate in 1821. He opposed the establishment of the state bank, supported war with England, and advocated the raising of the tariffs and the liberal extension of the franchise. He warmly

supported the candidature of Gen. Jackson for the presidency in 1828, and became successively governor of New York state, secretary of state, and vice-president of the Union, eventually succeeding Jackson as president in 1837. The early days of his presidency were mainly occupied in settling the national finances in order, a task in which he met with only partial success owing to the opposition of Congress.

seaport, on the S. shore of Burrard Inlet. It has a fine harbour, and steamships ply from it to all major world ports. W. terminus of the Canadian Pacific and Canadian National Railways, and N. terminus of the U.S. Great N. and N. Pacific Railways, it has an airport with daily services to prin. cities in Canada and the U.S.A., and weekly services to the Orient, Australia, and New Zealand. The city has many fine buildings and is

British Columbia Government Travel Bureau
TOTEM POLES AT NANAIMO, VANCOUVER ISLAND, B.C.

The country was upset by a financial panic and V. B. pressed his bill for an independent U.S. Treasury, which was finally adopted in 1840. He ran for the presidency in 1840 as a Democrat and in 1848 as Free Soil candidate. *See* life by E. M. Shepard, 1888.

Vancouver, George (1758-98) Brit. navigator, who accompanied Cook on his second (1772-4) and third (1776-80) voyages. In 1791-2 he was engaged in exploring the NW. coast of N. America from 39° 27' N. to 52° 18' N., including the is. which was named after him. A complete account of his voyage appeared in 1798. *See* W. Meany, *Vancouver's Discovery of Puget Sound*, 1907.

Vancouver, commercial metropolis of Brit. Columbia and Canada's chief Pacific

the seat of the univ. of Brit. Columbia. Chief industries: lumbering (of which it is the centre), canning, brewing, sugar refining, saw and flour milling, and shipbuilding. Pop. Greater Vancouver (1956) 658,813.

Vancouver, North, city of Brit. Columbia, Canada, opposite the city of Vancouver with which it is connected by the First and Second Narrows Bridge. Although essentially a residential and holiday resort, it has a large lumber assembly dock, and some canning, quarrying, and shipbuilding. It is the S. terminus of the Pacific Great F. Railway. Pop. 19,800; (with dist.) 25,719.

Vancouver Island, is. off the coast of Brit. Columbia, of which it forms part.

It is separated from the mainland by the straits of Juan de Fuca, Haro, Georgia, Johnstone, and by Queen Charlotte Sound. It was first circumnavigated by Capt. George Vancouver (1758-98), a Brit. navigator, in 1792, whence its name, it was estab. as a Crown colony in 1849 under the aegis of the Hudson's Bay Company. In 1866 it was united with the mainland colony of Brit. Columbia (estab. 1858) and the cap. was temporarily located at New Westminster. The is. is 282 m. long and has an area of 12,408 sq. m. with a deeply indented coast-line containing many deep-water harbours. The country on the S. and E. coasts is comparatively level; the interior is mountainous and heavily timbered. Gold, copper, and iron are found, and there are some important coal measures, but the chief wealth is in the forests.

Victoria (q.v.), the cap. of Brit. Columbia, is on S. tip of the is., as is Esquimalt, the naval station 3 m. away. Other tns are Nanaimo, Port Alberni, Duncan, Comox, Cumberland, and Courtenay.

Van de Graaff Machine is an electrostatic machine (q.v.) for the production of high voltages. It consists of a moving

belt of insulating material, one end of which is charged by passing near a point conductor attached to a high-tension supply (H.T. in fig.) at 5000-50,000 volts. The other end of the belt enters an insulated hollow conducting sphere, and the charge on the belt is collected by the pointed conductor (P). The action of the points depends on induction (q.v.), which produces an opposite charge on the points, and in consequence there is locally a high electric field leading to a point discharge. The charge is transferred to the sphere irrespective of the voltage on the sphere; a result of the inverse square law

of charges (see ELECTROSTATICS). The sphere can be charged to about 8,000,000 volts, provided the whole apparatus is enclosed in a tank containing a suitable gas at pressures up to 15 atmospheres and other precautions are taken to prevent sparking, e.g. a very high polish is made on the spheres and all corners rounded to prevent point discharge to the surroundings. The current obtained is small (up to about 50 μ A), but the voltage is very stable, not varying by more than a few thousand volts, and for this reason the generator has many important applications in atomic and nuclear research. See also CYCLOTRON.

Van de Velde, the name of 3 Dutch painters: *Willem the Elder* (c. 1611-93), appointed naval painter to Charles II of England (1667); *Willem the Younger* (1633-1707), son of the above, whom he succeeded as marine painter to Charles II (1679); *Adriaen* (1639-72), animal and landscape painter, son of the first, *b.* and *d.* at Amsterdam.

Van der Goen, Hugo, see GOER.

Van der Helst, Bartholomaeus, see HEELST.

Van der Meer, Jan, see MEER.

Van der Rohe, Ludwig Mies (1886-), German-Amer. architect, *b.* Aachen; learned the elements of building from his father, a master-mason, and was then apprenticed to a firm of architect-decorators. In 1905 he went to Berlin, entering the office of Behrens (q.v.) 3 years later. Here he met Gropius (q.v.) and 'Le Corbusier' (q.v.), and remained in this stimulating company till 1912. A year at The Hague followed; then the First World War; and in 1919 he returned to Berlin.

During the next 4 years, besides building some large flats for the city of Berlin, he produced some remarkable designs for skyscrapers, etc., and in 1930 became Director of the Bauhaus at Dessau on the recommendation of Gropius.

In 1937 he went to the U.S.A.: and in 1938 became Director of Architecture at the Illinois Institute of Technology at Chicago, for which he carried out important buildings from 1939 onwards. He also designed 2 very tall blocks of flats on the lake-side at Chicago in 1949 and 1951. See biographies by P. J. Johnson, 1947, 2nd ed. 1953, and by M. Bill, 1955.

Van der Waals, Johann Diderik (1837-1923), Dutch scientist, *b.* Leyden, celebrated for his researches upon the kinetic theory of gases and upon the continuity of the gaseous and liquid states of matter. His equation

$$\left(P + \frac{a}{V^2}\right)(V - b) = RT$$
 represents the actually observed relationship between the pressure, vol., and temp. of a gas much more closely than the simple law $PV = RT$. The constant b is, theoretically, equal to 4 times the real vol. of the molecules of the gas, while a is proportional to the attraction that the molecules exert upon one another.

Van der Weyden, Rogier, see ROGIER.

VAN DER WEYDEN.

Van Diemen, Anthony (d. 1645), Dutch explorer and colonial governor, b. Kullenberg. He went to India as a gov. accountant and in 1625 became a member of the supreme council. In 1631 he returned to Holland in command of the Dutch Indian fleet, and, the following year, was sent back as director-general. Later he became governor-general, in which capacity he greatly extended Dutch interests in the Far E. In 1642 he sent Abel Tasman on a voyage to the S., the result of which was the discovery of the is. which was named after him Van Diemen's Land, but which, at the instance of its Brit. colonists, was changed to Tasmania (q.v.).

Van Diemen's Gulf, between Coburg Peninsula and Cape Hotham and Melville Is., NW. Australia. It is 100 m. long by 60 m. broad.

Van Diemen's Land, see under TASMANIA.

Van Druten, John (1901-57). Amor. playwright and novelist, b. London, educ. University College School. At first he studied for the law, but he achieved fame as a playwright with *Young Woodley*, 1928. Subsequent plays included *After All*, 1929; *There's Always Juliet*, 1931; *Behold, We Live*, 1932; *The Disaff Side*, 1933; *Old Acquaintance*, 1940; *The Voice of the Turtle*, 1943, and *Bell, Book, and Candle*, 1950. He also wrote 2 plays based on works by other authors, *I Remember Mama*, 1944, and *I am a Camera*, 1951 (the latter based on Christopher Isherwood's Berlin stories). Other works included 4 novels, 2 autobiographical books, *The Way to the Present* and *The Widening Circle*, and *Playwright at Work*.

Van Dyck, Sir Anthony (1599-1641), Flem. painter, b. Antwerp, acquired the rudiments of his art from Van Balen. Some early religious paintings were noticed by Rubens, who made him an assistant, and V. D.'s hand can be traced in many works of that master. The Earl of Arundel induced him to visit England. James I gave him a pension, and, soon after, leave to travel to Italy, where he painted many notable portraits and acquired broader aesthetic horizons in studying Titian, Veronese, and Tintoretto. He returned to Antwerp, a rival of Rubens. To this period belong the beautifully modelled etchings made from studies in 'grisaille' of famous painters and others met on his travels in Italy. Once more he visited England (1632). Knighted and made Court painter, he received the patronage of Charles I, who arranged his marriage with Mary, daughter of Sir Patrick Ruthven. Fine portraits of the Royal family come from this time, 2 examples being the king's head from 3 points of view, for the Bernini sculpture, and the large equestrian portrait of the king.

V. D. next embarked on his remarkable record of the Eng. aristocracy. These paintings are scattered throughout the land in the collections of most of the oldest families. They are not entirely by V. D., who tended to work only on the

painting in the final stage, studio assistants doing the laying-in from V. D.'s careful drawing of head and body and notes on dress, decorations, ornaments, and general composition. He was always able subtly to flatter his sitter, and yet overcome his mannerisms to produce a fine picture if seldom a true revelation of character. V. D. owed little or nothing to Eng. tradition, but he estab. a formula for the grand style in portraiture which was to be accepted for generations. See lives and studies by L. Cust, 1900; M. Rooses, 1902; H. Stokes, 1905; E. Schaeffe, 1909; E. V. Lucas, 1926.

Van Eeden, Frederik Willem, see EEDEN.

Van Eyck, see EYCK.

Van Gogh, Vincent, see GOGH.

Van Leeuwenhoek, Anthony, see LEEUWENHOEK.

Van Lennep, Jacob, see LENNEP.

Van Lerberghe, Charles (1861-1907), Belgian poet, b. Ghent. He was educ. at the famous Collège de Sainte Barbe in Ghent. He won a large measure of fame with his best book, *La Chanson d'Ève*, 1904. His poetry is sensitive and beautiful, but the mystical symbolism makes much of its thought difficult to follow. See L. Christophe, C. Van Lerberghe, 1943.

Van Marrix, Philip de Sainte Aldegonde, see SAINTE ALDEGONDE.

Van Meegeren, Henricus Anthonius (Han) (1889-1947), Dutch painter and forger, b. Deventer. He made 8 fakes of 17th-cent. masters, including 'Christ at Emmaus,' a supposed Vermeer, which long imposed on the world.

Van Veen, Maerten, see HEEMSKERK, MAERTEN JACOBZ.

Van Wykswlei, see CARNARVON.

Vandals, The, Teutonic people of E. Germanic stock, originally inhabiting the area between the Vistula and the Oder. In the days of Aurelian (271) there was a Vandal wing to the imperial army, and the famous Stilicho was Vandal by descent. Under Constantine I (330) they made a home in Pannonia, many adopting the Arian Christianity which Wulfilas had taught. About 406 they began to swarm into Gaul, across the Pyrenees to Spain, where, after much bloodshed, they settled down with the Alans in Andalusia ('Vandalitia'). Genseric (q.v.) the V. king invaded Africa in 429. He captured Hippo (431) and Carthage (433) and was soon acknowledged master of the whole prov. In 455 he sacked Rome; and his pirate bands terrorised the Mediterranean. The V. decline began after Genseric's death in 477. In 534 Gellimer (q.v.), having suffered defeat at the hands of Justinian's gen. Belisarius, both at Ad Decimum and Tricameron, finally acknowledged the supremacy of Rome, and thus brought to an abrupt conclusion the independent hist. of his tribe. See L. Schmidt, *Geschichte der Vandalen*, 1901; F. Lot, *La fin du monde antique*, 1927.

Vandenberg, Arthur Hendrick (1884-1951), Amer. statesman, b. Grand Rapids, Michigan. He entered the Senate as a Republican in 1928. He gradually changed from a narrow nationalist

approach or isolationist outlook to a strong belief in international conciliation and a modified Amer. participation in the world structure. He became the Republican party's chief spokesman in foreign affairs. After the Second World War V. was a leading delegate to the U.N. Conference at San Francisco, the Foreign Ministers' Conference in Paris, and he worked staunchly for U.N.R.R.A. He also was of great influence in the development of a bipartisan foreign policy.

Vanderbilt, Cornelius (1794-1877), Amer. financier, b. Port Richmond, Staten Island (now part of New York City). Descended from Dutch ancestors exiled by religious persecution, at 16 he bought a boat and started a ferry, which he gradually developed into a large steamboat business round New York. In 1863 he started speculating in railways, acquiring enormous and commanding interests, and left a fortune of over £20m. By his will the Vanderbilt Univ. was founded. His eldest son Wm Henry V. (1821-85) joined him in business, acquiring further extensive railway control, and also left an immense fortune. See G. Myers, *History of the Great American Fortunes*, 1908-10; A. D. H. Smith, *Commodore Vanderbilt*, 1927.

Vanderbilt University, non-sectarian institution of higher learning for men and women at Nashville, Tennessee, founded in 1873. It comprises a college of arts and sciences and schools of engineering, law, religion, medicine, and nursing; and the average enrolment of students is about 3500. The total book resources in 1955 were 466,518 vols.

Vanderdecken, see FLYING DUTCHMAN.
Van Dine, S. S., pseudonym of Willard Huntington Wright (1888-1939), Amer. writer of detective stories, b. Charlottesville, Virginia. Educ. at Harvard, Munich, and Paris, from 1907 to 1914 he was literary critic for various papers. After the failure of a serious novel, *The Man of Promise*, he turned to detective fiction, using an old family name with the initials for 'steam ship.' Under this pen name *The Benson Murder Case*, 1926, was an immediate success, and *The Canary Murder Case*, which followed in the same year, was even more popular. Philo Vance, the languid hero of these books, in part reflected the personality of the author. The last of the crime mysteries, which all used the same formula for their titles, was *The Winter Murder Case*, 1939. See also DETECTIVE STORY.

Van Doren, Carl Clinton (1885-1950), Amer. critic and biographer, b. Hope, Illinois. He was educ. at the univ. of Illinois and at Columbia, where from 1911 to 1930 he was on the Eng. staff. From 1917 to 1921 he was general editor of the *Cambridge History of American Literature*. Said to be America's most popular biographer, he wrote lives of Thomas Love Peacock, 1911, James Branch Cabell, 1925, Dean Swift, 1930, Sinclair Lewis, 1933, and Benjamin Franklin, 1938, this last being awarded the Pulitzer Prize. His critical works include *The American Novel*, 1921, and *American and British*

Literature Since 1890, 1925, in which he collaborated with his brother Mark (q.v.). In 1947 he pub. an ed. of Benjamin Franklin's *Letters and Papers. Three Worlds*, 1936, is an autobiography.

Van Doren, Mark Albert (1894-), Amer. poet and critic, b. Hope, Illinois, younger brother of the above. He was educ. at the univ. of Illinois and Columbia, where he became prof. of English, and in 1924 he succeeded his brother as literary editor of the *Nation*. In 1940 he was awarded the Pulitzer Prize for his *Collected Poems*; later vols. are *The Seven Sleepers*, 1944, *The Country Year*, 1946, and *Spring Birth*, 1953. He also ed. *The Oxford Book of American Prose* and *An Anthology of World Poetry*. Among his critical works are studies of Thoreau, 1916, Dryden, 1920, Shakespeare, 1939, and Hawthorne, 1949, and he collaborated with his brother in *American and British Literature Since 1890*, 1925.

Vanduares, see PAISLEY.

Vane, Sir Henry (the Elder, 1589-1655), statesman, studied at Brasenose College, Oxford, was knighted in 1611, and from the next year held various posts in the royal household. He entered Parliament in 1614, and was employed on various missions and commissions. In 1640 he was made a secretary of state, but after his part in the condemnation of Strafford he was dismissed from this and his other offices in 1641 and joined the parl. party.

Vane, Sir Henry (the Younger, 1613-62), Eng. statesman, the eldest son of Sir Henry V. the Elder, b. probably at Debden, near Newport, Essex. He was educ. at Magdalen Hall, Oxford. After spending 2 years in America, where he was governor of Massachusetts (1636-7), he entered Parliament in 1640, in which year he was knighted. In 1641 he was, for his share in the impeachment of Strafford, dismissed from the treasurership of the Navy. He then joined the parl. party, and they appointed him to his old post, which he held until 1650. He took an active share in the negotiations with Scotland, and in 1648 was one of the commissioners who treated with Charles I at Newport, but he refused to take part in the king's trial. In the early years of the Commonwealth he was one of the leading spirits, but in 1653 he quarrelled on a political matter with Cromwell, by whom 3 years later he was imprisoned for a pamphlet against the Protector's arbitrary methods. After the Restoration, he was tried for high treason and executed on Tower Hill. V. was not a regicide, but his spirited defence against the charges brought against him made the Crown decide that he was 'too dangerous to let live.' He was one of the noblest of the Eng. Puritans, and was a leading champion of religious toleration. See life by J. Willcock, 1913.

Vane, Henry Vane Sutton (1888-), Brit. playwright. He began as an actor, but after writing two plays of no special note scored a signal success with *Outward Bound*, 1923. Later plays were *Time, Gentlemen, Please* and *Marine Parade*.

Vane-Tempest-Stewart, see LONDON-DERRY, SEVENTH MARQUESS OF.

Vänern, largest lake of Sweden, 87 m. long and 44 m. broad. It is very indented, and receives sev. rivs. Its shores are high and rocky in the N., open and shallow in the S., and are fringed by sev. is.

'Vanguard', Brit. battleship, see NAVY AND NAVIES.

Vanilla, genus of climbing orchids, natives of tropical Asia and America, with fleshy leaves and large white and yellow flowers. The V. of commerce is an aromatic used in the flavouring of confectionery and food. It is derived from the long dried pods of *V. planifolia*, which is extensively cultivated in tropical countries.

Vanini, Lucilio (1585-1619), It. free-thinker, b. Taurisano, wrote under the pseudonym of *Giulio Cesare*. He studied at Naples and Padua and was inflamed with the 'New Learning.' He was ordained priest, but soon embarked on a wandering life, preaching a modern anti-religious philosophy. Arrested (1618) on a charge of atheism, he was tortured and burned at the stake. His writings include *Amphitheatrum Aeternae Providentiae Divino-Magicum*, 1516, and *De Admirandis Naturae Arcanis*, 1616.

'Vanity Fair': 1. Political and social review founded in 1868, and in its earliest years the foremost 'society' paper of the day. The series of pencil caricatures of men of public note by Pellegrini, and, later, the chromolithographic caricatures, especially of legal celebrities, by the inimitable 'Spy,' were outstanding features. In 1929 the paper was incorporated in the Eng. ed. of *Harper's Bazaar*.

2. Women's monthly fashion and beauty magazine, founded in 1950 and designed to appeal to 'the younger, smarter woman.'

Vannes, seaport and cap. of the dept of Morbihan, France. It is the seat of a bishopric, and has a school for officers and N.C.O.s of the Reserve. There are agric., shipbuilding, woollen, and rope industries. As Veneti it was the cap. of the Celts. Pop. 28,200.

Vannin, see MAN, ISLE OF.

Vannucci, see PERUGINO.

Vansittart, Robert Gilbert Vansittart, first Baron of Denham (1881-1957), Brit. diplomat and publicist, b. Farnham, and educ. at Eton. He entered the Foreign Office and was secretary to Curzon, then foreign minister, from 1920 to 1924. He was chief diplomatic adviser to the Foreign Secretary from 1938 to 1941. V. was knighted in 1929 and made a peer in 1941. He circulated the views that the Germans were responsible, in large measure, for aggressive wars over a large period of time, tracing the Ger. predilection for aggression back to the time of Tacitus. After the Second World War he advocated strong measures to combat Communism. His many publications include his memoirs, *Lessons of My Life*, 1945.

Van't Hoff, Jakobus Hendrikus (1852-1911), Dutch chemist, b. Rotterdam;

studied anatomy, chem., and mineralogy in Holland, France, and Germany, and in 1878 was appointed prof. of chem. at Amsterdam. In 1896 he became prof. to the Academy of Sciences at Berlin. His great work in conjunction with Le Bel (q.v.) was in connection with stereochemistry. Taking up the discoveries of Wislicenus in connection with the lactic acids, he enunciated in 1874 his discovery that 'in carbon compounds which exhibit the property of rotating the polarised ray in either direction, the molecule in every case contains at least one atom of carbon combined in four different ways' ('Tilden'), and, later, taking up Kekulé's doctrine of the linking of atoms, he worked it out with great success. In 1894 he pub. a paper which threw much light on the perplexed subject of solutions in electrochemistry. In 1901 he received the Nobel prize for chem. See E. Cohen, *Jacobus Henricus van't Hoff: Sein Leben und Wirken*, 1912.

Vanua Levu, see FIJI.

Vanzetti, Sacco and, Case of, one of the most famous cases in the court annals of the U.S.A., grew out of the murder, on 15 April 1920 of the paymaster and a guard of a shoe-factory at S. Braintree, Massachusetts, and the theft of the money. In May two It. immigrants, Nicola Sacco, a shoemaker, and Bartolomeo Vanzetti, a fish-peddler, were arrested and charged with the crime. On 31 May 1921 they were tried by Judge Webster Thayer and a jury, and on 14 July were found guilty.

At that time there was a widespread intolerance of radical political opinions, and it was claimed by the defence that the accused did not have a fair trial owing to this feeling. Motion for a new trial was based upon the claim that the identification of the men was not complete. This was refused, as were other motions for new trials. In Nov. 1925 an Italian under sentence for another murder confessed that he had participated in the Braintree crime and exonerated Sacco and Vanzetti. Judge Thayer refused a new trial, alleging that the confession had been made solely that the criminal might delay his own execution. An appeal to the State Supreme Court failed, it being held that the trial judge had the final power to determine a matter of retrial. On 9 April 1927 Judge Thayer sentenced the men to the electric chair. A great outcry arose, not only in the U.S.A. but throughout the world at the thought that one judge should pass judgment upon all the facts and motions in the case, with no review by a higher court. Finally, a despairing appeal was made to Governor Fuller, who promised to review the papers in the case. At the same time he named President Lowell of Harvard Univ., President Stratton of the Massachusetts Institute of Technology, and Robert Grant to make an independent investigation. Both the governor and the committee found no ground for retrial or clemency, and the men were executed, 23 Aug. 1927, protesting their innocence to the last. There still remains in the minds of many lawyers a grave fear that

there was a miscarriage of justice. See O. K. Fraenkel, *The Sacco-Vanzetti Case*, 1931.

Vapereau, Louis Gustave (1819-1906), Fr. author, b. Orleans. He became a teacher of philosophy, then an advocate, and finally abandoned law for letters. His *Dictionnaire universel des contemporains*, 1858, and his *Dictionnaire universel des littératures*, 1877, are his best-known works.

Vapinicum, see GAP.

Vaporisation, see EVAPORATION.

Vaporising Oil, see KEROSENE.

Vapour, see GAS AND GASES.

Var: 1. Riv. of France, which rises in the Alpes Maritimes (see ALPS), and flows across the dept of Alpes-Maritimes to the Mediterranean 4 m. SW. of Nice (q.v.). Length 84 m.

2. Dept of SE. France, in Provence (q.v.), with a coast-line on the Mediterranean (including part of the Riviera, q.v.). It has a much-indented coast-line, is generally hilly and wooded (outliers of the Alps of Provence in the S.), and is drained by the Argens. The climate is warm and dry. Fruit, flowers, vines, and olives are produced in coastal dists., there are bauxite, lead, zinc, and salt deposits, and there are shipbuilding and armament industries. There are 2 arrons., Draguignan and Toulon (qq.v.). Resorts include Hyères, Fréjus, and St-Raphaël (qq.v.). The cap. is Draguignan. Area 2333 sq. m.; pop. 413,000.

Varangians, or **Varings**, name given by the Greeks and Slavs to the Norsemen who threatened Constantinople in the 9th and 10th cents. From 988 until the Turkish capture of Constantinople in 1453 there was a body of Varangians in the imperial guard.

Varazdin, tn in Croatia, Yugoslavia, on the Drava. It was a free city in the Middle Ages, and its anct fortifications remain. It has textile manufs., and is a growing industrial tn. Pop. 19,400.

Vardar, see AXIUM.

Vardö, seaport of the co. of Finnmark, Norway, at the entrance to Varanger Fjord. There is a 14th cent. fortress. Much cod-fishing is carried on, and fish and cod-liver oil are exported. Pop. 3100.

Varenus, Bernhardus (or **Bornhardus**), see GEOGRAPHY, *Exploration*.

Varese: 1. Prov. of Italy, in NW Lombardy (q.v.). It is in the Alps (q.v.), and is bounded on the N. and NE. by Switzerland. Lake Maggiore (q.v.) is on the W. boundary of the prov. There are iron, silk, and cotton industries. The prin. tns include V., Busto Arsizio, and Gallarate (qq.v.). Area 470 sq. m.; pop. 501,000.

2. It. tn. cap. of the prov. of V., 26 m. NW. of Milan (q.v.). It is a modern tn, with villas and gardens, and has a 16th-17th-cent. basilica, and an 18th-cent. palace. There are machinery, motor-car, furniture, textile, and brewing industries. Pop. 57,000.

Vargas, Gerulio Dornellas (1883-1954), Brazilian statesman, b. São Borja. He was the focus of the revolution of 1930, and was President of the Rep. from 1930

to 1934: he was again elected, but resigned in 1945. Dictatorial and forceful, he crushed Brazilian constitutionalism, and by his efficiency won support from classes which had formerly sided with the constitutionalists. Mounting economic problems of the post-war ministry which he formed in 1951 resulted in his suicide.

Vargas, Luis de (1507-1568), Sp. painter, b. Seville. He studied art in Rome, and was one of the leading Sp. artists of the Renaissance. His altar pictures and church frescoes are very fine, and particularly good examples can be found in Seville. See A. L. Mayer, *Die Sevillaner Malerschule*, 1911; V. von Loga, *Die Malerei in Spanien*, 1922.

Variable Stars. Many thousands of stars exist whose luminosity is variable; such stars are called V. S. The different characters of the variations led E. C. Pickering to group them into 5 classes according to their periods and features of variation. These are: (1) eclipsing variables; (2) cepheid variables; (3) long-period variables; (4) irregular variables; (5) novae or temporary stars. Eclipsing variables (sometimes known as eclipsing binary stars) differ from the other classes by the fact that they are not intrinsically variable in brightness. Their variations are caused by the mutual eclipses of the binaries, one component passing between the other and the earth, thus cutting off some of the light from the other, the amount of which depends on the inclination of their orbital plane to the line of sight of terrestrial observers. The best-known instance of this class is Algol, which consists of a bright and a comparatively dark star revolving around their common centre of gravity in 2 days 21 hrs. Cepheid variables are generally regular in period of variation and also in their light-curve, and have periods between a few hrs and about 50 days. For further information see STAR. Long-period variables include those stars whose periods range from about 2 months to 2 years or more, the greatest frequency occurring near the period of 300 days. The variation extends over sev. magnitudes, and in the case of α Cygni exceeds 8 magnitudes. These stars generally belong to the M,N,R,S spectral types and the most famous of this class is ϵ Ceti or Mira (q.v.). Sev. theories have been advanced to explain the causes of stellar variability, but these are open to various objections. The fact that many stars contract and expand rhythmically under the force of gravity in the first case and under increasing temp. in the second case, suggests that an explanation may be found here, but there are difficulties in accepting this as a final explanation. Irregular variables have a narrow range of variation—seldom more than half a magnitude and often less than this—and their behaviour is more or less unpredictable. The percentage of such variables increases with increasing redness of the stars. Betelgeuse is the brightest star among the irregular variables and it is known that this star varies considerably in its diameter,

but it has not been decided whether such pulsations keep in step with variations in brightness. Even if this were proved it would not necessarily follow that variations in the Cepheids were due to the same cause. Other well-known irregular variables are R Coronae Borealis and U Geminorum, the former remaining uniformly bright for a long time and then becoming much more faint, returning after a period which cannot be predicted to its normal condition. This star is typical of many others which behave in a similar manner. Others resemble U Geminorum, in which the light remains practically the same for a long time, but at intervals increases rapidly and afterwards fades more slowly. It is remarkable that while the R Coronae Borealis stars tend to congregate in the neighbourhood of the Milky Way the U Geminorum stars show no preference for this region. Novae or temporary stars rise quite suddenly and unexpectedly from obscurity or invisibility and appear in many cases as bright stars. See NOVAE.

Variation, Calculus of. In the differential calculus many problems arise in connection with finding values of a variable x for which a given function $f(x)$ is a maximum or a minimum. For instance, let us suppose that we have a line of definite length a and we want to divide into 2 parts so that the product of their lengths is a maximum, we proceed as follows. Let the length of one part be x , then the length of the other part is $a-x$, and the product, which will be called y , is $ax - x^2 = y$. To obtain the maximum or minimum values of the product we differentiate y with respect to the variable x , and obtain $dy/dx = a - 2x$. Equating this to zero we find $x = \frac{1}{2}a$, so the line would be bisected to give the maximum value. It is shown elsewhere how to use certain criteria to determine whether the value thus found is a maximum or minimum (see MAXIMA AND MINIMA).

This is a very simple case and the general problem is more complicated. The invention of the Calculus of Variations is due to John Bernoulli, who proposed the following problem in 1696 and solved it: A particle under the action of gravity is constrained to move from a point A to another point B along a smooth plane curve. What is the nature of the curve so that the time of descent is a minimum? It was shown that the equations of the curve were $x = a \sin^2 \theta$, $y = a(\theta - \sin \theta \cos \theta) + b$, where a and b are arbitrary constants. This curve is the well-known cycloid (see CURVE).

See I. Todhunter, *On the Calculus of Variation*, 1871; G. A. Bliss, *The Calculus of Variations*, 1925; A. R. Forsyth, *Calculus of Variations*, 1947.

Variation, in Biology. It is a matter of common observation that offspring differ to a certain extent from their parents. Such V. in plants and animals is of the greatest importance, since it provides a means whereby evolution has taken place; without V. evolution is clearly impossible. V.s are of 2 main kinds, *fluctuations*, which are small and continuous V.s in

size, colour, shape, and the like, as for instance gradations in the height of man, and *mutations* or sports, which are larger V.s such as those seen in the Manx cat, the Shirley poppy, the fastigiated Yew, and numerous mutations of the Evening Primrose (*Oenothera*) first described by de Vries. C. Darwin relied chiefly on fluctuations as providing the raw material for evolution, but the modern tendency is to regard mutations as more important, since they are definitely inherited. The cause of mutations must lie in some disturbance of the chromosomes, as for example, in a multiplication in their number, a phenomenon known as *polyploidy*. Mutation can be induced artificially, by such means as radium, X-rays, the plant derivative colchicine, and mustard oils, and it is possible that cosmic rays perform this role in nature. See also CHROMOSOME; EVOLUTION; EUGENICS; HEREDITY.

Variation, Magnetic, see DECLINATION, MAGNETIC.

Variations. One of the important musical forms, the principle of which is the statement of a theme followed by varied treatments of it, sometimes with a restatement of the theme in its first form at the end (e.g. Bach's *Goldberg V.*), sometimes with a more elaborate final section, such as a fugue (e.g. Beethoven's *Eroica V.* for piano, or Brahms's *Handel V.* for piano), a passacaglia (e.g. Brahms's *Haydn V.* for 2 pianos or orchestra). There is at least one instance (d'Indy's *Jstar*) where the theme does not appear in its primitive form until the end. Historically the V. principle goes back as far as instrumental music, but sets of V. first emerge towards the end of the 16th cent., especially in England and Spain. The Eng. virginal masters wrote sets on popular tunes for their instruments and another favoured medium for V. was the lute. In 17th cent. England, V. were called *Divisions* because they split up the theme into smaller rhythmic patterns, and they could be based on a Ground, i.e. an unchanging bass. The later hist. of the form continues to show the two different tendencies of (1) varying the tune, and (2) maintaining the foundation of the same bass, with greater or less incidental changes while the superstructure can be handled very freely and need not keep to the melodic tune of the theme at all. Mozart's V. for example, are predominantly melodic, and so are Beethoven's earlier sets, but the latter reverts to the 'ground' type by keeping chiefly to the harmonic framework in such a work as the *Diabelli V.*, and in the 32 V. for piano he keeps so close to the bass that the work is more like a passacaglia, which is true also of the finale of Brahms's fourth Symphony. In Elgar's *Enigma V.* for orchestra each one of which represents a portrait of one of the composer's friends, and in R. Strauss's *Don Quixote*, the form is complicated by an element of programme music (q.v.).

Varicose Veins, condition in which the veins are enlarged, being increased in length as well as in girth. The valves of

the veins are incompetent and allow the blood to leak past them in a direction away from the heart. They are found in the lower part of the body, affecting the lower leg and thigh, causing haemorrhoids or piles in the rectum if the rectum be involved, and varicocele when the spermatic cord is affected. They are caused by occupations involving a great deal of standing, constriction such as that caused by tight garters, or pregnancy; or may be associated with general debility or a hereditary tendency. V. V. tend to become worse if left untreated. They may rupture and become ulcerated. A mottled appearance of the legs is a less serious condition caused by enlargement of superficial veins when the legs are placed regularly too near a fire.

Variety, see VARIATION; CLASSIFICATION, PLANT.

Variola, see SMALLPOX.

Varlus, Rufus Lucius, Rom. poet of the 1st cent. BC. Maecenas was his patron, and he was a friend of Horace and Virgil, becoming a literary executor of the latter (19 BC). His tragedy *Thyestes* was highly valued, and he also wrote epics. Only fragments are extant.

Varley, Cornelius (1781-1873), water-colour painter, younger brother of John V. (q.v.), b. London. He exhibited occasionally in the Royal Academy, and was also the inventor of various scientific instruments. His works consist chiefly of carefully finished classical and architectural subjects, and also some figures.

Varley, John (1778-1842), water-colour painter, b. Hackney, became a successful art teacher in London, but made several sketching tours amid the picturesque and inspiring scenery of N. Wales. He exhibited in the Royal Academy, and his output was very large. He had a great number of pupils, including W. H. Hunt, John Linnell, and Turner of Oxford. He believed in astrology and was the friend of Blake, who drew his 'visionary heads' at V.'s house.

Varmland, län (co.) of Sweden, to the N. of the Vener Lake, and bordering on Norway. Forestry is carried on, and there are mines and sev. industries in the E. part. Area 7427 sq. m.; pop. 272,500.

Varna (called *Stalin* in 1949; anct. *Odessus* or *Tiberiopolis*), city of E. Bulgaria, cap. of V. prov., built on a sandy isthmus on the Black Sea, 230 m. ENE. of Sofia (q.v.). It was founded by the Greeks in the 6th cent. BC, and was subsequently ruled by the Romans and the Byzantines. It was in the hands of the Bulgarians in the 13th-14th cents. It was sacked by the Turks in 1391, and the Turks defeated the Hungarians here in 1444. It was ceded to Bulgaria in 1878. There are anct churches and mosques, a univ., and a naval academy. The port is busy, there is a spa, and there are engineering (including shipbuilding), textile, leather, foodstuffs, and other industries. Pop. 78,000.

Varnhagen von Ense, Karl August (1785-1858), Ger. author, b. Düsseldorf. In 1814 he married Rahel Levin, a christianised Jewess and a remarkably

cultured woman, who gathered round her the chief men of letters and savants of her day. V. is chiefly famous as a biographer; among his works are *Musenalmnach*; *Goethe in den Zeugnissen der Mitlebenden*, 1823, *Biographische Denkmale* (5 vols.), 1824-30. His correspondence with Carlyle and with his wife has been pub. See study by C. Misch, 1925; and a life of Rahel by L. Feist, 1927.

Varnish Tree, evergreen tree, *Aleurites cordata*, of the family *Aria cardaceae*. It flourishes in China and the E. Indies; its timber is one of sev. kinds known as *lignum vitae*. It owes its name to the lac in its seeds, a resinous secretion exuded by certain insects.

Varnishes are transparent surface coatings consisting of resins or resins and oils thinned with suitable solvents. The simple resin solutions are usually called spirit V., having no exterior durability, and are hard and brittle, although additions of plasticisers may to some extent offset this. A typical spirit varnish would consist of soft Manila copal in methylated spirit or industrial alcohol, and is sold as crystal paper varnish. Alcoholic solutions of Sandarac resin are used for coating maps and drawings, etc. The term varnish is, however, mainly used to describe solutions of resin in oil, thinned with turpentine (q.v.), white spirit, or other suitable solvents. For many years the natural resins were employed exclusively for this purpose. These are derived from fossil or more recent forest remains, and usually bear the name of the dist. of origin, e.g. Congo copal or Sierra Leone copal. Natural resins have to undergo a process known as 'running', which consists of heating them at a temperature of over 300° C. in a varnish pot so that certain chemical changes take place and acidic fumes are driven off, to the extent of about 25 per cent of the weight of the resin. Linseed oil is then introduced little by little, and the cooking process continued until the varnish is of the right 'body' or thickness. Driers and turpentine or white spirit are then added and the finished varnish is allowed to stand for several months, both to mature and to allow dirt and other undesirable impurities to settle. Whilst considerable quantities of V. based on natural resins are still made, synthetic resins are being increasingly used for varnish manufacture. V. made from phenolic resins are more resistant to water and chemical attack, and V. based on alkyl resins have better gloss retention and greater durability. A further group is often classified with V., this being the solutions of pitches and asphaltums, either alone or in admixture with resin and/or oils. These, however, are not strictly speaking V. or paints, but occupy a position on their own.

See H. W. Chatfield, *Varnish Constituents*, 1953. *Paint and Varnish Manufacture*, 1955.

Varnsdorf (Ger. Warnsdorf), Czechoslovak town in the region of Liberec (q.v.). It is a railway junction and has textile manufs. Pop. 15,700.

Varro, Gaius Terentius, Rom. gen. Of low birth and ultra-democratic opinions, he was chosen, despite the opposition of the aristocracy, to bring the war against Hannibal to an end (216 bc). His fellow consul, L. Aemilius Paulus, was one of the leaders of the aristocratic party. The two consuls were defeated by Hannibal at the historic battle of Cannae (q.v., and also ROMAN HISTORY), which was fought by V. against the advice of Paulus, who was killed in action. V. was one of the few who escaped and was subsequently made responsible for the disaster. His conduct after the battle, however, in organising precautionary measures against the Carthaginians, won high praise. He was ambas. to Philip of Macedon, 203, and to Syphax, King of Numidia, 200 bc.

Varro, Marcus Terentius (116-27 bc), Rom. antiquary, b. Reate. He fought for Pompey in the Civil war, but was allowed by the second triumvirate to retire into private life (c. 42 bc). V. is known to have written about 70 works on antiquarian subjects and 150 Menippean satires; but, apart from numerous fragments, we possess only the *De Re Rustica* and 6 of the 25 books of *De Lingua Latina*. A good deal of information derived from his *Antiquitates Rerum Humanarum et Divinarum* has been preserved by Aulus Gellius, Macrobius, and St Augustine (*De Civitate Dei*). See the ed. of *De Re Rustica* by G. Goetz, 1922, of Books V-X of *De Lingua Latina* by F. Schoell and G. Goetz, 1910. Both these works have been ed. with trans. in the Loeb Library, the former by W. D. Hooper and H. B. Ash, 1934, the latter by R. G. Kent, 1938.

Varuna (cf. *Gk Ouranos*), anct Vedic god of day; also the god of water.

Varve-analysis, the method of counting annual layers in sedimentary geological deposits with the object of obtaining a relative chronology. In Sweden, where this scientific method of dating the past was first studied by Baron de Geer in 1878, each layer or varve was regarded as a year's accumulation of silt in the melt-water of an ice-sheet, and a continuous sequence along the retreat of the ice-sheet was demonstrated. There have been attempts to correlate the varveseries in Sweden with that in America, but such teleconnections are not yet established to the satisfaction of all archaeologists. See F. E. Zeuner, *Dating the Past* (1950 ed.), Chapter 2. See also ARCHAEOLOGY.

Varves (Swedish, *varv*, a complete turn or circle), laminae in a clay or similar sediment which each represent the deposit of a single year. Varved clays are formed in lakes to which the supply of water shows a seasonal variation, due to the summer melting of glaciers, or to the alternation of wet and dry seasons. This variation affects the nature and abundance of the sediment deposited, and a single varve may therefore show a regular change of colour or grain-size from bottom to top. Since the seasonal cycle is repeated year after year, successive V. resemble each other in appearance. If it can be estab. that a laminated clay is a

varved deposit, and that each varve represents the accumulation of a single year's sediment, it is possible by counting the number of V. to find the length of time taken by the accumulation of a given thickness of rock, and this method of dating has been used in the study of varved sediments deposited around the fringes of the great Pleistocene ice-sheet in Canada and Scandinavia.

Vas County, see SZOMBATHELY.

Vasa, Gustavus, see GUSTAVUS.

Vasari, Giorgio (1511-74), It. historian of art, b. Arezzo. He studied under Michelangelo, and during his lifetime was famous as a painter and architect but it is now recognised that his paintings lack inspiration. He is chiefly remembered as an art historian unbiased and with a very engaging literary style. There is critical merit besides trustworthy fact in his celebrated *Lives of the most eminent Painters, Sculptors, and Architects*, 1550; an Eng. trans. has been reprinted in the Everyman's Library (1949). It was partly rewritten and enlarged in 1568, and contains his autobiography. See W. Kallab, *Vasari-Studien*, 1908.

Vasco da Gama, see GAMA, VASCO DA.

Vascongados, see BASQUES.

Vascongadas, Provinolas, see BASQUE PROVINCES.

Vascular System (Lat. *vasculum*, a little vessel), of animals. This is the system of tubes, present in most animals, and conveying blood to and from different parts of the body. See also CIRCULATION OF THE BLOOD, COMPARATIVE; HEART. **Vascular System**, of plants, is a series of cells and vessels conducting sap from the roots to the leaves, and the soluble products of photosynthesis from the leaves to various parts of the plant. In the higher plants the vascular tissue consists of wood or xylem and bast or phloem, but in the lower plants, such as the mosses and liverworts, there are merely conducting strands of thicker-walled cells. In stems (q.v.) the xylem and phloem masses are collateral; in roots (q.v.) they alternate. They may be arranged in separate vascular bundles, as in the Phanerogamia (q.v.), or in concentric cylinders, the phloem being outermost, as in many Ferns (q.v.). As girth increases, more vascular tissue may be formed by the activity of the cambium (q.v.) in secondary growth. See L. J. F. Brimble, *Intermediate Botany*, 1953.

Vase, see references under CERAMICS; see also PORTLAND VASE.

Vaseline, term coined by Robert A. Chesebrough about 1870 and used by Chesebrough Manufacturing Company, Consolidated, as its registered trade mark upon the company's line of products, the chief of which is petroleum jelly, which is a semi-solid mixture of hydrocarbons, distilled from petroleum and purified, and used largely as an unguent, lubricant, etc.

Vassal, see FEUDALISM.

Vassar College, New York, for the higher education of women, was founded by Matthew Vassar (1792-1868) in 1861. It occupies about 950 ac. at Pough-

keeps, 3 m. from the Hudson R., and has 75 buildings, including a fine library (300,000 vols.), chapel, art gallery, hall of casts, etc. In 1956 the number of students was 1400. Faculty, administration, and staff number more than 350.

Västerås, or **Vesterås**, cap. of the co. of Västmanland, Sweden. It is an old tn. with a cathedral and an episcopal library. Pop. 68,276.

Västerbotten, or **Vesterbotten**, co. of Sweden, between Norway and the Gulf of Bothnia. Lumbering is important. Cap. Umeå. Area 22,839 sq. m.; pop. 236,562.

Västernorrland, or **Vesternorrland**, co. of Sweden, between Jämtland and the Gulf of Bothnia. Lumbering is important and there are exports of wood pulp. Cap. Hemse. Area 9925 sq. m.; pop. 279,300.

Västmanland, or **Vestmanland**, co. of Sweden, between Uppsala and Örebro. Iron and silver are mined, and iron goods and pig iron produced. Cap. Västerås. Area 2611 sq. m.; pop. 213,723.

Vasto, lt. tn. in Abruzzi e Molise (q.v.), 31 m. ESE. of Chieti (q.v.). It is on the Adriatic coast, on high ground overlooking fine beaches, and is known for its olives. Wine, bricks, and silk are also produced. Pop. 20,500.

Vat Dyes, see **DYE**.

Vatican, **The**, residence of the Popes since their return from Avignon in 1377. Previously the home of the Popes had been the Lateran, but they had long possessed a palace in the Vatican hill next to St Peter's. In 1377 the Lateran palace was in ruins, and Pope Gregory XII decided to make the V. his permanent residence. Subsequent building has made it a vast collection of edifices, containing over 4000 rooms, used mainly for museums or administrative purposes. The residential part is relatively small. Among its artistically famous units are the chapel of San Lorenzo (built under Nicholas V. d. 1465), the Appartamento Borgia (built under Alexander VI. d. 1503), the world-famous Sistine Chapel (built under Sixtus IV. d. 1484), containing the masterpieces of Michelangelo ('The Last Judgment' and the 'Creation'), Botticelli, and Ghirlandajo, and the Loggia of Julius II (d. 1513). The actual residence of the Pope is of later date, being built under Sixtus V (d. 1590), and Clement VIII (d. 1605). Adjoining the palace are the Museums, 5 in number, containing the finest collection of Graeco-Rom. sculpture in existence, and including Egyptian and Etruscan depts. In the Pinacotheca and elsewhere are the choicest works of Raphael, Perugino, Domenichino, and Titian. The grand corridor of the V. library is the longest room in the world, being 1 m. in length. The V. is also an institute of scientific research, for which its archives (35,000 vols. and 120,000 letters, documents, etc.), and its library (upwards of 356,000 vols. and 60,000 documents) make it the most important centre for historical research in the world. There is also a V. observatory, the Polyglot Press, and

the Galleria Lapidaria, containing 6000 stone inscriptions.

The V. is also the administrative centre of the Rom. Catholic Church. Here are held conclaves for the election of the Pope, consistories for the creation of cardinals, and here a number of the Rom. congregations (i.e. depts for the administration of Church affairs) hold their meetings. In particular, the cardinal secretary of state, i.e. the cardinal in charge of foreign policy, has his offices in the V. The ensemble of buildings covers an area of 1151 ft. by 767 ft., and represents one of the most historic architectural records of the world. The policing of the V. is mainly in the hands of the famous Swiss Guards, formed by Julius II in 1505.

Vatican City, area adjacent to St Peter's, being the independent state governed by the Pope, and the smallest state in the world (108 ac.). It lies almost entirely N. and W. of the basilica of St Peter and is bounded by the Piazza di San Pietro, the Via di Porta Angelica and the Via di Leone IV on the E.; the Viale Vaticano with very high walls completes the enclosure on the other sides. The pop., i.e. those having permanent residence in the Vatican, is about 600. The V. C. has its own governor, post office (with stamps), coinage, law courts, and railway train, connecting with the lt. station of S. Pietro in Trastevere. Cavour had tried to settle the Rom. question but had failed; negotiations begun in 1926, ended in the signing of the Lateran treaty between Cardinal Gasparri and Mussolini on 11 Feb. 1929, by which the Papal states were renounced by Pope Pius XI and Città del Vaticano (V. C.) came into being. Its neutrality was violated by the Germans in 1943, when they occupied it with paratroops. See also **VATICAN** and **CHURCH, STATES OF THE**.

Vatican Council, last oecumenical Council of the Rom. Catholic Church, 1870. It is principally famous for the promulgation of the doctrine of papal infallibility. The Council opened on 8 Dec. 1869, with about 600 members present. A considerable number of the bishops considered such a definition inopportune, but the majority favoured it, and finally, on 18 July 1870, 433 out of 435 persons present voted for the definition. In England Newman and Acton, who had considered it inopportune, submitted afterwards. In Germany Dollinger rejected it and founded the denomination known as the Old Catholics. The Council also promulgated an important constitution on the relationship between faith and reason. See C. Butler, *The Vatican Council*, 1925.

Vatnajökull, perpetual icefield in the SE. of Iceland, by far the largest in Europe, with an area of c. 3300 sq. m. Except for Óraefjökull (q.v.), in reality part of it, the maximum altitude of V. is 6562 ft. Under this colossal mass of ice are several volcanoes which are constantly more or less active, and eruptions are fairly frequent. They always cause some damage, and sometimes work fearful havoc, for they are accompanied by

terrific floods, the fire melting the ice and breaking it up into huge icebergs, which then are carried along by the floods. V. was first crossed in 1875, by an Englishman, W. L. Watts. See his *Across the Vainä Jökull*, 1876.

Vätter, lake of Sweden, connected with the Baltic Sea and Lake Vänar by means of the Göta Canal. 75 m. long, and just over 10 m. wide, its picturesque shores and clear limpid waters make it one of the most beautiful lakes in Sweden. It is dotted with is., one of the chief being Visingsö.

Vauban, Sébastien le Prestre de (1633-1707), marshal of France, and military engineer, b. St. Léger. He served under Condé in Spain, and in 1658 he was France's chief engineer under Turenne. In 1678 he became 'commissaire-général des fortifications' and proceeded to strengthen the frontier defences, building the fortresses of Landau and New Breisach, etc., and rebuilding Strasbourg (1681). But besides constructing or improving over 150 strongholds, he conducted 40 sieges, including those of Lille (1662), Maastricht (1673), Cambrai (1677), Ghent (1678), Namur (1692), and Old Breisach (1703). Made a marshal of France in 1703, his latter days were darkened by royal displeasure and neglect. See also FORTIFICATION. See lives by D. Halévy (Eng. trans., 1924); P. Lazard, 1934; Sir R. Blomfield, 1938.

Vaucluse, dept. of SE. France, lying on the E. bank of the lower Rhône (q.v.) and the N. of the Durance (q.v.). It consists of parts of the Comtat Venaissin and Provence (q.v.). In the E. it contains outliers of the Alps of Provence, and it is drained by the Eygues, Sorgue, Ouvèze, and Coulon Rs. It is known for its wines (Châteauneuf-du-Pape), and for its fruit. Olives, cereals, silk, and live-stock are also produced. The chief industries are the manuf. of textiles, chemicals, and food-stuffs. There are 3 arrons., Avignon, Carpentras, and Apt (q.v.). The cap. is Avignon. The name V. comes from a vil., 15 m. E. of Avignon, where there is a spring (the origin of the R. Sorgue) celebrated by Petrarch (q.v.). Area 1387 sq. m.; pop. 268,350.

Vaud (Ger. Waadt), canton of SW. Switzerland. The canton is in the shape of a triangle, the base of which extends along the N. shore of Lake Geneva. The chain of the Jura Mts cuts through it in a SW. to NE. direction. The ter. of V. was owned successively by the Romans (Bo), the French, the emperors of Germany, the Dukes of Zähringen, and the house of Savoy. It did not become an independent canton until 1798, and entered the Confederation in 1803. V. is the most prominent vine-growing canton in Switzerland. Wine, chocolate, tobacco, clocks, and condensed milk are among the chief objects of industry or export. Salt is mined in Bex dist. Cap. Lausanne (q.v.). Area 1238 sq. m.; pop. (1955) 392,800, French-speaking, mainly Protestant.

Vaudeville, play in which dialogue is interspersed with songs. The word is a

corruption of Vaux de Vire, the name of 2 valleys in Normandy. In the 15th cent. one Olivier Basselin, of Vire, composed a number of drinking songs, which spread over France, bearing the name of their native place. V. in the U.S.A. has the same implications as variety in Great Britain.

Vaudois, see WALDENSES.

Vaughan, Charles John (1816-97), divine, b. Leicester, and educ. at Rugby and Trinity College, Cambridge. V. was ordained in 1841 and appointed to his father's former par. In 1844 he was chosen for the headmastership of Harrow, which position he held with distinction until his resignation in 1859. He then began to train groups of men for ordination, and continued this work when he accepted the mastership of the Temple in 1869, and the deanery of Llandaff in 1879. Numerous religious works and sermons were pub. by him, his first vol. being *Memorials of Harrow Sundays*, 1859.

Vaughan, Henry (1622-95), poet, b. Llansantffraed, Brecknock. As a native of the land of the anct Silures, he called himself 'Silurist.' Educ. at Oxford and London, he settled as a physician at Brecon and Newton-by-Usk. He seems to have served in the Royalist forces, though no exact details are known. His first book, *Poems, with the Tenth Satire of Juvenal Englished*, appeared in 1646. *Olor Iscanus* (The Swan of Usk), a collection of poems and trans. was surreptitiously pub. in 1651. About this time he had a serious illness which led to deep spiritual impressions, and thereafter his writings were almost entirely religious. *Silex Scintillans: Sacred Poems and Private Ejaculations*, 1650, his best-known work, consists of short poems full of deep religious feeling; it contains 'The Retreat,' a short, exquisite poem which suggested to Wordsworth his 'Ode on the Intimations of Immortality.' V. is an unequal poet, and even at his best not so careful an artist as George Herbert, but also at his best he is the more imaginative poet, if with less of tender fancy. His *Complete Works* were ed. by A. B. Grossart, 1871, and *Poems* by E. K. Chambers, 1896. See E. Blunden, *On the Poems of Henry Vaughan*, 1927; Elizabeth Holmes, *Vaughan and the Hermetic Philosophy*, 1932; F. E. Hutchinson, *Henry Vaughan: A Life and Interpretation*, 1947.

Vaughan, Herbert Alfred (1832-1903), cardinal, b. Gloucester. He was first educ. at Stonyhurst, thence went to a Jesuit school at Brugesette, Belgium, and afterwards to Rome in 1851 to study for the priesthood. At Manning's suggestion, V. was chosen to succeed Dr Turner as Bishop of Salford in July 1872. On the death of Manning in Jan. 1892, he was appointed Archbishop of Westminster, and enthroned at the cathedral, Kensington, 8 May. The following year he received a cardinal's hat from the hands of Leo XIII. He founded St Joseph's College for foreign missions at Mill Hill. In July 1894 V. started his great project for erecting a cathedral at

Westminster, which he lived just long enough to see consummated. See life by J. G. Snead-Cox, 1910.

Vaughan Williams, Ralph (1872-), composer, b. Down Ampney, Gloucestershire, educ. at Charterhouse and Trinity College, Cambridge. He studied music at the Royal College of Music in London (1890-2, 1895-6), and later briefly with Bruch in Berlin and Ravel in Paris. He took the Mus.D. at Cambridge in 1901 and made his first major success with *Toward the Unknown Region* at the Leeds Festival of 1907. After serving in the First World War he was appointed prof. of composition at the Royal College, where for some 30 years he had many pupils who have since made distinguished careers. He received the Order of Merit in 1935. Although a great upholder of the finest Eng. musical traditions and an ardent enthusiast for Eng. folksong, he was also progressive, so much so that he was often represented among many far younger men at the festivals of the International Society for Contemporary Music in various European centres. Even in works written when he was nearing his eightieth year, such as the sixth Symphony and the *Sinfonia antartica*, he enterprisingly introduced new ideas or devices, and the fourth Symphony of 1935 is as audacious as any work contemporary with it. His very large output includes the operas *Hugh the Drover*, 1922, *Sir John in Love*, 1929, *The Poisoned Kiss*, 1936, *Riders to the Sea* (Synge), 1937, and *The Pilgrim's Progress*, 1922; the masque for dancing *Job* (after Blake's illustrations), 1930; incidental music for *The Wasps* of Aristophanes, 1909; church and film music; very many choral works, e.g. *A Sea Symphony*, *Flos Campi* (with solo viola), oratorio *Sancta Civitas*, *Magnificat*, *Dona nobis pacem*, *Five Tudor Portraits*; *Serenade to Music* (Shakespeare) for 16 solo voices and orchestra; much orchestral music, e.g. *A London Symphony*, *Pastoral Symphony*, Symphonies Nos. 4-9, *Fantasy on a Theme by Tallis* for strings; *The Lark Ascending* for violin and orchestra, and var. concertos; 2 string quartets; *On Wenlock Edge* (Housman) for tenor, string quartet, and piano; many song cycles and separate songs. His splendid hymn-tune *For All the Saints* is known to thousands who have never heard any other music of his and to many who perhaps do not even know his name. See books by H. Foss, 1950, and P. M. Young, 1953; also studies on separate aspects in *Musical Pilgrim* series by A. E. F. Dickinson and F. Howes.

Vault, in architecture, a continuous arch of brick, stone, or concrete, forming a self-supporting roof over a building or part of a building; also, a vaulted structure, e.g. under a street-pavement. The principle of the V. was known in Babylonia and Egypt 6000 years ago; but was rapidly developed by the Romans, who made great strides in their skillful use of concrete; by the Sassanid rulers of Persia in the 6th-7th cents AD, using brickwork on the grand scale;

and by medieval builders throughout E. Europe.

The Romans used barrel V.s or tunnel V.s: the line of intersection of such V.s is called a 'groin' (see A in illustration). Barrel V.'s were thick and heavy. During the Romanesque period they were lightened by the introduction of stone ribs, carrying a thin stone 'web,' just as the steel ribs of an umbrella support the thin cover. The resulting V., however, also assumed the convex shape of an umbrella (B). This led to various difficulties, especially where the nave of a church was twice the width of each aisle; because the wide round arch of the nave was far taller than the narrow arches over the aisles. In the early Gothic period, however, the introduction of pointed arches (C) solved this problem; for they could be made more or less pointed to suit the varying widths of nave and aisles, and thus it became possible to construct a vaulted roof of which the top (or 'crown') was level at the ridge. Vaulting grew progressively more complicated during the later Gothic period, as intermediate ('lierne') ribs were added, and the thickness of the stone 'web' was reduced to 6 in. or so, while the use of massive buttresses enabled walls between the buttress to be much thinner, and to be pierced over much of their surface for great windows of stained glass. Thus a late-Gothic vaulted building became a skeleton of stone ribs and buttresses.

Fan vaulting, peculiar to England and introduced during the last phase of Gothic, went even farther (D); and elaborate but superfluous carved stone pendants were hung to the underside of the vaulting for purely ornamental purposes. The conoidal underside of the V. was carved into tracery, thus producing the effect of a fan as seen from below—hence the name. (See diagram, p. 408.)

Vauquelin, Louis Nicolas (1763-1829) Fr. analytical chemist, b. Saint-André, Normandy. He obtained an introduction to Fourcroy (q.v.) and was then able to devote his time to chemical analysis. V. held various posts, including those of prof. of chemistry at the Collège de France, commissioner on the pharmacy laws, and eventually succeeded Fourcroy on the faculty of medicine at Paris (1809). He discovered chromium, glucina (beryllium), and, with P. J. Robiquet, asparagine. He is also known as the discoverer of quinic acid and other naturally occurring compounds; he conducted valuable researches in lactic acid, alum, and naphtha.

Vauquelin de la Fresnaye, Jean, Sieur des Yveteaux (1536-1608), Fr. poet, b. at the château of La Fresnaye, near Falaise, studied classics at Paris and law at Poitiers and Bourges. He is notable as the author of *Satyres françaises*, addressed to various distinguished contemporaries, the earliest collection of regular satires in France, which were, however, to a great extent borrowed from the Italians Sansovino and Ariosto. An admirer of Ronsard, his *Art Poétique*, 1575, formulated the tenets of the Pléiade. He was

author also of *Idylles*, with sonnets and epigrams, which appeared in 1605.

Vauvenargues, Luc de Clapiers, Marquis de (1715-47), Fr. writer and moralist, b. Aix-en-Provence. In 1741 V. was in garrison at Metz, and during the terrible retreat from Prague had both legs badly frost-bitten. Ruined in health, in 1745

Vauxhall, dist. and a parl. division in the bor. of Lambeth, London, once famous for its pleasure gardens (opened in 1660 and closed in 1859).

Vavau, one of the 3 main groups of is. of the Kingdom of Tonga.

Vazov, Ivan Minchev (1850-1921), Bulgarian author. At school he acquired

DIAGRAM SHOWING DEVELOPMENT OF ENGLISH VAULTING

A, Roman Intersecting Barrel Vaults (X = Groin); B, Romanesque Ribbed Vault; C Gothic Ribbed Vault; D, Late Gothic Fan Vault from Henry VII's Chapel, Westminster.

he settled quietly in Paris, and devoted himself to literature. The bulk of his work is small, but its merits are very considerable. His interest lies in the social institutions of man, and the play and development of human forces. His work was little noticed at the time, but has since steadily risen in fame. The *Œuvres complètes de Vauvenargues* were pub. by C. de Saint-Maurice in 1821; a new ed. by D. L. Gilbert in 1874; and a selection ed. by G. de Champris, in 1942. See F. Lee, *La Bruyère and Vauvenargues*, 1903, and a study by F. Vial, 1938.

Vaux, Vicomte de Melun et de, see FOUQUET, NICOLAS.

a good knowledge of Russian and Fr. literature. His meeting with Karavelov (q.v.) and Botev (q.v.) in Rumania turned him to literature, which he was the first Bulgarian to adopt as a profession. He was compromised in the revolt of 1876, but escaped, to return next year with the liberating Russian army. From then on he lived in Bulgaria and Rumelia, except for a period of exile (1886-9) in Russia, where he wrote *Under the Yoke*, his most famous novel. He was minister of education from 1897 to 1899. Prolific in many genres, he excels as a poet and short-story writer. Everything he wrote was inspired by a great but clear-sighted

love of his country and his people, a love that is returned, for Bulgarians consider him their greatest author. He was a master of language, and immensely improved the flexibility and expressiveness of Bulgarian as a literary instrument. An Eng. trans. of *Under the Yoke* appeared in London, 1912, and of selected stories, in Sofia, 1950. P. Khristoforov pub. a study of V. in Paris, 1938.

Veadar, see ADAR.

Vecchi, Orazio (1550-1605), It. composer, b. Modena, took holy orders, became a canon at Correggio in 1586 and archdeacon in 1591, but deserted to his bp., wishing to devote himself to music, and became chapel master at the cathedral in 1596 and at the ducal court in 1598. He wrote church music, madrigals, and canzonets, but historically his fame rests on his madrigal-opera *L'Amfiparnaso*, 1594, a curious forerunner of comic opera proper with a dramatic plot for a number of characters, whose parts are sung by concerted voices in the madrigal style and not acted. In modern times this work has been very successfully performed with puppets.

Vecelli, Francesco (1483-1560), It. painter, the brother of Titian, whose jealousy he excited by his 'Transfiguration' for Salvatore. But his best picture is a 'Nativity' in the church of St Giuseppe at Belluno. Other works are 'Ecce Homo' (Dresden) and 'The Annunciation' (Venice).

Vecsca, see HUSKA.

Veche, in assembly in medieval Russia. It acquired supreme power in Novgorod, Pskov, and Vyatka; elsewhere it shared power with the local prince.

Vector. Physical quantities are of 2 kinds: scalars and vectors. A scalar is completely defined by a number and a unit or scale of measurement. Thus the temp. at any point of a body is completely determined by the number of degrees on a given scale. Mass, heat, atm. pressure, electric charge, potential, are scalars. A vector needs a number, a unit, and a direction for definition. Displacement, velocity, acceleration, force, are V.s. The size of a V. is called its tensor. Two vectors are considered equal if they are parallel (in the same sense) and have equal tensors. V.s are represented in diagrams by straight lines, an arrow indicating the sense. In diagrams any vector may be moved parallel to itself to a convenient position.

Vector Algebra. The sum of 2 vectors, $a + b$, with common origin is the diagonal in the parallelogram formed by a and b . If the origin of b is placed at the endpoint of a , the sum is the V. from the origin of a to the end of b . If a number of V.s are linked in this way into a chain, their sum is the V. from the origin of the first to the endpoint of the last.

Multiplying a V. by a scalar n simply increases its tensor in the ratio $n:1$. If unit V.s i, j, k are marked on the axis of a rectangular system, i upwards, j towards the right and k forward, a vector a may be written $a_1i + a_2j + a_3k$, a_1, a_2, a_3 being the (scalar) components. The

scalar product of two V.s ab is defined as $ab \cos(a, b)$. Since $\cos 0 = 1$, $\cos 90^\circ = 0$, $\cos \alpha = \cos(-\alpha)$, we have $ab = ba$, $aa = a^2$, $ii = jj = kk = 1$, $ij = jk = ki = 0$, and, in terms of the components: $ab = a_1b_1 + a_2b_2 + a_3b_3$. The vector product $\nabla ab = c$ is a V. of tensor $ab \sin(a, b)$, normal to the plane ab in a sense such that looking along c , the turning of a towards b is clockwise. Since $\sin 0 = 0$, $\sin 90^\circ = 1$, $\sin \alpha = -\sin(-\alpha)$, we have $\nabla aa = 0$, $\nabla ab = -\nabla ba$, $\nabla ij = k$, $\nabla jk = i$, $\nabla ki = j$. In terms of components, $\nabla ab = (a_2b_3 - a_3b_2)i + (a_3b_1 - a_1b_3)j + (a_1b_2 - a_2b_1)k$.

Vector Analysis. Considering a scalar, like the temp., in its distribution over a portion of space, we have a scalar field, represented on a meteorological chart by isotherms joining points of equal temp., like contour lines on a map. At any point we define a gradient, a vector along the steepest rise of temp. whose tensor is the rate of increase with distance. The mathematical expression is $\text{grad } \theta =$

$i \frac{\partial \theta}{\partial x} + j \frac{\partial \theta}{\partial y} + k \frac{\partial \theta}{\partial z}$. Drawing the lines of magnetic force due to a bar magnet, we have a representation of a vector field. The lines start from the N. pole and end on the S. pole. Drawing a closed surface round the N. pole, the lines emerging from the surface are a measure of the quantity of magnetism enclosed. The number of lines emerging from a closed surface not containing magnetism is equal to the number of lines entering. The vector field is related to a scalar quantity, represented by the difference between the number of lines emerging from, and the number of lines entering, a closed surface anywhere (cf. Gauss's Theorem, in electrostatics). The mathematical expression is the divergence of the vector,

$\text{div } H = \frac{\partial H_x}{\partial x} + \frac{\partial H_y}{\partial y} + \frac{\partial H_z}{\partial z}$. In the free field $\text{div } H = 0$. In the above field there are no closed lines of force. But in Faraday's experiment on electromagnetism induction, the insertion or withdrawal of a magnet along the axis of a ring induces an e.m.f. in the ring. A varying magnetic force generates an electric vector field in closed lines around the magnetic force. The mathematical expression is $\text{curl } E = \mu \frac{\partial H}{\partial t}$, $\text{curl } E$ being a vector $i \left(\frac{\partial E_y}{\partial y} - \frac{\partial E_z}{\partial z} \right) +$

$j \left(\frac{\partial E_z}{\partial z} - \frac{\partial E_x}{\partial x} \right) + k \left(\frac{\partial E_x}{\partial x} - \frac{\partial E_y}{\partial y} \right)$. In the discharge of a capacitor, the displacement

current in the dielectric (q.v.) is $\frac{1}{4\pi} \epsilon \frac{\partial E}{\partial t}$ (ϵ = permittivity), the current in the conductor is σE (σ = conductivity) and the total current is linked with a magnetic field surrounding it in closed lines. The mathematical expression in $\text{curl } H =$

$\frac{1}{4\pi} \epsilon \frac{\partial E}{\partial t} + \sigma E$. These 2 equations are the vector forms of Maxwell's classical equations, on which is based the entire theory of electromagnetism from the design of electric machines to the propagation of electromagnetic waves (q.v.). The vector operators grad , div , curl , and their

combinations are powerful tools for solving problems in hydrodynamics, mechanics, electromagnetic theory, geometry of surfaces, potential theory, etc.

Vector Diagrams. In electrical engineering the relations between alternating currents and voltages in a circuit, assumed to be sine waves of the same frequency, may be represented in a diagram by 'vectors' drawn at the respective phase angles to one another. The 'vectors' are understood to rotate round their origin at const. speed and the varying ordinates to be plotted on a time-base, thus generating the sine waves. The method is founded on the fact that a sine wave generated by a line AB added to the sine wave generated by AC (at an angle behind AB) equals the sine wave generated by the vector sum $AB + AC$. See E. B. Wilson, *Vector Analysis: text book founded upon the lectures of J. W. Gibbs*, 1901-2; C. E. Weatherburn, *Vector Analysis* (elementary), 1921; (advanced), 1924; L. Silberstein, *Synopsis of Applicable Mathematics*, 1923; P. Kelland and P. G. Tait, *Introduction to Quaternions*, 1873.

Veda and Vedism. Veda is the general term for the anct sacred literature of India, and Vedism is the early Aryan religion of India. The religious literature of India opens with 4 collections of hymns meant to be used at sacrifices. These are the Vedas proper, and the oldest of them is the *Rigveda*, which contains the poems from which the earliest information about the Aryans in India is derived. The other collections (*Samhitās*) of sacrificial hymns (*Mantras*) are the *Samaveda*, consisting of liturgical songs; the *Yajurveda*, consisting of sacrificial formulae; and the *Atharvaveda*; the last consists for the most part of charms and incantations, and is the prin. source of knowledge of the popular beliefs and superstitions of anct India. See also SANSKRIT LANGUAGE AND LITERATURE.

Vedānta, Uttara-Mīmāṃsā, or Upanishad, system of Brahminic philosophy which in its main features carries on the speculations of the older Upanishads; e.g. God is the sole real existence. He is both Creator and Nature, and all things are resolved in Him; the individual soul proceeds from Him and ultimately returns to Him; it is not a free agent, but is ruled by God, and its sufferings depend upon its bodily organs. See A. B. Keith, *The Religion and Philosophy of the Veda and Upanishads*, 1920; W. S. Urquhart, *The Vedānta and Modern Thought*, 1928; N. Macnicol (ed.), *Hindu Scriptures* (Everyman's Library), 1938; C. Isherwood (ed.), *Vedānta for the Western World*, 1948.

V.E.-Day, 8 May 1945, on which was celebrated the defeat of Germany in the Second World War, unconditional surrender having been signed at Reims on the previous day. 'V' painted on walls, tapped out in Morse, and symbolised in the rhythm of the opening bars of Beethoven's fifth symphony had been adopted as a symbol of resistance to, and victory over, the Germans; 'E' stood for Europe.

Veddahs (or Veddās), meaning 'hunters,' are regarded as the true aborigines of Ceylon and the last remnant of a race descended from the Yakkas (or Yakkos), a race of hunters whose ancestry dates back to the Stone Age, and who were probably immigrants, well over 2000 years ago, from pre-Dravidian India. Although the census of some years ago estimated the number of V. living in Ceylon at nearly 5000, they are fast dying out, and the Veddah pop., in the absence of reliable statistics, can be regarded as much less. It is thought that in the not too distant future they will cease to be a distinct ethnical group.

S. V. O. Somander

ROCK VEDDAHs

There are 3 types of V. in Ceylon, forming 3 distinct social groups, each composed of sev. clans. They are: (1) *The Wild or Rock Veddahs*. These dwell in caves or under shelter of overhanging rocks and forest trees in remote vils. (2) *The Coast Veddahs*. These live in the sea-board vils. between Batticaloa and Trincomalee, dwelling in mud-huts. (3) *The Village Veddahs*. These are intermediate between (1) and (2), and scattered over small areas in the neighbourhood of the Sinhalese and Tamils in the E. Uva and N.-Central Provs.

As a rule, the V. are about 5 ft tall, and can be distinguished by their dark, swarthy skin, long, black, shaggy hair, narrow skull, slightly prominent cheek-bones and other features. Their language consists of a limited range of guttural sounds, and though it is not quite comprehensible to the Sinhalese, it is supposed to be of Aryan origin. Some of the V. however, can speak Sinhalese or Tamil, or an

admixture of both. Their religion is a sort of demon-worship.

So merged is the Veddah tribe with the other races surrounding them that most of them are really half-V. at the present day.

Veen, Maerten van, see **HEEMSKERK, MAERTEN JACOBZ.**

Vega, Garroilaso de la, see **GARCILASO.**

Vega (α Lyrae) was the pole star of the 12th and 13th millenniums BC, and will attain the same position in the 15th and 16th AD. Draper photographed its spectrum in 1872. It belongs to that class of A stars, which are white stars, like Sirius, in which the spectral lines of hydrogen reach their greatest strength. The temp. of V. is about 11,000° C., and it is approaching the sun at about 10 m. per sec. Its magnitude is 0.1, parallax 0.13", and distance 26 light-years (see **LYRA**).

Vega Carpio, Lope Felix de (Lope de Vega) (1582-1635), Sp. poet and dramatist, b. Madrid. He took part in the expedition to the Azores in 1582, and also served in the Armada in 1588. He was secretary to the Duke of Alva and the Marquis of Malpica, and in 1613 took holy orders.

V. C. was held in high estimation in his own day, and his influence in Spain was as great as that of Voltaire in France. He was a voluminous writer, producing epics, pastorals, odes, sonnets, and novels; but it is to his dramatic works that he owes his eminent place in literary hist., and of these he wrote some 1500, of which 500 have come down to us. It was Lope de Vega who really created the Sp. romantic drama. The variety of his plays is extraordinary. Some of the best known are: *Los Ramilleles de Madrid*, *El Perro del Hortelano*; *La Viuda de Valencia*, *Las Flores de Don Juan*, *Estrella de Sevilla*, *Esclava de su Galan*, and *Alcade de Talamanca*. Among his other works are the *Angelica*, an epic poem written in imitation of the *Orlando Furioso*; the *Arcadia*, a pastoral romance; *La Dorotea*, a masterly novel in dialogue form, imitating *La Celestina*; and *Dragontea*, an epic poem concerned with the hist. and death of Drake.

His plays were pub. in 25 vols. in 1604-47, and his miscellaneous works in 21 vols. in 1776-91. See lives by H. A. Renner and A. Castro, 1919, and J. de Entrambasaguas, 1942; also J. F. Kelly, *Lope de Vega and the Spanish Drama*, 1902; R. Schevill, *The Dramatic Art of Lope de Vega*, 1918; M. Menéndez y Pelayo, *Estudios sobre el teatro de L. de Vega* (6 vols., 1919-27); K. Vossler, *Lope de Vega und sein Zeitalter*, 1932; J. de Entrambasaguas, *Estudios sobre Lope de Vega*, 1946.

Vegetable Butters, see **BUTTERS.**

Vegetable Ivory, the seed of *Phytolaphs macrocarpa*, the Ivory Nut Palm or Negro's Head, native of Colombia. When dried, the seeds can be carved and polished to simulate ivory.

Vegetable Marrow, fruit of an annual trailing gourd (*Cucurbita pepo ovifera*) much grown in cottage and other gardens

for use as a vegetable and for making preserves.

Vegetable Physiology, see **PLANTS.**

Vegetable Sponge, see **LOOFAB.**

Vegetable Wines, see **WINES, HOME-MADE.**

Vegetables, see **COOKERY.**

Vegetarianism, see **FOOD AND DIET.**

Vegilius, or Flavius Vegetius Renatus (fl. c. AD 400), Rom. writer, author of *Epitoma Rei Militaris* in 4 books. The material is chiefly borrowed from earlier authorities, and the style is worthless; But V. is the only extant source for much that his work contains. He also wrote *Digestorum artis mulomedicinae libri*, on veterinary medicine (ed. F. Lommatsch, 1903). See C. Lang's ed. of the *Epitoma*, 1885).

Veglia, see **KRK.**

Vehmgerichte, see **FEHMIC COURTS.**

Veii, anct city of Etruria, about 12 m. NNW. of Rome, and lying on a plateau near Isola Farnese. Until it was razed to the ground by Camillus after a 10-years' siege (396 BC), it was a dangerous rival of Rome.

Veiled Prophet, see **AL-MOKANNA.**

Veins, in anatomy, the blood vessels that carry the blood from the tissues to the heart. They are composed of 3 coats, *tunica adventitia*, *tunica media*, and *tunica intima*, and there is less muscular and elastic tissue than in arteries (q.v.). The V. are generally divided into 3 systems: the *general venous system*, the *pulmonary system*, and the *hepatic portal system*. The general venous system returns the blood from the greater part of the organism to the heart. The pulmonary system brings back the oxygenated blood from the lungs to the left ventricle of the heart. The hepatic portal system carries the blood from the stomach, intestines, spleen, and pancreas to the liver by the portal V., ramifying into numerous capillaries. The pulmonary and hepatic portal V. have no valves, but the general venous system has. The valves are so constructed as to prevent a reverse flow of blood. When these valves become incompetent varicose veins (q.v.) result. As a rule the course of the deeper veins is contiguous to that of the arteries.

Veins, Varicose, see under **VARICOSE VEINS.**

Vejle: 1. Amt in E. Jutland, Denmark. Agriculture, dairy farming, and cattle breeding is carried on. Area 905 sq. m.; pop. 207,880.

2. Cap. of the above, port on V. Fjord. It is an industrial centre, and manufs. machinery, hardware, textiles, leather, and soap. Pop. 30,760.

Vekhi (Russian 'landmarks'), symposium pub. in 1909 by a group of Russian philosophers and politicians (including Struve, Berdyaev, and Bulgakov, q.v.) which marked the emancipation of progressive Russian thought from the mystique of revolution. In the wider sense the name V. is applied to this whole trend of thought, most of whose leaders had been Marxists in the 1890s (see **LEGAL MARXISTS**), while others (see **NOVGORODTSEV**; **TRUBETSKOY**) had been Hegelians.

Both groups developed towards Idealism and Christianity under the influence of Dostoyevsky and Vl. Solov'ev. See L. Schapiro, 'The Vekhi Group and the Mystique of Revolution' in *The Slavonic and E. European Review*, vol. xxxiv, No. 82, Dec. 1955.

Velasquez de Cuéllar, Diego (c. 1465-1523), Sp. administrator, b. Cuéllar. In 1511 he conquered Cuba, of which he was governor until his death, and in 1517 sent an expedition which discovered Yucatan. In 1518 V. sent Cortés to Mexico; later he regretted the wide powers given to the latter; Cortés in 1520 defeated a force sent against him by V.

Velathri, see VOLATERRAE.

Velázquez, Diego Rodríguez de Silva y (1599-1660), Sp. painter and one of the world's greatest artists, b. Seville, studied under Francisco Herrera (q.v.) and Francisco Pacheco (q.v.), whose daughter

Anderson

VELÁZQUEZ
Detail of the self-portrait from
'Las Meninas'.

be married in 1618. Summoned from Seville to Madrid by Count Olivares in 1623, he became Court Painter to Philip IV, and spent the rest of his life at Court (except for 2 journeys to Italy 1629-31 and 1649-51), painting many portraits of the royal family. His earliest work consisted of careful peasant studies ('The Cook' purchased by the National Gallery of Scotland in 1955 for £58,000, is an example). He then painted mythological subjects, but in the same realistic manner ('Los Borrachos'—the Topers—and the 'Forge of Vulcan'). Next comes his masterpiece of contemporary history 'Las Lanzas'—'The Surrender of Breda.'

(See SPAIN, History.) It was on his visit to Rome that he painted 2 views of the Villa Medici which have special place in the hist. of landscape. To his later period belong the masterpieces of group portraiture ('Las Meninas'—The Maids of Honour; 'Las Hilanderas'—the 'Tapestry Weavers'); and the 'Venus and Cupid' called the Itokeby Venus, now in the National Gallery. His individual portraits, profound in humanity and mastery in design, are well represented in the 'Aesop' (Prado), 'Philip IV' (National Gallery). A great series of masterpieces are in the Prado, but as well as at the National Gallery there are fine works at Apsley House and in the Wallace Collection. V. has had a decisive effect on the course of European painting and beneficially influenced such later artists as Whistler and Manet. Murillo, Juan de Pareja, and Juan del Mazo were his pupils. See lives and studies by R. A. M. Stevenson, 1895; W. Armstrong, 1896; H. Stokes, 1901; A. de Beruete, 1906; R. Davies, 1914; E. V. Lucas, 1924; E. Harris, 1939. See also C. Justi, *Velázquez and his Times* (Eng. ed.), 1889; E. Lafuente, *The Paintings of Velázquez*, 1944.

Veld, Afrikaans (q.v.) word in common use throughout S. Africa and applied to any large plain. V. is applied generally to the great plateau lying to the W. of the Drakensberg Mts. Sheep thrive in this area, yielding high-quality wool. Maize is grown in abundance. Where irrigation is possible citrus fruit grows well. V. takes in the Karroo (q.v.).

Velez de Guevara, see GUEVARA.

Vélez Málaga, Sp. tn in the prov. of Málaga, on the Vélez. It has large sugar-refineries, and a trade in wine. Pop. 11,000.

Velika Kikinda, see KIKINDA.

Veliki Beckerak, see ZRENJANIN.

Velikiy Novgorod, see NOVGOROD.

Velikiy Ustyug, tn in the Vologda Oblast of N. Russia, on the R. Sukhona, 42 m. SW. of Kotlas. There is some industry (ships, hog bristles), and a famous silver craft is still carried on. Many 17th-19th-cent. architectural monuments may be seen. Known since the 12th cent., in the 16th and 17th cents. it was an important trading centre on the route to Archangel and Siberia. Pop. (1926) 19,000.

Velikiye Luki: 1. Oblast in Russia, W. of Moscow, largely lowland (Valday upland in the E.) and partly covered with mixed forests. There are lignite deposits. Area 17,300 sq. m.; pop. (1956) 658,000, mostly Russian. It has flax and dairy farming, lumbering, wood-working (prefabricated houses), and food industries. V.L. Oblast was abolished in 1958, and its ter. divided between the Pskov and Kalinin Oblasts.

2. Tn in the Pskov Oblast of Russia, on the Moscow-Riga railway. There is some industry, and it is an important railway junction. Pop. (1956) 53,000. It was founded in 1166, and was an important fortress and trading point of the Novgorod Rep. near the Lithuanian

frontier; it became Muscovite in 1478. It was the scene of bitter fighting in 1942-3, and was largely destroyed.

Velitrae, *see* VELLETRI.

Velleius Paterculus, *see* PATERCULUS.

Velletri (anc. Velitrae), It. tn, in Lazio (q.v.), in the Alban Hills (q.v.), 19 m. SE. of Rome. It has a 14th-cent. cathedral, and sev. fine anc. palaces. It was one of the Ger. strongholds in their defence of Rome in 1944, and was severely damaged (*see* ITALIAN FRONT, SECOND WORLD WAR CAMPAIGNS ON). There is a school of viticulture, and a trade in wine. Pop. (tn) 31,000; (com.) 34,927.

Vellum, the prepared skin of calves, lambs, and other animals, finer in quality than parchment, used for writing on since the 2nd cent. BC. *See also* MANUSCRIPTS; PARCHMENT.

Velobriga, *see* VIANA DO CASTELO.

FIG. 1. RÖMER'S METHOD

Velocipede, *see* CYCLES AND CYCLING.

Velocity, rate of displacement of a moving point. It is sometimes applied to the rate at which a change of state or configuration may take place in bodies. To specify V. completely, the direction as well as the rate at which the body is moving must be given, and hence it is a vector quantity. To determine the V. of a body, the distance passed over by the body is divided by the time it takes. This gives the average V. over that distance. If the V. is not uniform the instantaneous V. is required, which necessitates the use of the differential calculus. The unit of V. is defined as that V. with which a moving point passes over unit distance in unit time, e.g. ft per sec., cm. per sec. (*See* MECHANICS; METROLOGY; VECTOR.)

Velocity of Light. Light travels through free space at the rate of 299,793.1 km. per sec., while its speed in air is only slightly less than this. The journey from the sun to the earth, a mean distance of approximately 93,000,000 m., occupies a ray of light for almost 500 sec.; in 1 sec. the light traverses a distance rather more than 7 times round the equator. The interest of the student of physics in the

determination of the V. of L. is threefold: in the first place the experimental determination of the V. of L. in air and in water provided a direct refutation of the corpuscular theory of light usually linked with the name of Newton; in the second place Maxwell discovered theoretically that electromagnetic waves (q.v.) travel through the ether with a velocity equal to that of light, and therefore identified electromagnetic waves and light waves. But the real philosophical importance of the V. of L. is due to the development of the Theory of Relativity (q.v.) which establishes the V. of L. in a vacuum as the greatest possible speed in nature, a speed that is an absolute constant; the V. of L. relative to all observers is the same. Three methods of measuring the V. of L. are especially interesting, viz.: (1) Römer's determination in 1675, the first

determination ever made; (2) Michelson's (q.v.) determination in 1931, much more accurate, giving the result of 299,796 km. per sec.; (3) Essen's determination in 1950, using radio waves.

Römer's Method. The planet Jupiter has sev. moons, and as they revolve around it they sometimes pass behind it, as seen from the earth, so that they are eclipsed. The time of an eclipse for any moon can be deduced by astronomical calculations. Fig. 1. shows that if the eclipse of a moon occurs when the earth is at E, i.e. when Jupiter is in opposition to the sun, this 'light-signal' sent out from Jupiter will reach the earth earlier than in the case where the earth is at E', Jupiter being then in conjunction. Römer, by his observations, deduced the time taken for a light-signal to travel the distance EE', which is the diameter of the earth's orbit, a distance of 196,000,000 m. The result he obtained was 286,000 km. per sec.

Michelson's Method is really an improvement on the methods of Fizeau and Foucault. The idea may be understood from the apparatus he used in 1882. A beam of light from a source S (*see* Fig. 2) falls on a rapidly rotating prism while it is in the position AB. The light is focused

by a convex lens on the surface of a concave mirror M, whose centre of curvature is at the centre of the lens. The beam of light is therefore reflected as shown (the shaded beam), and it reaches the rotating prism, now at CD; it is reflected there and forms an image at S'. In this attempt the distance LM was about 2000 ft, while a turbine drove the prism at the rate of 256 revolutions per sec. By measuring SS', the V. of L. can be deduced from the other data. In 1931 Michelson made his final determination referred to above. The distance between the fixed mirror and the rotating prism was actually 22 m., the former being erected at Mt San Antonio, the latter at the Mt Wilson Observatory.

FIG. 2. MICHELSON'S METHOD

This enormous increase in the 'run' for the light was achieved by the design of a perfectly fashioned octagonal mirror, so that the image found was far brighter than when Michelson used a single mirror. Moreover, by adjusting the speed of rotation of the prism, Michelson arranged that the light set off on its 44-m. journey from one face of the prism and was received on its return by the succeeding face in exactly the same position occupied by its predecessor when the light set out. Thus the image S' was made to coincide with S and an inconvenient measurement was eliminated. See also MICHELSON-MORLEY EXPERIMENT.

Resonating-cavity Method. Strictly speaking this measures the velocity of radio waves, but the velocity of electromagnetic waves in free space is a constant independent of frequency, as is confirmed by the close agreement between the values from this and other methods. The resonant frequency of a metal cavity of accurately known dimensions is found with high precision. For a cavity about 7 in. long and a frequency of about 24,005,000,000 cycles per sec. Essen obtained the value $c = 299,792.6 \pm 0.7$ km. per sec. (1952). The latest value from refined optical methods is given by Edge (1956) as $299,792.4 \pm 0.11$ km. per sec.

Velour (Fr. velvet), fabric with a weft of mohair yarn, and linen and double cotton warps, used for hats and upholstery. It resembles felt, but has a pile akin to that of plush or velvet.

Velsen, tn in the prov. of N. Holland, Netherlands, on the N. Sea Canal. It is the entry harbour to Amsterdam. A tunnel to carry road and rail traffic under the Canal was opened in 1957. Main manufs. are chemicals, paper, and iron, and there is shipbuilding. Pop. 56,400.

Velvet (Lat. *villosa* and Fr. *velours*), fabric believed to have originated in the E., possibly in China, but known at least as early as the 13th cent. V. is made of pure silk, its surface being a short, thick pile, produced by weaving a second set of warp thread over the already woven cloth, these threads being passed over wires and cut before the wires are removed. A similar material with a cotton back and silken face is termed velveteen, but with the development of synthetic materials the term V. is indiscriminately used in conjunction with the basic fabric from which it is made, such as rayon V., cotton V., etc. Up to the 16th cent. the finest V.s were woven on the looms of Genoa, Venice, and Florence. The craft was brought to London by Fr. Protestant refugees. Today Krefeld and Lyons are 2 important producing centres.

Ven, Hven, or Hveen, is. of Sweden, situated in the Sound, 5 m. NW. of Landskrona. Tycho Brahe lived here in his observatory until 1597.

Venado Tuerto, tn of Argentina in the prov. of Santa Fé, 230 m. from Buenos Aires on Bartolomé Mitre Railway. There are large estancias in the vicinity; meat packing and agriculture are carried on. Pop. 16,500.

Venda, a Bantu-speaking tribe of the Transvaal, S. Africa. Their origin is unknown, and they are famed for their elaborate kingship. The king is sacred, or semi-divine, and before his death confers godhead upon himself by the performance of a solemn and solitary dance. To-day they number about 130,000 in the Soutpansberg district. See H. A. Stayt, *The BaVenda*, 1931.

Vendace, see COREGONUS.

Vendée, La, maritime dept of W. France, formed of part of the anct prov. of Poitou (q.v.). The Bocage Vendéen (see BOCAGE) is the main part of the dept, but there are marshes in the NW., and a well-cultivated plain in the S. Agric. is the main occupation, the prin. crops being wheat and sugar-beet. The vine is widely cultivated, and horses and cattle are bred. Fishing is important to the coastal vills., and there are a few minor coalfields in the centre. The prin. tns are La-Roche-sur-Yon (the cap.), Fontenay-le-Comte, and Les-Sables-d'Olonne. In the year 1793 a Royalist rising took place in La V., touched off by the Republican gov.'s introduction of conscription. The rebels gained initial military successes, but were finally checked at Cholet in Oct., and the revolt was stamped out by a decisive defeat at Savenay (Dec.). For a short

time it had appeared to threaten the existence of the Rep. Area 2890 sq. m.; pop. 395,650.

Vendémiaire (Lat. *vindemia*, vintage), the first month of the year in the Fr. revolutionary calendar, *see* CALENDAR.

Venden, *see* WENDEN.

Vendetta, modern survival of the custom of blood feud by which fellow-kinsmen were bound to take vengeance for any personal injury done to a member of their clan or family. The V. is narrower than the old blood feud in that vengeance is exacted only in the single case of a murdered relative. The V. exists or did exist until recently in Corsica and in parts of Sardinia and Sicily. *See also* BLOOD VENGEANCE.

Satur Photograph

VENDA TRIBE OF NORTH TRANSVAAL

Vendôme, Duke of, *see* ANTOINE.

Vendôme, Louis Joseph, Duke of (1654-1712), marshal of France, b. Paris, son of Louis, 2nd Duke of V., and great-grandson of Henry IV. He first saw service in the Dutch campaign of 1672, and in the war of the Grand Alliance served with distinction. In 1702 he was placed in command of the Franco-Sp. army in Italy, fighting 2 indecisive battles against Prince Eugene and overthrowing the Austrians at Calcinato (1706). He was defeated by Marlborough at Oudenarde in 1708, and relieved of his command. He won further victories in Spain in 1710,

however. V. was one of the greatest of Fr. gens. and exercised an enormous influence over his men. *See* life by the Marquis de Segur, 1913.

Vendôme, Fr. tn., cap. of an arron., in the dept. of Loir-et-Cher, on the Loir. The anct church of the Trinity has a magnificent 12th-cent. belfry, 255 ft high. On a hill above the tn is the ruined castle of the counts of V. Gloves and paper are manuf., and noted cheese and asparagus are produced. Pop. 10,300.

Vendors and Purchasers. The law concerning contracts for the sale of land, and especially their specific enforcement in the Chancery Courts (as to which *see* SPECIFIC PERFORMANCE), is commonly referred to as the law of V. and P.; though, of course, personal property can equally form the subject of such a contract. Contracts for the sale of interests in land are, however, so intricate and technical (though to a less degree since the passing of the Law of Property Act, 1925), that it is always desirable in negotiating for sale or purchase to employ solicitors. (As to the form of such a contract, *see* CONTRACT; FRAUDS, STATUTE OF.) No contract for the sale of land will stand unless: (1) It is quite clear what the subject-matter of the contract is. In this connection if the subject-matter can be ascertained, mere uncertainty as to the exact measurements will not of necessity invalidate the contract. (2) The price is fixed. A contract for sale 'at a fair valuation' is enforceable; but if the mode of valuation be specified in the contract the court will not decree specific performance until the price has been ascertained by the means so specified. (3) All other essential terms are included. All the court requires is that the agreement contains the necessary terms upon which to base a formal conveyance; hence the omission of trifling details is immaterial. Where it is contracted to sell in addition to land (q.v.) the goodwill (q.v.) of a business, it is essential to specify the time for completion of the sale. The duties of a vendor are: (1) To show and make a good title to the land in accordance with the contract. The 'abstract of title' (i.e. the hist. of the title showing the successive steps in its transfer) must go beyond 30 years where necessary to arrive at a root of title, i.e. a point at which it can properly begin. The best root of title is a mortgage or purchase deed, as such a document leads to the inference that at the time of the execution thereof the title must have been investigated and in the case of a purchase deed the seisin (q.v.) of the possessor in title is shown. A general devise by will or a disentailing deed is not a proper root of title. (2) To enter into covenants with the purchaser. The most important are: (a) that he has a right to convey the land; (b) that the purchaser shall have quiet enjoyment of the land; (c) that the land is free from encumbrances; (d) that he will make all 'further assurances' (i.e. conveyances) that may be necessary; and in the case of sale of leasehold (e) that the lease is valid and the rent paid. (3) To

execute a proper deed of conveyance (q.v.) on the payment of the purchase money. It is for the vendor to bear the cost of supplying a proper abstract of title, and he must also bear the expense of getting in all outstanding estates (q.v.) (including outstanding legal estates) and paying off encumbrances and stamping all title-deeds. In the absence of express provision to the contrary the purchaser prepares and pays for the preparation and stamping of the deed of conveyance, though the vendor pays the cost of *perusal*. (4) To deliver to the purchaser all title-deeds in his possession or control. The duties of the purchaser are: (1) to peruse the abstract of title and make all his objections to it in reasonable time; (2) to *prepare* the deed of conveyance and deliver it to the vendor for execution; (3) on completion to pay the purchase money, or, if a deposit has been paid (as is usual by way of guarantee of good faith), the residue of the purchase money, together with any interest due for delay; and (4) to enter into possession of the land so as to relieve the vendor from any further liability incident to ownership. Breach of contract by the purchaser entitles the vendor either: (1) to bring an action for specific performance and join with the claim a claim for damages (q.v.); or (2) to sue at common law for the price; or (3) to take out a summons (a summary remedy available only to decide questions as to title); or (4) to sue at common law for damages; or (5) to enforce his lien (q.v.); or (6) to resell and recover any difference in price from the purchaser; or (7) to sue for rescission. The purchaser has remedies corresponding to (1), (3), and (4) above; he may also sue: (i) for rescission of the contract, adding a claim for the return of any purchase money paid; (2) to enforce his lien by claiming a declaration of his right thereto and an order for sale.

The law of V. and P. was considerably changed by the Law of Property Act, 1925, which came into force on 1 Jan. 1926. This Act introduced a new system of making titles to land (see CONVEYANCING) and, generally, revolutionised the law of real property, though many of the topics or branches of the law of V. and P., e.g. the contract of sale, specific performance (q.v.), etc., are not materially affected. The underlying principle of the new system, in relation to V. and P., is to extend the doctrine of 'purchase for value without notice', or, in other words, to keep the equities off the legal estate. The Act of 1925 provides a method by which the vendor can prove a legal title to the legal estate alone, and the purchaser is protected from equitable interests even if he has notice. Where a conveyance of the legal estate to a purchaser is made, the purchaser will take the land free from equitable interests, even if he has notice of them, in the following cases: (1) if the land is sold by a tenant-for-life or otherwise under the powers of a settlement (q.v.) the purchaser takes free from all the equitable interests of persons entitled under the settlement, but not

from such equitable interests as restrictive covenants and equitable easements which existed prior to the settlement; (2) if the land is sold by trustees under a trust for sale the purchaser takes free from all equitable interests of persons entitled to the proceeds under the document creating the trust and, if the trustees are appointed by the court or are a trust corporation (see TRUSTS AND TRUSTEES), the purchaser takes free from interests having priority to the trust for sale; but not from certain other interests, *if he has notice of them*, viz. interests protected by a deposit of deeds, restrictive covenants, easements, contracts to sell legal estate, etc.; (3) if the land is sold by a mortgagee the purchaser takes free from the equity of redemption; (4) if the land is sold by a personal representative of a deceased owner the purchaser takes free from the claims of persons interested in the estate of the deceased; and (5) if the land is sold under order of the court the purchaser takes free from the interests of all persons who are parties to the action. It is to be noted that the Act of 1925 does not give the purchaser protection against equitable charges, etc., protected by deposit of the title deeds of the legal estate; nor against any interest of a person in land of which he is in actual possession. See H. Seaborne, *Law of Vendors and Purchasers of Real and Leasehold Property* (9th ed.), 1928 (supplement), 1929; J. H. Dart, *Vendors and Purchasers* (2 vols., 8th ed.), 1929; T. C. Williams and J. M. Lightwood, *Vendor and Purchaser of Real Estate and Chattels Real* (2 vols., 4th ed.), 1936; Sir C. Brickdale and Sir J. S. Stewart-Wallace, *Land Registration Act, 1925* (4th ed.), 1939; E. O. Walford, *Conditions of Sale of Land, 1940*; Sir L. H. Elphinstone, *Covenants Affecting Land, 1946*; T. C. Williams, *Contract of Sale of Land, 1948* (with supplement, 1953); A. Gibson, *Conveyancing* (16th ed.), 1950; L. E. Emmet, *Notes on Perusing Titles and on Practical Conveyancing* (14th revised ed.), 1955.

Veneering, gluing of a thin sheet or sheets of ornamental wood over a foundation of inferior wood. V. is much practised in furniture making, and is the most popular and least expensive means of forming a decorative surface on plywood (q.v.) boarding. In good V., only the best plywood is employed, since the final polished surface would show any minor defects that cheaper plywood might possess. The best results are obtained when the veneers are of double thickness. A good straight-grained veneer is laid on the outer ply of the board with the grain at right angles to the grain of the ply, and the finishing figured veneer is then laid on this with its grain following the grain of the outer lamination of the ply board. Counter veneers, of similar substance and strength to the veneers laid on the face, are laid on the back of the ply to prevent the whole from being pulled out of its true plane. See Edward Kilson, *Marquetry and Veneers*, 1952.

Venema (or **Venemas**), **Hermann** (1697-1787). Dutch prof. of theology at Franeker. He was author of the *Institutes of Theology* (trans. 1850), and of commentaries on Daniel, 1752, Malachi, 1759, the Psalms, 1762-7.

Vener, Lake, see **VANERN**.

Veneral Diseases (from Lat. *Venus*, *Veneris*, the Goddess of Love), nowadays frequently abbreviated to *V. D.*; is so called because these diseases are usually acquired during sexual intercourse. Such a mode of infection is probably invariable in the case of *gonorrhoea* (q.v.) of adults, but a child can become infected in the eyes from the genital passage of the mother during birth. *Syphilis* (q.v.) is occasionally transmitted by other means, e.g. by kissing an infected person; it can also be acquired by the foetus (unborn child) *in utero*, but it is not strictly speaking inherited. These two, which are the only *V. D.* of importance in Great Britain, are dealt with in separate articles, though it may be added here that the treatment of gonorrhoea, and to a certain extent of syphilis also, has been improved and shortened by the use of penicillin. In the Second World War, as always during war-time, the incidence of *V. D.* increased, and a publicity campaign was undertaken by the gov. to warn the public of the dangers. Regulation 33B (1939) prescribed that any person named as a source of contact of *V. D.* by 2 patients should be compelled to attend for treatment; lectures and prophylactic treatment were given in the Armed Forces. There are arguments both for and against the inclusion of *V. D.* in the list of notifiable diseases. Notification is compulsory in some countries (e.g. all 48 states of the U.S.A.), but not in Great Britain. See R. H. Wilcox, *A Textbook of Venereal Diseases*, 1950.

Venesection, or **Phlebotomy**, cutting of a vein in order to let blood. *V.*, together with other methods, such as cupping and leeching, was the chief remedial measure of medieval physicians. The underlying idea was the elimination of the morbid 'humours' causing disease. In modern practice it is sometimes employed in conditions where the blood-pressure needs to be reduced or in congestive heart failure.

Venet, see **VNNES**.

Venetii. 1. Gallic tribe who dwelt in what is now the Morbihan dept. of France. Essentially sea-traders, and with a prosperous agriculture, they carried on a considerable trade with Britain. They resisted Caesar's forces, but were defeated in a naval battle in 57 BC. Under the Empire their trade declined.

2. People who dwelt in the area round the headwaters of the Adriatic, to which they had migrated about the mid-10th cent. BC. At that time they were an Illyrian-speaking people. Civilised and peaceful, they preferred commerce to war, were prominent in the amber trade and famous for their horse-breeding. Friendly towards Rome, they fought for her against the Gauls and against Hannibal. Later they became subject to Rome, were romanised before the end of

the rep., and under Augustus their ter. became part of the 10th region of Italy. They enjoyed prosperity until the end of the 2nd cent. AD, but later they were attacked in turn by the Alemanni (286), the Goths (c. 400), and the Huns (452). After the last attack many of them took refuge in the Is. off their coast, on which Venice now stands.

Veneto, region (*compartimento*) of NE. Italy, comprising the provs. of Belluno, Padua, Rovigo, Treviso, Venice, Verona, and Vicenza (qq.v.). It is bounded N. by Austria, W. by Lombardy and Trentino-Alto Adige, S. by Emilia-Romagna, and E. by the Gulf of Venice and Friuli-Venezia Giulia (qq.v.). The N. is in the Alps (q.v.), and contains part of the Dolomites (q.v.); the S. is in the Plain of Lombardy, and is watered by the Po and the Adige (qq.v.). Cereals, rice, wine, tobacco, sugar-beet, and vegetables are produced, marble is quarried, and there are textile, glass (Venice), brick, sugar, iron, aluminium, leather, and ship-building industries. The chief tn. is Venice. Area 7098 sq. m.; pop. 3,911,000. See **VENEZIA EUGANEA**.

Venezia, see **VENICE**.

Venezia Euganea, former name of a dist. of NE. Italy, comprising the present region of Veneto (q.v.) and the present prov. of Udine (q.v.).

Venezia Giulia e Zara, name of a former region of NE. Italy, which comprised the provs. of Carnaro, Gorizia, Istria, Trieste, and Zara (area 3456 sq. m.). At the end of the Second World War, by the peace treaty signed in Paris on 10 Feb. 1947, the greater part of the region was ceded to Yugoslavia, Italy retaining 180 sq. m. now incorporated in Friuli-Venezia Giulia (q.v.). See **TRIESTE**.

Venezia Tridentina, see **TRENTINO-ALTO ADIGE**.

Veneziano, **Agostino**, Venetian engraver of the early 18th cent. He was a pupil and assistant of Marcantonio Raimondi, and engraved many works, chiefly after Raphael. A fine collection of his works is preserved in the Brit. Museum.

Venezuela (**Estados Unidos di Venezuela**), S. Amer. rep. occupying the whole of the lower basin of the R. Orinoco and the coastal plain surrounding the Gulf of Maracaibo, with a sea coast just within the Caribbean Sea and therefore facing the W. Indian Is. E. of Cuba and Jamaica. The average sea-level temp. varies from 75° to 85° F., but like other tropical countries, the range of climate coincides with elevation. Where ocean winds penetrate, the region is healthy, otherwise malaria and other fevers are common. In the E. lies Brit. Guiana; W., Colombia; S., Brazil. The first portion of the mainland to be sighted by Columbus, it fell to the Spaniards, and its hist. is connected with the piracy and slave trade of the Sp. Main.

Physical Features. The valley between the maritime Andes and the Sierra Nevada de Mérida is the most densely peopled part of the state. E. and S. of this lies a densely wooded, thinly peopled, and largely unknown mountainous region,

separated from the Orinoco by llanos (grassy plains, or prairies), with wooded portions here and there. The mts of the central highlands rise sharply from the coast to heights of 7000-9000 ft. The dry conditions are restricted to the first few hundred ft of the mt slopes. Above that an abundant rainfall supports a cover of forest which continues to the tree line between 6000-7000 ft above sea-level. In the vicinity of Mérida are 5 snow-capped peaks, about 16,000 ft in altitude. The Sierra Nevada de Mérida is the chief coffee-providing region of V. The llanos are uniformly level and largely flooded during the rainy season; the delta and borders of British Guiana are thickly forested and inhabited only by scattered Indian tribes. The pastures of the Valencia region have been long used for the fattening of cattle from the llanos. The savanna varies from tall bunch grasses which grow in the drier parts to the short grass of the wet spots. The Orinoco is navigable for large steamers for 260 m. to Ciudad Bolívar, the centre of the riv. trade, a place of 41,000 inhab., with steamer connection with Trinidad. Navigation varies greatly, the riv. being much lower in the dry season. Altogether there are some 11,000 m. of navigable water in V.

Political Divisions, Population, and Area. The country is divided into a federal dist., 20 states, and 2 ters. with a total pop. according to the 1950 census of 5,030,000. The chief tns are: Caracas (cap. and federal dist.); Barquisimeto; Maracaibo; Valencia; San Cristóbal; Puerto Cabello; Maracay; Carúpano; Ciudad Bolívar; and La Guaira (the prin. port of V.). Of the pop. 10 per cent are white, chiefly of Sp. descent; 70 per cent mestizos, probably the largest proportion in any of the S. Amer. states; the remainder Indians, Negroes, and foreigners. Europeans are concentrated in the large tns. Pure Indians survive only in the more remote places—the Guiana highlands, S. of the Orinoco or in the forests W. of Maracaibo. The Negro mixture is greatest along the Caribbean coast, in such parts as La Guaira and Puerto Cabello.

The states have separate legislative assemblies and constitutions, with a president; they are divided into dists. and municipalities. The Federal dist. and the ters. are administered by the president through governors. The area of V. is approximately 352,140 sq. m., four-fifths of which forms part of the basin of the Orinoco.

Constitution and Government. In 1830 V. seceded from the rep. of Colombia, and its present constitution dates from 5 July, 1947 and the Electoral Statute of April, 1951. Congress consists of 2 chambers, a senate of 40 members, and a chamber of 98 deputies, elected for 5 years by universal adult suffrage. Senators must be Venezuelans by birth and over 30 years of age. Deputies must also be native Venezuelans and over 21 years of age; there is 1 deputy for every 40,000 inhab. and 1 more for an excess of 20,000,

and a state with fewer than 35,000 pop. has 1 deputy. The 2 ters., on reaching the pop. fixed by law, also elect deputies. The president is elected by universal secret ballot for 5 years, must be a Venezuelan by birth, over 30 years of age, and cannot succeed himself. He exercises executive power in conjunction with the cabinet ministers, through whom he acts, and has a modified power of veto. This in effect means that his veto may be overridden by a two-thirds vote of both chambers, and if he considers an Act to be unconstitutional he may submit it directly to the Supreme Court for a decision.

Production. The surface of V. comprises 3 well-marked zones—the agric., the pastoral, and the forest. In the first are grown coffee (nearly 540,000 ac.), cocoa (13,000 plantations), wheat, rice, tobacco, cotton, maize, sugar-cane (about 18,000 plantations); the second is given over to stock-raising; and the third, which covers half the country, produces caoutchouc, balata (a kind of gum somewhat like rubber), copaliba, vanilla, etc.; but the forest resources are scarcely tapped. Over one-fifth of the people are engaged in agriculture or in cattle-raising. There are 4,000,000 oxen in V., 1,333,000 goats and more than 350,000 pigs. V. is the second largest petroleum-producing country in the world. The oil concessions cover over 13,500,000 ac., and oil accounts for 90 per cent of total exports. The output has increased from 19,000,000 barrels in 1925 to over 2,000,000 barrels daily in 1954, and in the latter year export of petroleum and by-products amounted to over \$1,500m. The basin of Lake Maracaibo is the most prolific S. Amer. source of oil. There is another oilfield in eastern V., in the states of Anzoátegui and Monagas and the ter. of Delta Amacuro. Other minerals are gold (found near Ciudad Bolívar), copper ore, magnesite, coal (obtained in the vicinity of Coro, and Naricón), iron, sulphur, and salt. Iron is obtained in the Imataca Mts and the delta, and the war-time discovery of the 'Iron Mountain' of Cerro Bolívar has added a steel project to the already thriving industrialisation touched off by the oil boom. At this site, at the junction of the Orinoco and Caroní rivs., a new port (San Félix) and an airport (Porto Ordaz) have been built. Coal and petroleum are sought chiefly in the regions of Lake Maracaibo and the R. Guasare. Pearl-fishing flourishes, especially around the is. of Margarita. There are but few secondary industries beyond cotton textiles of a cheap quality produced at Valencia and Caracas. Salt and matches are gov. monopolies. There are cement factories at Valencia, Barquisimeto, and Caracas, and a glass factory at Caracas. Imports and exports have thriven in recent years, and in 1954 were \$2605m. and \$2933m. respectively; the deficit is more than made good by oil royalties. On 30 June 1930 V. paid off its entire external debt of 23,750,000 bolívares in gold, as a token of homage to Simón Bolívar, the Liberator. The

official monetary unit is the bolívar, normally equal to 0.290323 gramme fine gold or 32.67 cents U.S.

Communications. La Guaira is the chief port. There are 11 main railway lines, which own together over 640 m. of railways. There are wireless stations at Caracas, Cristóbal, Barquisimeto, and in a number of other tns. There are some 10,000 m. of road. The excellent inland and international air services are government-owned. Malquetia is the airport for Caracas.

Religion and Education. The Rom. Catholic is the prevailing religion of V. There are 2 archbishops, one at Caracas and the other at Mérida. There are also 8 suffragan bishops. Elementary instruction is free and from the age of 7 compulsory. The univs. are those of Los Andes at Mérida with 2000 students and the Central Univ. at Caracas (300 years old) with over 1600 students, and that of Zulia (Maracaibo) with some 1200. A Workers' Univ. in Caracas was set up by a law of 9 Oct. 1947.

Defence. By a law of 1942 all males who have reached the age of 18 must serve in the active military forces for periods ranging from 1 to 3 years. All serve in the reserve afterwards until the age of 45. The active army has an estab. of 10,000 men of all ranks and consists of 8 infantry brigades, a corps of artillery, engineers, and other ancillaries, and also aviation services.

History. V. was first sighted by Columbus in 1498, and in the following year visited by Alonso de Ojeda and Amerigo Vesputci. The country remained under Sp. rule until the revolution under Simón Bolívar (q.v.), when its independence was won at the battles of Lastoguanes (1813) and Carabobo (1821). V. was part of the Federal Rep. of Colombia until 1830, but thereafter became absolutely independent. There have been a number of revolutions since 1846, and in 1864 the country was divided by President Falcón into states and formed into a Federal rep. Between 1830 and 1935, V. had more than a dozen rulers, but 3 were pre-eminent: Páez, the half-Indian peon, who declared the independence of V. in 1830; Guzmán Blanco, who assumed office in 1870; and Juan Vicente Gómez (1909-35). Under each of these despots V. was ruled as a private estate for the benefit of the owner, but the result was the estab. of order among the different factions and a consequent increase of material prosperity. On the dispute between Great Britain and the U.S.A., over the Venezuelan-British Guiana boundary, see ARBITRATION, *A. between Great Britain and the U.S.A.*; CLEVELAND, STEPHEN GROVER; and UNITED STATES, *History*. In Oct. 1945 a revolt broke out against the Conservative gov. of Gen. Medina, who had been elected president for 5 years from 1941. The leader of the revolt, Rómulo Betancourt, assumed the presidency after a struggle of only 3 days and the new gov. was soon recognised by America, Britain, and France. A year later an elected constituent assembly drew up a new

constitution, providing for a federal rep. of 20 autonomous states, a federal dist. and 2 ters. The general election of Oct. 1946 was the first that had been held since 1881. He in turn was succeeded by a military junta under Delgado Chalbaud in Nov. 1948 and the Chief of Staff, Lt.-Col. Carlos Pérez Jiménez, was elected President, and re-elected in 1952. In Jan. 1958 General Pérez Jiménez was overthrown by a military junta led by Rear-Admiral Wolfgang Larrazabal, following on a general strike organised by a civilian body which resulted in the outbreak of fighting. Jiménez fled to the Dominican Rep., and General Ferón (q.v.), the former president of Argentina to whom Jiménez had given asylum, left for Colombia.

Alvarado, *Datos Etnográficos de Venezuela* (Caracas), 1945; R. S. Scrivener, *Venezuela, August 1954*, H.M.S.O. (Overseas Econ. Surveys), 1955. 'Veni Creator Spiritus' ('Come, Holy Ghost') an early and very famous hymn for Pentecost, probably written by Hrabanus Maurus (776-856). The trans. in the Anglican Prayer Book ordination service is by Bishop Cosyn.

Venice (It. Venezia); 1. Prov. of Italy, in F. Veneto (q.v.). It is generally plainland, lying along the Gulf of V. The coast-line is greatly indented, and contains numerous lagoons, including the famous lagoon on which the city of V. stands. There are sev. rivs., of which the most important is the Piave (q.v.). Cereals, salt, rice, and fish are produced. The prin. tns include V., Mestre, Portogruaro, and Chioggia (qq.v.). Area 950 sq. m.; pop. 745,000.

2. It. city and seaport, cap. of the prov. of V., and chief tn of Veneto, on the Gulf of V., 240 m. N. of Rome (q.v.). It is the H.Q. of one of the It. naval defence zones. The city is built on a large number of small is., divided into 2 groups by the Grand Canal (q.v.), which runs NW.-SE. and forms the main thoroughfare. This canal (in shape an inverted S) is crossed by 3 bridges (from N. to S.: Stazione, Rialto, Accademia), and from it branch about 150 smaller canals. There is no wheeled traffic in the city, and transport is traditionally by means of the boat known as the 'Gondola' (q.v.). The is. of *la Giudecca* is separated from the city proper by a waterway called the Canale della Giudecca. A railway viaduct 2½ m. long connects the city to suburbs on the mainland (see MESTRE), and there are other suburbs on the long narrow is. on the outer edge of the lagoon (see LIDO). The centre of V. is the wonderful square of St Mark, which is surrounded by many

of the prin. buildings of the city: the 5-domed cathedral of St Mark (1063-94), with its marbles and mosaics and the 4 great bronze horses (Gk, 3rd or 4th cent. bc), is one of the most splendid Byzantine buildings in the world; the palace of the Doge (q.v.) is a Gothic structure of the 14th-15th cents., and is connected to the State Prison by the covered Bridge of Sighs (q.v.); the Campanile is a reconstruction of a tower which collapsed in 1902, but the Loggetta adjoining it is by Sansovino (q.v.); the Torre dell'Orologio, with its bronze figures to strike the hours, dates from 1490; and the Museo Civico has a notable collection of antiquities. On the quay S. of the cathedral stands the famous column bearing the 6th-cent. bronze lion of St Mark. There are many fine churches, most of them richly decorated and containing remarkable paintings, among them Sta Maria della Salute, Sta Maria Gloriosa, and S. Salvatore. There are sev. important libraries, and the Galleria dell'Accademia has a representative collection of works by Venetian painters (see ITALIAN ART). In addition to its great schools of painters, the contribution of V. to the arts has been very considerable. Its masons, mosaicists, and glass-workers have been famous since early times, and in the 15th cent. the printing-presses of V. produced more books than those of Rome, Milan, Florence, and Naples combined. The blown-glass industry still flourishes (see MURANO), and there are textile, jewellery, lace, and publishing industries. At the new suburb of Porto Marghera, on the mainland, there are iron, steel, zinc, and other industries. Pop. (city) 204,500; (com.) 323,200.

History. The hist. of V. begins with the inhab. of the plain at the head of the Adriatic taking refuge in the lagoons from the incursions of the Barbarians. At first the ls. of the lagoons were only a temporary refuge, and although steps were taken towards a corporate existence in 466, it was not until 568 that the refugees abandoned the idea of a return to the mainland. Of the original 12 townships Rialto, now V., was not the most important. The tn became known as the Rep. of St Mark after the saint's bones were brought there in 828. It grew into the most powerful of the It. states, trading with the Far E. and distributing its imports throughout W. Europe. Colonies and factories were founded in the Morea, at Constantinople, and in many of the coast tns of Syria. By the end of the 15th cent. V. ruled also Istria and Dalmatia, Ravenna, and parts of Lombardy and Apulia (q.v.). From the beginning of the 14th cent. its gov. was an oligarchy headed by the Doge, and it had to maintain its supremacy in the Adriatic against its rival Genoa (q.v.), and against the Empire, the Turks, and the Dalmatian pirates. It took a leading part in the transport of soldiers to the Holy Land during the Crusades (q.v.). In the latter half of the 15th cent. the decline of the Rep. began; the chief causes were the Turkish conquest of

Constantinople, the discovery of the Cape route and of America, and the rise of the great European Powers and their dominance in Italy generally. The end finally came with the destruction of the Rep. by Napoleon I (q.v.) and the handing over of the city to Austria by the treaty of Campo Formio (q.v.) in 1797. In 1866, after the war between Prussia and Austria (see AUSTRIA, *History*), V. passed to Italy. During the Second World War the city escaped serious damage.

See J. Ruskin, *Stones of Venice*; E. V. Lucas, *A Wanderer in Venice*, 1930; T. Oker, *Venice and its Story*, 1930; F. Schillmann, *Venedig Geschichte und Kultur Venetiens*, 1933; H. Tietze, *The Drawings of the Venetian Painters*, 1944; A. Stokes, *Venice: An Aspect of Art*, 1945.

Venice, Gulf of, name given to the N. part of the Adriatic Sea (q.v.), bounded by the coasts of Istria, Friuli-Venezia Giulia, and Veneto (qq.v.). The prin. tns on its shores are Venice and Trieste (qq.v.); the indentation on which the latter tn stands is also called the Gulf of Trieste.

Venzelos, Eleutherios (1864-1936), Gk statesman, b. Canea, Crete. He became Gk Premier in 1910 (he had already made his name politically in Cretan Affairs), having saved the dynasty during the Balkan crisis of 1909-10 by his masterly revision of the Constitution and co-operation in forming the Balkan Alliance of 1912. At the outset of the First World War he advocated Gk intervention on the side of the Entente, but received no support from King Constantine and resigned in 1915. Towards the end of 1916 V. set up a provisional revolutionary gov. at Salonika. Late in 1917 he returned to Athens, being recalled to office after the abdication of Constantine, by King Alexander. He was now head of the National Gov. and contributed to the efficiency and success of the Allied army at Salonika, reorganising the Hellenic forces. But the failure of the Greeks in the war with Turkey in 1921-2 embittered sentiment towards him. After the revolution in Greece in 1922, however, he represented his country at the Lausanne Conference and in 1924 once more became Prime Minister, the country having meanwhile become a rep. From 1928 to 1932, following a dictatorship, he was again in power; in Crete he inspired a revolt against its acting regent, but the revolt was quelled and he was forced to go into exile in France, where he d. See lives by V. J. Seligman, 1920; S. B. Chester, 1921; H. A. Gibbons, 1921.

Venlo, tn and important railway junction in the prov. of Limburg, Netherlands, on the R. Maas. It was once a strongly fortified tn. Industries include engineering, and the manuf. of tobacco, paper, and electric lamps. V. was the scene of heavy fighting late in the Second World War (see WESTERN FRONT in SECOND WORLD WAR). Pop. 49,438.

Venomous bites and stings. Some snakes are provided with poison-glands connected with grooved fangs. One lizard, the heloderm of N. America, has

poison-glands. Centipedes have poison-sacs connected with the jaws. Spiders paralyse their prey by stabbing with poison-claws, and scorpions have a sting or telson at the end of the 'tail' (abdomen). For first-aid treatment in snake bite the wound should be enlarged and suction applied; an injection of antivenine should be given if available. The adder (viper) is the only poisonous snake in Great Britain. See also INSECT BITES AND STINGS.

Venosa (anc. *Venusia*), It. tn in Basilicata (q.v.), 23 m. N. of Potenza (q.v.). It has a 15th-cent. cathedral, and has a large trade in agric. produce. Horace (q.v.) was b. here. Pop. 13,400.

Ventilation, the replacement of stale air by fresh. People differ widely in what they consider to be stale air, and it is difficult to lay down standards. Generally, V. should be designed to remove smell, smoke, noxious gases, or dusts before they cause discomfort or injury to health; in hot weather it may need also to supply a current of fresh air to promote evaporation of perspiration, whereby the human body keeps cool. Some air movement is always necessary for comfort, at rates of about 20-40 ft per min. The V. of a room is usually measured by the number of air changes per hr: thus a room 1000 cub. ft in volume needs 2000 cub. ft of air to enter to give 2 air changes. Domestic bathrooms and W.C.s require 3 air changes per hr, larders 2, living-rooms rather less. Higher rates are generally required for public buildings (e.g. 1000 cub. ft per hr per person), offices, etc. In factories and mines (see COAL-MINING) V. demands special attention, and standards are laid down by the Factories Act, 1937 (Section 4), for the former, and the Mines and Quarries Act, 1954, for the latter.

Natural Ventilation. In houses and other small buildings natural V. is usually quite adequate. Even with all doors and windows closed, plenty of air can pass through the gaps around them; indeed, it is often desirable to fit draught-excluding strips to conserve warmth in the winter. On no account, however, should the V. below timber floors be interfered with, or decay may result (see DRY ROT); care should also be taken not to reduce V. below what is necessary for coal or gas fires to draw properly. With large buildings it is necessary to consider the effects of wind and of convection currents due to temp. differences, before deciding whether natural V. will be adequate.

Forced Ventilation. In its simplest form a forced-V. system may be simply an extractor fan mounted in a wall or window. A system for a complete building uses ducts to distribute air from a central fan installation; if this air is also heated or cooled and recirculated after filtering and washing the system is more properly termed air conditioning (q.v.).

See A. A. Jones, *Modern Heating and Ventilation*, 1935; O. Faber and J. R. Kell, *Heating and Air Conditioning of Buildings*, 1937; J. Porzes, *Handbook of Heating, Ventilating and Air Conditioning*,

1942; *British Standard Code of Functional Requirements for Buildings*, Chapter I(C), *Ventilation*.

Ventimiglia, It. seaside resort, in Liguria (q.v.), on the Roja. It is on the Riviera (q.v.), 3 m. from the Fr. frontier, and has a 12th-cent. Gothic cathedral and a notable 11th-cent. church. The Balzi Rossi grottoes contain palaeolithic remains, and E. of the tn are the remains of the Rom. settlement, *Albintulum*. There is a trade in flowers. Pop. 15,000.

Ventnor, tn in the Is. of Wight. The climate is mild and suitable for invalids. In the summer V. is a pleasure resort. St Boniface Down, a hill rising to 764 ft behind the tn, is a property of the National Trust. The Royal National Hospital for diseases of the chest is outside the tn. Pop. 6900.

Ventôse (windy month), sixth month of the year in Fr. revolutionary calendar. See CALENDAR.

Ventriloquism, art of speaking in such a manner that the sound appears to be produced at a distance from the speaker. The origin of the word, from *venter*, belly, suggests that the voice was supposed to proceed from the speaker's stomach. The words are, however, produced in the usual manner, though some consonants may be masked by the immobility of the lips and teeth and the restricted use of the tongue. The art was practised by the anc. Greeks and Egyptians. See A. Prince, *Whole Art of Ventriloquism*, 1920; S. Vereker, *Ventriloquism as a Hobby*, 1938; D. Craggs, *The A.B.C. of Ventriloquism*, 1946.

Ventura, cap. of Ventura co., California, U.S.A., 65 m. NW. of Los Angeles, between Santa Clara and Ventura rvs. It is an oil-shipping and refining point in an agric. area with oilfields. San Buenaventura Mission was estab. here in 1782 by Junipero Serra. Pop. 16,500.

Venturi Flowmeter, see WATER MEASUREMENT; HYDROKINETICS.

Venus. In an indictment the V. is the statement of the co. or other geographical div. in which the trial of a person accused of an indictable offence is to take place (see INDICTMENT, and JURY), and also, as a rule, the place where the crime was committed. As the V. should, by the common law, be the jurisdiction within which the crime was committed, the trial generally takes place there too. But to this general rule there are exceptions; e.g. offences committed on a Brit. ship (see MERCHANT SHIPPING ACTS) may be tried in any co. where the offender is in custody; offences against the Customs Acts are triable in any co. Again, the V. as to forgery, bigamy, larceny, or embezzlement by public servants may be laid either in the co. where the crime was committed or in the place of arrest; and there are special rules applying where the offence was committed partly in one and partly in another co.

Venus, see APERODITE.

Venus, the most conspicuous and brightest planet. Phosphorus, the morning star, and Hesperus, the evening star

were its names among the Greeks. It is frequently visible in daylight. It moves at a mean distance from the sun of 67,200,000 m. in an orbit of less eccentricity, 0.007, than that of any other planet, at a velocity of 22 m. per sec.; the revolution is completed in 225 days (its sidereal period), its synodic period being 583.92 days. The inclination of its orbit to the plane of the ecliptic is under $3\frac{1}{2}^\circ$. The apparent diameter varies from $10''$ to $61''$, its distance from the earth varying from 26,000,000 to 160,000,000 m. The real diameter is 7800 m., the planet being practically the same size as the earth therefore, and its mass is 83 per cent, density 94 per cent, superficial gravity 90 per cent those of the earth. Owing to its position inside the earth's orbit V. exhibits phases; the discovery of the gibbous phase by Galileo in 1610 being one of the facts which disproves the Ptolemaic system, and supports that of Copernicus. The transit of V., its passage across the sun's disc at inferior conjunction, is a rare phenomenon, and occurs about 6 June or 7 Dec., but takes place outside these dates; actual past or future dates are 6 Dec. 1631; 4 Dec. 1639; 6 June 1761; 3 June 1769; 8 Dec. 1874; 6 Dec. 1882; 7 June 2004; 5 June 2012; 10 Dec. 2117; 8 Dec. 2125; 11 June 2247; 8 June 2255. Horrocks and Crabtree in England were the first (1639) to observe a transit, which Horrocks (q.v.) had predicted, since when they have been specially observed elaborately by scientific expedition to the best stations. The matter was one of great importance as a means of determining the parallax (q.v.) of the sun, but more accurate methods are now adopted.

Surface Markings. The best telescopes fail to show any well-defined markings on the disk of V., and even the red and infra-red photographs obtained in 1927 by Ross at Mt Wilson, using filters of different colours before the plates, revealed no markings. Some of the photographs taken with blue light showed very weak markings, and those taken with ultra-violet light showed a considerable amount of detail on the disk. These markings are located in the atmosphere of V., and so give no information about the surface features. The lack of permanence in details revealed by photography makes it impossible to be certain about the period of V.'s rotation. Ross suggested 30 days as a probable period, and it is believed that the actual figures are close to this, though probably some days less. What is certain, however, is that the atmosphere of V. contains a large amount of carbon dioxide, but all attempts to detect oxygen and water vapour have failed. The temp. of the sunlight side of the planet is about 50°C ., and that of the dark side is about -20°C . V. is a disappointing planet, when viewed through the telescope. About the time of inferior conjunction it displays a crescent disk-like new moon, which increases from night to night, passing through all the phases characteristic of the waxing moon, until it looks like the

full moon when it is in superior conjunction about $9\frac{1}{2}$ months later. After this it goes through the phases of the waning moon, attaining the crescent-like new moon $9\frac{1}{2}$ months later. While V. can be seen both as a morning and an evening star, it can never be seen all through the night, though periodically it sets some hrs after the sun, and at such times appears very brilliant in the heavens. The albedo of V.—the percentage reflected to the total light falling on the surface of a body—is 59, compared with moon's albedo of 7 per cent. A high albedo usually indicates the presence of a cloudy atmosphere—a condition prevailing on V.

Venusberg, see TANNHAÜSER.

Venusia, see VENOSA.

Venus's Fly-trap, see DIONAEA MUSCIPULA.

Venus's Looking-glass (*Specularia hybrida*), campanulate plant with purple flower, often grown in garden borders and beds.

Vera Cruz: 1. Gulf state of Mexico. The surface is broken up by large tidal lagoons and rivs., behind which is a gently rolling stretch of fertile lands which rise gradually to the base of the Sierras, whose valleys and precipitous wooded slopes form the S.E. flank of the great centre tableland. Cihuatlpetl, the highest mt in Mexico (18,204 ft) is on its W. border. The products are cedar, fancy and hard woods, coffee, sugar, alcohol, vanilla, tobacco, bananas, and beans. There are textile mills and breweries in Orizaba, and soap factories and flour mills in the state. There are oilfields in the N. and S. parts of the state. Jalapa (q.v.) is the cap. Area 27,736 sq. m.; pop. 2,040,231.

2. Seaport lying on the SW. coast of the Gulf of Mexico, in the state of the same name, and 264 m. E. of Mexico City by rail. It is built on low-lying sand-banks and has a harbour protected by sea-walls. Cortés (q.v.) landed on the gulf coast near the site in 1519, founding the city of the True Cross or V. C. the next year; and from here launched the campaign which was to result in Iberian colonisation of the Americas. From the docks of V. C. may be seen the grim fortress of San Juan built by Cortés. There are extensive, sloping beaches of fine sand. The old port of V. C. was abandoned in 1609, and the new city was estab. a little farther to the S. From V. C. a colonial road was built into the highlands by way of Jalapa, a route paralleled by the modern railway. V. C. remains the chief Mexican port. There are manufs. of furniture and tobacco: the prin. exports are metal ores, coffee, bananas, tobacco, hides, sugar, and rubber. Pop. 101,515.

Veraguas, prov. of Panama, extending across the isthmus. Its mts reach 6000 ft. There are the usual tropical products and various minerals, but only a little gold is mined. The cap. is Santiago. Area 4600 sq. m.; pop. 107,000.

Veratrine, poisonous crystalline powder derived from sabadilla seeds by bruising, boiling in alcohol, and precipitation with

an alkali. It is sometimes applied externally as a local analgesic, if the skin is unbroken, and in the form of an ointment as a parasiticide, especially in cases of pediculosis capitis (see LICE).

Veratrum, or **False Hellebore**, genus of perennial plants (family Liliaceae) with decorative leaves and panicles of white, green, or purple flowers. *V. album* yields the poisonous powder known as Hellebore powder, which is mixed with water and used as an insecticide.

Verbanus Lacus, see MAGGIORE, LAKE.

Verbena, or **Vervain**, genus of herbaceous plants and shrubs. *V. officinalis* is the common Brit. wayside plant, with slender spikes of small lilac flowers. There are about 200 species, mainly indigenous to America. The Garden *V.* (*V. × hybrida*) is grown as an ann. varieties Firefly and Lawrence Johnston being very fine.

Verbenaceae, family of herbs, shrubs, trees, and climbers, about 3000 species, chiefly tropical and sub-tropical. Teak (q.v.) is the most important. Genera include *Callicarpa*, *Caryopteris*, *Clerodendron*, *Gmelina*, *Lantana*, *Lippia*, *Petrea*, *Tectona*, *Verbena*, and *Vitex*.

Vercellae, see VERCELLI.

Vercelli: 1. Prov. of Italy, in NE. Piedmont (q.v.). The N. half of the prov. is in the Alps (q.v.); the S. is part of the great N. plain of Italy, and is watered by the Sesta, a trib. of the Po (q.v.). The prin. tns include V. and Biella (qq.v.). Area 1182 sq. m.; pop. 389,000.

2. (Anc. Vercellae), It. tn, cap. of the prov. of V., 38 m. NE. of Turin (q.v.). It is near the R. Sesia, at the junction of the Milan-Turin rd. with the road from Genoa. Here, in 101 BC, Marius (q.v.) vanquished the Cimbri (q.v.). There is a baroque archiepiscopal cathedral, and a 13th-cent. basilica. The tn is the centre of a great rice-producing area, and has sugar, engineering, and textile manufs. Pop. (tn) 36,100; (com.) 41,100. See VERCELLI BOOK.

Vercelli Book, or **Codex Vercellensis**. Early Eng. MS., discovered in 1822 by Dr Friedrich Blume, a Ger. jurist, in the cathedral library at Vercelli (see above). Besides 6 homilies and a prose 'Life of Guthlac,' it contains 6 poems, including 'Andreas,' 'Gynewulf's 'Elene,' the 'Dream of the Rood,' and an 'Address of the Soul to the Body.' A facsimile ed. was pub. in 1894.

Vercingetorix (d. 46 BC), chieftain of the Arverni, a Gallic tribe. He led a revolt against the Romans with great ability, but was delivered to Caesar on the surrender of Alesia (52 BC). After adorning Caesar's triumph in 46 BC he was put to death. See life by M. A. Leblond, 1937-8.

Verd-Antique, old Fr. name for what the Romans called *lapis atrax*, from Atrax in Thessaly, its place of origin. It is a fine green serpentine mixed with limestone, variegated often with brown or white patches. The columns of the Lateran basilica are composed of this stone.

Verde, Cape, see CAPE VERDE ISLANDS.

Verdelho Wine, see MADEIRA WINE.

Verden, Ger. tn in the Land of Lower Saxony (q.v.), on the Aller, 43 m. NNW. of Hanover (q.v.). In 782 Charlemagne (q.v.) decisively defeated the Saxons here. From 1405 to the mid-16th cent. V. was a free imperial tn; it passed to Sweden in 1648, to Denmark in 1712, and to Hanover in 1715. It has beer and tobacco industries. Pop. 11,000.

Verdi, Giuseppe (1813-1901), It. composer, b. Le Roncole, near Busseto, Parma, son of a poor innkeeper and grocer. He became a choir-boy in the local church at the age of 7, and was taught by the organist, in whose place he was appointed in 1823. At 11 he went to school at Busseto. Barezzi, a friend of V.'s father,

VERDI: PORTRAIT BY BOLDINI

took him into his house in 1826, and he learnt much from the cathedral organist, Provesi. He had an overture performed and had composed for a military band in 1828, and the next year he wrote a symphony and deputised for Provesi. In 1831 V. was sent to Milan with a scholarship and some financial help from Barezzi, but was rejected by the Conservatory as over entrance age. He studied, however, with Lavigna at the Scala Theatre. In 1836 he married Barezzi's daughter, Margherita, by whom he had 2 children; but the whole family died between 1838 and 1840.

Meanwhile V. had composed his first opera, *Oberto*, which was produced at La Scala in 1839. A second, *Un giorno di regno*, was a failure, having been composed at the time of his bereavement; but *Nabucco*, produced there in 1842, had a great success. In the cast was Giusep-

pina Strepponi, who became a great and loyal friend and later V.'s second wife. *Ernani* was produced in 1844, *Rigoletto* in 1851, *Il Trovatore* and *La Traviata* in 1853. In 1871 V. excelled his previous efforts with *Aida*; then, in his old age, after a long interval, he produced his 2 great Shakespearean masterpieces: *Otello*, 1887, and *Falstaff*, 1893. Among the operas not yet named the most important are *Macbeth*, 1847, rev. 1865, *Luisa Miller*, 1849, *Simon Boccanegra*, 1857, rev. 1881, *Un ballo in maschera*, 1859, *La forza del destino*, 1862, and *Don Carlo*, 1867, rev. 1884. A great non-operative work deserves notice: the *Requiem*, 1873, in memory of Alessandro Manzoni. Choral works include *Pater Noster*, *Ave Maria*, and *Stabat Mater*.

V. is the artistic successor of Donizetti and Bellini, but shows a far greater wealth of passionate feeling, musicianly craftsmanship, and power of enlightening pathos or tragedy by a simple and suggestive spirituality. His music was essentially it. In character, and owed nothing to Wagnerian influences. His musical development was as varied as that of Beethoven: his lyricism was always constant, but his last works show also a rare spirituality, a refinement, and religious consciousness which place him among the foremost composers in the field of sacred, as well as of operatic, music. See lives and studies by C. Bellague, 1911; A. Weissmann, 1922; M. Bonaventura, 1923; E. Checci, 1926; F. Werfel, 1924, 1944; F. Bonavia, 1930, 1947; A. Alberti, 1931; C. Gatti, 1931, 1951; F. Toye, 1931; M. Chop, 1938; D. Hussey, 1940, 1948; G. Monaldi, 1951.

Verdict. In civil trials the jury, after the judge has summed up the evidence, determine by their V. all issues of fact, and if they find for the plaintiff assess the damages. Damages are said to be 'liquidated' when the jury can arrive at the amount by mere arithmetic or calculate them according to a scale of charges or some other accepted rate of percentage (see *Odger's Principle of Pleading*). But when the amount is arrived at after consideration of all the circumstances, including the conduct of the parties, the damages are 'unliquidated.' In this latter case they may be *contemptuous*, when the jury think the plaintiff ought never to have brought his action; *nominal*, when, though the plaintiff was justified in suing, he has suffered no special damage, and has sued rather to clear his character or establish a right; *substantial*, when the plaintiff is entitled to fair compensation; and *vindictive*, when the jury desire to punish the defendant by making an example of him (this is permissible only in actions of breach of promise, libel, seduction, assault, malicious prosecution, false imprisonment, trespass, and slander). In criminal law V.s are said to be either: (1) general, i.e. guilty or not guilty; or (2) *partial*, i.e. guilty on one count (see *INDICTMENT*) and not guilty on the rest; or (3) *special*, i.e. where the jury find a certain state of facts and leave it to the judge to decide upon those facts whether

the offence charged has been committed. In Scots law there is a middle V. of *non-proven*, but Eng. jurisprudence has never favoured any rule that militates against finality one way or the other in criminal trials. Where the jury cannot agree they must be discharged, and the accused is then tried before a new jury. If a juror dies or is taken ill a similar result follows. Before a jury arrive at a V. they ought to satisfy themselves: (a) that the facts are satisfactorily proved; and (b) that the circumstantial evidence (see *EVIDENCE*) is not only consistent with guilt, but is inconsistent with any other reasonable conclusion.

Verdigris, see *ACETIC ACID*.

Verditer, basic copper carbonate obtained when sodium carbonate is added to a solution of copper sulphate. It is greenish blue in colour, but is little used as a pigment, as it is very poisonous.

Verdun, Fr. tn in the dept of Meuse, on the Meuse. It has long been a fortress, commanding an approach to the Paris basin. There was a Gallic settlement here, and, later, the Rom. fortress *Verodunum*. Here, in 843, the threefold div. of the Frankish empire among the sons of Louis the Debonnaire was decided upon (see *CARLOVINGIANS*). The bishopric dates back to the 3rd cent. There are brewing, and textile and metallurgical manufs. Pop. 14,600. See also *WESTPHALIA, TREATY OF*.

2. City of Quebec, Canada, on the St Lawrence R., and on the Canadian National Railway, a W. residential suburb of Montreal (q.v.). It is named after Savardun, bp. of Dupuis, who in 1672 received a grant of land. In 1830 it was renamed *Rivière-St Pierre*, but an Act restoring the name V. was passed in 1876. It became a city in 1912. V. has very few large industries. The main public-utility services are owned by the municipality. There are a number of churches, a general hospital, and a hospital for mental patients. Pop. 77,500.

Verdun, Battle of (1916), began on 21 Feb. 1916 and continued, intermittently, until June 1916. (For the political considerations which decided the Ger. Gov. to endeavour, at all costs, to take Verdun, see *WORLD WAR, FIRST*.) The attack, in the first phase of this remarkable battle, or series of battles, was heralded by an artillery bombardment of quite exceptional intensity. A few days later the Ger. infantry, wave upon wave, advanced up the slopes of Douaumont Hill (see *DOUAUMONT*), suffering extraordinary casualties from the famous Fr. 75s and mitrailleuses. Gen. Pétain's arrival with timely reinforcements thwarted this plan, and, the following day, a Fr. counter-attack was ordered which, in the result, changed the whole aspect of the attack. For days a tremendous battle was waged around the ruins of Fort Douaumont and by the first day of Mar. the Ger. attack slackened, a respite which enabled the French to bring up ever more reinforcements and supplies. In the first phase of the struggle for Verdun, the French had been called on to defend the heights of the

Meuse, but, in the next phase, the struggle was transferred to the W. bank of the Meuse, the Ger. object being to remove the Fr. threat across the riv., so as to turn Douaumont by taking Pepper Ridge, which, like Douaumont, lay in a commanding position to the N. of Verdun. The fiercest fighting raged round Mort Homme, the key of the position on the W. bank of the riv., but, though the fighting continued throughout Mar. and into April, the Ger. effort failed to gain the coveted city. Still undaunted, the Germans at the end of May launched the most desperate attacks on both sides of the riv. and, after a struggle of amazing intensity, during which Gen. Nivelle vainly counter-attacked to regain Douaumont, the Germans succeeded in capturing Fort Vaux, on 7 June, and thus, at all events, had won 2 important positions of the exterior ring of the permanent fortifications. This, however, marked the limit of Ger. success, for the next important fort, Souville, was never reached, and the French were never driven from the S. slopes of the Mort Homme hill, so that Verdun was saved, and all the Germans had gained in return for the vast sacrifices made were a piece of ter. NE. of Verdun and less than 12 sq. m., 2 shattered forts, and some ruined vils. It is computed that the Ger. casualties were about 300,000.

Vere, Sir Aubrey de, see DE VERE, SIR AUBREY.

Vere, Aubrey Thomas de, see DE VERE.

Vere, Sir Francis (1560-1609), soldier, brought up by Sir Wm Browne. His whole life from 1585 to 1604 was engrossed in active service, chiefly in the Lowlands. He played a gallant part in the defence of Sluys (1587), the relief of Rheinberg (1589), the fights at Breda (1589) and Groningen (1594), the victories at Turnhout (1598) and Nieuport (1600), and the defence of Ostend (1601-2). He also shared in the success of the Cadiz expedition (1596). There is an ed. of his *Commentaries*, 1883. See Sir C. R. Markham, *The Fighting Veres*, 1888.

Vere, Horace, Baron Vere of Tilbury (1565-1635), soldier, was brother to Sir Francis V. (q.v.). As commander of the Eng. troops in Holland (1604) he recovered Sluys. In the Palatinate he was obliged to surrender to Tilly at Mannheim (1622). See Sir C. R. Markham, *The Fighting Veres*, 1888.

Vereeniging, manufacturing centre and pleasure resort in the Transvaal, S. Africa, on the R. Vaal, 36 m. from Johannesburg by road. It is the largest coal-mining area in the Union, ann. output 4,500,000 tons. The great Iscor Steel Works are on the S. side of V., also brick and tile works, and electric power stations. Here is one of the largest generating stations in the Commonwealth. The Anglo-Boer War (1899-1902) Peace Treaty was negotiated and signed at V. Pop. (whites) 17,322; (Bantu) 41,103; (Coloured) 707; (Asiatics) 694.

Vereschagin, Vassili (1842-1904), Russian painter, graduated from the naval school of St Petersburg, but subsequently

studied art in that city and in Paris. A restless spirit, he fought under Kauffmann during his Turkestan campaigns (1867), visited India, the Himalaya, and Tibet (1873), went through the Russo-Turkish war of 1877, travelled in Palestine and Syria (1884), was at the front during the Sino-Japanese war (1894), and finally perished with the flagship *Petrovsk* during the struggle between his country and Japan. His sensational pictures were designed to disgust people with warfare by confronting them with its horrors.

Verga, Giovanni (1840-1922), It. novelist, b. Catania. He was one of the leaders of the It. school of realism, believing in complete objectivity. He is at his best when he describes the life of Sicilian peasants and fisherfolk, as in *Vita dei Campi*, 1880, *I Malavoglia*, 1881, *Novelle Rusticane*, 1883, and *Mastro Don Gesualdo*, 1889. His short story *Cavalleria Rusticana*, rewritten as a play, was the source of the libretto for Mascagni's opera of the same name. See Verga, *Cavalleria Rusticana and Other Stories*, trans. by D. H. Lawrence, 1928; N. Cappellani, *Opere di Giovanni Verga*, 1941.

Vergara, or Bergara, Sp. tn in the prov. of Guipúzcoa, on the Deva, the scene of the convention ending the first Carlist war in 1839 (see CARLISTS). Textiles are manufactured. Pop. 9000.

Vergil, see VIRGIL.

Vergil, Polydore, or 'De Castello' (c. 1470-c. 1555). It. historian who spent the first and last years of his life in Urbino, his bp., but lived in England 1502-50. He had studied at Padua and Bologna. He was appointed archdeacon of Wells in 1508 and prebend of St Paul's in 1513. V.'s *History of England*, in Latin (pub. 1534) is particularly valuable for its account of Henry VII's reign. It was pub. in Eng. for the Camden Soc., 1844-6. V. also ed. Gildas, 1525.

Vergniaud, Pierre Victorin (1753-93). Fr. orator and revolutionary, b. Limoges. He entered the National Assembly in 1791, where he became, with Brissot (q.v.), leader of the Girondists, and, in Dec. 1792, urged an appeal to the people to decide the king's fate. After the king's execution he attempted, without success, to restrain Robespierre (q.v.), and, with other prominent members of his party, fell a victim to the Reign of Terror in Oct. 1793.

Verhaeren, Emile (1855-1916), Belgian poet, b. Saint-Amand, near Antwerp, and educ. at the Jesuit College of St Barbe, Ghent, and Louvain Univ. He was greatly influenced by Zola, and pub. (1883), *Les Flamandes*, a vol. of high-spirited poetry that shocked the respectable. A period of travel (including visits to London) was marked by: *Les Moines*, 1886, *Les Soirs*, 1887, *Les Débâcles*, 1888, and *Les Flambeaux noirs*, 1890, the last 3 pathological. Recovering from a severe nervous breakdown, he began to work the vein for which he is famous, realistic studies of modern life and labour, e.g. *Les Campagnes hallucinées*, 1893, *Les Villages illustrés*, 1895, *Les Villes tentaculaires*, 1895. In the same

vein were *Visages de la vie*, 1899, and *Les Forces tumultueuses*, 1902. A greater calm is reflected in *Les Heures Claires*, 1896, *Les Heures de l'Après-midi*, 1905, and *Les Heures du Soir*, 1911. *Love Poems* were trans. by F. S. Flint (1916). See lives and studies by P. Mansell-Jones, 1926; E. Estève, 1928; C. Brütisch, 1929; E. Kuchler, 1930; A. Mockel, 1932; R. T. Sussex, 1938.

Veria, or Verria, see BEROEA.

Verjuice, acid juice of unripe grapes or crab apples, used in cooking.

Verkhne-Ural'sk, tn in the Chelyabinsk Oblast of the Urals, 44 m. N. of Magnitogorsk. It has a food industry and is an isolator for important political prisoners. It was founded as a fortress in 1734. Pop. (1926) 10,000.

Verkhoyansk, tn in Yakutia (NE. Siberia), on R. Yana, 656 m. NE. of Yakutsk. It is the 'Cold pole' of the world (lowest reading -83.6° F.). V. is the centre of a cattle-breeding and fur-trapping area, and there is tin mining near by. Pop. (1951) 3000 (Russian, Yakuts). Founded 1638, place of banishment.

Verkneudinsk, see ULAN-UDE.

Verlaine, Paul (1844-96). Fr. poet, b. Metz. His lyrics are of the so-called impressionist type: half sensuous, half mystic, intensely beautiful in inspiration and subtle in rhythm, akin to the compositions of Debussy, who has set some of them, e.g. the *Fêtes galantes*, to music. His early paganism, responsible for such Baudelairean works as the *Fêtes galantes*, 1869, inspired by the paintings of Watteau, *Poèmes saturniens*, 1865, and *La Bonne Chanson*, 1870, was superseded (after 12 years of a life of dissipation broken by illness) by devout Catholicism, which he adopted during his imprisonment at Mons for shooting at the poet Rimbaud. *Sagesse*, 1881, is on a level with the finest religious poems ever written. Other works: *Romances sans paroles*, 1874, *Jadis et naguère*, 1884, *Les poètes maudits*, 1884, *Amour*, 1885, *Parallèlement*, 1890, *Bonheur*, 1891, etc. V. gave to Fr. poetry an entirely new and original music and broke away from the stilted Alexandrine verse. The melody of his poetry, the harmony of mood and sound, has found no rivals: V. combined this power of sound with, very frequently, deep emotionalism, and the combination produced a sense of poetry that was sharply poignant and extremely beautiful, without descending to sentimentality of any sort. At his greatest he ranks with Heine as one of the lyric singers who defies translation and imitation. See L. Lepelletier, *P. Verlaine et son oeuvre*, 1907; H. Nicholson, *P. Verlaine*, 1921; F. Porché, *Verlaine tel qu'il fut*, 1933; U. P. Underwood, *Verlaine et Angleterre*, 1938; C. Morice, *Verlaine poète maudit*, 1947; A. Adam, *Verlaine, l'homme et l'oeuvre*, 1953.

Vermeer, or Van der Meer, Jan (1632-1675), Dutch painter, b. Delft. Little is known of his life. He married in 1652, and was admitted to the Guild of Painters of Delft. He probably studied under

Karel Fabritius, a pupil of Rembrandt. In 1662 he was master of the Guild, and again in 1670. After his death he was forgotten, his work being assigned to Peter de Hooch and others. He was 'discovered' in 1866 by the Fr. critic Théophile Thoré, who wrote under the name W. Bürger. V. is now recognised as the most perfect of the Dutch masters in point of technique. His greatest qualities are his capacity for balanced design and his feeling for the play of light on colour, shown to perfection in his interiors. Forty-one pictures have been assigned to him. Of these the 'View of Delft' and the 'Head of a Girl' are in the Mauritshuis, The Hague; 'Lady Standing at the Virginals' and 'Lady Seated at the Virginals' are in the National Gallery, the 'Little Street' in the Rijksmuseum, and the 'Painter in his Studio' at Vienna. A number of pictures are in the U.S.A. Sev. paintings attributed to V. and acquired by public collections, notably 'Christ at Emmaus,' were proved to be forgeries in 1945. See lives and studies by G. Vanzype, 1921; E. V. Lucas, 1922 and 1929; H. G. Fell, 1933-34; A. B. de Vries, 1948; F. van Thienen, 1949.

Vermelo, see BERMEO, RIO.

Vermeylen, August (1872-1945), Flem. writer, b. Brussels. He was one of the leaders in the revival of Flem. literature, and one of the co-founders of the journal *Van Nu en Straks*, advocating a more serious and intellectual literature. As a critic and prof. at Brussels and Ghent Univs. he greatly influenced his generation. His philosophical novel *De wandelende Jood*, 1906, has been trans. into sev. languages. He also wrote an important *History of Plastic Art and Painting in Europe*, 1921-5.

Vermicelli, popular food in Italy, and so-called because it consists of worm-like threads (from It. *vermicello*, a little worm), made from the granular meal of certain kinds of wheat.

Vermiculite was originally thought to be mica which had undergone metamorphosis and considered of no commercial importance until 1936. To-day the U.S.A. and the Transvaal are the largest producers of V. It is formed from a micaceous ore, by heating to about 2000° F., and consists of a porous, flaky medium of small particles, sterile and highly absorbent and retentive of air and water, and light in weight. Its colour varies from white to yellow, brown, and green, and it expands to about 20 times its original volume on heating. The heated product has a very low density, high refractoriness at low temps., low thermal conductivity, chemical inertness, and is a non-conductor of electricity. It is thus used extensively in the building trade, giving nearly 10 times as much thermal insulation as does the same quantity of sand gravel concrete. V. plasters have excellent acoustic properties, and are highly moisture-resistant and crack proof. Apart from these major uses, a specially prepared form, neutral in reaction, is used in horticulture as a medium for raising plants from seeds

and cuttings, for which it is admirably suited. It is also employed in oil refining, and is one of the few materials whose supply is almost unlimited.

Vermilion, red variety of mercuric sulphide, HgS . It may be obtained by subliming the black sulphide formed by triturating mercury and sulphur together in a mortar. It is also prepared by digesting the black amorphous sulphide for some hours in alkaline sulphides. V. is used as a pigment, but is commonly adulterated with ferrous oxide and red lead. On heating it readily sublimes, and this constitutes a test of its purity. V. occurs naturally as the red mineral cinnabar.

Vermin, general term for noxious animals, or those destructive to crops and game. Rats, mice, moles, weasels, foxes, and polecats are V. In Great Britain, by an Act of 1919, persons who do not destroy rats and mice on their land, wherever it is reasonably possible to do so, may be fined. The word is also used of the insect parasites of man, lice, fleas, etc.

Vernland, län in the SW. of Sweden, lying to the N. of Lake Vener and adjoining Norway. Copper and iron are mined, and there is an important wood-pulp industry. Cap. Karlstad. Area 7427 sq. m.; pop. 286,786.

Vermont, known as the 'Green Mountain State', a New England state of the U.S.A., remarkable in its group for having no seaboard. It is bounded on the N. by Canada, on the E. by New Hampshire, on the S. by Massachusetts, and on the W. by New York. Lake Champlain, about 107 m. long, forms part of the W. boundary. The name ('Verd Mont') has reference to the Green Mts (highest peak, Mt Mansfield, 4393 ft.), which traverse it from N. to S. V. is primarily an agric. state, producing oats, maize, barley, hay, potatoes, maple sugar, and apples. Its output of dairy products is among the greatest in the U.S.A., and it leads in the production of maple syrup and maple sugar, the output being (1947), 777,000 galls. of syrup and 191,000 lb. of sugar. The quarrying of marble, granite, and slate is the most profitable industry, asbestos and talc are produced, and there is lumbering and timbering. State forests and state forest parks cover 78,600 ac. Metal founding, flour milling, and the manuf. of hosiery, other woollen goods, and paper are also important. It has probably the fewest people of colour of any state, its white pop. being 99.8 per cent.

V. was the first state to be admitted to the Union formed by the original states. The legislature has 30 senators and 246 representatives: 2 senators and 1 representative are sent to Congress. The cap., Montpelier, has a pop. of 8600. Other towns: Burlington, 33,155; Rutland, 17,659; Bennington, 12,410; Brattleboro, 11,520; Barre, 10,922. Area 9609 sq. m.; pop. (1950) 377,747. See W. H. Crockett, *Vermont: the Green Mountain State*, 1921; Federal Writer's Project, *Vermont: A Guide to the Green Mountain State*, 1937.

Vermouth (from Ger. *vermouth*, worm-wood—see **ABSINTHE**), an aperitif made

from white wine compounded with herbs and usually fortified. Nolly Prat is probably the best known of the Fr. V.s, which are mostly drier and stronger than the It. V.

Vermuyden, Sir Cornelius (†1596–†1683), Dutch engineer, b. in the Netherlands. He came to England, and began working on the drainage of the Fens (q.v.) in 1621. In 1628 he received an Eng. knighthood, and between 1629 and 1637, and 1649 and 1656, was responsible for the draining of the Bedford Level (q.v.) at the command of the 4th Earl of Bedford and an association of landowners. He re-visited the Netherlands on behalf of Cromwell, 1653.

Vernadskiy, Vladimir Ivanovich (1863–1945), Russian scientist and thinker, one of the founders of geochemistry and the founder of bio-geochemistry; also the founder of many academic bodies (Commission for the Study of Natural Productive Forces in Russia, 1915, Ukrainian Academy of Sciences, 1919, Institute of Radiology, 1922, etc.). As a public figure V. was active in the Zemstvo (q.v.) movement, the State Council (elected member for Moscow Univ.), and the Constitutional Democratic party (see **CONSTITUTIONAL DEMOCRATS**). He opposed the Bolsheviks and in 1917–21 was on the White side, living in Kiev and Simferopol. V. consistently rejected Marxist philosophy, building his own natural philosophy largely on the ideas of Fëdorov (q.v.).

Vernadon, manner in which the rudimentary leaves of plants are arranged in the bud.

Verne, Jules (1828–1905), Fr. novelist, b. Nantes. He first popularised that species of romance in which all kinds of more or less plausible scientific discoveries are made the basis of the most extravagant and thrilling adventures. His best stories are *Vingt mille lieues sous les mers*, *Le tour du monde en 80 jours*, *Cinq semaines en ballon*, 1863; his first success, and *Michael Strogoff*, 1880. See A. de la Fuye, *Jules Verne, sa vie et son oeuvre*, 1928; K. Allott, *Jules Verne*, 1940.

Verner, Frederick Arthur (1836–1928), Canadian painter, b. Sheridan, Ontario. He studied art in England, where he joined the Army, and served with Garibaldi in Italy, returning to Canada in 1862. Buffalo subjects and life in the W. were his favourite topics. He is represented in the National Gallery of Canada by 4 pictures.

Verner's Law, phonetic law propounded in 1875 by the Dan. philologist Karl Adolf Verner (1846–96), b. Aarhus, Jutland; univ. prof. of Slavonic studies at Copenhagen. Its discovery was the result of investigations intended to solve certain difficulties and irregularities left unexplained by Grimm's Law (q.v.). In his outstanding article 'Eine Ausnahme der ersten Lautverschiebung', in *Zeitschrift für vergleichende Sprachforschung*, 23 (1872), pp. 97–130, Verner tries to reconstruct the position of the accent in the hypothetical original Indo-European, and suggests that when the accent falls on the

syllable before the consonant, Grimm's Law holds good; but when it falls on the following syllable, *p*, *t*, and *k*, become continuant *ß*(*bh*), *ð*(*dh*), and *γ*(*gh*), later becoming stop *b*, *d*, and *g*, in most positions: e.g. Indo-European *bhr̥dā*, cf. anct. Indian *bhr̥dā* (Gk. *phr̥dēr*) gives Gothic *broþar*, Eng. *brother*, but Indo-European *pater*, cf. anct. Indian *pitā* (Gk. *pater*), gives Gothic *faðar*, Old High Ger. *fadar*, Old Eng. *fader*.

Vernet, Antoine Charles Horace (1758-1836), Fr. painter, b. Paris, and commonly called Carle Vernet. He was the son of Claude Joseph V (1714-1789), a marine painter noted for his views of the seaports of France. C. V.'s 'Triumph of Paulus Aemilius' shows how much he had profited by his study of horses at riding schools and races. The 'Morning of Austerlitz' and the 'Battle of Marengo' are two of his finest works. C. V.'s son was Emile Jean Horace Vernet (1789-1863), a dashing military painter. For accounts of this dynasty of artists, see C. Blanc, *Les Vernet*, 1845; A. Dayot, *Les Vernet*, 1898.

Verney, Sir Edmund (1590-1642), knight-marshal and standard-bearer, member of an old Buckinghamshire family, educ. at Oxford. In 1623 he accompanied Prince Charles and Buckingham to Madrid. From 1624 he was a member of Parliament, and when King Charles appointed him knight-marshal in 1626, the Marshalsea prison became his charge. He was killed at the battle of Edgehill, fighting loyally for the king, though his personal sympathies lay with the Puritans. An excellent picture of 17th-cent. life in the circles of the landed gentry is given in the papers of the V. family. These comprise *Letters and Papers of the Verney Family down to 1640* (ed. J. Bruce), 1853, and *Memoirs of the Verney Family* (ed. Lady F. P. and Lady M. M. Verney), 1892-9, 1904.

Vernier, device invented by Pierre Vernier (c. 1580-1637) for reading the fractions of the smaller parts of a measuring scale. It is a scale which slides along the prin. scale, and is divided so that *n* of its divisions corresponds to *n* - 1 or *n* + 1 divisions on the prin. scale. It is used on all instruments which make linear or angular measurements, e.g. barometers, cathetometers, theodolites, sextants, telescopes, etc. To read the V., note the position of its zero and take the value of the nearest division, then look for the lines coinciding in V. and scale, and this gives the fraction of the division beyond the

scale mark nearest 0. Thus in the figure the V. 3 coincides with the scale 10 and the nearest division to the zero is 7, and since the scale is graduated in tenths the length from 0 on the scale to 0 on the V. is 0.73 in.

Vernis, Martin, Fr. name for a type of lacquer, especially popular in the 18th cent. The Martin brothers were famous for their lacquer work, in Louis XV's reign, hence its name. It was developed from oriental types.

Vernon, Edward (1684-1757), admiral, educ. at Westminster School. He served at the siege of Gibraltar under Sir George Rooke (1704) and in the W. Indies and the Baltic, and in 1739 captured Porto Bello with only 6 ships, an achievement celebrated in London with public fires.

Vernon: 1. Fr. tn in the dept of Eure, on the Seine. The Bizy forest is near by. V. is a quaint old tn, built in 1123 by Henry I of England. It manufs. chemicals and has stone quarries, mineral springs, and artillery engineering establs. Pop. 11,200.

2. Tn of Brit. Columbia, Canada, 50 m. S. of Sicamous on the E. bank of Okanagan Lake, served by the Canadian National and Canadian Pacific Railways. Fruit-farming is widely carried on in the dist. Pop. 8874.

Verocchio, see VERROCCHIO.

Verolamium, see VERULAMIUM.

Verona: 1. Prov. of Italy, in W. Veneto (q.v.). The N. part of the prov. is in the Alps (q.v.), but the S. belongs to the great N. plain of Italy. In the NW. is the E. shore of Lake Garda (q.v.). The R. Adige flows NW.-SE. across the prov. The prin. tns include V., Legnago, and Villafranca (qq.v.). Area 1220 sq. m.; pop. 652,000.

2. It. city, cap. of the prov. of V., on the Adige, 63 m. W. of Venice (q.v.). It is situated at the point where the road from the Brenner Pass (q.v.) joins the Venice-Milan road. The tn is of Rom. origin, and was later the seat of Theodoric the Great (q.v.), and an important tn of the Longobards (q.v.). In the 13th cent. it came into the possession of the della Scala (q.v.) family, with one of whom, Can Grande I, Dante (q.v.) found refuge. In 1405 it became part of the Venetian Rep., in 1796 it was taken by the French, and in 1797 it was ceded to Austria, under whose domination it formed part of the 'Quadrilateral' (q.v.). In 1866 it became part of united Italy. V. has many Rom. remains, including a magnificent amphitheatre, arches, and a theatre. There is a Romanesque-Gothic cathedral, and among the numerous other beautiful old churches are those of San Zeno (12th-13th cents.), one of the finest Romanesque churches in Italy, and the splendid Gothic church of Santa Anastasia (13th-15th cents.). The 14th-cent. Scaligeri Palace, and the exquisitely sculptured family tombs, recall the della Scalas. The battlemented Scaligeri bridge, destroyed in 1945, has been rebuilt. P. is an agric. centre, has a trade in wine and marble, and has paper, plastics, and printing industries. Pop. 187,000. See F. S. Maffei, *Verona Illustrata*, 1731; A. Wiel, *Verona*, 1902 (Medieval Towns); A. M. Allen, *A History of Verona*, 1925.

Veronal, see BARBITONE.

Veronese, Paul, whose real name was Paolo Caliari or Cagliari (1528-88). It. painter, b. Verona. He studied under

Antonio Badile, and from 1555 lived in Venice. His gigantic paintings, including his religious works, exhibit rich colouring, broad composition, and that love of pomp and worldly splendour which led to charges of irreligion against him. The huge 'Marriage at Cana,' now in the Louvre, with its 130 figures (many portraits of famous people of the time), is typical of the exuberance of his art. Apart from the fine 'Vision of St Helena' and the 'Family of Darius' (National Gallery, London), his best paintings and frescoes are in Venice, the Doge's Palace, the church of San Sebastiano, the Accademia, and the Villa Masiera. See F. P. Stearns, *Four Great Venetians*, 1901; P. H. Osmond, *Paolo Veronese: his Career and Work*, 1927.

Veronica, St, name given to the woman of whom tradition speaks as having wiped our Lord's face with a kerchief on the road to Calvary. A picture of Christ's face remained imprinted on the cloth. Her feast is on 12 July.

Veronica, or **Speedwell**, family Scrophulariaceae, genus of ann. or perennial herbs or shrubs, of about 200 species in temperate regions of the world. *V. officinalis*, Common S., *V. anagallis-aquatica*, Water S., *V. scutellata*, Marsh S., *V. montana*, Wood S., *V. chamaedrys*, Germander S., *V. spicata*, Spiked S., *V. fruticans*, Rock S., *V. alpina*, Alpine S., and *V. hederifolia*, Ivy S., and others are found in Britain. *V. beccabunga* is Brooklime. Many shrub species are grown in gardens.

Verrocchio, Andrea del (1435-88), real name Cione, It. artist, was 'goldsmith, master of perspective, sculptor, carver, painter, and musician' according to Vasari. He worked under Donatello, and Leonardo da Vinci was his pupil. The only authentic painting of his is the somewhat hard but forcible 'Baptism of Christ' (Uffizi Gallery), though the 'Virgin and Child' in the National Gallery is ascribed to him. His renown has a sure foundation in the magnificent equestrian statue in bronze of Bartolommeo Colleoni, which adorns the piazza of SS. Giovanni e Paolo Venice. See M. Cruttwell, *Verrocchio*, 1904.

Versailles, Fr. tn, cap. of the dept of Seine-et-Oise, 11 m. SW. of Paris. It is a bishopric. From 1678 to 1769, V. was the prin. residence of the kings of France. On the site of a hunting lodge of Louis XIII, Louis XIV had built the magnificent palace of V., the work of Le Vau and J. H. Mansard (qq.v.). The gardens were designed by Le Nôtre (q.v.), and much of the interior decorations are the work of Le Brun (q.v.). In addition to the great château, there are 2 smaller châteaux: the Grand Trianon, and the exquisite Petit Trianon, the favourite residence of Marie Antoinette. The famous halls and salons of V. have been the scene of many historic events: Britain's recognition of the independence of the Amer. colonies (1783); the tragedy of Louis XVI; the capitulation of Paris (1871) during the Franco-Prussian War (q.v.); the proclamation of William I of

Prussia (q.v.) as Emperor (1871); and the signing of the treaty of V. (see below) (1919). Pop. of V. tn 84,500. See P. de Nolhac, *Versailles et la cour de France* (10 vols.), 1925-30; G. Lenôtre, *Versailles au temps des rois*, 1934.

Ahnari

JESUS AND ST THOMAS

Sculpture by Verrocchio, set in a Tabernacle by Donatello in the Oratorio S. Michele, Florence.

Versailles, Treaty of (1919), signed on 28 June 1919 and ratified 10 Jan. 1920. (For the hist. of the conference which discussed the terms of peace following the termination of hostilities in the First World War see **PEACE CONFERENCE** (1919).) The plenipotentiaries of the Allied and Associated Powers met in Jan. 1919 at Versailles to draw up the conditions of peace for the defeated Central Empires. These Powers were the U.K. (represented by D. Lloyd George, A. Bonar Law, Viscount Milner, A. J. Balfour, and G. N. Barnes); U.S.A. (Woodrow Wilson and Robert Lansing); France (Georges Clemenceau); Italy (V. E. Orlando); and Japan (Marquis Saionji). The Brit. Overseas Dominions were also represented by: Canada (Sir G. Foster and C. J. Doherty); Australia (W. M. Hughes and Sir J. Cook); S. Africa (Gen. Botha and Gen. Smuts); and New Zealand (W. F. Massey). The minor Allied states represented were Belgium, Brazil, China, Greece, Poland, Portugal, Rumania, Yugoslavia (then known as Serbo-Croatia), and Czechoslovakia, besides various Central and S. Amer. states and others; and of these China alone refused to sign the treaty. The draft

was presented to the Ger. delegates on 7 May; on 22 June the Ger. National Assembly at Weimar by a majority of 99 (237 against 138) voted in favour of acceptance, and on 28 June the Ger. plenipotentiaries signed the treaty at Versailles. The original copy is deposited in the archives of the Fr. Rep.

ARTICLES OF THE TREATY. *The League of Nations.* In the forefront of the treaty were the clauses to establish the League of Nations and to provide for international action to preserve peace in the future by means of the Covenant of the League (see COVENANT OF THE LEAGUE OF NATIONS; LEAGUE OF NATIONS; see also under INTERNATIONAL COURT OF JUSTICE). The Monroe Doctrine (q.v.) is expressly excluded from the decisions of the League members. Provision is also made in these earlier articles for the administration of the ceded Ger. colonies and ter. by mandatories of the League (see MANDATE SYSTEM).

Surrendered Territories. (i) Alsace-Lorraine to France; (ii) the greater part of the provs. of W. Prussia and Posen to Poland; (iii) the greater part of E. Silesia and of E. Prussia to Poland; (iv) a portion of Upper Silesia to Czechoslovakia; (v) Memel to Lithuania; (vi) Danzig, to be a Free State under the protection of the League of Nations; (vii) part of Schleswig to Denmark (see also SELF-DETERMINATION).

Military and Naval Clauses. These were designed for the dual purpose of compelling compliance with the terms of the treaty and of securing Ger. disarmament.

War-guilt. Under the treaty, the Allies publicly arraigned the ex-Emperor William II (who had fled to Holland) for a supreme offence against international morality and the sanctity of peace' and made provision for a special tribunal to try him. But in fact the Dutch Gov. could not and were not even expected to surrender their refugee.

Reparations. Germany accepted, under the treaty, responsibility for the loss and damage caused to the Allies by the War, and provision was made for assessing the amount of compensation to be paid by Germany in kind or money. Under the Financial Clauses the first charge upon the assets and revenues of the Ger. Empire was to be reparations, and up to 1 May 1921 Germany was forbidden to dispose of gold without the approval of the Reparation Commission (see DAWES PLAN; REPARATIONS; YOUNG PLAN).

Miscellaneous. There were also provisions relating to labour organisation, trade, and economic conditions; aerial navigation; ports and waterways; Ger. property in Allied countries was to be applied to meeting the claims of Allied citizens for debts or losses due to Ger. agency, war graves, etc. The whole treaty contains some 440 Articles, and the authentic text was presented to Parliament as Treaty Series No. 4 (1919), Cmd. 153. Alterations of the treaty in respect of the occupation of the Rhineland and reparations were effected by negotiation; the rest of the treaty was abrogated by

Hitler by unilateral action. See also under EUROPE. See Index to the Treaty of Peace between Allied and Associated Powers and Germany; E. J. Dillon, *The Peace Conference, 1919*; H. Nicolson, *Peacemaking, 1919*, 1933; H. W. V. Temperley, *History of the Peace Conference, 1920-4*; G. P. Gooch, *Studies in Diplomacy and Statecraft*, vol. 6, 1942; R. McCallum, *Public Opinion and the Last Peace, 1944*; D. P. Myers, *The Treaty of Versailles and After, 1947*.

Verse (Lat. *vertere*, to turn), a word used in 3 distinct senses in English. It can mean: (1) poetical writing in general as opposed to prose; (2) a single line of poetry; (3) a set of lines, or stanza. For V. structure and types of V., see METRE.

Versez, see VERSE.

Verst, Russian linear measure equivalent to 3500 Eng. ft. See METROLOGY.

Vertebrates, or **Backboned Animals**, form a div. of the animal kingdom which includes not only man and animals of similar structure (mammals), but also fishes, amphibians, reptiles, and birds. V. are characterised by the possession of a well-developed internal skeleton including a skull surrounding the brain, which is connected with the organs of sight, smell, hearing, touch, and taste.

Vertex, in geometry, the point of a triangle opposite the base; the point of intersection of lines bounding an angle; the intersection of a curve with its axis. See PARABOLA.

Vertical Take-off Aircraft. Any rotating wing aircraft derives its normal lift from horizontally turning rotors. The true helicopter is one which can rise direct from the ground and move in any direction. There have been various machines which employed the rotor principle, from those where lift alone was obtained by the rotors (the autogiro), which turned freely with the motion of the propeller-driven aircraft, to the modern orthodox helicopter which both rises and propels itself by means of its rotors. Helicopter toys were known to the anc. Chinese, and about 1500 Leonardo da Vinci designed a helicopter based on the Archimedeian screw; but this design, of which a model was apparently made, was not known until late in the 19th cent. The first successful model helicopter in Europe was made in France in 1784 by Launoy and Bienvenu. During the 19th cent. many helicopter models were constructed, some of them making successful flights. The first helicopters to lift a man were made in 1907, one by Cornu and the other by the Breguet brothers. The first successful and practical helicopter was the Focke-Achgelis of 1937, but Sikorsky in the U.S.A. made (in 1939) the really practical vehicle from which most modern helicopters derive. The development of the helicopter was undoubtedly helped by the 'autogiro,' first flown in 1923 and considerably developed thereafter. Helicopters are both raised and propelled by one or more rotors, and the multi-rotor type can be either coaxial or in tandem, etc. A single rotor helicopter must normally have a small anti-torque propeller

at the tail, whereas twin coaxial or tandem rotor helicopters can dispense with this. Lift is obtained by controlling the collective pitch of the rotors, and forward thrust in any direction by the cyclic pitch. Thus a helicopter can fly up and down, forwards, backwards, or sideways. There are now many types flying, some in combination with ordinary propellers for forward thrust; and recently a number of one-man types have been built in which the pilot stands on a platform with contra-rotating coaxial rotors revolving below him. The helicopter is becoming growingly important for work in the fields of rescue, reconnaissance, agric. spraying, transport in otherwise inaccessible locations, and inter-urban passenger service.

The latest development, seen in the Fairey 'Rotodyne', is a machine with propellers, wings, engine, and a rotor. The rotor (jet propelled at tips) takes the air-craft up vertically; then forward thrust is taken over by the two propeller engines and lift shared by the small wings and the now freely rotating rotor.

Various other aircraft now under development have been designed to achieve vertical take-off (V.T.O.) and landing without the use of rotating wings, which limit forward speed to approximately 200 m.p.h. One promising type is the tilt-wing aeroplane which resembles an orthodox fixed-wing aircraft in forward flight, but has mechanism to pivot its entire wing through 90° during take-off and landing, so that the wing-mounted propellers then operate horizontally as rotors. Special air-jet or tail-rotor controls reduce stability and control problems during transition.

Another important V.T.O. technique makes use of direct jet lift, as pioneered by the Rolls-Royce 'Flying-Bedstead.' In this form of design, one or more jet-engines are mounted vertically in the aircraft's fuselage, their total thrust exceeding the all-up weight of the aircraft and so raising it vertically off the ground. At a safe height, normal forward-facing engines thrust the aircraft forward until its fixed wings are able to provide sufficient lift to keep it airborne, and the downward-exhausting jets are then switched off. In a variation of this technique, the downward-exhausting jets are made to swivel gradually through 90° after take-off to function as normal propelling engines during cruising flight.

Vertigo, or Giddiness, a sense of lack of equilibrium. It may be *aural*, connected with ear disturbances; *ocular*, connected with eye disturbances; *cerebral*, caused by disease or injury in the brain; *gastric*, caused by digestive disturbances; or may be due to the introduction of toxic substances, such as alcohol, tobacco, etc., into the blood. See **EAR**.

Verulam, Lord, see **BACON**, FRANCIS.

Verulamium, native Belgic settlement of importance, immediately W. of St Albans, Herts, England, founded at the end of the 1st cent. BC. It was sufficiently well developed shortly after AD 43 to be awarded the high status of *municipium*, an honour unique in the prov. of Britain.

The tn was sacked by the Iceni under Boadicea (Boudicca), in AD 61, but after the turn of the middle of the cent., a new tn of some 150 ac. was laid out. There was a further development in the 2nd quarter of the 2nd cent. It decayed much in the 3rd cent., but towards its end suffered a temporary reinstatement, only to waste again in the Dark Ages. The excavations in 1930 and the years following threw much light on the Rom. occupation of the SE. of Britain. There was a series of fine mosaics, a temple of unusual triangular plan which had votive deposits within the fabric, 2 triumphal arches, and an open-air theatre, the only one of its kind in Britain. Much of the tn plan was recovered, and the sites of temples, houses, shops, and streets were excavated. Part of the tn wall, the theatre, and a mosaic still remain in position, but most of the discoveries of note are represented in the well-arranged Museum. Especially important is the extensive series of pottery types, both Rom. and Belgic, and 2 fine pavements which are re-erected on the Museum wall. The excavations are now filled in, apart from the hypocaust, the heating system of a Rom. villa. See *Society of Antiquaries Research Report*, No. XI, 1936; R. L. P. Jovitt, *A Guide to St Albans and Verulamium*, new ed., 1948.

Verus, Lucius Aurelius, joint-emperor with Marcus Aurelius (q.v.), his brother by adoption, from AD 161 to 169.

Vervain, see **VERBENA**.

Verviers, tn in the prov. of Liège, Belgium, situated on the R. Vesdre, 13 m. E. of the city of Liège. With its suburb Ensisval, it is one of the chief centres of the woollen industry. The large quantities of water required are supplied by the Gileppe dam, 6 m. to the E. Other manufs. are soap, leather, footwear, chocolate, and chemicals. Pop. 37,800.

Verwey, Albert (1865-1937), Dutch poet and critic, b. Amsterdam. He was among the founders of the *Nieuwe Gids* in 1889, and his early poetry is impressionistic and intensely individual. His mature poetry, however, is more contemplative, and has been criticised as over-intellectual. He was co-founder of the *Tweemaandelijksche Tijdschrift*, 1894-1902, and *De Twintigste Eeuw*, 1902-5, and editor of *De Beweging*, 1905-19. V. was a critic of rare integrity, and his influence as literary historian was profound. In 1925 he was appointed prof. of Dutch Literature at the Univ. of Leiden. See J. J. Gielen, *De Dichter Verwey*, 1946.

Vesalius, Andreas (1514-64), Flem. anatomist, b. Brussels. He studied medicine in Paris, spent a year dissecting at Louvain, and graduated M.D. Padua in 1537. He was at once made prof. of surgery and anatomy there. At his lectures he did away with the pro-sectores, carrying out the dissections himself. At first he followed the teaching of Galen (q.v.), but soon confined his lectures to what he himself had observed. In 1543 he pub. *De Humani Corporis Fabrica*, one of the greatest of all medical works. With this book and in his own teaching V. replaced tradition in anatomy

by observation and experiment and did away with the reverence for authority in science, paving the way for the experimental era in medicine instituted by W. Harvey (q.v.). The *Fabrica* contains some magnificent plates, particularly of the muscles, and excellent descriptions of the bones and nervous system. It had a hostile reception from the Galenists, and V. gave up his teaching to become physician to Charles V. He d. on the is. of Zante while returning from a pilgrimage to Jerusalem. See C. Singer, *A Prelude to Modern Science*, 1946; life by M. Roth, 1892.

Vesicant, an agent which causes blistering. It may be a substance applied to the skin, such as cantharides and mustard, or a physical agent in the form of heat or ultra-violet light rays. See BLISTER.

Vesicaria, family Cruciferae. *V. graeca*, yellow-flowering perennial of Greece, is chief species now grown in gardens.

Vesicle, small sac containing liquid. Medical term for a blister (q.v.) or elevation of the epidermis containing serous fluid. See SKIN.

Vespasian, or **Titus Flavius Sabinus Vespasianus** (AD 9-79), Rom. emperor, b. Reate in central Italy, son of a tax collector. He owed his rapid rise undoubtedly to his military genius; in 43, as *legatus legionis* in Britain, he reduced the is. of Wight. Nero disliked him, but could not dispense with his services, and thus V. was in Judaea, where he had been sent in 66 to conquer the Jews, when tidings reached him of his proclamation as emperor (69). Vitellius, his rival for imperial honours, was defeated by Antonius Primus, and, largely owing to the support of Mucianus, V. was soon firmly estab. on the throne. See also ROMAN HISTORY. See H. W. Henderson, *Five Roman Emperors*, 1927; C. Longford, *Vespasian and some of his Contemporaries*, 1928.

Vespers, see BREVIARY.

Vespers, the Sicilian, see SICILY.

Vespucci, Amerigo (1451-1512), It. navigator, b. Florence. He began his career at Seville as a merchant, but his interest in the exploits of Columbus induced him to abandon this profession, and he set sail for the New World in 1499.

The first discovery of the mainland of America, at Paria, was made by Columbus in the course of his third voyage in 1498. In 1499 Alonso de Ojeda, having on board V., reached a point farther S., somewhere, it is conjectured, on the coast of Surinam and thence went northwards to the Gulf of Paria; after that to Venezuela, which he so named. V.'s account of the natives of Venezuela is 'curious and interesting' and his narrative, spreading over Europe, was the cause of his name being given to the third part of the inhabitable globe. See *Letters of Vespucci*, trans. for the Hakluyt Soc. by C. R. Markham, 1894; *Vespucci Reprints*, 1916; F. J. Pohl, *Amerigo Vespucci: Pilot Major*, 1945.

Vest-Agder, co. of Norway on the N. Sea. It has forestry, farming, fishing, and some industry. The cap. is Kristiansand. Area 2793 sq. m.; pop. 96,900.

Vesta, Rom. goddess of the hearth, Gk. 'Hestia' (q.v.). From Lavinium whither Aeneas had brought, from Troy, the sacred fire as well as the Penates, her worship was traditionally introduced to Rome by Numa, who was believed to have built her central shrine in the Forum between the Palatine and Capitoline hills. Here her fires were kept burning by the Vestal Virgins (see VESTALS). The 'Vestalia' were celebrated on 8 June.

Vesta, minor planet discovered in 1807 by Olbers of Bremen, was the fourth in order of discovery, and is the brightest, being the only one visible to the naked eye, and as bright as a 6th magnitude star. It has the greatest albedo of all minor planets, and a diameter of c. 250 m. (Bamond), 214 m. (Farley). Revolution is performed in 3.63 years at a mean distance of 219,000,000 m.

Vestals, The, 6 priestesses of Vesta (q.v.), in her temple at Rome. They were chosen by lot from 20 maidens of free and worthy parentage, selected by the pontifex. They officiated for at least 30 years; 10 years of learning and initiation, 10 of actual ministration, and 10 teaching the neophytes. The violation of the vow of chastity was punishable by death, and retribution followed if they allowed the sacred fires to go out.

Vesteras, see VÄSTERÅS.

Vesterbotten, see VÄSTERBOTTEN.

Vesternorrland, see VÄSTERNORRLAND.

Vestfold, smallest co. of Norway, on the W. side of Oslo fjord. It has forestry, farming, and considerable industry, also shipping and whaling. Area 903 sq. m.; pop. 154,500.

Vestmanland, see VÄSTMÄNLAND.

Vestmanneyjar, or **Westman Isles**, some rocky is. on the S. coast of Iceland, surrounded by excellent fishing-grounds. Harbour facilities are good, but communication with Reykjavik is now principally by air, usually sev. flights a day when weather permits. Pop. 4070.

Vestments, **Oriental Ecclesiastical**. These differ widely now from those in the W. Church (see VESTMENTS, SACRED), though originally they were in most cases identical. For convenience the name of a W. equivalent is, where possible, given first in the following list, followed by the Gk name. The E. rite being vernacular, the vestments are also called by other names in different countries.

ALB, *Sticharion*, like the W. alb, but with a single line of embroidery around the bottom. A bishop's has 2 red-and-white stripes from top to bottom, called *potamoi* (rivers) from John vii. 38. The *Sticharion* is generally white.

STOLE: (1) that of a bishop or priest, *Epitrachelion*; (2) that of a deacon or sub-deacon, *Orarion*. (1) The *Epitrachelion* is the same as the Lat. stole, but wider, and hangs around the neck and down in front, where it is sewn together. In effect, it is now a long, broad piece of stiffened cloth, with a hole at one end for the head. It is of the same colour as the chasuble. (2) The *Orarion* is like the Lat. stole, but worn by the deacon with one end over the left shoulder, across the

breast, under the right arm and across the back to hang low over the left shoulder in front. This end is held up by him when intoning the Litanies. The *Orarion* is worn crossed upon the breast and the back by the deacon for Communion, and always so by the sub-deacon.

CUFFS, *Epimanikia*, are worn over the wrists of the *Sticharion*. Coloured like the stole, and embroidered with a cross, they are derived from the gloves worn by the Byzantine Emperors when receiving Holy Communion in the palms of their hands. They granted the use of them to dignitaries, from whom it passed later to all clerics. But as these had the privilege of receiving the Host in their bare hands, the gloves became cuffs (cf. the bishop's gloves in the W. rite).

GIRDLE, *Zone*, a band of material coloured to match the chasuble, fastened around the *Sticharion* and *Epirachelion* with tapes at the back.

DALMATIC: 1. The *Stichar*, worn by the deacon and sub-deacon, is a long, straight tunic with short, wide sleeves, like that of the W. rite. 2. The *Sakkos*, worn by the bishop, is the same but embroidered with a multitude of crosses (*polystaurion*). The bishop wears this in place of a chasuble. Its colour varies with the season.

CHASUBLE, *phelonion* (*paenula*), identical with that of the W. rite, but instead of being shortened at the sides, it has been shortened in front to leave the forearms free. It has a cross embroidered on the shoulders at the back. Its colour varies with the season (see *Liturgical colours*, below).

MANIPLE, *Epigonation*, worn only by dignitaries. There are 2 kinds, the oblong and the lozenge. They are made of stiffened brocade, to match the *Phelonion*, and hang at the hip by tapes from the *Zone*. They are thought to be derived from a handkerchief or purse, often carried in the hand by Rom. officials, and which they are seen waving in monumental reliefs to start public games. The Pope still wears such a vestment.

PALLIUM, *Omophorion*, like the Lat. Pallium (q.v.) but broader and made of coloured material to match the *Phelonion*. It is worn over the bishop's *Sakkos*, and consists of a long stiff scarf hanging around the shoulders to make a loop in front, and having its ends hanging down in front and at the back.

MANTLE, *Mandys*, worn by all bishops when not wearing the *Omophorion*. It is of Persian origin, a military cloak adopted first by the Emperors.

BIRETTA: 1. *Kalymmachion*, worn by monks under a long wide veil of light, black material called the *Epirrhiptarion* or *Epanokalymmachion*. The *Kalymmachion* is black, cylindrical and without a brim. 2. *Skouphia*, worn by the secular clergy, round, black, brimless, and in Russia, pointed at the top, but worn without a veil.

CROZIER, *Poemantike Rhabdos* (pastoral staff), *Baklerion*, or *Dikanikon*, carried by bishops and Archimandrites (Abbots)

with a sudarium, or holding cloth. It is the size of a large walking-stick, surmounted by a T cross, the arms of which are curved upward and in to form 2 serpents confronting each other. Armenian bishops carry a W. style crozier.

MITRE, *Mitra*, a diadem, shaped like the papal tiara, but swelling at the top, rich and sometimes jewelled. It is worn by bishops, but sometimes conferred also on Archimandrites (Abbots) and Archpriests. Armenian priests all wear it, their bishops wearing a W. style mitre.

PECTORAL CROSS, *Stauros*, worn by Gk bishops, and Russian bishops and priests generally.

Enkolpion, or *Panagion*, a medallion of the Blessed Virgin, is worn by bishops only, on the breast, and is characteristic of them.

Dikerrion and *Trikerrion*, are a pair of candelabra holding 2 and 3 candles apiece to represent the 2 natures in Christ, and the Holy Trinity. The bishop blesses the people with them, especially after the Sanctus.

LITURGICAL COLOURS of the E. rite are these: black, for Masses of the Pre-sanctified; violet, dark green, or some such sub-fuso colour, for Lent; white for feasts, but red for Easter, and for martyrs. Multi-coloured V. and cloth-of-gold are frequently used.

Vestments, *Sacred*, have been worn by the priesthood from time immemorial. The O.T. regulations are extremely minute, but in spite of apparent resemblances, no connection can be traced between these and the Christian V. The earliest mention of special Christian V. is at Jerusalem in 330 (Theodoret, *Eccles. Hist.* ii, 27). In the first cents. ordinary dress (though no doubt the best available) was used in sacerdotal functions, and this remained the Rom. usage to the 6th and 7th cents., when barbarian fashions coming in conflicted with religious conservatism concerning dress, and turned the old everyday garments into ceremonial V. The V. for a priest in the W. Church are amice, alb, girdle, stole, maniple, chasuble (q.v.). At other solemn services and in processions a cope (q.v.) is used. At choir offices and other occasions the clergy wear a surplice (q.v.), sometimes in the Eng. Church with the addition of a scarf and univ. hood. A stole is worn in the administration of the sacraments. The V. of the Oriental Rites differ somewhat from these (see **VESTMENTS, ORIENTAL ECCLESIASTICAL**). The use of the old V. in the Church of England is authorised by the *Ornaments Rubric* in the Prayer Book. See *A. Fortescue, Ceremonies of the Roman Rite*, 1917; G. Dix, *The Shape of the Liturgy*, 1945; H. Norris, *Church Vestments*, 1949.

Vestris, Lucia Elizabeth (*née* Bartolozzi) (1797-1856), grand-daughter of the famous engraver Francesco Bartolozzi. Well educated and possessing a splendid voice, she married Armand Vestris, the leading ballet dancer of his time. She appeared in opera in London and Paris, and was prima donna at Her Majesty's Opera House in the Haymarket. She was

famous for her many love affairs as well as her beauty, and particularly for her extremely shapely legs. She played at most theatres in London, at Drury Lane and the Haymarket, and was very popular as a singer at Vauxhall Gardens. Her most popular song was 'Cherry Ripe'. Later, she became actress-manageress and took over the Olympic Theatre, near Drury Lane, a curious playhouse built entirely from the timbers of captured French men-o'-war. There she made theatrical history by producing extravaganzas and burlesques which she mounted with great taste and beauty. She can be regarded as one of the pioneers of musical plays as they are known to-day. She had no financial sense, but could always get money which she lavished on her theatre. She later married Charles Matthews, and they became joint manager and producer. She ran Covent Garden Opera House, where her productions included *A Midsummer Night's Dream* with Mendelssohn's music. But financial misfortune dogged her and her husband, and she died in 1856 after a most disastrous season at the Lyceum. For many years she was the most talked-of woman in London, the toast of the town, and she did a great deal for the theatre at a time when theatrical taste was low.

Vestry, room in a church where the vestments and other movable ornaments are kept. Since they have generally been used for parochial meetings, some of these in the Church of England have also acquired the name of V.s. It is the duty of such meetings to provide funds for the maintenance of the edifice of the church, and public worship, and to elect churchwardens. Their conduct is regulated by common law and by a succession of Acts.

Vesuvianite, see IDOCRASE.

Vesuvius (It. *Vesuvio*), volcano in Campania, Italy, 9 m. E. by S. of Naples (q.v.). Its height varies by a few hundred ft. but averages 4000 ft. Monte Somma, the Mons Summanus of the ancients, is a great semicircular girdle of cliff to N. and E., parted from the eruptive cone by the valley known as Atrio di Cavallo, and itself the remnant of a massive wall which once shut in the huge cone of prehistoric times. Lava, scoriae, ashes, and pumice-stone are the fabric of the mt, which during activity emits a large assortment of minerals, such as augite, magnetic iron, leucite, hornblende, and mica. The amazing fertility of its slopes, on which especially those grapes luxuriate from which the wine 'Lachrimae Christi' is made, explains why for over 25 cents V., in spite of its constant menace, has been the heart of a densely populated region. The destruction on 24 Aug. AD 79, of the cities of Pompeii, Herculaneum, and Stabiae (qq.v.), and the death of the elder Pliny (q.v.), have cast an unfading glamour over that historic eruption. During those of 472 and 1631 particles of dust are said to have alighted in Constantinople. During that of 512 some may have reached Tripoli. Other years of remarkable activity were 1794, 1822,

1855, 1871, 1906, 1929, and 1944, the volcano never having been totally quiescent since AD 79. See F. A. Perrott, *Vesuvius Eruption of 1906*, 1924; G. Alfano and J. Friedlaender, *Die Geschichte des Vesuvius*, 1929.

Veszprém (Ger. *Weissbrunn*), tn of W. Hungary, cap. of V. co., in the Bakony Forest (q.v.), 80 m. SW. of Budapest (q.v.). The older part of the tn, once a fortress, stands on a steep rock. There is a fine neo-Romanesque cathedral (20th cent., on site of sev. previous structures), and an 18th-cent. baroque bishop's palace. The school of chemistry serves the surrounding mining dists., and there are textile and oil manufs., and an agric. trade. The tn was a centre of Hungarian resistance during the anti-Russian risings of Oct.-Nov. 1956. Pop. 22,000.

Vetch, see TARE.

Veterinary Science may be said to have begun in the Egyptian civilisation, and from the Egyptians' knowledge of the horse and its diseases the Greeks and Romans learnt much. The Rom. Vegetius (c. AD 300) left writings on the subject, which in the 16th cent. were much studied, and stimulated interest in the science, especially in France, where the first veterinary college was estab. at Lyons in 1762, and the second at Alfort near Paris in 1766. A Frenchman, St Bel, founded the Royal Veterinary College in London in 1790, and Liataud first estab. a college in New York.

Veterinary education in Great Britain and Ireland is provided by the univs. of Bristol, Cambridge, Edinburgh, Glasgow, Liverpool, London, and Dublin. The Licence to practise as a veterinary surgeon (M.R.C.V.S.) is now granted to veterinary graduates of the univs., but was formerly obtained on success in a series of examinations conducted by the Royal College of Veterinary Surgeons. There is no other qualification which entitles an individual to practise veterinary medicine and surgery and describe himself or herself as a veterinary surgeon, and the Veterinary Surgeons Act of 1948 provides that registration with the Royal College of Veterinary Surgeons is a *sine qua non* of practice as a veterinary surgeon. This Act provides that the Royal College of Veterinary Surgeons will continue to examine candidates for the higher qualification, the F.R.C.V.S. diploma. The R.C.V.S. is responsible for ensuring that adequate standards are maintained by the univ. schools. It also exercises disciplinary powers—comparable to those of the General Medical Council—over registered practitioners.

In modern times the most important function of the veterinary profession is the improvement of animal husbandry in all its aspects. This involves a knowledge of the proper selection of breeding farm animals, the management and feeding of herds and flocks, and the prevention of diseases. Recognition of disease in the interest of public health is of primary importance and diseases of animals communicable to man by contact or through the medium of milk or meat must without

delay be recognised by the veterinarian and measures applied with a view to eliminating danger to man and spread to other animals. Research institutes of the Ministry of Agriculture and appropriate depts of veterinary schools play an essential part in the recognition and prevention of animal disease. There is an increasing demand in the colonies for veterinary scientists to combat infectious diseases, especially rinderpest, which have devastated herds and caused large tracts of country to be uninhabitable. In private practice the veterinary surgeon, apart from the part-time duties of many as officials of the Ministry of Agriculture, is called upon to attend cases of animal suffering of all kinds. Small animal practice has assumed an increasing importance during the last half cent., and some veterinary surgeons, particularly women, are almost wholly engaged in it. Great strides have been made in this kind of practice, particularly in respect of anaesthesia, operative technique, X-ray diagnosis, preventive medicine, and euthanasia. Veterinary surgeons are also employed by the Royal Army Veterinary Corps, by some municipalities and animal welfare societies. But by far the greatest employer of veterinarians in Britain is the Ministry of Agriculture, Fisheries, and Food, which, besides a large full-time veterinary staff, also relies on the part-time services of practitioners to assist in diagnosis and eradication of certain animal diseases and allied duties.

See CAT; CATTLE; DOG; HORSE; PIG; POULTRY; SHEEP, etc.; CRUELTY TO ANIMALS ACT, 1876; DISEASES OF ANIMALS ACT; DISTEMPER; DOCKING; FARRIERY; FOOT AND MOUTH DISEASE; HUSK; LOUPING ILL; NAVICULAR DISEASE; PESTICACOSIS; RINDERPEST; ROUN.

Veto, term applied to the right of a king or other chief magistrate or officer to withhold his assent to the enactment of a law, or, generally, of one branch of the executive or legislature of a state to reject the bills, resolutions, or measures of other branches. The term originates in the power of the tribunes of the plebs of ancient Rome to declare their protest against any unlawful measure, which they did by pronouncing the word *veto* ('I forbid'). In Great Britain the power theoretically belongs to the crown (see CROWN). In the crown colonies the governor exercises the power (see GOVERNOR, COLONIAL). In the Brit. Overseas Dominions the V. of the governor-general had fallen into desuetude even before the passing of the Statute of Westminster, 1931, and even before the status of the governor-general and of the state governor had been changed by the Imperial Conference (see on this GOVERNOR, COLONIAL; COLONIAL LAW). The position now (1958) is that the governor-general of a Dominion or the governor of a state is merely the queen's representative and has no power of reservation or, in other words, no power to V. a measure for 'repugnancy' within the meaning of the Colonial Laws Validity Act, 1865. The governor of an Australian

state, however, has the right, in effect, to V. a measure which violates the written constitution of the State. See also WESTMINSTER, STATUTE OF. The power of V. enjoyed by the House of Lords was reduced by the 1911 Parliament Act to 2 years, and by an Act of 1949 to 1 year. In the U.S.A., the president can V. a measure of Congress, but, notwithstanding his V., the measure becomes law if subsequently carried by a two-thirds majority of each house.

The Great Power V. has been the great problem of the U.N.; it nearly wrecked the San Francisco Conference (q.v.), for the Soviet formula had required that the 5 Great Powers must always be in agreement. Russia has exercised its right to stop majority decisions on numerous occasions. This is the great stumbling block to the practical functioning of the Council. See also UNITED NATIONS, CHARTER OF THE. See W. Koo, *Voting Procedures in International Political Organisations*, 1947; M. Maier, *Le veto législatif du Chef de l'État*, 1948.

Vetter, see VATTER.

Veurne, see FURNES.

Veuster, Joseph de, see DAMIEN, FATHER. **Vevey**, tourist resort in the canton of Vaud, Switzerland, situated on Lake Geneva, 12 m. SE. of Lausanne. One of the chief buildings of interest is the church of St Martin, in which is Ludlow's tomb. V. is also the scene of Rousseau's *Nouvelle Héloïse*. The chief manufs. are chocolate, machinery, watches, and infants' food. Pop. (1955) 14,700, Fr.-speaking.

Vexatious Indictments Act (1859), an Act passed to check a formerly unlimited right of private persons to prefer an indictment (q.v.) to a grand jury without any previous inquiry before magistrates. The Act was repealed by the Administration of Justice (Miscel. Provs.) Act, 1933, which, *inter alia*, abolished grand juries, amended the law as to the presentation of indictments, but did not affect certain statutory restrictions on the right to prosecute in particular classes of case.

Vexilla Regis, see HYMNS—*Latin Hymnology*.

Vexin, The, historic region of NW. France, on the E. of the Seine (q.v.), now comprised in the depts of Seine-et-Oise, Oise, and Eure (q.v.). By the treaty of St-Clair-sur-Epte in 911 it was divided into the V. Normand, the cap. of which was Gisors (q.v.), and the V. Français, the cap. of which was Pontoise (q.v.). In the 12th-cent. struggles between the houses of Blois and Anjou, in which Henry II (q.v.) of England was involved, the V. Normand was the strategic key to Rouen. Geoffrey of Anjou (father of Henry II), under whom Anjou and Normandy were united, had ceded it to the King of France, but Henry regained it by treaty with Louis VII. John (later King of England) alienated the V. again in 1195 to Philip II of France; and Richard I had to build the great fortress at Les Andelys to replace the lost fortress and natural defences of the V. See F. M. Powicke, *The Loss of Normandy, 1189-1204*, 1913.

Veygoux, Louis Charles Antoine Desaix de (1768-1800), Fr. gen., b. Château d'Arat, near Riom, and educated at the military school founded by the Marshal d'Effiat. V. played a good part in Moreau's skilful retreat through the Black Forest, drove back the Archduke Charles at Rastadt, and for 2 months held the bridge of Kehl against his assailants. But the subjugation of Upper Egypt during Napoleon's campaign (1798-9) was the crowning distinction of his career. He d. of wounds received at the battle of Marengo.

Vézelay, Fr. vil. in the dept of Yonne, built on a high, isolated hill. It was important in the Middle Ages, and here St Bernard (q.v.) preached the Second Crusade to Louis VII. The 12th-cent. church of Ste-Madeleine is one of the finest monastic churches in France. Beza (q.v.) was b. here. Pop. 530.

Via Appia, see **APPIAN WAY**.

Via Flaminia, or **Flaminian Way**, was the great trunk road which led from Rome northward for 222 m. to Ariminum on the Adriatic. It was a famous thoroughfare for travel and for commerce alike, and there are many allusions to it in literature. A wayfarer leaving Rome would pass in turn through Oricoli, Narnia, Sangemini, Carsulae, Mevania, and Forum Flaminii. In time he would reach Nuceria and after ascending the pass over the Apennines would descend to Caes. Here his road bore round in a NE. direction, and he would finally reach Forum Fortunae on the coast, whence he would turn NW. through Pisaurum on to the busy port of Ariminum. Some of the paving stone and the bridges or, at least, their piers still remain *in situ*. It was built during the censorship of Flaminius (220 BC), whence the name.

Via Mala, gorge in the canton of Grisons, Switzerland, the original road being made about the year 1470, and the present one during the first half of the 19th cent. It is at the beginning of the Splügen road, is 4 m. long, and flanked by rocks about 1600 ft high. It crosses the Rhine 3 times.

Viadua, see **ODER**.

Viaduct, see **BRIDGE**.

Viana do Castelo: 1. Dist. of N. Portugal, in Mino prov. (q.v.). It has a coast-line on the Atlantic in the W., and is bounded by Spain on the N. and E. It is generally mountainous, and is crossed E.-W. by the fertile valley of the Lima. Area 814 sq. m.; pop. 274,532.

2. (Anct Velobriga), city of Portugal, cap. of V. dist., on the Atlantic at the mouth of the Lima, 205 m. N. by E. of Lisbon. It has an anct fort and many fine old houses. There are important cod fisheries, and there are manufs. of carpets and foodstuffs. Pop. 14,000.

Viareggio, It. resort, in Tuscany (q.v.), on the Tyrrhenian Sea, 13 m. W. of Lucca (q.v.). It is a modern, well-laid-out tn, and has a good beach. There is a monument to Shelley (q.v.), whose body was cremated here. Pop. (tn) 37,000; (com.) 41,400.

Viaticum (Lat. 'provision for a journey'), a name for Holy Communion when given to a person in danger of death.

Viatka, see **KIROV**.

Viaud, Louis Marie Julien, see **LOTI**, **PIERRE**.

Vibo Valentia (until 1928, **Monteleone di Calabria**), It. tn, in Calabria (q.v.), 30 m. SW. of Catanzaro (q.v.). It was severely damaged in earthquakes in 1783 and 1905. There is a cathedral (17th-18th cents.) and a ruined castle. Silk and olive oil are manuf. Pop. 23,000.

Viborg: 1. Amt in N. central Jutland, Denmark; it includes the peninsula of Salling and the is. of Fur in Lim Fjord. The S. is hilly, and the soil is rather poor. There is agriculture, mainly in the N., and dairy farming. Area 1,180 sq. m.; pop. 160,020.

2. Cap. of the above, 36 m. NW. of Aarhus. It is one of the oldest tns in Denmark, and has the largest granite church in Europe, founded in 1130, but completely restored in the 19th cent. The tn has been the seat of a bishop since the 11th cent., and in 1919 became the seat of the new High Court of Jutland. It suffered from successive fires in the 18th cent. V. has textile mills, tobacco factories, and breweries. Pop. 22,820.

Viborg, Russia, see **Vyborg**.

Vibration, see **RESONANCE**.

Vibrations, see **MASSAGE**.

Vibrio, generic term for certain bacteria of spiral form. See **BACTERIA**.

Viburnum, genus of deciduous and evergreen shrubs and trees (family Caprifoliaceae). *V. Opulus*, the guelder rose, is an ornamental Brit. shrub, with large white flower heads followed by pinkish berries which are eaten in parts of Europe. *V. tinus* is the Lauristinus. *V. Lantana* is the Wayfaring tree.

Vic-Wells, see **SADLER'S WELLS**.

Vicar. A V. strictly is one who holds a benefice as deputy of the rector, who may be a layman and receives a share of the emoluments of the incumbency. But commonly a V. is any incumbent who is not entitled to tithes (q.v.).

Vicary, Thomas c. (1495-1562), surgeon. At one time he practised in Maldstone, then went to London, where he was admitted a member of the Barbers' Company, being senior warden in 1528 and master in 1530. In 1535 he became sergeant-surgeon to Henry VIII, and also served Edward VI, Mary, and Elizabeth I. In 1540 the Barbers united with the surgeons to form the Barber-Surgeons' Company, of which V. became first master; he was re-elected to the mastership in 1546, 1548, and 1557. He was resident surgical governor of St Bartholomew's Hospital from 1548 until his death. His writings were unimportant, but his influence and reputation were great, and he used them to the advancement of his craft. His *Anatomic of the Bodie of Man* is said to have been first pub. in 1548; the edition of 1577 was reprinted in 1888, edited by F. J. and P. Furnivall; it includes a memoir. V.'s memory is perpetuated by an annual lecture on the

history of surgery at the Royal College of Surgeons of England.

Vice-President, next in rank to a president. As a rule the duties of a V.-P. are necessarily nominal or dormant. In the U.S.A. the V.-P. automatically becomes president on the demise of the president during the latter's term of office. His chief duty is as presiding officer over the U.S. Senate, in which, however, he has only a casting vote. He has no seat in the cabinet.

Vicente, or Vincente, Gil (c. 1465-1536), Portuguese dramatist, *b.* Lisbon. He wrote over 40 plays, usually divided into autos, comedies, tragi-comedies; and farces which are full of vivacity and merry humour, and undoubtedly contain V.'s best work. This division, however, is subject to some criticism, because in his

being the *Coryciana*, ed. by Bloasius Palladius, Papal Secretary. His partner and punch-cutter was Lautizio de Bartolomeo dei Roteili, a Perugian goldsmith. By 1524 he was printing for the humanist poet Gian Giorgio Trissino—first to write blank-verse plays—who said of him, 'as in calligraphy he has surpassed all other men of our age, so he has gone beyond all other printers'; a tribute given modern confirmation by Caslon, Garabond, and others in their discipleship. Other printing included 4 books (1526), without the aid of Lautizio, yet no example of V.'s holograph as *scrittore* can be found.

See *Il modo de temperare le penne* 2 eds. Victoria and Albert Museum, London; F. Warde's complete facsimile of *La operina* and *Il modo*, introduced by

THE CURSIVE LETTERS OF ARRIGHI VICENTINO

From *La operina*, in the collection of the late R. B. Fishenden.

works a minor type of play can be found, such as the morality. It has been alleged that Lope de Vega modelled his dramas on V.'s work. See *Four Plays*, 1920, and *Lyrics*, 1921, trans. by A. F. G. Bell. See also studies by A. F. G. Bell, 1921; A. J. Saraiva, 1943; A. B. Freire (2nd ed.), 1947.

Vicentino, Lodovico degli Arrighi (*d.* 1527?), prince of calligraphers, *b.* Vicenza. V. became writing-master in Venice before going to the Vatican as *scrittore de brevi apostolici*—apostolic brief writer. In 1522 he pub. the first manual of our written alphabet, *La operina da imparare di scriuere littera cancellarescha* (being a book of models of a current correspondence hand based upon the Apostolic chancery-script), which remains unsurpassed. Compressed into 20 pages, it is the fullest writing instruction known. In 1523 V. left Vatican service to produce in Venice his *Il modo de temperare le penne*, describing himself on one page as public notary. This work opens with 5 pages of the earliest use of calligraphic italic type which V. did not use again and has no further record. Returning to Rome, V. took up printing, the first off his press

S. Morison, 1926; P. Standard, *Calligraphy's Flowering, Decay, & Restoration*, 1947; A. Fairbank, *A Book of Scripts* 1949. On development of italic hand to printing, see S. Morison, *Type Designs of the Past and Present*, 1926.

Vicenza: 1. Prov. of Italy, in central Veneto (q.v.). It is generally low-lying, but the NW. of the prov. is in the Alps (q.v.). In the N. is the plateau of the 'Sette Comuni,' the chief of which is Asiago (q.v.), whose inhab. speak a Ger. patois. The chief riv. of the prov. is the Bacchiglione (q.v.). The prin. tns include V. and Bassano (qq.v.). Area 1075 sq. m.; pop. 610,000.

2. (Anet Vicetia), It. city, cap. of the prov. of V., on the Bacchiglione, 38 m. WNW. of Venice (q.v.). It was the bp. of Palladio (q.v.), and the tn contains many splendid buildings by him: the Basilica, the Chiericati palace, the Olimpico theatre, and the Rotonda villa amongst them. There is a fine Gothic cathedral, now restored after being damaged during the Second World War. V. manufs. textiles, glass, machinery, and motor-car chassis. Pop. 83,000.

Viceroy, one who rules over a kingdom or country in the name of the king with regal authority. The title so far as Great Britain is concerned seems to be confined in recent hist. to the former V.s of India.

Vicetia, see VICENZA.

Vichy (-les-Bains), Fr. spa, cap. of an arron., in the dept of Allier, on the Allier. It acquired an unhappy notoriety during the Second World War, when it became the seat of the gov. headed by Marshal Pétain (q.v.) and Pierre Laval (q.v.). The waters of V. were known to the Romans; they are exported in large quantities. Pop. 29,100. See also FRANCE, History.

Vicia, see TARE.

Vickers Ltd., a holding company owning, *inter alia*, all the shares in Vickers-Armstrongs Ltd. (formed in 1928) and jointly with Cammell Laird & Co. Ltd. the whole of the issued capitals of English Steel Corporation Ltd. and Metropolitan Cammell Carriage & Wagon Co. Ltd. The interests of the Vickers Group cover a very wide range, including shipbuilding and repairs, aircraft, steel production, engineers' tools, equipment for power stations, docks and harbours, mining, and cement-making plant, printing machinery, power presses, soap, paint, and ink-making machines, non-ferrous products, brewing, malting and distillery plant, optical and scientific instruments, rubber and plastic products, railway rolling stock, motor-bus bodies, punched-card accounting machinery, earth-moving equipment, armaments, constructional engineering, hydraulic pumps, and gears. The authorised capital in 1956 was £45m., of which £37,591,051 had been issued. The group has interests in Australia, S. Africa, India, Pakistan, and Canada.

Vickers Test, see METAL TESTING.

Vickerstown, see WALNEY ISLAND.

Vicksburg, co. seat of Warren co., Mississippi, U.S.A. It is an important cotton manufacturing centre and has also railroad shops, saw and lumber mills, canneries, and machinery works. The scene of an important siege and campaign of the Civil war, it contains National Cemetery with more than 12,000 graves of unidentified soldiers, and the V. National Park of 1300 ac. on the site of the great battle-ground of 1863. Pop. 28,000.

Vico, Giovanni Battista (1668-1744), It. philosopher, historian, and jurist, b. Naples, where he became prof. of rhetoric in the univ. (1698). In 1735 he was appointed historiographer to Charles III, King of Naples. His most important work is the *Scienza nuova* (revised ed. 1744), in which he studies and defines the imaginative faculty, and propounds theories on the nature of poetry, the origin of speech, etc., and anticipates the mod. theory of recurring cycles in history. This great work has been ed. by Fisch and Bergin (Cornell, 1949; Eng. trans. by the same authors, 1944). V.'s complete works have been ed. by Nicollini and others (8 vols., 1914-42). See H. P. Adams, *The Life and Writings of Giovanni Battista Vico*, 1935. T. Berry, *The*

Historical Theory of Giovanni Battista Vico, 1949.

Vico, Lake, see VITERBO.

Victor, name of 3 Popes and 1 Antipope. **Victor I, Saint**, was Pope from c. 189 to c. 199. He may have been b. in Africa. He decided the Easter controversy. **Victor II (Gerhard of Eichstätt)**, pope 1055-7, was a German. He vigorously asserted the independence of the papacy against the Imperial claims. **Victor III, Blessed (Dausserius or Desiderius)**, Pope from 1086 to 1087, was b. at Benevento. He became abbot of the Benedictine monastery of Monte Cassino in 1057, and under him the abbey enjoyed its greatest distinction, both in sanctity and learning. **Victor IV (Gregory Conti)**, antipope Mar.-May 1138, was the nominee of Roger of Sicily, and reigned in opposition to Innocent II. See POPES, LIST OF THE.

Victor, Perrin Claude, Duke of Belluno (1764-1841), Fr. marshal, b. La Marche (Vosges). He entered the Army in 1782, distinguished himself at Toulon (1793). He commanded in the It. campaigns of 1796-7 and 1799-1800, and won distinction at Marengo. He took part in the campaigns in Russia, Germany, and France.

Victor Amadeus, see SAVOY, HOUSE OF.

Victor Emmanuel I (1759-1824), King of Sardinia (1802-21), b. Turin. He commanded the Sardinian forces against the French (1792-6), who occupied all the continental possessions of his family. The first Peace of Paris (1814) restored to him Piedmont, Savoy, and Nice, and the second (1815) restored Genoa. He abdicated in favour of his brother, Charles Felix, in 1821 after a popular revolution.

Victor Emmanuel II (1820-78), King of Sardinia (1849-61) and of Italy (1861-78). He ascended the Sardinian throne on his father's abdication after the defeat at Novara (23 Mar. 1849). V. E. was a conscientious and capable ruler, and gave Cavour influential support. A new It. kingdom had been created by the end of 1860, and V. E. proclaimed king of Italy (26 Feb. 1861). In 1866 he wrested Venetia from Austria, and in 1870 occupied Rome. Between 1861 and the end of his reign V. E. showed considerable political skill in the handling of the crises with the papacy and resultant on the conduct of Garibaldi (q.v.). He became extremely popular, and proved a unifying influence in the new state. See also ITALY, History. See lives by Sir E. Dicey, 1882; C. S. Forrester, 1927.

Victor Emmanuel III (1869-1947), King of Italy, b. Naples, only son of the prince of Piedmont, later Umberto I. In 1896 he married Princess Elena of Montenegro. There were 5 children, Umberto and 4 daughters. He played some part in the entry of Italy into the First World War on the side of the Allies.

After the war his relations with Mussolini were distant, and he continued to direct It. foreign policy in its old course, but in the crisis which brought Mussolini to power, he ignored the advice of his ministers to disperse the Fascisti by force

and refused to sign the decree of martial law presented by his premier, Facta. After the 'March on Rome' (see under FASCISM; MUSSOLINI) he sent Mussolini a telegram offering him the premiership, and thereafter he allowed himself to become the figurehead and spokesman of the Fascist regime, though he unsuccessfully opposed Italy's entry into the Second World War on Germany's side. Later he tried to save what he could from the ruins. He escaped from Rome on 8 Sept. 1943, and reached S. Italy, which was under the protection of the Brit. and Amer. armies. He gave sincere support to Badoglio (q.v.), his new premier, and promised support to the Allies after Italy's surrender in Sept. 1943 (see ITALY, History). Reluctantly he ceded his royal powers to his son, Crown Prince Umberto, on 5 June 1944, and he abdicated formally in Umberto's favour on 9 May 1946, in a futile last-minute gesture which his advisers hoped would save the monarchy. V. E. d. in Alexandria, Egypt.

Victoria (Alexandrina Victoria) (1819-1901), Queen of Great Britain and Ireland and, from 1876, Empress of India, daughter of Edward Duke of Kent, fourth son of George III, by Victoria, daughter of the Duke of Saxe-Coburg, b. Kensington Palace. She became queen in 1837. She reigned longer than any previous monarch, proved herself a model for constitutional monarchy, and gave her name to a great period of Eng. history and social life.

Princess Victoria was strictly brought up by her mother; her tutors were chosen by her uncle, Leopold, later King of the Belgians. On her accession V. broke at once from the rule of her mother, and with tact and firmness eluded Leopold's attempts to influence policy. She then threw herself with the greatest zest into her new duties. Her confidential friend and adviser in these early days was Lord Melbourne, the Prime Minister. V. was soon to show that she had a will of her own. When Melbourne's ministry was defeated (1839), Sir Robert Peel was asked to form a gov. Peel stipulated, however, that the Queen's ladies of the bedchamber (all members of Whig families) should be dismissed, to which, against all advice, the Queen flatly refused to agree. She won, and Melbourne returned to office for another 2 years. In 1840 V. married her cousin, Prince Albert of Saxe-Coburg-Gotha (q.v.), and although at first she allowed him to take no part in state affairs, she soon came to rely almost wholly on his judgment. It was a very happy marriage. There were sev. children: the Princess Royal married the Ger. Crown Prince; the second child and eldest son subsequently succeeded his mother as Edward VII. Alice became Duchess of Hesse-Darmstadt; Alfred, Duke of Edinburgh, later became Duke of Saxe-Coburg-Gotha; Helena married Prince Christian of Schleswig-Holstein; Louise married the Duke of Argyll; Arthur became Duke of Connaught, and Leopold, Duke of Albany, and Beatrice

married Prince Henry of Battenberg. The marriages of Victoria's children, and of their immediate descendants, have linked the Brit. royal family to practically every royal house in Europe. Difficult times were to follow: Peel, whom the Queen had grown to like, fell from office, and the Whigs brought in Lord Palmerston, whom Prince Albert disliked and distrusted. The Queen followed his lead, and there was constant friction culminating in Palmerston's dismissal in 1851 because he had acted without first consulting the Queen.

In 1861 Prince Albert d. of typhoid and overwork. For the rest of her life, that is for more than half her reign, V. nursed her tragedy, and though she worked laboriously at affairs of state, refusing to let the Prince of Wales relieve her of anything, for long she never appeared in public if she could possibly avoid it. Her 3 great ministers of this long period were Gladstone (q.v.), who addressed her, as she said, as if she were a public meeting, and whom she detested; Disraeli (q.v.), who was the perfect courtier, flattering his royal mistress and making difficult affairs of state appear simple and interesting; and Lord Salisbury (q.v.), the great Conservative leader. In 1876 the Queen was proclaimed Empress of India. In 1887 she held her first Jubilee, to be followed 10 years later by the Diamond Jubilee. This last period of her life was a sort of apotheosis, in which she was accepted as the living and apparently immortal symbol of Eng. greatness and Empire.

It is impossible to overstate V.'s influence. She had immense character and will-power, but no great intellect. As a girl she had received the Crown when it was in disrepute. She reigned for 63 years, and she left it as a symbol of public honour and the highest private virtue. Her happy family life, her sympathy with simple people, her tragic widowhood and retirement, her great courage (in her old age she sent out the word in the dark days of the Boer war that 'The Queen is not interested in the possibility of defeat'), her glorious return in the evening of life, all caused her to be regarded with great veneration and have given her a place in hist. which nothing can belittle. Though the days of personal royal rule were ended beyond revival, V. refused to abate her remaining constitutional privileges — amongst them a particular care for foreign policy, and there were repeated battles over Palmerston's habit of taking action first and informing his sovereign afterwards. She demonstrated by example the place which the Crown could fill in Eng. political life and as a link of the commonwealth, and estab. a tradition of work and service to the nation.

V.'s letters were ed. by Viscount Esher and G. Buckle, 1907-30, and her *Journal of Our Life in the Highlands* by A. Helps, 1868. See lives and studies by Sir R. R. Holmes, 1897; L. Strachey, 1921; Lord Ponsonby, 1933; E. F. Bruson, 1936; E. Sitwell, 1936, 1948. See also T. H. Ward (ed.), *The Reign of Queen Victoria*,

Hardie, *Political Influence of Victoria, 1861-1901*, 1935; Sir G. Arthur, *Concerning Queen Victoria and her Son*, 1943; A. Cecil, *Queen Victoria and her Prime Ministers*, 1953.

Victoria, Tomás Luis de (c. 1548-1611), Sp. composer, b. Avila, studied probably with Escobedo at Segovia, and in 1565 received a grant from Phillip II to go to Rome the next year. He took holy orders there and became a singer in the Ger. College, and in 1571 choirmaster. In 1587 he became chaplain to the dowager empress Maria, who returned to Spain in 1581, and whom he followed about 2 years later, becoming choirmaster in the Madrid convent in which she lived. V. is as great a polyphonic master in the Sp. school as his contemporaries Palestrina, Lassus, and Byrd were in the It., Flem., and Eng. He wrote 19 masses, 2 Requiem, 45 motets, and much other church music.

Victoria, state of the Commonwealth of Australia (q.v.), in the S. of the continent, between the 34th and 39th parallels of S. latitude and the 141st and 150th meridians of E. longitude. It is bounded on the N. and N.E. by New S. Wales, from which it is separated by the Murray R., on the W. by S. Australia, and on the S. and S.E. by the S. Ocean, Bass Strait, and the Pacific Ocean. The area is 87,884 sq. m., or only about one-thirty-fourth part of the whole continent; pop. 2,632,623 (estimated at 31 Dec. 1956). The pops. of the 4 chief cities are: Melbourne (cap.), 1,524,111; Geelong, 80,000; Ballarat, 48,030; and Bendigo, 36,918.

Physical Features. The state is traversed with more or less regularity throughout its length from E. to W. by a chain of mts and lesser hills, completely dividing it into 2 parts, and known as the Dividing Range. The streams to the N. of it flow towards the Murray R. and those to the S. towards the sea. The E. part of the range, dividing the Gippsland dist. from that of the Murray, is called the Australian Alps; and that part which separates the co. of Ripon from that of Borung is called the Pyrenees. Snow covers the higher peaks for sev. months of the year. The mountainous country is densely wooded to the summits with fine timber, but the peaks above the winter snow-line are bare or only partially covered with dwarfed trees or shrubs. For some 200 m. from Kilmore eastward the mts are steep, but have been made accessible by good roads; westward from Kilmore the range rapidly dwindles and, though there are points of considerable height, such as Mt William and Mt Macedon, is easily crossed. That

portion of the Murray basin commencing at Woolonga and extending in the form of a triangle to a width of 200 m. along the W. boundary of the state is almost flat. The remaining country N. and S. of the Dividing Range and its spurs is undulating and in some parts destitute of timber, in others closely wooded. Besides the main Dividing Range, there are other ranges extending in different parts of the country, some of them being spurs of the main chain. V. has a climate far more congenial to Europeans than any other state in Australia. It is never severely oppressive, except during the prevalence of hot northerly winds: these occur only at infrequent intervals in the summer. Droughts in V. are neither so general nor so continuous as in sev. of the other states, though, in certain dists., serious inconvenience and loss have been experienced at times on account of deficient rainfall. The gov., therefore, promoted national irrigation schemes upon a large scale, and these are now under the administration of the State Rivers and Water Supply Commission. Fruit-growing has been especially facilitated by these systems. Eildon Reservoir, on the Goulburn R., has a water storage capacity of 2½ million ac. ft. and is one of the largest earth dams in the world.

Production and Industry. The main industry is grazing and agriculture, 5,511,843 ac. being under cultivation in 1956-7. The chief products are wheat (1,565,220 ac.), oats (612,587 ac.), hay (781,952 ac.), and barley (345,282 ac.). In 1954-5 there were 45,757 ac. devoted to the culture of vines, producing 1,612,000 gall. of wine, and 54,042 tons of raisins and currants. A large area is under orchards, and vegetables, tobacco, hops, and olives are also grown. The dairying industry is becoming increasingly important, and 90,676 tons of butter were produced in 1955-6. V. normally exports about half her total butter production annually. Livestock at 31 March 1957 included 25,830,544 sheep, 2,765,049 head of cattle (dairy and other), 258,336 pigs, and over 107,850 horses. The wool produced in 1955-6 amounted to 273,356,000 lb. (greasy), valued at some £469,020,000. There are enormous deposits of brown coal, and the main beds in the Latrobe Valley are estimated to contain 22,000,000,000 tons suitable for open cast working. In 1956, 38,846 fine oz. of gold were yielded, valued at £4806,968. The chief exports, other than wool and gold, are grain and flour, butter, hides and skins, meats, live-stock, leather, milk and cream, and tallow. In 1955-6 exports were valued at £209,555,000. There is also a depot trade in wool, tea, textiles, timber, tobacco, and sugar. In 1956 there were 16,053 factories, employing 355,185 persons, with an annual output of £21,201,392. The chief imports are textiles and apparel, woollens, tea, timber, paper, oils, machinery, and iron. Imports in 1955-6 cost £290,349,000. Melbourne does over 90 per cent of the overseas trade; the other principal ports being Geelong, Portland, and Warrnam-

bool. The chief manufs. are: woollens, clothing, etc.; food, drink, and tobacco; bricks, stone, and glass work; furniture; rubber goods, drugs, and chemicals; tanning and fellmongering. Hydro-electric power is increasingly used. The great Kiewa project was begun in 1937.

Communications. Melbourne is connected with Sydney, Brisbane, Adelaide, and Perth by railway. The railways in V., with the exception of small lines, are all state-owned. The number of m. open for traffic in 1936 was 4449.

Education. Educational establishments in V. are of 4 classes: the univ. with 5

preparatory section is associated with every technical school. There are also private or church technical schools; V. has also 2 agric. colleges and a school of horticulture.

Government. The gov. of V. consists of a governor appointed by the Crown, a Legislative Council or Upper House of 34 members, and an Assembly or Lower House of 85 members. The Constitution was estab. by an Act of the Victorian Legislature of 1854. The Adult Suffrage Act of 1908 placed women on an equality with men as electors. A very complete system of local self-gov. exists in V. The

Australian News and Information Bureau

EILDON RESERVOIR, VICTORIA

In the background is the spillway of the new Eildon Dam, which has a capacity of 2,750,000 acre feet.

affiliated colleges, for superior education; state schools for primary and secondary education—the system of primary public instruction, which was commenced in 1873, is secular and attendance at school is compulsory for children between the ages of 6 and 14, and state instruction is granted free of cost; registered schools, for primary and secondary education, run by the churches or in private hands; and technical schools, for instruction in the various arts. The Melbourne Univ. was estab. under a special Act of the Victorian Legislature in 1853; affiliated to it are Trinity, Ormond, Queen's, and Newman Colleges, connected with the Church of England, Presbyterian, Methodist, and Rom. Catholic Churches respectively, and the Univ. Women's College. There are 35 state-aided technical schools (1950), and a full-time day junior technical or

municipalities are either cities, tns, bors., or shires. Each dist. is a body corporate with a common seal. In 1948 there were 35 cities, 5 tns, 20 bors., and 137 shires. There is a supreme court with a chief justice and 7 puisne judges; courts of general and petty sessions, co. courts, courts of mines, court of licensing, and children's courts.

Early History. Capt. Cook and the officers and crew of the *Endeavour* were, probably, the first Europeans to sight the country, though no landing was attempted. On his report that the E. part of Australia was suitable for colonisation, a party of convicts was sent out in 1785 under Capt. Arthur Phillip, R.N., and on the shores of Port Jackson, N. of Botany Bay, Phillip estab. a permanent settlement. Later, Hume and Hovell travelled overland from Sydney, and the outcome

of their report was that a convict estab. was founded on W. Port Bay. This settlement was soon abandoned, and the first permanent settlement in V. was formed at Portland Bay by Edward Henty, from Van Diemen's Land (Tasmania), who landed on 19 Nov. 1834 and thereafter began agric. and stock-breeding operations and also whaling. Other settlers followed, but no marked development ensued in this vicinity, owing to the want of good land and of safe harbourage. The cap. was founded by 2 Tasmanian parties, one led by John Batman, who landed on 29 May 1835, the other by John Pascoe Fawkner, who reached the site of Melbourne on 28 Aug. of the same year. Others from the same ls. and from Sydney followed, bringing stock with them, and penetrated farther into the interior. Among these was Maj. (later Lt.-Col. Sir) Thomas Mitchell, who was so impressed with the economic potentialities of the country, the greater part of which was still unknown, that he named it Australia Felix. His reports, coupled with the success of the earliest settlers, stimulated the interest of existing Australian settlers and of the mother country, and one immediate result was that large herds of sheep and cattle were driven overland from New S. Wales to occupy the best pasturage land in V. and shiploads of emigrants began to arrive from the U.K. Regular gov. was first estab. under Capt. Wm Lonsdale, who was sent from Sydney to take control, and landed on 20 Sept. 1839. On 2 Mar. 1840 Sir Richard Bourke, the governor of New S. Wales, visited it and named the cap. Melbourne. Charles La Trobe was appointed superintendent, which title was in 1851 changed to that of lieutenant-governor, when the colony was separated from New S. Wales and named V. Gold was discovered soon afterwards and led to a further influx of pop., but the ensuing and oppressive mining regulations resulted in rioting on the Ballarat (q.v.) goldfield in 1854. A new Constitution giving responsible gov. to the colony was proclaimed on 23 Nov. 1855.

Hall, *Victoria's Part in the Australian Federation Movement, 1849-1900*, 1931; A. Pratt, *Centenary History of Victoria*, 1934, and *Victoria: the first Century* (Official History of Victoria), 1934; A. J. and J. J. McIntyre, *Country Towns of Victoria: a Social Survey*, 1944; G. W. Leeper (ed.), *Introducing Victoria*, 1955; the ann. *Victorian Year Book*.

Victoria, 1. Cap of Brit. Columbia, on the S. end of Vancouver Is., overlooking the strait of Juan de Fuca, separated by 82 m. of sea from the city of Vancouver on the mainland. Founded by the Hudson's Bay Co., in 1843, and named in honour of the young Queen, it became the cap. when the colony of Vancouver Is. was estab. in 1849. Upon the union of Vancouver Is. with Brit. Columbia in 1866 it ceased to be the cap., to which status it was restored in 1868. V.'s dominating

architectural feature is the imposing Parliament buildings, attached to which are the prov. reference library and the important prov. museum of natural hist., Victoria College (affiliated with the univ. of Brit. Columbia), and the Dominion Astrophysical Observatory, one of the largest in the world. V. is a residential and tourist centre, but there are nevertheless some industries, including ship-building, lumbering, saw-milling, flour-milling, and canning. Pop. (1956) 52,835, with Greater Victoria 123,035.

2. Seaport shipping coffee, cocoa, etc., and manganese, 400 m. N.E. of Rio de Janeiro, the cap. of Espirito Santo, Brazil. Pop. 21,900.

Victoria, cap. and port of Hong Kong (q.v.). It is situated between a range of treeless hills of volcanic rock and the extensive harbour of Hong Kong and extends for 9 m. along the N. shore of the ls. A large proportion of V., particularly in the central dists., was built in the early days of the colony, and runs up the steep hillside for hundreds of yds in narrow stepped streets or terraces. The chief industries of V. are cotton manufs., sugar, cement, paint, preserved ginger, tobacco and matches, rope works, food canning, rubber goods, electrical and light metal wares. St John's Cathedral, seat of the diocese of Victoria and S. China, was heavily damaged in the Second World War. The pop. of V., including the Peak, is about 1,000,000.

Victoria, Lake, or **Victoria Nyanza**, known formerly to the Arabs as **Ukarewe**, largest lake of Africa. Area 26,828 sq. m.; 255 m. long and 155 m. broad; altitude, 3726 ft. The water is highest in July and lowest in Nov., the extreme range being 43½ in. As a fresh-water lake it is in size second only to Lake Superior. L. V. is situated on the equator and forms the chief reservoir of the Nile, which leaves the lake at Ripon Falls, at Jinja, where a great hydro-electric scheme has been commenced. There is an important fishing industry (12,000 tons, 1955). A marine service for passengers and cargo is maintained with great efficiency between 6 lakeside ports. The N. part lies in Uganda, the S. in Tanganyika Ter., and a small area in the W. of Kenya Colony.

Victoria amazonica (synonym *regia*), **Queen Victoria**, or **Royal Water Lily**, aquatic plant (family Nymphaeaceae), native of S. Amer. rivs. It has a thick, fleshy root stock, and huge tray-like leaves from 6 to 12 ft in diameter, green above and purple or violet beneath. The flowers are very large and fragrant. It is grown in tanks in stove-houses.

Victoria and Albert Museum, S. Kensington, London, one of the world's greatest museums of fine and applied art, mainly of the post-classical periods. It originated in the Museum of Ornamental Art at Marlborough House in 1852, and in 1857 merged in the collective S. Kensington Museum, where various collections of science and art were assembled. The original aims of the art sections of the museum were both educational and academic, and the appeal to both scholars

and the general public has always been maintained. The original buildings were continually being enlarged in the 19th cent., and by 1899 Aston Webb's final extension was completed. The whole museum was renamed V. and A. in 1899, and in 1909 this name was restricted only to the art collections, which were then parted from the science collections and became the present separate museum. The museum now consists of 11 depts: those of Architecture and Sculpture; Ceramics; Engraving, Illustration, and Design; Library; Metalwork; Paintings; Textiles; Woodwork; Indian Section; Circulation (dealing with travelling exhibitions, etc.); and Museum Extension Services (for inquiries, photographs, lectures, etc.). Outstations are Bethnal Green Museum, Ham House, Osterley Park, and Apsley House. The galleries are arranged in 2 groups: the primary collections, arranged by style and period; and the study collection, arranged by materials, for the use of the scholar and the student. The museum is under the Ministry of Education.

Victoria Channel, 4 m. SW. of Formby Point, Lancs, England, leading into Crosby Channel, and the best entry to the R. Mersey.

Victoria Cross, highest Brit. decoration for 'conspicuous bravery or devotion to the country in the presence of the enemy.' It was founded by Queen Victoria towards the conclusion of the Crimean War (1856) and has been cast from the metal of Russian guns taken at Sevastopol, save for brief periods during the two World Wars. It consists of a Maltese cross made of bronze, bearing in the centre the royal crown surmounted by a lion, and with the scroll superscribed 'For Valour.' The winning of the V.C. carries with it a pension of £10 per annum, which can under special circumstances be made up to £75. A Royal Warrant of 1920 extends eligibility to women of military nursing services and to civilians of either sex when serving under naval, military, or air authorities.

The awards up to 1956 number 1346, including 3 bars (awarded to Capt. A. Martin-Leake and Capt. N. G. Chavasse, both of the R.A.M.C., and to Capt. C. H. Upham of the New Zealand military forces). The number of V.C. awards made during the First World War was 633. Of this number 173 were posthumous awards. The number of V.C. awards made during the Second World War was 182, of which 82 were posthumous awards.

The distribution of forces awards has been as follows: U.K., Royal Navy 118, Army 865, R.A.F. and R.F.C. 31; *Australia*, 87; *Canada*, 80; *Fiji*, 1; *India*, 111; *New Zealand*, 21; *S. Africa*, 28. The awards to civilians number 4.

See Sir O.M. Croagh and E. M. Humphris, *The Book of the V.C.*, 1924; R. Stewart, *The Victoria Cross*, 1928; K. Hare-Scott, *For Valour*, 1949.

Victoria Falls, The (native name *Mosi-oa-tun-ya*, 'smoke that thunders'), great waterfalls upon the R. Zambezi,

in Rhodesia, Central Africa, 900 m. from the sea, discovered by Livingstone in 1855. Above the falls the riv. flows over a level stretch of basalt and is flat and broad, dotted with thickly wooded is. At this point it is some 1860 yds wide, and then drops over a chasm extending the whole breadth and varying from 250 to nearly 400 ft. Its course is impeded by an opposite wall, nearly as high, the water escaping through a channel of 100 ft width through the 'Boiling Pot,' into the Grand Cañon, now spanned by a splendid bridge. In 1938 a hydro-electric station, with a capacity of 2000 kW, was started up and a supply of electricity was provided for the Livingstone Municipality.

Victoria Lake, or *Zor-kul*, or *Sarykul*, lies at an altitude of 13,400 ft on the SE. Pamirs, in the Tajik S.S.R. It is a vestige, gradually diminishing in size, of a prehistoric period of glaciation.

Victoria Land, named after Queen Victoria, was discovered in 1841 by Capt. James Clark Ross. It is a region of the Antarctic lying between 180° and 150° E. long. Ross followed its margin as far as 78° 4' S. lat. Here are situated Mt Erebus (volcanic) and Mt Melbourne (8337 ft). V. L. is the area of the 'heroic' age of polar exploration under Scott and Shackleton (qq.v.). See also *Ross Sea Sector*.

Victoria Palace, theatre in Victoria Street, London. It was opened in 1911 on the site of the old Royal Standard as a music-hall to seat just under 2000. In May 1935 it was opened as a regular theatre under Seymour Hicks's management and is now owned by Moss Empires Ltd. It is now regarded as almost the permanent home of the famous 'Crazy Gang' shows.

Victoria University, The, Manchester, in Oxford Road, owes its existence principally to John Owens (q.v.), a Manchester merchant who d. in 1846 and who left a sum of over £96,000 for the foundation of a college in which instruction would be given 'in such branches of learning and science as are usually taught in the English universities.' Owens College was opened in a house in Quay Street in 1851. Growth was rapid, and by 1873 the first of the present buildings, designed by Waterhouse, was in occupation. In 1880 a charter was granted for the institution of the Victoria Univ., with its seat in Manchester. Four years later the colleges of Liverpool (q.v.) and Leeds (q.v.) were admitted, and the Federal Univ. continued until 1903, when a new charter was granted and separate univs. were estab. in the 3 cities. To-day the univ. contains 9 faculties, and the original Owens College is surrounded by additional buildings containing the Whitworth Hall, Christie Library, the Manchester Museum, and the many depts of learning. There are over 5200 students.

Victorian Order, The Royal, see *ORDERS OF KNIGHTHOOD, GREAT BRITAIN AND IRELAND* (8).

Victoriaville, tn of Quebec, Canada, 59 m. N. of Sherbrooke. The prin. industries are manufs. of clothing and furniture. Pop. 14,200.

'Victory,' Brit. battleship of 2164 tons, launched at Chatham on 7 May 1765, flies the flag of the commander-in-chief at Portsmouth. She was the flagship of Howe at the relief of Gibraltar (1782), of Hood at Toulon (1793), and of Nelson at St. Vincent (1797) and Trafalgar (1805). The *Victory* is now at Portsmouth. She is maintained in a state of preservation by the Victory Fund, and is open to the public.

Victory Medal. The institution of this medal was decided upon by the Associated Powers in Mar. 1919, and its name in all Allied countries is 'Victory Medal' and the ribbon is identical, consisting of 2 rainbows joined by red in the centre. It was also agreed that the medal should be made of bronze and that the design should be as nearly as possible identical for each nation. On the reverse are the words 'The Great War for Civilisation' (in various languages). The V. M. was awarded to all officers and men who entered a theatre of war on the strength of any military unit or, in the navy, all officers and men who had been afloat on duty between Jan. 1914 and Nov. 1918, extended in 1920 to include the N. Russian, Siberian, and Caucasian operations. Awards exceeded 5,000,000.

Victualling, see RATION.

Victualling Bill, see BILL OF VICTUALLING.

Vicuña, or Vicugna (*Lama vicunia*), small ruminant related to the camels, native of Bolivia and N. Chile. Its soft silky fur or wool is brown in colour, and much valued for the manuf. of choice fabrics.

Vicus Aquensis, see BAGNÈRES-DE-BIGORRE.

Vidalin, Jón (1666-1720), Icelandic theologian and Lat. poet, Bishop of the S. diocese. For eloquence as a preacher he is unrivalled in the hist. of the Icelandic church until the advent of Haraldrur Nielsson (q.v.). See Arne Möller, *Jón Vidalin og hans Postil* (in Danish).

Vidalin, Páll (1667-1727), Icelandic lawyer and sub-governor of the country, cousin of Bishop Vidalin, both of them grandsons of Arngrimur Jónsson (q.v.). Together with Árni Magnússon (q.v.), he wrote the colossal *Jarabók*, which, however, remained unpub. until the 20th cent. It gives a minute description of every farm in the country (there was then no town in Iceland) and details of the livestock. He was a philologist and one of the foremost poets of his time.

Vidisa, see BHILSA.

Vidyasagar, see ISWAR CHANDRA.

Viebig, Clara (1860-1952), Ger. novelist, b. Trier. She first became famous for portraying the influence of the bleak landscape of her native region, the Eifel, on the inhab., as in her novels *Kinder der Eifel*, 1897, *Das Weibsdorf*, 1900, *Das Kreuz in Venn*, 1908. Later novels are set in a background of modern Berlin, where she settled and married. See C. Scheuffler, *Clara Viebig*, 1926.

Vieille-à-roue, see HURDY-GURDY.

Vieira, Antonio (1608-97), Portuguese missionary, b. Lisbon. He was educ. by

the Jesuits at Bahai, Brazil, and entered the Society in 1625. He did much to better the lot of the Indians of Brazil, and obtained the prohibition of slavery.

Vienna (Ger. *Wien*), Austrian city, cap. of the Rep., and until 1916 cap. of the Empire. With the exception of the dist. of Floridsdorf it lies on the r. b. of the Danube, a canalised arm of which also intersects the city. To the W. and SW. are the beautiful, wooded hills called the Wiener Wald.

History. On the site of a Celtic settlement the Romans built a garrison in called Vindobona, in which Marcus Aurelius (q.v.) is said to have d. The place passes out of history during the barbarian invasions, but it reappears as 'Wenia' in 881, and in 1137 'Wienn' is mentioned as 'civitas.' In 1137 also Henry Jasomirgott (*see under AUSTRIA*) made it his cap. Under the Babenbergs (q.v.) V. became a commercial centre, and the Babenbergs kept a brilliant court and encouraged the arts (Walther von der Vogelweide, q.v., began his poetical career there). In 1278 V. became the cap. of the Hapsburgs (q.v.), and hence, in time, the seat of the German emperors. By the end of the 14th cent. the city had a univ. and many fine churches and monasteries. It was ravaged by fire in 1525, and was unsuccessfully besieged by the Turks in 1529 and 1683. It was a centre for the Counter-Reformation, and, after the defeat of the Turks, there was a period of rapid expansion. Many palaces (e.g. Schwarzenberg), churches (e.g. Karlskirche), and other buildings were constructed in sumptuous Baroque style. Under Maria Theresa (q.v.) V. was the brilliant centre of a great empire, and it continued into the 19th cent. as the 'Alt-Wien' of tradition. In the second half of the 19th cent. the pop. increased rapidly, particularly in the new industrial suburbs, there was much building activity, and the city was extensively replanned and modernised. In 1878 the students and industrial workers led a revolution, which was quickly suppressed. The aftermath of the First World War caused considerable suffering in the city, and the Social Democrat municipality launched an ambitious programme of social reform. V. was among the first cities in the world to build modern blocks of flats for workers. The unsettled state of the country, however, led to sev. risings and clashes between rival parties. From Mar. 1938 until April-May 1945 V. was occupied by the Germans, and was an integral part of Germany as the cap. of the 'Ostmark' (q.v.). During the occupation of Austria, after the Second World War, the city was supervised by a 4-power authority, appointed by the U.K., the U.S.A., France, and Russia. V. gives its name to sev. treaties and gatherings: the Concordat (1448) between the Pope and Frederick III (q.v.); the Treaty of 1689 (see GRAND ALLIANCE); the Peace of 1809, after Napoleon's defeat of Austria (also called the Peace of Schönbrunn); the Congress (1814-15) for the settlement of Europe, following the

downfall of Napoleon; the Treaty of 1864 (see SCHLESWIG-HOLSTEIN).

V. To-day. Although in the ter. of Lower Austria (q.v.), V. is a separate prov. itself, and it is the seat of a Rom. Catholic archbishop and of a Protestant bishop. It consists of an anct inner city and 26 dists. (*bezirke*). The old ramparts which enclosed the inner city were levelled in 1860, and in their place was constructed a boulevard, the Ringstrasse, which is one of the finest streets in the world. The inner city contains most of the remarkable institutions and buildings: St Stephen's cathedral (12th-16th cents.),

'Donauland' Vienna

ST STEPHEN'S CATHEDRAL, VIENNA

now restored after suffering severe damage in 1945; the Hofburg (13th-19th cents.), the former Imperial palace; the great opera-house, reopened in 1955 after rebuilding necessitated by the disastrous fire of 1945; the palaces of the archbishop and nobility, and many notable churches. V. has a univ. (1365) with a renowned medical faculty, and there are technical and veterinary colleges, museums, libraries, art galleries, and sev. parks, including the celebrated Prater (6½ sq. m.), which is beside the riv. in the E. of the city. It has long been renowned as a musical centre, and has connections with Gluck, Haydn, Mozart, Beethoven, Schubert, Bruckner, Brahms, Strauss, Hugo Wolf, and Gustav Mahler (qq.v.).

After the dissolution of the Austrian Empire during the First World War (see

under AUSTRIA V. remained the chief commercial city in SE. Europe, although suffering some diminution of trade. Since the Second World War its commercial importance has been prejudiced by the restrictions on traffic between E. and W. Europe. Among the prin. manufs. are silk, velvet, linens, carpets, ceramics, jewellery, mathematical, scientific, and musical instruments, watches, fine cutlery, chemicals, leather goods, furniture, paper, and meerschaum pipes. Pop. 1,616,100. See D. A. Fischer, *Vienna: the Town and its Buildings*, 1946.

Vienna, Congress of. A congress of European statesmen held in 1814 after Napoleon's exile to Elba, to settle the peace of Europe. Before the deliberations of the congress had ended, Napoleon escaped from Elba and landed in France.

Vienna Art Museums. The Art-Hist. Museum in Maria Theresa Platz was originally the Imperial Gallery formed by Ferdinand I., brother of Charles V of Spain, who succeeded the latter as emperor of the Holy Rom. Empire. All the Imperial collections, paintings, sculpture, antiquities were regrouped in the *Kunsthistorisches Museum*, inaugurated in 1891, a further regrouping being completed in 1936, making the picture section comparable with that of the National Gallery, the Louvre, and the Prado. In the early Dutch masters the gallery is rich, particularly the work of Joost van Cleve, Mabuse, Jacob Cornelisz, Jan van Eyck, Memling, and Hugo van der Goos. Here also are paintings by Ter Borch, Jan van der Capelle, Brouwer, Van Goyen, Ruysdael, Jan Steen, Pieter de Hooch, and Rembrandt—the latter is represented by 8 pictures, including that of his son Titus. There is a famous series of pictures by Brueghel, the best of his work in any gallery, not excluding even Belgian galleries. Other great Flem. painters represented are Rubens with his immense 'Festival of Venus', 'St Ambrose and the Emperor Theodosius', and 'Ignatius casting out Devils'; Van Dyck, and Jordaens. The wonderfully elaborate 'Trinity' of Dürer is one of the outstanding works in Vienna and also here are his 'Young Venetian Woman' and a 'Madonna and Child.' Other Ger. masters follow, including Holbein with portraits of Jane Seymour and John Chambers. Eng. art is represented by Hogarth, Reynolds, and Gainsborough. The Viennese gallery is strong in Venetian and other It. schools. Here are Titian's most dramatic picture, 'Ecce Homo,' some of his finest portraits, including his daughter Lavinia; Tintoretto with his 'Susanna and the Elders'; Palma Vecchio; Paris Bordone, and Giorgione, with his unforgettable 'Three Philosophers.' Among the works of later It. artists are the pagan and voluptuous 'Io' and 'Ganymede' of Correggio; Parmigianino's (Parmigiano) 'Cupid Shaping his Bow'; Raphael's 'Madonna al Verde'; Fra Bartolommeo's 'Presentation in the Temple.' Though the museum buildings were damaged in the War, the pictures were safe in the salt-mines of Upper Austria, and a handsome

selection was shown in London in 1949. Also in Vienna is the Lichtenstein collection, which is notable for its pictures by Rubens and Van Dyck alone, and the superb Albertina collection of old Master drawings (originally formed by Albert Casimir of Saxony (1738-1822).

Vienne: 1. Dept of W. central France, formed in 1790 out of the larger part of Poitou (q.v.), and of part of Touraine and Berry (qq.v.). V. is flat and low-lying, and is drained from N. to S. by the R. V. (q.v.) and its trib. the Olain. Cereals, fruit, and some hemp are grown, and stock is raised. Poitiers (q.v.) is the cap., and there are 3 arrons., Poitiers, Châtellerault (q.v.), and Montmorillon. The dept has numerous megalithic monuments. Area 2720 sq. m.; pop. 313,950.

2. Anc't Vienna, Fr. in and arron. in the dept of Isère (q.v.) on the R. Rhone (q.v.), 16 m. S. of Lyons. Once the cap. of the Allobroges (q.v.), V. became a Rom. colonia under Caesar c. 47 BC, and many traces of the Rom. occupation can be seen. The most notable Rom. building is the temple of Augustus and Livia, built by Claudius. During the 5th and early 6th cents., and again at the end of the 9th and the beginning of the 10th cents., V. was the home of the Burgundian kings. Between c. 450 and 1790 it was the seat of an archbishop; the church of St Maurice (11th to 16th cents.) was once the cathedral. The church of St Pierre was rebuilt in the 9th cent.; it houses the Musée Lapidaire. V. has woollen and metal manufacturing industries. Pop. 20,000.

3. Riv. of France, which rises in N. Corrèze, and flows N. and NW. past Châtellerault, Limoges, and Chinon, to join the Loire 8 m. SE. of Saumur (qq.v.). Length 230 m.

Vienne, Haute-, dept of France, formed of parts of the anc't provs. of Limousin, March, Poitou, and Berry. It is very hilly, the riv. Vienne flowing between the Marche Mts in the centre of the dept, and the Limousin Mts in the S. Agric. is not well developed, but some cereals and hemp are grown, and there is considerable breeding of livestock. Uranium, wolfram, manganese, and kaolin are found. There are important porcelain, leather, paper, and textile industries. The prin. tns are Limoges (the cap.), Bellac, and Rochechouart (qq.v.). Area 2119 sq. m.; pop. 324,450.

Vientiane, administrative cap. of Laos (q.v.), standing on l. b. of R. Mekong (q.v.). Once cap. of independent Thai kingdom, V. was sacked by Siamese invaders in 1827 and its people dispersed. Chosen as the seat of the Fr. Resident of Laos in 1899, the tn began to grow again with the building of European-style villas and streets. Traces of the old city still remain, and there are ruins of some 24 temples. To-day the administrative cap., it houses foreign embassies and aid missions, and has an airport. Communications are difficult except by air. There is no railway. No recent pop. figures are available. See also **VIET NAM**; **HO CHI MINH**. See P. Devillers,

Histoire du Viet Nam, 1952; J. Sainteny, *Histoire d'une Paix Manquée*, 1953; E. Hammer, *The Struggle for Indo-China*, 1954, with supplement, *The Struggle for Indo-China Continues*, 1955; B. Fall, *The Viet Minh Regime*, 1955.

Vierlande, see **BERGSDORF**.

Viersen, Ger. tn in the Land of N. Rhine-Westphalia (q.v.), 17 m. W. of Düsseldorf (q.v.). It was badly damaged in the Second World War. Textiles, foodstuffs, machinery, and paper are manuf. Pop. 37,000.

Vierwaldstättersee, see **LUZERN, LAKE OF**.

Vierzon, Fr. tn and dist. in the dept of Cher, on the Cher. It was severely damaged in the Second World War. It is a railway junction, has iron-works, and manufs. porcelain, agric. machinery, and glass. Pop. 26,000.

Viet Minh, abbreviation for 'Viet Nam Doc Lap Dong Minh Hoi' (League for the Independence of Viet Nam), a Communist-led Vietnamese nationalist organisation. The V. M. was founded in 1941 at a congress of Vietnamese nationalists convened by Ho Chi Minh (q.v.) in Tsin Tsai in the Chinese prov. of Kwangsi. It was headed by Ho Chi Minh, and during the Second World War collaborated with the Allies in carrying out underground resistance against the Japanese occupying Viet Nam. In 1945, after the Jap. surrender, the V. M. declared Viet Nam (q.v.) an independent rep. and estab. a gov. at Hanoi (q.v.). When negotiations between the V. M. and France broke down in 1946 the former resorted to open warfare against the Fr. forces in Tonkin, and the fighting continued until 1954. Although the V. M. was absorbed in the Lien Viet, a broad union of political groups, in 1946, the Communist-led resistance movement continued to be known as V. M. After the Geneva conference in 1954 the V. M. assumed control of N. Viet Nam, which is to-day known as the Democratic Rep. of Viet Nam.

Viet Nam, independent country of SE. Asia, now divided into 2 self-governing halves at the 17th parallel. The ter. comprises Tonkin, Annam, and Cochinchina (qq.v.), and is bounded to the N. by China, to the W. by Laos and Cambodia, to the E. by the China Sea, and to the S. by the Gulf of Siam and the China Sea. The length of V. N. from N. to S. is slightly less than 1000 m., but the greater part is mountainous. Almost all the inhab. live in the Red R. delta (see **RED RIVER**) of Tonkin, the Mekong delta (see **MEKONG**) of Cochinchina, and the coastal strip of Annam. The mts, which lie to the N. and W. of the Red R. delta and which run from N. to S. along the W. side of Annam, are sparsely inhabited by backward tribal peoples, Nung, Man, Moi, etc. V. N. is affected by the monsoons, and the N. part experiences violent typhoons from the China Sea in autumn. Temp. varies considerably from N. to S., particularly during winter, when Tonkin is frequently cold and damp, the thermometer registering only a few degrees above freezing-point. The people are Vietnamese, with minorities of tribal peoples

in the mts and Chinese in the cities. The prin. language spoken is Vietnamese, a monosyllabic language with 6 tones and incorporating a large number of Chinese words. The second language, spoken by most educ. Vietnamese is Fr., but strenuous efforts are being made by the Vietnamese to replace it by English. The national poem of V. N. is the Kim Van Kieu (q.v.) of Nguyen Du (q.v.). Physically, the Vietnamese are short and slight, with yellow skins and mongoloid features. They are believed to have migrated from S. China into Tonking, where they settled.

The Vietnamese kingdom has been known by a number of different names during its hist. (e.g. Van-Lang, Giao-Chi, etc.), but, for the sake of clarity, is here referred to as V. N. throughout. It was conquered by China in 111 BC, and remained under Chinese domination until AD 939, when it regained independence. In 1413 it was again occupied by China, but only until 1427. From the 15th cent. onwards the Vietnamese pushed steadily southwards until, by the end of the 18th cent., they had occupied the ter. of Champa (q.v.) completely and taken part of Cambodia (q.v.). By 1780 the occupation of the ter. comprising modern V. N. was completed. The country was governed by an emperor through mandarins, and the emperor continued to send tribute to China until the 19th cent. About 1600 the country split into 2 halves, Tonking and Cochín-China, each ruled by a Chua or temporal king, the emperor having become merely a religious head. The Tay-Son rebellion in 1771 overthrew the 2 Chuas, but the Tay-Son were themselves defeated by the heir of the Chua of Cochín-China, who enlisted the aid of foreign soldiers, mainly Fr. This man, Gia Long reunited V. N. and became emperor in 1802. France intervened about the middle of the 19th cent., making Cochín-China a Fr. colony in 1867 and Tonking and Annam Fr. protectorates in 1884. During the Second World War V. N. was occupied by the Japanese, who, before leaving the country, granted it independence. After the Jap. surrender, N. V. N. was temporarily occupied by Chinese troops and S. V. N. by Brit. troops. When the French returned to assume control, V. N. claimed to be independent. A confusing series of military operations and conferences ensued, culminating in the outbreak of full-scale war in 1946. Three main parties were involved in this war, the French, the Viet Minh (q.v.), and the non-Communist Vietnamese nationalists who fought against the Viet Minh or remained neutral, but who never ceased to claim independence for V. N. This war ended in the costly defeat of the Fr. and nationalist troops at Dien-bien-phu (q.v.), and the signing of agreements on the future of Fr. Indo-China at the Geneva conference of 1954. In accordance with these agreements V. N. was divided into 2 parts at the 17th parallel, the N. being handed over to the Viet Minh and the S. to the nationalists. France has now withdrawn her troops, while N. V. N. has

become the Democratic Rep. of V. N. (see VIET MINH; HO CHI MINH) and S. V. N. the Rep. of Viet Nam (see NGO DINH DIEM). An International Truce Supervisory Commission ensures peace between the 2 govs. The Democratic Rep. of V. N. is closely linked to Russia and China, while the Rep. of V. N. receives aid and technical assistance from the U.S.A.

No recent pop. figures are available for V. N., but the inhab. are estimated to number 25,000,000. For industries, agric. products, etc., see ANNAM; TONKING; COCHIN-CHINA.

See also C. Maybon, *Histoire Moderne du Pays d'Annam*, 1920; P. Huard and M. Durand, *Connaissance du Viet Nam*, 1954; G. Taboulet, *La Geste Française en Indochine* (2 vols.), 1955-6; Le Thanh Khol, *Histoire du Viet Nam*, 1955.

Viet Nam, Democratic Republic of, the whole of Viet Nam (q.v.) N. of the 17th parallel. It is administered by the Communist gov. of President Ho Chi Minh (q.v.), and its cap. is Hanoi (q.v.).

Viet Nam, Republic of, the whole of Viet Nam (q.v.) S. of the 17th parallel. It is administered by the republican gov. of President Ngo Dinh Diem (q.v.), and its cap. is Saigon (q.v.).

Vigan, Le, Fr. tn, cap. of an arron., in the dept of Gard, on the Arre. It has a fine Gothic bridge. Silk, hosiery, and wine are manuf., and there is a small coalfield near by. The chevalier d'Assas (q.v.) was b. here. Pop. 3700.

Vigée Le Brun, Marie Louise Elizabeth, see LEBRUN.

Vigeland (Adolf) Gustaf (1869-1943), Norwegian sculptor, b. Oslo. His symbolical naturalism (in which he followed Rodin) profoundly influenced and virtually monopolised Scandinavian sculpture for nearly half a cent. Many of his most remarkable works are in the Frognerpark at Oslo. This park contains a vast collection of V.'s figures, his conscious attempt to express every aspect of the human spirit in stone. He is said to have been the most prolific sculptor of all time.

Vigevano, It. tn, in Lombardy (q.v.), 16 m. NW. of Pavia (q.v.). It has a cathedral (partly 10th cent.) and a palace, upon the construction of which Leonardo da Vinci (q.v.) is said to have been employed. There are textile and leather industries. Pop. 38,000.

Vigfússon, Gudbrandur (1828-89), Icelandic scholar, graduated from Copenhagen Univ.; was appointed reader in Scandinavian at Oxford in 1884. Besides editing with F. York Powell classic Scandinavian poetry in the *Corpus Poeticum Boreale*, 1883, and a number of Icelandic classics and sagas, he compiled an *Icelandic-English Dictionary*, 1866-73, new ed. 1956, with supplement by Sir William Craigie.

Vigil, a day of preparation before a great festival. In the early Church the V. was the night before a festival, and was spent in watching and prayer. In 1956 Pius XII abolished most V.s in the Rom. Catholic Church. The Anglican Book of Common Prayer orders 16 of them to be

observed among the days of fasting and abstinence.

Vigilance Associations protect and help women and young girls. The Brit. Vigilance Association (founded as The National Vigilance Association in 1835) in collaboration with the International Catholic Girls' Society promotes travellers' aid work. At St Martin-in-the-Fields Church, London, a hospitality bureau for foreign girls has been organised in conjunction with 'The Friends of the Island,' and an information leaflet for the foreign worker and visitor to England is issued. The bureau carries out many inquiries for foreign voluntary societies regarding the placing of girls in Eng. households on a domestic or *au pair* basis, pen friends, employment agencies, hotel and boarding-house accommodation, employment offers, etc. There are several autonomous branches of the Association, including the Liverpool Vigilance Association, which runs a port counselling service, and meets all boats from Ireland. The National Vigilance Association of Scotland, founded in 1910, does similar work.

The International Bureau for the Suppression of Traffic in Persons was founded in 1899 as the International Bureau for the Suppression of Traffic in Women and Children, to study this problem in its international aspects and to secure national and international legislation which would prevent sexual exploitation of women and children by third-party vested interests. Branches of the International Bureau exist in many countries, and close liaison is maintained. The League of Nations undertook a world-wide study of traffic in women in 1927, which resulted in close co-operation between many countries through international conventions designed to punish those who exploit the prostitution of others. The last convention considered by the U.N. (which carries on the work of the League in this field) was adopted by the General Assembly in Dec. 1949.

Vigilius, name of one Pope. *Vigilius* was Pope from 538 to 555. He was elected at the instance of Justinian, emperor of the E. Under pressure from the Emperor V. gave his support to the doctrine of the 'Three Chapters.'

Vignola, correctly **Giuseppe Barozzi da Vignola** (1507-73). It. architect. *b.* Vignola near Modena, designed the Villa Papa Giulio, the church of Il Gesù, and some other churches—all in Rome; also the palace or castle of Caprarola. He worked in France 1541-3, and compiled 2 important books on architecture and perspective.

Vigny, Alfred Victor, Comte de (1797-1863). Fr. poet. *b.* Loches (Indre-et-Loire). He came of a military family, and served in the Army for 12 years. He pub. his first vol. of poems in 1822, followed in 1826 by his famous prose romance *Cinq-Mars*, and by *Poèmes Antiques et Modernes*, including *Motae and Le Cor*. In 1835 appeared his drama of *Chatterton*; amongst his other dramatic work may be mentioned: *Quitte pour la Peur*, and *Shylock*, an adaptation of *The*

Merchant of Venice. *La Mort du Loup*, *La Maison du berger* and *Le Mont des Oliviers* were written between 1843 and 1844, and included in the collection entitled *Les Destinées*, 1864, and pub. posthumously, as was his *Journal d'un Poète*, 1867. V.'s poetry is notable for its grandeur and starkness, and for its constant theme of suffering. He saw man as a pigmy, with a God entirely uninterested in his suffering, and evolved a stoic philosophy as humanity's only solace and solution. He was elected to the Fr. Academy in 1845. See E. Estève, *Vigny, sa pensée et son art*, 1923; P. Flottes, *A. de Vigny*, 1925, and *Pensée politique et sociale de Vigny*, 1927; F. Baldensperger, *A. de Vigny*, 1933; G. Bonnefoy, *La pensée religieuse et morale de Vigny*, 1946; P. G. Castex, *A. de Vigny, l'homme et l'œuvre*, 1952.

Vigo, Sp. seaport in the prov. of Pontevedra, standing on a fford, the Rio de V. on the Atlantic coast. It was attacked by Drake unsuccessfully in 1585 and was plundered by him in 1589. In 1702 a Brit. and Dutch fleet under Rooke (q.v.) sank Sp. and Fr. ships in the fford and took £1m. of Amer. treasure. V. is the prin. port in Spain for transatlantic traffic. It has 2 anc't castles and an old fishing quarter, but it is, in general, a well-planned modern tn. There are important fisheries, and shipbuilding and metallurgical industries. Paper, sugar, leather soap, brandy and flour are manufactured. Pop. 140,000.

Vijipuri, see **VIJYORG**.

Vijayanagar, or Hampi, 34 m. from Bellary (q.v.) in Andhra State, India, is the site of the famous ruined city of V. Founded in AD 1336, it was the seat of the Hindu V. kings, who ruled much of S. India, till 1565, when at the battle of Talikota the Muslims of the Deccan inflicted a shattering defeat on the Hindus. So complete was the rout, in which the V. king Ratta Raya was killed, that no serious attempt was made to defend the city. The ruins, which lie on the S. bank of the Tungabhadra R., cover 9 sq. m., and though the city was thoroughly looted, many splendid buildings remain, notably the so-called King's or Ladies' Bath, the Elephant Stables, the huge image of Narsingh Avatar, and the great Siva Temple.

Vijayawada, see **BEZWADA**.

Viking Art. Fine wood-carving, tools beautifully engraved with interlaced linear design, and finely wrought personal ornaments in gold and silver are typical of the art of the Vikings. In England it did not in any sense replace that of the Saxons (see **SAXONS**), and it is not until the latter part of the 10th cent. that its influence becomes at all marked. In the period of the raiding expeditions, the subsequent period of colonisation, and the time of the Dan. wars, there is little beyond a few brooches, many of the characteristic tortoise form worn in pairs on the shoulders, pins, and other small objects of bone and ivory.

It is usual to recognise 3 styles in Viking art. The *Jellinge* style, named from a

Dan. royal grave in Jutland, is based on heavy animal designs, of which the Great Beast, to be seen on the famous Jellinge rune-stone itself, is one variety. In Britain the style is well represented on the 14½-ft-high standing cross in Gosforth (q.v.) (Cumberland) churchyard.

Guildhall Museum: Library Committee of the Corporation of London

VIKING GRAVE SLAB (WIDTH 24 IN.) WITH RUNES, FROM ST PAUL'S, LONDON

An elaborate foliage ornament and interlacing are to be noticed in the *litterike* style, named after the dist. in Norway where it is well represented, carved in the local sandstone. But one origin of the style can be found in the Winchester school of illuminated MSS. A particularly interesting example of it may be seen in a rune-inscribed slab, part of a tomb, found in St Paul's churchyard in 1852 and now in the Guildhall (City of London) Museum; this early 11th-cent. sculpture of a 'Great Beast' and serpent, originally coloured, is the most notable relic of the Vikings in Britain. Another noteworthy relic of the same style and date is a bronze plate, part of a weather-vane, found at Winchester and now in the Cathedral Library. Influence of the Ringerike style is well represented in Eng. MSS., and there are also a few exceedingly competent carvings in ivory.

The carving on the wooden doors of Urnes church on the Sognefjord, Norway, gives its name to the Urnes style, though the distribution in Scandinavia is wider than the name might suggest. It found brilliant exposition in Irish metalwork (e.g. the Cross of Cong, (q.v.)), and it had an equally important place in Eng. Christian art. It is, says Dr T. D. Kendrick, leading Brit. authority, 'a permissible background of Northern taste, and (differs from) the Jellinge and Ringerike styles in that whereas these were distinctively and nationally Viking, Urnes was in its limited world an international and orthodox Christian art.' See T. D. Kendrick, *Late Saxon and Viking Art*, 1949 (chapters x, xi, xii). For the

earlier historic background, see R. H. Hodgkin, *A History of the Anglo-Saxons*, 1939 ed. (chapters xiii-xvii).

Vikings, see NORSEMEN.

Vikramaditya, legendary king of Ujjain (Malwa) in India who is associated with the Vikram Samvat, the Hindu era which commenced in the spring of 57 bc. No ruler of that date is historically traceable, the era having been for long called the Malava era (from Malwa). Its change of name may have been due to Chandragupta II, surnamed V. (a surname assumed by various kings), the Gupta ruler who conquered Ujjain about AD 390.

Vila Nova de Portimão, see PORTIMÃO.

Vila Real: 1. Dist. of N. Portugal, in Trás-os-Montes e Alto Douro prov. (q.v.). It is bounded on the N. by Spain, and on the S. by the Douro (q.v.). It is generally mountainous. There are many vineyards, producing chiefly port wine. Area 1636 sq. m.; pop. 317,370.

2. Tn of Portugal, cap. of V. R. dist. and of Trás-os-Montes e Alto Douro prov., on the Corgo, 190 m. NNE. of Lisbon. It has a medieval church and sev. old houses. There is a trade in port wine, and there are pottery manufs. Pop. 8000.

Villa, in the archaeology of Rom. Britain, a self-supporting country house with an attached farm, worked with slave labour and generally owned by Romanised Britons. Subsidiary industries, e.g. fulling and metal-working, were sometimes carried on. V.s were common in the lowland zone of Rom. Britain, though rare in the highland zone, where conditions were less settled and peaceful. Some were built on sites of earlier Belgic farms, especially in SE. Britain. Though showing many variations of size and plan, V.s may be generally divided into 3 prin. types. Most are of the 'winged corridor' type: the corridor extended along the front of the house with projecting rooms at each end, and often with 1 or 2 rows of rooms behind. Examples are found at Callow Hill and Ditchley in Oxfordshire. The largest V.s were of the 'courtyard' type, often formed by additions to an earlier building, as at North Leigh, Oxon. The third type was the 'basilican' comprising a rectangular building divided by 2 rows of posts into a nave and 2 aisles; rooms were formed by the use of internal partitions. Most V.s had hypocaust heating, and many had baths. Tessellated pavements and plastered and painted walls were common. The authoritative account is by Prof. I. A. Richmond, *Roman Britain*, 1955, Chapter iii (Pelican History of England). For a recent excavation, see G. W. Meates, *Lullingstone Roman Villa*, 1955. For distribution, see *Map of Roman Britain* (Ordinance Survey, 3rd ed. 1956).

Villa Borghese, see BORGHESI, VILLA.

Villa de Cerro Largo, see MELO.

Villa de Cura, see CURA.

Villa-Lobos, Heitor (1887-), Brazilian composer, b. Rio de Janeiro. He began by touring as a pianist and collecting Brazilian folk music, took to composition,

and in 1915 gave his first concert of works of his own at Rio. From 1922 he studied for a time in Paris with a gov. grant, and in 1931 he was appointed director of musical education in the schools of Rio. The catalogue of his work is enormous, and includes 5 operas, 14 ballets, 9 works entitled *Bachianas Brasileiras* and 16 called *Chôros* for various instrumental combinations, church and choral music, masses of orchestral works, many with vocal or instrumental solos, chamber music, piano works, and songs.

Villa Maria, tn of Argentina, in the prov. of Córdoba, on the Bartolomé Mitre and San Martín Railway, 343 m. from Buenos Aires. It trades in grain, timber, and dairy produce. In 1872 it was nominated by Congress as Federal cap. Pop. 34,000.

Villach, Austrian tn in the prov. of Carinthia, on the Drau. It has a fine 14th-15th-cent. church, a Renaissance tn hall, and other interesting old buildings, including a house once occupied by Paracelsus (q.v.). V. has a thermal spa, is the centre of the timber trade with Italy, and has iron, cellulose, and lead manufs. Pop. 30,100.

Villafrales, It. tn, in Veneto (q.v.), 7 m. SW. of Verona (q.v.). An armistice was signed here between France and Austria in 1859 after the battle of Solferino (see FRANCE, History). Pop. 11,000.

Villahermosa (formerly San Juan Bautista), city of SE. Mexico, cap. of Tabasco state, on the Grijalva R., 30 m. from the Gulf of Mexico. Bricks, tiles, soap, candles, and cigars are made. There is an airfield. Pop. 25,110.

Villani, Giovanni (c. 1275-1348), It. chronicler, b. Florence. He spent some time in travel. From 1316 he held various responsible offices in Florence. His *Historie Fiorentine* or *Cronica Universale* begins with biblical times and comes down to 1348, and gives a valuable account of the early hist. of Florence. It was continued by Matteo V, his brother, and Matteo's son, Filippo V, who take the chronicle down to 1364. There are Eng. trans. of portions, by R. E. Selfe, 1906.

Villanueva y Geltru, Sp. tn in the prov. of Barcelona, on the Mediterranean. It has textile mills, and manufs. tyres. Pop. 20,000.

Villarica, tn of Paraguay, cap. of the dept of Guairá, second city of the rep. It is on the main line of the Central Paraguayan Railway, 90 m. from Asunción. Its chief products include tobacco, yerba maté, sugar, cotton, etc. There are sugar refineries, saw-mills, and flour-mills. Pop. 31,000.

Villars, Claude Louis Hector, Duc de (1653-1734), marshal of France, b. Moulins. He served in the Dutch wars and also helped the elector of Bavaria against the Turks, and in 1702 defeated the margrave of Baden at Friedlingen. In 1709 he was sent to command the main army opposing Eugene and Marlborough on the N. frontier, but was wounded at Malplaquet. He was at the head of the last army France could raise, and

saved his country by his victory at Denain (1712), when he fell upon the British and Dutch under Albemarle and drove Prince Eugene under the walls of Brussels, negotiating the peace of Rastatt (1714). His *Memoirs* were ed. by the marquis of Vogüé, 1884-92.

Villefranche-de-Rouergue, Fr. tn, cap. of an arron., in the dept of Aveyron, on the Aveyron. It has iron foundries, and a live-stock mkt. Belle-Ile (q.v.) was b. here. Pop. 9300.

Villefranche-sur-Saône, Fr. tn, cap. of an arron., in the dept of Rhône, on the Saône. It was the anct cap. of Beaujolais (q.v.). It is a centre of the Burgundy wine trade, manufs. textiles, and has a cattle mkt. Pop. 20,000.

Villages, Francisco, see QUEVEDO.

Villahardouin, Geoffroi de (c. 1160-c. 1213), Fr. historian, b. Aube. He took part in the Fourth Crusade, and was present at the capture of Constantinople in 1204. His *Histoire de la Prise de Constantinople par les Français et les Vénitiens* is an extremely valuable record of the events of the crusade. There is an Eng. trans. of the *Chronicles* by Sir F. Marzials in Everyman's Library, 1908.

Villein. In feudal law, V.s were those who held land by base or servile tenure; villeinage existed in England from about the 11th to the 14th cents. Legally a V. was bound to his native manor and all his earnings were his lord's. He held no property of his own. His corn had to be ground at his lord's mill, his loaves baked in his lord's oven. A payment (merchet) had to be made to his lord when he married off his daughter, and a fine paid to his lord when he sold an animal. His lord could claim a V.'s best animal as heriot at his death. A V. and all his family could be sold to another owner, though it is unlikely that a V. would in practice be removed to another part of the country; generally such transfers meant only a change of lordship. However, a lord might voluntarily enfranchise a V.; in theory a V. could not buy his freedom, but in practice this did occasionally happen. If a V. lived for a year and a day in a chartered bor. he could claim his freedom. A V. on crown land could estab. his right to protection in the royal courts of law. See also FEUDALISM; FRANKPLEDGE.

Villemarqué, see LA VILLEMARQUÉ, THÉODORE CLAUDE HENRI HERSART, VICOMTE DE.

Villena, Enrique de (1384-1434), Sp. writer and scholar, reputed to be a wizard. He pub. *Arte de Trobar*, a treatise on poetry; *Los Trabajos de Hércules*, a pedantic allegory; *Arte Cisoria*, a handbook on the pleasures and fashions of the table; *Libro de Ojomiento*, a dissertation on the evil eye and its effects; and the first trans. of the *Aeneid* and the *Divine Comedy* into Spanish. After his death John II ordered his books to be destroyed.

Villeneuve, Pierre Charles Jean-Baptiste Silvestre (1763-1806), Fr. sailor. At the age of 16 he entered the Navy, was rapidly promoted, and in 1796 attained the rank of rear-adm. In the battle of

the Nile he commanded the rear of the fleet and escaped with 2 ships and 2 frigates to Malta. In 1804 he was in command of the Toulon squadron, and in 1805 was defeated and taken prisoner off Cape Trafalgar (see TRAFALGAR, BATTLE OF). In 1806 V. was liberated and returned to France.

Villeneuve (-sur-Lot), Fr. tn, cap. of an arron., in the dept of Lot-et-Garonne. It has preserving industries. Pop. 17,100.

Villeroi, François de Neuville, Duc de (1644-1730), Fr. soldier, the son of Marquis de V., marshal of France. He was brought up with Louis XIV, with whom he was a favourite, and in 1693 rose to be marshal of France. But he showed great incapacity in the Netherlands, 1695-6, and in 1701 was defeated and taken prisoner by Prince Eugene in Italy. He was again defeated by Marlborough at Ramillies, 1706, after which he was made governor of Lyons and died in Paris.

Villers-Bocage, tn in the dept of Calvados, France, about 12 m. SW. of Caen. On 13 June 1944 began the battle of V.-B. between the 7th Armoured Division ('Desert Rats') and the 4th Coy. of London Yeomanry on the one side, and a Ger. armoured div. equipped with Tigers and Panthers, which drove into the tn from another direction. The Brit. force was forced to withdraw after suffering severe losses. It was some time before V.-B. was recaptured by Brit. troops, and in the interval there took place the pattern bombing which greatly increased the destruction. Pop. 600.

Villers-Cotterêts, Fr. tn in the dept of Aisne, 17 m. SW. of Soissons. An important ordinance of Francis I (q.v.) from here in 1539 regulated the administration of justice. It was from here that Foch launched the attack that broke the Ger. front in July 1918 (see WORLD WAR, FIRST). There is a castle built by Francis I. Dumas, Père (q.v.) was a native. The forest of V. covers some 30,000 ac. Pop. 3500.

Villiers, Alan John (1903-), Australian sailor and travel writer, b. Melbourne. At the age of 15 he went to sea as a cadet, and thereafter spent much of his life in sailing ships. With the 4-master *Pamir* he twice won the grain race from S. Australia to England. During the Second World War he held the rank of Lieutenant-commander R.N.V.R. and was awarded the D.S.C., and in 1957 he captained the *Mayflower II*, a replica of the original ship of the Pilgrim Fathers, on a commemorative voyage across the Atlantic. His books include *Falmouth for Orders*, 1929, *By Way of Cape Horn*, 1930, *The Cruise of the 'Conrad'*, 1937, *The Quest of the Schooner 'Aragu'*, 1952, for which he was awarded the Portuguese Camoens Prize, and *The Way of a Ship*, 1953. *The Set of the Sails*, 1949, is autobiographical.

Villiers, Barbara, see CLEVELAND, DUCHESSE OF.

Villiers, George, see BUCKINGHAM.

Villiers, George William Frederik, see CLARENDON, FOURTH EARL OF.

Villiers de l'Isle-Adam, Philippe Auguste Mathias, Comte de (1840-89), Fr. writer, b. Brittany. He gained a reputation as a satirist and a poet, but later wrote mostly in prose. Among his works are: *Istis*, 1862, *Morgane*, 1862, *Le Nouveau Monde*, 1876, *Contes cruels*, a fine vol. of short stories, 1883, 1886 (Eng. trans. Hamish Miles, *Sardonic Tales* 1927); and the drama *Axel*, 1890 (Eng. trans. by H. P. R. Finberg, 1925). V. is a master of the story of mystery and terror. See M. Dalreux, *V. de l'Isle-Adam, l'homme et l'œuvre*, 1936.

Villon, François (1431-c. 1485), Fr. poet, b. of poor parents in Paris, real name probably Montcorbier. He called himself Villon after a priest who became his benefactor. At an early age he became a student in arts, and by 1452 had taken his M.A. degree. After this little is known of him until 1455, when he was sentenced to banishment for killing a priest in a street brawl: 1456 saw him again in trouble, and the following year he was accused of being the ringleader of a gang of burglars, and sentenced, with others, to be hanged. Having appealed, he was banished and went to Roussillon in Dauphiné, but in 1461 he was caught at his old practices and imprisoned at Meung-sur-Loire. Being released, he was promptly involved in a street quarrel and again arrested and condemned to be hanged, but the sentence was commuted to banishment (1463). From this time V. passes from hist. He was the author of *Grand Testament*, 1456, *Petit Testament*, 1461, and some 40 or 50 short pieces, chiefly ballades, notably *Ballade des Dames du Temps Jadis*, *La Grosse Margot*, *Ballade des Penâs*, *Ballade pour sa Mère*, and *Regrets de la Belle Heaulmière*, which occur mainly in the body of his *Grand Testament*. His 2 books of verse remain among the great treasures of Fr. poetry. It was V. who perfected the ballade and rondeau. V. was all things by turns in his poetry—witty, sardonic, gay, mocking, plunged into the utmost despair, penitent, and at times deeply religious. His artistic sincerity and spontaneity have set him among the great poets of the world. The best modern eds. of V.'s poems are those of Paul Lacroix, Pierre Jannet, Longnon, 1892 (revised by J. Foulet, 1932), Moland, 1893, H. de Vere Stacpoole, 1913, and G. Atkinson (with trans.), 1930. See P. Champion, *François Villon sa Vie et son Temps*, 1913, 1932; D. B. Wyndham Lewis, *François Villon: a Documented Survey*, 1928; L. Wharton (trans.), *Poems of François Villon*, 1935; L. Cons. *État présent des études sur Villon*, 1936; Cecily Mackworth, *François Villon*, 1948.

Vilna, see VILNIUS.

Vilnius (Polish Wilno, formerly Russian Vil'na), city in E. Europe, cap., economic and cultural centre of Lithuania. It has engineering, woodworking, and light industries, and many old crafts are practised. It is an important railway junction (5 lines). V. is the seat of the Academy of Sciences (1941) and a univ. (founded 1578 as a Jesuit academy, univ.

1803, abolished 1832, re-estab. 1919). It has many outstanding architectural monuments of the 14th-19th cents. Known since the 12th cent., it became cap. of Lithuania in 1323. At first it was predominantly Orthodox and Russian (Belorussian), but from the 17th cent. it became Catholic and Polish. It was the main seat of Jewish culture in Europe in the 17th-19th cents. It became Russian in 1795, and was the residence of the Governor-General of the Lithuanian and Belorussian provs.; it was a centre of the Polish national movement in the 19th cent., and of Social Democracy from the 1890s. V. was occupied by the Germans from 1915 to 1918 and 1941 to 1944; it was constitutional cap. of independent Lithuania from 1918, but in fact Polish from 1920 to 1939. Occupied by the Soviet Army in 1939, it was returned to Lithuania, but annexed by the U.S.S.R. with the rest of Lithuania in 1940. V. was cap. of V. Oblast 1950-3 (abolished). Pop. (1956) 200,000 (c. 1914 193,000; 1921 123,000; 1941 235,000), before the War mainly Polish and Jewish, now Lithuanian and Russian.

Vil'nyus, see VILNIUS.

Vilvoorde (Fr. Vilvoorde), tn in the prov. of Brabant, Belgium, 6 m. NNE. of Brussels. There are mills, breweries, and manufs. of lace, bristles, food-stuffs, chemicals, hardware, varnish, glue, and starch. Pop. 29,300.

Vimiero, vil. of Portugal, in Lisboa dist., 32 m. NNW. of Lisbon (q.v.). Here Wellington decisively defeated the French under Junot on 21 Aug. 1808, during the Peninsular War (q.v.). Pop. 600.

Vimy Ridge, upland in the dept of Pas-de-Calais, France, 5 m. NE. of Arras. The Germans captured V. R. in the early part of the First World War and held it against Fr. attacks in 1915. Canadian forces stormed the ridge on 9-10 April 1917, and 11,295 missing are commemorated by a memorial unveiled in 1936.

Viña del Mar, residential suburb of Valparaíso (q.v.), 5½ m. from the port, with which it is connected by rail along the shore. Pop. 85,000.

Vinan, see BINAN.

Vinca, see PERIWINKLE.

Vincennes: 1. Fr. tn in the dept of Seine, an E. suburb of Paris. The immense castle was a royal residence and fortress in the Middle Ages. It was later a state prison, and was turned into a military barracks by Napoleon. Here the Duc d'Enghien (q.v.) was shot in 1804. The surrounding woods of V. are popular as a resort; the Fr. Colonial Exhibition was held here in 1931. Chemicals and machinery are manuf. Pop. 50,400. See also SÈVRES (porcelain).

2. City, seat of Knox co., Indiana, U.S.A., on the Wabash R. 50 m. N. of Evansville in agric., coal, and oil area. It cans and processes foods, and manufs. structural steel, farm implements, glass, flour, and furniture. One of the oldest settlements in Indiana, it is the site of a Fr. fort, taken in 1763 by the British and

renamed Fort Sackville. Captured by Clark for the Americans during the Amer. Revolution, it was ceded to the U.S.A. in 1783. It was cap. of the ter. of Indiana, and preserves the old capitol and the 200-year-old St Francis Xavier cathedral. Pop. 18,800.

Vincent, Edgar, see D'ABERNON.

Vincent de Paul, St (1576-1660), Fr. priest and philanthropist, b. Pouy. He was ordained priest in 1600, and on a journey to Marseilles in 1604 he was taken prisoner by Turkish pirates but eventually escaped. He became curé of Clichy, and then tutor to the children of the Gondi family. He soon devoted himself, under the guidance of Bérulle, to the relief of the poor, establishing what he called 'confréries de charité' in various tns in France. In 1625 he founded the Congregation of Mission Priests to train preachers who were to act as assistants to the regular clergy; and in 1632 the Sisters of Charity, who are devoted to the care of the sick. He was canonised in 1737; his feast is on 19 July. See T. Maynard, *Apostle of Charity*, 1940.

Vincent Ferrer, St (c. 1350-1418), b. Valencia. He became a Dominican, and adviser to the King of Aragon and the Avignon Pope. The ending of the papal schism was due in large part to his efforts. His feast is on 5 April.

Vincent of Beauvais (c. 1190-c. 1264), Dominican friar, who has been regarded as the precursor of the encyclopaedists. He compiled a summary of general knowledge under the title of *Speculum Majus*.

Vincent the Deacon, St (d. 304), martyred under Diocletian. He was a native of Huesca, and was educ. by Valerius, Bishop of Saragossa, who ordained him deacon. For professing his faith he was taken to Valencia and put to death. His festival is celebrated on 22 Jan.

Vincenzo di Biagio, see CATENA.

Vinci, Leonardo da, see LEONARDO.

Vinci, It. vil. in Tuscany (q.v.), 15 m. WNW. of Florence (q.v.). It was the bp. of Leonardo da V. (q.v.), and has a Leonardo museum in its 11th-cent. castle. Pop. 2000.

Vindhya Mountains, series of mt ranges in Central India, connecting at the extremities with the E. and W. Ghats.

Vindhya Pradesh, former state of Central India. It was formed in April 1948 of 35 states known as Bundelkhand and Baghelkhand States (including Rewa). Local rivalries, and economic and political backwardness, however, necessitated its conversion on 1 Jan. 1950 into a Chief Commissioner's Province. Ten of the states were merged into Uttar Pradesh and in 1956 the state was merged into Madhya Pradesh.

'**Vindictive**,' Brit. cruiser, took a leading part in the naval raid on Zeebrugge (q.v.) April 1918, and was then used in the raid on Ostend (q.v.). The V. was sunk, partially closing the harbour.

Vindobona, see VIENNA.

Vine, climbing shrubs of the genus *Vitis* and of the plant family Vitaceae. *V. vinifera* is the common grape V. and other species of grape V. include *V. aestivalis*,

V. Labrusca, *V. rotundifolia*, etc., but *V. vinifera* is the best known and longest cultivated. The plant is a native of Asia, cultivated from a remote period for its fruit, which, besides being one of the choicest dessert fruits (dessert varieties include Hamburg, Muscat, Gros Maroc, Gros Colmar, Muscadine, Sweetwater, Alicante, etc.), is made into wine and other fermented drinks, while the dried fruits of certain varieties (Malaga, Sultana, Alexandria, and Gordo Blanco) furnish raisins and currants. The V. was formerly much planted against sunny sheltered walls in the S. of England, but its production of fair-sized fruit is irregular. In a greenhouse its culture is easy; the roots are generally set in a border outside, the stem passing under arches or through holes into the house, where the shoots are trained up the roof. By control of the temp. and management of ventilation, fruit can be ripened, according to variety, over many months. The most famous wine grapes are the black Cabernet Sauvignon of Bordeaux, the black and white Pinot of Burgundy and Champagne, the Syrah of Hermitage, the Riesling of the Rhine and Moselle, the Pedro Ximenez of Jerez, and the Furmint of Tokay. The V. is liable to the attack of many pests: mildew (q.v.), *cochylis*, *oidium* (q.v.), and worst of all the aphid *phylloxera* (q.v.), which attacks its roots and, invading Europe from America, laid waste European vineyards, 1858-63. *Phylloxera* was brought over with native Amer. V.s which are immune from its attacks and produce wine in quantity without quality, and all good wine to-day is made from native European V.s grafted on Amer. stocks. See A. F. Barron, *Vine and Vine Culture*, 1900; F. Malvezin, *Bordeaux*, 1919; A. J. Perold, *A Treatise on Viticulture*, 1927.

Vinegar, weak solution of acetic acid containing colouring matter, is obtained by the acetic fermentation of wine, beer, or other dilute alcoholic liquids. In wine-growing countries it is produced from wine; elsewhere malt V. is prepared from beer.

Vinegar Hill, hill (398 ft) in Ireland, overlooking Enniscorthy (q.v.), Co. Wexford. Here, on 21 June 1798 Gen. Lake defeated the main body of the Wexford rebels (see IRELAND, *History*; UNITED IRISHMEN).

Vingt-et-Un, or Pontoon, old card game, the object in which is to make out of the cards one holds 'twenty-one.' One card is dealt, face downwards, to each player, including the dealer or banker. Maximum and minimum stakes are arranged beforehand. The players look at their cards and stake accordingly. The game proceeds thereafter by a second deal and by the exercise of the option to draw further cards so as by a certain combination to make the desired total. An ace counts as 11 or 1, court cards 10, and the other cards according to 'pips.' The combination of an ace with a court card or other tenth card is called a 'natural.'

The dealer, after the first round is dealt, has the right to double the stakes.

The second round is then dealt. Those holding 'naturals' get 3 times their stakes from the banker. The dealer must then offer fresh cards in rotation, beginning with the player on his left. If a player wishes he can buy cards, and have them dealt face downwards to him, or have them 'twisted,' dealt face upwards. If he draws a card which brings his total over 21, he is said to have gone 'bust,' and hands his stake to the dealer. Those who have not overdrawn are said to 'stand' (whether their total is 21 or under), but the total must not as yet be revealed. The dealer's turn comes last. If he overdraws, he has to pay all round, except to those who have already handed in their stakes, by reason of overdraw. The player with exactly 21 gets double his stake. If the dealer wins, he gets double his stake from each of the others remaining in the game. There is a variation of this game called *Fr. vingt-et-un*.

Vinland, or **Wineland**, country of uncertain identity discovered by Leif Ericsson (q.v.) in AD 1000, and so called from the wild grapes he found growing there. This and other recorded characteristics of V. have led scholars to place it somewhere on the E. coast of N. America, most probably in the neighbourhood of Mt Hope bay.

Vinnitsa (Ukrainian Vynnytsya): 1. Oblast in the Ukraine, lying in the Volhynia-Podolia upland, bordering on Bessarabia, in wooded steppe country traversed by the S. Bug riv. Sugar beet and wheat are grown, cattle are bred, and there are food industries. V. belonged to Volhynia, was Lithuanian by 1395, became Polish in 1569, and Russian in 1793. Area 10,600 sq. m.; pop. (1956) 2,143,000. Ukrainians (before the Second World War also some Jews).

2. Cap., economic and cultural centre of the above, on the S. Bug, 120 m. SW. of Kiev. It has varied industries. V. has been known since the 14th cent., was the residence of the Ukrainian Directory in 1918, and became prov. cap. in 1920. Pop. (1956) 105,000 (c. 1914, 48,000; 1939, 83,000).

Vinogradoff, Sir Paul Gavrilovich (1854-1925), Russo-Brit. jurist, b. Kostroma, NE. of Moscow, became prof. of hist. at Moscow Univ. Resigning because of conflicts with the authorities in 1902, he took up residence in England. From 1903 he was prof. of jurisprudence at Oxford, and was knighted in 1917. His best-known pub. is *Village in England*, 1892.

Vintners' Company, one of the 12 greater livery companies of the city of London, originally known as the Merchant Wine Tunnors of Gascony, importing wine from Gascony. The Iter Rolls of the 13th cent. give evidence of its existence, but the earliest written reference to 'the mystery of Vintners' occurs in 1321. Letters patent were granted in 1363, and the company's first charter in 1437. The company's court room dates from the middle of the 15th cent., and its hall from 1671. To-day the company's charitable works are covered by a scheme called 'Vintners' Gifts,' while it still maintains

the closest contact with its trade, particularly from an educational angle.

Viol (It. *viola*), generic name for the chief family of bowed stringed instruments preceding that of the violin, of the 15th to the 17th cents. The V. was made in 4 sizes, and had from 5-7 strings, tuned in thirds and fourths: (i) the treble or descant; (ii) alto, tenor, or viola da braccio; (iii) bass, viola da gamba (corresponding respectively to the modern violin, viola, and violoncello); and (iv) the bass viol.

Viola, family Violaceae, genus of over 400 perennial herbs, found in N. and S. temperate regions. Botanically divided into sections and sub-sections, based largely on the form of the style. The more important groups are: (1) the true Violets—*V. odorata* or sweet V.; *V. canina*, Dog Violet; *V. hirta*; *V. pedata*, Bird's-foot Violet; *V. riviniana*, Wood Violet; and (2) the true Pansies or Melanum—*V. alatica*; *V. arvensis*, Field Pansy; *V. calcarata*; *V. cornuta*, a parent of tufted Pansies; *V. lutea*, Brit. wild Pansy; *V. tricolor*, Wild Pansy; and parent of Garden Pansies.

Viola, see VIOLIN FAMILY.

Viola di Bordone, see BARYTON.

Violet, see VIOLA.

Violin Family (including Viola, Violoncello, and Double Bass), stringed musical instruments played with the bow.

Violin. The violin consists of a resonant wooden box called the body; the neck, a solid piece of wood to which is attached the fingerboard; and the strings, fastened at one end to the lower part of the body by means of a projecting tail-piece, and at the other to pegs in the head, the scroll-like termination of the neck. The body consists of 2 thin, arched pieces of wood joined by side-pieces, or ribs to form a shallow box. The top surface, or belly, is made of a soft wood, pine or fir. The under surface, or back, is generally of maple or sycamore, as are the ribs. The body is so constructed that there are 2 deep inward curves in its sides, to make room for the bow when it is held steeply to play on the outer strings. The neck also is of maple, glued and mortised to a block fixed in the upper part of the body. The tail-piece and finger-board are of ebony, this hard wood being specially necessary in the latter case to prevent the finger-board from being worn into hollows by the player's fingers. Sound-holes are cut in the belly in the form of an *f* on either side of the bridge. The bridge itself is of maple, cut in a peculiar shape, which has remained practically unaltered since its introduction by Stradivari. Under the right foot of the bridge (or rather a little way behind it) is the sound-post, a small rounded bar of soft pine, joining the back and belly of the instrument, and serving the double purpose of supporting the pressure of the strings and communicating the vibrations to the back. Without the sound-post the tone would be very weak and of a poor quality. The bass-bar is a strip of wood glued to the inside of the V., and passing under the left foot of the bridge. The

strings are of catgut (the E string is often of steel wire), and are tuned in fifths, the highest, or first string, sounding the E on the fourth space of the treble clef, the other three descending to A, D, and G below. Since the time of the early It. masters there has been scarcely any alteration in the shape of the V., and modern makers are still following the model of Stradivari, and endeavour, unsuccessfully, to reproduce his exquisite tone.

The *Viola* is slightly larger than the violin, and more than proportionately thicker. It is tuned in fifths and a fifth below the violin. Music for this instrument is generally written in the alto clef (C clef on the third line). Its tone is somewhat grave and melancholy, and it has an attractiveness quite different from the charm of the violin.

The *Violoncello* is much larger than either violin or viola, and is held between the player's knees. Like the others, it has 4 gut strings, but in this case the 2 lower strings are generally spun over with silver wire. The signature is the bass, tenor, and treble clefs, and it is tuned in fifths, an octave below the viola.

The *Double Bass* is largest of all, having a deep, rougher tone. It differs somewhat from the other stringed instruments chiefly in having sloping shoulders, and in being differently tuned. Formerly double basses had only 3 strings tuned in fifths (A, D, G, on the bass staff), but a fourth string is now always added, sounding the E below the staff, and the strings are tuned in fourths (E, A, D, G). The actual sound is an octave below the notes written in the bass clef.

The *mute* is a contrivance for fixing on the bridge of all stringed instruments to deaden the sound. It produces a muffled note, which, when properly used, is very effective.

The V. is said to be derived from the Asiatic *ravanastron*. This reached Europe as the Persian or Arabian *rebab* (Fr. *rebec*) from which the *viol* (q.v.) group derived.

The first maker of V.s who is known to have produced the instrument as we now have it was Gasparo da Saló, who worked about 1560. His V.s were large, very arched, and varnished dark brown. After him came the Brescian school of Maggini, Zanetto, Peregrino, Raphael, and others. Early in the 16th cent. Andrea Amati founded the Cremona school. He made some improvements, but accomplished less than did his sons, Antonio and Geronimo. The most famous member of this family was Nicolò (1596-1684), son of Geronimo who taught the still more famous Antonio Stradivari (q.v.) (1644-1737). The latter, as said above, has set the standard for succeeding generations. Among his pupils the foremost were Carlo Bergonzi and Giuseppe Guarneri. In the family of the latter there were many V. makers, the most successful being Giuseppe Antonio Guarneri (q.v.) (1683-1745). The work of Stainer, b. in the Tyrol in 1621, equalled that of the Amati. Of modern names the best known is Vuillaume, of Paris.

The latter city has also produced the most famous maker of V. bows, François Tourte (c. 1780).

See Forster and Sandys, *History of the Violin*, 1864; A. Bachmann, *An Encyclopaedia of the Violin*, trans. by F. H. Martens, ed. by A. E. Wier, 1925; E. van der Straeten, *The History of the Violin*, 1933; E. H. Allen, *Violin Making As It Was and Is*, 1846.

Viollet-le-Duc, Eugène Emmanuel (1814-79), Fr. architect and writer, b. Paris. After training in France and studying abroad, he began in 1840 the restorations which made him famous. At the Sainte Chapelle, 1840, and Notre Dame, 1842, he was associated with Lassus; most of his later restorations, which have been criticised as being too drastic, were carried out by him alone. They include the Cité of Carcassonne; the *châteaux* of Pierrefonds and Coucy; the abbey of Vézelay and St Denis; S. Ouen at Rouen and S. Sernin at Toulouse. He became prof. at the Ecole des Beaux Arts in 1863. His prodigious output of books included dictionaries of architecture (10 vols.) and furniture (6 vols.). See life by U. Saint-Paul, 1881. His letters have been ed. by his son, 1902.

Violoncello, or Cello, see VIOLIN FAMILY.

Vionville, or Mars-la-Tour, Fr. vil. in the dept of Moselle, c. 12 m. W. of Metz, site of a battle during the Franco-Prussian War (q.v.).

Viper (*Viperidae*), family of poisonous snakes, most abundant in Africa and SW. Asia. True V.s (*Vipera*) have a characteristic flattened triangular head and relatively short, thick body. The common V. or adder (q.v.) (*Vipera berus*) is the only poisonous Brit. snake. Others of

VIPER

the genus are the horned V. (*V. cornuta*) and Russell's V. (*V. russellii*) of India, which causes many deaths. The horned V., a small sand-coloured species with short, horn-like projections above the eyes, is said to be the 'asp' of Cleopatra. The rattlesnakes (q.v.) are also members of this family.

Vipers, Pit, see RATTLESNAKES.

Viper's Bugloss, or *Echium vulgare*, Brit. plant (family Boraginaceae) with bristly stems and leaves, and spikes of flowers which are at first rose colour, later turning to blue.

Vipsanuis, see AGRIPPA, MARCUS VIPSANUS.

Virbius, Lat. god, identified with Hippolytus (q.v.).

Virchow, Rudolf Ludwig Karl (1821-1902), Ger. pathologist, b. Schivelbein, Pomerania. He studied medicine at Berlin, qualified in 1845, and lectured there from 1846. In 1847 he founded the *Archiv für pathologische Anatomie* (Virchow's Archiv), one of the most important journals in medicine and still being published. In 1848 he served on the commission investigating epidemic typhus in Silesia and produced a report criticising the gov. for permitting the conditions under which the sufferers lived. He was appointed prof. of pathology at Würzburg in 1849, but returned to Berlin in 1856 to a new chair of pathological anatomy and to direct the Pathological Institute, which had been specially built for him. The year 1858 saw the pub. of his *Cellular-pathologie*, one of the great books in medicine and one which caused a revolution in medical thinking (Eng. trans., 1860). V. was the outstanding physician of his generation and the creator of modern pathology, to which he contributed many discoveries. His life was one of intense activity; he lectured, wrote hundreds of papers, and was a member of the Reichstag from 1880 to 1893. He also made useful contributions to anthropology and archaeology. See lives by C. Posner, 1921, and E. H. Ackerknecht, 1953.

Vire, Fr. tn in the dept of Calvados. There are ruins of a 12th-cent. castle built by Henry I of England, and an anct clock tower (13th-15th cents.). The tn was very badly damaged during the battle of Normandy (1944). SW. of the tn is the picturesque valley Vaux-de-V., whence comes the theatrical term 'Vaudeville' (q.v.). V. is an important mkt tn and has some manufs. Pop. 3900.

Virgil, Polydore, see VERGIL.

Virgil, Virgilius, or Vergilius Maro, Publius (70-19 bc), Lat. poet, b. 15 Oct. near Mantua in Cisalpine Gaul. He was educ. at Cremona and Mediolanum (Milan), and he took the toga virilis at Cremona in 55. It is said that he subsequently studied at Neapolis (Naples) under Parthenius, a native of Bithynia, from whom he learned Greek. He was also instructed by Syron, an Epicurean, and probably at Rome. After completing his education, V. appears to have retired to his paternal farm. In the div. of land among the soldiers after the battle of Philippi (42) V. was deprived of his property, but it was afterwards restored by order of Octavian. V. probably became acquainted with Maecenas soon after writing his *Eclogues*, in which Maecenas is not mentioned. His most finished work, the *Georgics*, was undertaken at the suggestion of Maecenas (*Georg.* iii. 41), and was completed after the battle of

Actium, 31 bc, while Octavian was in the E. V. probably commenced the *Aeneid* at about this time. When Augustus was returning from Samos, where he had spent the winter of 20, he met V. at Athens. The poet, it is said, had intended to make a tour of Greece, but he accompanied the emperor to Megara, and thence to Italy. His health, which had been long declining, was now completely broken; he d. soon after his arrival at Brundisium on 22 Sept., not having quite completed his fifty-first year, and was buried near the road between Naples and Putcoli. Besides the *Eclogues*, *Georgics*, and *Aeneid*, sev. shorter pieces are attributed to V., which may possibly have been the productions of his youth. Such are the *Culex*, *Ciris*, *Copa*, etc. Of all his works the *Georgics* is both the most finished and the most original. The *Aeneid* (q.v.) is the national epic of the Romans. V. was by far the greatest of all the Rom. epic poets.

The best complete edition of V.'s works is that of J. Conington (1883-98). There are numerous eds. of separate works and trans. of the same; see particularly M. Oakeley's version of the *Aeneid* in Everyman's Library, that of the *Georgics* by C. Day Lewis, 1940, and of the *Eclogues* by J. Dryden (with *Georgics* and *Aeneid*), 1697. See also T. Frank, *Virgil*, 1927; C. Bailey, *Religion in Virgil*, 1935; R. W. Crutwell, *Virgil's Mind at Work*, 1946.

Virgin Islands, The, group of 3 is., St Thomas, St Croix, and St John, together with about 50 smaller ones, all in the W. Indies, and belonging partly to the U.S.A., partly (i.e. Anegada, Virgin Gorda, Tortola, Jost Van Dykes, Peter Is., Salt Is., and all others not in the possession of the U.S.A.) to Britain. Sugar, cattle, cay oil, tobacco, vegetables, limes, and bay rum are the main products. The Amer. V. I. are under a governor, appointed by the president of the U.S.A., with the approval of the Senate; the legislative assembly is composed of the 2 municipalities. The Brit. V. I. form a presidency of the Leeward Is.

The V. I. were discovered by Columbus in 1493 and named after St Ursula. The English occupied Tortola in 1666 and have remained in occupation ever since. The Amer. V. I., St Croix, St Thomas, etc., were taken by the English from Denmark in 1801, restored in 1802, surrendered to the English in 1807, and again restored in 1815. In 1917 they were bought by the U.S.A. from Denmark. Area of the Amer. is., 132 sq. m.; pop. 24,900. Area of the Brit. is., 67 sq. m.; pop. 6505.

Virgin Land Campaign, measures for the cultivation of virgin lands and reclamation of waste land in the U.S.S.R., initiated by Khrushchëv (q.v.) in 1953, and aimed at ensuring an adequate supply of grain. It affects mainly W. Siberia, N. Kazakhstan, and S. Urals, and brings there new settlers from European Russia, chiefly semi-compulsorily recruited young people. By 1956 87,500,000 ac. had been cultivated.

Virgin Mary, see MARY THE BLESSED VIRGIN.

Virginal, see HARPSICORD; PIANO-FORTE.

Virginia, 'Old Dominion,' one of the 13 original states of the Amer. Union, bounded on the N. by W. Virginia and Maryland, on the E. by Chesapeake Bay, the Atlantic Ocean, and Maryland, on the S. by N. Carolina and Tennessee, on the W. by Kentucky and W. Virginia. It has an area of 40,815 sq. m., and is divided into: tidewater V., the low-lying region along the coast consisting of 4 peninsulas; the Piedmont, the central part rising to the Blue Ridge Mts; the Shenandoah Valley between those mts and the Alleghenies, a rich farming dist.; and SW. V., extending to the W. and including

U.S. Information Bureau: American Embassy

UNIVERSITY OF VIRGINIA:
JEFFERSON'S ROTUNDA, THE MAIN
BUILDING

mts and fertile valleys. Two-thirds of the area of the state are given over to farming, with 16,000,000 ac. in farm and pasture land, of which 4,000,000 are in crops. Tobacco and apples are important crops; others are corn, winter wheat, cotton, and peanuts. Dairying, livestock (especially horses in the Piedmont), and turkey-raising are important. E. Virginia is an extensive truck-farming area. Among important industries are lumber and timber products, tobacco manufactures (Richmond is the world's largest cigarette centre), and flour and grist-mill products; the state also produces large quantities of leather and cotton goods, boots and shoes, chemicals, cars, foundry and machine-shop products, and iron and steel from blast furnaces. The chief mineral products are coal, stone, gravel, sand, and zinc, and others include titanium cement, felspar, clay, lead-

gypsum, manganese, mica, pyrites, and salt. The 1500 m. of tidal shore on the Atlantic, Chesapeake Bay, and the entering rivers have important fisheries, especially of oysters. The chief ports are Norfolk and Newport News, on Hampton Roads, formed by the estuary of the James, on which river stand Richmond, the largest city and cap., and other important cities. There are 25,750 ac. of State Parks, as well as the Shenandoah National Park in the Blue Ridge Mts. V. is famous for its educational institutions, including the Univ. of V. (see VIRGINIA, UNIVERSITY OF), Washington and Lee Univ., William and Mary College, the Univ. of Richmond, V. Military Institute, and Hampton Normal School, the latter being the first school for Negro higher education established in the S. The first permanent Eng. settlement was made at Jamestown in 1607 under the leadership of John Smith. In 1624 the charter formerly possessed by V. was revoked and V. became a crown colony. During the Fr. and Indian War Virginians saved Braddock's army from annihilation. V. took a leading part in the Revolution, and seceded with the S. States in 1861. The W. part of the state, which was against secession, broke away during the Civil war and became the state of W. Virginia. V. has been called the 'Mother of Presidents'. Five were not only from V., but were residents there when elected, George Washington, Thomas Jefferson, James Madison, James Monroe, and John Tyler. Three others were b. in V., but were residents of other states: W. H. Harrison, Zachary Taylor, and Woodrow Wilson. Leading cities are: Richmond, 236,310; Norfolk, 213,513; Roanoke, 91,921; Portsmouth, 80,039; Lynchburg, 47,727; Newport News, 42,458; Petersburg, 35,054. Pop. of the state is 3,318,680.

See W. Stith, *History of the First Discovery and Settlement of Virginia*, 1865; T. J. Wertenbaker, *Virginia under the Stuarts (1607-88)*, 1914; H. J. Eckenrode, *The Revolution in Virginia*, 1916; R. A. Lancaster, *Historic Virginian Homes and Churches*, 1915; P. A. Bruce, L. G. Tyler, and R. L. Merton, *History of Virginia* (3 vols.), 1924; M. P. Andrews, *Virginia: the Old Dominion*, 1937.

Virginia, University of, most celebrated institution of learning in the S. of the U.S.A., opened in 1825 in Charlottesville, Virginia. Jefferson drew the architectural plans for the main semi-Gk buildings, the beautiful campus, and the old serpentine brick walls. He also drew up the plans for the very liberal curriculum and invented the honour system, whereby the students were not under supervision when writing their examination papers. Two other presidents of the U.S.A. were also connected with the Univ., James Madison and James Monroe. The State grants the Univ. an ann. sum and it now has endowments of over \$14m. In addition to the College of Arts and Sciences there are the following schools: Graduate Studies, Business Administration, Education, Engineering, Medicine. Library collections total 725,000 accessible

books, 350,000 unbound documents, etc., and 3,700,000 MSS.

Virginia, West, see WEST VIRGINIA.

Virginia City, city and co. seat of Storey co., Nevada, U.S.A., settled in 1859 after the famous Comstock Lode was discovered (1857). The mines under the city produce large quantities of gold and silver bullion. V. is also a tourist centre and dairying area. Pop. 950.

Virginia Creeper, see PARTHENOCEISSUS.

Virginia Water, dist. of Egham, Surrey, England. The lake, $1\frac{1}{2}$ m. long, lies in the S. of Windsor Great Park, and was formed by the Duke of Cumberland, the victor of Culloden.

Virgo, or the Virgin, sixth sign of the zodiac (q.v.), and an ancient constellation, noted for its nebulae, situated in the head and breast, of which the spiral Messier 99 is the chief. The sign of this constellation is entered by the sun about 21 Aug. It was usually represented by a woman holding an ear of corn, Spica, and was identified in Egypt, probably from Chaldea, with the goddess Ishtar. It marked the Egyptian harvest time. It is also associated with Astraea, Demeter, and Persephone. There are 30 stars of magnitude 4-5-2.

Virgula Divina, see DIVINING ROD.

Virtuconium, see WROXETER.

Virtanen, Arturi Ilmari (1895-), Finnish biochemist, b. Helsinki and educ. at a school in Vilpuri and at the Univ. of Helsinki, Zürich, Münster, and Stockholm. He taught organic chemistry at Helsinki from 1924, and in 1939 became prof. of biochemistry at the Univ. there. In 1945 V. was awarded the Nobel Prize for chemistry. V. did extensive research on the effects of micro-organisms on the quality of food.

Virtual Displacement and Virtual Work. If a point at O be conceived as displaced to D, OD is called the *virtual displacement* of the point. The product of a force and the projection along its direction of the virtual displacement of its point of application is the *virtual work* of the force. The principle of V. W. has many useful applications in problems in statics, one example of which is as follows: If a free particle is acted on by any number of forces in the same plane, it will be in equilibrium if, for every arbitrary displacement, the virtual work of the system of forces vanishes. Problems can frequently be simplified by choosing a displacement in a direction at right angles to one of the forces; thereby ensuring that this force will not appear in the equation of virtual work.

Viruses. Causative agents of many diseases in plants (e.g. tobacco mosaic, potato leaf-roll), in animals (e.g. foot-and-mouth disease, distemper, rabies), and in man (e.g. measles, influenza, smallpox, yellow fever, poliomyelitis). Most V. are too small to be seen under the ordinary microscope, though they can be studied by electron microscopy; the largest, such as that of psittacosis (q.v.), measure about 250 m μ (1 m μ = 1/1,000,000 mm.) and are little smaller than some bacteria, whilst the smallest include such as poliomyelitis

10 μ), which is comparable in size with large protein molecules. Since they are able to pass through the pores of earthenware filters, the term filterable V. is often applied to them. The V. of animals appear to be living micro-organisms, but some of the plant V. have been obtained as crystalline proteins (e.g. tobacco mosaic V. in 1935 by Stanley), and must therefore be regarded as self-propagating enzymes. The discovery of V. dates from 1892, when Ivanowski showed that filtered sap of tobacco plants could transmit mosaic disease; in 1898 Loeffler and Frosch demonstrated the virus nature of foot-and-mouth disease, and they were followed by Reed in 1901 for yellow fever. Infection by V. takes place through the skin, as in warts, or through the mucous membranes, as in droplet infections of the respiratory tract, such as influenza; insect vectors are often important, for instance aphids in plant V. and mosquitos in Yellow Fever. One attack of a virus disease in mammals often conveys subsequent immunity (see SMALLPOX), though recurrent attacks of influenza (q.v.) and the common cold are frequent. The majority of virus diseases in human beings do not respond to treatment with the antibiotics or sulphonamides. Exceptions to this rule are primary atypical pneumonia, psittacosis, lymphogranuloma venereum, and herpes zoster. These 4 respond to aureomycin. See K.M. Smith, *The Virus*, 1948; Macfarlane Burnet, *The Natural History of Infectious Disease*, 1953.

Vis (It. Lissa), Yugoslavian is. in the Adriatic, the outermost of the Dalmatian archipelago. Its cap. is also called V. (pop. 2800). In 1811 a Fr.-Venetian naval force was defeated near the is. by the British, and in 1866 the Austrians were victorious over the Italians; this latter engagement was the first between iron-clad, steam-driven warships. During the Second World War the is. was for a time the H.Q. of Marshal Tito's (q.v.) partisans, and it was also used by Brit. commandos. The chief products are wine and sardines.

Visby, seaport of Sweden, cap. of Gotthland is., on the W. coast of the is. in the Baltic. St Mary's Cathedral was founded about 1190-1225, and is still used. W. was an important member of the Hanseatic League, and gave its name to a maritime legal code of the 13th cent. Its ruined turreted walls date from the 13th cent. It is a favourite holiday resort. Sugar, chalk, and cement are among its exports. It became Swedish in 1648. Pop. 15,202.

Viscachas (*Viscacia viscacia*), a large, heavily built rodent related to the chinchillas, inhabiting the pampas of Argentina. The head and body measure about 2 ft. The V. is a nocturnal animal and lives in warrens ('viscacheras'). The general body colour is mottled grey and black. A stiff brush of bristles on the third digit of the hind foot is used as a fur-groomer.

Vischer, Peter (c. 1460-1529), Ger. sculptor, b. Nuremberg. In collaboration

with his son Peter Vischer the younger (1487-1528), he executed a relief representing the coronation of the Blessed Virgin in Erfurt cathedral, a tomb of Archbishop Ernest in Magdeburg cathedral (1497), and the shrine of St Sebald at Nuremberg (1508-18), the latter being generally regarded as the sculptural masterpiece of the Ger. renaissance and abounding in details executed with amazing skill. See C. Headlam, *Peter Vischer*, 1901; A. Feulner, *Peter Vischers Sebaldusgrab*, 1924.

Visconti, name of a noble Lombard family which ruled Milan for nearly 2 cents. Their lordship was estab. by Ottone, who was appointed to the archbishopric of that in in 1282. He drove out the opposing family of the Della Torre, and left his possessions to his nephew, Matteo. In the 14th cent. the V. were in constant conflict with the papacy. During this century the V. were supreme in Milan, and Galeazzo II was of such importance that he was able to marry his daughter and son respectively to a son of Edward III of England and the daughter of the Fr. king. He patronised the arts, refounded a univ. at Pavia, and was a patron of Petrarch. He was succeeded by the joint sovereigns Barnabo and Gian Galeazzo (d. 1403), the latter of whom was the most powerful of all the V. He was finally made Duke of Milan by the Emperor Wenceslaus (1395). His son, Filippo Maria, who succeeded him, and who was the last of the male V. line, d. in 1447, being succeeded by Francesco Sforza.

Visconti, Tebaldo, see GREGORY (popes) — Gregory X.

Viscose Silk, see RAYON.

Viscosity, property of a fluid whereby it resists the relative motion of its parts. Thus, for example, when tea is stirred by a spoon, it is the V. of the tea that brings it to rest again. Viscous forces are merely frictional forces of a special kind. The tea comes to rest under the action of liquid friction between the layers of fluid that are moving relative to one another, and under the action of the liquid friction between the cup and the layer of tea next to it. Fluids like pitch, treacle, and heavy oils are highly viscous, but all fluids, and even gases, are viscous to some extent. The ideal 'perfect fluid' is non-viscous, but no real fluid is perfect. The special character of this fluid friction was guessed intuitively by Newton, who formulated the law of V. that has stood the test of experiment. Newton's law is best explained in the following way. Suppose a stream of liquid is moving from left to right (see diagram) over a horizontal bed XY.

The velocity of any layer parallel to the bed depends on its distance above the

bed; the layer next to the bed is at rest, while the surface layer is moving fastest. If we consider the layer AB we realise that the surface of the liquid immediately below it experiences a viscous force acting in the direction AB, tending to speed it up relative to the faster-moving layer above it. The latter simultaneously experiences an equal and opposite viscous force in the direction BA, that acts as a drag on it, tending to reduce its speed to that of the slower-moving layer below it.

As a result of these viscous forces the relative motion of the various layers will vanish unless there is some external force acting on the liquid to maintain the relative motion. Newton's law enables us to compute the viscous forces acting in this liquid. Suppose the surface layer is moving with a velocity v parallel to the bed; the layer XY is at rest. There is therefore a velocity gradient, which is

given in the simplest case by $\frac{v}{d}$, where d is the depth of the liquid. The viscous force F per unit area of any layer parallel to the bed is $\eta \frac{v}{d}$, where η is a constant for a

given fluid at a given temp., known as the coefficient of V . of the fluid. The direction of this force is parallel to the bed and $F = \eta \frac{v}{d}$, or $\eta = \frac{Fd}{v}$. When the

moving parts of a machine are lubricated by means of a layer of oil the friction between the parts of the machine is greatly reduced. If, for example, the space between a plate moving over a fixed bed is lubricated by a film of oil whose thickness is d , the frictional force between

the plates will be $\eta \frac{v}{d}$ per unit area, where v is the velocity of the moving plate and η the coefficient of V . of the lubricating oil (see LUBRICANTS). Two examples serve to illustrate the V . of air. The vibrations of a pendulum are 'damped' by the air-friction on its surfaces, while the V . of air is sufficiently great to balance the weight of raindrops moving with a certain speed. Raindrops, therefore, on reaching this speed continue to descend with a uniform velocity. This is given by Stoke's Law, $mg = 6\pi\eta rv$ where mg is the weight of the drop of radius r and terminal velocity v , and η is the coefficient of V . for air. The kinetic theory of gases gives a satisfactory explanation of the V . of a gas. According to this theory, there is a continuous exchange of molecules between any 2 layers of a gas. Hence if one layer is moving relative to the other, it receives slower molecules from the other layer and loses faster molecules to it. The effect is the same as if a viscous force acted across the surface separating the 2 layers, tending to destroy their relative motion. See E. Hatachek, *The Viscosity of Liquids*, 1928; J. R. Caddell, *Fluid Flow in Practice*, 1957.

Viscount (from Low Lat. *vicecomes*, 'in place of earl,' through O.F. *viscomite*), in the U.K. the title of the fourth degree of nobility, between earl and baron, first granted in England to John Lord Beau-

mont in 1440. Originally the title was given to the deputy sheriff, who acted on behalf of an earl within his estate.

Viseu: 1. Dist. of N. central Portugal, mainly in Beira Alta prov., but partly also in Trás-os-Montes e Alto Douro and Douro Litoral provs. (qq.v.). It is bounded in the N. by the Douro (q.v.), and is generally mountainous. Much port wine is produced. Area 1932 sq. m.; pop. 487,200.

2. City of Portugal, cap. of V. dist. and of Beira Alta prov., 150 m. NNE. of Lisbon. It dates from Rom. times, and has a cathedral (partly 12th cent.) and an airfield. A chapel near by is said to contain the tomb of Roderic (q.v.), the last Visigothic king. There is an agric. mkt., and there are textile manufs. Pop. 15,000.

Vish, see BIKH.

Vishinsky, see VYSHINSKIY.

Vishnu, occupies the second place in the Hindu Trimurti (q.v.) or Triad (q.v.). He embodies the preserving principle, and his worship is of very ant. date, and to-day he is often worshipped as the superior of Brahma. V. has undergone a number of Avatars or Incarnations, the number given being various. His 2 most famous incarnations are those as Ram and as Krishna. Under the latter form he is the hero of the great poem, the *Mahabharata*.

Visibility, term used in meteorology and aviation to describe the transparency of the atmosphere. It is the horizontal distance to the farthest object that can be recognised. V may vary with direction, and for landing aircraft, an important distinction must be made between the horizontal V ., as estimated by the meteorologist, and the slant V . which affects the pilot's ability to recognise the runway. At night estimates can be made by noting the number of runway lights visible from a fixed point, or with the aid of the instrument known as the Gold V . meter, used in conjunction with a fixed light of known strength.

In looking at a black object at a distance, the light from the sun (either direct, diffused through clouds, or reflected from the ground) is scattered by air molecules and other small particles between the observer and the object so that the object does not appear completely black. This apparent brightness depends on the amount of scattering between the observer and the object, which therefore appears less bright than the background, for there must be more scattering in the greater distance between the observer and the background. At the V . distance this difference can just be distinguished; at greater distances it cannot. V is therefore a rough but practical measure of the number of scattering particles or impurities in the atmosphere, for most scattering is produced by particles consisting of solutions of hygroscopic nuclei, which are absorbed into the atmosphere mainly from smoke. Mist and rain drops by diffuse reflection and refraction have a similar effect to scattering but more pronounced; when the water droplets are very numerous the V . is very low, being

defined as mist when below 2 km. (2200 yds) and as fog when below 1 km. (1100 yds). Fog and mist are most likely when the air is at its dampest, i.e. when coldest just about sunrise (see further under Fog). In relatively dry air the worst V. is probably experienced in and near tns at about 8 a.m., when most domestic fires are being lit and when the air is at its most stable and quietest so that the pollution is not carried away. The best V. occurs in clean arctic or polar air or in high mt regions.

Visigoths, see GOTHES.

Vision. Sensory nerve fibres are very fine cylindrical threads, ending outwardly in the sensitive surfaces and sense organs, and inwardly in the nerve centres, especially the brain. Impressions on their outer extremity are transmitted along the fibre with a velocity of about 100 ft a second and determine changes in the nerve centres, which in turn may determine changes in consciousness or sensation (q.v.). The optic nerves are organised to respond to the ethereal vibrations called light (q.v.) and nothing else. If, therefore, these nerves be mechanically irritated, nothing is felt, but a flash of light is seen. All the higher senses may be regarded as the result of refinements of common sensation, each a more refined touch. In sight, objects are perceived at a distance which is illimitable, the vibrations being conveyed by a medium which is universal and too subtle to be recognised except as the bearer of light. The direct data of V. or sight, and what are added by the mind as judgments based on such data must be distinguished. The direct data are only light, its intensity and colour, and direction. These, being incapable of further analysis, are simple sensations. But size and distance and solid form, though they may seem to be perceived, are not direct perceptions, but only very simple judgments based on these data (for the general structure of the eye see under EYE).

Formation of Images. The eyeball may be regarded as consisting of 2 distinct portions: a nervous expansion, the *retina*, which responds to light-vibrations, and an optical instrument, the *lens apparatus*, placed in front of the retina, and arranged to make the impression of light strong and definite by means of an image. These 2 portions entirely differ in their embryological origin, but they meet and unite to form the eyeball, the sole object of which is the formation of a perfect image on the retina. Without images, light could be perceived, but not objects, and the distinctiveness of objects is exactly proportioned to the distinctiveness of retinal images. Hence a serviceable image must be sufficiently bright and perfectly sharp and distinct in outline, and in order to be perfectly distinct it is necessary that rays from different points in the object, even the most contiguous, should not mingle on the image, but that all the rays from each point on the object should be carried to its own point on the image, conditions which can be fulfilled only by the arrangement found in the eye.

Colour Vision. The sense by which the eye distinguishes and recognises colours. According to the Young-Helmholtz *Trichromatic* theory of colour V. there are 3 kinds of sensory cones in the retina. When excited they produce the sensation of red, green, and violet respectively. A sensation of white is produced when the 3 types of cones are excited to the same extent, while other colour sensations are produced by the excitation of the 3 kinds of cones to different extents. In addition, there are sev. modifications of the Trichromatic theory by V. Kreis, McDougall, and Roaf.

In opposition are a group of theories known as the Tetrachromatic Theories based on Newton's discoveries, supporters of which are Hering, Lodd-Franklin, Müller, and Edridge-Green.

Colour Blindness. See COLOUR-BLINDNESS.

Vision and Colour Sense in Animals. The structure and functioning of the eye in other mammals, and indeed in all vertebrates, resembles in general that of man, though reptiles, amphibians, and fishes accommodate for objects at varying distances by a backward and forward movement of the lens instead of by a change in its shape. Amongst invertebrates a true eye capable of forming images is confined to the molluscs, such as the cuttlefish (which has a pair of eyes of curiously human aspect), and the arthropods (insects, crustaceans, etc.). Many other invertebrates, as for instance the common earthworm and even some unicellular organisms, are sensitive to the difference between light and darkness.

The extent to which animals apart from man are able to distinguish various colours is still under investigation. Much early work is of little value, owing to the failure to differentiate between colour and brightness: an animal may be sensitive to a certain colour simply because that colour is brighter than the surroundings. Colour vision certainly occurs in birds, bony fish, some reptiles, and in primates. The majority of mammals (including, for example, dogs and cats but excluding primates) are probably colour blind, despite the popular belief that red is a distinctive colour to bulls. Amongst insects the work of von Frisch has shown that the honey bee can distinguish blue and yellow, but not green or red, so that it resembles in its colour sense the commonest type of colour-blind human individual.

Erect Vision. Retinal images are all inverted. External images or signs of objects are outward projections of retinal images. Yet they are not seen inverted owing to the 'law of visible direction,' which may be thus stated: 'When the rays from any radiant strike the retina, the impression is referred back along the ray-line into space and therefore to its proper place.'

Single and Double Images. The preceding paragraphs proceed on the assumption that V. is monocular. The phenomena of binocular V. are less purely physical than those of monocular V.

There being 2 retinæ, there are 2 retinal images of every external object, and since retinal images are projected outward into space as external images, there must be 2 external images of every object. In fact, all objects are seen double, except under certain special conditions. This can be proved by simple experiment, e.g. point with the forefinger at some distant object, looking with both eyes at the object, not the finger. Two fingers will be seen, one of them pointing at the object and the other far out of range, usually to the right. It is evident that any object looked at directly is seen single, but that all things nearer or beyond the point of sight are seen double. But an object is seen single when the 2 images of it are projected outward to the same spot in space, and are therefore superimposed and coincide. Under all other than these special conditions objects are seen double. The 2 external images of an object are thrown to the same spot and thus superimposed and seen single when the 2 retinal images of that object fall on what are called corresponding points or identical points of the 2 retinæ; if they do not fall on corresponding points of the 2 retinæ, then the external images are thrown to different places in space and therefore seen double. All the phenomena of binocular V. are explained by the 'law of corresponding points,' for which see any text-book.

Horopter. If any point is looked at, the 2 visual lines converge and meet at that point. Its 2 images therefore fall on corresponding points of the 2 retinæ, viz. on their central spots. A small object at this point of convergence is seen absolutely single. All objects beyond this, the point of sight, are seen double (in the one case homonymously, in the other heteronymously) because their images do not fall on corresponding points of the 2 retinæ. But objects below or above or to one side or the other of the 'point of sight' may possibly be seen single also. The sum of all the points which are seen single while the point of sight remains unchanged is called the horopter. The nature and form of the horopter have given rise to much controversy.

See also BLIND SPOT.

See W. D. Wright, *Researches in Normal and Defective Colour Vision*, 1946; J. H. Prince, *Visual Development*, 1949; H. H. Emsley, *Visual Optics* (5th ed.), 1952, 1953.

Vision, Defects of. These may be due to affections of the nervous mechanism of the eye, to inflammatory and other changes in the transparent media through which light passes, or to errors of accommodation or co-ordination. The optical mechanism of the eye and the D. of V. arising from defective refraction are discussed in the articles on EYE and REFRACTION, ERRORS OF. Pathological causes that produce defective vision are so numerous as to require the attention of specialists in medical practice. Tumours in the brain may cause impairment of function of part or the whole of the visual

centre. Thus a lesion may cause hemianopia or half-blindness, one side of the visual field in each eye being affected. Toxic influences, such as that of tobacco, are usually responsible for Amblyopia (q.v.), in which the visual impressions are dimmed. Paralysis or inflammation of the optic nerve may cause total or partial blindness. Glaucoma (q.v.) is a condition caused by a rise of pressure inside the eyeball; various visual defects are experienced, which may proceed quickly or gradually to total blindness. Glaucoma may be chronic or acute. Keratitis, or inflammation of the cornea, is the result of injury or is secondary to conjunctivitis. Opacity of the lens is known as cataract (q.v.); it may be due to injury, to degeneration of the tissues in old people, or to altered nutrition. Iritis (q.v.) is a painful and dangerous condition dependent on a variety of causes, such as injury, constitutional disturbances of various kinds, extension of inflammation from other structures, etc. Conjunctivitis (see CONJUNCTIVA AND CONJUNCTIVITIS) may be catarrhal or purulent; most varieties are contagious, hence the necessity for care in dealing with discharges from a diseased eye. When the 2 eyes are not co-ordinated, a condition of diplopia or double-vision exists; this is due to an affection of the oculomotor nerves. See also BLIND, *Blindness and Causes of Blindness*; COLOUR-BLINDNESS; BLEPHARITIS; MYOPIA; PINK EYE; SQUINTING; TRACHOMA; VISION.

For the treatment of wounds and foreign bodies in the eye see under EYE; and for sight-testing, see under REFRACTION, ERRORS OF.

Visions, see APOCALYPSE; APPARITION; SPIRITUALISM; REVELATION, BOOK OF; THEOSOPHY.

Visit and Search, in international law the right inherent in all belligerents in time of war to stop private or mercantile vessels carrying the flag of a neutral state, and being within the territorial waters (see TERRITORIAL WATERS) of the belligerent or his enemy, in order to ascertain whether such vessels are in fact neutral. Warships are not the subjects of this right. The right is exercised by sending an officer on board the suspected vessel to examine the register (see MERCHANT SHIPPING ACTS), the log, invoices, and charter-party and other ship's papers, so as to satisfy himself that both the character of the ship and the nature of her cargo are neutral. From the Parliamentary Papers relative to the Declaration of London (q.v.) it seems that the Brit. point of view yielded to the Continental doctrine that the 'neutral vessels under national convoy are exempt from search.' Resistance to V. and S. justifies capture. If V. and S. are impracticable at sea, in view of the conditions of modern warfare, a vessel may be taken into harbour for the purpose.

In the Second World War, after July 1940, all neutral ships proceeding to European shores had to possess a navicert (q.v.), or otherwise both ship and cargo were liable to seizure by the R.N.

See Parliamentary Papers Misc. No. 6 of 1915 and No. 15 of 1916. See also Hall, *International Law*, 1924; Birkenhead, *International Law*, 1927. See also BLOOMADE; CONTRABAND.

Visitation, Order of the, see FRANCIS OF SALES, ST.

Visitation of the Blessed Virgin Mary, Feast of the, festival on 2 July commemorating the sanctification of St John the Baptist in the womb of his mother, St Elizabeth, by the visit of the Blessed Virgin who was then bearing her own Son. The feast was instituted for universal observance in 1389 by Urban VI as a supplication for the end of the Great Schism.

Visitor, officer or superior whose duty it is to visit a corporation, civil or eccles., in order to see that its rules and regulations are being observed, and that there is no serious default. The visitation of civil corporations is the work of the Crown, which acts through the medium of the court of Queen's Bench. The bishop is the V. of his diocese; but, on account of the number of par., the visitation is usually left to the archdeacons.

Viso, Monte (height 12,605 ft), highest peak of the Cottian Alps (q.v.), situated in Italy near the F. border. It was first climbed, 1861, by Wm Matthews (1828-1901). The R. Po rises on its N. slopes. Its comparatively isolated position renders it a notable object in any Alpine summit view and as seen from the plain of Piedmont.

Vistula (Ger. Weichsel; Polish Wisła), chief riv. of Poland, which rises in the Beskid Mts (see CARPATHIANS), SSE. of Cieszyn, and flows NE, then NW, and N. past Crakow, Warsaw, Plock, and Toruń, to the Baltic Sea at the Gulf of Danzig. It enters the sea by sev. arms, of which the main arm, the 'Dead V.' (Polish *Martwa Wisła*), passes Gdańsk (q.v.) and Nowy Port. The E. branch is called the Nogat R. It is connected by canal with the Oder, the Neman, and the Bug (q.v.). Its main tribs. are: on the right, the Skawa, Dunajec, Wisłoka, San, Narew, and Drweca R.; and on the left, the Nida, Pilica, Brda, and Wierzyca Rs. Length 670 m. See FRISCHES HAFF; and see EASTERN FRONT or RUSSO-GERMAN CAMPAIGNS IN SECOND WORLD WAR.

Vistula Lagoon, see FRISCHES HAFF.

Vital Statistics. The England and Wales birth-rate (per 1000 pop.) declined progressively from 25.5 in 1920 to 14.4 in 1933, after which it varied between 14 and 15 until 1941. The rate then rose steadily to the post-war peak of 20.6 in 1947. In the years 1948-51 there was a decline to 15.4, but since then there have been only small fluctuations—e.g. the rate in 1954 was 15.2. In 1954 most European countries had birth-rates between 14.6 and 23: the Dominion birth-rates were from 22.5 in Australia to 28.5 in Canada: the U.S.A. rate was 24.9, and that for Japan 20.0.

The lowest recorded death-rate per 1000 pop. of England and Wales was 10.8 in 1948; since then it has risen as high as

12.5 in 1951, but in 1952-54 the rate was steady at 11.3-11.4. This rate of 11.3 compares with the following 1954 rates for other countries: Netherlands 7.6, Norway 8.4, S. Africa 8.6, New Zealand 9.0, Australia and Denmark 9.1, U.S.A. and Italy 9.2, Sweden 9.6, Belgium 11.9, France 12.0, and Austria 12.1. The infant mortality rate (that is, the number of deaths of infants under one year of age per 1000 live births) for England and Wales in 1954 was 25. This compares with 1954 rates for other countries as follows: New Zealand 20, Australia 22, U.S.A. 27, Canada 32, S. Africa 34, France 42, Ceylon 72, and India 119.

Royal Commission on Population, 1944. This Commission was appointed to inquire into the facts concerning Brit. pop. trends, their causes and probable consequences; and to 'consider what measures, if any, should be taken in the national interest to influence the future trend of population.' Surveying the growth of Britain's pop. from about 7,000,000 in 1700 to 49,000,000 to-day, the report of the Commission (pub. in June 1949) concluded that reductions in the death-rate were the main influence making for expansion of numbers. The rate of increase had slackened because the birth-rate, starting to drop in the 1870s, came to fall faster than the death-rate. This fall in births was not due to any change in the proportion of people marrying but to a decline in the number of children b. per married couple. Holding any marked increase or decrease in Britain's pop. alike undesirable, the Commission urged a national effort to raise the average family size from 2.2 to 2.4 children, just sufficient to secure replacement.

DISTRIBUTION OF FAMILIES BY SIZE

Number of Children Born	Marriages Taking Place about 1860 (1911 Census of England and Wales)	Marriages of 1925 (Great Britain, 1946 Family Census)
	Per cent	Per cent
0	9	17
1	5	25
2	6	25
3	8	14
4	9	8
5	10	5
6	10	3
7	10	2
8	9	1
9	8	0.6
10	6	0.4
Over 10	10	0.3

Such a change is not likely to come about of its own accord without deliberate encouragement. The increase in births since 1941 does not, on analysis, clearly point to an enlargement of family size. Most of the additional children born in

1941-7 seem to have been either 'arrears' from earlier years (births postponed owing to the outbreak of war) or 'borrowings' from the future (births brought forward for various war-time and immediate post-war reasons). The Commission also found that the early stages of the decline in family size went on fastest among the higher occupational categories. Among couples married between 1900 and 1930 the families of manual workers have consistently been about 40 per cent larger than those of non-manual workers, the average for the most recent groups being 2.5 children for the manual workers and as low as 1.7 for the non-manual group.

The table shows that the reduction of 60 per cent in the size of families between the mid-Victorian era and the period 1925-9 has been achieved by the substitution of 1- and 2-child families for families of 5, 6, or 7 children as the most common sizes of family and by the virtual disappearance of families of more than 6 children, which were formerly very numerous.

Disregarding the effects of emigration and immigration, the Commission predicted with confidence that: (i) total numbers would continue to grow slightly in the near future, perhaps for another generation; (ii) the pop. of working age would remain at about its present size for at least the next 30 years, though it would come to form a somewhat smaller proportion of the total; (iii) the pop. of young adults (15-39) would show a fall of about 1,400,000 in the next 15 years; (iv) the number of old people (over 65) would grow steadily over the next 30 years, the increase amounting to at least 2,300,000 and very probably much more. The proportion of old people to the total would increase considerably.

Vitamins are substances occurring in many foods in small amounts. A number of the V. are necessary for the healthy functioning of the body. As far back as 1881 Lunin discovered that certain unknown factors in the diet were essential for growth. Subsequently Sir F. Gowland Hopkins (q.v.) estab. the presence of such substances in milk. For these Funk suggested the name 'vitamines,' later modified to 'vitamins' by Sir Jack Drummond. After considerable research the chemical nature of these 'accessory food factors' was determined. They were separately distinguished alphabetically as A, B, C, etc., but more recently other names have been given to indicate their chemical constitution. The V. which so far have been shown to be necessary for health in man are vitamin A, vitamin B₁, some components of the vitamin B₂ complex, and V. C, D, and K. E, F, and P may also have some significance.

Vitamin A includes A₁, or xerophthol, and β -carotene. The best sources of this vitamin are halibut-liver oil, cod-liver oil, liver, milk, cheese, and fortified margarine. As carotene it occurs in green vegetables and carrots; both parts of vitamin A occur in eggs and butter. Deficiency of this vitamin leads to

diminished growth, diminished powers of dark adaptation progressing to night-blindness, skin eruptions, and degenerative changes in the eye.

Vitamin B₁ (aneurin or thiamine) is found in dried wheat germ, rice germ, and other unmilled cereals, barley, oatmeal, legumes, eggs, milk, and liver. Its absence leads to polyneuritis and to inadequate growth and gastro-intestinal disturbances in infants. The disease beriberi is common among Far E. pops subsisting too exclusively on 'polished' rice (i.e. rice from which the vitamin B₁ has been removed by over-milling).

Vitamin B₂ is a complex of at least 9 V. (nicotinamide, riboflavin, pyridoxine, pantothenic acid, p-aminobenzoic acid, inositol, choline, biotin, and folic acid). Three of these are needed by man. Nicotinamide is important as a preventive of pellagra; it is found in yeast and liver, fish, meat, pulses, and whole wheat-meal. Riboflavin occurs in yeast, liver, milk, kidney, and egg-white; deficiency causes cracked lips and mouth, and changes in the cornea. Folic acid, or pteroylglutamic acid, is found in liver, kidney, yeast, and many plants. It stimulates production of the red blood cells and has been found of value in the treatment of certain types of anaemia. Biotin is identical with vitamin H. It was isolated from egg-yolk and has been shown to be essential for the growth of many micro-organisms; biotin deficiency has been produced in man by feeding with large amounts of raw eggs or dried egg-white, with resultant loss of hair and dermatitis.

Vitamin C (ascorbic acid) occurs in fresh lemons, limes, and oranges, tomatoes, green salad, rose hips. Scurvy is due to absence of this vitamin. In the 18th cent. scurvy was eradicated from the Brit. Navy by giving sailors plenty of lemons, limes, and oranges.

Vitamin D, the anti-rachitic vitamin, prevents rickets and osteomalacia (softening of the bones). It has the power of controlling the deposition of calcium and phosphorus in the tissues. The 2 most important forms are D₂ (calciferol), prepared by the ultra-violet irradiation of ergosterol, and D₃ (irradiated 7-dehydrocholesterol), present in fish-liver oils, fresh vegetables, butter, and milk. The sun produces vitamin D in the body by ultra-violet irradiation of ergosterol and dehydrocholesterol, substances which are present in the skin.

Vitamin E (tocopherol), the anti-sterility vitamin, is found in wheat germ and green leafy vegetables. Deficiency is believed to cause reproductive failure, muscular dystrophy, and degenerative changes in the kidney.

Vitamin F is a synonym for the nutritionally essential unsaturated fatty acids (linoleic acid, linolenic acid, and arachidonic acid). Deficiency has not been recorded in humans, but claims have been made for its use in the treatment of eczematous conditions.

Vitamin K plays an important part in the regulation of liver function. Its

deficiency lowers the power of the blood to coagulate, leading to certain haemorrhagic conditions. Sources of vitamin K are fish meal, cabbage and spinach leaves, cauliflower, and other vegetables.

Vitamin P, the flavone factor in lemon juice (citrin), is said to control the fragility of capillary blood vessels.

See I. J. Harris, *Vitamins in Theory and Practice*, 1955; F. Bicknell and F. Prescott, *The Vitamins in Medicine*, 1953. See also FOOD and DIET.

Vitebsk: 1. Oblast in N. Belorussia, a moraine area traversed by the R. W. Dvina, partly covered by mixed forests. Pop. (1956) 908,000, mostly Belorussians (before the war many Jews). It has flax and dairy farming, textile and wood-working industries. The prin. tns are V., Polotsk, Orsha.

2. Cap., economic and cultural centre of the above, on W. Dvina. There are textile, engineering (tools), and wood-working industries, and it is a railway junction. It has 12th-19th-cent. architectural monuments. Pop. (1956) 128,000 (1913, 109,000; 1920, 80,000; 1939, 167,000). V. has been known since 1021, became cap. of V. principality in 1101, Lithuanian in 1320, and Russian in 1772 (prov. cap.). Bitter fighting took place here in 1944.

Vitellius, Aulus (AD 15-69), Rom. emperor. He became the commander of the Rom. legions on the lower Rhine. In AD 69 he was proclaimed emperor (2 Jan.) by the legions, but on the approach of Vespasian's ally Antonius Primus he was murdered (22 Dec.).

Viterbo: 1. Prov. of Italy, in NW. Lazio (q.v.). It is largely in the Apennines (q.v.), but has a coastal plain on the Tyrrhenian Sea in the W. The valley of the Tiber (q.v.) is in the E. The Lake of Bolsena (q.v.) is in the N. of the prov., and there is another lake, Vico, in the S. The prin. tns include V. and Civita Castellana (qq.v.). Area 1418 sq. m.; pop. 264,000.

2. It. tn, cap. of the prov. of V., 38 m. NNW. of Rome (q.v.). It became the residence of the Popes in 1257 and was for a time a tn of importance. It was badly damaged during the Second World War. The old part of the tn preserves its medieval appearance, and there are a 12th-cent. cathedral, sev. fine old churches, and a papal palace (1266-7). Pottery and textiles are manuf., and there is a trade in agric. produce, wine, and oil. Pop. (tn) 31,500; (com.) 41,350.

Viti Levu, see FIJI ISLANDS.

Vitim, navigable right trib. of R. Lena in Siberia, rising in the Transbaikalian mts. Length 1200 m. Its lower course traverses the rich V. gold-mining area, which has sev. labour camps. The chief port is Bodaybo (q.v.).

Vituous Intromission, see INTROMISSION.

Vitis, family Vitaceae, genus of 70 species of deciduous and evergreen climbing shrubs, with tendrils. *V. vinifera* is the Common Grape Vine, native to the Caucasus; *V. rotundifolia*, Japan, *V. flexuosa*, and *V. thunbergii*, Orient, are hardy and grown for their ornamental colourful leaves.

Vittoria: 1. (Eng. Vittoria), Sp. tn, cap. of the prov. of Alava. During the Peninsular war (q.v.) the French were decisively beaten here by Wellington in 1813. It is a picturesque tn, with a Gothic cathedral, and many other old buildings. A new cathedral is being built. Paper and leather goods are manufactured, and there is a trade in agric. produce and wine. Pop. 59,100.

2. Tn of E. Brazil, cap. of the state of Espirito Santo. It exports iron ore, coffee, cacao, and other tropical produce. Its industries are steel smelting, sugar refining, cotton weaving, and the manuf. of footwear and mineral waters. Pop. 55,000.

Vitreous Rocks, see IGNEOUS ROCKS.

Vitrified Forts, term sometimes applied to the camps and forts with timber-reinforced stone ramparts dating from the latter part of the Early Iron Age in the highlands of Scotland and in N. France. Finavon, near Fortar, is an example which has been excavated by modern archaeological methods. The ramparts, faced with roughly squared blocks of stone, are tied to a rectangular lattice of timber beams filled with rubble. The beams have often been completely burnt, intentionally or by accident or in war, and the filling of rubble has thus become a vitrified mass. Such forts are not thought to be related to the *murus gallicus* constructions recorded in Gaul by Caesar. See EARTHWORK; HILL-FORTS.

Vitriol (Lat. *vitrum*, glass), metallic sulphates that form glassy crystals. Blue V. is copper sulphate, white V. is zinc sulphate, green V. (copperas) is ferrous sulphate. Oil of V. is sulphuric acid. See SULPHURIC ACID; COPPERAS; ZINC.

Vitriol, Oil of, see SULPHURIC ACID.

Vitro-Varnish Painting, art practised in Venice in the 15th cent., but now almost lost. Varnish highly coloured for painting was mixed with 5-10 per cent of burnt-glass powder, the resulting substance being applied with a fine brush (as in gesso-painting) to any surface. When dry the effect produced was that of glass in relief.

Vitruvius, correctly Marcus Vitruvius Pollio (1st cent. BC), Rom. architect and writer, was an official under Augustus, to whom he dedicated his famous book on architecture and building-construction, *De Re Architectura*, to which we owe much of our knowledge of Rom. building methods and of Gk buildings which have perished since his day. A copy of this book was discovered in the 15th cent., printed, and trans. into many languages.

Vitry-le-François, Fr. tn, cap. of an arron., in the dept. of Marne, on the Marne. It was built to a definite plan by Francis I (q.v.) in 1545. It was almost destroyed in the Second World War, but is being rebuilt. It has mechanical and pottery manufs. Pop. 7600.

Vitte, see WITTE.

Vittoria, Duca della, see DIAZ, ARMANDO.

Vittoria, Tomaso Lodovico, see VICTORIA, TOMÁS LUIS DE.

Vittoria: 1. Tn in Sicily (q.v.), 11 m. WNW. of Ragusa (q.v.). It is named

after Vittoria Colonna (q.v.). It has a cathedral and an anct castle, and has a trade in wine and gypsum. Pop. 37,000.

2. City of Spain, *see* VITORIA.

Vittorio Veneto, It. tn. in Veneto (q.v.), 22 m. N. of Treviso (q.v.). It has a cathedral and many old houses. There are saline and sulphur springs, and silk and cement are manuf. It was the scene of a great battle during the First World War (*see* next article). Pop. (tn) 14,300; (com.) 25,200.

Vittorio Veneto, Battle of, 24 Oct.-4 Nov. 1918. This battle of the Piave line (Italy) brought about the rout and surrender of the Austrian forces during the First World War. The summer campaign of 1918 was very successful for the Allies, who had forced the Austrians back to W. of the Piave. The Brit. force under Lord Cavan was on the left of the line. An advance was made during Oct. which drove the Austrians back to the Livenza, and towards the end of the month the British were about Ramera. A further advance in a NE. direction towards Sacile broke the Austrian line and separated the Austrians in the mts from those in the plain. *See also* WORLD WAR, FIRST.

Vitus, St. It. martyr who suffered perhaps under Diocletian. His aid is invoked against St Vitus's Dance (*Chorea*), hydrophobia, and other complaints, and he is the patron saint of dancers. His feast is on 15 June.

Vivaldi, Antonio (c. 1675-1741). It. violinist and composer, b. Venice, where he learnt music from his father, a violinist in St Mark's, and Legrenzi. He was ordained priest in 1703, and taught music at the Ospedale della Pietà until 1740, with a 3 years' absence at Mantua in the 1720s. He then went to Vienna, where he d. in poverty. V. is by far the most interesting and individual of the It. violinist-composers of his time, and though long neglected, one of the most original masters contemporary with Bach, who indeed appreciated him so much as to arrange sev. of his concertos. V. wrote over 40 operas, 2 oratorios, church music, secular cantatas, 23 symphonies, and 46 *concerti grossi*, but his real importance lies in some 450 concertos for various solo instruments and combinations of instruments, the majority of the violin family, but also woodwind and such rare things as piccolo, viola d'amore, and mandolin. He also wrote 73 sonatas for 1 and 2 violins, and for cello. *See* studies by M. Abbado, 1942; G. Guerrini, 1951; S. A. Luciani, 1939; M. Pincherle, 1948 (with thematic catalogue); and *Lettere e dediche*, ed. by O. Rudge.

Vivarini, family of It. painters, of Murano, Venice, of some importance in the development of Venetian painting. The most prominent members were: **Antonio** (fl. mid-15th cent.); **Bartolommeo** (fl. 1450-99), the pupil of Antonello of Messina, who taught him to paint in oils; and **Luigi or Alvise** (c. 1446-1502), a portrait painter.

Viverra, *see* CIVET.

Vives, **Juan Luis**, more commonly known as **Ludovius Vives** (1492-1540), Sp. scholar and humanist, b. Valencia. He was a friend of Erasmus and More. He became prof. of humanities at Louvain (1519), and 4 years later was appointed tutor to Princess Mary of England, for whom he wrote *De ratione studii puerilis epistolae duae*, 1523. He opposed Henry VIII's divorce, and from 1528 lived in Bruges. His works include a famous commentary on St Augustine's *City of God*, 1522.

Vivisection, dissection of, and experiment upon, living animals. In its present legal sense, the term V. is limited to vertebrates. V. is an anct practice, Galen being one of its exponents. It is claimed that by V. alone was it possible to discover much physiological and pathological knowledge, e.g. the circulation of the blood and the value of therapeutics. This, however, is denied by many, who say that nothing has been discovered with the aid of V. that could not have been discovered without it. *See also* ANTI VIVISECTION; MEDICAL RESEARCH.

Vivonne, **Catherine de**, *see* RAMBOUILLET.

Vizagapatam, tn of Andhra State, India. V. is the only natural protected harbour on the Coromandel coast, and there is now a large shipbuilding yard. The suburb Waltair is a favourite seaside resort.

Vizcaya (Eng. **Biscay**), Sp. prov. on the Bay of Biscay, one of the Basque Provs. (q.v.). It is very rich in minerals, iron, lead, copper, and zinc being found. Stock-raising, agriculture, and fishing are also important. The cap. is Bilbao (q.v.). Area 832 sq. m.; pop. 584,700.

Vizcaya, Golfo de, *see* BISCAY, BAY OF.

Vize, **Vladimir Yul'yevich** (1888-1954), leading figure in Soviet Arctic studies, b. St Petersburg, studied chemistry in Germany and physics in Russia. He took part as geographer in G. Ya Sedov's attempt to reach the N. Pole in 1912-14. He specialised in sea ice studies and was a pioneer in the subject, also writing widely on the hist. of exploration. He participated altogether in 14 arctic expeditions between 1910 and 1937, and was closely connected with the organisation of the Soviet N. Polar drifting station, 1937-8. He was deputy director of the Arctic Institute, Leningrad, from 1930 until his retirement. He greatly influenced the great surge of scientific endeavour in the Soviet Arctic between the wars. *See* *The Polar Record*, Vol. 7, No. 50, 1955.

Vizetelly, Henry (1820-94), publisher and pioneer of the illustrated Press, b. London of It. extraction. He started the *Pictorial Times*, 1843, and the *Illustrated Times*, 1855, and became Paris correspondent to the *Illustrated London News*, 1865, afterwards publishing *Paris in Peril*, 1882, an account of the siege. He estab. a publishing firm in London (1879), which issued trans. of Fr. and Russian novels. He trans. most of E. Zola's novels, for which he was prosecuted. He wrote *Glances Back Through Seventy Years*, 1893.

Vizeu, *see* VISEU.

Vizier (Arabic *Wazir*), title first given to the chief minister of the Abbasid caliphs, subsequently applied to the chief minister of the Turkish sultan, and to the chief minister of other Muslim states.

V. J.-Day, 16 Aug. 1945, on which, with 16 Aug., was celebrated the defeat of Japan in the Second World War, the Japanese having formally accepted, on 14 Aug., terms of unconditional surrender.

Vladikavkaz, see **ORDZHONIKIDZE**.

Vladimir, St (Vladimir I, Grand Duke of Kiev) (956-1015), patron Saint of Russian Christians. Before his marriage to the sister of the Byzantine emperor V. was baptised, and he called in the Gk clergy to evangelise his country. His feast is on 15 July.

Vladimir, name of 2 outstanding princes of Kiev. See **KIEVAN RUSSIA**.

Vladimir: 1. Oblast in Central Russia, E. of Moscow. It is a region of forested lowland, with large peat deposits. Area 10,350 sq. m.; pop. (1956) 1,353,000, Russian. There are large engineering, textile, and glass-working industries dating from the 16th-17th cents.; there are also old handicrafts (linen, silk, wood-carving). Grain and potatoes are grown, and there is mkt gardening (V. cherries) and dairy farming. The prin. towns are V. Kovrov, Murom.

2. (Or V.-na-Klyaz'me), cap., economic and cultural centre of the above, 120 m. E. of Moscow. It has large engineering (tractors, automobile parts) and chemical industries, and is a treasury of Russian 12th-early 19th-cent. art, including the magnificent cathedrals of the Assumption (1158-61) and St Demetrius (1193-7) and the beautiful church of Intercession at Bogolyubovo, near by. The notorious 'V. Isolator' for important political prisoners is situated here. Pop. (1956) 121,000 (1914, 47,000; 1920, 24,000; 1939, 67,000). V. was founded by Vladimir Monomakh as a fortress in 1116, was cap. of Central Russia 1157-1238, became Muscovite in 1364, and a prov. cap. in 1778. Its industrial development dates from the 1930s.

Vladivostok, city on the W. shore of the Sea of Japan, in Peter the Great's Bay, cap. of the Maritime Kray (q.v.) and the most important economic and cultural centre of the Russian Far East. It is a terminus of the Trans-Siberian Railway (5732 m. from Moscow) and the N. Sea Route (q.v.), centre of communications for Russian Pacific ters., the largest Russian port in the Pacific, and the chief base of the Pacific Fleet. There are engineering (shipbuilding, mining equipment), fishing, and whaling industries. It has a branch of the U.S.S.R. Academy of Sciences, and the Far Eastern Univ. (founded 1899 as Oriental Institute, univ. from 1920, abolished 1938, reopened 1956) is situated here. Pop. (1956) 265,000 (1897, 29,000; c. 1914, 120,000; 1926, 108,000; 1939, 206,000), Russians (until 1937 also Chinese and Koreans). V. was founded as a Russian port in 1860, has been a tn since 1875, and became cap. of the Maritime region in 1888; it rapidly developed as a free port (supplies for

Russian Far E. and transit from Manchuria), naval base, and fortress, and had a pronounced international character until the 1930s. In both world wars it was used for Allied supplies. During 1918-22 it saw Allied occupation under Jap. leadership and various pro- and anti-Bolshevik govs.

Vlasov, **Andrey Andreyevich** (1900-46), Russian gen., leader of the anti-Communist movement among the Soviet prisoners of war and civilian deportees in Germany during the Second World War. The son of a peasant, V. served in the Red Army from 1919. In 1938-9 he was military adviser to Chiang Kai-shek, and in 1941-2 distinguished himself in the defence of Kiev and Moscow. Taken prisoner in 1942, he was persuaded by Russian sympathisers among Ger. officers to assume the leading role in the Russian anti-Communist movement. In Nov. 1944 a Committee for the Liberation of the Peoples of Russia was set up with V. as chairman. V. had no authority over the Russian units in the Ger. Army till Jan. 1945. In May 1945 V. surrendered to the Americans, and was handed over to the Soviet authorities and executed. See G. Fischer, *Soviet Opposition to Stalin* (Cambridge, Mass.), 1952.

Vlissingen, see **FLUSHING**.

Vlonë, Albanian name for Avlona (q.v.).

Vltava (Ger. *Moldau*), riv. of Czechoslovakia, which rises in the Forest of Bohemia (q.v.) and flows SE. and then N. to join the Labe (see **ELBE**) at Mělník (q.v.). It passes České Budějovice and Prague. Length 270 m.

Vocalisation. As a phonetic term, V. would indicate the action of making vocal or sonant, i.e. of forming voice sounds, or the modes of utterance or pronunciation of voice sounds, esp. of vowel sounds. As a musical term, V. indicates the use of singing voice, the action of producing musical sounds with the voice, especially singing to vowel sounds. As a graphic term, V. means vowel-representation in consonantal alphabets (such as Heb., Arabic, Syriac, and other Semitic alphabets). The absence of vowel-letters is not as strongly felt in Semitic as, e.g. Indo-European languages, because the former are essentially consonantal, and the vowels serve principally to denote grammatical variations. However, in the 5th to 8th cents. AD subsidiary and inadequate systems of V. or vowel-representation were introduced in Syriac, Hebrew, and Arabic, consisting mainly in diacritical marks (dots, little dashes, etc.). See also **ALPHABET**; **HEBREW LANGUAGE**; **WRITING**; **AND LITERATURE**; **VOICE** AND **VOICE TRAINING**.

Vocational Training, a term often contrasted with academic or liberal education, to describe training in skills and techniques of commerce or industry for the purpose of making competent practitioners (see **TECHNICAL EDUCATION**; **COMMERCIAL EDUCATION**). The prestige enjoyed by the occupation or profession tends to determine whether the training undertaken for it is regarded as vocational

or not. Thus professional studies in theology, law, and medicine have long enjoyed a high reputation. General education provided through the 7 liberal arts came to be regarded throughout Europe as most suitable for education in other walks of life. Scientific and technological studies were reluctantly accepted as worthy of inclusion in the curricula of schools and colleges. More recently manual training, arts, and crafts have been included more for their aesthetic and therapeutic than for their general educational value. This dichotomy is sometimes held to stem from the views expressed by Plato in his *Republic*. It has led to a state of affairs in Europe where technical, commercial, and professional courses at all levels are offered in special institutions, e.g. in technical univs. or technical schools. It is a tradition that fails to accept that all training may be education and that much education may be training. This pattern has, to a greater or lesser extent, been copied in many areas of the world where European education has been influential. It has created considerable difficulties for those countries which now wish to raise their standard of living through rapid economic and industrial development. In contrast, the movement towards vocational and professional training at the highest level has been rapid in the U.S.A. The views expressed by John Dewey (q.v.), whilst by no means accepted by all educators, command wide support.

Vodka, the national spirituous drink of Russia, distilled from potatoes, rye, or other grain, and highly alcoholic.

Vogues, see **VOGUES**.

Voghera (aunct Iria), It. tn, in Lombardy (q.v.), 14 m. SW. of Pavia (q.v.). It has a 17th-cent. cathedral, and a 13th-cent. castle. The tn is a railway junction and agric. mkt., and there are engineering, textile, and food-preserving industries. Pop. (tn) 27,500; (com.) 32,500.

Vogt, Alfred (1879-1943), Swiss ophthalmologist, b. Menziken, qualified in medicine, 1904. He was prof. of the univ. eye clinic at Basel from 1923 to 1927, when he moved to a similar post at Zürich. He perfected the technique of slit-lamp microscopy of the eye, and wrote *Atlas der Spallampennmikroskopie des lebenden Auges*, 1921.

'Vogue', international fashion magazine, pub. in separate native eds. in Great Britain, the U.S.A., and France, reports fashions, not only in dress but in beauty, decoration, and the arts. The Brit. ed., founded in 1916, is pub. monthly.

Voguls, see **MANSI**.

Voice and Voice Training. *The Singing Voice*. The vocal cords, set horizontally in the larynx, do not actually create sound; they produce eddy currents (vortices) as they open and close, one eddy or vortex at each complete vibration to and fro. A vowel is merely shaped vibration. Every vowel tone has a central core or main stream called sound column (a better term is sound-beam). The sound-beams of the different vowels, and the different directions they take, are

the singer's most valuable 'tools.' Voice training, therefore, must include accurate knowledge of the behaviour of these beams, varying as they do in width, height, and location (tonal focus or tuning) according to the pitch and vowel.

The categories of voice are: soprano, mezzo, contralto, tenor, baritone, bass (including the *basso cantante*, singing bass, actually a big baritone with a bass tinge running through the entire voice). Each category is distinguished by the characteristic timbre or quality of the voice, never by its compass. Pitch is raised on an ascending chromatic scale by a triple action of the vocal cords: they get gradually shorter and thinner, with a corresponding gradual increase in tension. Only in the completely natural voice is this triple action mechanically perfect; in most voices the master's art steps into the breach to complete the mechanical three-fold action of the cords.

The main stream of the tone (sound column or beam) will take the right direction and 'tune in' to the exact point within the resonating zone to which the particular pitch belongs acoustically, provided the singer allows it to do so through appropriate vowel shaping in relation to pitch. This is the natural 'placing' of the voice. And as the direction, height, and location vary according to pitch and vowel, it is highly detrimental to 'place' or thrust indiscriminately all tones (all pitches, all vowels) 'well forward on the lips, teeth, or mask', for that spells strain and distortion. The singer must learn to discriminate between tonal focusing and reverberation; the former is of paramount importance. To relax everything except the vibrating element and adjacent parts, and the breathing apparatus, in order to give free play to the upsoaring tonal stream or beam, is a highly important factor in singing.

The Speaking Voice. The use of the voice in song and in speech is dependent on the same physiological principles. The 4 factors of vocal tone are: the breath; the note; the tone; the articulation. Speech is acquired entirely through the ear, and its musical elements remain under the control of the ear. In imitating the sounds heard the auto-power of making audible movements is developed, and these movements give a feeling of right speech. There is an auditive and a kinaesthetic element in speech. Breathing for the speaking voice needs to be even more easy and controlled than for song. The note is produced by the outgoing air vibrating the 2 small membranes called vocal cords. In speaking, the note is constantly gliding up and down the scale; in song it moves by quick steps, and its pitch and duration are exactly measured; it is therefore essential to train the speaking voice, so that the ear may grow to appreciate differences of pitch and musical quality. The range of the speaking voice is roughly from A to A in women, and an octave lower for men. The vowels result from the resounding of the air in the neck, throat, and mouth. They

can be whispered without voice, when they will be found each to have a specific pitch. For the vowel sounds, see under PHONETICS. See A. Randegger, *Singing*, 1878; A. B. Bach, *The Principles of Singing*, 1885; Sir R. Paget, *Human Speech*, 1930; W. W. Shaw, *Voice Production*, 1930; T. H. Pear, *Voice and Personality*, 1931; Blanche Marchesi, *A Singer's Catechism and Creed*, 1932; E. Herbert-Cassari, *The Science and Sensations of Vocal Tone*, 1936, *The Voice of the Mind*, 1950, and *Tradition and Gigli*, 1958; Gwynneth Thurburn, *Voice and Speech*, 1939, *New Speech*, 1949; W. A. Atkin, *The Voice*, 1951.

Voile, fabric of cotton, wool, or silk, with a fine, open mesh.

Vojvodina, autonomous prov. of Serbia, Yugoslavia, lying N. of the riva Danube and Drava. Prior to the First World War it formed part of a Hungarian dist. estab. in 1849 as a concession to Serbian nationalism (see BANAT). It was temporarily re-occupied by Hungary during the Second World War. The pop. is very mixed, and the prov. is one of the chief agric. regions of the country. The prin. tns are Novi Sad (the cap.), Subotica, and Zrenjanin (qq.v.). Area 8680 sq. m.; pop. 1,713,900.

Volapük, see ESPERANTO; IDO.

Volaterrae, called by the Etruscans Velathri, one of the 12 cities of the Etruscan Confederation. Its dominions extended eastwards to Arretium, westward to the Mediterranean, and southward to its colony Populonia. Its influence was due mainly to its ports, Luna and Populonia. The modern in (Volterra, q.v.) contains interesting Etruscan remains.

Volcae, Celtic tribe of Gallia Narbonensis, who lived in the region between the Pyrenees and the frontiers of Aquitania along the coast as far as the Ithône. They were autonomous, were not subject to the Rom. provincial governor, and also possessed the Jus Latii. Their chief tn was Tolosa (modern Toulouse).

Volcano. A V. is a vent in the earth's crust from which lava, volcanic ash, and gases are ejected. If the vent is in the form of a fissure it is not commonly called a V. The term volcano is generally restricted to those conical mts which are built up by material ejected by means of a central throat or pipe. At the top of the cone is a pit-shaped opening called the 'crater.' V.s, however, exhibit 2 prin. types of eruption: (1) the explosive type; (2) the quiet type. In the former the materials are ejected with explosive violence, while in the latter the lava rises up into the crater and flows over the rim or breaks through the sides. Of the first type the best known are Vesuvius (q.v.) and Stromboli.

Smaller volcanic cones exist in the Phlegrean Plain near Naples, and these, nearly extinct, discharge only carbon dioxide and sulphurous gases. This stage is known as the solfataric stage. The eruption of Krakatoa (q.v.), between Java and Sumatra, which took place in 1883, after a period of 200 years' quiescence,

was an eruption of extremely explosive violence. In 1902 2 eruptions occurred in the is. of St Vincent and Martinique in the W. Indies, the phenomena being practically the same in both cases. 26,000 people in St Pierre, Martinique, were killed. In the Hawaiian Is. the volcanic eruptions are of the quiet type. Mauna Loa is the largest of 4 volcanic cones in the is. of Hawaii, and rises over 30,000 ft from the ocean floor. In Iceland 3 types of eruptive vents are considered: (1) cones built of ash and lava; (2) cones built of lava alone; (3) chains of craters. The first 2 correspond to the Vesuvian and Hawaiian types. The third type is common in Iceland. Eruptions which are strictly not from V.s are those described as fissure eruptions. These are lava flows which cover thousands of sq. m., and are known in the basin range of N. America (Snake R. plains), in the Deccan plateau of India, and in Antrim, Mull, Skye, the Faroes, Iceland, and parts of Greenland.

Regarding the occurrence of V.s, it is found that though a few occur isolated, yet as a rule they are met with in extended lines, and are usually situated on important lines of fracture. V.s may occur in mid-ocean, as in Hawaii and Iceland; in mid-continent, as in the Belgian Congo, and along the recently formed mt chains of the Alpine belt and the belt encircling much of the Pacific. Extinct V.s are found in comparable situations, either where the crust has been deeply fractured or where it has been distorted during mt building movements. The type of eruption depends largely on the amount of gas contained within the rock melt or magma and on whether or not it is free to escape readily. The most violent eruptions occur when large volumes of gas are suddenly released due to a sudden drop in the pressure confining the magma rising through the vent of the volcano. Eruptions can be predicted in certain circumstances; some V.s exhibit a cycle of activity which is roughly constant. More accurate predictions have been made by observing the very small tilting of the ground that may precede the eruption by a few hrs, and by the recording of changes in the local magnetic field near the V. caused by the uprise of the hot magma, which is above its Curie point and thus non-magnetic.

See also AGGLOMERATE; BOMB; LAVA. See A. Harker, *The Natural History of Igneous Rocks*, 1909; G. W. Tyrrell, *Volcanoes*, 1931; S. N. Coleman, *Volcanoes New and Old*, 1950.

Vole, name given to various species of rodents. The water V. or water rat (*Arvicola amphibius*) is about 1 ft long from nose to tip of tail. Its fur is thick and shining, rich reddish brown above and yellowish grey beneath. Its feet are not webbed, although it takes readily to water. It feeds chiefly on the stalks of sedges and other aquatic plants, and is of service in helping to keep water-courses clear. The field V. (*Microtus agrestis*) occasionally occurs in swarms, causing heavy losses to crops. See also LEMMING; MUSK RAT.

Volga (anct Rha), longest riv. (2300 m.) and one of the chief waterways of Europe. It lies entirely in Russia, rising in the Valdai upland NW. of Moscow and flowing roughly E. to Kazan' and then S. into the Caspian Sea, where it forms a large delta. Typical of the V. is a low left bank and high right bank, especially between Gor'kiy and Stalingrad, where it flows along the V. upland. It is free from ice for 150-250 days a year, is largely fed by water from melting snow, and therefore has high and long spring floods. Its chief tribes are the Kama (q.v.) on the left and the Oka (q.v.) on the right, both longer than the Rhine. Total drainage area 533,000 sq. m. The V. traverses almost all the landscape zones of the Russian plain, from forest to semi-desert (below Stalingrad). In its basin lie 2 of the biggest industrial areas of Russia, the Moscow area between the V. and the Oka, and the Urals in the basin of the Kama. There are large deposits of oil, natural gas, oil shale (see VOLGA-URALS OIL AREA), salt, and peat. V. is navigable almost throughout its course and has over 70 navigable tribes., with the total length of the waterways exceeding 16,000 m. V. and its tribes carry two-thirds of all goods and over a half of all passengers transported on internal waterways of the U.S.S.R. The main goods are timber, oil, mineral building materials, grain, and salt. The chief ports on the V. are Gor'kiy, Kazan', Kuybyshev, Stalingrad, Astrakhan', Saratov, Yaroslavl', and Rybinsk, most of them industrial cities situated where the riv. is crossed by railways. Artificial waterways connect the V. with the Baltic and White Seas (see MARINEKIY WATERWAY; WHITE SEA-BALTIC CANAL), the Don (see VOLGA-DON CANAL), and Moscow (see MOSCOW-VOLGA CANAL). The building of the Kuybyshev, Saratov, Gor'kiy, and other large hydro-electric stations makes the V. one of the main sources of power supply in the country, while the stations' high dams transform the riv. into a series of artificial reservoirs (see KUYBYSHEV; RYBINSK RESERVOIR) with lake-like conditions of navigation. The former fish resources of the V. have been depleted since the 1930s by pollution and the construction of the dams. In the Middle Ages V. formed a part of the trade route from N. Europe to Central Asia. On its banks rose the medieval states of Volga Bulgarians and Khazars, the Golden Horde, and the Kazan' and Astrakhan' khanates (qq.v.). The area between the upper V. and the Oka was the cradle of Muscovy (q.v.), which absorbed the whole of the V. basin in the 16th cent. See also under the names of the main V. cities.

Volga Bulgarians, Turkic-speaking medieval people who lived on the middle Volga and Kama, where they came in the 7th cent. from the steppes N. of the Sea of Azov. They originally belonged to the Hun confederation, then formed a separate state with Bulgar (q.v.) as cap.; they were under Khazar (see KHAZARS) suzerainty till the 10th cent., independent

till 1236, then under the suzerainty of the Golden Horde (q.v.) till the 15th cent. The state later existed as Kazan' Khanate (q.v.), Chuvashes (q.v.) and Volga Tatars are descendants of V. B.

Volga-Don Canal, artificial waterway connecting the Volga near Stalingrad with the Don. It was built 1947-52, largely by forced labour. Length 63 m. The first attempt at the construction of such a canal was made in 1569 by the Turks, and constant plans were made for it from the time of Peter the Great.

Volga German Republic was formed in 1918 as an Autonomous Workers' Commune, and transformed into an Autonomous Rep. in 1924. Over a half of the pop. were Volga Germans, descendants of colonists from Germany who settled on both banks of the lower Volga near Saratov under Catherine II in the 1760s. After the Ger. invasion of Russia in 1941 the V. G. R. was abolished by a decree of the Soviet Gov. and its Ger. inhab. deported to W. Siberia. The 1957 decree on rehabilitation of the deported peoples did not include the Volga Germans. See W. Kolarz, *Russia and Her Colonies*, 1952.

Volga-Urals Oil Area (formerly called the **Second Baku**), main oil-producing area in the U.S.S.R., situated between the middle Volga and the Ural Mts. Oil extraction began in the 1930s, and by 1955 production was more than double that of the old Baku oilfields. The main centre is the Tatar-Bashkir oilfields.

Volhynia (Russian and Ukrainian Volyn'): 1. Area in NW. Ukraine comprising the V., Rovno, and Zhitomir Oblasts, with the Poles'ye (q.v.) lowland in the N. and the Volhynia-Podolia upland in the S. From the 9th cent. V. belonged to the Kievan State (see KIEVAN RUSSIA), from 988 as a principality, later becoming independent; it was fused with Galicia 1199-1340 (see KINGDOM OF GALICIA AND V.), and from the mid-14th cent. was Lithuanian. It became Polish in 1569, Russian in 1793-5, again partly Polish 1919-39, and was occupied by the Germans in 1918 and 1941.

2. The westernmost Oblast of the above, adjacent to the Polish border. Grain and potatoes are grown, cattle and hogs raised, and there is bee-keeping; there are also food and timber industries. The prin. tns are Lutsk, Kovel'. Area 7700 sq. m.; pop. (1956) 890,000, mostly Ukrainians (before the Second World War also Jews and Poles).

Volition, see WILL.

Volkhov, riv. in NW. Russia, flowing from Lake Il'men' N. into Lake Ladoga. Length 130 m. Novgorod stands on the V., which in the Middle Ages was part of the trade route from Scandinavia to Byzantium.

Volksrust, centre of an agric. dist., close to the N. boundary of the Transvaal, 175 m. SE. of Johannesburg. Here in 1904 Gandhi was convicted for breaking a law excluding Asiatic traders. Pop. (whites) 3500; (Bantus) 3145; (others) 167.

Volkssturm, force similar to the Brit. Home Guard, raised by the Germans as a last line of defence in the winter of 1944-5. The V. consisted of virtually all able-bodied Germans not in the armed forces, the term 'able-bodied' being very liberally interpreted.

Volley Ball is a form of hand tennis invented in the U.S.A. as a gymnasium game during the 1890s and popularised throughout Europe by the Y.M.C.A. It is gradually establishing itself in Britain. The game consists in banging the ball over an 8-ft net with the hands, the aim being to force the ball on to the ground in the opponents' court or to induce them to hit into the net or out of play. Only the serving side scores, service changing as soon as the serving side makes an error or commits a fault. The first team to reach 15 points wins. The 6 players of each team are ranged 3 at the net, 3 at the rear of their court, the right back serving. At each service change the players of a team rotate one place clockwise. Each team is allowed 3 successive hits, but no player may hit twice consecutively, hold on to or throw the ball, touch the net, reach into his opponents' court, or strike the ball from below knee level. The court is 60 ft by 30 ft, and the ball, about the size of a football, 12 oz in weight. The game can, of course, be played by fewer players on a smaller court.

Volos, seaport of Thessaly, Greece, on the Gulf of V. As the outlet for the agric. produce and chrome of Thessaly it expanded rapidly after annexation of the latter to Greece in 1881. It is now Greece's fourth largest port. It is the seat of a metropolitan. Pop. 51,100.

Vologda: 1. Oblast in the N. of European Russia, stretching from Lake Onega and Rybinsk Reservoir to N. Dvina riv. It is a rolling plain, half covered with coniferous forests. There are peat deposits. Area 56,900 sq. m.; pop. c. 1,300,000, mostly Russian. It has dairy farming, flax growing, and linen milling, lumbering, paper milling, woodworking, and metalworking industries; there are also old crafts (V. lace). The prin. tns are V., Cherepovets, Velikiy Ustyug. It was colonised by Novgorod in the 11th cent., and was Muscovite by 1462. It is an area of banishment.

2. Cap., economic and cultural centre of the above, on Moscow-Archangel and Leningrad-Perm' railways. It has engineering (shipbuilding, timber machinery), linen milling, and dairy industries, and a large paper plant at Sokol near by. There is an institute of dairying, and many architectural monuments of the 16th-early 19th cents. Pop. (1956) 127,000 (1914, 45,000). V. has been known since 1147, became Muscovite in 1397, and was an important trading point on the route to Siberia and W. Europe in the 15th-early 18th cents.

Volsci, anc. It. people of E. Latium, akin to the Oscans and Umbrians, dwelling on both sides of the Liris down to the Tyrrhenian Sea. They were at war with the Romans in the 5th and 4th cents.

BC and often allies of the Aequi, but were subdued (338) and enjoyed Rom. citizenship by 304.

Volscian Dialect, see LATIN LANGUAGE AND LITERATURE.

Volsimensis, Lacus, see BOLSENA, LAKE OF.

Volsinii, see ORVIETO; and see BOLSENA. **Vol'sk**, tn in the Saratov Oblast, Russia, on the Volga, 80 m. NE. of Saratov. It has a large cement industry (since 1896). V. has been known since the 17th cent., and became a tn in 1780. Pop. (1956) 60,000.

Volstead Act (U.S.A.), see PROHIBITION. **Volsungs**, heroic race prominent in old Germanic and Norse sagas, descended from Volsung, grandson of Odin.

Volt, practical unit of electromotive force (e.m.f.), so called after Alessandro Volta (q.v.). In England it was defined by order in council (1894) as being equal to 10⁹ abs. units in the C.G.S. system. See UNITS, ELECTRICAL; METROLOGY.

Volta, Alessandro, Count (1745-1827) It. physicist b. Como, noted for his electrical discoveries. He invented the electrophorus, the electrical condenser (1782), and the hydrogen lamp (1777). His most noted discovery was, however, that of the development of electricity in metallic bodies (see *Philosophical Transactions*, 1793), leading to the invention of an electrical battery and later of the 'Voltaic' (or Galvanic) pile (see *Philosophical Transactions*, xc, 1800). He was awarded the Copley medal in 1791. Collections of his works were pub. in 1816 and 1918-29 and letters (*La Correspondence de Alessandro Volta et M. von Marum*), ed. by J. Boscha, in 1904. See lives by Z. Volta, 1875, and C. Volpatì, 1927.

Volta Redonda, tn in the state of Rio de Janeiro, Brazil. This new steel city stands on a broad bend (hence its name) of the R. Paraíba, at an altitude of 1847 ft, 70 m. along the railway from Rio to S. Paulo. In 1942 it was a vil., but now has the largest steelworks in S. America, and its pop. of 35,000 has every modern industrial and social amenity.

Voltaic Cell, see CELL, VOLTAIC.

Voltaire, Jean François Marie Arouet de (1694-1778), Fr. sceptic, dramatist, and historian, b. Paris, his father being an official in the Chambre des Comptes; educ. at the Jesuit Collège Louis le Grand. By the age of 18 his literary abilities had gained him entrance into the most brilliant intellectual circles. In 1715 he was banished, and on his return in 1717 imprisoned in the Bastille for writing a scurrilous lampoon on the regent. He had already written the tragedy *Œdipe*; and on his release in 1718 it was performed with brilliant success. He now assumed the pseudonym of 'Voltaire,' an anagram of Arouet le(j)une. In 1725, he was exiled to England. Here, as the protégé of Bolingbroke, he was welcomed in intellectual circles and became versed in Eng. politics, literature, and philosophy, the latter especially stimulating his scepticism. On his return to Paris (1729) he realised a fortune by speculation. In 1734, threatened with

arrest for his *Lettres Anglaises* (pub. without his authority), he retired with his mistress Madame du Châtelet to Cirey, Champagne. By this time he had already produced the *Lettres Philosophiques*, 1734, *Histoire de Charles XII*, 1731, and *L'Épître philosophique à Uranie*, 1732. At Cirey he wrote the plays *Alzire*, 1736, *Mérope*, 1743, *Mahomet*, 1741, the poetical satire *La Pucelle*, 1738, *Treatise on Metaphysics*, 1734, a thesis on Sir Isaac Newton, part of *Le Siècle de Louis XIV*, 1751, *Les Mœurs et l'Esprit des Nations*, 1756, *Zadig*, 1748, and other eastern tales. In 1746 he was elected to the Academy. Meanwhile, he had become

Harris's Picture Agency

STATUETTE OF VOLTAIRE BY JOSEPH ROSSET

the intimate correspondent of Frederick the Great and in 1750 visited Frederick at Berlin. Here he was entertained in great style, his chief occupation being to correct his patron's writings, but a disparity of temperament led to V.'s departure in 1753. The *Siècle de Louis XIV* was completed about this time. From 1755 onwards, V. spent his time at Ferney, near Geneva, beginning his anti-Christian writings in 1762. Other works of the period include *Candide*, 1759 (a novel serving as a vehicle for political and social satire), the *Dictionnaire Philosophique*, 1764, lists of Peter the Great, of India, and of Louis XV, the *Treatise on Toleration*, 1763, and *Irène*, 1778, the

last being performed with triumphant success on V.'s return to Paris in 1778.

V.'s contemporary fame rested chiefly upon his verse tragedies, whereas afterwards it is by his stories and histories that his fame has been principally supported. After his visit to England V. showed a new maturity, abandoning his early hedonism and becoming a true 'philosopher' of his age. Hist. he sought to treat scientifically as the story of the human mind and of the advance of civilisation. He strove passionately for justice; thus in the Calas case he devoted 3 years to establishing the innocence of a Protestant father executed in 1762 on the charge of murdering his son to prevent his joining the Catholic Church. He was a sworn enemy of theocracy and the coercive power of the Church, and in the *Essay on Toleration*, 1763, and the *Philosophic Dictionary*, 1764, of which the influence was immense, he took up the work with less disguise of irony than before. He was a deist, and always believed in a social morality which he considered common to all men in all ages. Later he developed a theory of a conscience implanted by God, and finally came to a belief in a God who is goodness itself, standing in some direct relationship to man. To the gift of a unique artistry in words V. added an incomparable industry and daring, and a life of service to mankind in the ideals of tolerance, justice, and freedom. He was one of the most voluminous letter writers who ever lived; some 12,000 to about 700 correspondents are extant and afford a wealth of information about the 18th cent. There are eds. of his works by P. A. Caron de Beaumarchais (70 vols.), 1785-89; M. Beuchot (72 vols.), 1829-40; Garnierfrères (52 vols.), 1883, 1877-85.

Leroy, *Histoire des idées sociales en France*, 1946; J. H. Brumfielt, *Voltaire, Historian*, 1957.

Voltameter, see ELECTROLYSIS.

Volterra, Vito (1860-1940), It. mathematician and physicist, b. Ancona. He was prof. of mechanics at Pisa and Turin in 1883, and held the chair of physics at Rome from 1900. His work on the theories of electricity led him to the study of differential equations, from which he arrived at the basis of functional analysis. This he adapted to the form of integral equations (Volterran).

Volterra (Rom. *Volterrae*, q.v.; Etruscan *Velathri*), It. tn in Tuscany (q.v.), 31 m. SE. of Pisa (q.v.). It has remains of Etruscan (see ETRURIA) and medieval walls. The fine cathedral dates from the 13th cent., and there are sev. other

medieval churches, as well as a 14th-15th-cent. fortress. The prin. industry is the making of vases and statuettes from locally found alabaster. Boric acid is obtained from springs in the dist. Pop. (tn) 12,800; (com.) 19,100.

Voltmeter, instrument for measuring voltage. See ELECTRIC METERS.

Volturno, riv. of Italy, rising in the Central Apennines (q.v.) and flowing SE., then WSW. past Capua (q.v.) to the Tyrrhenian Sea (q.v.) 20 m. NW. of Naples (q.v.). Its main trib. is the Calore. In 1860 Garibaldi (q.v.) defeated the Neapolitan army on its banks. Length 110 m. See ITALIAN FRONT, SECOND WORLD WAR CAMPAIGNS ON.

Volume and Capacity, Measures of, see METROLOGY.

Volumenometer, see SPECIFIC GRAVITY.

Volumetric Analysis, see ANALYSIS, CHEMICAL.

Voluntary Aid Detachments, see RED CROSS, THE.

Volunteer State, see TENNESSEE.

Volunteers. V. in Brit. armies were usually individuals serving at their own charges, sometimes with a view to acquiring military experience before taking a commission. When in the second half of the 18th cent. the militia (q.v.) was embodied for long periods at a time, many who would have been exempt from the military ballot or could have become so on payment of a fine chose instead to serve as V. and formed volunteer companies within the co. militia regiments. The first Volunteer Act of 1782 provided that if such companies or corps served outside their own tn or co. the rank and file would be paid, lodged, and rationed as regulars. Similar Acts in 1794, 1798, and 1802 confirmed this arrangement and also bound V. and yeomanry to act in support of the civil power in case of riots. The formation of such units had the effect of drawing off the more dependable elements from the militia, and legislation from 1804 onward was designed to discourage the enlistment of V. as such and to force them by economic and other means into the local militia. In some cases whole volunteer battalions transferred bodily into the local militia.

By 1816 all volunteer units had been disbanded. But between 1848 and 1859 distrust of France as the dominant continental power and the Duke of Wellington's warnings about the weakness of the regular forces gave rise to a V. movement among the more prosperous middle class, who formed numerous 'rifle volunteer' corps, most of which were grudgingly recognised by the gov. From 1859 to 1863 the War Office paid more attention to the movement, and the various corps were formed into battalions for administrative purposes. Many corps dating from this period still survive as Territorial units.

It is difficult to assess the military value of this force because none of the corps as such was ever in action; but in the S. African War of 1899 some provided companies which were attached to line regiments, and a new City of London

Imperial Volunteer regiment was formed. Large numbers of men from Volunteer Corps also joined the City Imperial Yeomanry, but the force remained too heterogeneous and lacked a central administration. In 1908 it was merged, with the Yeomanry, in the Territorial Force, later the Territorial Army (q.v.).

M. Ross

A SCOTTISH VOLUNTEER (c. 1887)

John Armstrong, a member of the Highland Company, 4th Lanarkshire Rifle Volunteers.

The volunteer title was revived during the First World War, when a home defence force of older men was raised. In the Second World War the Home Guard (q.v.) were at first known as Local Defence Volunteers. See C. Sebag-Montefiore, *The Volunteer Force*, 1909.

Volunteers, South Irish, see IRISH REPUBLICAN ARMY.

Völuspá ('The Sybil's Prophecy'), a cosmological and theological poem preserved in the *Edda* (q.v.), and by most critics believed to have been composed in Iceland in the latter part of the 10th cent., though there are some who think it more likely to be of Norwegian origin. It covers almost the whole hist. of the cosmos, incorporating N. mythology and combining with pagan tradition elements of a new Christian belief.

Volute (Lat. *voluta*, curl or roll), in architecture, a spiral scroll, used especially in capitals of the Ionic Order (see ORDERS OF ARCHITECTURE).

Volvox, genus of small flagellate protozoa, common in ponds, and resembling green algae.

Vomiting, reflex act by which the contents of the stomach are violently ejected through the cardiac orifice, up through the oesophagus, and out of the mouth. It is caused by the presence of irritating substances in the stomach, and under such circumstances is a protective effort of the organism. It may, however, be produced by a variety of different causes: by certain drugs; by diseases such as peritonitis, gastric ulcer, kidney disease, liver disease, intestinal obstruction, etc.; by certain visual, olfactory, or other sensations; or by reflex nervous stimuli, as in the 'morning sickness' of pregnancy, which originates in the pelvic region. The treatment of V. consists of: (1) removing the cause, if possible; (2) administration of drugs which exert a sedative action on the stomach and reduce the irritability of the 'vomiting centre' in the medulla of the brain.

Vondel, Joost van den (1587-1679), Dutch poet and dramatist, b. Cologne of Baptist parents. He settled in Amsterdam as a draper, but spent much of his time writing poems and plays. V. was deeply religious and became a Rom. Catholic in 1641. He wrote much religious satire and devotional poetry, and many of his subjects were based on Biblical episodes. His later work shows the influence of classical antiquity. His majestic, fervent style exercised much influence on Ger. drama of the late 17th and early 18th cents. V. is one of the greatest tragic dramatists of his time. His works include *Joseph in Egypt*, 1640, *Jephtha*, 1659, and *Noah*, 1667. See lives by A. J. Barnouw, 1925, and J. F. M. Sterck, 1926; and J. G. Bomhoff, *Vondel's Drama*, 1950.

Voodoo, religion practised by the Negro pop. of some W. Indian is. especially Haiti. It is an active faith based on the worship of the sun, water, and other natural forces, and its rites are derived from many sources, including the drinking of blood, eating of flesh, and black magic. See J. J. Williams, *Voodooes and Obeahs: places and phases of West Indian Witchcraft*, 1933; Z. N. Hurston, *Voodoo Gods*, 1939; M. Dren, *Divine Horsemen: the living gods of Haiti*, 1953.

Voortrekkers, name given to the groups comprising the Great Trek or Boer migration from Cape Colony and Natal between 1836 and 1848, during which time 1 in 10 of the Colony's pop. took part in an exodus by way of an organised attempt to seek a country away from the British in which they might develop along their own lines.

In 1836 the trek to the N. began. At first somewhat spasmodic, the movement of the V. soon became a great outward rush. The Great Trek was in fact a piecemeal long-drawn-out movement. All the V. took, roughly, the same direction, N.E., and N. from the Cape Colony towards what is now Rhodesia; but the trek parties varied in size, and each trek had its own leader, only joining in face of danger. The trekkers moved

across the drifts of the middle Orange R., and over the open country on each side of the Vaal, a dispersion which was made less hazardous towards the end of 1837 after the defeat of the Matabele of chieftain Mosalekatse (q.v.) by V. under Pieter Uys and Hendrik Potgieter. By the close of 1837 the Matabele were streaming across the Limpopo and the high veld had fallen to the V. by right of conquest. To complete their independence the Boer Rep. needed access to the sea, and Retief, leader of the greatest body of V., crossing the Drakensberg Mts, sought land from the Zulu chief Dingaan. He agreed to cede land to the Boers, and invited Retief to a feast, where he massacred Retief and his companions. The main body of Boers, warned of what had happened, successfully defended themselves. Subsequently Andries Pretorius, greatest of the Boer leaders, appeared on the scene with a force of 430 farmers and took the offensive against the Zulu army, estimated at more than 30,000, and on 16 Dec. 1838 gained a decisive victory. In 1840 the Boers proclaimed Natal a rep. In 1836 the only European settlement S. of the Orange riv. had been the Cape Colony; by 1848 Natal, the Orange Free State, and the Transvaal were estab. as under European control and open to W. civilisation, a notable achievement which in the main was the work of the V.

The prin. memorials to the V. are the V. monument on Voortrekkerhoogte near Pretoria, which was dedicated in 1949, and the V. museum at Pietermaritzburg.

See G. McC. Theal, *History of South Africa since 1795*, 1908; C. F. Richardson, *South Africa from the Great Trek to the Union*, 1909; C. Fuller, *Louis Trichard's Trek across the Drakensberg*, 1927; E. A. Walker, *The Great Trek*, 1934; M. Nathan, *The Voortrekkers of South Africa*, 1937; A. F. Hattersley, *Portrait of a Colony: the Story of Natal*, 1940.

Vorarlberg, prov. of W. Austria, bounded on the N. by Bavaria, W. by the Lake of Constance, the Rhine, and Liechtenstein, and S. by Switzerland. It is very mountainous and wooded, and is known for its beautiful scenery. Forestry, dairy-farming, and fruit-growing are the prin. occupations. There are some textile, metallurgical, and leather industries, and there are hydro-electric plants. Bregenz (q.v.) is the cap. Area 1004 sq. m.; pop. 193,650.

Vorkuta, tn in the N.E. of the Komi Autonomous Rep. (q.v.), centre of the Pechora coal basin and one of the main centres of forced labour in the U.S.S.R. It has a large coal-mining industry (since the 1930s) and is a local cultural centre. The tn largely consists of mining settlements and forced labour camps, and has a total pop. of sev. hundred thousand. The famous strike of V. camp inmates in 1953 was an important event in the political development of post-Stalin Russia. See J. Scholmer, *Vorkuta*, 1954.

Voronezh, 1. Oblast in Central Russia, S.E. of Moscow, traversed by the Don, which separates the Central Russian upland in the W. and the Oka-Don

lowland in the E. It has rich black-earth soil and a few oak forests. Area 12,300 sq. m.; pop. (1956) 1,897,000, Russian. Wheat, sunflowers, and sugar-beet are grown, and there is varied and intensive livestock breeding (Russian trotters originated here). It has engineering, chemical, and food industries. V. was unpopulated till the 16th cent. It was the scene of anti-Soviet guerilla warfare in 1919-22, and was partly occupied by the Germans in 1942-3.

2. Cap. of the above and main economic and cultural centre of the central black-earth region. It has varied engineering (agric. and food-industry equipment, excavators, diesel motors, etc.), chemical (synthetic rubber, oil-cracking), and food industries, and is an important railway junction. There is a univ. (fd. 1918 on the basis of evacuated Tartu Univ.) and an agric. institute (fd. 1913). Pop. (1956) 400,000 (1920, 90,000; 1923, 79,000; 1939, 327,000). V. was founded in 1586 as a Muscovite frontier fortress against the Tatars, was the industrial base (ship-building, etc.) of Peter the Great's Azov campaign in 1695-6, and became the prov. cap. in 1711; it has been an important commercial and cultural centre since the 1830s, and was the cap. of the central black-earth region 1928-34. Much fighting took place here during the Civil war (1919) and the Second World War (1942-3); during the latter it was greatly damaged.

Voronoff, Serge (1866-1951), Russian surgeon, b. Voronezh, and educ. in Paris, where, before the First World War, he was chief surgeon in the Russian Hospital. In 1917 he became chief surgeon in the Military Hospital. Afterwards director of the biological laboratory at the École des Hautes Études, later he became director of experimental surgery of the Station Physiologique, Collège de France. V. became celebrated for his experiments toward human rejuvenation by transference of reproductive glands (testes) from apes.

Voroshilov, Kliment Yefremovich (1881-), Russian Communist. He was a metal worker in Donbas (q.v.), joined the Russian Social Democratic Labour Party (q.v.) in 1903, belonged to its Bolshevik faction, and was active in underground work. After the seizure of power by the Bolsheviks in 1917 (see OCTOBER REVOLUTION) he helped to set up the Cheka (q.v.). During the civil war he distinguished himself both as a military and a political leader, and in 1921 became a member of the Communist Party's Central Committee. In the inner-party struggle after Lenin's death he took Stalin's side and became commissar for war and the navy in 1925 and member of the party's Politburo (q.v.) in 1926; Marshal of the Soviet Union since 1935. In 1940, after the Soviet-Finnish war, he was relieved of the post of commissar of defence, but appointed deputy prime minister. During the Second World War he was member of the State Defence Committee (q.v.), but failed as a field commander. In 1945-7 he headed the Soviet Control Commission in Hungary. After Stalin's death in 1953 he became Chairman

of the Presidium of the U.S.S.R. Supreme Soviet, i.e. the titular head of the State.

Voroshilov (re-named *Ussuriysk* in 1958), tn in the Maritime Kray of the Russian Far E., 70 m. N. of Vladivostok. It has soya-oil and sugar industries, and is a junction of the Trans-Siberian and Chinese E. railways. Founded in 1866, V. became a tn in 1898, and was cap. of the Ussuri Oblast 1933-43 (abolished). Pop. (1956) 101,000 (c. 1914, 52,000; 1926, 35,000).

Voroshilovgrad: 1. Oblast in E. Ukraine, comprising the central part of the Donets Basin (q.v.) and the ravined area on the l. b. of the Severskiy Donets, in the black earth steppe belt. It has large coal deposits (half anthracite). There are iron and steel, engineering, chemical, food, and light industries; wheat and sunflower are grown, mkt gardening is practised, and cattle and hogs are raised. The prin. tns are V., Kadiyevka, Voroshilovsk, Krasnyy Luch. The area was unpopulated until annexed by Russia and colonised after 1753 (see NEW RUSSIA). The first colonists were Serbian immigrants. Industrial development dates from the late 18th cent. The Stakhanov Movement (q.v.) originated here. During the Ger. occupation (1941-3) the underground youth organisation the 'Young Guard' (q.v.) in Krasnodon performed heroic deeds. Area 10,300 sq. m.; pop. (1956) 2,220,000, Russians and Ukrainians.

2. (1882-1935 Lugansk) Cap., economic and cultural centre of the above, the oldest industrial centre of the Donets Basin, with large engineering and metallurgical industries (locomotives, mining equipment, machine tools, automobile parts, building industry equipment, pipes). Known since the mid-18th cent., it became a tn in 1882, and prov. cap. in 1938. A cannon foundry was built in 1796 (the first experiments in Russia in the smelting of iron with coke took place in 1797); a large locomotive plant was built in 1900, and further rapid industrial development took place in the 1930s. Pop. (1956) 251,000 (3rd in Donets Basin; 1917, 60,000; 1939, 213,000). Again re-named Lugansk in 1958.

Voroshilovsk: 1. See STAVROPOL'.

2. (until 1931 Alchevsk) Tn in the Lugansk Oblast (Ukraine), 26 m. SW. of Lugansk. It is a major centre of the metallurgical and coking industries, founded in 1895 as a settlement for workers of the iron and steel plant. Pop. (1939) 55,000 (1926, 16,000).

Vörösmarty, Mihály (1800-55), Hungarian poet, b. Kápolnásnyék. He became famous for his epic *The Flight of Zala*, 1825, but his reputation rests more securely on his lyric poetry, which includes *The Song of Föl and Szédel*. He was a considerable critic and ed. the review *Tudományos gyűjtemény*, 1821-32. He d. in Pest.

Vortex, term used in hydrodynamics for a motion in a fluid in which the individual particles are conceived as having a circular or rotatory motion. Vortex motion is represented by a straight-line vector perpendicular to the plane of rotation,

and of length proportional to the vorticity. It can be shown that such a line or filament cannot start or end in the interior of the fluid, and that a vortex always consists of the same elements of liquid. Kelvin adopted this idea in his theory of matter as vortices in motion in the all-pervading ether. See HYDROKINETICS.

Vorticism, see LEWIS, P. WYNDHAM.

Vortigern, or Wyrtegeorn (fl. 449), Brit. king who, according to Bede, invited Hengist and Horsa (q.v.) to come to England, to help him against the Picts. They later quarrelled with V. and overran Kent.

Vosges, frontier dept in E. France, sited in eastward by the V. Mts, the highest Fr. peak being Hohneck (4482 ft). The Moselle and Meuse have the largest drainage areas. Coal, iron, copper, and lead are found, and there are mineral springs. Oats, wheat, and the vine are cultivated, and cheese-making and cattle-grazing are important. Large forest tracts account for the wood-working industries, but textile goods are the chief manuf. The prin. tns are Épinal (the cap.), St-Dié, and Neufchâteau (qq.v.). Area 2303 sq. m.; pop. 373,000.

Vosges Mountains (Lat. *Vogesus*), range of mts along the W. bank of the Rhine, closely resembling in many respects the Black Forest along the E. They stretch for 150 m. from Basel to Mainz, through Lorraine and Alsace. The Ballon de Guebwiller is the culminating point (4680 ft). Silver, copper, coal, lead, and rock salt are mined, and vines grown on the lower slopes.

Vostitza, see AEGIUM.

Votiaks, or Votyaks, see UDMURTS.

Votkinsk, tn in the Udmurt Autonomous Rep., Russia, 32 m. NE. of Izhevsk. It has a large engineering plant. Founded in 1759 as an ironworks, it has become a tn since the 1930s. In 1918 V. workers overthrew the Communists and formed V. div., which fought on the White side. Pop. (1956) 54,000 (1897, 21,000), mostly Russian.

Vouet, Simon (1590–1649), Fr. historical painter, b. Paris. V. accompanied the Fr. ambas. to Constantinople (1611), and went to Italy (1612), studying the works of Paul Veronese at Venice and of Caravaggio and Guido Reni at Rome. Louis XIII recalled him to France (1627) as his prin. painter, and gave him work in the Luxembourg, Louvre, and St Germain palaces. His 'Virgin and Child' is in the Ashmolean Museum, Oxford. In his studio many of the great decorative painters of the age of Louis XIV, e.g. Le Brun (q.v.), were trained.

Voussoir, one of the stones (usually wedge-shaped) of an arch (see ARCH).

Vowels, see ALPHABET; PHONETICS; VOCALISATION.

Voysey, Charles (1828–1912), founder of the Theistic Church; b. London, he was ordained in the Church of England, but his views became increasingly unorthodox. In 1863 he was compelled to leave St Mark's, Whitechapel, because he denied eternal punishment. Later he founded

the Church of which he remained the head until his death.

Voysey, Charles Francis Annesley (1851–1941), architect and decorative designer, b. Hessele, Yorks; was trained in London. From c. 1890 to c. 1914 he had an international reputation as a designer of houses of extreme simplicity, in contrast to mid-Victorian pretentiousness. These included sev. near Windermere, one near Sandgate (for H. G. Wells), and his own charming home—'The Orchard'—at Chorley Wood, Herts. He also designed stained glass, wallpapers, textile fabrics, and furniture.

Vrachori, or Vrachochori, see AGRINION.

Vratsa, tn of NW. Bulgaria, cap. of V. prov., on the N. slope of the V. Mts, 36 m. NNE. of Sofia (q.v.). It has a trade in wine and agric. produce, and has textile and steel industries. Pop. 20,000.

Vrbas, see SAVA.

Vrochlábí (Ger. Hohenelbe), Czechoslovak tn in the region of Liberec (q.v.), near the source of the Labe (see ELBE). It has textile manufs. Pop. 8600.

Vriendt, Frans and Cornelis de, see FLORIS, FRANS.

Vries, Hugo de, see DE VRIES.

Vriesland, see FRIESLAND.

Vrsac (Hungarian Versecz), tn in Serbia, Yugoslavia, in the autonomous prov. of Vojvodina (q.v.). It has a fine cathedral, and many auct. buildings, is a mkt tn, and is known for its wines and brandy. Pop. 26,750.

Vryburg, cap. of V. dist., S. Africa, 126 m. from Kimberley, Cape Prov., was the cap. of the short-lived Stellaland (q.v.) Rep. It is a livestock centre, and has a butter factory and a soap works. V. is the starting-point of the Rhodesian railway system, which extends through the Bechuanaland Protectorate and S. and N. Rhodesia to the Belgian Congo. Pop.: (whites) 3774; (Bantu) 4528; (Coloureds) 709.

Vryheid (old Dutch, 'freedom'), tn of N. Natal, SE. Africa, 133 m. from Pietermaritzburg. It is the cap. of V. dist., rich in coal (at Hlobane), copper, gold, and other minerals. Once part of Zululand, it was ceded to the Boers under Meyer, proclaimed an independent 'New Republic' (1884), incorporated with the Transvaal, and annexed to Natal in 1903. Pop.: (whites) 4200; (Bantu) 4452; (others) 227.

Vulcan, see HEPHAESTUS.

Vulcan, hypothetical planet. In 1859 Leverrier suggested that perturbations of Mercury's orbit, which were then unaccounted for, were caused by an unknown planet revolving nearer the sun, but no discovery has resulted from any observations, and the existence of V. is discredited. Einstein's theory has explained the discrepancy in the motion of the perihelion of Mercury's orbit.

Vulcanisation, see RUBBER.

Vulcano, see LIPARI ISLANDS.

Vulgate (Lat. *Vulgata*, 'commonly used'), name sometimes given to the Septuagint (q.v.), but principally to the Lat. version of the Bible prepared by St Jerome in the latter part of the 4th cent. He revised the N.T. at the invitation of Pope Damasus, and this part

of the V. was little more than a revision of the existing text; the O.T. version was an independent trans. from the Heb. into Lat. It was declared authentic by the Council of Trent for use in the Rom. Church. The decision of Trent did not concern critical but doctrinal accuracy, guaranteeing the substantial conformity of the V. with the original texts and its authority in matters of faith and morals.

St Jerome's trans. became corrupted, and various recensions became necessary, one by Alcuin in the early 9th cent., another by Lanfranc (1089). The invention of printing led to the issue about 1456 of the Mazarin Bible printed at Mainz by Gutenberg and Fust. A revision by Toletus at the instance of Pope Clement III was issued in 1592 and is the authorised ed. in the Rom. Church. In 1907 Pope St Pius X appointed a commission to prepare a new official version. Wycliffe's version of the Bible was made from the V., and thus that version has affected the A.V. as it has those in all the languages of Europe. The Eng. trans. of the V., known as the Douai version, was pub. in 1582 (N.T.) and 1609 (O.T.), with subsequent revisions in 1749-50 and 1881-5. A new trans. by Monsignor R. A. Knox of the N.T. came out in 1943, and of the O.T. in 1948-9.

Vulpera-Tarasp, *see* TARASP.

Maslowski and Goodpaster
BLACK VULTURE

Vulture, bird with a strong, hooked beak, and repulsive in appearance and habits, but of considerable value on account of its food being mainly composed of carrion, which it discovers by its abnormally keen senses of sight and smell. V.s cannot, like eagles, carry food with their feet and claws, but feed their young by regurgitating from the crop, as pigeons do. They are classified in 2 families, the Accipitridae and the Cathartidae. The former include the griffon V. (*Gyps fulvus*), which occasionally reaches Britain, and the Egyptian V. (*Neophron per-*

nopterus). Among the Cathartidae are some birds of great size and powerful flight, such as the condor (*Vultur gryphus*), the black V. (*Catharista atratus*), and the Turkey buzzards (*Cathartes*).

Vyatka, *see* KIROV.

Vyborg (Finnish *Vilpuri*, Swedish *Viborg*), tn in the Leningrad Oblast of NW. Russia (since 1944), on the Gulf of Finland, 75 m. NW. of Leningrad. It is an important industrial (agric. machinery) and transportation centre (seaport, 5 railway lines, Salma canal). Founded in 1293 as a castle, it became a tn in 1403, and was an important fortress on the Russian frontier. It became Russian in 1710 (prov. cap.), but was included in Finland in 1811. V. suffered greatly during the Second World War. It was ceded to the U.S.S.R. in 1940 (included in the Karelo-Finnish Rep.), but was again Finnish from 1941 to 1944. Pop. (1956) 51,000 (1939, 73,000); before the war Finns and Swedes, now Russians.

Vyrnwy, artificial lake in Montgomeryshire, Wales. Made in 1890-1905 in order to give a water supply to Liverpool. The name is that of a trib. of the Severn used to fill the lake, which is 5 m. in length. It is 68 m. from Liverpool.

Vyshnitskiy, *Andrey Yanuaryevich* (1883-1955), Russian lawyer and politician of Polish descent. He joined the Russian Social Democratic Labour party (q.v.) in 1902, and after its split joined the Mensheviks (q.v.) and took an active part in the revolution of 1905 (q.v.). After the Bolsheviks estab. their power in Russia V. joined the victors (*see* COMMUNIST PARTY OF THE SOVIET UNION) in 1920. From 1921 he was a lecturer at Moscow Univ., then prof. and rector. From 1928 to 1931 he was head of the dept of higher education at the commissariat of education. In 1931 he became procurator of the Russian Federal Rep., in 1935 of the U.S.S.R., and in 1939 deputy chairman of the council of people's commissars. V. was the most prominent exponent of Stalinism (q.v.) in legal theory and practice. He played a leading role in the Moscow show trials of 1928-38—as chairman of the court in the Shakhty (q.v.) and Industrial party (q.v.) trials, and as public prosecutor in the Metro-Vickers (1933) trial and in the 3 main trials of the Great Purge (q.v.). From 1937 V. was dictator in Soviet legal science, to which he contributed the theory that confession by the accused was a sufficient proof of his guilt. From 1940 to 1949 and again 1953-5 he was deputy minister of foreign affairs under Molotov, and from 1949 to 1953 minister. In this capacity he had no influence on policy, being merely the mouthpiece of Stalin and the Politburo (q.v.).

Vyshnii Volochok, *see* VYSHNIY VOLOCHOK.

Vyshniy Volochok, tn in the Kalinin Oblast of Central Russia, 74 m. NW. of Kalinin. It has textile and glass industries (since 19th cent.). Pop. (1956) 60,000. It is an old commercial centre, and was particularly important in 1709-1810, when it stood on the only artificial waterway between the Baltic Sea and the Volga.

W

W, twenty-third letter of the Eng. alphabet. As a letter it appeared only in the 11th cent. Its phonetic value in English is that of a 'consonantal *u*', but its name 'double *u*' comes from the fact that when it was created as a separate sign it was formed as a differentiation of *V* (which, at the time, had not only the value of *v* but also of *u*): *W*. The N.-Semitic *waw* and, its descendant, the Gk *digamma* (see *F*) probably had a similar phonetic value to that of the Eng. *w*. According to some scholars also the Lat. *V*, representing the consonantal *v* and the vocalle *u* (see *V*), was pronounced like our modern *w*. The A.-S. alphabet represented the sound *w* by the letter *wyn* (*þ*). The Germans have no sound like the Eng. *w* and employ the letter *w* for the sound *ö*. Nor have the Slavonic languages a *w*-sound; in consequence, the Czech alphabet has no *w*, and the Polish alphabet has a *w* which is pronounced like the Eng. *v*. The Polish *w* sound is expressed by the sign *ó*. In English, the letter *w* is capable of performing the functions both of consonant (as in *war*, *with*, *wine*) and vowel (as in *law* or *few*). In Welsh names it is generally a vowel (*Bethws-y-Coed* or *Brach-y-pwll*). The French use *ou* as a substitute, and *Gu* for proper names (Guillaume for William). The Sp. use mostly *hu* (Huanuco, Huelva), but sometimes *gu* (Guatemala, Guadalquivir). See ALPHABET.

Waad, see *VAD*.

Waag, see *VAH*.

Waal, riv. of the Netherlands. The Rhine divides, 9 m. E. of Nijmegen, into the Neder Rijn and the *W.*, the latter becoming the Merwede at its confluence with the Meuse 2 m. E. of Gorinchem. Nijmegen, Tiel, and Zalt-Bommel are the prin. tns on the *W*.

Waalwijk (Waalwyk), tn in the prov. of N. Brabant, Netherlands, 10 m. W. of 's Hertogenbosch. There are manufs. of shoes, chemicals, and machinery. Pop. 16,040.

Wabash, riv., 475 m. long, trib. of the Ohio, rising in Ohio, flowing across Indiana and eventually forming the boundary between Indiana and Illinois. It was hydro-electric developments and barge traffic.

Wabrzeźno (Ger. Briesen), tn of Poland, in Bydgoszcz prov., 38 m. ENE. of Bydgoszcz (q.v.). It is a mrkt tn, and has manufs. of bricks and furniture. Pop. 10,000.

Wace, Robert (c. 1115-c. 1183), Anglo-Norman poet, b. Jersey. His 2 most important works are his historical poems, written in octosyllabic verse. The first is the *Roman de Brut*, a history of the Britons, based on Geoffrey of Monmouth's *Historia regum britanniae*; the second is the *Roman de Rou*, based on Dudo of St Quentin and Guillaume de Jumièges. *W.* was the first to mention, in his *Brut*,

King Arthur and the knights of the Round Table, and his influence on medieval Arthurian romance was immense. See M. Pelan, *L'influence du Brut de Wace*, 1931.

Wachau, the valley of the Danube in Austria between Ybbs and Krems (q.q.v.). It is extremely picturesque, with crags of rock, woods, vineyards, churches, and castles. Length 40 m.

'Wacht am Rhein, Die' ('The Watch on the Rhine'), Ger. patriotic song, words by Max Schneckenburger (c. 1840), music composed by Carl Wilhelm in 1854.

Waco (so called from the Waco or Hueco Indians), cap. of McLennan co., Texas, U.S.A., on the Brazos, 186 m. by rail NW. of Houston. It is a univ. city and an important cotton mrkt. Pop. 84,700.

Wadal, dist. of Fr. Equatorial Africa, the NE. part of Chad Ter., accepted the Fr. Protectorate in 1903; since 1909 it has been part of Fr. Equatorial Africa. *W.* is bounded on the NE. by Darfur, and on the N. is the Sahara Desert. The climate is hot and dry. The cap. is Abeshr, which is the head of caravan routes connecting it to Benghazi, on the coast of Tripoli, and Brit. W. Africa. *W.* was once notorious for its trade in eunuchs and slaves. Cattle and camels are reared; gazelles, baboons, ostriches, elephants, and lions are found in the dist. Area 170,000 sq. m.; pop. about 230,000.

Waddell, Helen Jane (1889-), Brit. scholar, b. Tokyo, of Irish parents. Educ. at Victoria College and Queen's Univ., Belfast, she was a lecturer in Latin at Somerville College, Oxford, from 1920 to 1922, and after that a Fellow of Lady Margaret Hall. Her trans. include *Lyrics from the Chinese*, 1913, and *Medieval Latin Lyrics*, 1929. *The Wandering Scholars*, 1927, is an account of the Latin poets of the later Middle Ages, and she also pub. *The Desert Fathers*, 1936, and *Poetry in the Dark Ages*, 1948. In 1927 she was awarded the A. C. Benson Medal of the Royal Society of Literature.

Wade, George Edward, see *ROBEY, SIR GEORGE*.

Wadebridge, mrkt tn of N. Cornwall, England, 6 m. from the coast, and at the head of the Camel estuary. A bridge of 15 arches dating from 1485 spans the riv. at *W.* *W.* is an agric. centre, and has a foundry. Pop. 3200.

Wadham College, Oxford, founded in 1612 by Nicholas Wadham of Merfield, in Somersetshire. It was built upon the site of an auct house of the Augustinian Friars, and in this college the Royal Society had its origin, and held its sittings from 1652 to 1659 in the great room over the gateway.

Wadi, or *Wady*, Arabic word (*wādī*) signifying a riv., a riv.-course, ravine, or valley. True *W.s* are riv.-courses dry except for a brief period in the rainy season; it is also of frequent occurrence in

the names of places, e.g. Wadi Halfa in the Sudan. In Spain, *wad* has been transformed into *guad*, e.g. Wādī 'I-hijārah ('river of the stones') has become Guadalajara.

Wadi-Asch, see GUADIX.

Wadi-el-Kebir, see GUADALQUIVIR.

Wadi Halfa, Halfa Prov., in Sudan. It is the frontier town of the N. Provs. and the N. gateway of the Sudan. The Sudan Railway across the Nubian desert from W. H. to Abu Hamad was begun in 1897; it now extends, via Atbara, to El Obeid. Halfa prov. extends from the Egyptian frontier to the third cataract. The people are Nubians and still retain their own language, although the traders understand Arabic. The inhab. of Halfa depend almost entirely on the Nile for a livelihood. For a large part of its course through the N. part of Berber and most of Halfa the Nile is shut in by barren rocky hills, beyond which there is nothing but desert. Rainfall is scarcely measurable. See Sir H. Macmichael, *The Anglo-Egyptian Sudan*, 1934; J. A. de C. Hamilton (ed.), *The Anglo-Egyptian Sudan from within*, 1935.

Wading-bird, see COURLAN.

Wadsworth, Edward Alexander (1889-1949), artist, b. Cleckheaton, and educ. at Fettes and the Slade. He served in the R.N.V.R. during the First World War. He became A.R.A. in 1943. He was primarily a painter of abstract forms and objects, and not a figure-painter; his paintings of industrial scenes and nautical subjects are his most outstanding. He worked much in tempera and pub. (1926) a book of copper engravings *The Sailing Ships and Barges of the W. Mediterranean and Adriatic Seas*.

Wager of Battle, see TRIAL BY COMBAT.

Wager of Law, name by which the mode of proof by compurgation continued to be employed occasionally in actions for debt until finally abolished in 1833. Compurgation was the alternative to trial by ordeal. See also COMPURGATOR.

Wages, price of labour, or that part of wealth (q.v.) which is given in exchange for labour. The ultimate source of W. as of profits (q.v.) is the value of that which capital and labour jointly produce, but in practice W. are paid in the first instance out of capital. Competition between employers tends to raise W., between labourers to lower them. The results of competition are checked by: (1) trade unions (q.v.), and (2) Minimum Wage Acts. Under the Coal Mines (Minimum Wage) Act, 1912, dist. boards were set up to settle the rate of W. in different coal areas, and the effect generally of such Acts as this, and of the Minimum Wages Regulations under the Trade Boards Acts, 1909 and 1913, was that many workmen or labourers obtained increased rates. The outbreak of the First World War led to the postponement of further legislation to regularise W., and it was not until 1918 that the Trade Boards (q.v.) Acts of 1909 and 1913 were extended to other trades, securing a minimum wage to many millions of workers who up till then had been outside

the scope of the protection afforded by the Acts. But the fixing of a mere minimum wage in depressed trades offered no solution to the W. problem as affected by the high cost of living after 1918, and in that year the Wages (Temporary Regulation) Act became law. It had the effect of fixing as minima W. in force at the time of its passing with the provision for adjustment by an Interim Court of Arbitration. The Act was passed for 6 months only, but it was renewed in 1919, and by the Industrial Courts Act of the same year certain of its provisions were still further extended.

Since then state legislation has provided a permanent safeguard against the exploiting of workers in the trades concerned by the further extension of the facilities of the Trade Boards Acts.

Wage-fixing Systems. As among different employments, the causes that produce different rates of W. were stated by Adam Smith (q.v.) as: (1) the agreeableness or otherwise of the nature of the employment; (2) the difficulty or otherwise, and the expense or cheapness involved in apprenticeship; (3) the constancy of employment; (4) the degree of trust necessarily reposed in the workman; and (5) the chances of success in the given trade. There are various methods of fixing W., the variety being due to a corresponding variety in the demands and character of the employment. Broadly speaking, the workers' output will be larger the more nearly the method of payment is adjusted to individual results. In this connection a system of piece W. (see PIECEWORK) is a common form of remuneration. Under this plan workmen, especially where machinery is used, are paid exactly in proportion to output. The system has been for some time practised in coal mining, textile industries, and boot and shoe trades, where conditions make such a system satisfactory; but in such industries as engineering, wood-working, and building a time W. system has been found to be more effective, since the different kinds of machinery and material besides varying quality of work, make a flat rate of piece W. difficult if not impossible to fix. Such time W. are usually paid by the hr. Another method of wage-fixing is known as task W., and is being adopted where practicable under modern factory economy. Experiments are made to determine what output a first-class workman can produce in a given time. The output thus defined is called a standard task, and the W. system is adjusted to encourage the worker to maintain the level of efficiency set by it. The plan is in operation in many of the mass-production works of the U.S.A. The success of the plan depends upon the scrupulousness of the employer, since there is a danger of exploitation, and the strong position of trade unionism in this country appears at present to make it improbable that the system will be widely adopted. (On the influence of protection on wages, see PROTECTION and TARIFFS; and on the connection between W. and prices, see PRICE.)

Wage Rates in Relation to the Cost of Living. In 1908-9 W. were depressed, but thereafter began to rise, the most marked increase being in 1912; the upward tendency was steadily maintained until the outbreak of the First World War. The increased cost of living caused by the War resulted in a rapid rise in W., though they did not keep pace with the cost of living, and wage rates rose to their peak during the industrial boom of 1920, when a reaction took place. After 1924 money wage rates, according to the Ministry of Labour statistics, remained practically unchanged at 170-175 per cent of the pre-War level, and Prof. Bowley's index of earnings showed a fall of about 1 per cent from 1924 to 1930. During the 1931 world-wide financial crisis wage rates fell considerably, and the continuance of the trade depression resulted in a further reduction.

After the Second World War wage rates climbed more or less in parallel with retail prices, until in 1956 both were more than half as much again as in 1947. Real wage rates were thus hardly changed. But the real value of *earnings* rose because of overtime and bonuses; there were also increased welfare and 'fringe' benefits.

Adjustment of Wages by Cost-of-living Sliding Scales. In a number of industries (including mining, glass, iron and steel, textile, clothing, food, drink and tobacco, woodworking, and building) collective agreements between organisations of employers and workpeople are in operation providing for the automatic adjustment of wage rates, on a pre-arranged basis, in accordance with the changes in the average level of working-class cost of living. This method of regulating wages, first introduced in certain industries towards the end of the First World War, was gradually extended to a number of other industries and services until the total number of workpeople covered by such arrangements had risen, by the year 1922, to about 3,000,000. In some industries and services these arrangements were subsequently suspended or abandoned, and by 1939 the number of people covered had fallen to about 1,500,000. During the Second World War there was a further extension of such agreements to some other important industries, including coal mining, pig-iron manuf., iron and steel manuf., cotton spinning, and weaving, and although in other industries sliding scales which were in operation at the beginning of the War were suspended or abandoned, the number of people covered had risen by June 1944 to about 2,500,000. After the War the scales in some important industries (cotton, wool, textile bleaching, etc.) were abandoned and comparatively few new scales were introduced; but by 1956 the number of employees whose wage rates were still subject to periodical adjustments under arrangements of this kind was nearly 2,500,000, or about the same as in mid-1944. Both during and after the War, increases in wage rates in these industries had not been restricted to those

taking effect under the cost-of-living sliding scale agreements, most of the workers having received additional increases in wage rates, or war bonuses, either by direct agreement between the employers' and workers' organisations or by arbitrators' awards (see *WAGES COUNCILS*). In some of the industries the terms of the sliding scale agreements have been altered so as to provide for an immediate increase, additional to the amount warranted by movements in the cost-of-living index figure (see *STANDARD OF LIVING*).

Guaranteed Annual Wage. The International Labour Conference at San Francisco in 1948 adopted a resolution on the desirability of extending the application of the principle of the guaranteed wage to wage earners who were liable to be laid off work temporarily. In Great Britain the principle of continuity of employment over a period has received little attention from the trade-union movement, but the 'annual wage' has in recent years become a major objective of Amer. labour. The term is included by the Americans in the more general expression 'a guaranteed wage,' which they use to mean a minimum guarantee over a period, not merely for a week, as in Great Britain. Before the Second World War the flour-milling industry and a few large concerns like Lever Brothers and some of the cocoa firms introduced schemes assuring their workers continuity of wages or employment, for a quarter of a year or longer, by supplementing unemployment benefit. In post-war conditions of full employment and labour shortage it was considered undesirable for the gov. to allow unemployment benefit to be used for this purpose, and changes under the new National Insurance Act forced those concerned to consider what new arrangements could be made. A guaranteed wage plan, as defined in the Latimer report, presented to the president of the U.S.A. in 1947, was a plan under which an employer guarantees to all or a defined unit or group of his employees a wage or employment for at least 3 months. In the case of an ann. wage the guarantee is for 12 months. The Latimer report favoured the principle of co-ordinating guarantees with unemployment insurance, as was done by the Brit. concerns above mentioned, but it has not hitherto been legally possible in the U.S.A. In 1955-6 transitional unemployment caused by difficulties in exporting and credit restriction increased attention to discussion of guaranteed wages, severance pay, and compensation for workers displaced by automation. See also *LABOUR, WAGES AND HORNS OF*.

See B. G. de Montgomery, *British and Continental Labour Policy*, 1922; H. Clay, *Problem of Industrial Relations*, 1929; A. C. Pigou, *Economics of Welfare*, 1929; *Report of Committee on Finance and Industry*, 1931; R. Dickinson, *Wages and Wealth*, 1931; P. H. Douglas, *Theory of Wages*, 1934; M. Dobb, *Wages*, 1946; T. E. M. McKitterick, *Wages Policy*, 1949.

Wages Councils, statutory bodies set up under the W. O. Act 1945. Replaced

the Trade Boards (q.v.). By the terms of the Act the minister of labour is empowered to establish a council in any industry in which he considers adequate wage-negotiating machinery is lacking or when advised by a commission of inquiry that the existing machinery is insufficient. The function of the councils is to fix minimum rates of pay for the industry concerned, and such rates when approved by the minister are enforceable at law. Councils may also make recommendations to the minister on conditions of work and recruitment. The power of the W. C. is limited by the strength of the demand for the products or services of the industry, and by the capacity of the employers to replace labour by machinery. For example, the Wages Council established in the catering industry may have harmed catering workers as a whole by pushing catering wages up too high and making it difficult for the industry to supply service when the customer wanted it. The industry is made up of many small units: restaurants, cafés, inns, hotels, and bars of all kinds, and the work cannot be done in 'factory time.' The high rates of wages fixed for overtime have caused some catering establishments to close down altogether at some parts of the day. High wages have encouraged catering employers to develop methods of self-service, or to replace men by women and adults by young workers.

Wagga Wagga, city of New S. Wales, Australia, on the Murrumbidgee R., approximately midway between Sydney and Melbourne, seat of a Rom. Catholic bishopric. It is the centre of a rich agricultural and pastoral region. Pop. 19,640.

Wagner, Richard (1813-83), Ger. composer, dramatist, and essayist, b. Leipzig. He had an overture performed in 1830, but it was crude and badly received, and he then studied composition under Weinlig, cantor at the Thomasschule. In 1833 he became conductor of the opera at Magdeburg. By then he had already composed 2 operas, *Die Feen* (the Fairies) and *Das Liebesverbot* (Love's Interdict, based on *Measure for Measure*). In 1836 he married Minna Planer, an actress at Königsberg, where he had gone in search of employment. From Königsberg he went to Riga, where he was made musical director at the new theatre. In 1839 he went to Paris by way of London with his unfinished opera *Rienzi*, a remarkable achievement for so young a man, but showing the influence of Meyerbeer and Spontini. He lived in Paris in wretched poverty until 1842, when *Rienzi* was produced at Dresden, and he was appointed second conductor at the court opera there. *Rienzi* was followed by *Der fliegende Holländer* (The Flying Dutchman), which did not meet with the same approval, and 2 years later, in 1845, by *Tannhäuser*. In 1848 he finished *Lohengrin*; but in the following year, W., who had involved himself in the political agitation of the time, was forced to quit Saxony. He escaped to Zürich, where he remained till 1859. *Der Ring des Nibelungen*, 1853-74, his great tetralogy,

was begun at this time, but before he completed it he turned aside to write *Tristan und Isolde*, under the influence of Mathilde Wesendonk, with whom he fell deeply in love. A breach with Minna followed, and in 1861 a version of *Tannhäuser* made for the Paris Opéra had a disastrous reception. He received a pardon and returned to Germany. From the end of 1862 W. was in Vienna until 1864, when he was threatened with imprisonment for debt. He was then invited by Ludwig II of Bavaria to Munich, where *Tristan* was produced in 1865. W. fell in love with Hans von Bülow's wife Cosima (Liszt's

WAGNER

daughter), and the scandal was exploited by those of the Court who feared his influence on the young king. Obligated to leave Munich, W. went to Switzerland, where Cosima joined him in 1866. After her divorce in 1870 they were married. W.'s first wife having died in 1866. *The Meistersinger* was produced in Munich in 1868, and W. then continued work on the *Ring* cycle, abandoned many years before. In 1876 the entire *Ring* was performed at Bayreuth, in a building specially erected for the purpose. His last work, *Parsifal*, was a drama founded on the story of the Holy Grail. It was produced at Bayreuth in 1882, and W., exhausted by his work on it, went to Venice, where he d. from a heart attack.

W.'s influence permeates the period of the later 19th cent., affecting many of his contemporaries and successors. He prevailed by sheer force of will, regarding his new type of opera, the music drama, as the final art-form, to which music, poetry, and painting were all subservient; but his symphonic treatment and orchestration transcends the poetry. In the allegorical sequence (*Das Rheingold*, 1853-4, *Die Walküre*, 1854-6, *Siegfried*, begun in 1856, resumed, and completed in 1869,

Tristan und Isolde, 1857-9, *Die Meistersinger*, 1862-7, *Götterdämmerung*, 1869-74, and *Parsifal*, 1877-82) there is a final advance to the fully evolved music drama, in which the 'endless melody' still dominant in *Tristan*, becomes abbreviated into the 'leading motive' and the whole score is woven out of these motto themes.

His pub. writings and letters include *Schriften und Dichtungen* (10 vols.), 1871-83, 1911, *Die Kunst und die Revolution*, 1849, *Das Kunstwerk der Zukunft*, 1850, *Oper und Drama*, 1851, *Über das Dirigieren*, 1869, *Letters* (ed. by W. Altmann, 1905; Eng. trans. 1927; Selection trans. by M. M. Bozeman, 1936). The W. bibliography is enormous. All biographies have been superseded by Ernest Newman's *The Life of Richard Wagner* (4 vols.), 1937-47. A shorter modern, Eng. work, with a critical study, is by Robert Jacobs (*Master Musicians*, 1935).

Wagram, vil. near Vienna, Austria. Here was fought the battle of W. (July 1809), in which Napoleon, with the co-operation of his gens., Masséna, Davout, and Oudinot, defeated the Austrians under the Archduke Charles.

Wagtail, genus of insectivorous, passerine birds (*Motacilla*), related to the pipits. There are 3 species in Britain: the pied W. (*M. yarrelli*), the grey W. (*M. cinerea*), and the yellow W. (*M. flava*). The white W. (*M. alba*), and the blue-headed W. (*M. flava*) are migrant. See S. Smith, *The Yellow Wagtail*, 1950.

Wahhab, name given to the followers of Mohammad ibn Abd al-Wahhab (1703-87) by his enemies; they call themselves 'unitarians.' Within the Muslim creed they make these affirmations: God is the only object of worship; those who worship any other deserve death. Most men are not monotheists, as they employ saints to win His favour for them. It is polytheism to name a prophet, saint, or angel in the prayers, to employ mediators with God, or to make vows to another than Him. It is unbelief to accept knowledge which does not rest on the Koran, the example of the prophet, or strict proof, to deny the overruling power of God, to allegorise the Koran. They condemn all innovations, including tobacco, their mosques are plain, and they regard silk as no wear for a man. See ARABIA; SA'UD, IRR.

Wahlenbergia, a genus of ann. and perennial herbs, mostly S. African and of S. temperate countries, with a few tropical and N. temperate species; family Campanulaceae, about 150 species. *W. hederacea*, lvy Campanula, is a creeping perennial of W. Europe, including Britain; *W. capensis* is grown as a half-hardy annual in gardens, others under glass.

Walblingen, see GUELPHS and GHIBELINES.

Walhi, tn of N. Is., New Zealand, 32 m. from Thames and on the railway to Auckland. A former gold-mining area, it is surrounded by fertile dairying land. W. Beach is a popular holiday resort. Pop. 3056.

Walkate, riv. (200 m. long) of N. Is., New Zealand. Rising to the S. of Lake

Taupo, which it drains, it flows NNW. and finally W. to Port Walkate on the W. coast, where it enters the Pacific.

Walling (or Western) Wall. Only 2 relics of the Temple of anct Israel are extant: (1) the 'foundation stone,' also known as *es-Sakhra*, or the sacred rock, to-day covered by the Kubbet es-Sakhra, or 'Dome of the Rock' and (2) the W. W., a portion of the wall which used formerly to surround the Temple, which was situated in the area of the present Haram esh-Sherif ('the Noble Sanctuary') in Jerusalem. The 9 lowest courses of the W. W. consist of huge blocks, as was characteristic of Herodian (Herod the Great, 37-4 BC) masonry, the largest one being 16½ ft long and 13 ft wide. Above are 15 courses of smaller stones. The W. W. reaches the height of c. 60 ft. It is named by the Jews the 'Kotel Ma'arabi' or 'Western Wall,' and only by Gentile onlookers has it been associated with 'wailing,' and that because the Jews recite there, along with other items of ritual, the Book of Lamentations in a loud voice. The Jews, indeed, assert that the W. W. is the most anct and most sacred devotional shrine of the Jew, and that he possessed and worshipped at it cents. before Islam came into existence, thus giving him a prescriptive right of 19 cents. duration. The Muslims of to-day assert that the wall and its adjoining pavement are an integral part of the shrine which ranks next to Mecca and Medina in sanctity.

Wainfleet, tn in Lincs, England, on Steeping R., 5 m. from Skegness. It was the bp. of Wm of Waynflete (1395-1486), Bishop of Winchester from 1447, founder of Magdalen College, Oxford, and of the Grammar School of W., built in 1458. Pop. 2500.

Waits were originally a band of watchmen who 'waited' or kept guard outside the dwellings of the great. Part of their duty was to 'pipe the watch' musically at intervals, at the same time making sure that all was secure. From this derives the modern application of the term to street musicians who go about at the Christmas season playing carols for a gratuity.

Wakashan Language, see NORTH AMERICAN NATIVE LANGUAGES, *Pacific Areas*. **Wakatipu**, lake of S. Island, New Zealand, in Otago (q.v.) prov. It is 25 m. long, 1242 ft deep, and 1016 ft above sea-level.

Wake (O.E. *wacu*, a watch); or **Lyke-wake**, or **Lyoh-wake** (O.E. *lyc*, a body), anct observance by which the body of a dead person was watched all night by friends and relatives. W.s. were also observed on the eves of saints' days, and became fairs, as in Lincs, and at Bradford (where they were known as tides). Ann. holidays are still called W.s in Lincs. The corpse W. survives in Ireland.

Wake-robin, another name for cuckoo-pint. See ARUM.

Wakefield, Charles Cheers Wakefield, first Viscount (1859-1941), businessman and philanthropist, educ. at Liverpool Institute. The organisation of C. C.

Wakefield and Co., producers of Castrol Oil, was founded by him in 1899, and from this he made a large fortune. He gave liberally to charity, and financed flights by J. A. Mollison, Amy Johnson, and Sir Alan Cobham. He also made generous donations to educational and cultural establishments, guaranteeing £50,000 to the Brit. Museum for purchase of the Codex Sinaiticus, and presenting the Thomas à Becket cup and Nelson's log-book to the nation. W. was knighted in 1908, received a baronetcy in 1917, became a baron in 1930, and viscount 4 years later.

Wakefield, Edward Gibbon (1796-1862), Eng. colonial statesman, b. London, educ. at Westminster and Edinburgh High School. He served in the Brit. embassies at Turin (1814-16) and Paris (1820-6). When in Newgate Gaol, serving a term for abduction of his second wife, he wrote *The Letter from Sydney*, 1829, exposing the evil effects of 'transportation' and roughly sketched a system of colonisation. He formed a colonisation society in 1830, and the Bill to erect S. Australia into a Brit. Prov. followed as a result. The scheme failed, but in 1837 he turned his attention to the acquisition of New Zealand as a Brit. colony, first in face of much gov. opposition, but with its support when there was a threat of Fr. occupation.

There were flaws in W.'s theories, but fundamentally his ideas were sound, and the New Zealand settlements achieved prosperity more rapidly than any of their predecessors elsewhere. W. wrote *View of the Art of Colonisation*, 1849, and ed. Smith's *Wealth of Nations*. There is an ed. of some of his writings in Everyman's Library (1929). See lives by R. Garnett, 1898; H. J. Harrop, 1928; I. O'Connor, 1929.

Wakefield: 1. City, co. bor., and cap. of the W. Riding of Yorks, England, on the R. Calder, 9 m. SE. of Leeds. There are good rail and canal communications. A medieval tn of some importance, W. became a prominent centre for the cloth trade in the 16th cent. It became a municipal bor. in 1848, a city in 1888, and a co. bor. in 1914. It returns 1 member of Parliament.

Richard, Duke of York was defeated and killed by the Lancastrians at the battle of W. in 1460. In 1888 a diocese was created, the par. church of All Saints becoming a cathedral. The church is of the 15th-cent. Perpendicular style with a distinguishing crocketed spire (247 ft), the tallest in Yorks. On the old bridge over the Calder stands the chapel of St Mary, rebuilt in 1847 in a rich Decorated style. W. was the bp. of Dr Radcliffe and George Gissing. The grammar school is said to be the descendant of a 13th-cent. school; it was founded by a royal charter of Elizabeth I in 1591.

The industries of W. include worsted spinning, woollen manuf., shirt and blouse-making, wire-drawing, coal mining, and the manuf. of engineering and machine-tool products, chemicals, glass, and sheet metal. The administrative offices of the W. Riding co. council are

situated here. The prison at W. has become well known for its progressive policy. Pop. 60,000.

2. Tn of Middlesex co., E. Massachusetts, U.S.A. It manufs. shoes, dies, knitted goods, rattan chairs, and electrical products. It was originally part of Reading. Pop. 19,633.

Wakley, Thomas, see 'LANCET, THE.'

Walafridus Strabo (c. 807-849) (i.e. 'squinting Wilfred'), Ger. monk and scholar. Educ. at Reichenau, he entered the Benedictine order at 15. He was abbot of Reichenau from 838. His best-known work is *Visto Wettini*, c. 830, a poem that foreshadowed Dante's work. See K. Beyerle, *Die Kultur der Abtei Reichenau*, 1925-6.

Walbrook, thoroughfare in the city of London, named from the riv. that once flowed into the Thames at this point, just W. of Cannon Street Station. The name means 'the stream of the Britons.' Just beyond its E. bank was the site chosen by the Romans for fortification in the Claudian invasion (AD 43), and is probably the first area of Rom. settlement in London. Many Rom. remains have been found on the site, culminating in the discovery of a mithraeum in 1953. The church of St Stephen W., generally considered as containing Wren's finest interior, has been restored after destruction in the Second World War.

Walbrzych (Ger. Waldenburg), tn of Poland, in Wrocław prov., in the foothills of the Sudetic Mts (q.v.), 43 m. SW. of Wrocław (q.v.). It was formerly in Lower Silesia, and is a coal-mining centre. Pop. 82,000.

Walburga, see WALFURGA, St.

Walcheren, ls. in the prov. of Zeeland, Netherlands, lying between the E. and W. Scheldt. The fertile land is protected from the sea by dikes. The chief tns are Middelburg and Flushing.

In Oct. 1944 Antwerp was in Brit. hands, but Germans on Walcheren controlled the mouth of the Scheldt. The R.A.F. breached the dikes by bombing and almost completely flooded W. On 1 Nov. commandos and part of 52 Div. landed on the ls. and cleared it by the 10th. The last part of the dike-breach was closed in Feb. 1946, and in the same year a harvest was reaped from the reclaimed land.

Waloż (Deutsch-Krone), tn of Poland, in Koszalin prov., 65 m. S. of Koszalin (q.v.). Until 1945 it was in Pomerania (q.v.). It is an important road and rail centre, and has a trade in live-stock, and textile manufs. Pop. 8000.

Waldeck, former principality of W. Germany, merged in the prov. of Hesse-Nassau (q.v.) in 1928. The cos. of W. and Pyrmont were united in the 17th cent., and the counts were created princes at the beginning of the 18th cent. In 1867 the principality passed to Prussia (q.v.), and in 1922 Pyrmont became part of Hanover prov. in Prussia. The cap. was Arolsen (q.v.). Area 433 sq. m.

Waldeck, or **Waldeck-Pyrmont**, former principality of Germany consisting of W. enclosed by the Prussian provs. of West-

phalia and Hesse-Nassau, and Pyrmont surrounded by Hanover, Lippe-Detmold, and Brunswick (qq.v.). In 1919 W. became a state of the Ger. Rep. with a separate constitution. In 1929, however, it was merged into Prussia (q.v.).

Waldemar (kings of Denmark), *see* VALDEMAR.

Walden, Paul, *see* WALDEN INVERSION.

Walden inversion, discovered in 1895 by the Russian chemist, P. Walden, refers to the change in sign of optical activity occasionally observed when an optically active compound is converted into its enantiomorph without the separation of a racemate. For example, *l*-chlorosuccinic acid on treatment with moist silver oxide gives *l*-malic acid, and this on treatment with phosphorus pentachloride yields *d*-chlorosuccinic acid. By a large amount of research work, the mechanism of the W. I. has been elucidated. *See* STEREOCHEMISTRY.

Waldenburg, *see* WALBRZYCH.

Waldenses, or **Vaudois**, religious body initiated about 1176 by a rich merchant of Lyons, Peter Waldes. At first a movement for voluntary poverty, it gradually developed unorthodox doctrines, some borrowed from the Cathari. Spreading through Provence, Lombardy, and N. Spain, the W. were subjected to intermittent persecution for cents. *See* K. Algrimissen, *Konfessionskunde* (5th ed.), 1939; Daniel-Rops, *Cathedral and Crusade* (trans.), 1957.

Waldmann, Hans, burgomaster of Zürich, 1483-89. *See* ZÜRICH.

Waldorf, William, *see* ASTOR, FIRST VISCOUNT.

Waldron, George, *see* BARRINGTON, G.

Waldeufel, Emile (1837-1915), Alsatian composer, b. Strasbourg. He became court pianist in Paris, and achieved great popularity by his waltzes.

Wales (Welsh, *Cymru*), anct principally forming a great westerly promontory (area 7470 sq. m., excluding Monmouth) of continental Britain, jutting out into the Irish Sea. W. is bounded on the E. by (N. to S.) the Eng. cos. of Cheshire, Shropshire, Hereford, and Monmouth (often included with W. for statistical purposes). On the N. and W. lies the Irish Sea, and on the S. the Bristol Channel and the Severn estuary separate W. from the SW. peninsula of England. The is. of Anglesey (q.v.) is divided from the NW. coast by the Menai Strait (q.v.). Cardiff is recognised as the cap.

Administrative Divisions. W. is divided into 12 geographical cos.: Anglesey, Brecon (or Brecknock), Caernarvon, Cardigan, Carmarthen, Denbigh, Flint, Glamorgan, Merioneth, Montgomery, Pembroke, and Radnor (qq.v.).

Topography. Practically the whole of W. is within the Highland Zone of Britain; the Cambrian Mts. lying NE.-SW., occupy most of the country (*see* EUROPE, *Geology*). The highest mts are those of the Snowdon (q.v.) range in the NW. (Caernarvonshire), and Snowdon (3560 ft) is the highest mt in England and W. To the S. of this range are Cader Idris and the Arenig group (in Merioneth), and to

the E. of these mts are the Berwyn Mts (on the S. Denbighshire-Montgomeryshire border); between the vale of Clwyd and the estuary of the R. Dee lies the Clwydian Range (NE. Wales). In central W. the hills tend to be rounder and more undulating between the upper reaches of the Severn and the Usk; in the S. the Black Mts and the Brecon Beacons (qq.v.), with the Black Mts of Carmarthen (on the Carmarthen-Brecon border), form an E.-W. boundary between centre and S. Anglesey and the N. coastal plain, including the low-lying Lleyn Promontory, together with a narrow strip of lowland along the shore of Cardigan Bay, most of the co. of Pembroke, S. Carmarthenshire, the Gower Peninsula, and the Vale of Glamorgan (lying between Cardiff and Port Talbot) make up the Welsh Lowland Zone. The prin. rivs. are the Wye, Usk, Taff, Neath, and Tawe; Yrrwry and Bala (qq.v.) are the 2 largest lakes. Shelter provided by estuaries of numerous small rivs. has led to the estab. of many little ports on the Welsh seaboard; Cardigan Bay (q.v.) is the largest bay in Wales.

Climate. The climate of W. is generally inclined to be wetter than that of England, owing to the mountainous nature of the terrain; the mild climate of N. Wales has led to the growth of a number of coastal resorts. For ann. average daily mean air temperature, rainfall, etc., *see* ENGLAND (CLIMATE); *see also* EUROPE (CLIMATE).

Rural and Urban Wales. The vellers of central W., with the western plateau region (Cardigan and part of Carmarthen), are largely suitable only for pasture, and sheep-farming and stock-raising are the prin. occupations. This area is sparsely populated, and includes a tract of moorland (Mynydd Eppynt) in N. Brecon. A substantial acreage in the central area forms a water-gathering ground for the Birmingham Corporation, and afforestation schemes are planned for this part of W. N. Wales, with its impressive and beautiful scenery, attracts many tourists, particularly to the Snowdonia National Park and to the coastal resorts, though here also there are no large urb. centres. In the S., however, are the 3 Welsh co. bors (Cardiff, Swansea, and Merthyr Tydfil, qq.v.), and in the area of the S. Wales coalfield (*see* below, *Industry*) is concentrated nearly half the total Welsh pop. Here, too, are the major Welsh ports, Cardiff, Barry, Swansea, Port Talbot, Penarth, Llanelly (qq.v.); Milford Haven and Fishguard (qq.v.), the latter with Holyhead in N. Wales having steamship services to Ireland, lie farther W. of the main group (*see* GREAT BRITAIN, *Communications*). The co. of Pembroke forms a low-lying peninsula in the SW.; it includes the Pembrokeshire National Park, some 150 m. of coast.

Population. The total estimated pop. of W. with Monmouth (to the nearest thousand) at mid-1955 was 2,603,000 (for further details, *see* ENGLAND (POPULATION)). At the same period, 1,819,000 people were estimated as living in urb. areas, while the remaining 784,000 lived

in the rural dists. Glamorgan had the highest and Radnor the lowest pop. density of the Welsh cos.

Employment. The total number of employees in W. at mid-1955 was estimated as in the region of 946,000. The 4 prin. occupations are indicated in the following table:

Mining and quarrying	133,800
(Includes coal mining 124,200; stone quarrying and mining 4600; slate quarrying and mining 3600)	
Distributive trades	87,400
Transport and communications	86,000
Metal manufacture	83,400
(Includes iron and steel melt- ing, rolling, etc., 33,900)	

(Figures to the nearest thousand)

Agriculture, forestry, and fishing accounted for only 30,800 persons. There is an unemployment problem in the prov. of Gwynedd (comprising 3 cos. of NW. Wales: Anglesey, Caernarvon, and Merioneth), where the slate industry, of great importance before 1900, has gradually dwindled away (see figures under *Mining and quarrying* in the above table) and, often as a consequence, the small ports of the area have also declined, in spite of efforts to introduce new industries (tourism, oil imports, extraction of bromine from sea-water, etc.). In S. Wales trade at the prin. S. Wales ports has shown some signs of decline, though efforts are being made, by modernisation and electrification schemes, to attract new trade. Similar problems affect Llanelly (q.v.) (see also MILFORD HAVEN).

Industry. In the S. Wales coalfield, which stretches from the Monmouth-Glamorgan border to E. Cardigan, anthracite, steam coal, and bituminous coal are found; iron ore was formerly mined on the N. edge of the field, but is now mostly imported to this area; tin is also imported for the great tinplate industry carried on here and in Monmouthshire. There is another smaller coalfield in NE. Wales, centred on Wrexham; in NW. Wales some stone and slate are quarried. Formerly some gold was mined. Some hydro-electricity is generated in Snowdonia. In the valleys of Glamorgan are the industrial tns, often crowded together; tinplate and steel are manuf. around Port Talbot, Llanelly, Cardiff, Swansea, and two-thirds of all Brit. tinplate and one-third of Britain's sheet steel are produced in the great works in and around Margam, where the biggest steel works in Europe is situated. Rhondda, Ebbw Vale, Merthyr Tydfil, Aberdare, Tredegar, and Pontypridd are among the prin. industrial centres. Goods from this area pass through the S. Wales ports: Cardiff (with Barry Dock) and Swansea distribute most of the steel, and Swansea imports and exports oil for nearby refineries (Llandarcy is the prin. centre). Milford Haven (q.v.) is now being developed as a major oil port. In 1958 a controversial proposal was put forward by the gov. to build a nuclear

power station on the shore of Lake Trawsfynydd in the Snowdonia National Park with output capacity of 500,000 kW.

Historical Monuments and Places of Interest. (In such an article this subject can be covered in only the briefest terms. A list of Welsh monuments protected by the State can be found in the *List of Ancient Monuments in England and Wales* (H.M.S.O., 1955.) W. has many examples of burial mounds and megalithic monuments, particularly in Pembrokeshire, which is also rich in pre-Rom. camps and sites of early settlements. The great Offa's Dyke (q.v.) is the longest example of a linear earthwork in Britain, and considerable stretches of it may still be seen in the Welsh Marches. At Caerleon and Caerwent (qq.v.) in Monmouthshire are notable Rom. remains, and there are a number of other Rom. sites in W. proper, including those at Caernarvon, and at Y Gaer, near Brecon. Secular buildings include many castles, among the finest being Powis Castle, Montgomeryshire; N. Wales is particularly rich in castles, among them those at Conway, Caernarvon, and Harlech (qq.v.). The cathedral at St David's (q.v.) amply repays a visit, and there are a number of small and beautiful churches scattered throughout the principality; Llananno has a remarkable roof loft and screen, and the Transitional-Norman ruins of Llanthony Abbey, in the Black Mts, though in a different category from the former, are most impressive.

Wild Life. The majority of the wild animals cited in the article England (see ENGLAND (WILD LIFE, Fauna)) are also found in W. The latter country, however, is one of the last homes of the polecat (now believed to be extinct in its former habitats, the Lake Dist. and Scotland); and kites, now rarely seen elsewhere, are to be observed in the Black Mts. The Atlantic grey seal can be seen in the seas off SW. Wales (and also off the Cornish coast on the opposite side of the Bristol Channel). The small is. around the Welsh coasts, particularly those off Pembrokeshire (see GRASSHOLM; SKOKHOLM) and off Anglesey, are favourite nesting-places for sea-birds, particularly the gannet and puffin.

Like the plants of England (see ENGLAND (WILD LIFE, Flora)), those of W. must be regarded as part of the common European flora, and most plants found in England are common also to W. In Snowdonia, however, there are a number of beautiful wild plants not found elsewhere in Britain, among them certain saxifrages and primulas.

History. Throughout its early hist., as in later periods, the human settlement of W. has been dictated by the geographical personality of the countryside. It is part of the Highland Zone of Britain, a land chiefly of mt and high plateau which consists of Palaeozoic rocks; its connections with the E. parts of Britain facing the Continent are less than with Ireland, and the famous W. sea-route which brought the Mediterranean into touch with Scandinavia. Native cultures per-

sisted for many cents. after they had been replaced in Lowland Britain. An outstanding example is the round hut circles of the Bronze Age in N. Wales, which were absorbed into the cultures of the Early Iron Age and continued in use well into Romano-Brit. times. Caves, also, which were used by prehistoric man were the homes of Romano-Brit. people. At the same time, the prehistoric settlement of W. was also governed by the height of the human habitation line on the mt sides, and by the presence of coastal plains in the S. and SW.

The Lower Palaeolithic is not represented in W., probably because of the lack

for the making of axes of igneous rock near Penmaen-mawr, Caernarvonshire. Its products were widely traded. Settlement of W. in the Iron Age came from the Cotswold-Somerset area to the S. coastal plain, and from Ireland.

So rapid was the domination of lowland Britain that within 4 years the Rom. Army was estab. on the frontier of S. Wales, and by about 75, the Second Legion was estab. in its fortress at Caerleon (*Isca Silurum*) in Monmouthshire. This fortress and its adjuncts have been carefully excavated, and its place in the story of Rom. W. is now well known. With the legionary fortress at Chester, it

HARLECH CASTLE, ON THE WEST COAST OF WALES

P. S. Ram

of animals or food in this difficult countryside, and because there was no stone suitable for the large core and flake tools of the earlier periods. Later stages are known in the caves of N. Wales in the Vale of Clwyd, and particularly in Gower, where, in Paviland Cave, Dean Buckland discovered the oldest human burial yet known in Britain. The food-gathering economy of the Mesolithic is represented in N. Wales, particularly at Prestatyn, Flintshire, and elsewhere in coastal dists. which provided sea-fishing and beach pebbles for conversion into tools.

W. is rich in remains of chambered tombs, cairns, and other megalithic monuments. There are many examples of stone circles. From detailed study, archaeologists have been able to recognise a distinctive megalithic culture centred round the Severn. An outstanding feature of the Neolithic period was a factory

became a base of military occupation by troops stationed in auxiliary forts. There was a considerable rebuilding of forts in stone in the 2nd cent., but about 120, much of the Welsh police garrison was withdrawn by Hadrian for employment on the rebuilding of the Wall. At Cardiff was estab. one of the forts of the Saxon Shore, designed for defence against sea rovers. Apart from the areas of military occupation, native life was not much influenced by the Romanisation felt elsewhere. See W. F. Grimes, *The Prehistory of Wales*, 1951 ed.; R. E. M. Wheeler, *Prehistoric and Roman Wales*, 1925; the former with a good bibliography.

The Celts accepted Christianity in about AD 200, and they maintained this faith when the rest of the is. was re-paganised. On the conquest of Britain by the Saxons (c. 450-600) the Celts were driven back

into the W. corners of the is., Cumberland, W., and Cornwall. Henceforth W. became the main stronghold of the Celts or Britons. Powerful native princes arose in W., and extended and consolidated their dominions. Among the most notable of these were Cadwallon the Long-Handed and his son Maelgwn Gwynedd. The Welsh people were for a time united under the latter's grandson, also named Cadwallon. The Britons of W. for some cents. made repeated attempts to recover the N. parts of England from the Saxons, but their defeat by Ethelfrith, of Northumbria, the Angle king, at the battle of Chester (c. 613), severed Strathclyde and all N. Britain from W. Cadwallon made one great attempt to recover the N. and to win the crown of Britain, but died fighting for it in 635, leaving to his son, Cadwaladr, a distracted and plague-stricken country. This ill-fated Cymric attempt to continue the political unity bequeathed by Rome to the W. found expression in the Arthurian romances and these gradually dominate Welsh political thought. This same period was one in which monasticism made great progress in the country and also gave W. a patron saint, St David, who represents the final victory of Christianity over a host of pagan deities.

After the death of Cadwaladr, king of Gwynedd, in 864, the struggle for the recovery of the N. of Britain was abandoned for ever. For the next 600 years the struggle was between a king who regarded himself as the champion of the Britons, wearing 'the crown of Arthur,' and the princes who were descended from the tribal princes. For this period the chief source of information is the *Chronicle of the Princes* written about the first half of the 14th cent., probably at the Cistercian abbey of Strata Florida in Ceredigion (Cardigan). Then came a period of internal strife and Saxon aggression, W. being apportioned among its many petty princes. The country was once again united under Rhodri the Great (844-78), who successfully resisted the onslaughts of the Danes, but was himself defeated and slain by the Mercians. On his death his dominions were again divided among his 3 sons, Anarawd, Mervyn, and Cadell. The next important Welsh prince was Howel Dda or Howel the Good (c. 909-49), who made himself master of the greater part of W., but did homage to King Athelstan of England. He also collected and codified an elaborate system of laws by which the people were divided into the royal class, the free tribesmen, and the non-tribesmen. From 950 to 1010 no supreme king ruled in W., but there were constant struggles between various petty local princes, as well as many raids on the part of Danes and Saxons. This period of anarchy was followed by the rule of 2 strong princes, Llewelyn ap Seisyllt and his son Griffith (Gruffydd). Llewelyn did much to reunite his country, which he completely freed from Dan. raids. Griffith (1039-63) was a monarch of great energy. He expelled the Saxons from Gwynedd, con-

quered S. Wales, consolidated his dominions, and made war against England. Eventually Harold of England subdued S. Wales and defeated Griffith (1063).

The Norman conquest of England (1066) had at first little immediate effect upon W. But it was not long before the Norman kings began to make encroachments, in particular placing on the Welsh borders a number of powerful barons who took advantage of the disorganised state of W. to expand their territories. The next 2 cents. (roughly, 1066-1282) form an epoch of continual struggle against Norman aggression. In 1094 there was a brief and transient Welsh revival, led by Cadwgan ap Bleddyn, who united the Welsh people against the Normans. At length Henry I made a determined effort to anglicise W., which he attacked simultaneously with 3 armies, reducing most of the Welsh princes to submission. They recovered much of their lost ground, however, during the civil wars of Stephen's reign.

During almost the whole of Stephen's reign and a great part of that of Henry II, the dominant figure in W. was Owen Gruffydd (who reigned from 1137 to 1169) son of Gruffydd ap Cynan. Between his death and the ascendancy of Llewelyn the Great, Davydd, Owen's son, tried to maintain some show of supremacy over the chiefs of Gwynedd, but in the last quarter of the 12th cent., when Henry II was endeavouring to curb the power of the border barons and at the same time to subjugate the Welsh princes, the chief figure in Welsh hist. is not Davydd I, Lord of Snowdon, but Rhys ap Griffith, Lord of the Vale of Towyn and son of Griffith ap Rhys (d. 1137). Rhys ap Griffith had defied both Owen Gwynedd and Henry II, but when Henry invaded W. in 1157 he made common cause with Owen, and Henry's army had to retreat. It was the rise of a new power in Ireland in the time of Strongbow that lessened the pressure on Rhys and thereby conduced to peace between him and the king. It was indeed largely through the co-operation of Rhys ap Griffith (1132-97), now his ally and vassal, that Henry succeeded in establishing some semblance of order in W., and he recognised this fact by making him Justiciar of S. Wales.

Meanwhile, before the end of the 12th cent., the Welsh Church had been merged completely in the Eng. Church and had thus lost all independence in internal affairs. A formidable stand was made for independence in eccles. matters by Giraldu Cambrensis (q.v.), but without ultimate success.

The most significant figure in medieval Welsh hist. was Llewelyn ap Iorwerth (the Great), who reigned from c. 1196 to 1240. In daring generalship he was the equal of Cadwaladr, and in cautious statesmanship not inferior to Owen Gwynedd. For nearly half a cent. W. in his lifetime was spared the frequent reaction against centralisation which generally ensued on the close of the rule of a strong prince. He was a powerful force on the side of the barons in their

struggle with King John, and in fact some 3 clauses of Magna Carta declare his privileges and recognise the independence of the law administered by him. At first, Llewelyn encountered difficulties from the jealousies of members of his family, but he overcame most of these difficulties through his alliance with John, reinforcing his alliance by his marriage with Joan, a daughter of the Eng. king. Llewelyn, however, was shrewd enough to realise that England was ultimately invincible, and at the end of his life he tried to secure for W. the continuation of peace by placing the country in feudal dependence on the King of England, by a treaty made through the Bishops of Chester and Hereford. By this treaty he gave away the semblance of Welsh independence while retaining the reality of it, but this involved the succession of Davydd, his son by an Eng. mother and the cousin of the king, and the disinheriting of Griffith, b. of a Welsh mother. Griffith was able and forceful, whereas Davydd was not, and the sympathies of many in W. were with Griffith and with his policy of hostile independence of England. Llewelyn could not reconcile his sons; he retired to the Cistercian monastery at Aberconway, where he d. (1240).

On Davydd's death in 1246 there were 4 claimants to the Welsh crown; Owen and Llewelyn, the sons of Griffith; Ralph Mortimer, who had married Gladys, daughter of Llewelyn the Great, and who at his death left his estates and claim to his son, Roger; and Edward, the king's son, later to become Edward I.

A settlement was reached in 1267 when Henry and Llewelyn met at Montgomery and there was ratified the treaty which gave W. peace under the recognised rule of Llewelyn. On the death of Henry (1272) Llewelyn refused to take the oath of fealty or to do homage to Edward, who at that time was absent on the Crusades. After his return to England, Edward, in 1275, appeared with an army at Chester. The following year Edward made great preparations for a war of annihilation against Llewelyn and in 1277 his army closed round W. Llewelyn realised the hopelessness of continuing the struggle and submitted to the humiliating terms of the treaty of Rhuddlan (10 Nov. 1277). He did homage to Edward at Westminster in 1278, but a few years later again broke out into revolt. Edward once again invaded W. and overran the country. Finally Llewelyn was killed in a chance encounter (1282).

From this date W. ceased to have any separate political existence. The conquest of the country brought into the king's hands the gov. of the principality and of those chieftains in S. Wales who had become Llewelyn's adherents. In all these lands gov. by princes was replaced by that of the king's officials. Llewelyn's principality became 6 shires: Anglesey (the former is. of Mon), Carnarvon, Merioneth, Flint, Cardigan, Carmarthen. Snowdon was surrounded by new castles. The young prince Edward, born

at Carnarvon, was the new Prince of Wales, and to him was given the honour of offering Llewelyn's coronet at the shrine of Edward the Confessor at Westminster.

Throughout Edward II's reign a struggle went on between the new official class and the conquered people. Edward, however, was popular with the Welsh, for he regarded himself as a Welshman. His ordinances were just, and he summoned Welshmen to Parliament. Edward might have retained the affection of his Welsh subjects, but he alienated their sympathy by favouritism.

The period which followed from 1350 to 1400 was one of disintegration, due mainly to the tyrannies and exactions of the great marcher barons. The most formidable rising in W. against the new order and the tyranny of the border barons was the great national movement associated with the name of Owen Glendower (fl. 1400-15). By fighting in his own private quarrel, he became the leader of the widespread revolt which terrified all in authority at the time and left behind it a more enduring impression on Welsh legends than any other political or social movement. In 1404 Glendower was supreme in W., holding his own Parliament; his political ideals being an independent W., under prince and Parliament, an independent Church, with St David's as its metropolitan see, and the organisation of the new learning through Welsh univs. All his political ideals vanished with his death, save a vague sense of nationality.

The prin. results of these risings and of the havoc wrought by the wars of the Roses were the destruction of the feudal system, the prevalence of robbers, the appropriation by Englishmen of all positions of trust, the enactment of many severe and unjust laws against the Welsh, and the consequent growth of bitter racial feeling. The border barons continued to make unjust exactions, and the rights of citizenship were withheld from the Welsh people. Nevertheless, this period of oppression corresponds in point of time with the golden age of Welsh poetry.

The chief movements in Tudor times in W. were the political reorganisation, the reform of the system of justice, and the religious reformation, to the last of which there was passive resistance. The political reorganisation was the work of Thomas Cromwell. The Act of Union of 1535 united W. to England, and by its operation the former was politically assimilated in all respects to the latter. The liberties as well as the laws of England were extended to the Principality, and W. was now for the first time given parl. representation. On the other hand, the Welsh language was completely banished from the courts, and many old Welsh customs were abolished. One great benefit of the Act was the conversion of the marcher lordships into shire ground, the new shires being Brecknock, Denbigh, Monmouth, Montgomery, and Radnor, while the shires of Glamorgan, Pembroke, Carmarthen, Cardigan, and Merioneth were enlarged.

Religion in Wales. In matters of religion W. was not at first very greatly affected by the Reformation, but during the 17th cent. the Baptist movement was estab. in W., and at the beginning of the Methodist revival, about 1730, the country experienced a great religious awakening. The religious revival led indirectly to a great though gradual national awakening, which has since borne diverse and abundant fruit in a social, literary, and industrial revival. See CALVINISTIC METHODIST CHURCH OF WALES; DISESTABLISHMENT; WALES, CHURCH IN. The Rom. Catholic prov. of W. is composed of the archbishopric of Cardiff and the bishopric of Menevia.

Education. See EDUCATION, *England and Wales*. The univ. of W. estab. in 1893, now has 4 centres, in the form of constituent colleges, at Aberystwyth, Bangor, Cardiff and Swansea, while tutorial classes are conducted throughout the country under the aegis of the univ. (see WALES, UNIVERSITY OF). A notable acquisition in public buildings is the celebrated National Museum of W. (*Amgueddfa Cenedlaethol Cymru*) at Cardiff, opened by George V in 1927.

Welsh Nationalism has been effective in the cultural sphere through such institutions as the *Eisteddfod* (q.v.) and the univ. of W., by the use of the Welsh language and by the estab. of a separate Welsh broadcasting region, but politically has found little solid support. The Nationalist demand for a separate Welsh Parl. is not supported by either the Conservative or Labour parties officially, though it has support from individual party members. The gov. in 1948 rejected the scheme of a separate ministry for W., and an Advisory Council, of somewhat ill-defined functions, was estab. when the Conservatives returned to power in 1951; they created a Ministry for Welsh Affairs, but until 1957 this office had always been combined with another under the same man. The first holder was Sir David Maxwell Fyfe, later Lord Kilmuir (q.v.), who combined it with the Home Secretaryship, 1951-4; he was succeeded by Gwilym Lloyd George, later first Viscount Tenby (q.v.), who held the two posts 1954-7. Subsequently Henry Brooke, Minister of Housing, also held the post of Minister for Welsh Affairs. In Dec. 1957, however, a separate Minister of State for Welsh Affairs was appointed; the first minister was Mr David Penrose Lewis, who was raised to the peerage as Baron Brecon. A Welsh Nationalist party, aiming at a separate Welsh Parliament, exists (see PLAID CYMRU). The movement *Urdd Gobaith Cymru* (League of Youth) is non-political in character and was founded by Sir Ifan ap Owen Edwards, to protect the Welsh language.

The Arts. The arts of W. are the arts of poetry and song. Artists from W., however, have at times played notable parts in the development of Brit. art. Among painters, the most prominent is Richard Wilson, whose achievement it was to graft the Eng. landscape school on to that of the Continent, and whose

influence was a decisive factor in the development of the former. Mention must also be made of the engravers Robert Walker and John Jones, and the sculptor John Gibson. 20th-cent. artists include J. D. Innes, Augustus John, Sir Frank Brangwyn, David Jones, and Sir Wm Goscombe John.

In the field of applied arts it is noteworthy that the remoteness of W. has fostered, and until recently preserved, native traditions in craftsmanship. In the peasant arts of the builder, weaver, wood-turner, and quilter, widespread European conceptions receive an individual national expression. The Welsh tradition in wrought ironwork attained its finest flowering with Robert and John Davies in the 18th cent.; but that the arts of metalwork also fl. in W. in a far earlier age may be inferred from the splendid examples which she has furnished of the La Tène art of the early Iron Age. Lastly mention must be made of the japanned tinware made at Pontypool and Usk in the 18th and early 19th cents., and the brilliant pottery and porcelain made at Swansea and Nantgarw early in the 19th cent.

Welsh Language and Literature. Welsh or Cymric (together with Breton and Cornish) belongs to the Brythonic subdivision of the Celtic branch (Gaelic, i.e. Irish and Scottish and Manx form the Goidelic subdivision), of the Indo-European languages (q.v.). The language is phonetically written, and the accent is generally on the penultimate syllable. The Welsh alphabet contains 28 letters or combinations of letters (*ch, dd, ff, ng, ll, ph, rh, th*). The earlier Welsh verse-material contains 6th-cent. elements, but the earliest glosses and preserved poems are attributed to the 9th-11th cents. From the 12th cent. onwards there has been produced a vast amount of Welsh literature, which is still preserved. Up to the Tudor period Welsh was spoken by the upper and the lower classes. Two causes have kept the Welsh language alive up to the present day: the isolation of the people among the mountains, and religion. The Snowdonian region (*Eryri*) was never conquered by England, nor has there been any incentive for any other people save the Welsh to take possession of the Caernarvonshire mountains. The Welsh language, however, might have died soon, but for the efforts of men like John Penri, who in Elizabeth's reign gave his life for his language, with the result that the Bible was trans. into Welsh in 1588. That saved the native tongue for some generations. The Methodist revival of Welsh in the 18th cent. gave birth to an educational system, the development of which is not even yet completed. Schools sprang up in the wake of the preachers. The Bible was sold for a few pence, and the language was saved. Now Welsh is taught in the primary and secondary schools, a number of all-Welsh primary schools have been estab., and Welsh is studied at the Welsh Univ. colleges. The pub. of the first part of Prof. J. M. Jones's *Welsh Grammar* in June 1913 was

a notable event in the progress of the new national spirit of W. The desire of the modern scholars was to bring uniformity into the spelling, to reintroduce some of the vocabulary of medieval Welsh, to abolish the Latinisms introduced by the scholarly translators of the Bible, and to revert to the standard of pure Welsh prose as it was written by Elis W yn in his *Bardd Cwsc* of 1704. In the 19th cent. the *Eisteddfod* (q.v.) became an annual event, and there can be no doubt of its influence in keeping alive in the Welsh people a keen appreciation and understanding of their language.

The earliest period of Welsh literature is that of the *Cynfeirdd* or early poets. Much of their work is anonymous, but the major part is associated with the names of Aneurin (q.v.) and Taliesin (q.v.), poets of the late 6th cent. and Llywarch Hen, a dramatic figure in a 9th-cent. saga. This poetry survives in the 'Four Ancient Books of W.': the Black Book of Carmarthen, the manuscript of which belongs to the 12th cent., the Book of Aneurin and the Book of Taliesin (13th cent.), and the Red Book of Hergest (see under *MABINOGION*) (late 14th cent.). (See also *TRIAD*.) Aneurin is the reputed author of the *Gododdin*, a lyrical epic of battle. Besides heroic and saga poetry a fair amount of nature and gnomic verse was composed by the later *Cynfeirdd*. The next period is that of the *Gogynfeirdd* or the medieval poets, the court poets of the Norman period, chief among whom were Gwalchmai and Prince Hywel ab Owain. This was the period of the bardic schools which elaborated the rules of versification that have now become traditional in Welsh poetry. Later documents associate the name of Gruffudd ap Cynan, who returned from Ireland in 1080, with a reorganisation of the bardic order, but it is difficult to ascertain the exact nature of that reorganisation. The highest reputation among the bards belonged to Cynddelw, 'the great poet.' It was during this period that written form was first given to the 11 great romances, known as the *Mabinogion* (q.v.). The next or third period is dominated by the genius of Dafydd ap Gwilym (q.v.) (fl. 1340-70), who wrote in a simpler style than the bardic poets and developed a new form of metre in his *cynryddau* or lyrical odes. The first *Eisteddfod* was held in the 15th cent. although tradition places similar events at a much earlier date. The metre of the bardic poetry and of the *cynryddau* was strictly unaccentual. The anglicisation of Welsh culture in the 16th and 17th cents. led to the introduction of accentual or so-called 'free' metres, brought to considerable perfection by Richard Hughes, who was at the court of Queen Elizabeth, and later by Huw Morus (1622-1709), who was the greatest figure in Welsh literature in his day. During the course of a long life he wrote political and satirical verse as well as love-poems and religious songs. He was a Royalist, and opposed to him in politics was his contemporary, Morgan Llwyd (1619-59), who also wrote political verse in the free

metres. He is chiefly remembered, however, for his prose writings, strongly influenced by Boehme. Apart from the work of these poets, Welsh poetry was in decline, flourishing only in popular ballads or folk-songs and in religious verse. One writer of hymns was Elis W yn (1671-1734), whose fame, however, is more secure as a master of Welsh prose. His great prose work *Gwledigaethu y Bardd Cwsc* (*Visions of the Sleeping Bard*) was pub. in 1704, and although borrowed through English from the Spanish of Quevedo, it is so native in its colour, speech, and idiom that it is set to-day as a model for all generations to copy. The religious movement was the chief, but not the only influence in the revival of Welsh literature in the 18th cent. There was at the same time a growing antiquarian interest, to which the present-day Welsh society of the *Cymmrodorion* owes its origin. The Gorsedd or Court of the Poets also came into existence with its arch-druid as president, its druids, bards, and ovates. The return to the traditional literature found its chief exponent in Goronwy Owen (d. 1769). His greatest poem was his ode *To the Judgment Day* (*Cywydd y Farn Fawr*). Greater popularity, however, was won by the dramatic interludes written by Thomas Edwards (1739-1810), whose bardic name was Twm o'r Nant. These poets wrote mainly in the 'strict' traditional metres. The 'free' verse, however, reached a new perfection in the work of Alun (John Blackwell, 1797-1840). After him came the 2 outstanding poets of the 19th cent., Ceiriog and Islwyn, the bardic names of John Ceiriog Hughes (1832-87), and William Thomas (1832-78) respectively. Ceiriog wrote lyric poetry derived from peasant life. By contrast, Islwyn was a mystical writer with little lyric feeling. These 2 poets were at the head of a renaissance of Welsh literature, to which a further impetus was given in the 20th cent. through the research and scholarship and above all by the poetic example of Sir John Morris-Jones (1864-1929), who was Prof. of Welsh at Bangor Univ. Among his followers in what has come to be known as the Bangor school of poetry are numbered 2 of the foremost writers of the present cent.: Thomas Gwynn Jones (1872-1949), and W. J. Gruffydd (1881-1954). A high degree of literary accomplishment distinguished Gwynn Jones, whose Arthurian poem won the chair in the *Eisteddfod* of 1902. He wrote in both the strict and free metres, being particularly successful in the former. Other major poets associated with the Bangor school are R. Williams Parry, who, like Gruffydd, represented a neo-paganism, and T. H. Parry-Williams, a more austere and introspective poet. An older contemporary, less modernistic in his approach, as is shown by his preference for a bardic name, was Elfed (Rev. H. Elvet Lewis, 1860-1893). He and other poets of the time from S. Wales were less intellectual and scholarly than the 'new poets' of the Bangor school, but they wrote simply and in the traditional

manner, moving poems descriptive of Welsh communal life. Eifed and Elfion Wyn (E. H. Williams, 1867-1926) were in fact judged the most popular of Welsh poets of this century. Among the poets whose reputation belong chiefly to the First World War are Cyman (Rev. A. E. Jones), Hedd Wyn (Ellis Evans, 1887-1917), and T. E. Nicholas. Mention must be made of other poets whose work showed that Welsh poetry was a living force and by no means an academic exercise in a forgotten idiom. They include E. Prosser Rhys, who in collaboration with J. T. Jones won the crown at the Eisteddfod in 1924, also Caradoc Prichard, whose poems were also crowned, Iorwerth C. Peate, Wil Ifan (Wm Evans), W. R. Hughes, Gwennallt Jones, Saunders Lewis, also a notable prose writer, and many others.

In prose Welsh literature is by no means so outstanding. The prose romances of the *Mabinogion* had few successors. The novelist, Daniel Owen (1836-95), whose studies of Welsh home life are still acknowledged to be in the front rank, was the pioneer of modern Welsh fiction, whose tradition is represented to-day by Thomas Rowland Hughes (his *O Law I Lau* was pub. in Eng., 1950), Kate Roberts, Gerald Owen, and Islwyn Ff. Ellis. In literary criticism the father of the modern school is Emrys ap Iwan (R. A. Jones, 1851-1906), whose successors include W. J. Gruffydd, T. Gwynn Jones, Saunders Lewis, and J. Gwilym Jones.

Music. Welsh music attained a high cultural standard in very early times, being upheld by the bards. Harp-tunes were the chief form of Welsh music, and *penillion* competitions in which songs were improvised to a harp accompaniment, formed a great feature of Welsh life. These competitions and the activities of the bards are still continued in the Eisteddfodau of to-day (see **BARD; EISTEDDFOD**).

Bibliography. **GEOGRAPHICAL.** AND **GENERAL:** The following classic descriptions of W. are of interest: Giraldus Cambrensis *Itinerary through Wales*, 1188 (trans. with introduction, 1908); D. Defoe, *Tour Through the Whole Island of Great Britain*, 1724-6; T. Pennant, *Tours in Wales*, 1770-6; G. Borrow, *Wild Wales*, 1854. Among many excellent modern books, the following may be cited: E. Vale, *The World of Wales*, 1935; H. R. C. Carr and G. A. Lister, *The Mountains of Snowdonia* (2nd ed.), 1948; Elfuned and P. Lewis, *The Land of Wales* (3rd ed.), 1949; H. V. Morton, *In Search of Wales* (18th ed.), 1949; W. Griffith, *The Welsh*, 1950; T. Edwards, *The Face of Wales*, 1950; Maxwell Fraser, *Wales* (2 vols.: I, *The Background*; II, *The Country*), 1952, and *Introducing West Wales*, 1956; L. R. Muirhead, *Wales* (Blue Guides, 4th ed.), 1953; D. M. and E. M. Lloyd (eds.), *A Book of Wales*, 1954; H. Piehler, *Wales for Everyman*, 1955; H. L. V. Fletcher, *North Wales*, 1955, and *South Wales*, 1956; G. W. Young, G. Sutton, and W. Noyce, *Snowdon Biography*, 1957. See also the various memoranda by the Council for Wales and Mon-

mouthshire (*First Memorandum*, 1950, *Second Memorandum*, 1953, and *Third Memorandum*, 1957), and H.M.S.O., *Digest of Welsh Statistics* (ann.), which includes Monmouthshire. **HISTORY:** R. E. M. Wheeler, *Prehistoric and Roman Wales*, 1925; J. E. Lloyd, *History of Wales from the Earliest Times to the Edwardian Conquest*, 1911, 1939, and *A History of Wales*, 1930, 1949; T. Jenkins and W. Rees, *A Bibliography of the History of Wales*, 1931; J. F. Rees, *Studies in Welsh History*, 1947; D. Williams, *A History of Modern Wales (1485-1939)*, 1950; E. V. Nash-Williams, *The Roman Frontier in Wales*, 1954; E. Ingalls-Jones, *The Story of Wales*, 1955; C. Hughes, *Royal Wales*, 1957. See also vols. of *Archaeologica Cambrensis* (in course) and the Reports of the Royal Commission on Historical Monuments, Wales. **LITERATURE:** I. C. Morris, *A Manual of Welsh Literature*, 1909; H. I. Bell, *The Development of Welsh Poetry*, 1936; and O. W. Owain, *History of the Drama in Wales, 1850-1943*, 1948; T. Parry, *Hanes Llenyddiaeth Gymraeg hyd 1900*, 1944 (Eng. trans. by H. I. Bell, *A History of Welsh Literature*, 1955). **MUSIC:** J. Graham, *A Century of Welsh Music*, 1923; C. P. Holland (ed.), *Music in Wales*, 1949.

Wales, Calvinistic Methodist Church in, or Presbyterian Church of, see CALVINISTIC METHODIST CHURCH OF WALES.

Wales, Church in, diocesan. St David's, Llandaff, Bangor, St Asaph, Monmouth, and Swansea and Brecon (a diocese which, with Monmouth, was formed after 1920). The office of Archbishop of Wales is filled by the election of one of the bishops to it. Until the Welsh Church Acts of 1914 and 1919, Wales was included in the Province of Canterbury; a Welsh archbishopric was formed on disestablishment towards disestablishment. A movement towards disestablishment had been gaining ground in Wales from the last quarter of the 19th cent. onwards; in 1906 a commission examined the state of the Welsh Church and found that less than a quarter of the people nominally belonged to it. In 1912 a measure of disestablishment was rejected by the Lords after being approved by the Commons, and disestablishment was not finally made legal until the Parliament Act. The Church had a communicant body of about 200,000, with 1850 churches throughout the principality. The languages used in services are Welsh and English, and the service book is the book of Common Prayer as used in the Church of England. See also **DIS-ESTABLISHMENT**.

Wales, Nat. Library, Aberystwyth. Founded in 1907, the building being formally opened in 1955, it is one of the 6 copyright libraries (q.v.) entitled, with certain reservations, to a free copy of every book pub. in the U.K. The stock contains over 1,000,000 printed books and 25,000 MSS., with many collections relating to Wales and the Welsh or other Celtic peoples. The Library also acts as a depository for manorial and other records, and contains many special col-

sections of documents of old Welsh families as well as a fine collection of private press books.

Wales, Prince of. The eldest son of the King of England, becomes at birth Duke of Cornwall, and on his succession to the throne the duchy vests in his eldest son; but the king can, if and when he chooses, create his son P. of W. and Earl of Chester by letters patent. It is now customary always to make the heir-apparent to the throne P. of W., but the title is not heritable. The life of the P. of W. and the chastity of his wife are protected by the Statute of Treasons (see TREASON). Provision is made for the Prince and Princess of Wales by the Civil List Act, 1901.

Wales, University of, founded in 1893 from a union of the colleges of Aberystwyth, Bangor, and Cardiff (Swansea being added in 1920). These are the constituent colleges of the univ., none taking precedence of the others. The Welsh National School of Medicine is situated in Cardiff. There are associated theological colleges at Brecon, Aberystwyth, and Carmarthen, and schools of theology at Cardiff and Bangor. The univ. grants degrees in almost all subjects. There are nearly 5000 students, also univ. extension courses.

Walewski, Alexandre Florian Joseph Colonne, Comte (1810-68), Fr. diplomat, b. Poland, son of Napoleon I and Marie, Countess Walewska. He became a naturalised Frenchman and held sev. diplomatic posts. Under Napoleon III he was Fr. ambas. in London. He was minister of foreign affairs 1855-60.

Waley, Arthur David (1889-), poet and translator, b. Tisbury Wells, his name being originally Schloss. Educ. at Rugby and King's College, Cambridge, of which he was made an honorary Fellow, he became one of the greatest authorities on Chinese literature. From 1912 to 1930 he was Assistant Keeper of the Dept. of Prints and Drawings at the British Museum. He is chiefly remembered by his renderings of Chinese lyrics, which are so effective that they deserve to be regarded as poems in their own right; vols. of these were pub. in 1918, 1919, 1927, and 1946. He also wrote *Japanese Poetry*, 1919, and *Three Ways of Thought in Ancient China*, 1933. A Fellow of the British Academy, he was made a Companion of Honour in 1956.

Walfish Bay, see WALVIS BAY.

Walker, Horatio (1858-1938), Canadian artist, b. Listowel, Ontario. He began as water-colourist, and in 1888 won the Evans Prize of the Amer. Water-colour Society, but later devoted himself to oils. His subjects are chiefly Canadian landscapes and farm scenes, composed in a broad and simple manner showing the influence of Millet.

Walker, William (1824-1860), Amer. adventurer, b. Nashville, Tennessee. He was educ. at the univ. of Nashville, M.D. univ. of Pennsylvania, 1843. Later he was admitted to the bar at New Orleans. In 1853 he went on an expedition to conquer Mexican ter. and in 1854 pro-

claimed Lower California and the State of Sonora an independent rep. with himself as president. He was forced to abandon this project. Acquitted of violating the neutrality law, W. made further expeditions to Nicaragua, where the gov. he set up was formally recognised by Washington in 1856, to Mobile, and to Honduras, where he was executed in 1860.

Walking, see ATHLETICS.

Walkley, Arthur Bingham (1855-1926), journalist, b. Bristol. Educ. at Westminster School and Oxford, he worked on the Post Office staff, then became a dramatic critic, representing *The Times* for many years. His works include *Playhouse Impressions*, 1892, and *Dramatic Criticism*, 1903.

Wall, vi. of Staffordshire, England, 2½ m. from Lichfield, on Watling Street, and formerly the Rom. city of *Letoctum*. The Rom. baths are preserved by the National Trust. Pop. 300.

Wall, see W. LLS.

Wall, Great, of China, see CHINA.

Wall-paper, see PAINTING AND DECORATING.

Wall Pellitory, see PELLITORY.

Wall Pennywort, *Umbilicus rupestris*, a native perennial herb of rocks and walls.

Wall Street, street of New York, the financial centre. It is a narrow thoroughfare 7 blocks long which runs from Trinity Church in Broadway to the E. R. In Wall Street and the thoroughfares in the immediate proximity are located most of the great banks, trust companies, insurance corporations, as well as the head offices of the big railway, steamship, metal, and coal companies. In this dist. are also located the Stock, Coffee, Cotton, Metal, Produce, and Com. Exchanges.

Walla Walla, co. seat of W. W. co., Washington, U.S.A., on Mile Creek. It is the centre of an important wheat-growing dist., and has flour mills and meat-packing factories. It is the seat of Whitman College and W. W. College. Pop. 24,102.

Wallaby, see KANGAROO.

Wallace, Alfred Russell (1823-1913), naturalist, b. Usk, Monmouthshire, began life as an architect, but interested himself in botany. In 1848 W. and H. W. Bates set out for the Amazon, but separated later. From 1854 to 1862 W. was in the Malay Archipelago; here he estab. the 'Wallace Line,' zoologically separating Lombok and Celebes from Bali and Borneo. His own work and the reading of Malthus's *Essay on Population* (which contained ideas tending towards Darwin's theory) led him to the idea of the 'survival of the fittest,' as a correlation of natural selection, and his own formulation of the law that every species originates in the same locality as a pre-existing closely allied species.

He wrote immediately to Darwin, who, noting the coincidence of views, communicated with Sir C. Lyell and Sir Joseph Hooker. As a result a joint paper was read, containing Darwin's views, to the Linnean Society on 1 July 1858. W.'s *Contributions to the Theory of Natural*

Selection appeared in 1870, and contained his views on evolution, differing in certain aspects from Darwin. The Royal Medal in 1868 and the first Darwin Medal, 1890, were presented to him by the Royal Society. He was president of the Entomological Society in 1870-1. In 1889 he received the degree of D.C.L. from Oxford. See life by E. D. Cope, 1891; and J. Marchant, *A. R. Wallace: Letters and Reminiscences*, 1916.

Wallace, Edgar (1875-1932), novelist and playwright, b. London. Left a destitute orphan, he was saved from the workhouse by a fish porter, who brought him up. He went to a Board school in Peckham and then worked in a rubber factory, on a Grimsby trawler, and as a milk-boy and newspaper seller. He then joined the Army and was in S. Africa during the war of 1899-1902. On leaving the Army he decided to turn journalist and returned to S. Africa as war correspondent for Reuter's agency. His first story was *The Four Just Men*, 1905, which he pub. at his own expense. After this W., with amazing energy, wrote or dictated about 150 novels in the space of 20 years. He found his true *métier* in the 'thrillers,' peculiarly his own creation, which he himself styled 'pirate stories in modern dress.' Typical titles are *The Man Who Knew*, 1919, *The Angel of Terror*, 1922, *The Crimson Circle*, 1922, *The Green Archer*, 1923, *The Clue of the New Pin*, 1923, and *Room 13*, 1924. He also wrote some good horror plays, and *People*, 1926, an autobiography. See life by Margaret Lane (his daughter-in-law), 1938.

Wallace, Henry Agard (1888-), Amer. politician, b. Adair (o., Iowa). He studied at Iowa State College. From 1933 he was secretary of agriculture in the Roosevelt administration, and in 1940 became vice-president. Truman (q.v.) was elected in his place in 1944, and W. became secretary of commerce. In 1946 he attacked the U.S. gov.'s attitude to Russia, and resigned. In 1948 he stood for the presidency as candidate of his newly formed Progressive party, but polled only 1,157,172 votes, out of a total of more than 47,000,000. When fighting broke out in Korea in 1950, W. announced his support for U.N. action there.

Wallace, Lewis (1827-1905), Amer. lawyer, diplomat, and novelist, b. Brookville, Indiana. After studying law, Lew, as he was generally called, served in the Mexican War and with the Union Army in the Civil war. From 1878 to 1881 he was Governor of New Mexico, and from then till 1885 Amer. minister to Turkey. His greatest success as a writer was with *Ben Hur*, 1880, a historical novel about the early days of Christianity; it sold some 2,000,000 copies, and he followed it with *The Boyhood of Christ*, 1888. His *Autobiography*, 1906, was completed by his wife.

Wallace, Sir Richard (1818-90), art connoisseur, b. London, and educ. in Paris, where he gathered together a valuable collection, sold in 1857. He then helped the Marquess of Hertford, his

half-brother, in forming his collection, which he inherited in 1876, and which was bequeathed by his widow to the nation in 1897, and is now housed in Hertford House, Manchester Square, London (see WALLACE COLLECTION).

Wallace, Vincent (1812-65), Irish composer, b. Waterford, pupil of his father, a bandmaster, appeared in Dublin as a boy organist and violinist, and in 1834 played a violin concerto of his own. After living abroad, mainly in Australia, in 1835-45, he produced his opera *Martina* in London in 1845. It made him famous in Germany and France, and after some further successes, especially with *Lurline* and *The Amber Witch*, he received a commission from the Paris Opéra, which he was unable to complete owing to approaching blindness. He d. at a castle in the Pyrenees.

Wallace, Sir William (c. 1272-1305), Scottish patriot, b. probably at Elderslie, near Paisley. He came of a family of the lesser nobility of Scotland, and first took up arms against the English in 1297. It was an opportune moment for a Scottish rising. Edward I had taken advantage of the dispute about the succession to the Scottish throne to possess himself of the country. In 1296 he ravaged Scotland and made prisoner John de Balliol, at the time the occupant of the throne. John de Warenne was appointed guardian of Scotland, and Eng. sheriffs were set up in the S. shires, and in Ayr and Lanark. In 1297 the Eng. barons and clergy were in revolt against Edward I, while he was absorbed in preparations for the Fr. war. W. seized his opportunity, organised the Scottish insurgents in the name of John de Balliol, killed Sir Wm Hazelrig, the Eng. sheriff of Lanark, and became Guardian of Scotland. He next drove the English out of Perth, Stirling, and Lanark shires, besieged Dundee and Stirling castles, and defeated the English at Stirling Bridge. All this was the work of 1297; but after ravaging Northumberland, Westmorland, and Cumberland, he was defeated by Edward I at Falkirk (1298) and resigned the Guardianship of Scotland. After this he withdrew to France and solicited aid from Norway, France, and the Pope; but being refused, returned to Scotland, and carried on a guerilla warfare (1303-5). He was declared an outlaw by Edward I (1304), and having been captured by treachery at Glasgow (1305) was brought to London, tried, and executed the same year. See life by J. Ferguson, 1938.

Wallace Collection, famous art museum, at Hertford House, Manchester Square, London, originally formed by the 4th Marquess of Hertford (1800-70) and bequeathed to the nation, 1897. Fr. art of the 18th cent. is a distinctive feature of the collection, much of it coming from the Royal Châteaux, including sculpture, furniture, and small *objets d'art*, as well as paintings by Watteau, Boucher (qq.v.), and others. There are many fine paintings also of various national schools, including Velázquez' 'Lady with a Fan' and Hals' 'The Laughing Cavalier.'

Wallace Line, *see under* WALLACE, ALFRED RUSSELL.

Wallach, Otto (1847-1931), Ger. chemist, *b.* Königsberg. He was a prof. at Bonn in 1876, and at Göttingen from 1889 to 1915. He worked on camphor and terpenes, and on volatile oils and scents, winning the Nobel prize for chemistry in 1910.

Wallachia, or **Muntenia**, prov. of Rumania, lying between the Carpathians and the Danube, the Black Sea, and Yugoslavia. W. was one of the 2 Danubian principalities (the other being Moldavia), in the union of which the kingdom of Rumania had its origin under the treaty of Paris, April 1856. W. is the prin. agric. area of the country. Area 29,960 sq. m.; pop. 6,579,000.

Wallaroo, tn of S. Australia on the E. shore of Flinders Gulf, 110 m. by rail from Adelaide. Its chief industries are now 2 superphosphate works and a clothing factory. Pop. 3000.

Wallas, Graham (1858-1932), sociologist and political scientist, *b.* Sunderland; educ. at Shrewsbury School and Corpus Christi College, Oxford.

His most important work on sociology, *Human Nature in Politics*, did not appear until 1903. W. was a lecturer at the London School of Economics, 1895-1914, and prof. of political science at London Univ., 1914-23.

Wallasey, co. bor., largely residential, of Cheshire, England, on the SW. side of the Mersey estuary, opposite Liverpool. W. developed as a residential tn within the Merseyside area, and became a co. bor. in 1913; it includes the townships of W., Egremont, Liccard, Poulton-cum-Seacombe, and the popular seaside resort of New Brighton. Under the Town Planning Act, 1947, a start was made on the detailed planning of the Moreton and Leasowe areas (added to the bor. in 1928) to provide facilities for community needs of an ultimate additional pop. of 34,000 there. These, with Saughall Massie (added to the bor. in 1933), form modern residential suburbs. The corporation owns ferry, motor-bus, and water undertakings, and W. has 5 m. of promenade, parks, pleasure grounds, and a pier. There are 5 grammar schools, the oldest (W. Grammar School, a boys' public school) being founded in the 16th cent. Industries include flour milling, and manufs. of beltings, tyres, bronze propellers, and chocolate biscuits. Pop. 102,100.

Wallenstein, or **Walstein**, **Albrecht Wenzel Eusebius von** (1583-1634), Ger. soldier, Duke of Friedland, *b.* Bohemia. His father was a Protestant, but he early determined to embrace the Catholic faith. He took part in the war between the archduke Ferdinand and the Venetians. On the outbreak of the Bohemian revolt he obtained the command of an army, defeated Mansfeld (q.v.), and conquered a great stretch of country. He was created Duke of Mecklenburg by the emperor. In 1632 he was defeated at Lützen by Gustavus Adolphus. The Emperor decided that W. had become too powerful for Hapsburg safety. He was

charged with treachery, and murdered. *See* lives by L. von Ranke, 1910; H. von Srbik, 1920; W. Tritsch, 1936; F. Watson, 1938. *See also* C. V. Wedgwood, *The Thirty Years War*, 1944.

Waller, Edmund (1606-87), poet and politician, *b.* Colleshill, Buckinghamshire. Educ. at Eton and Cambridge, he was a student of Lincoln's Inn in 1622, and 4 years later was M.P. for High Wycombe, and for Amersham in 1628 and 1640. In this latter year he sat in the Long Parliament. He was at heart a royalist, and having been caught plotting to seize London for Charles I. was arrested and expelled from the House (1643). He was a prisoner in the Tower (1643-4), but his sentence of death was commuted to a heavy fine and banishment. He was, however, pardoned in 1651 by Cromwell's influence, and pub. laudatory verses upon him in 1655. But he also wrote poems of rejoicing on Cromwell's death (1658), and in 1660 pub. *To the King, upon his Majesty's Happy Return*. His *Divine Poems* appeared in 1685. Acknowledged in the 18th cent. as a pioneer of the neo-classical style in poetry, he is now chiefly known for the lyrics he wrote to the lady he called Sacharissa, identified with Lady Dorothy Sidney. *See* study by G. Thorne-Drury, 1893.

Waller, Lewis (1860-1915), actor-manager, probably the finest romantic actor the Eng. stage ever possessed. He excelled in 'costume' drama of the romantic type which reached its culmination in his production of *Monsieur Beaucaire* in 1902. He was also a magnificent Shakespearean actor, excelling as Lysander, Faulconbridge, Brutus, and especially Henry V. He was the first actor in whose honour what is now known as a 'fan club' was formed; the ladies who formed it called themselves 'The Keen on Wallers.' He had magnificent diction and vocal powers and great personal magnetism.

Wallflower (*Cheiranthus cheiri*), fragrant cruciferous perennial plant, a number of beautiful varieties of which are grown in gardens, bearing yellow, brown, red, and variegated flowers. They are usually treated as biennials, the seed being sown in May.

Walling, Curtain, a system of external walling for framed buildings, in the form of a lightweight skin attached *outside* the frame so that it is uninterrupted by columns, beams, or floor slabs. This sheathing may be simply of sheet metal or glass, but will often be of sandwich or cavity construction, similar to that of panel walls (q.v.), to provide adequate sound and heat insulation. For large buildings, C. W. needs to be carefully designed; the joints need to allow for movement with changes of temperature while keeping out wind and rain, and the method of fixing to the building frame has to resist high wind pressures. *See* Building Research Station Digests Nos. 98 and 99, *Light Cladding*, 1957.

Wallingford: 1. Municipal bor. and mkt tn of Berks, England, on the r. b. of the Thames, about 48 m. by road from

London, centre for an agric. dist. It is the site of a Rom. camp, and is mentioned in Domesday Book. Pop. 3800.

2. Tn in New Haven co., Connecticut, U.S.A., in an agric. and dairy region. It has silverplate works and manufs. metal products, electrical equipment, hardware, tools, plastics, clothing, chemicals, and outlery. Choate School for boys is here. Pop. 17,000.

Wallington, par. of Surrey, England, 2 m. W. of Croydon, formerly noted for its cultivation of lavender. It forms with Beddington a single municipal bor. Pop. 32,757.

Wallis, John (1616-1703), mathematician, b. Ashford, Kent, was Savilian professor of geometry at Oxford, 1649-1703, and keeper of the archives, 1658-1703. He introduced the principles of analogy and continuity into mathematical science, and widened the range of higher algebra. He pub. *Arithmetica Infinitorum*, 1655, which contained the germs of the differential calculus, and invented the symbol ∞ for infinity. He wrote the first mathematical treatise on the tides, also a treatise on *Analytical Conic Sections*, 1664, and *Algebra*, 1686.

Wallis (Switzerland), see VALAIS.

Wallons, inhab. of S. and SE. Belgium (Wallonie) and of the Fr. depts Ardennes, Alsne, and Nord. They speak different varieties of a romance dialect (see under ROMANCE LANGUAGES), which contains also some Celtic roots and many words of Flemish origin. Walloon is commonly, but not quite accurately, considered as 'Belgian French'; indeed, the origin and the development of Walloon is in many ways parallel with those of mod. French (the Walloon part of Belgium was occupied by Rom. forces for cents.). In contrast to French the vowels are pronounced less distinctly. Final syllables are omitted very often, and Walloon dialects show the characteristic singing accent. From the 12th till the 15th cent. sev. chronicles were composed in the Walloon dialect. In the 17th cent. it is found again in literary works. From that time Walloon literature has existed; it is regional but very lively. For many years there has been friction between the W. and the Flemings (Ypres, Courtrai, Brussels, and Liège may be considered as situated on the 'border line' between the W. and the Flemings). Both in the First and in the Second World Wars the W. accused the Flemings of disloyalty to the Belgian state. Between the two wars the Flemings were successful in securing official recognition for the Flemish tongue. In 1950 King Leopold's restoration for a brief period led to a secessionist campaign by the W. (who were more strongly against his return than the Flemings), and the threat of civil war. See J. Destrée, *Wallonie*, 1914; M. Valkhoff, *Philologie et littérature wallonnes*, 1938; M. Piron, *Les lettres wallonnes contemporaines*, 1944; E. Baudart, *L'avenir de la Wallonie*, 1945; and L. Remède, *Le Problème de l'ancien Wallon*, 1948.

Walls. The most common types of W. in Great Britain are the external and

internal wall to the usual small house. The external wall performs 2 main functions: it acts as a screen to the weather, and it supports the upper floor and the roof. The wall is often built in 2 leaves with a 2-in. cavity between them; the 2 leaves are bonded together by wall ties, usually of twisted or indented metal to prevent moisture creeping across the cavity. The inside of the wall is usually covered with $\frac{1}{2}$ in. of plaster to give a smooth finish, though in recent years many have been lined with boards, usually of wood fibre or plaster.

The external W. minimise the passage of sound and heat, and there is an increasing tendency to use special insulating materials to prevent the escape of heat and thus cut down fuel costs. The internal W. to small houses are usually half-brick thick or timber studding faced on both sides with plaster, or wood-fibre or plaster boards. For other buildings, such as schools, blocks of flats, or industrial buildings, the W. are thicker, 13 $\frac{1}{2}$ in., or 18 in., etc., often decreasing in thickness by 4 $\frac{1}{2}$ -in. reductions as the wall rises. But the increasing tendency is to build W. of large buildings on the frame and panel method; that is, a frame of steel or reinforced concrete is first erected, and the panels (or voids between the members of the frame) filled in with brickwork, concrete, stonework, or light sheet materials. The frame thus supports the building and loads, and the panels act as a screen against the weather and passage of heat and noise. This introduction of panel or curtain walling brings with it new problems of jointing; with large panels, each joint has to be able to take up considerable movement due to temp. or moisture changes, while remaining weatherproof. This has stimulated the development of new jointing *mastics* (q.v.). Although stress has been laid here on brick construction, in some dists., as in the Cotswolds, stone is the usual walling material, and in other places concrete is largely used. The concrete is either laid *in situ*, by pouring it between 2 sheets of shuttering, or is pre-cast in the form of blocks and laid like masonry. Other materials have been largely used for the W. of prefabricated houses. Thousands of the latter have been built of asbestos-cement sheets along with special insulation of various kinds, or of 2 sheets of resin-bonded plywood stuffed between with slag wool, or even of insulated steel or aluminium sheets. In comparison with W. of ant. times, modern W., particularly for large buildings, are scientifically designed; they have, for a minimum amount of material, a calculated strength, heat, and sound insulation, etc. Old W. were built by rule-of-thumb methods, were often of massive thickness, and sometimes used for military defence, both in buildings and to protect tns and cities. These are often of great beauty, especially the red-brick W. of Eng. country houses and parks.

Wallsend, tn and municipal bor. of Northumberland, England, situated on the Tyne. Its name is taken from its

position at the E. end of Hadrian's Wall (q.v.). Its chief industries are coal mining, shipbuilding, engineering, rope-making, coal-gas production, plastics, and the manuf. of plywood. Pop. 49,130.

Walmer, tn and seaside resort on the coast of Kent, England. Since 1935 amalgamated with the bor. of Deal, it is one of the reputed landing-places of Julius Caesar. Walmer Castle, residence of the Lord Warden of the Cinque Ports, was built by Henry VIII in 1539 as one of a series of forts for the defence of the SE. coast against artillery assaults.

Walney Island, is. 10 m. long, opposite Barrow-in-Furness, Lancs, England. It is joined by a bridge to Barrow. The suburb of Vickerstown is on the is.

Walnut (*Juglans regia*), tree of the family Juglandaceae; the Eng. variety, the Persian W., is hardy though not a native. Other varieties are found in the Far E., and the Black W. in America, the latter forming the bulk of supplies in Britain. Besides its nuts, which are of much value as a dessert delicacy, the wood is in great demand by cabinet-makers; burred wood, chiefly obtained from Mediterranean countries, is valuable for veneers. Sugar has been made from the sap, and the aromatic leaves have been used in pharmacy.

Walpole, Horace, 4th Earl of Orford (1717-97), author and letter-writer, b. London, the youngest son of Robert W. (q.v.). At the age of 22 he visited France and Italy, together with the poet Gray. Whilst on the tour he met Horace Mann, with whom he maintained a correspondence for some very considerable period, and in France formed a friendship with Madame du Deffand. He returned to England, having quarrelled with Gray, and entered Parliament, holding a seat continuously up to 1768. It is, however, not as a politician but as an author that he is famous. His memoirs and correspondence are of the greatest importance to students of the life and times of the middle 18th cent. He lived at Strawberry Hill, Twickenham, from 1747. This he converted into 'a little Gothic castle' and his house became the centre of fashionable learning in England. He set up a printing press there and pub. much that was his own and his friends'. Gray's *Odes* were issued from here, as was his own *Castle of Otranto*, 1765, pub. under a pseudonym and as a 'Gothic romance' from the It. This estab. the vogue of the 'terror novel.' His memoirs include: *Reminiscences*, 1805, *Memoirs of the last Ten Years of the Reign of George II*, 1822, and *Journal of 1771-83*, 1859. He also wrote a tragedy, essays, prologues, and many *jeux d'esprit* in prose and verse; but his greatest work was his *Letters*. In style these show something of the polish and refinement of Madame de Sévigné and the epigrammatic felicity of Voltaire. The *Letters* were ed. by Mrs. Paget Toynbee (1903-5), and by W. S. Lewis (1937), and his *Works* by Mary Berry and others (1798-1825). See lives and studies by L. B. Sealey, 1884; A. Dobson, 1890; P. Yvon, 1924; D. M.

Stuart, 1927; L. Melville, 1930; S. Gwynn, 1932; R. W. Ketton-Cremer, 1946; also A. T. Hazen, *Bibliography of the Strawberry Hill Press*, 1942.

Walpole, Sir Hugh Seymour (1884-1941), Eng. novelist, b. Auckland, New Zealand, son of George W., Bishop of Edinburgh. He was educ. at King's School, Canterbury, Bede College, Durham, and Emmanuel College, Cambridge. He wrote with much distinction on the cathedral city environment, and *The Cathedral*, 1922, is his finest work in this particular sphere. His first novel, *The Wooden Horse*, appeared in 1909, and W. estab. himself in Chelsea as a writer. His next 3 novels were produced in fairly rapid succession, *Maradick at Forty*, 1910, *Mr Perrin and Mr Traill*, 1911, and *Prelude to Adventure*, 1912, the second of these, a study of school life, attracting much attention. But his first big success was *Fortitude*. His experiences in Russia during the First World War suggested his *The Duchess of Wreace*, 1914, a penetrating study of an autocratic personality symbolic of a social system in decay; *The Dark Forest*, 1916; and *The Secret City*, 1919, for which he was awarded the James Tait Black Prize. W.'s later writing is dominated, however, by that massive and gorgeously tapestried historical work, the tetralogy of *Rogue Herries*, 1930, *Judith Paris*, 1931, *The Fortress*, 1932, and *Vanessa*, 1933, which form his 'Lakeland saga,' a most sustained product of the modern romantic revival and one which endowed historical fiction with a new life. An able critic, he wrote studies of Conrad, 1916, and Trollope, 1928. He was knighted in 1937. See studies by Marguerite Steen, 1933; and R. Hart-Davis, 1952.

Walpole, Sir Robert, first Earl of Orford (1676-1745), statesman, b. Houghton, Norfolk. He studied at King's College, Cambridge. A Whig by persuasion and upbringing, he entered Parliament in 1701 as M.P. for Castle Rising, and in the next Parliament, the first of the reign of Queen Anne, for Lynn. He quickly distinguished himself, and in 1708 he became secretary for war. On the accession of the Tories in 1712 he was accused of speculation, and was dismissed his office and sent to the Tower. The Protestant succession, however, restored him to favour, and in 1715 he became chancellor of the Exchequer. On the dismissal of Townshend he resigned and opposed strongly the policy of Stanhope and Sunderland on every possible count, without regard for principle. His greatest victory in opposition was the rejection in 1718 of the Peerage Bill, which limited the prerogative of the Crown and which would have increased enormously the power of the House of Lords. In 1720 he returned to the Pay Office, just before the South Sea crisis broke. He succeeded Sunderland at the Treasury in 1721, but only after Sunderland's sudden death (1722) was W. really the king's chief minister, and for the next 18 years his position was undisputed.

W.'s handling of the South Sea crisis

showed to the full his common sense, tenacity, and skilful, unprincipled manipulation of people and events. It is now estab. that W. was not in fact a great financial minister: he himself lost heavily in the South Sea speculations, although he amassed an enormous fortune through speculation during his political career as a whole. He maintained his position by retaining the confidence of the Court, and by controlling the Commons by his wholesale managing of M.P.s and of parl. elections. In 1739 the war of 'Jenkin's Ear' was declared, and W. ought to have resigned, since he had declared war much against his will, but he clung to office, and only resigned when his majority had dwindled to 2. He was raised to the peerage as Earl of Orford. The position which he occupied and the doctrine of ministerial cohesion which he applied are generally considered to justify his being regarded as the first effective Eng. Prime Minister. See lives by W. Cole, 1798, and J. H. Plumb, 1956. See also Sir L. B. Namier, *The Structure of Politics at the Accession of George III*, 1929.

Walpurga, St (Walpurgis or Walburga) (d. c. 779), sister of SS. Willibald and Winebald. She became a nun at Wimborne, Dorset, and at the invitation of St Boniface followed St Lioba to Germany, becoming abbess of Heldenheim until her death. Her relics were transferred to Eichstätt, where a convent was erected in her honour. Throughout all Germany, and even in France, the Netherlands, and England, churches and chapels were dedicated to her. The feast of W. falls properly on 25 Feb., but in some Ger. calendars it is assigned to 1 May, which day, with its promise of returning summer, was already associated with various heathen celebrations, from which the ann. Witches' Sabbath on Walpurgis-Night took form. (See Goethe's *Faust*.) A mysterious fluid, known as St W.'s oil, still flows periodically from beneath her shrine and is distributed far and wide to those in physical or spiritual need.

Walrus, Sea Horse, Sea Cow, or Morse (*Odobenus*), large marine carnivore. The Pacific W. (*O. obesus*) occurs around Alaska and the N.E. Siberian coasts. The Atlantic W. (*O. rosmarus*) is found in Spitzbergen and other European is. of the far N. The W. has been ruthlessly hunted for its immense tusk-like upper canines, its hide, and its oil. It is a gregarious animal, and quiet and inoffensive in disposition except during the breeding season, or if attacked, when it is capable of fighting fiercely. It averages 10-12 ft in length, though specimens nearly twice as long are recorded. The muzzle is divided between the nostrils, and bears bristly moustaches. The eyes are small, and there is no external ear. The adult animal has only 1 incisor and 3 premolar teeth at each side of the upper jaw besides the tusks; in the lower jaw only 3 premolars and 1 small canine occur on each side. Bivalve molluscs are its prin. diet, these being dug up from the sea bottom by means of the tusks.

Walsall, mrkt tn, co. and municipal bor. of Staffordshire, England, 8 m. NW. of Birmingham. Queen Mary's school was estab. in 1554. It has trade in harness, saddlery, and leather goods as well as in engineering and hardware. Pop. 114,900.

Walsham, North, urban dist. and mrkt tn of Norfolk, England, 14 m. NNW. of Norwich. The 16th-cent. grammar school was attended by Nelson. Agric. machinery is manuf. Pop. 4733.

The Zoological Society of London

WALRUS

Walsingham, Sir Francis (c. 1530-90). Eng. statesman, b. Chislehurst, Kent, and educ. at King's College, Cambridge. He was a fervent Protestant, and travelled widely in Europe during Mary's reign, but on the accession of Elizabeth I returned to England, and in 1569 acted as chief of the secret service in London. He was ambas. to France 1570-3, and secretary of state from 1573 until 1590. He secured the convictions of Wm Parry, 1585, Anthony Babington, 1586, and Mary, Queen of Scots, 1586.

W.'s whole administration of foreign affairs was founded on a system of espionage and bribes, but his diplomatic methods were balanced by an undoubted personal integrity and disinterested patriotism. See C. Read, *Mr Secretary Walsingham and the Policy of Queen Elizabeth*, 1925.

Walsingham, Thomas (d. c. 1422), monk and historian, was preceptor and superintendent of the scriptorium of St Albans Abbey, and afterwards prior of Wymondham. He is the prin. authority for the reigns of Richard II, Henry IV, and Henry V. He compiled parts of *Historia Anglicana 1272-1422* (ed. H. T. Riley, 2 vols. in Rolls series), 1863, *Chronicon Angliæ*, 1328-88, *Ypodigma Neustriæ*, a record of events in Normandy, and *Gesta Abbatum*.

Walsingham, vil. of Norfolk, England, famous in history for its Chapel of Our Lady, with which miracles have been associated since before the Norman Conquest. From then until the Reformation

W. was unrivalled in England as a centre of pilgrimage, being visited by every king and queen of England. Of the Chapel Erasmus wrote, 'When you look in, you would say it was the mansion of the saints, so much does it glitter on all sides with jewels, gold and silver.' W. Augustinian Priory, founded by Geoffrey de Faverches in 1163, is now in ruins, but its proportions can still be distinguished. The Franciscan Friary, also in ruins, is 14th cent. In recent times W. has again become a place of pilgrimage, the centre now being the Slipper Chapel, 1 m. from the vil. An Anglican shrine has also been erected in W. Pop. (Little W. and Great W.) 1150.

Waltari, Mika (1908-), Finnish author, educ. Helsinki Univ. He was literary reviewer for the Finnish Broadcasting Co. (1937-8) and ed. a weekly illustrated magazine (1936-8). He won sev. literary prizes in Finland, and his works, including *The Egyptian*, 1949, have been trans. into English and other languages.

Walter, Bruno (1876-), Ger. conductor and composer, b. Berlin. He graduated at the Stern Conservatory there and spent his early years as conductor in the opera houses in various Ger. cities. He was much influenced by Mahler, whom he accompanied to Vienna in 1901. He remained there as assistant conductor at the Court Opera until 1913, when he went to Munich as Music Director. By the time he resigned that post in 1922 he had estab. a European reputation. In that year he took part in the Salzburg Festival with which he was associated for many years. He conducted in Berlin and Leipzig until 1933, when on his dismissal by the Nazis he went as conductor to the State Opera in Vienna. After the Ger. annexation of Austria he became a Fr. citizen, and has since conducted mainly in New York but also in France, Italy, and Great Britain.

Walter, Hubert (d. 1205), cleric and administrator, b. probably at W. Dereham, Norfolk. W. may have been trained in Glanvill's household: after a series of rapid civil and eccles. promotions he became, in 1193, Archbishop of Canterbury and a justiciar. Some historians suggest that *Tractatus de Legibus et Consuetudinibus Anglie*, commonly attributed to Glanvill, was in fact compiled under W.'s direction.

Walter, John, name of 3 successive proprietors of *The Times* (q.v.): (1) (1739-1812) founder and first editor, son of a London coal-merchant, whose business he followed prosperously till 1781. He was also an underwriter till 1782. He set up a printing business in Printing-House Square, 1784, and printed, 1 Jan. 1785, the first number of *Daily Universal Register*, which was renamed *The Times*, 1 Jan. 1788. (2) (1776-1847), chief proprietor; b. probably at Battersea, second son of the founder. Educ. at Merchant Taylors' School and Trinity College, Oxford. He succeeded his elder brother as manager, 1803, and was editor till c. 1810. (3) (1818-94) chief

proprietor, b. Printing-House Square, eldest son of the last-named. Educ. at Eton and Exeter College, Oxford, he was called to the Bar at Lincoln's Inn, 1847. He became sole manager on his father's death.

Walters, Lucy (c. 1630-58), daughter of a S. Wales squire, and mistress or wife of Charles II. She went to the Hague, where she became the mistress of the exiled Prince of Wales (later Charles II) in 1648. At Rotterdam on 9 Apr. 1649 she bore Charles a son, James, whom he created Duke of Monmouth. See Lord George Scott, *Lucy Walters, Wife or Mistress?*, 1948.

Waltham, city of Middx co., Massachusetts, U.S.A., on Charles R. 10 m. W. of Boston. It has the Amer. Waltham Watch Company, one of the largest watch factories in the world, and numerous cotton mills, the first one in America being estab. here in 1814. W. also manufs. machinery, tools, precision instruments, gauges, foundry products, and clothing; it has a printing industry. The Brandeis Univ., Fernald school, and an army hospital are situated here. W. was settled in 1634 and incorporated as a city in 1884.

Waltham, Waltham Abbey, or Waltham Holy Cross, anct. mkt. tn. on the R. Lea, 12½ m. from London and an urb. dist. of Essex. It is now famous chiefly for its important anct. abbey church. The church of Holy Cross was founded in 1060, on an earlier foundation, by King Harold; Henry II converted it into a priory, and, in 1184, it became an abbey. There are manufs. of plastics and chemicals, and horticultural and scientific establs. Pop. 8940.

Waltham Cross, dist. of Herts, part of the urb. dist. of Cheshunt, about 13 m. from London. Here is one of the crosses erected by Edward I to commemorate the resting stages of the body of Queen Eleanor on its way to Westminster Abbey.

Walthamstow, residential and industrial suburb in the metropolitan area of Essex, on the l. b. of the Lea. It includes 300 ac. of Epping Forest. Wm Morris was b. in W. A civic centre was opened in 1941. There are plastics and light-engineering industries, etc. W. has 2 members of Parliament. Pop. 119,400.

Walther von der Vogelweide (c. 1170-c. 1230), Ger. Minnesinger, probably a native of Tyrol. He served in turn many masters, and wandered all over Europe. The greatest of Ger. medieval poets, his mastery lay in his wealth of tone and feeling. His lyric verse is of exquisite tenderness, whilst his national poems are powerful and rich in ideas. His works have been ed. by Lachmann-Kraus (10th ed., 1936), and trans. by M. F. Richey, *Selected Poems*, 1948. See studies by A. E. Schönbach, 1890, 1924; C. Büttler, 1940.

Walton, Izaak (1593-1683), author, b. Stafford. He was apprenticed to an ironmonger in London, and by 1614 was in possession of a business of his own. He had before 1619 begun to write verses,

and in 1640 he prefixed a life of Donne to the first folio ed. of that author's *Sermons*, which was much approved by John Hales. He afterwards issued separately an improved ed. of his *Life of Donne*, 1658. In 1651 he pub. *Reliquiae Wottonianae* with his *Life of Sir Henry Wotton*, and 2 years later produced his famous treatise *The Compleat Angler*, or *the Contemplative Man's Recreation*, one of the most delightful books in the Eng. language. In 1665 he pub. his *Life of Richard Hooker*, and in 1670 appeared his *Life of George Herbert*, followed in 1678 by that of *Bishop Sanderson*. C. Cotton's dialogue between Piscator and Viator was pub. as a second part in the fifth ed. of *The Compleat Angler*. See complete ed. of works ed. by G. L. Keynes, 1929.

Walton, Sir William (1902-), composer, b. Oldham, studied at Oxford, but was mainly self-taught and remained remarkably uninfluenced, except by the Sitwell family on the literary and cultural side. In 1923 he first appeared at the festival of the International Society for Contemporary Music, at Salzburg. He then lived mainly in London, where in 1934 his Symphony was performed, although still without a finale. In 1937 he received the hon. D.Mus. from Durham Univ., and in 1942 from Oxford, and he was knighted in 1951. Since his marriage in 1948 he has lived for some time of each year at Ischia. The greatest event of his career, and an important one in the history of opera, was the production of his first work in that form, *Troilus and Cressida*, at Covent Garden in 1954. He writes with extreme deliberation (the finale of the Symphony followed 3 years after the other movements) and with great finish, in an idiom that is entirely his own even if it shows occasional traces of the influence of Elgar or Sibelius and, in *Troilus*, Verdi and Strauss. His work has been found fault with for not being 'up to date,' but such assessment is itself faulty because it leaves his strong individuality out of account. His works include a ballet, *The Quest* (after Spenser), 1943, incidental music for *Macbeth*, film and radio music, *Te Deum* for the coronation of Queen Elizabeth II, 1953; *Belshazzar's Feast*, in Honour of the City of London (Dunbar) and other choral works, overtures *Portsmouth Point* and *Scapino*, Symphony and other orchestral music; *Façade* (Edith Sitwell) for recitation and chamber orchestra; *Sinfonia concertante* for piano and orchestra, concertos for violin, viola, cello, piano Quartet, 2 string Quartets; Sonata for violin and piano; piano *Duets for Children*; and a few songs. See F. Howes, *The Music of William Walton* (Musical Pilgrim, 2 vols.), 1942-3.

Walton Heath, see BANSTEAD.

Walton-le-Dale urb. dist. of NW. Lancs, England, on the Ribble; it has cotton mills, corn mills, and iron foundries. The Unicorn Inn was Cromwell's H.Q. in 1648. Pop. 14,870.

Walton-on-Thames, urb. dist. (with Weybridge) and tn of Surrey, England, a favourite resort for boating and angling,

and a residential suburb of London. Pop. (W. and Weybridge) 39,420.

Walton-on-the-Naze, or Walton-le-Soken, urb. dist. and par. of NE. Essex, England, 7 m. S. of Harwich; a seaside resort. Pop. (with Frinton) 9900.

Waltz, dance in 3/4 time first known in Austria and Bavaria about 1780, and assumed to have been derived from the popular *Ländler*. In Germany and France it became a favourite in high society. In England, although W. melodies were appreciated, the position taken by the dancing couples so shocked the public sense of decorum, that the dance itself was not accepted in the ballroom until 1812. Even then it was performed at half the tempo of the giddy whirl enjoyed by the Germans, Eng. dignity of the period being unaccustomed to 'fast dancing.' Once estab., it held pride of place for many years, remaining popular to the present day. During these decades, the W. has adopted different forms and tempos, as the German W., the French Valse, the Sauteruse. The *Waltz-à-trois-temps*, in effect, was the German W., while the later, and quicker, *Waltz-à-deux-temps* was akin to a gallop. The modern W. has developed a style technically different, and slower in tempo than the original dance. Of recent years, the popularity of Old Time dancing has revived the early W., based on 19th-cent. style. Weber and Schubert were among the first masters to cultivate the W. seriously, and the elder J. Strauss and Lanner among the first ballroom composers to develop its vogue in Vienna, whence it spread rapidly all over Europe. As a medium for instrumental music it was used by Chopin, Brahms, and others. See M. Carner, *The History of the Waltz*, 1948.

Walvis (Walfish) Bay, bay on the W. coast of Africa. Most of the imports of SW. Africa are landed at W. B., the only good harbour on that coast. It is the principal seaboard terminus of the SW. Africa railway. An important fishing and canning factory has been created at W. B. Pop. (European) 2000; (others) 2000. Seasonal influx of labour about 4000.

Wampum, Amer. Indian name for perforated shell beads, woven into articles of personal adornment, and used in many forms as a medium of exchange of goods and property, i.e. as currency. The W. was also employed for sealing treaties and as means of recording important events; it thus became a symbolic device for communications, i.e. a sort of writing. Broad belts or collars were formed of strings of W. arranged in patterns, sometimes representing pictographs, according to the story to be recorded.

Wand, John William Charles (1885-), Bishop of London, 1945-56; educ. at King's School, Grantham, and St Edmund Hall, Oxford. His first curacy was at Benwell (1908-11); after this he was at Lancaster, 1911-14, a temporary chaplain to the forces, 1915-19, and honorary chaplain to the forces, 1919-22 and from 1925. After the First World

War he held a living at Salisbury and was appointed to a number of academic posts at Oxford. From 1934 to 1943 he was Archbishop of Brisbane and Metropolitan of Queensland; 1943-5 he was Bishop of Bath and Wells, being translated to the see of London in 1945. He retired in 1956, and was followed in his see by Dr H. C. M. Campbell (q.v.). He has written many books, among them *New Testament Letters*, 1944, *The Anglican Communion* (ed.), 1948, *History of the Early Church to AD 600* (3rd ed.), 1949, *History of the Modern Church* (7th ed.), 1952, *What the Church of England Stands for*, 1951, *The Life of Christ*, 1954.

Wandering Jew, see **Jews**.

Wandiwasu, or **Vandivasu**, tn of Madras state, India. It was the scene of the decisive victory by Eyre Coote over the French on 22 Jan. 1760, by which Fr. power in S. India was finally ousted.

Wandsworth, parl. and metropolitan bor. of SW. London, the westernmost bor. on the S.W. bank of the Thames. This largest of the bors. comprises the old vils. and hamlets of W., Putney, Roehampton, Clapham, Streatham, Tooting (qq.v.), and Balham. W. takes its name from the R. Wandie, and was originally a fishing vil. Huguenots settled here after the revocation of the Edict of Nantes (1685), and engaged in hat-making; their burial ground is at East Hill. The industries include oil-mills, dye works, paper mills, calico-printing, and brewing. The W. Prison was built in 1851. There is a fine common of 183 ac. The bor. returns 4 members to parliament. Area 9108 ac.; pop. 333,900.

Wanganui, city and port, on the W. coast of N. Is., New Zealand, on the Wanganui R., 134 m. N. of Wellington by rail. It is the depot and port for a large area of pastoral and agric. country. The chief industries are freezing works, engineering works, woollen mills, steel-pipe works, fertiliser and chemical works. The magnificent scenery of the upper riv. attracts many overseas tourists and holiday makers from other parts of New Zealand. Pop. 52,106.

Wangaratta, tn of Victoria, Australia, 130 m. N.E. of Melbourne, at the junction of the Ovens and King Rrs., and the cos. of Bogong, Delatite, and Moira. It is the centre of an agric. dist. producing hops, tobacco, and broom. There are woollen mills and a rayon factory. Pop. 8700.

Wankie, tn in S. Rhodesia, 212 m. by road from Bulawayo and chief coal-mining area of S. Rhodesia. The discovery of coal here was the reason why Rhodes diverted the N. to S. railway. The W. coalfields cover at least 400 sq. m. and reserves are conservatively estimated at 4,000,000,000 tons. Present production (1956) averages 3,000,000 tons per annum. Pop. (Europeans), 1123.

Wanks River (Nicaragua), see **Coco**.

Wansbeck, riv. of England, rising in the Wannies, a group of hills in central S. Northumberland, and flowing 23 m. through a wooded valley past Morpeth to the N. Sea.

Wanstead and Woodford, municipal bor. (since 1937) of Essex, England, situated on the outskirts of Greater London, 10 m. from the City, and including 730 ac. of Epping Forest. It is predominantly residential in character, and forms the parl. bor. of Woodford. Pop. 61,620.

Wantage, mkt tn of Berkshire, England, 25 m. NW. of Reading. It is famous as the bp. of Alfred the Great. There is trade in agric. produce and engineering works. Pop. 5430.

Wapenshaw (A.-S. *waepen*, weapon; *sceawian*, to show), in Scots feudal history, an exhibition of arms, according to the rank of the individual, made formerly at certain times in every dist. Such exhibitions or meetings were not designed for military exercises, but with the object of showing that the lieges were properly provided with arms.

Wapentake (Old Norse *vǫpntak*, touching of weapons), div. of those Eng. cos. which were settled by the Danes, corresponding to the 'hundred' (q.v.) elsewhere.

Wapiti (*Cervus canadensis*), large and magnificent deer once widely distributed throughout N. America, now limited to the Rockies and the Cascades. It is also found in NE. and Central Asia. In N. America it is known as the 'Elk'.

Wapping, riverside dist. in the bor. of Stepney, E. London, containing the London Docks. The name has a connection with the originally marshy nature of the ground. W. was notorious in the 18th and early 19th cents. for its drinking dens for sailors. Execution Dock, which stood c. 1850 E. of W. Old Stairs, was the place of execution for crimes committed on the high seas. Capt Kidd (q.v.) was executed here. Judge Jeffreys was arrested at W. when trying to escape. The Thames Tunnel, constructed 1824-43, connects with Rotherhithe.

War, Civil, see **Civil War**.

War, Great, see **World War, First**.

War, Second World, see **World War, Second**.

War and Warfare. War may be defined as 'the state or condition of governments contending by force' (Westlake), and in ascertaining whether such a state or condition exists, the intention of the parties or either of them must be regarded. The mere commission of certain acts of force, hostility or unfriendliness, is not sufficient, there being, for instance, certain acts war-like in their essence but traditionally held to fall short of war, to which a nation may resort when provoked under circumstances of too little moment to call for a declaration of war. It is always open to the Power affected by such acts to treat their commission as an act of war, but if it does not elect to do so, the peace is deemed to remain unbroken. The most familiar among these acts of forcible redress short of war are retorsions (q.v.), reprisals (q.v.), and pacific blockade (i.e. a blockade that leaves third Powers free to enter and leave the blockaded ports at pleasure). For a considerable time it was held, though

not unanimously, to be necessary that the outbreak of war should be preceded by a solemn declaration. This theory was very frequently disregarded in practice, there being either no declaration at all or a declaration at some date after the first act of hostility. It became, however, customary in the latter part of the 19th cent. to issue a manifesto announcing the outbreak of war, and present practice is founded on the third Hague Convention drawn up at the Peace Conference in 1907, the Powers recognising 'that hostilities between them must not commence without a previous and explicit warning in the form of either a declaration of war, giving reasons, or an ultimatum with a conditional declaration of war.' A war may be brought to an end in 3 ways: (1) by the reciprocal intermission of hostilities without any definite understanding being arrived at between the belligerents; (2) by the conquest and subjugation of one of the belligerents by the other; (3) by a bilateral arrangement embodied in a treaty of peace, whether the honours of war be equal or unequal.

For warfare see (*inter alia*) AERIAL WARFARE; ARMS; ARMY; BELLIGERENTS, RIGHTS AND DUTIES OF; BLOCKADE; CHEMICAL WARFARE; CRIMES, WAR; JUNGLE WARFARE; NAVY AND NAVIES; PRISONERS OF WAR; RED CROSS; STRATEGY AND TACTICS; various wars, historic battles, and weapons of war, are treated in separate articles.

War Communism, name given to the economic and social policy of the Bolshevik Gov. in Russia in 1918-21. This policy had the dual aim of serving the Bolshevik effort in the civil war and of effecting the transition to Communist conditions; it included nationalisation of industry and trade, compulsory food deliveries by peasants, wages in kind for workers and employees, compulsory labour service by the bourgeoisie, etc. All this led to widespread discontent and sev. uprisings in 1921 (see ANTONOV; KRONSTADT); as a result the New Economic Policy (q.v.) was introduced.

See M. Dobb, *Soviet Economic Development since 1917* 1948; H. Schwartz, *Russia's Soviet Economy*, 1951.

War Crimes, see CRIMES, WAR; INTERNATIONAL LAW, *International Law and War Crimes*; NUREMBERG TRIAL.

War Debts, see DEBTS, INTER-ALLIED.

War Decorations, see DECORATIONS FOR WAR SERVICES.

War Department of the U.S.A. (since 1947 the Department of the Army), was created by Act of Congress in 1789, succeeding a similar dept which was estab. prior to the adoption of the Constitution. Subsequent Acts and executive orders have greatly altered the scope and functions of the dept since its inception, as it originally encompassed many activities later delegated to the Navy and Interior Depts. The National Security Act of 1947 transferred the dept to the newly created National Military Establishment (since 1949 the Dept of Defence) and redesignated it the Dept of the Army. The Secretary of War assumed the title

Secretary of the Army. The dept is charged with responsibility for organising, training, maintaining, and equipping the U.S. Army, and is housed in the Pentagon (q.v.). For the administration of the Navy see NAVY DEPARTMENT OF THE U.S.A. A separate Dept of the Air Force was first set up in 1947.

War Graves. The enormous casualties of the First World War brought into prominence the question of burial and of the upkeep of the graves of the dead. In the case of the Brit. Empire it was agreed at the Imperial Conference (q.v.) of 1918 that such graves should be maintained permanently. To deal with the matter the Imperial W. G. Commission was constituted, which consists of the secretaries of state for war and the colonies, the minister of works, the high commissioners of Canada, Australia, New Zealand, S. Africa, India, and Pakistan, and various other persons. The Duke of Gloucester is president and the secretary of state for war the chairman. In every battlefield of the First World War proper cemeteries have been made and headstones and other means of identification provided. Areas have been searched for the 'missing,' their identity estab., and proper burial carried out. The discovery of Brit. bodies by local inhab. on the former battlefields continued up to the outbreak of the Second World War (1939), but in the year 1938-9 the number was much less than in previous years. Visits to the cemeteries have been organised by voluntary associations, particularly on the occasion of the unveiling of a general memorial. Much detail may be obtained from the ann. reports of the commission, whose permanent H.Q. are now situated at Woodburn Green, near High Wycombe, Buckinghamshire. By fostering the remembrance in common of the dead of the First World War the commission were persuaded that they might make a practical, as well as a sentimental and emotional, contribution to the maintenance of peace. But while the commission were still finding on the battlefields of the First World War, and giving burial to, the remains of men who had given their lives 'to end war' they were called upon to prepare for a new harvest of death, and to protect the new memorials visibly recording the sacrifice of the past from the effects of a fresh outbreak of violence. In 1938, following a visit by members of the 'Anglo-Ger.-Fr. mixed committee' to England, an informal agreement was reached under which Great Britain and Germany reciprocally assured the care of enemy graves during the subsequent hostilities. By agreement with the participating govts. the powers bestowed on the commission by the original charter and supplemental charters have been extended to cover the commemoration of the dead of the Second World War. So swift was the allied advance in N. France in 1944 that the tide of battle swept past the Brit. war cemeteries and memorials of the First World War and left them for the most part unscathed. As France and Belgium were liberated, it was found that the cemeteries

had, on the whole, been respected by friend and foe alike. At Cologne the Brit. cemetery was found to be in good condition (1945). Of the great memorials, the Menin Gate suffered rather more damage than had been expected, though largely on the surface, but name panels were found damaged and the bronze gates had been removed. Much remains to be done to bring the cemeteries to their former standard; but fortunately the commission is in a strong financial position, with an endowment fund of nearly £6m. Cemeteries and memorials of the

cemeteries, and many of the larger service plots in municipal cemeteries, have developed in such a way as may render some of them places of pilgrimage no less beautiful in their horticultural and architectural features than the cemeteries of the last war overseas. Wooden crosses and other markers, later to be replaced by permanent headstones, are wherever possible set in narrow flower borders between stretches of level turf. At Brookwood are special plots for Fr., Belgian, Czechoslovak, and Polish dead, and similarly for the Canadian dead from the Dieppe raid.

Imperial War Graves Commission

THE BRITISH MILITARY CEMETERY AT ROME, ITALY

This cemetery contains 429 British Commonwealth graves of the Second World War.

First World War in many other parts of the world have been maintained at a high standard. For the commemoration of the dead of the commonwealth and empire in the Second World War arrangements were made for taking over recorded graves as soon as conditions allowed. First cemeteries in N. Africa to be constructed are those at Sollum and Acroma, designed by Sir Hubert Worthington, first of the commission's prin. architects appointed for Second World War cemeteries. As in other foreign countries, the Egyptian Gov. expressed willingness to provide the requisite land for the new cemeteries. A local chieftain in Eritrea gave the site of the Brit. cemetery at Keren. Numerous sites and lay-outs S. of Rome were prepared for Brit. graves in Italy. Under the guidance of Sir Edward Maufe, whom the commission appointed its prin. architect in the U.K., the R.A.F. regional

Out of a tota of about 350,000 graves scattered throughout the world, by 1955 some 220,919 Brit. (U.K.) W. G. out of a total Commonwealth figure of 318,672 had been taken over from the Army by the W. G. Commission. Approximately 40,000 of these are located in Italy. They are divided among 42 cemeteries, stretching from Sicily to the foothills of the Alps. Their size varies; the large necropolis at Cassino contains over 4000 graves; others such as Padua, a few hundred. The pilgrim will naturally see the close connection between the progress of allied military operations in 1943-4 and the cemetery sites. They lie in most cases near or on the spot where many actions for the liberation of Italy were fought. Sicily has 3 concentrations—Agrig, Catania, and Syracuse. The cemetery at Cassino is set in a tremendous natural amphitheatre. Of all these moving burial

areas in Italy none is more serene than that at Assisi, near to the churches and monastery rich in memories of the saint who perhaps more than any other is dear to the Eng. race. The commission have made it their particular concern to blend the lay-out of the cemeteries with the natural beauty and architectural character of their environment. The general treatment of the sites is uniform, and on the lines adopted for the graves of the First World War. The effect aimed at is that of an Eng. garden rather than that of the local *campi santi*, and headstones take the place of crosses. The central features are again the great Cross of Sacrifice designed by Sir Reginald Blomfield and the Stone of Remembrance, by Sir Edwin Lutyens, serving to underline the fact that here is ground 'that is for ever England.' Among cemeteries in the Pacific area the sites of 3 are of outstanding interest and beauty: Bita Paka, 32 m. from Rabaul, with 2800 burials; Ambon, overlooking Ambolina Bay, with 2000 burials; and Makassar, with 600 burials, mostly U.K. sailors and marines who were prisoners of war in Celebes. See *Their Name Liveth* (issued by the Imperial War Graves Commission, 1954-).

War in Korea (1950-53), see KOREAN WAR.

War Loan, see PUBLIC DEBT.

War Medal, British: 1. Issued in July 1919 to record the successful conclusion of the First World War, and awarded to all officers and men of the Brit., Dominion, Colonial, and Indian Forces, members of women's formations enrolled for service with the Forces and members of military hospitals and kindred organisations, who either entered a theatre of war on duty or who left their places of residence and rendered approved service overseas between 5 Aug. 1914 and 11 Nov. 1918 inclusive. The medal is in silver for all except Brit. subjects enrolled in native labour corps units, for whom the medal is cast in bronze. The ribbon has an orange centre, watered with stripes of white and black on each side with borders of royal blue. The winning design was that of Wm McMillan, a young Scottish sculptor, who also won the prize for the best design for the Victory Medal (q.v.).

2. Instituted in 1948 for service in the Second World War. The obverse of the cupro-nickel medal bears the royal effigy, crowned, and the reverse, designed and modelled by E. Carter Preston, shows a lion standing triumphant on the body of a double-headed dragon, the two heads, an eagle's and a dragon's, signifying respectively the prin. occidental and oriental enemies in the Second World War. The medal is 1.42 in. in diameter. The ribbon has stripes of red, white, and blue.

War Office, the H.Q. of the Brit. Army, situated in Whitehall, London. The dept during the early years of the present cent. was thoroughly overhauled and its organisation revised on the recommendation of a specially appointed committee over which Lord Escher presided. An Army Council was formed which consisted

of the secretary and under-secretary for war, together with the financial secretary and 4 military members (chief of the imperial general staff, adjutant-general to the forces, quarter-master general to the forces, and master general of the ordnance). The present composition of the council includes the vice-chief and the deputy chief of the imperial general staff, and the permanent under-secretary of state for war (secretary of the council), and omits the master general of the ordnance. Each of the military members has some special dept of the military service to superintend. The vice-chief is responsible, broadly speaking, for operations, while the deputy chief is responsible for Army organisation policy; and they are responsible directly to the secretary of state for war, who is, of course, directly responsible to Parliament. The inspector-general of the forces, who took the place of the former commander-in-chief, carried out the plans of the Army Council and reported upon the efficiency of the men and the utility of the reforms; this post has now been abolished, and the duties allocated to a director of military training, with subordinate directors to assist.

The beginning of the present W. O. is to be found in the appointment of a 'clerk to the general' in Charles II's days. The expressions 'secretary to the forces' and 'secretary to the council of war' were also current, and appear to have developed into the 'secretary-at-war.' This official was in the nature of a private secretary to the commander-in-chief, but the office grew in importance, and considerable administrative duties were attached to it. The Ordnance Board (q.v.), which long antedated the W. O., was abolished in 1855. Its functions, which included the supply of arms and equipment, were merged with those of the W. O. In 1939 many of the duties taken over by the W. O. in 1855 passed to the newly formed Ministry of Supply. The executive head of the W. O. is the Army Council, presided over by the secretary of state for war.

See H. Gordon, *The War Office*, 1935.

War Shock, see PSYCHONEUROSIS; PSYCHOPATHOLOGY; SHELL-SHOCK; INSANITY.

Warbeok, Perkin (c. 1474-99), pretender to the Eng. throne in the reign of Henry VII. He was a native of Tournai, and appeared in 1490 at the Burgundian court as the younger of the 2 princes whom Richard III was said to have murdered in the Tower of London. He was acknowledged as her nephew by Margaret of Burgundy (q.v.), and received at the Court of the Fr. king. W. went to Scotland, where he was received by James IV. In 1498 he invaded the SW. of England, and besieged Exeter, but was captured and brought to the Tower. The following year he escaped, but was recaptured and executed at Tyburn.

Warblers, or *Sylviidae*, family of passerine birds distinguished from the thrushes by their more delicate structure and more subulate bill. They include

some of the choicest songsters. Among the numerous Brit. W.s are chaff-chaff (*Phylloscopus collybita*), the garden W. (*Sylvia salicaria*), the lesser whitethroat (*Sylvia curruca*), the grasshopper W. (*Acrocephalus naevius*), the Dartford W. (*Melospiza undulata*), the reed W. (*A. streperus*), and the sedge W. (*A. phragmitis*).

Warburg, Otto Heinrich (1883-), Ger. physiological chemist, b. Freiburg im Breisgau, studied chemistry under Emil Fischer. He became a prof. at the univ. of Berlin, and at the Kaiser Wilhelm Institute of cellular physiology. He worked on the chemistry of the living cell, and on the principles of metabolism, and made important discoveries about fermentation, breathing, and the assimilation of carbonic acid. In 1931 he received the Nobel prize for chemistry.

Warburton, William (1698-1779), prelate and editor, b. Newark. Educ. at Oakham Grammar School, Rutland, he took orders, became chaplain to Frederick, Prince of Wales, and was appointed dean of Bristol in 1757 and Bishop of Gloucester in 1759. He was a friend of Pope, who made W. his literary executor, and he brought out an ed. of Pope's works in 1751. He also pub. an ed. of Shakespeare which was severely criticised. See life by J. S. Watson, 1863; and A. W. Evans, *Warburton and the Warburtonians*, 1932.

Ward, Artemus, see BROWNE, C. F.

Ward, Ebenezer (1819-1902) and **Lock, George** (1832-91), joint founders, 1854, of the firm of publishers which still flourishes under their names. Among their first pub. were popularly priced editions of Webster's *Dictionary* and Homer's *Odyssey*, illustrated by John Flaxman. Ward, Lock also pub. the *Windsor Magazine*. The House received a temporary setback when its premises were completely gutted during the Blitz, 1940.

Ward, James (1769-1859), painter and engraver, b. London. In 1791 he was appointed painter and mezzotint engraver to the Prince of Wales, and in 1807 became A.R.A., and in 1811 R.A. In his animal studies he was influenced by his brother-in-law, George Morland, but his aims were more ambitious. His large landscape 'Gordale Scar' (Tate Gallery), though falling short of greatness, is remarkable in its romantic energy.

Ward, John Quincy Adams (1830-1910), Amer. sculptor, b. Urbana, Ohio. From 1850 to 1856 he studied under H. K. Brown, assisting him with the equestrian statue of Washington in Union Square, New York. In 1863 his 'Indian Hunter' was erected in Central Park, where also are his 'Freedman' and 'Shakespeare.' He executed the colossal statue of Washington for the Treasury Buildings.

Ward, Sir Joseph George (1856-1930), New Zealand statesman, b. Melbourne. He was postmaster-general and colonial secretary, 1899-1906. Prime Minister 1906-12; he represented New Zealand at the Imperial Conferences in London, 1907, 1909, and 1911. He was created a baronet in 1911. He was again Prime Minister, Dec. 1928-May 1930.

Ward, Sir Leslie (1851-1922), artist, b. London, known by his pseudonym 'Spy.' He became famous as a caricaturist for *Vanity Fair* (1873-1909), among his most characteristic drawings being those of lawyers. He was knighted in 1922. He wrote *Forty Years of Spy*, 1915.

Ward, Mary Augusta (1851-1920), Brit. novelist better known as Mrs Humphry Ward, b. Hobart, a grand-daughter of Dr Arnold of Rugby and niece of Matthew Arnold. She went to school in England, settled at Oxford, and in 1872 married T. Humphry Ward, a Fellow of Brasenose, who later joined the staff of *The Times*. She is best known by her novel *Robert Elsmere*, 1888, an attack on evangelical Christianity which caused a great sensation. It was followed by *David Grieve*, 1892, and a succession of serious and humourless novels which were popular for a time. Her autobiography, *A Writer's Recollections*, appeared in 1918. See lives by S. Gwynn, 1917, and J. P. Trevelyan, 1923.

Ward, William George (1812-82), Rom. Catholic philosopher and theologian; educ. at Winchester and Lincoln College, Oxford, fellow of Balliol 1834-45. He was ordained priest in the Church of England, 1840 and thereafter led a movement advocating reunion with Rome. In 1841 he wrote in defence of Newman's Tract XC, and in 1844 pub. *Ideal of a Christian Church*, maintaining that the Church of England had no future but in submission to the Holy Sec. Deprived of his fellowship and of his degrees, W. was received into the Rom. Catholic Church in 1845. From 1851 to 1858 he was lecturer in moral philosophy at St Edmund's College, Ware, and was granted a doctorate of philosophy by Pius IX (1854). From 1863 to 1878 he edited *The Dublin Review*, in which he upheld the doctrine of papal infallibility (proclaimed in 1870). See his *Essays in the Philosophy of Theism* (ed. W. P. Ward, his son), 2 vols., 1884. See also W. P. Ward, *William George Ward and the Oxford Movement*, 1889, *William George Ward and the Catholic Revival*, 1912.

Ward: 1. In Eng. law, a minor who has been legally placed under the care of a guardian (q.v.).

2. Electoral div. of a parl. or municipal bor.

Warden, in England, officer appointed for the naval or military protection of some particular dist. The W. of the Cinque Ports (q.v.) was created by Wm the Conqueror with extensive jurisdiction over the adjacent coast land. The W.s of the marches were appointed to protect the boundaries between England and Scotland or Wales. It is the title of the heads of some univ. colleges.

Wardha, tn of Madhya Pradesh state, India, known mainly because it was for many years the place where Gandhi (q.v.) lived and had his main ashram.

Wardmote, in the city of London an ann. court or meeting held in each ward of the city under the presidency of the alderman. Its powers, which formerly extended to matters concerning the

watch, the police, etc., are now merely nominal. The common councillors of the city are elected at the W.

Wardroom, originally, in the days of wooden warships, the big cabin in the after part underneath the capt.'s apartments. The term dates from about 1750, the W. being used as a lieutenants' mess, where they also slept. The name is supposed to be derived from 'wardrobe' as the place where officers kept their clothes before they had a communal mess. In modern times the wardroom became the mess in men-of-war for officers of all branches of and above the rank of lieutenant, but in 1949 Branch (former Warrant) officers were also admitted to the wardroom.

Wardship, in feudal times, an incident of tenure by knight service. This right gave the lord the guardianship in chivalry of the heirs (males under 21 and females under 14) of his tenants, and with such guardianship the right to the lands of the heir, without having to account for the profits, until the heir came of age. Abolished under the Commonwealth.

Ware, urb. dist. of Herts, England, on the Lea, 2 m. N.E. of Hertford. It has manufacturing chemists, malting, plastics, engineering, stationery, coach-building, glove-making, and numerous other small industries. 'The Great Bed of W.' once at the 'Saracen's Head,' is now in the Victoria and Albert Museum in London. Pop. 8500.

Wareham, municipal bor. and mkt. tn of Dorset, England, on the Frome, near Poole Harbour, 15 m. E. of Dorchester. It has remains of a Brit. earth-work. The church of St Mary contains the coffin of King Edward the Martyr. W. was a medieval port of some importance. Stone, clay, and lime are worked. Pop. 3000.

Warham, William (c. 1450-1532), prelate, a native of Hants, educ. at Winchester and New College, Oxford, of which he became a fellow, 1475. He was recognised as a legal expert, and between 1490 and 1502 was employed on sev. important gov. missions abroad. In 1502 he became Bishop of London, and was translated to Canterbury 2 years later. W. was lord keeper, 1502-4, and lord chancellor, 1504-15, when he was ousted by Wolsey (q.v.). He was chancellor of Oxford Univ., 1506-32. W. had the confidence of Henry VII, and he retained the royal confidence under Henry VIII until Wolsey supplanted him, not only as chancellor but also as prin. royal adviser. By the time Henry raised the project of the annulment of his marriage with Catherine of Aragon (q.v.), W. was an old man. Though always regarded as a 'king's man,' and known for his conscientiousness over detail rather than for his spiritual ardour, W. opposed the annulment. Eventually, however, Henry VIII forced him to advise the Pope to grant it. But though compliant in this instance, W. protested shortly before his death against the measures taken by Parliament since 1529 in defiance of papal authority. At this

stage his words carried little weight. His death enabled the king to appoint Cranmer to the primacy at a moment highly convenient to the king and to the Eng. Reformation. W.'s library was bequeathed to Winchester College, and to New College and All Souls College, Oxford.

Warkworth, small tn of Northumberland, England, on the Coquet, 1 m. from the N. Sea. The ruins of W. castle and W. hermitage (mentioned in Percy's *Reliques*) are near by. Pop. 917.

Warlock, Peter (pen-name of Philip Heseltine) (1894-1930), musical scholar and composer, b. London. He studied under Collin Taylor at Eton and was influenced by Debussy and Bernard van Dieren. He founded the *Sackbut* in 1920 and ed. it for a year. He wrote a book on Debussy, 1923, another on Gershwald (with Cecil Gray), 1926, and a small but very learned work on *The English Ayre*, 1926. He was also a scholarly editor of old Eng. music. Compositions include: *An Old Song; The Curlew*; a song-cycle (a Carnegie award, 1923); *Saudades; Peterisms; Cornus Christi*; and numerous separate songs (over 100 published), which are among the best produced in England at any time. See memoir by C. Gray, 1934; H. Foss, *British Music of our Time*, 1946.

Warmia, see ERMELAND.

Warminster, tn. of Wilts, England, at the SW. extremity of Salisbury Plain, midway between Bath and Salisbury. It has an early 14th-cent. church, the theological college of St Boniface, and an 18th-cent. grammar school. Longleat House and Park is 5 m. SW., and Shearwater 2 m. S. W. is an army training centre and workshop depôt. Silk, gloves, and agric. machinery are produced, and there is an anc. mkt. Pop. 8236.

Warne, Frederick (1825-1901), founder, 1865, of the Brit. publishing firm that still bears his name.

Warnefridus, see PAUL THE DEACON.

Warnemünde, Gor. seaport in the dist. of Rostock, on the Mecklenburg bay of the Baltic Sea, at the mouth of the Warnow R., 7 m. NNW. of Rostock (q.v.), for which it is the outport. It is a seaside resort, and has a train ferry to Denmark.

Warner, Sir Pelham Francis (1873-), barrister, cricketer, and writer, b. Port of Spain, youngest son of Charles Wm W., sometime Attorney-General of Trinidad. He was educ. at Rugby School, and Oriel College, Oxford. Played for Middx 1894-1920 (captain 1908-20), and captained M.C.C. teams to Australia (1903-4 and 1911-12), S. Africa (1905-6), and S. America (1926-7); also toured N. America, New Zealand, Portugal, Holland, and Denmark. He made nearly 29,000 runs in first-class cricket. Joint-manager M.C.C. team in Australia, 1932-3; Chairman of the Selection Committee, various years; President M.C.C., 1950. Knighted 1937; M.B.E. His numerous books include *Lord's 1787-1945*, 1946, and *Long Innings*, 1951 (his autobiography). Ed. *The Cricketer* (periodical) since 1921; *Imperial Cricket*, 1912.

Warner, Susan Bogert (1819-85), Amer. novelist who wrote under the name Elizabeth Wetherell, b. New York City. Her emotional novel *The Wide, Wide World*, 1850, had immense popularity, though it contains hardly any incidents. *Queechy*, 1852, was also a success, and was followed by sev. other similar stories of gentle piety. See life by A. B. Warner, 1910.

Warner, Sylvia Townsend (1893-), novelist and poetess, b. Harrow, Middx. A graceful and inconsequent fancy appears in her books of verse, *The Espalier*, 1925, *Time Importuned*, 1928, *Opus 7*, 1931, and *Rainbow*, 1932. Of similar type are her novels *Lolly Willows*, 1926, *Mr Fortune's Margot*, 1927, *The True Heart*, 1929, *Summer Will Show*, 1936, *The Corner That Held Them*, 1948, and *The Flint Anchor*, 1954. A Garland of *Straw*, 1943, and *Museum of Cheats*, 1947, are vols. of short stories.

Warner, William (1558-1609), poet, b. London. Educ. at Oxford, he became an attorney. His chief work was a metrical history, *Albion's England*, 1586, which ran to about 10,000 lines and had a great vogue in Elizabethan times, W. and Spenser being called the Homer and Virgil of the age.

Warner Brothers' Pictures, Amer. film-making organisation. The company's studios of 140 ac. are in Burbank, California. In 1903 the late Sam Warner with his brothers Harry M., Jack L., and Albert, started to show films in a converted shop. In 1912, when they had acquired 2 theatres, they decided that the best way to secure a sufficient supply of films was to make them. They were pioneers in the field of 'talkies,' making 'The Jazz Singer' and the 'Lights of New York.'

Warnsdorf, see VARNSDORF.

Warrandice, in Scots law, the obligation by which a party conveying a subject or right is bound to indemnify the grantee, disponee, or receiver of the right, in case of eviction, or of real claims or burdens being made effectual against the subject, arising out of obligations or transactions antecedent to the date of the conveyance. W. is either *personal* or *real*. *Personal* W. is that by which the grantor and his heirs are bound personally. *Real* W. was that by which certain lands, called warrandice lands, were made over eventually in the security of the lands conveyed; it is no longer competent. Though the term 'covenant' is unknown to Scots law, its place is to some extent filled by the doctrines of the W.

Warrant, instrument authorising one to do something which otherwise he has no right to do. In England a police W. is issued by a justice on a written and sworn information of an offence; it is addressed to the constables of his dist., specifies the offence, describes the person accused, and commands the police to arrest him and bring him before justices to answer the charge. It remains in force until executed, and if the criminal escapes into another dist. the W. can be 'backed' by endorsement of the justices of such dist.,

so to be enforceable against the criminal in such dist. A general W. (i.e. one which purports to authorise the arrest of unnamed persons without previous evidence of their guilt or knowledge of their persons) to seize suspected persons and a general search W. empowering messengers to seize documents are alike illegal. The term W. is also used for documents authorising the payment of dividends or the delivery of goods out of bond. A distress W. is one that authorises the sheriff's officer to seize goods for arrears of rent.

Warrant of Attorney, written instrument executed by one person authorising another to confess judgment against him in an action for a certain named amount. It is often given by way of security by a prospective debtor and enables the creditor to obtain judgment against the debtor without the delay and expense of an action.

Warrant Officers, see RANK.

Warranty. In Eng. law a W. within the meaning of the Sale of Goods Act, 1893, is an agreement for the sale of goods, the breach of which gives a right to sue for damages, but not to reject the goods or treat the contract as repudiated. A representation made by the seller at the time of sale will only amount to a W. if made with that intention, and the test of such intention is to determine whether the seller purported to assert a fact of which the buyer was ignorant. If not, then there is no W. A general W. does not give a right to sue in respect of defects obvious to both parties, but in this respect it is to be observed that a purchaser is not bound to use extreme diligence in finding defects.

Warren, Earl (1891-), Amer. politician, governor, and supreme court justice, b. Los Angeles, California, and graduated from the Univ. of California law school, 1912. He was admitted to the bar, 1914, and practised law in Oakland, California, and served the local gov. in various capacities. W. was attorney-general of California, 1939-43, and twice elected governor, in 1942 and 1946. He was vice-presidential candidate on the Republican ticket in 1948, but was defeated along with Thomas E. Dewey, the Presidential candidate. W. was appointed Chief Justice of the U.S. Supreme Court, taking office 5 Oct. 1953.

Warren, Joseph (1741-75), Amer. patriot b. Roxbury Massachusetts. He graduated at Harvard in 1759 and studied medicine at Boston. In 1774 he drafted the 'Suffolk Resolves' which urged the use of force against Great Britain if necessary. W. was a member of the First, Second, and Third Provincial Congresses (1774-75) and was president of the Third. He took part as a volunteer in the Battle of Bunker Hill (q.v.), where he was killed.

Warren, Leicester, see DE TABLEY.

Warren, Robert Penn (1905-), Amer. poet, novelist, and critic, b. Guthrie, Kentucky. Educ. at Vanderbilt Univ. and Yale, he went to Oxford as a Rhodes Scholar. He was appointed prof. of

English at Louisiana State Univ. in 1934, and at the Univ. of Minnesota in 1942, when he also received the Shelley Memorial Prize for Poetry. His vols. of verse, which are partly in the metaphysical tradition, include *XXXVI Poems*, 1935, *Eleven Poems on the Same Theme*, 1942, and *Brother to Dragons*, 1953. In 1946 his novel *All the King's Horses* was awarded the Pulitzer Prize; others are *Night Rider*, 1938, *At Heaven's Gate*, 1943, and *World Enough and Time*, 1950; *The Circus in the Attic*, 1948, is a vol. of short stories.

Warren: 1. City, co. seat of Trumbull co., NE. Ohio, on Mahoning R. 53 m. SE. of Cleveland. It manufs. machinery, electric appliances, and automobile parts, and has steel mills. Pop. 49,900.

2. Co. seat of W. co., Pennsylvania, U.S.A., on the Conewango and Allegheny Rs., 49 m. ESE. of Erie. Oil and natural gas abound. Iron-ore and petroleum are found. W. has oil refineries, iron and chemical works, foundries, silk, woollen, and flour mills, and manufs. furniture. It is named after the Amer. patriot, Joseph W. (q.v.) Pop. 14,849.

Warren, enclosure made for the breeding of rabbits. The term W. also denotes a fish or game preserve.

Warrenpoint, seaside resort of co. Down, N. Ireland, on the N. shore of Carlingford Lough, a centre for the Mourne Mts. Pop. 2800.

Warringham, metropolitan shire of Sydney in Cumberland co., New S. Wales, Australia, situated on the NE. boundary of the metropolis. It has a number of fine surfing beaches. Pop. 64,830.

Warrington, municipal and parl. bor. of Lancs, England, on the Mersey, 16 m. from Liverpool and Manchester. It is on the Manchester Ship Canal below the Latchford locks, and has access to that canal, as well as to the R. Mersey, and the Sankey and Bridgewater canals. It is near both the Lancs coalfield and the Mersey chemical area, and its position is reflected in its various industries. W. played a prominent part in the rise of nonconformity in the 17th cent. An interesting building is the one-time Old Academy opened in 1757 as a home of intellectual culture for Lancs generally. A circulating library, founded in 1760, became the nucleus of the first municipal rate-supported public library in Great Britain, 1848.

In Rom. times W. was a place of considerable strategic value, the ford over the Mersey at this point being for cents. the prin. connecting link between N. and S. and to guard the ford the Rom. station *Veratunum* was estab. W. by the name of *Wahitunc*, appears in Domesday Book.

In the Middle Ages W. was one of the prin. centres in the country for linen, flax, and hemp, and its armourers founded its present reputation for files and tools. In the 18th cent. wire-drawing, ship-building, sailmaking, the making of clocks and watches, and brewing estab. the growing in to meet the struggles of the industrial revolution. The chief

groups of industries in W. to-day are metals manuf., including, especially, wire of all varieties, tool-making, engineering products of all kinds, gas appliances; leather; soap, chemicals, and glycerine; glues and gelatines; seeds; aluminium; and brewing. Pop. 80,250.

Warriston, Lord, see JOHNSTON, ARCHIBALD.

Warrnambool, seaport of Victoria co., Victoria, Australia, on Lady Bay, 50 m. from Portland. It has a fine harbour, and a lighthouse on the N. shore of the bay. There are freestone quarries. Pop. 9900.

Wars of the Cross, see CRUSADES.

Wars of the Roses, see ROSES, WARS OF THE.

Warsaw (Polish *Warszawa*): 1. Prov. (*województwo*) of E. central Poland. It is generally low-lying and fertile, and is well-wooded. It is drained by the Vistula, Bug (qq.v.), Narew, and Pilica R.s. Live-stock is raised, and cereals, potatoes, flax, and sugar-beet are grown. Area 10,871 sq. m.

2. (Russian *Varshava*; Ger. *Warschau*; Fr. *Varsovie*) Cap. city of Poland, in the E. central part of the country. It is also cap. of the prov. of W., but itself ranks as a prov. It stands on both banks of the Vistula, and has road and rail communications with Moscow, Kiev, Leningrad, Prague, and Berlin, as well as with cities of W. Europe. It grew up around a castle of the Dukes of Mazowsee, and became, in the 15th cent., the cap. of the duchy. In 1595 it succeeded Cracow (q.v.) as cap. of Poland. It was taken by the Swedes in 1655, 1656, and 1702, and by the Russians in 1792 and 1794. In 1795 it went to Prussia. Napoleon made it the cap. of a grand duchy. It was taken by the Russians in 1813, and was ceded to them by the Congress of Vienna (q.v.). In 1830 it was the centre of a rebellion against Russian rule. In 1919 it became the cap. of the Polish rep., and in the following year it was defended by Marshal Weygand (q.v.) against the Russians. In 1926 it was the scene of Pilsudski's (q.v.) *coup d'état*. During the Second World War W. fell to the Germans on 27 Sept. 1939. There was a Jewish rising in the city in Feb. 1943, after which the surviving Jews were massacred. In Aug. 1944 the Polish resistance movement in the city rose against the Germans, and was subdued only after a heroic battle of 63 days' duration; throughout this period the Russian Army was in possession of the E. bank of the Vistula, but refused assistance to the Polish fighters on the opposite bank (see EASTERN FRONT or RUSSO-GERMAN CAMPAIGNS IN SECOND WORLD WAR). When the Russians finally took the city in Jan. 1945, 87 per cent of its buildings were in ruins. Immediately after the end of war the rebuilding of W. began. Whereas the old city grew concentrically round the citadel on the escarpment above the riv., the new W. is built on the axis of a great E.-W. highway, which passes under the Old Tn (*Stare Miasto*) by means of a tunnel. A N.-S. highway connects the N. suburb of Zoliborz with the S. suburb

of Mokotow. In general lay-out the city consists of a series of strips running N. and S. with gov. buildings along the riverside escarpment, and the shopping, entertainment, and commercial centres to the W. There are sev. bridges across the Vistula, connecting the main part of the city with Praga, the dist. on the E. bank.

W. is the seat of an archbishop, and has a univ. (1818) and many other educational institutes. There is an airport at Okęcie (SW.) and a radio station at Raszyn (SW.). There are metalworking, textile, chemical, engineering (electrical goods, precision instruments, motor cars), foodstuff, printing, and publishing industries. Pop. 996,000.

Warsop, tn of Notts, England, 5 m. from Mansfield, on the Moder. The prin. industry is coal mining. The tn has a 13th-cent. church. Pop. 11,330.

Wart, or Verruca, excrecence caused by excessive growth of the tissues of the papillae of the skin (see SKIN). Little is known of the manner in which Ws are formed, and they usually appear and disappear without any apparent cause, especially in the young. In some cases the cause seems to be infection by a virus. They are very vascular, and are covered with some thickness of scaly epidermis, which easily becomes rubbed off. In children, plantar warts (i.e. verrucas on the soles of the feet) may be painful on walking, and, since they are very infectious, schools, etc., always insist on treatment at once.

Wart Hog, genus of African pigs (*Phacochoerus*) with 2 species. Resembling the wild boar, it is distinguished by the large head, 4 large tusks, and at each side of the face large, wart-like pads. Both species (*P. aethiopicus*, found in the SE. regions, and *P. africanus* found over most of Africa) have a mane of bristly hair on neck and back.

Warta (Ger. Warthe), riv. of Poland, which rises about 30 m. NW. of Cracow, and flows in a general NNW. direction, past Poznań, to join the Oder (q.v.) at Kostrzyn. Its chief tribs. are the Noteć and the Prosnia. It is connected by canal with the Vistula (q.v.). Length 492 m.

Warthe, see WARTHA.
Warton, Joseph (1722-1800), poet and critic, b. Dunsfold, Surrey, son of Thomas W., vicar of Basingstoke and Prof. of Poetry at Oxford. Joseph was educ. at Winchester and Oxford, took orders, and became headmaster of Winchester and prebendary of Winchester and of St Paul's. His 2 vols. of *Odes*, 1744-6, represented a revolt against neo-classical correctness, and with his *Essay on the Writings and Genius of Pope*, 1757-82, gave an impulse to the coming Romantic Movement. See E. H. Partridge, *The Three Wartons*, 1927.

Warton, Thomas (1728-90). Poet Laureate, b. Basingstoke, brother of Joseph W. (q.v.). He was educ. at Trinity College, Oxford, of which he became a Fellow, remaining there all his life. After publishing sev. poetical works, including *The Pleasures of Melancholy*, 1747, and

The Triumph of Isis, 1749, he enhanced his reputation by his *Observations on Spenser's Faerie Queene*, 1754. Between 1774 and 1781 he pub. his great *History of English Poetry*, which comes down to the end of the Elizabethan age. He was appointed Poet Laureate in 1785, and in the same year Camden Prof. of History, and was one of the first to detect Chatterton's forgeries. See E. Gosse, *Two Pioneers of Romanticism*, 1916; and life by C. Rinkner, 1916.

Warville, Jean Pierre Brissot de, see BRISSTOT.

Warwick, Guy of, see GUY OF WARWICK.
Warwick, Richard Neville, Earl of (1428-71), 'the king-maker'. He was the eldest son of the Earl of Salisbury and married the daughter and heiress of the Earl of Warwick, succeeding to the title in 1449. He was the most active and influential of all the supporters of the Yorkist house. For the first 3 years of Edward IV's reign W. was the real ruler of England, but after Edward's marriage to Elizabeth Woodville and the advancement of the queen's relations, W. and Edward quarrelled. W. went over to the Lancastrians, but was killed at the battle of Barnet in 1471. W.'s title of 'king-maker' does not seem to have been used until half a cent. after his death. Throughout his life, W.'s actions were dictated solely by personal ambition. He was interested only in increasing the power of his own family, even at the expense of national stability. But he had dynamic energy, personal courage, and considerable diplomatic and military skill. See ROSSES, WARS OF THE. See C. Oman, *Warwick the King-maker* (2nd ed.), 1903.

Warwick: 1. Mkrt tn, municipal bor., and co. tn of Warwickshire, England, on the R. Avon, 21 m. SE. of Birmingham. It has been suggested that the name of the tn derives from the O.E. 'wæring wic,' meaning 'dwellings by the weir.' The story of W. is closely linked with that of its castle, which stands on a site fortified since Saxon times; the main castle gateway and towers date back to the 14th cent., and are among the finest examples of the military architecture of that time. W. grammar school claims its descent from a school possibly going back to the reign of Edward the Confessor, which is first mentioned in a charter of Henry I. In the church of St Mary is the famous 15th-cent. Beauchamp Chapel, and the fine church tower, built after the fire of 1694, is a landmark. The Hospital of Lord Leicester was founded by Robert Dudley, Earl of Leicester, in 1571; the beautiful group of half-timbered buildings, dating from the late 15th cent., includes the old W. Guild Hall. Agriculture is the chief local occupation; manufs. include agric. implements, edible gelatines, lozenges and other sweetmeats, mechanical and motor-engineering products, carpets, and pistons. W. forms a single parl. div. with Leamington. Pop. 15,510.

2. Tn of Rhode Is., U.S.A., in Kent co., on Narragansett Bay, with manufs., especially cotton, agriculture and fisheries; coast resort. Pop. 43,028.

3. City of Darling Downs (q.v.), Queensland, Australia, 100 m. SW. of Brisbane. Dist. industries: wheat, dairying, maize and other grain and fodder crops, mixed farming, wool, mutton, lamb, fruit, vegetables, honey, timber, coal, limestone, and other minerals. Pop. 9370.

Warwickshire, midland co. of England, bounded on the N. by Staffordshire, S. by Gloucestershire and Oxon, E. by the cos. of Leicester and Northants, and W. by Worcestershire. The surface is very variable, though there are no great elevations, Broom Hill (830 ft) being the highest. The prin. rivs. are the Avon, with its numerous tribs., which runs right across the co., the Stour, and the Tame. In the W. is the region that was once the forest of Arden, made famous by Shakespeare. The co. possesses immense coal-fields in the NE.; ironstone, lime, and cement are also worked. Almost the whole co. is under cultivation; dairy farming, fruit growing, and mkt gardening are carried on, and oats and wheat are the main crops. Industrial centres include Birmingham, in the NW., and Coventry; both are co. bors. and outside the administrative co. of W. Besides these 2 cities, the most important tns are the bors. of Leamington, famous for its spa, Nuneaton, Rugby, Solihull, Stratford-upon-Avon, the bp. of Shakespeare, Sutton Coldfield, and Warwick, the co. tn. The co. is divided into 6 parl. divs. There is a univ. at Birmingham. The co. is famous for its antiquities, Warwick Castle and Kenilworth Castle being the most famous. The Beauchamp Chapel at St Mary's Church, Warwick, is notable, and there are the remains of a Cistercian monastery at Coombe Abbey, and of other religious houses at Merevale, Stoneleigh, Maxstoke, Kenilworth, and Wroxall. Edgehill gave its name to the battle of 1642, in the Civil war. The area of the geographical co. is 628,994 ac.; pop. 1,880,500. See Sir William Dugdale, *Antiquities of Warwickshire*, 1730 ed.; *The Victoria History of the County of Warwick*, vols. i-vi, 1904-51; A. Mee, *Warwickshire*, 1942; A. Burgess, *Warwickshire*, 1950.

Warwickshire Regiment, The Royal. This Eng. regiment, formerly the 6th Foot, was raised in 1673 for service under the Dutch Gov. It first came on to the Brit. estab. in 1685 and served under Wm III at Namur, 1695. At the beginning of the 18th cent. it served as marines on both sides of the Atlantic, and reverted to a foot regiment about 1705, suffering heavily at Almanza in Spain, 1707. After a period in the W. Indies the regiment served with much distinction under Wellington in the Peninsula. Further honours were gained at Niagara, S. Africa (1846-7), Khartoum (1898), and S. Africa (1899-1902). During the First World War 30 battalions were raised and served in France, Flanders, Italy, Gallipoli, Mesopotamia, and Persia. In the Second World War the regiment fought in France, N. Africa, and Italy, and notably in the battle of Normandy (1944). See C. L.

Kingsford, *The Story of the Royal Warwick Regiment*, 1921.

Wasatch Mountains, Rocky mt range of Utah and Idaho, U.S.A., largely pine-covered. They form the E. margin of the Great Basin and contain at least 4 peaks over 11,000 ft high. The loftiest is Timpanogos Peak (12,008 ft). The range includes parts of Uinta and Wasatch national forests in Utah, and is drained by the Weber, Ogden, and Provo rivs. Copper, lead, silver, and gold are mined near Provo and Salt Lake City.

Wasdale, valley in SW. Cumberland, England, in the Ennerdale (q.v.) rural dist., with Wastwater, a lake nearly 3 m. long. W. Head is a famous rock-climbing centre.

Wash, The, inlet (22 m. by 15 m.) of the N. Sea, on the E. coast of England, between the cos. of Norfolk and Lincoln, receiving the Welland, Ouse, Nene, and other rivs. Its shores are low and marshy. Since 1948 a large area has been drained under a reclamation project.

Washford, vil. of Somerset, England, 3 m. from Watchet. To the S. are the lovely ruins of Cleve Abbey, founded by Cistercians in 1188. Pop. 600.

Washing Machines, see LAUNDRIES.

Washington, George (1732-99), first president of the U.S.A., b. Pope's Creek, Westmoreland co., Virginia. He was descended from pure Brit. stock from Sulgrave Manor, Northants, his great-grandfather, John W., having migrated in

GEORGE WASHINGTON

1657. Largely self-taught, he began his career as a land surveyor, but inheriting the Mt Vernon estate from his brother Lawrence, W. settled down as a country gentleman. He had made a good impression on Governor Dinwiddie, and the latter soon made him lieutenant-colonel of the Virginia military. In May 1745 W. was ordered to drive the French out of Fort Duquesne. He succeeded, but was in turn besieged in Fort Necessity, and on 13 July surrendered.

In 1758 W. resigned command of the Virginia troops and married a rich widow, Martha Custis. The union of their plantations made W. one of the wealthiest men in his state. W. threw himself into the work of looking after his estates. He entertained lavishly, and thus came into contact with notable men from all over the Eng. colonies in America. He was elected to the Virginia House of Burgesses, and re-elected. He soon displayed a growing interest in the disputes between the colonies and the Eng. Crown, and Virginia elected him as one of its delegates to the First Continental Congress. In Philadelphia he bought arms and ammunition which he sent to Virginia, and when the Congress adjourned he returned to Virginia to take up the active training of the raw soldiers.

When the Second Continental Congress met in Philadelphia the general feeling among the New Englanders was that they must have a Southern man to lead them, since only thus could they be sure of uniting all the colonies in one common cause. War had already started, and John Adams (q.v.) proposed W. as commander-in-chief of the colonial armies and on 15 June 1775 W. took over the command. The Amer. troops often lacked arms, munitions, food, and clothes; and W. had to combat faction and treachery among his gens., including the episode of Benedict Arnold's (q.v.) treachery. Knowing the jealousy of Congress, W. kept in close touch with it, and let its members know his every move and every motive. When he took charge of the Amer. forces at Boston he won a notable success. His occupation of Dorchester Heights compelled Howe to evacuate Boston in Mar. 1776. He then had a succession of reverses, notably at the battle of Brooklyn Heights, but in New Jersey he turned and beat his enemy at Trenton and Princeton. Following his defeats in the battles of the Brandywine and Germantown in the autumn of 1777, W. led his 11,000 men into winter camp at Valley Forge, 20 m. from Philadelphia. The spring brought better news for the Americans. The French were coming into the war. Clinton, who succeeded Howe, had been ordered to give up Philadelphia and return to New York. W. harassed his troops, notably at the battle of Monmouth. When Clinton reached New York, W. took up a position at White Plains and for 3 years, while fighting was going on elsewhere, the 2 armies watched each other. At last, W.'s chance came when Cornwallis met with difficulties in N. Carolina, withdrew his army to Virginia, and finally shut himself up in Yorktown. Here W., who had hurried S., forced him to surrender (1781). When the British finally moved out of New York for home the Amer. army under W. entered the tn. A few days afterwards, on 4 Dec. 1783, W. went via Philadelphia to Annapolis, Maryland, where Congress was sitting. Here on 23 Dec. he resigned his commission as commander of the armies.

For 4 years he strove to recoup his

shattered fortunes. At length it was decided to call a convention to frame a constitution, and W. was chosen as one of the Virginia delegation. The convention opened 13 May 1787 in Philadelphia, and W. was unanimously chosen to preside. Others wrote the constitution, but it was W. who did much to remove difficulties. He was unanimously chosen as first president of the rep., although he was reluctant to assume the burden. He was inaugurated 30 April 1789. (*See UNITED STATES OF AMERICA, History*, for the events of W.'s presidency.) W. wished to retire at the end of his first term, but at the instance of the rival leaders, Thomas Jefferson and Alexander Hamilton, he was elected to a second term by a unanimous vote. He declined a third term, being weary of the unjust attacks of bitter partisans. On giving up office, he made a famous farewell address, warning the country against ontangling alliances and advising it to keep aloof from European quarrels.

W. was pre-eminently a product of the Virginia of his time, with a solid, disciplined character, neither brilliant nor profound. The force which brought him to pre-eminence was an honourable but overmastering ambition for public esteem, a determination not to remain an obscure Virginian, and a sincere regard for what he considered to be the best interests of the Thirteen States.

John C. Fitzpatrick ed. a definitive ed. of his letters and papers (39 vols.), 1931-44. *See* lives by J. Marshall, 1804-7; W. Irving, 1855-9; N. Hargood, 1901; R. Hughes, 1926-30; also M. Ashley, *Mr President*, 1948; Douglas S. Freeman, *George Washington* (5 vols.), 1948-52.

Washington, cap. of the U.S.A., in the Dist. of Columbia, an area of 70 sq. m. enclosed by the state of Maryland, except in the SW., where the Potomac R. forms the boundary. W. stands on the l. b. of the Potomac R., which is navigable for large vessels up to this point. A portion of the Dist. of Columbia (D.C.), embracing 6654 ac., is known in law as the City of W., 'the Federal Capital.' But that name is a geographical distinction only, as the ter. it includes is not a municipal gov., separate from the rest of the Dist. of Columbia, but is subject to the same national and municipal control. W. was made the capital by an Act of Congress passed in 1790, and the gov. was transferred there from Philadelphia in 1800. George Washington himself was responsible for its original plan, and took great interest in the city that was to bear his name. The city was regularly laid out according to the design of Maj. Pierre l'Enfant, a Fr. engineer. The Capitol is the central site. This splendid building is on a rising ground at the E. end of Pennsylvania Avenue. It was built to the design of Sir Wm Thornton, a Brit. W. Indian. The cornerstone was laid by George Washington in 1793, but the building was burned by the British in 1812. The erection of the present building was begun in 1818 by Bulfinch; it is constructed of freestone and consists of a

central block and 2 wings, in the N. of which is the Senate Chamber. The principal feature of the capitol is the rotunda, 96 ft in diameter, and height 288 ft above the ground. At the other end of Pennsylvania Avenue is the White House, the official residence of the President of the U.S.A. The city has many other magnificent buildings, among which may be named the Pentagon, the Patent Office, the General Post Office, the National Observatory, the Corcoran Gallery of Art, the Lincoln Memorial, the Thomas Jefferson Memorial, the Pan-American Union, Constitution Hall, the Amer.

binding, and manufacturing depts. The country community is mainly agric., flowers and foliage plants forming 60 per cent of the total agric. products. Dairying is also important. The manufs., like the agriculture, are mainly incidental to the needs of the cap. Slaughtering and meat packing are important occupations, there are planing mills, and marble, granite, and other stones are dressed, and there is a naval shipyard. Printing and publishing are leading industries, and there are bakery manufs. W. has railroad connections with most of the important tns of the U.S.A. It is 38 m.

United States Information Service: American Embassy
THE UNITED STATES CAPITOL, WASHINGTON

Univ., and the Howard (coloured) Univ. There are also Georgetown Univ. and George Washington Univ.

W. is, in many aspects, the most beautiful city in the U.S.A., with its white stone and marble gov. buildings and wide, tree-shaded avenues. Between the State Dept, near White House grounds, and the Capitol are sev. gov. buildings. The National Gallery of Art and the Library of Congress are also particularly notable. The magnificent stone bridge across the Potomac is 1452 ft long, and connects W. with the Arlington National Cemetery. On the Virginia side of the Potomac stands the Pentagon (q.v.) the world's largest office building, accommodating Amer. War Dept personnel and built 1941-3. W. is mainly a residential city. The U.S. Gov. employs large numbers of citizens in the offices of the various depts, and normally employs thousands of people in its engraving, printing, book-

from Baltimore, 136 m. from Philadelphia, and 226 m. from New York. There are also Bolling Air Force Base, Anacostia Naval Air Station and National Airport. Sev. important treaties have been signed here (see WASHINGTON CONFERENCE (1921); WASHINGTON, TREATIES OF). About one-third of the pop. is Negro. W. is subjected to control by Congress and by Commissioners appointed by the President and confirmed by the Senate. Since 1895 W. by Act of Congress has been made co-extensive with the Dist. of Columbia. Pop. (1950) 802,178. See W. B. Bryan, *A History of the National Capital*, 1924-26; Wm Tindall, *Standard History of the City of Washington*, 1914; C. Moore, *Washington Past and Present*, 1929; H. P. Caemmerer, *A Manual on the Origin and Development of Washington*, 1939.

Washington, the 'Evergreen State,' Pacific State of the U.S.A., was formerly

part of Oregon. It is situated in the extreme NW., bounded N. by Brit. Columbia, E. by Idaho, S. by Oregon, W. by the Pacific Ocean. It was created a ter. in 1853, and in 1889 was admitted to statehood. The state is traversed from N. to S. by the Cascade Range, whose general altitude is between 6000 and 7000 ft, but there are sev. volcanic peaks rising above 10,000 ft. Mt Rainier (or Tacoma) reaches 14,408 ft; it is surrounded by a national park. There is also a lower, coastal range in the W., the Olympic Mts. In the NW., between the 2 ranges, Puget Sound, an inlet with many harbours, on which stand cities such as Seattle, Tacoma, and Olympia, is an important commercial centre. The Columbia R. enters the state from Brit. Columbia on the N. and flows along 300 m. of its S. boundary. Its chief affluent is the Snake R., which joins it near S. Ainsworth. E. of the Cascades are stretches of arid or semi-arid land, with fertile areas. Here are great cattle and sheep ranges, and here also much wheat is grown. Wheat is also grown in the W., which receives a heavy rainfall and has a profuse vegetation. Agriculture is the chief industry, barley, oats, and maize being grown as well as wheat. Fruit is also an important product, W. having the largest apple crop of all the states. More timber (chiefly coniferous) is cut here than in any other state except Oregon. The mining of coal, copper, mercury, lead, magnetite, zinc, silver, and gold is also carried on. The state produces 30 per cent of the nation's magnetite and 35 per cent of its lead. Other minerals include mercury, clay products, limestone, marble, granite, platinum, tungsten, and diatomite. Aluminium refining is important. The Grand Coulee Dam is part of the Columbia R. reclamation project; other dams are Bonneville and McNary. Industrial estabs. include lumber and planing mills, and flour mills; meat-packing and the manuf. of dairy products are important; shipbuilding and aircraft manuf. expanded greatly during the Second World War. Seattle is the landing-place of the N. Pacific fisheries and handles also the bulk of the Alaskan trade and much Asiatic and Panama Canal trade. W. leads the nation in total catch of sea foods. There are 18 Indian reservations in the state, the largest being that of Coleville. The cap. is Olympia (pop. 15,819), and the chief cities are Seattle (467,591), Spokane (161,721), Tacoma (143,670), Bellingham (34,112), and Everett (33,849). The Univ. of W. near Seattle had an attendance in 1947-8 of 18,000 students, and the State College at Pullman for Science and Agriculture (founded 1890), 7200 students. The area of the state is 68,192 sq. m. and the pop. 2,378,963. See E. S. Meary, *History of the State of Washington*, 1924; L. Pollard, *History of the State of Washington*, 1937; Federal Writers' Project, *Washington: A Guide to the Evergreen State*, 1941.

Washington: 1. Urb. dist. of Co. Durham, England, 6 m. from Gateshead; home of George Washington's earliest forebears.

Coal mining, quarrying, iron, steel, and chemical manufs. are carried on. Pop. 17,600.

2. City of Pennsylvania, U.S.A., co. seat of Washington co., 25 m. from Pittsburgh. It is a well-built city, the seat of Washington and Jefferson College and of Washington Seminary. It has iron and steel works, and produces wool, glass, chemicals, molybdenum, and ferro-alloys. It has coal mines and natural gas and oil wells. Pop. 26,280.

Washington, Mount, culminating peak of the White Mts. in the Presidential Range, Coos co., New Hampshire, U.S.A. It is 6288 ft high and ascended by a rack-railway (1869) and a carriage (now motor-car) road (1861). It is the highest peak in New Hampshire and in the NE. U.S.A., and marks the centre of a summer and winter resort area. There are a hotel and a meteorological station on the summit.

Washington, Treaties of: (1) That made in 1846 with Great Britain by which the boundary W. of the Rocky Mts was estab. (2) That made in 1854 with Great Britain relative to fisheries, duties, and navigation in British N. America, often called the 'Reciprocity' Treaty. (3) That made in 1871 with Great Britain for the settlement of all causes of difference. (4) That of 1922; see next article.

Washington Conference (1921). With the defeat of Germany after the First World War naval rivalry seemed dead. But both Japan and the U.S.A. had adopted huge building programmes which continued after the war, and in view of this fact Britain announced that it had adopted a one-power standard and that 4 new battleships of 48,000 tons displacement were to be built. So naval competition was once more manifest, and the situation was rendered more delicate by evident Amer. dislike of the Anglo-Jap. alliance. In order both to arrest this competition and seek a more satisfactory relationship in the Pacific, President Harding took the initiative and, on 11 Aug. 1921, invited the Brit., Jap., Fr., and Italian govts. to a conference at Washington to discuss not only the limitation of naval armaments but also general questions relating to the Far E. China, the Netherlands, Portugal, and Belgium were also represented. The Treaty subsequently signed on 6 Feb. 1922 put a stop to naval competition by stabilising the battleship strength of the 5 Powers in an agreement to a tentative 10-year building holiday; limiting both the maximum individual tonnage of, and the maximum calibre of gun which could be mounted in, capital ships, aircraft carriers, and cruisers respectively. To satisfy Japan's desire for security, it was agreed that none of the Powers should augment the defences of their outlying possessions in the Pacific, which meant that, while Japan was forbidden to fortify the mandated Is., America could not strengthen the Philippine bases nor those of Guam. With this agreement satisfactorily concluded, the Anglo-Jap. alliance was allowed to lapse. Finally, it was pre-

scribed that a further conference was to be held in 1930, by which time all parties had reasons for desiring a new treaty. (See LONDON NAVAL CONFERENCE, 1930.)

Washita, see OUACHITA.

Wasmes, in the prov. of Hainaut, Belgium, 6 m. WSW. of Mons. It is the centre of the coal-mining dist. of the Borinage. Vincent van Gogh (q.v.) lived and worked here 1878-80. Pop. 15,000.

Wasp, winged, stinging, predaceous insect of the order *Hymenoptera*, thousands of species of which are distributed throughout the world. In Britain 7 species of the *Vespidæ*, which are social, and *Eumenes* and *Odynerus*, solitary, predominate among the 290 or more species. On a single occasion a male *W.* fecundates the queen *W.* with sperms, the mating taking place on the wing. The queen can then lay sperm-impregnated eggs to produce workers or other queens, or non-impregnated eggs to produce males. In the autumn the males and workers die, and the queen hibernates in a sheltered place until she revives to found a new colony in the spring. The eggs laid by the queen *W.s* hatch, and the growing larvae feed on insects, then, sealed in cells or cocoons, after 4-6 weeks, transformed into young *W.s* they bite their way out. The *Vespa vulgaris* (social), the common yellow-black banded *W.* seen about Brit. homes and gardens, causes intense pain from venom when it stings. In the spring the queens build nests in the earth which are completed by the workers as they develop, using sound, weathered wood from posts and trees, chewed to pulp for their building material. Extending downwards from a hovering layer, and suspended from pillars, horizontal combs of vertical, hexagonal cells are built as required in layers. Each oviposited egg is stuck in the inverted cell to prevent its falling out, and insects are fed to the hatched-out grub until it fills the cell. Two or three hundred *W.s*, one queen, many workers, and fewer males live in each colony. The solitary queen *W.* paralyses a caterpillar by stinging then lays or suspends an egg in a hole burrowed in the earth, a wall, post, or plant stem, beside the helpless grub, which provides food for the one hatched and growing larva. It is the custom for solitary *W.s* to make single nests in small groups. Most *W.s* store honey and pollen in cells as food, and, as they collect nectar and pollen, pollinate fruits and flowers; they feed also on the juices of many ripe fruits. *W.s* are not pests; they reduce garden insect foes, but may become a nuisance. A *W.'s* nest may be destroyed by dissolving 1 lb. of potassium cyanide, a deadly poison, in boiling water; cotton-wool should be saturated with this solution, and, with a pointed stick, plugged into the entrance to the nest; after an hr the nest may be dug out. See A. D. Imms, *Insect Natural History*, 1947; J. Crompton, *The Hunting Wasp*, 1948.

Wasail (O.E. *was hal*, be thou whole, of good health), originally an expression

of good wishes at festivities, especially a 'toasting' or salutation in drinking. Later it was used for a drinking-bout or carouse, and then for the beverage used (especially at Christmas and New Year).

Wassermann, August von (1866-1925), Ger. bacteriologist and immunologist, b. Bamberg, and studied at Erlangen, Vienna, Munich, and Strasburg. After qualifying in medicine in 1888 *W.* began to practise at Strasburg, but in 1890 became an assistant at the Robert Koch Institute in Berlin, where he was appointed professor in 1902. In 1913 he became director of the Institute of Experimental Therapy, Kaiser Wilhelm Society. He carried out important investigations on toxins and antitoxins, diphtheria antitoxin, cholera immunisation, cancer, diagnosis of tuberculosis, and blood grouping. By modifying the complement-fixation reaction of Bordet (q.v.) and Gengou he devised the Wassermann reaction (q.v.), a specific blood test for the diagnosis of syphilis (1906). With *W. Kolle* he wrote *Handbuch der pathogenen Mikroorganismen* (6 vols.), 1903-9, and made many contributions to medical journals.

Wassermann, Jakob (1873-1934), Ger. novelist, b. Fürth, Bavaria, of Jewish parents. His novels are a study of post-1918 conditions and problems, mostly of subtle psychological analysis. They have been trans. into most European languages. Perhaps his greatest novel is *Christian Wahnschaffe*, 1919, Eng. trans. *The World's Illusion*, 1921. Other works include *Der Fall Maurizius*, 1928, *Doktor Kleverhoren*, 1932, autobiography *Mein Weg als Deutscher und Jude*, 1921, and *Selbstbetrachtungen*, 1933. See J. N. Blankenagel, *The Writings of Wassermann*, 1945.

Wassermann Reaction, so called after the Ger. bacteriologist August von Wassermann (q.v.), who, in 1906, together with Neisser and Bruck, followed up Bordet's and Gengou's discovery of the 'complement-fixation' reaction in the blood and spinal fluid and applied it to the diagnosis of syphilis (q.v.). This discovery has proved to be of immense value to the medical profession in the treatment, cure, and prevention of the disease.

Waste, in law a term denoting any spoil or destruction done or permitted by the tenant to houses, woods, lands, or other corporeal hereditaments (q.v.) during the continuance of his particular estate (q.v.) therein. *W.* is said to be either (a) *voluntary*, i.e. acts of commission, such as pulling down buildings, felling timber, opening mines, etc.; (b) *permissive*, i.e. acts of omission, such as non-repair of buildings. A tenant for life, even though expressly declared by the settlement to be not impeachable by *W.*, is nevertheless liable for equitable *W.* The remedy for *W.* is by action for damages and injunction (q.v.). See also **TIMBER**.

Waste Lands, see **LAND RECLAMATION**.

Waste Products, see **REFUSE, DISPOSAL** OF.

Watch, on board ship, one of the 2 parts (starboard and port W.s) into which the crew is divided for the purpose of taking duty alternately. The term is also applied to the periods of duty worked. The night is divided into 3 W.s: from 8 to 12, first W.; from 12 to 4, middle W.; from 4 to 8, morning W. The day has 4 W.s: forenoon, 8 to midday; afternoon, midday to 4; and the 'dog-watches,' 4 to 6, and 6 to 8, whose purpose is to change the turn. The list of men appointed to watch is known as the 'watch-bill.' Time is shown by the striking of the watch-bell, which is struck once for every 1-hr. Thus 12.30 a.m. is 1 bell in the middle W. 3 a.m. is 6 bells, and 6.30 p.m. is 1 bell in the second dog watch.

Watch. A time-measuring instrument (see HOROLOGY) similar to but smaller than the clock (q.v.) and is generally carried on the person. The W. only became a practical possibility as the result of the invention of the mainspring, which is generally attributed to Peter Hele, or Henlein, a Nuremberg locksmith, c. 1510. He was able to produce springy strips of steel, and when one of these was coiled tightly round an arbor the force it exerted in trying to straighten itself out again was used as the driving force.

The first W.s were cylindrical in shape, like the small table clocks of the period, measuring some 2½ in. in diameter and about half that height. These were known as the *canister* and later as the *drum* or *tambourine*. Many of the 16th-cent. W.s still in existence have either an alarm or hour-striking mechanism; some have both. To allow the bell to be heard more clearly, the cases were pierced round the edge and often on the bottom also—the work being beautifully executed and lending great charm to the design. The simple round drum gave way to more fanciful shapes—oval, octagonal, etc.—but the dial always remained circular. The edges next became rounded, accompanied by domed covers, resulting in the type known as the Nuremberg egg—as Ger. W.s of the first part of the 17th cent. are called. Enamel, as a decorative agent, was introduced c. 1630 from Blois, the watchmaking centre in France, and many fine cases were produced, some finished in translucent and some in opaque enamel, while others were painted on an enamel surface. Towards the middle of the 17th cent., chasing and repoussé work was much used. *Form watches* of many patterns made their appearance towards the latter part of the 16th cent., sometimes taking the shape of a cross, star, book, animal, beetle, sphere, etc., while others were made in the grotesque form of a skull or death's head.

As with early clocks, the first W.s had only one hand. They had been in use for 150 years before their timekeeping became sufficiently reliable to make a minute hand of any practical use. From about 1640 an additional cover, or outer case, was provided to protect the decorative work of the case proper, as well as the dial and hand, for no glass was used

on W.s until much later. The outer case was frequently made of gold or silver, with designs in chasing or repoussé work, and their production formed an important part of the watchmaking industry. Some were covered with tortoiseshell, horn, leather, shagreen, and other kinds of skin. The use of a case within a case, or *pair cases*, as they are called, continued until the early 19th cent. Sometimes a third case of plain design appeared, the object being to protect the outer part of the pair case.

The more or less transparent covers were originally made of comparatively thick crystal. At first they were not transparent enough, and it was still necessary to lift the cover to read the time. Glass as a protection for the dial and hand came later.

All early W.s were large, thick, bulky, and expensive; they were worn on the girdle, more for adornment than use. They were controlled by the verge escapement (see CLOCK), which required a great deal of space. The invention of the balance spring (frequently called the hairspring) by Dr Robert Hooke (q.v.), c. 1675, marked a great step towards good timekeeping, and the balance and spring have been used as the controller of watch escapements ever since its introduction at that time. After this the general tendency was for W.s to become round and to be carried in the pocket of the waistcoat and to be considered as articles of use. The period of elaborate decoration ended towards the end of the 17th cent., with the W. hidden in the pocket there was no need for its continuance.

The earliest Eng. W.s, examples of which are to be found in the Brit. Museum, date from about 1540. During the first quarter of the 17th cent. great progress was made, and from that time Britain took the lead in the making of W.s and clocks. The most outstanding exponent of the art was Thomas Tompion (q.v.). In 1698 an Act of Parliament was passed obliging makers to put their names on the W.s they made, to prevent discreditable imitations being sold abroad as Brit. Smuggling assumed tremendous proportions, and many W.s bearing well-known Eng. names were brought into Britain.

Escapements. The cylinder escapement, which enabled W.s. to be made thinner than before, was invented by George Graham, c. 1725. This was the first step towards accurate timekeeping in W.s. Other escapements followed, and in 1757 Thomas Mudge (q.v.) made the first detached-lever escapement, which, with but slight modification, is to be found in every reliable W. made to-day. His first lever W., made for George III and given by him to his consort Queen Charlotte, is now in the Royal Collection at Windsor Castle.

The lever escapement is really an adaptation to W.s of the dead-beat escapement (see HOROLOGY). The main parts are the escape wheel; the lever, with pallets at one end and terminating in a fork or notch flanked by horns at

the other extremity; the balance, with spring and double rollers secured to the balance staff (the larger roller carries the impulse or ruby pin, and the smaller acts with the horns of the lever to form a safety device to prevent the escapement from unlocking if the W. gets a jar or knock); and the banking pins to limit the movement of the lever. When the escapement is locked, a tooth of the escape wheel is held against the locking face of one of the pallets. As the balance oscillates to and fro, the impulse pin enters the notch of the lever and moves it to one side. As this happens the appropriate pallet is raised to clear the wheel and thus unlock the escapement. As the escape wheel begins to move, it pushes the pallet out of the way, thus causing the notch of the lever to press against the impulse pin, thereby giving impulse to the balance. A great advantage of this escapement is that the impulse pin is only in the notch of the lever for a short part of its period of swing. The remaining part of its swing is known as the supplementary arc, during which the escapement is entirely detached. Escapement interference is, therefore, at a minimum. The cycle is then repeated in respect of the other pallet.

In older Eng. lever W.s made up to about 1830, a pointed-tooth escape wheel is employed. The pallets are mounted at right angles to the lever. In the modern type, first developed by the Swiss c. 1840, a club form of tooth is used and the escapement is arranged in a straight line. The club tooth is more robust, can be made of steel, and is easier to produce by quantity-production methods.

No W. can be described as a jewelled lever W. unless it has a minimum of 15 jewels—i.e. 2 pallet stones, impulse pin, 2 jewel holes and end-stones for balance staff, 2 jewel holes for pallet staff, 2 jewel holes for escape, fourth and third wheels. Many W.s have 17 or more jewels.

The lever escapement is now frequently used in clocks, giving the advantage of greater portability, moving for dusting purposes, and so on. A cheap form of escapement, known as the pin-pallet escapement, was developed by Roskopf, c. 1865, and was first exhibited publicly at the Paris Exhibition of 1867. It works on the lever principle, but instead of jewelled pallets, it is provided with two steel pins. The impulse pin is also of steel. Generally, a pin-pallet W. has either no jewels at all or a maximum of five. It cannot be compared with a genuine lever W.

Compensation. The first step towards compensating a W. against variations in temperature was made by John Harrison (q.v.). He invented a bimetallic strip, or what is known as Harrison's bimetallic curb, which comprised thin strips of steel and brass, securely fixed together all along their length. One end of this curb was secured to the plate of the W., while 2 curb pins were mounted at the other end. As temperature rose,

the strip expanded, but since brass expands with heat more than steel, the effect was for the strip to curl, thus making the curb pins slide along the outer coil of the balance spring, thereby shortening its effective length. A fall in temperature had the opposite effect. In his later writings Harrison said that the compensating device should be in the balance itself and not in the spring. After learning about Harrison's curb, Pierre Le Roy of Paris devised the first means of compensating by means of the balance. The bimetallic balance was later improved by Thomas Earnshaw, who fused the brass on to the steel instead of riveting or soldering. The bimetallic compensation balance is still extensively used. Modern compensation is achieved by using a balance spring of one of the invar alloys in conjunction with a balance of nickel or beryllium alloy, with which the differences in rate caused by variations in temp. likely to be met with in general use are so small as to be almost negligible in W.s for ordinary use.

Fusee. Early escapements were particularly susceptible to every variation in the strength of the driving force, and it was necessary to employ some power-equalising device if tolerably good time-keeping was to result. The fusee was invented with the object of equalising the pull of the mainspring throughout the run of the clock or W.; it became widely used, and was efficient. Its invention is often attributed to Jacob the Czech (c. 1525), although drawings by Leonardo da Vinci made some 40 years earlier are in existence.

The fusee is a conical-shaped piece of brass, its taper being a gradual curve from the greatest to the smallest diameter. A spiral groove is cut round its circumference running continuously from one end to the other. One end of a chain is secured to the spring barrel on to which it is wound when the movement is assembled, the other end being hooked to the large diameter of the fusee. As the W. is wound, the chain is transferred from the barrel on to the fusee. As the W. goes, when the spring is fully wound it pulls on the chain and exerts its maximum force on the small diameter of the fusee, but as it runs down and its power diminishes it acts on an ever-increasing radius. The fusee is thus a lever of constantly increasing length, and the leverage exerted by the spring increases just as the force of the spring tends to decrease. The result is almost even force at the teeth of the great wheel throughout the whole period of going.

With the growing efficiency of escapements, particularly the lever escapement, and with better mainsprings, the fusee became less important and was gradually discarded. On the Continent it ceased to be used in W.s much sooner than was the case in England. There it was retained up to (and sometimes beyond) the end of the 19th cent., after it had ceased to be necessary or desirable, and when it served only to complicate the mechanism.

This was one of the reasons why Brit. makers lost the lead in the watchmaking trade towards the end of the 19th cent. To-day the fusee is used in most marine chronometers and in some good spring-driven clocks, but not in W.s.

Wrist Watches. The introduction of the wrist W. brought about a revolution in the W. manufacturing industry. The forerunner of the modern wrist W. made its appearance soon after the turn of the present cent., when, in some instances, small ladies' pocket W.s were fitted into a specially made leather or gold adaptor to be worn on the wrist. The wrist W. struck a new note of appeal, and the First World War hastened its popularity owing to the ease with which the time could be read without having to undo the coat or uniform. The main differences between a pocket and wrist W. are that there is no bow on a wrist W.; the winding button is smaller and neater; and loops, lugs, or side joints are attached at the 12- and 6-o'clock positions for the strap, bracelet, or other form of wrist band, these being the best positions for reading the time, no matter on which wrist the W. is worn. The winding button is at the 3 instead of the 12-o'clock position, for the obvious reason that it does not get in the way of the lugs or loops.

Water-resistant Watches. With improvement in production methods it has become possible to make cases so that they will resist the ingress of water. Several types of water-resistant cases are made, some with screw-on covers, some with snap-on covers, most of them relying upon some form of sealing washer at the points where the covers fit on to the case, and a packing gland, usually of plastic material for the winding stem. The glass, which, incidentally, in all modern W.s is of some plastic and more or less unbreakable material, is a particularly good fit.

Anti-magnetic Watches. The steel parts of a W. are all liable to be magnetised if exposed to a magnetic field. This is largely overcome in modern W.s by making the balance spring of one of the invar alloys, which are non-magnetic.

Shock-resistant Watches. Many W.s are now provided with sprung jewels for the pivots of the balance staff. The result is that when the W. receives a sudden knock or jar the bearings give, and the risk of damage to sensitive parts is much reduced.

Self-winding Watches. Louis Recordon of Soho, London, was granted a patent in 1780 for a W. which wound itself on the pedometer principle. The movement of the body when walking caused a pivoted weight, geared up to the mainspring, to oscillate.

The first self-winding wrist W. was invented by John Harwood, b. at Bolton in 1890, who secured a patent in 1924. A centrally pivoted weight oscillates between bankings at every movement of the wrist, and by means of suitable gearing the mainspring is wound in this way. Since Harwood's original patent, nearly

every W. manufacturer has produced self-winding models. Some of these act on Harwood's principle, while in others an eccentric weight is made to rotate through the full circle, causing the spring to be wound sometimes in one and sometimes in both directions of travel.

Repeating Watches. A repeating W. is one which, at the will of the owner, can be made to strike the time on gongs coiled round the circumference of the movement. Sometimes the blows are struck on the band of the case, when the W. is called a dumb repeater because there is no music in the blows. The repeating mechanism is operated by a separate mainspring and train of wheels, and is automatically wound—in early repeaters by depressing a push piece in the pendant and in modern types by moving a slide on the outside of the band of the case.

There are 2 gongs: one—the base gong—is used to strike the hrs and also the deep note of the ting-tang chime; the other—the treble gong—is used to strike the min., or other intervals catered for, and also the higher note of the quarter chime. Some repeaters chime the hrs and the quarters; some the hrs, quarters, and half-quarters; some each 5 min.; and some all the min. The mechanism is somewhat complicated. See G. H. Baillie, *Clocks and Watches*, 1951; T. P. Camerer Cuss, *The Story of Watches*, 1952. See also CLOCK; CHRONOGRAPH; CHRONOMETER; TOMPION.

Watch Tower Bible and Tract Society, The. see JEHOVAH'S WITNESSES.

Watchet. urb. dist. and port of Somerset, England, on the Bristol Channel, 17 m. NW. of Taunton. The tn dates back to A.-S. times. There are large imports of wood pulp and esparto from overseas; here are paper mills, and paper-bag and shirt factories. Pop. 2650.

Water. W. covers 72 per cent of the surface of the globe and occupies depressions greater than the land above sea-level could fill. It solidifies and evaporates at normal earth temps., and in the state of vapour forms a minute but extremely important constituent of the atmosphere. It freezes at 0° C. or 32° F., and boils under 760 mm. mercury at 100° C. or 212° F. On freezing it expands by $\frac{1}{9}$ its bulk; 1 ml. weighs 1 gram at 4° C., or 39.2° F., or 1 cub. ft. weighs 62.428 lb. at its greatest density, and it forms the unit of specific gravity. At 62° F. it has a density which is about 790 times that of air, which in the ordinary state contains about 4 grains of W. per cub. ft. Seven-eighths of the animal body is composed of W.

Chemically, it is composed of 2 volumes of H (hydrogen) to 1 of O (oxygen), the proportions by weight being 1:8. It may be prepared by exploding a mixture of those gases in proper proportion, or by burning one in the other. The combustion of most H compounds is accompanied by the formation of W. W. is, when pure, a faint greenish-blue and odourless; it is very slightly compressible, and a bad conductor of heat and

electricity. It has the highest specific heat of any substance known, and is thus the best cooler through a given range of temp.: 79.74 cal. per gram of ice (the latent heat of fusion) are required to turn ice into W., while 539.1 cal. per gram of W. (the latent heat of vaporisation) are required to convert it into steam. In the reverse changes of solidification or liquefaction exactly the same quantities of heat are evolved. Chemically, W. is neutral, forming acids with anhydrides. Its solvent action on many substances renders it very active, and brings about reactions between dissolved substances; with some of these it forms hydrates, with others it enters into their crystal growth as W. of crystallisation. Potassium, sodium, and some other metals decompose it. It is generally held that the earliest forms of life occurred in W. Its change of form and mobility have immense effects on the earth, distributing the sun's heat, shielding the land from excessive temps., and eroding the land surface. The pressure it exerts on freezing, not less than 30,000 lb. per sq. in., bursts iron pipes and disintegrates rocks. Its purest natural form is rain, which, however, contains dust and gases dissolved from the atmosphere. It exerts a solvent effect on many rocks and enters into their crystalline structure; by virtue of its solvent action on CO₂ in the atmosphere, this effect is increased, and all natural W.s. contain matters in solution. (For composition of oceanic W.s. see OCEAN.) Calcium and magnesium bicarbonates, calcium chloride, and sulphate are the cause of hard W. The dissolved air in all natural W. is indispensable for life in W. The presence of air and salts is beneficial in W. for domestic use: the presence of organic matter is injurious; for drinking, W. should have no solvent action on the lead pipes, or contain much magnesium salt, nor should it be soft. The presence of organic matter allows W. to be the home of injurious germs, and it is thus the vehicle in the spread of some diseases. It is usual to analyse drinking-W. chemically and bacteriologically. Filtering is useful chiefly as holding back organic remains; boiling renders it much more harmless, if not totally so, only a few probably harmless spores being able to resist the temp. Drinking-W. is often sterilised by treatment with chlorine, the excess chlorine being afterwards removed by addition of ammonia or filtration through active carbon.

Water-Boatman, see BOAT-FLY.

Water-cloak, see CLEPSYDRA.

Water-colours, pigments transferred from the cakes in which they are prepared to the paper or other painting-surface by suspension in water. The various colours are sometimes supplied in hard cakes, in which case they have to be ground by rubbing on a palette and mixed with water to the desired consistency.

A convenient form is that of fairly soft cakes in china pans prepared by mixing the colour substance with a slowly drying gum. Another popular form is prepared by adding a small quantity of glycerine, which results in a moist colour suitable for storage in collapsible tubes. Variations of tint are obtained in the case of opaque pigments by mixing the colours in the right proportions. With transparent colours, beautiful effects are obtained by superimposing thin washes.

In the 18th cent. water-colour painting became a separate art, developing from the tinted drawings of the period. It has become a peculiarly Eng. art, possibly because it is especially suited to landscape and is an admirable medium to render atmospheric effects. Gainsborough used the medium, and Sandby and the Cozens, father and son, are among the earliest of Eng. water-colour painters. Those of the greatest importance who lived at the end of the 18th cent. are John Sell Cotman, one of the best of the Norwich School, and distinguished by his broad treatment of masses, J. Crome, also of the Norwich School, T. Girtin, P. de Wint, Turner, master of atmosphere, who successfully combined various methods of water-colour painting, Constable, D. Cox, F. Towne, J. Varley, R. P. Bonington, and also, but individual in subject-matter, Blake and Rowlandson. In the course of the 19th cent. water-colour painting declined, becoming over-burdened with detail, but in the 20th cent. the art has recovered its vitality in the work of Sargent, Steer, Rich. Paul and John Nash, Edward Bawden, Eric Ravilious, John Piper, David Jones, and Edward Pitchforth. *Gouache*, a method of water-colour painting with opaque colours mixed with gum and honey, was used by Paul Sandby and others; also by a number of our contemporary artists, including Edward Burra and Michael Avton. A Royal Society of Painters in Water-colours was founded in 1804. See E. B. Lintott, *The Art of Water-colour Painting*, 1926; H. M. Cundall, *History of British Water-colour Painting*, 1929; L. Richmond and J. Littlejohns, *The Technique of Water-colour Painting*, 1931, 1948; L. Binyon, *English Water Colours*, 1944; I. Williams, *Early English Water Colours*, 1952.

Water Hemlock, Cowbane, or Dropwort, (*Oenanthe fistulosa*), tall, umbelliferous perennial, growing in damp places, bearing large umbels of white flowers. Its turnip-shaped root is poisonous.

Water-lily, name given to the various species of Nymphaea and Nuphar and also of Nelumbo, all belonging to the family

Nymphaeaceae. Britain produces white (*Nymphaea alba*) and yellow (*Nuphar lutea*) W.s, which are found floating in still waters.

Water-mark, design impressed into paper (q.v.), first invented at Fabriano in Italy. At the last stage of the progress of the pulp over the wire gauze a wire mesh cylinder, called the 'dandy roll,' carrying the design, impresses this into the pulp, producing the W.

Water Measurement. The flow of water is measured most accurately by recording the time taken to fill a vessel of known proportions. Very large flows of water, e.g. in rivs., can be measured with moderate accuracy by finding the average velocity in a section of channel of known cross-sectional area. The velocities are measured by recording the movement of floats, or by the use of current meters. As the velocity is higher at the surface and in the centre than near the bottom or sides of the stream, recordings have to be taken in sev. positions and averaged.

Flows can be estimated, roughly in the case of rivs. or with fair accuracy in the case of pipes or channels constructed of specified materials, by recording the hydraulic gradient, or loss of head due to friction per unit length, and calculating the flow from various formulae, some of which take the form

$$V = K m \alpha i^{\beta}$$

where: V = velocity in ft per sec.; m = hydraulic mean depth, i.e. cross-sectional area of flow divided by wetted perimeter, in ft; and i = the fall divided by the length. The values of the constant K and of the indices α and β all vary according to the material of which the channel is constructed.

Where practicable, flows in rivs. and open channels are measured by recording the depth of flow over weirs of known proportions. Sev. types of weir are used, including V-shaped, rectangular, and trapezoidal weirs constructed of sharp-edged metal plates; suppressed weirs, consisting of a sharp-edged plate arranged across vertical-sided channels; and simple broad-crested sills, such as brick, masonry or concrete walls. Precautions have to be taken that the velocity of approach to a weir is not excessive. Accurate measurements of head over a weir are made with the aid of a hook-gauge, which is a hook so arranged that its point approaches the surface of the water upwards. When the point of the hook breaks the surface this becomes immediately obvious and the level of the point, relative to crest of weir, is read on a vernier scale. Flows are also recorded graphically by floats which actuate clock-controlled instruments. Flows of water containing heavy silts are best measured through standing-wave flumes, which are constrictions in open channels. The formula applicable to flat-crested weirs serves also for these.

Velocity in pipes or channels can be recorded by the use of Pitot tubes, which are small-diameter tubes arranged with their ends to face the flow so as to re-

convert velocity head into pressure head. Nozzles incorporating Pitot tubes are often used by fire brigades for recording the discharges of hydrants.

The Venturi Flowmeter is an instrument applicable to the measurement of moderately large flows through pipes. It consists of a constriction in the line of pipe which causes a local increase of velocity and corresponding reduction of pressure. (see HYDROKINETICS). Pressure is measured above the constriction and at the constriction. The Brit. Standard formula for computing the flow reads:

$$Q = 0.0557 aC \sqrt{\frac{H}{n^5 - 1}}$$

where Q = discharge in cubic ft per sec.; a = area of the upstream entrance to the meter in sq. in.; C = coefficient of discharge (= approximately 0.98); H = differential head in ft of water; n =

$$\frac{\text{Area of Venturi tube at upstream}}{\text{Area of throat}} = \left(\frac{D_1}{D_2} \right)^2$$

where D_1 = upstream diameter, and D_2 = throat diameter.

Supplies of water, e.g. to premises, are usually recorded by meters either of the inferential or positive types. In each case the total flow 'to date' is recorded on a dial. An inferential meter consists of a small turbine which is driven at varying rates according to the rate of flow: it is liable to be inaccurate at very small flows. A positive meter involves a piston moving in a cylinder, the number of strokes of the piston being in direct relation to the quantity of water displaced. See also HYDROKINETICS. See A. A. Barnes, *Hydraulic Flow Reviewed*, 1916; F. C. Lea, *Hydraulics*, 1926; *British Standard Specification No. 722 for Borehole and Well Pump Tests*, 1937; *British Standard Specification No. 723 for Sewage Pump Tests*, 1937; E. Water Melon, or *Citrullus vulgaris*, plant (family Cucurbitaceae) with yellow flowers followed by large, round fruits which are cultivated in tropical countries and sometimes grown in greenhouses in Britain. In the U.S.A. the W. M. is an important crop in the S. states. The fruit, which has a green rind, often grows to 2 ft in length, and when ripe the meat inside is a rosy red and very sweet, particularly when iced.

Water Polo, game which originated in England about 1880 and is now played universally. There are 7 players in each team—a goalkeeper, 2 backs, 1 half-back, and 3 forwards, who endeavour to score goals by throwing a ball (like a football in size and construction) into their opponents' goal.

The governing body of the game is the Amateur Swimming Association, and the game is played in swimming-pools which will accommodate a playing pitch with the following dimensions: length, minimum 20 yds, maximum 30 yds; width, minimum 8 yds, maximum 20 yds; depth, minimum 3 ft; distance between goal-posts 10 ft; crossbar in deep water, 3 ft above water surface; crossbar in shallow water, 8 ft from floor of playing space.

The duration of each game is 35 min., divided into halves of 15 min. with a 5-min. interval. It is controlled by a referee on the bath side.

Water-rail, see RAIL.

Water Scorpion, hemipterous insect or bug (*Nepa cinerea*) found in ponds and stagnant waters in Britain. It has curved forelegs and a tail-like appendage or breathing tube to the abdomen which give it somewhat the appearance of a scorpion.

'Water-Snake,' see HYDRUS; HYDRA (constellations).

Water-softening. Hardness of water is due to the presence of calcium sulphate, and the bicarbonates of calcium and magnesium (the latter being responsible for temporary hardness, which can be removed by boiling); these do not lather with soap, which is decomposed, insoluble salts of calcium and magnesium being formed with the fatty acids. In addition, the formation of 'fur' or scale in boilers and kettles by deposition of soluble matters is a great disadvantage. The methods for rendering hard water soft are: (1) By the addition of washing soda or of ammonia. In this way calcium carbonate is deposited, $\text{CaSO}_4 + \text{Na}_2\text{CO}_3 = \text{CaCO}_3 \downarrow + \text{Na}_2\text{SO}_4$, $\text{Ca}(\text{HCO}_3)_2 + 2\text{NH}_4\text{OH} = (\text{NH}_4)_2\text{CO}_3 + \text{CaCO}_3 \downarrow + 2\text{H}_2\text{O}$. This method is often employed in the household. (2) By the addition of the requisite amount of milk of lime, which removes temporary hardness, $\text{Ca}(\text{HCO}_3)_2 + \text{Ca}(\text{OH})_2 = 2\text{CaCO}_3 \downarrow + 2\text{H}_2\text{O}$. The precipitate is allowed to settle. This does not remove the sulphate; for this purpose sodium carbonate is added, the Ca being precipitated as carbonate, the sodium sulphate formed being soluble and innocuous. It is usual to supply the lime in defect rather than in excess, though a slight excess is claimed to have bactericidal effect. Commercially, the process is carried out by adding a controlled amount of lime and soda emulsion to the hard water, allowing the mixture to settle in a reaction tank, and filtering the resultant softened water to eliminate traces of precipitate which are not removed by settlement. In the Percipitator type of lime-soda softener, hardness removal is achieved by allowing the water to flow upwards through a zone of precipitate retained in hydraulic suspension: this method produces a clear, softened water which often requires no additional filtration. In the 'Spiractor' pressure lime softener the precipitated calcium carbonate is induced to crystallise

on grains of catalyst, the particular advantage being that all precipitate forms in hard, easily handled granules instead of as bulky, wet salt. (3) By the base-exchange process. A base-exchange water softener consists of a closed steel vessel containing granular base-exchange material through which the hard water is passed. This base-exchange material has the property of absorbing the calcium and magnesium hardness salts from the water and of exchanging them for an equivalent amount of harmless soda salts. This

WATER-SOFTENER: 'PERMUTIT' SPIRATOR

A, air vent; B, softened water outlet; C, test cocks; D, chemical inlets; E, raw water inlet; F, draw-off valve for enlarged catalyst.

softening action continues until the base-exchange material contains no more exchangeable sodium: when this stage is reached the softener is regenerated by flushing with a small amount of solution of common salt (NaCl). During regeneration, soda from the brine is taken up by the base-exchange material, and the calcium and magnesium previously absorbed are rinsed away to the drain.

Water Spaniel, Irish, see SPANIEL.

Water-spout, funnel cloud very similar to a tornado (q.v.), except that it occurs at sea and is normally not quite so violent. It is formed in a similar way to the tornado beneath a cumulonimbus cloud in the

transition zone between warm, moist and dry air masses, although it can occur without a change of air mass in convectively unstable air that has absorbed in the lower layers large quantities of moisture from warm seas. The instability is increased by the cooling of under-running dry air by evaporation into it of rain from above. The funnel of the W. may be of any diameter from 20 to 200-300 ft and raises a small cloud of spray where it meets the sea. The life of a W. is rarely more than $\frac{1}{2}$ hr.

Water Supply. Water has always been considered one of the prime necessities of life. The Rom. aqueducts and baths are unsurpassed in splendour, but they are an isolated phenomenon. Hot baths were introduced from the E. and communal bath-houses were in use on the Continent throughout the Middle Ages. Bath-houses were built in England at country mansions about 1660, indoor baths began to be installed, and in 1778 Joseph Bramah patented the modern form of water closet.

But recognition of the importance of cleanliness as a preventive, and of contamination of water as carrier of disease had to await the discoveries of Lister and Pasteur, and the provision of ample supply of wholesome water became possible only after the development of bacteriological technique. The outbreak of cholera in 1831-3 directed public attention to the question of water pollution, and in 1842 a parl. commission was appointed to inquire into the state of W. S.s. Of 50 large tns examined, 6 were found to possess good W. S., in 13 it was indifferent, in 31 inadequate or impure. In Birmingham 4 out of 5 houses, in Newcastle 11 out of 12, had no water. After the third cholera epidemic (1865-6) a Royal Commission was set up to investigate the state of public health and pronounced the supply of pure water necessary 'for civilised social life.' It is Disraeli's Public Health Act (1895) and Joseph Chamberlain's work during his mayoralty of Birmingham (1873-6) which mark the beginning of modern improvements in sanitation, putting public health in the forefront of State responsibilities and making it incumbent on public authorities to see that every dwelling-house has an adequate supply of wholesome water within reasonable distance. In Great Britain, 70 per cent of the pop. obtain their W. S. from public authorities, 15 per cent from private companies, and 15 per cent from local wells or other sources (1950).

Quantities. The quantity of water consumed per head of pop. varies considerably, from less than 5 gallons per head of pop. per day in some outlying localities, to over 100 gallons in parts of Scotland. In America demands of more than 100 gallons per head per day are not uncommon. In Great Britain the demand is most often in the region of 25 gallons per head per day for domestic purposes only, and 30 gallons per head per day including trade demands. These figures make no allowance for the private supplies owned by many factories. In the design

of new W. S. systems, it is usual to allow 12½ gallons per head per day for vills, 25 gallons for country tns and residential areas, and 30 gallons upwards for larger tns.

Sources of Supply. Supplies of water for domestic and other purposes are obtained from either surface or underground sources. Surface sources, which include the run-off of upland catchments, intake from rivs., and natural lakes, and collection from artificial impervious areas (e.g. roofs), usually afford waters which are soft, i.e. containing little dissolved mineral matter. Underground sources from springs and deep wells are liable to be hard. Riv. waters, shallow wells, and some springs are liable to organic and bacteriological pollution. In Great Britain the majority of upland catchments are in the N. and W. areas, where the geology is such that it renders collection of surface run-off and storage in impounding reservoirs comparatively easy. Wells are more common in the E. and SE. owing to the prevalence in those regions of water-bearing strata. The type of source to be selected depends on the value of the available sources, their positions, and the quantity of water required. Very large supplies are usually taken from catchments, either upland or lowland; wells will serve for small supplies and for some tns, but an individual well will seldom give an adequate supply for a large pop. Thus, supplies to small communities are local, but supplies for large tns may be brought from considerable distances.

The distribution of water in the strata of England may be generalised as follows. The clays, gault, Upper Lias, and New Red Marl are non-water bearing; limited supplies are obtained from Purbeck Beds and Lower Lias; from the gravels, crags, and sands the water is subject to pollution and often contains iron, but good supplies are obtainable from the Reading Beds and Thanet sands. Chalk, Upper and Lower Greensand afford a practically unlimited supply of good, pure, but hard water, which applies also to calcareous grit, oolites, magnesian limestone, and mt limestone. Good supplies are obtained from Portland rock, Middle Lias, New Red Sandstone, Old Red Sandstone, slate, and granite. Millstone Grit gives excellent water in abundance; the coal measures also provide much.

Water Treatment. Water as collected requires treatment, owing to the suspended and dissolved solids and living organisms which it contains. The first process of treatment is usually sedimentation, to remove suspended matter, and in some cases this may be combined with the water-softening process. Remaining sediment, including a large proportion of the bacteria present, is removed by filtration. The method which is known as slow sand filtration is being largely superseded by the use of mechanical filters or pressure filters, which are closed steel vessels containing the filter medium. The water, dosed with coagulant, enters the shell at the top and passes downwards through the graded medium at a rate of

filtration often as high as 100 gallons per sq. ft per hr. The filter is cleaned periodically by agitation or injection of compressed air.

Sedimentation and filtration remove suspended solids and an appreciable proportion of the bacteria present in the raw water. Dissolved solids are removed by softening processes. (See WATER SOFTENING.) It is now usual to render all waters bacteriologically sterile by the application of chlorine, chlorine and ammonia (chloramine process), or, less frequently, ozone. After complete treatment water is kept in covered reservoirs so as to exclude light, which would encourage vegetable growth. This storage, which gives time for chlorine to act, usually takes place in the service reservoirs which are part of the distribution system.

Reservoirs. When water supplies are taken from surface sources, in particular upland catchments, storage reservoirs are necessary to overcome periods of drought. These are of very great capacity, e.g. 6 months water demand. (See RESERVOIRS.) When water is drawn from underground sources reliance is placed on the natural underground storage (referred to as the underground reservoir), and no reservoirs have to be constructed other than the small-capacity service reservoirs which form part of the treatment and distribution system and which hold in the region of 2 or 3 days' supply only.

Water Distribution and Provision for Fire Fighting. Water distribution systems are made to take at least 3 times the average daily demand, in order to allow for peak demands and reduction of pipe capacity by incrustation. Water must be supplied between reasonable limits of pressure, so as to be adequate for fire-fighting purposes and to reach the tops of high buildings. For fire fighting the pressure should not be less than 45 lb. per sq. in. when the demand from the hydrant is about 200 gallons per min. This rough rule ensures sufficient pressure for ordinary fire fighting without the aid of a mobile pump and sufficient quantity to keep a mobile pump supplied should the latter prove necessary. On the other hand, pressure in the mains should as far as practicable be kept below 100 lb. per sq. in. because not only do high pressures cause water-hammer and damage to household pipes and fittings, but they necessitate heavier classes of main. These limits of pressure necessitate that water shall be supplied in 'zones,' low-lying areas being served from low-level service reservoirs, and high-level areas from high-level reservoirs. Areas are sometimes served by pumping only and pressure reduced as necessary by automatic pressure-reducing valves. Water towers are small service reservoirs erected above ground level. Water is delivered to the areas to be served by trunk mains. Properties are not served directly from these trunk mains, but by means of networks of service mains, each of which connects to a trunk main at one point only. The networks of service mains are broken up into sections with the aid of a system of

valves, which renders possible the isolation of short lengths for maintenance purposes. It is seldom that a main of less diameter than 4 in., unless of very short length, will give the aforementioned quantity and pressure for fire-fighting purposes. Thus, in some dists., all distributing mains have been made 4 in. internal diameter or larger. Smaller sizes are used in rural areas. When new mains are proposed, the fire authority (co. or co. bor.) must be informed, and they can insist on increased dimensions and the provision of hydrants, etc. The additional cost falls on the fire authority.

Water mains consist of cast-iron pipes, or, more rarely, asbestos-cement pressure pipes, laid with at least 3 ft. of cover, to protect them from frost or damage. Air valves are placed at all high points on the system to release air and thereby prevent air-lock, and wash-out valves at all low points. Fire hydrants are placed at intervals not exceeding 200 yds, and closer as may be justified by the fire risk. Calculation of flow through pipes is made in accordance with sev. accepted formulae. (See WATER MEASUREMENT.)

Statutory Powers. The power to supply water in England and Wales is vested in various bodies, namely, water companies and individuals, acting either under a local Act or a Provisional Order, or under powers given by the general law without the special powers conferred by such Act or Order; local authorities acting as or in default of water companies; joint water boards formed by uniting 2 or more urb. or rural dists. into a united dist. for a common W. S.; and (for London), the Metropolitan Water Board (q.v.). Generally speaking, prior to the Public Health Act, 1936, the W. S. of rural dists. was regulated by the Public Health Act, 1875, and the Public Health (Water) Act, 1878, the supply being under the authority of the rural dist. council as the rural sanitary authority.

Under the Water Act, 1945, the minister of health is assigned the general duty of promoting the conservation and proper use of water resources and securing the effective execution by water undertakers of a national policy relating to water, and to this end he is required to appoint a central advisory committee for the purpose of advising him on these matters and on the operation of legislation concerned with W. S. To secure better W. S. or water conservation in given areas the minister may set up joint advisory water committees representative of water undertakers and local authorities in the areas concerned. He is also empowered to require local authorities and statutory water undertakers to carry out surveys and formulate proposals relating to W. S. as well as to require records and information from persons abstracting water from any source.

Under the Public Health Act, 1936, the minister was enabled, on application being made to him, to create joint water boards for united dists., but this he may now do without the need for prior application. Where it is expedient for securing a more

efficient W. S., the minister may make orders, operating by agreement or by compulsion, for the combination or amalgamation of water undertakers or the transfer of water undertakings. On complaint or otherwise, the minister may order an investigation to ascertain whether any local authorities, joint water boards, or statutory water undertakers have failed to provide an adequate W. S., and in the event of sustained default on the part of a water undertaker the minister may transfer to himself or, in certain cases, to the co. council of the area, the powers of the body in default. As to conservation of water resources, all by-laws for preventing the waste or contamination of water require the confirmation of the minister and have a maximum duration of 10 years. Apart from by-laws there is statutory provision making it an offence to pollute any spring if the water from it is used or likely to be used for human consumption or domestic purposes. Part IV of the Water Act, 1945, enables the minister to make orders conferring on 'any persons who are or propose to become statutory water undertakers' authorising them to construct, alter, and maintain waterworks, to supply water in any area, and to raise capital for such purposes and to acquire land or water rights either compulsorily or by agreement. The Act imposes a duty on the undertakers of giving a W. S. on reasonable terms and conditions for non-domestic purposes, such as to farmers and industrialists, but there is a limit to this duty where its performance would prejudice existing obligations to supply water, by entailing unreasonable expenditure in constructing new waterworks. The Act also makes provision for requiring statutory water undertakers to lay water mains in advance of the development of a housing site. Other provisions in the Act enable the minister to revise water rates and charges and empower water companies to issue redeemable stock. The Rural Water Supplies and Sewerage Act, 1944, authorises the minister of health to make contributions towards the expenses incurred by local authorities on approved works in providing or improving water supplies in rural localities (and in making adequate provision for sewage disposal).

Russell, *Public Water Supplies*, 1924; A. P. Folwell, *Water-Supply Engineering*, 1925; P. M. Parker, *Control of Water*, 1925; W. T. Taylor, *Practical Water-Power Engineering*, 1925; J. E. Dumbleton, *The Construction of Wells and Boreholes for Water Supply*, 1928; W. K. Burton, *Water Supply of Towns*, 1929; D. M. Baker and H. Conkling, *Water Supply and Utilisation*, 1930; G. V. James, *Water Treatment*, 1949; L. B. Escritt and S. F. Hich, *The Work of the Sanitary Engineer*, 1949; Institution of Water Engineers, *Manual of British Water Supply Practice* (2nd ed.), 1954.

Water Table, the upper surface of the zone within which the rocks of the earth's crust are completely saturated with water. The W. T. shows gentle undulations reflecting in a more subdued form the surface topography. Its distance from the surface varies according to the climate. In desert regions the W. T. may be at a depth of 100 ft or more. In wet climates it may rise above the surface of valleys and low-lying areas and give rise to areas of permanent swamp. In any dist. the position of the W. T. varies from an upper level reached after periods of heavy rain to a lower level reached in periods of drought. Wells which do not penetrate below the zone of intermittent saturation enclosed by these two limits are liable to run dry.

Water-tight Compartments, see SHIPS AND SHIPBUILDING.

Water Wheels, the earliest form of prime mover utilising the energy of water falling from a high to a lower level. The difference between the levels is known as the 'head.' The overshot wheel has a diameter slightly less than the head, water is led on to the highest point through the 'headrace' and fills the 'buckets,' usually formed by flat staves set in the cylindrical surface of the wheel. The buckets in the side near the reservoir being empty, the wheel turns under the weight of water in the far side. In the breast-wheel water is led into buckets on the near side about the height of the axis. To prevent loss of water, the loaded part of the wheel moves in a close-fitting channel and the buckets are shaped to hold as much water as possible until they reach the lowest point. Both these types of W. W. move under the weight of water, they utilise the potential energy; any kinetic energy of the entering water is wasted, and the water should enter at slow speed. In the undershot wheel water enters the buckets at a point below the axis, and it is the reaction of the bucket to the streaming water, i.e. the kinetic energy, that is utilised. The buckets are so shaped that the water moves smoothly, without impact. The Pelton Wheel (see HYDRO-ELECTRIC POWER) moves under the impact of a jet of water under high pressure.

Waterbearer, see AQUARIUS.

Waterbuck, see ANTELOPE.

Waterbury, city of New Haven co., Connecticut, U.S.A., on Naugatuck R., 18 m. NNW. of New Haven. One of the chief manufacturing cities of the state, it produces clocks and all kinds of metalware and the noted 'W. watches.' Hardware, chemicals, clothing, tools, automobile parts, lighting fixtures, plastics, bedding, and cigars are also manufactured. W. is the centre of a brass industry. Pop. 104,480.

Waterfalls are typical of regions where streams are young or immature, not having had time to grade their courses. Tributaries gathering less water often fall into rivs. of larger volume, erosive action being less in the former. Falls are numerous where coastal plains of younger and poorly resistant strata are

crossed by older rivs.; a *fall-line* exists along the inner margin of the coastal plain adjoining the older land. Most W., however, are due to rivs. crossing strata of different degrees of resistance, the valley in softer rock being deeper than that in the harder. W. work themselves backward through the hard rock, chiefly by undermining at the base; in the case of the Niagara and Zambesi, narrow gorges with dangerous currents occur between the present and original sites of the falls. Some of the most picturesque W. are formed by springs issuing from cliff-walls in mountainous regions. Among famous W. are Niagara; Victoria, Rhodesia; Yosemite, California; Sutherland, New Zealand; the Staubbach, Alps; Ignassu, Argentina; Kaletour, Brit. Guiana; Tequendama, Colombia. W. have been used to generate power by means of water-wheels (q.v.) for cents.; turbines are replacing them and are particularly used for generating electricity. (See also HYDRO-ELECTRIC POWER.)

Waterford: 1. Co. of the Rep. of Ireland, bounded on the N. by Kilkenny and Tipperary, S. by the Atlantic, E. by Waterford Harbour and Wexford, and W. by Cork. In the 10th cent. W. was inhabited by the Danes, of whom there are numerous relics. At Lismore there is a historic castle, the Irish seat of the Duke of Devonshire, at Ardmore 7th-cent. monastic remains and a holy well, and at Cappoquin there is a Trappist monastery (1830). The coast-line is much indented, the prin. inlets being W. Harbour, Tramore Bay, Dungarvan Harbour, Ardmore Bay, and Youghal Harbour. The dists. to the N. and NW. are mountainous, the chief ranges being the Comeragh and Monavallagh Mts (2597 ft), the Knockmealdown Mts (2609 ft), and the Drum Hills (990 ft) in the SW. The prin. rivs. are the Suir and the Blackwater, famous for the salmon fishing. Agriculture is successfully carried on, but the greatest area is under pasturage, and the rearing of livestock is important. The fisheries form one of the chief industries, and there are breweries, distilleries, and flour mills. Marble and copper are found. The chief tns. are W., Dungarvan, and Lismore. The co. returns 4 members to the Dail Eireann. Area 709 sq. m.

2. Municipal, parl., and co. bor., city, and cap. of co. Waterford, Rep. of Ireland, on the R. Suir. W. was occupied by the Danes in AD 853 and wrested from them by Strongbow in 1170. Henry II visited W. the following year. Prince John landed there in 1185, and afterwards as king in 1211. W. received its first charter from him in 1205. James II sailed from Duncannon Fort on the Wexford side of W. Harbour for France after the battle of the Boyne, and William sailed from there to England. During the Civil war W. was taken by Ireton. A modern bridge connects it with the suburb of Ferrybank on the N. bank of the riv. It has Protestant and Rom. Catholic cathedrals. Fragments of the old city walls remain, notably Reginald's Tower, dating from the 11th cent. A large ex-

port trade is carried on, especially in bacon, butter, and cattle, and other industries are flour-milling, brewing, paper and board, and electrical equipment. Glass-making, for which W. was once famous, has been revived. The harbour is formed by the estuary of the Suir and Barrow. There is steamer communication with Fishguard, Glasgow, Liverpool, Bristol, etc., besides the other Irish ports, among which it ranks second. Pop. 28,500.

Waterhen, or **Moorhen** (*Gallinula chloropus*), common bird of the order Rallidae (rails), frequenting slow rivs., streams, lakes, and ponds, and though not web-footed an active diver and swimmer. Though black and white apparently from a distance, the plumage has many hues. The nest is built by the waterside, and the eggs are reddish-white with orange-brown spots. It is found in Europe, N. Africa, N. and S. America, and N. Asia.

Waterhouse, Alfred, R.A. (1830-1905), architect, b. Liverpool, began practice 1853. He won competitions for the Manchester Assize Courts, 1859, and for the Manchester Town Hall, 1868, both designed in the Gothic style. Among the chief buildings in his enormous subsequent practice were the Natural History Museum, the National Liberal Club, the New University Club, St Paul's School at Hammersmith, the City and Guilds College at Kensington, the Prudential Assurance Co's head offices, Univ. College Hospital—all in London; the Metropole Hotel, Brighton; and the univs. of Manchester, Leeds, and Liverpool. He favoured the Romanesque style, and used terracotta freely. He was President R.I.B.A. 1888-91, and was succeeded in that office by his son Paul (1921-3) and his grandson Michael (1948-50). He was awarded the R.I.B.A. Royal Gold Medal in 1878.

Waterloo, vil. situated 9 m. S. of Brussels, chosen by the Duke of Wellington, from its strategic position relatively to the line of the fortresses on the NE frontier of France, as the most advantageous place to resist the advance of Napoleon on the Belgian cap. in 1815. Napoleon crossed the Belgian frontier and fighting began on 16 June, as the Prussians contested his advance to gain time for the concentration of the main Allied forces. Simultaneously engagements at Ligny and at Quatre Bras followed Napoleon's decision to attack the Allies separately. Neither was decisive, largely owing to the contradictory orders which caused D'Eriens's corps to take part in neither. The Prussians then retreated, but to the N., and not to the E., in which direction lay their line of communications; this was to have an important result, since Napoleon's aim was to defeat Wellington before Blücher could join him. Detaching Grouchy to follow the Prussians, Napoleon advanced with his main body on Wellington's defensive position at W., which Ney had allowed him to reach unmolested. The Duke learned during the night of 18-19 June that Blücher could support him, and determined to stand and fight.

His forces consisted of 49,608 infantry, 12,402 cavalry, 5645 artillery with 156 guns (of which total, scarcely 24,000 were Brit.). Napoleon had 48,950 infantry 15,765 cavalry, 7232 artillery with 246 guns.

Wellington took up a characteristic defensive position, using a low ridge as a screen for his main body. The Guards occupied the outlying farm of Hougomont on the right, and the King's German Legion that of La Haye Sainte in the centre. The battle opened at 11.30 a.m. with a Fr. attack on Hougomont; Napoleon's decision to break his enemy's centre instead of turning his left removed the last hope of separating the Allies. At 1.30 p.m. Bülow's corps were seen advancing, and a force was sent to hold them off; thus the effect of Blücher's manoeuvres was early felt. An attack was launched on Wellington's centre, and on La Haye Sainte. A Dutch-Belgian brigade broke, but no decisive effect was produced, and a charge of the 'Union' cavalry brigade (Royals, Scots Greys, and Inniskillings) swept away the Fr. infantry before itself being driven back. Another attack on La Haye Sainte failed, and a heavy artillery fire was opened. Fr. cavalry charges then broke against the infantry squares. About 4.30 p.m. further Fr. forces, including the Young Guard, were sent against Bülow, who was temporarily forced back. About 6 p.m. the remnants of D'Eriens's corps succeeded in capturing La Haye Sainte, but Wellington reformed his line, being enabled to reinforce his weakened centre by the advance of Zielen's Prussians towards his left. Napoleon then launched another general attack, including his Guard, but was repulsed. As the Guard fell back at 8 p.m. Zielen broke into the NE. sector of the Fr. line; Wellington set his whole force moving and the Fr. Army disintegrated, the Prussians taking up the pursuit. The casualties were heavy; the French lost over 40,000, and the Prussians 7000, and Wellington over 15,000. See K. von Clausewitz, *Campagne de 1815* (1835, Fr. trans. 1899); J. S. Kennedy, *Battle of Waterloo, 1865*; Sir E. Creasy, *The Fifteen Decisive Battles of the World* (1887); A. F. Becke, *Napoleon and Waterloo*, 1914; Wellington, *Despatches and Memorandum on Waterloo* (ed.), 1844-7.

Waterloo, City, co. seat of Black Hawk co., Iowa, U.S.A., on Cedar R. in agric. area 52 m. NW. of Cedar Rapids, with railway shops, meat-packing plants, and soybean processing. It manufs. farm machinery, cement mixers, foundry, concrete, and wood products. It is the site of the annual Dairy Cattle Congress and National Belgian Horse Show. Pop. 65,200.

Waterloo, city of Ontario, Canada, 50 m. NW. of Hamilton. Footwear, brushes, hardware, and furniture are made. Pop. 14,050.

Waterloo Bridge. The original 9-arched bridge between Blackfriars Bridge and Charing Cross was built by Sir John Rennie (who also built London Bridge) 1811-17. It was the oldest existing Lon-

don bridge crossing the Thames before being demolished and replaced by a new bridge designed by Sir Giles Gilbert Scott (q.v.), and opened in 1944.

Waterloo Cup, The, see **COURSING**.
Waterloo-with-Seaforth, once an urb. dist. of Lancs, England, now part of the bor. of Crosby, on the Irish Sea at the mouth of the R. Mersey. W. is a residential suburb to the NW. of Liverpool. For pop., see **CROSBY**.

Watermael-Boltsfort (Flem. **Watermaal-Bosvoorde**), suburb of Brussels, Belgium, SE. of the city. Pop. (1955) 22,300.

Waterproof Compositions. Prior to 1946, continuous-film waterproofing compositions for fabrics comprised mainly drying oils (e.g. 'boiled' or blown linseed or tung oils), drying oil varnishes, natural or a very limited range of synthetic rubbers and celluloses. Where the proofed fabrics were required to 'breathe', rotproofing and/or showerproofing impregnants like cuprammonium solutions and metallic soaps were used. Many of these compositions still pertain, in improved forms, but rapid advances in high-polymer chemistry have led to new synthetic compositions, some of which have almost entirely replaced the older media.

Oilproofing, by impregnation and machine or hand-coating for foul-weather clothing and covers and by surface spreading for table baize and leather-cloths, is now practised only to a limited extent. The main replacements are vinyl resins—polyvinyl chloride ('P.V.C.' for short) or polyvinyl co-polymers. Their films are more tough and stable. They possess high abrasion and flex-cracking resistances in arctic, temperate, and tropical climates, they are more chemically resistant, and they do not develop stickiness with humid ageing. They are thermoplastic and can be calendered, embossed, and welded, and they can be processed without the use of thinners. The compositions are prepared by mixing the dry, powdered polymer with suitable softeners or plasticisers, e.g. tritolyl or trixylyl phosphates, diethylhexyl or dialphanlyl phthalates or Dioctyl sebacate. Heat stabilisers, like white lead or metallic stearates, and pigments are added. The mixes are applied to fabrics by dipping and/or surface coating and calendering and momentarily heating to about 177°C (350°F) in order to fuse the coatings into homogeneous films. Garments or other articles made from the finished fabrics are cut and machine sewn, and the stitched seams are welded and rendered proof by means of electronic welding machines.

P.V.C. films are also produced in unsupported sheet form, i.e. without a fabric base. The plastic is extruded and/or calendered and fused and given attractive 'grains' or printed finishes. Other plastic sheet materials include polyethylene, polyamides (e.g. nylon), polyethylene terephthalate ('Terylene'). Oilproofing of silk, cotton, spun and continuous-filament viscose rayons, nylon, 'Terylene', and glass fabrics is still done

by mechanical dipping and vertical tower stoving, but a wide variety of synthetic or modified synthetic proofing media is now employed, e.g. oil-modified alkyls, phenolic, coumarone, maleic, urea, melamine, epoxy and acrylic resins, polyurethanes, silicone resins, and silicone rubber.

Waterproofing of fabrics by rubber coating remains an active industry. Natural rubber is compounded with vulcanising and accelerating chemicals, anti-oxidants, colours and fillers, made into a dough with a rubber swelling solvent, e.g. solvent naphtha or benzene, and applied on spreading machines to fabrics. The fabrics may be coated on one side (single texture) or on both, or 2 layers of coating fabric may be doubled together, rubber to rubber (double texture). The proofed material is finally heat vulcanised. In addition to rubber, chlorinated rubber and a widening range of synthetic rubbers are employed in coating. These generally provide increased oil and chemical resistance where required.

Showerproofing is practised for rain-coats, etc., and tent and cover fabrics. In addition to the basic processes, which, in the case of metallic soaps, do not withstand dry-cleaning, a number of resins and other chemicals which react on the fabric surfaces and are more permanent are available, as are also silicone water-repellents.

Watershed, Water-parting, or Divide, in physical geography, the line of separation between the basins of 2 adjacent rivs., lakes, or drainage-valleys, or between 2 drainage systems, the natural boundary of a basin, from which streams flow in opposite directions.

Waterton National Park (Canadian Section), situated on the SW. corner of Alberta (q.v.), along the E. slope of the Rocky Mts (q.v.) where they approach the international border, estab. in 1895, when its area was 54 sq. m. Its boundaries were enlarged in 1932, when Waterton Lakes and Glacier National Parks were proclaimed the Waterton-Glacier International Peace Park. The present area of the park is 204 sq. m. Upper Waterton Lake, from which the park takes its name, is 7 m. long and nearly 1 m. wide and occupies a deep trench between 2 high mt. ranges. The international border crosses the lake. Lake and park were named in honour of Charles Waterton, the naturalist. The first settler within the park was 'Kootenai' Brown, who became the first superintendent of the park.

Watertown: 1. Tn. of Middlesex co., Massachusetts, U.S.A., on Charles R., residential suburb of Boston, 7 m. W. There is a national arsenal; manufs. include rubber, paper, woollen goods, stoves, tools, and electrical equipment. W. was founded and incorporated in 1630. Pop. 37,329.

2. Cap. of Jefferson co., New York, U.S.A., on Black R., 47 m. from Oswego. It has a state armoury, and manufs. of paper, wood pulp, air brakes, vehicles,

clothing, silk, thermometers, cheese, and other dairy produce. There are talc and lead mines, and W. is the gateway to the Thousand Is. region. Pop. 34,350.

3. Cap. of Codington co., S. Dakota, U.S.A., 90 m. W. by N. of Sioux Falls. It is a railway, distribution, and processing centre for a large farm area; it is also a resort. Cement products, sashes and doors, beverage, meat, poultry, and dairy products. A municipal airport and power plant are here. Pop. 12,700.

Waterville: 1. Famous angling centre in co. Kerry, Rep. of Ireland, 36 m. W. of Kenmare. Ballinskelligs (8 m. farther W.), a Gaelic-speaking fishing vil., has ruins of an anct. castle of the McCarthys and an abbey. Pop. 223.

2. Tn. of Kennebec co., Maine, U.S.A., on the Kennebec 17 m. N. of Augusta. Fine water-power is supplied by the Ticonic Falls, and W. is the seat of Colby College. W. is a rail, agric., and trade centre, with paper, textile, and lumber mills. Pop. 18,287.

Watford, municipal bor. of Herts, England, on the Colne, 15 m. NW. of London. A wide variety of light industries includes printing, paper-making, engineering, brewing, and watercress growing. It is a large residential dist. The par. church (13th cent.) includes the Essex Chapel. The almshouses (1590), Monmouth House (17th cent.), Free School (1704), and Frogmore House (1715) are interesting. Aldenham, 2 m. distant, has an important public school (1597). Pop. 74,000.

Wath-upon-Dearne, tn and urb. dist. of the W. Riding of Yorks, England, 7 m. from Barnsley on the Dearne and Dove Canal. It lies on the S. Yorks coalfield. Coal and iron mining, and brewing, are carried on. Pop. 13,928.

Watkins, Henry George ('Gino') (1907-32). Arctic explorer, educ. at Lancing and Trinity College, Cambridge. He was interested in natural science and was an expert Alpinist. At 21 he was chosen to organise a univ. expedition to Edge Is., Svalbard (Spitsbergen). In 1928 he undertook the more ambitious task of exploring and surveying the interior of Labrador. The success of this undertaking led to the formation under W. of the Brit. Arctic Air Route Expedition of 1930-1. Later W. planned an expedition across the Antarctic, but gave up for lack of funds and returned in July (1932) to Greenland, where he was drowned while seal-hunting. W. was probably the youngest man ever to receive the Founder's medal of the Royal Geographical Society (1932). See G. S. Chapman, *Northern Lights*, 1932, and *Watkins' Last Expedition*, 1934; J. M. Scott, *Gino Watkins*, 1935.

Watkinson, Harold Arthur (1910-), politician, educ. at Queen's College, Taunton, and King's College, London. He entered Parliament as a Conservative in 1950; from 1952 to 1955 was parl. secretary to the minister of labour, and since that date has been minister of transport.

Watling Street (*Waeclinga Street*), one of the early Rom. highways in Britain.

It ran from Dover, through Canterbury to London, and then N. past St Albans (Verulamium) and the boundary between Leicestershire and Warwickshire to Wroter on the Severn, and perhaps to Chester. Branch-roads were added later, and the Kentish branches from the ports of Reculver, Richborough, Dover, and Lympne, focused on Canterbury, became the highway from the Channel ports to London. The road in London, crossed by Bread Street, with Watling Tavern at the corner of Bow Lane, still bears this name. See J. R. Harris, *Watling Street*, 1928.

Watson, J. Broadus, see BEHAVIOURISM.

Watson, John (1850-1907), minister and novelist, known as 'Ian Maclaren', b. Manningtree, Essex. Educ. at Stirling High School and Edinburgh Univ., he studied for the ministry and became pastor at Logiealmond, in Perthshire, the 'Drumtochty' of his stories. In 1877 he was called to a Glasgow church, and in 1880 to Liverpool, where he remained for 25 years and won great popularity. He was very successful as a writer, and his descriptions of Scottish life became very popular. He wrote sev. novels, the best-known being *Beside the Bonnie Brier Bush*, 1894, *The Days of Auld Lang Syne*, 1895, *Kate Carnegie*, 1897, and *The Young Barbarians*, 1901. See life by W. Robertson Nicoll, 1908.

Watson, John Christian (1867-1941), Australian statesman, b. Valparaiso, Chile, and educ. at Oamaru, New Zealand. He went to New S. Wales, where he became head of the newspaper compositors' trade union. In 1894 he entered the Legislative Assembly and soon afterwards was elected leader of the Parliamentary Labour Party. In 1901 he became leader of the Federal Labour Party. In 1904 W. was invited to form a Gov., the first Gov. formed by and in the interests of Labour in the Commonwealth Parliament, and one of the first that had ever attained to office under Brit. parl. institutions.

Watson, Robert William Seton, see SETON-WATSON.

Watson, Sir William (1858-1935), poet, b. Burley-in-Wharfedale, Yorks. His first vol. of verse, *The Prince's Quest*, appeared in 1880, and 10 years later he won fame with *Wordsworth's Grave and Other Poems*. In 1892 he wrote *Lachrymae Musarum*, the official elegy to Tennyson, which he followed with *Odes and Other Poems*, 1894, *The Father of the Forest*, 1895, and *The Purple East*, 1896, in which he coined the name 'Abdul the Damned.' He was an obvious choice for the Laureateship, but lost favour owing to his anti-imperialist views, and it went to Alfred Austin (q.v.). Among his last works was *The Muse in Exile*, 1913. A follower of the Tennyson tradition, he excelled as an epigrammatist. He was knighted in 1917.

Watson-Watt, Sir Robert Alexander (1892-), scientist and inventor, b. Brechin, Angus; educ. at the High School there, Univ. College, Dundee, and

St Andrews Univ. After working in the Meteorological office and the Dept of Scientific and Industrial Research, he was from 1933 to 1936 superintendent of the radio dept of the National Physical Laboratory. Here, following the investigations of the Americans Breit and Ture, he estab. the science of radar (q.v.) as a military weapon. From 1938 to 1940 he was director of communications development at the Air Ministry. In 1940 he became scientific adviser on telecommunications at the Air Ministry, and in 1942 vice-controller of communications at the Ministry of Aircraft Production. He was knighted in 1942. He pub. *Through the Weather House*, 1935, and *The Cathode Ray Oscillograph in Radio Research*.

Watson-Wentworth, Charles, see ROCKINGHAM, SECOND MARQUESS OF.

Watt, James (1736-1819), Scottish engineer, b. Greenock. He became mathematical instrument maker to Glasgow Univ. in 1757. He was employed on

JAMES WATT

Engraving after a picture by Sir W. Beechey.

surveys for the Forth and Clyde Canal (1767), as well as for the Caledonian and other canals, and he was also concerned with the deepening of rivers, including the Forth and Clyde, and with the improvement of the harbours of Ayr, Port Glasgow, and Greenock. He had already begun to think about steam as a motive force, and in 1764, while repairing a model of John Newcome's pumping engine, discovered the cause of its waste of power. He, therefore, in 1765 devised the separate

condenser to obviate the defect, and in 1789 patented his 'Watt' steam engine, which was manufactured at the Soho Ironworks, W. having entered into partnership with Boulton of Soho near Birmingham. His crowning achievement was the invention of the governor or apparatus for regulating the working speed of an engine under varying conditions of load. Between 1781 and 1785 he obtained patents for the sun-and-planet motion, the expansive principle, the double engine, the parallel motion, and a fuel-saving furnace. He also invented copying-ink and discovered independently the composition of water. *Correspondence* regarding this latter discovery was ed. by J. P. Muirhead, 1846. See *lives* by J. P. Muirhead, 1858; T. H. Marshall, 1925; and S. Smiles, *Lives of Boulton and Watt*, 1865; H. W. Dickinson and R. Jenkins, *James Watt and the Steam Engine*, 1927.

Watt, practical unit of electric power, in d.c. circuits equal to the product of volts \times amperes. In a.c. circuits this is the 'apparent' power, the power in W.s is the 'effective' power, the product of volts \times amps. \times (power factor) (q.v.). $1 \text{ W} = 1 \text{ joule/sec.} = 10^7 \text{ ergs/sec.} 1 \text{ h.p.} = 746 \text{ W.}$ See METROLOGY.

Watteau, Jean Antoine (1684-1721), Fr. painter, b. Valenciennes. He went to Paris in 1702, and after enduring much privation he was eventually recognised, being made a member of the Fr. Academy in 1717, and painter to the king in the following year. His great 'Embarkation for Cythera' (Louvre) was his 'diploma piece.' Despite his premature death, W. exercised a profound and lasting influence on Fr. art, and left a great number of pictures behind him. Many of them are now in the Louvre, and others are in the Wallace Collection. He excelled in his imaginative portrayal of scenes from lit. comedy, having met their actors in the studio of his master Gillot, elegant party groups, 'fêtes champêtres' such as were given by his patron, Crozat. He was, however, an innovator whose work gave inspiration to many less-gifted contemporaries by its brilliance and charm, though its wistful and poetic imaginative quality was his own. His draughtsmanship was superb, and he had complete mastery of atmosphere and composition. See E. Staley *Watteau and His School*, 1907; K. T. Parker, *The Drawings of A. Watteau*, 1931; D. Sutton, *French Drawings of the Eighteenth Century*, 1949.

Wattmeter, the meter installed in consumers' circuits for continuous measurement and recording of energy consumed. See ELECTRIC METERS.

Wattignies, Fr. vil. in the dept of Nord, 5½ m. SSE. of Mauberge. The French under Carnot and Jourdan (q.v.) defeated an allied force, mainly Austrian, here on 16 Oct. 1793, thus saving the Mauberge fortress, which was vital to the defence of Paris. Carnot employed new tactics, later improved by Napoleon. Pop. 150.

Wattle, see ACACIA.

Wattmeter, electrical instrument for measuring power. See ELECTRIC METERS.

Watts, George Frederick (1817-1904), painter and sculptor, b. London. He studied art in the studio of Wm Behnes, the sculptor, and also at the Royal Academy schools. In 1843, when sev. prizes were offered for cartoons to decorate the Houses of Parliament, W. competed and won £300. He became a Royal Academician in 1867. In 1864 he married Ellen Terry (q.v.). In 1902 he was made a member of the newly instituted Order of Merit. Many of his pictures are in the Tate Gallery and the National Portrait Gallery, and there is a permanent exhibition in his house at Compton in Surrey. Among his best-known paintings are 'Hope' and 'Love and Death,' represented by large symbolical figures. His sculpture 'Physical Energy' and his portraits of eminent Victorians represent him at his best. See *lives* and studies by H. Macmillan, 1903; G. K. Chesterton, 1904, 1914; Mary Watts, 1912; E. R. Dibdin, 1923.

Watts, Isaac (1674-1748), minister and hymn-writer, b. Southampton of Non-conformist parents. W. attended a small Independent school and, later, a Dissenting academy at Stoke Newington. In 1702, after some years of educational work, he took the Independent pastorate at Mark Lane Chapel in London. He became eminent as a preacher, but had to retire in 1712 owing to ill health, and for the last 36 years of his life he resided at Theobald's or at other homes of his friend, Sir Thomas Abney (q.v.). During these years he compiled educational manuals, and pub. theological works. He wrote between 500 and 600 hymns, including 'O God, our help in ages past,' and 'When I survey the wondrous Cross.' His collected works (6 vols.) appeared in 1753. See *lives* by E. P. Hood, 1875, and A. P. Davis, 1948; T. Milner, *Life, Times, and Correspondence of I. Watts*, 1834; B. Manning, *The Hymns of Wesley and Watts*, 1932.

Watts-Dunton, Walter Theodore (1832-1914), critic and novelist, b. St Ives, Hunts. He became a solicitor in London, wrote literary criticism for the *Athenaeum*, and became intimate with the Pre-Raphaelites. From 1879 onwards he was a sort of guardian to Swinburne (q.v.). W.'s works include *The Coming of Love*, 1897, a collection of his poems, and the romantic novel *Aylwin*, 1898, which had great popularity. But he was greatest as a critic, in *The Renaissance of Wonder*, 1903, and *Studies of Shakespeare*, 1910. See his *Life and Letters* by T. Hake and A. Compton-Rickett, 1916.

Waugh, Alexander Raban (1898-), novelist, b. London, brother of Evelyn W. (q.v.). Educ. at Sherborne and Sandhurst, he held commissions in the Dorsets in both World Wars. His first novel, *The Loom of Youth*, 1917, was a realistic story of school life. Others are *The Lonely Unicorn*, 1922, *Card Castle*, 1924, *Kept*, 1925, *Nor Many Waters*, 1928, *So, Lovers Dream*, 1931, *Wheels within Wheels*, 1933, *The Balliol*, 1934, *Going Their Own Ways*, 1938, *No Truce with*

Time, 1941, *Unclouded Summer*, 1948, *When the Clock Strikes Twice*, 1951, *Guy Renton*, 1953, and *Island in the Sun*, 1956. *The Coloured Countries*, 1930, and *The Sunlit Caribbean*, 1948, are travel books, and *Myself When Young*, 1923, and *Thirteen Such Years*, 1932, are autobiographical.

Waugh, Benjamin, see CHILDREN, NATIONAL SOCIETY FOR PREVENTION OF CRUELTY TO.

Waugh, Edwin (1817-90), poet, b. Rochdale. Being apprenticed to a bookseller and printer, he found opportunities for reading. He learned the literary use that could be made of the Lancs dialect, and in 1859 pub. *Poems and Lancashire Songs*. He also pub. sev. sketches of Lancs life and scenery.

Waugh, Evelyn Arthur St John (1903-), novelist, b. London, brother of Alexander W. (q.v.). Educ. at Lancing and Hertford College, Oxford, he was a schoolmaster for a time. In 1927 he pub. a life of Dante Gabriel Rossetti, and in 1928 the first of his humorously satirical novels, *Decline and Fall*; others of the same type are *Vile Bodies*, 1930, *Black Mischief*, 1932, *A Handful of Dust*, 1934, *Scoop*, 1938, *Put Out More Flags*, 1942, and *The Loved One*, 1948. In 1930 he joined the Rom. Catholic Church, and in 1936 his life of Edmund Campion was awarded the Hawthornden Prize; in 1950 he pub. a novel, *Helena*, about the mother of Constantine the Great. During the Second World War he was an officer in the Commandos. *Men at Arms*, 1952, is a novel dealing with the war, and *Officers and Gentlemen*, 1955, is a sequel to it, while *Love Among the Ruins*, 1953, is a satire on the Welfare State. In 1957 *The Ordeal of Gilbert Pinfold* was pub. W. also wrote a number of travel books, including *Labels*, 1930, *Ninety-Two Days*, 1934, *Waugh in Abyssinia*, 1938, and *The Holy Places*, 1953.

Waukegan, city, co. seat of Lake co., Illinois, U.S.A., on Lake Michigan, 36 m. N. of Chicago. W. manufs. asbestos, roofing, steel and steel products, automobile accessories, and drugs. Dairying and resort areas are near. Pop. 38,900.

Waukesha, city, co. seat of W. co., Wisconsin, U.S.A., on the Fox R. in a dairying area 15 m. W. of Milwaukee. It is a health resort with mineral waters that are shipped. It manufs. iron, steel, and aluminum products, motors, farm implements, and air-conditioning equipment. Carroll College is here. Pop. 21,200.

Wausau, city, co. seat of Marathon co., Wisconsin, U.S.A., on the Wisconsin R. in a dairying area with granite quarries 85 m. NW. of Oshkosh. It has cheese factories, breweries, and manufs. paper, woodwork, chemicals, plastics, and machinery. Pop. 30,400.

Wauwatosa, city in Wisconsin, U.S.A., adjoining Milwaukee at W., with stone quarries. It manufs. iron castings, chemicals, leather and wood, and concrete and metal products. Pop. 33,300.

Wave, movement on water (see SEA WAVES AND SWELL). The term *wave* has

also a wider significance. All material substances have some degree of elasticity, and any molecular disturbance which takes place in the body will be propagated through the body in virtue of this elasticity. Elasticity may appear in 2 different forms, such as the resistance offered to change of bulk and the resistance offered to change of shape. The former is called bulk elasticity or degree of incompressibility, and the latter rigidity. In gases and most liquids, such as water, the resistance to change of bulk is the only one which exists, and any propagation which takes place through the medium of these fluids is due to this type of elasticity. Such W.s are called longitudinal, and consist of periodic variations of density in the medium. See also AETHER; ELECTRICITY; HEAT; LIGHT; RADIOCOMMUNICATION; SOUND.

Wave Mechanics. Newtonian or classical mechanics treats bodies as if they possessed well-defined shapes, velocities, and positions. In sev. respects light can be treated as consisting of a stream of corpuscles, but until Einstein explained the photoelectric effect in terms of quanta the most comprehensive theory treated light as an electromagnetic wave (q.v.). The success of the quantum theory (q.v.) showed that light was associated with both wave properties and 'corpuscular' or quantum properties. In 1923 de Broglie suggested that an analogous dualism might exist for material particles, and he showed that a particle of mass m , travelling with a velocity v should be associated with waves of wavelength λ given by $\lambda = h/mv$, where h is Planck's constant. This was confirmed by the experiments of Davisson and Germer in 1927 on the reflection and scattering of a beam of electrons by a nickel crystal. G. P. Thomson in 1928 confirmed this work for higher-energy electrons diffracted by a very thin gold foil. Since that time abundant evidence has accumulated to show that particles such as the proton, neutron, and alpha-particle have a wave nature. The theoretical implications of these discoveries, together with quantum theory, have completely revolutionised the physicist's approach to the properties of matter, especially at the microscopic level. The theory of the electrons around the nucleus when formulated in wave mechanical terms gives a much more complete account of optical spectra than did the 'particle' theory of Bohr (q.v.). Schrödinger (q.v.) made important contributions to this theory from 1926 onwards. The philosophical implications of the wave-particle duality have not yet been fully worked out. See QUANTUM THEORY; ELECTRON; DIFFRACTION; MECHANICS. See also N. F. Mott and I. N. Sneddon, *Wave Mechanics and its Applications*, 1950; N. F. Mott, *Elements of Wave Mechanics*, 1952; L. I. Schiff, *Elementary Wave Mechanics*, 1955; W. Heitler, *Elementary Wave Mechanics*, 1957.

Waveguide, any system of conductors limiting the path of propagation of electromagnetic waves. A co-axial cable or 2

parallel wires are examples. The waves do not penetrate into conductors. The energy in a transmission line does not travel in but along the conductors. In h.f. technique, W.s. are used as resonant circuits at wavelengths of the order of cm., either in the shape of parallel wires or hollow conductors. Radio waves travel in the W. consisting of the earth and the ionosphere.

Wavell of Cyrenaica, Archibald Percival Wavell, first Earl (1883-1950), soldier and administrator, b. Colchester. W. was educ. at Winchester. After passing out of Sandhurst he served in the S. African War as an officer in the Black Watch and then on the Indian NW. frontier. In the First World War he was sent in 1916 to Russia as military attaché to the army of the Caucasus. When Russian resistance collapsed he was transferred to Allenby's staff in the Middle E. In 1937 he was appointed commander of the Brit. troops in Palestine during the Arab-Jewish troubles and handled the situation skillfully. After the Munich Pact he was given the S. Command in Britain, and in June 1939 was sent to Cairo as commander-in-chief of the Brit. forces in the Middle E.

After the collapse of France in 1940 he was called on to defend the entire Middle E. with a few divs. of Brit. troops and a handful of planes. As commander of outnumbered armies during the 3 years of Britain's delaying fight, W. sustained defeat after defeat, but the net gain of his delaying battles, which disrupted the whole Ger. time-table, was incalculable. He won a brilliant victory over Graziani against tremendous odds in Libya (Dec. 1940-Feb. 1941) but was then forced to send 60,000 of his troops together with sev. R.A.F. squadrons, besides numerous tanks and guns, to the defence of Greece, a campaign dictated largely by political considerations. Simultaneously, however, he maintained a deceptive and constant harrying attack in force upon the Sudan, while preparing his offensive against It. E. Africa, a campaign thoroughly planned and brilliantly executed against odds of about 25,000 to 250,000. (See AFRICA, NORTH, SECOND WORLD WAR, CAMPAIGN IN; ITALIAN EAST AFRICA, CAMPAIGN IN.) At this time a revolt in Iraq and Ger. intrigues in Persia and, in collusion with the Vichy French, in Syria, called for prompt military action. W. appears not to have expected Rommel's counter-offensive to be launched as soon as it was, and the Brit. intelligence service was deceived on the strength of the Ger. forces then in Libya.

After the Gk débâcle and the loss of Cyrenaica, W. was sent to India, but soon after he was promoted to supreme command in the Far E. against Japan, and after the fall of all the Brit. and Dutch colonial possessions in the S. Pacific he returned to India to organise the stand against the Japanese there and in Burma. He was in Singapore until the Jap. troops entered the is.

He became F.M. on 1 Jan. 1943. In the same year he was appointed viceroy

in succession to Lord Linlithgow and at once took effective measures to check famine conditions in Bengal. He was replaced as viceroy by Lord Mountbatten in 1948. (See further under INDIA.) His publs. include *Allenby: a Study in Greatness*, 1940, *Generals and Generalship*, 1943, *Allenby in Egypt*, 1943, *Other Men's Flowers*, 1944, an anthology of poetry, *Speaking Generally*, 1946, and *The Good Soldier*, 1948. A critical discussion of W.'s actions in the Second World War is contained in Winston S. Churchill's *The Second World War* (vol. III), 1950. See also W.'s various *Dispatches*; lives by R. H. Kiernan, 1945, and R. J. Collins, 1948.

Wavellite, hydrated aluminium phosphate, occasionally containing iron oxide and fluorine.

Waveney, riv. of England, rises near the Little Ouse and forms part of the boundary between Norfolk and Suffolk. It flows past Diss, Bungay, and Beccles, and has a course of nearly 50 m., being navigable as far as Geldeston. The W. joins the Yare 4 m. SW. of Great Yarmouth.

Waverley, John Anderson, first Viscount, of Westdean (1882-1958), administrator and statesman, educ. at George Watson's College, Edinburgh, and Edinburgh and Leipzig Univs. In 1905 he entered the Colonial Office. Subsequently he held various civil service posts, becoming chairman of the Board of Inland Revenue, 1919-22, and permanent under-secretary of state, Home Office, 1922-32. From 1932 to 1937 he was governor of Bengal. In 1938 W. (then Sir John Anderson) entered Parliament as M.P. (National Gov.) for the Scottish Univs., representing this constituency until 1950. He had been knighted in 1919. He was Lord Privy Seal, 1938-9; Home Secretary, 1939-40; Lord President of the Council, 1940-3; and Chancellor of the Exchequer, 1943-5. In 1946 he became Chairman of the Port of London Authority. He was created a viscount, 1952. One of the outstanding administrators of his century, W. is perhaps popularly best remembered for his connection with the standard air-raid shelter issued during his home secretaryship, known as the 'Anderson'. The O.M. awarded to him in 1957 was presented to him in hospital shortly before his death.

Waverly, metropolitan municipality of Sydney in Cumberland co., New S. Wales, Australia. One of the E. suburbs, it includes the famous Bondi Beach. Pop. 66,570.

Wavre, (Flem. *Waver*), city in the prov. of Brabant, Belgium, 16 m. SE. of Brussels. On 18-19 June 1815 Fr. forces under Grouchy gained a victory over Prussians under Thielmann; it was a barren success, since it merely kept Grouchy from aiding Napoleon at Waterloo. In 1940 the centre of the city was totally destroyed. It has breweries, tanneries, iron-foundries, and paper-mills. Pop. 8,800.

Wax, name given to various animal, vegetable, and mineral substances, which resemble beeswax in having a peculiar

lustre. W.s resemble fats in that they are lighter than water, melt on heating, and burn well. They are soluble in turpentine, but are insoluble in water and cold alcohol, and differ from true fats in that they do not yield glycerol when boiled with alkalis. Beeswax, the most commonly known W., is secreted by bees, and is obtained by heating the 'honey-combs' in water, when the W. rises to the surface. In the crude state this W. is of impure yellow colour, has a melting point of 63° C. and a sp. gr. of 0.96. It contains 12-15 per cent cerotic acid and some 80-85 per cent of myricin or myricyl palmitate. For candle-making the W. is bleached in the sun after treatment with acid. The W. is also used for waxing floors, and for making varnishes and lithographic crayons. Chinese W., which is used for candle-making in Japan and China, is produced by an insect (*Coccus cerifera*), and consists chiefly of ceryl cerotate. Japan W. is obtained from the seeds of a species of *Ithrus* (*I. succedanea*). It consists mainly of palmitin, is green when raw, and is bleached in the sun. Myrtle-berry W. is another vegetable W. made from the plant *Myrica cerifera*. Palm W., or Carnauba W., is produced from the leaves of the W. palm of Brazil (*Corypha cerifera*) and the Andes (*Ceraylon antiole*). The W. is found on the leaves of the palm, and these are cut and dried in the sun. The W. is then obtained as a fine powder, when the leaves are shaken. Spermaceti is a W. obtained from the head of the sperm whale. As an example of a mineral W., ozokerite (q.v.) may be mentioned. The most important mineral W. is paraffin W. It is obtained by distillation of petroleum or oil shales, and is largely used for candle-making, as insulating material, in laundries with starch, for waterproofing textiles, and for making pomades and polishes. Other waxes used in industry are as follows: Candelilla, a hard wax from Mexico; Shellac W.; Montan W. (bituminous origin); Ouricoury (palm leaf); and Esparto (Sp. grass).

Wax Flower (*Iloja carnosa*), or Honey-plant, evergreen climbing plant of the family Asclepiadaceae, with thick leaves and wheel-shaped, waxy-looking flowers in clusters.

Wax Flower, Clustered, see STEPHANOTIS.

Wax Myrtle, see BAYBERRY.

Wax Palm, see WAX.

Waxahachie, co. seat of Ellis co., Texas, U.S.A., 30 m. SW. of Dallas; it has a Methodist College. Pop. 11,200.

Waxwing, a bird of the family Bombycillidae, of which there are 3 species. The Bohemian Waxwing (*Bombycilla garrulus*) has a cinnamon-brown plumage changing in parts to grey or chestnut, and relieved by black, white, and a yellow band to the tail. It is easily distinguished from all other birds by the curious expansion of the shaft of some of its wing-feathers at the tip into an appearance of drops of scarlet sealing-wax. The W. is a rare visitor to Britain from the forests of N. Europe and Asia.

Waxy Degeneration, see AMYLOID DEGENERATION.

Way, Right of, see RIGHT OF WAY.

Way of the Cross, see STATIONS, OR WAY, OF THE CROSS.

Waycross, co. seat of Ware co., Georgia, U.S.A., 95 m. W. of Savannah. It is a rail junction, has railway workshops, and manufs. naval stores and lumber products; alligator skins are cured. Pop. 18,900.

Wayland the Smith, mythical farrier, the Voland or Wieland of Norse legend. His tradition is kept alive in England by Wayland's Smithy, a famous megalithic chambered long-barrow at Ashbury, Berkshire, on the capstone of which the wayfarer might leave a groat and find his horse shod by an invisible smith. During the excavation of the barrow in 1919, 2 iron currency bars dating from the Early Iron Age were recovered from the foot of the capstone. It was known as *Welandes smidhan* in a Compton Beauchamp charter granted in 955 by King Edred. See BARROWS; MEGALITH CULTURE.

Waynflete, William, see WAINFLEET.

Ways and Means and of Supply, Committees of, are appointed by the House of Commons at the commencement of every session, as soon as an address has been agreed to, in answer to the speech from the Throne. The business of supply consists of proceedings on motions 'That Mr Speaker do now leave the chair'; supplementary or additional estimates for the current financial year; any excess vote; votes on account; main estimates, whether for the coming or the current financial year; and the consideration of reports from the committee of public accounts and the select committee on estimates. But such business may not include any vote of credit or votes for supplementary or additional estimates for war expenditure.

Waziristan, tract of land, now forming part of Pakistan, lying on the border between Afghanistan on the NW., Baluchistan on the S., and the NW. Frontier Province on the E. It is about 160 m. long from N. to S., and 60 m. from E. to W. The Western half is mountainous. The land slopes E., and is, when irrigated, fertile in the N. round Bannu, but too dry to be pastoral farther S. See H. de Watterville, *Waziristan*, 1925.

Weald, England, specifically the area between the N. and S. Downs (see DOWNS), and Butser Hill, Hants. The W. includes most of Kent, all Sussex, the S. part of Surrey, and parts of Hants (qq.v.). It is about 120 m. long, and 30 m. wide. The geological structure of the W. is that of a broad anticline with its axis ESE.-WNW. By reason of denudation processes, the oldest rocks are exposed in the centre, and are surrounded by horse-shoe shaped outcrops of progressively younger rocks. The Wealden Series which attains a thickness of some 2000 ft., consists of clays, sands, sandstone, ironstone, and shelly limestones. It consists of the Weald Clay, and the Hastings Beds with their formations of

Fairlight Clays, Ashdown Sands, Wadhurst Clay, and Tunbridge Wells Sand—all named from local exposures. In the large forest known as *Andredeweald*, iron ore was mined in Roman times; Ashdown Forest is all that now remains of this area. Until their depletions in the early 19th cent., the woodlands provided fuel for an extensive iron industry, and the oak was

crates brought the idea down to earth, teaching that increase in W. is to be measured by *product net*, the surplus of agro. and mineral products over cost of production. For Adam Smith, *An Inquiry into the Nature and Causes of the Wealth of Nations* meant a study of exchange values of every kind. While air and sunlight had enormous value in use,

¹ Exemption limit £150.

² Exemption limit £100.

³ Exemption limit £160.

⁴ Including £32m income of Charities, Friendly Societies, and Local Authorities (excluded from subdivisions)

Based on a table by Sir Thomas Whittaker and reproduced from the late Lord Stamp's *British Incomes and Property* (1916, 1920) by permission of the author's executors and Staples Press Ltd.

highly esteemed for shipbuilding. See R. Furley, *History of the Weald of Kent*, 1871-4; E. Straker, *Wealden Iron*, 1931; Brit. Regional Geology, Geological Survey, *The Wealden District*, 1948, I D Margary, *Roman Ways in the Weald*, 1948

Wealdstone, par. and former urb. dist. of Middx, England, now part of the Harrow urb dist W. is an industrial area, and its manuifs include photographic materials, glass, and paint-brushes.

Wealth. The Mercantilists regarded W. as money or 'treasure', measuring the profit of international trade by the amount of treasure, of gold and silver, they could thereby amass. The Physio-

only things with value in exchange were measurable W. and the subject-matter of economics. Jean-Baptiste Say insisted that services are W. equally with material things. It may seem fanciful to reckon a song as W.; but the modern statistician cannot make his national W. figures come right if he ignores the fee of the singer. National W. statistics have made great strides in recent years. Since 1941 an extremely valuable series of Brit. Gov. White Papers and Blue Books has given official estimates of the ann. production of national W. (goods and services).

The term National Income and Expenditure denotes two aspects of one thing. The essential equality of the national

income (everybody's income) and the national expenditure (everybody's spending) is a particularly modern conception which is bound up with the modern economic notion that to achieve full business activity it is essential to see that spending is adequate. Since spending is the mainspring of trade and production, the dynamic approach to national income is *via* national expenditure. What is spent will make income (subject to company reserves built from undistributed profits not increasing). Whether income makes (full) expenditure in due course depends upon saving being matched by investment-spending. The income-spending income circuit takes time: on the average money makes income perhaps twice a year. While payment for a shoeshine is spending and income at one and the same time, payment for a shop article makes income at varying intervals, as costs are met farther and farther back along the production line.

Double counting has to be guarded against in computing national income. If a man earns £3000 a year and employs a gardener at £300, both sums represent service and both properly reckon in the National Income. If the £3000 man is taxed to pay £300 a year to pensioners rendering no current service, then the £300 does not count. Indirect taxes cause an artificial inflation of the National Income, creating a difficulty which can be met statistically by using 'factor costs' (i.e. market prices less indirect taxes, plus subsidies). Ordinary inflation can be countered approximately by the price index; but cannot simply be dubbed artificial, since there is fundamentally no base year. Other difficulties remain. The whole concept of summing national income or national wealth in a single figure is, besides practical difficulties of measurement and time-lag, necessarily artificial to some extent, because 'the best things in life are free', and only those goods and services which are (usually) paid for are reckonable. If a man marries his housekeeper he reduces the (statistical) national income: the housekeeping services move from the paid to the unpaid category. While the practical difficulties are far from being overcome, the White Papers and Blue Books are a remarkable achievement. They represent a period of evolution and advance in new statistical territory, and improvement in approximation and presentation is continuous; in particular, great progress has been made in reducing the field where an impressive balance is due to a mere residual item. The White Papers owe much to Colin Clark, who produced ann. estimates of the National Income from 1924 onwards. Before that there had been a number of estimates for isolated years—notably 1924 (£3,803m.), by Prof. Bowley, and Sir Josiah (later Lord) Stamp. Estimates for earlier years are shown in the table.

See Sir J. C. Stamp, *Wealth and Taxable Capacity*, 1922; A. L. Bowley and Sir J. C. Stamp, *The National Income*, 1924, 1927; C. Clark, *The National Income*,

1924-31, 1932, and *National Income and Outlay*, 1937; *The Conditions of Economic Progress*, 1940; Carter and Roy, *British Economic Statistics*, 1954; *National Income Statistics: Sources and Methods*, H.M.S.O., 1956; also White Papers and Blue Books (ann.).

Wear, riv. of England, rising in the W. Durham Pennines and flowing E. past Durham and Chester-le-Street to the N. Sea at Sunderland, 65 m. in length. It is navigable for barges from Durham. Weardale, moorland in its upper reaches, which comprise Stanhope and Wolsingham, retains its rural character to Bishop Auckland, whence it becomes industrialised and comprises the S. part of the Durham coalfield.

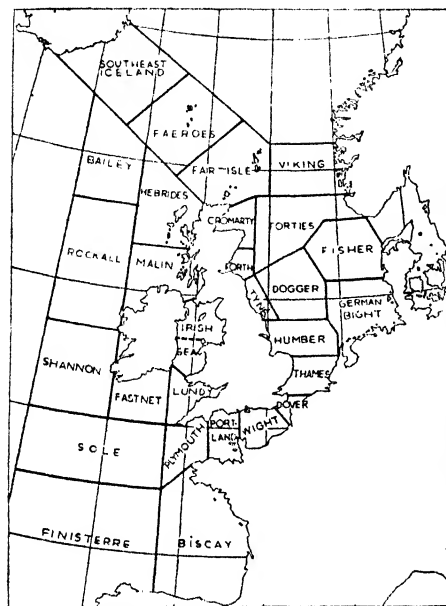

Weasel (*Mustela nivalis*), widely distributed carnivore, native of Europe. Its body is about 8 in. long, and its tail 2-3 in. Its head is small and flattened, with lively black eyes and short, rounded ears. The fur is reddish-brown above and white below. It feeds principally on rodents and small birds. See FUR.

Weather, see METEOROLOGY.

Weather Forecast. The term 'forecast' was invented by Adm. FitzRoy in 1860 when, based on weather maps, the first estimates of future weather were made. W. F.s may be for different periods, but the usual period is 24 hrs, with shorter periods, such as 12 hrs, 8 hrs, or 6 hrs, for special purposes such as aviation. For periods longer than 36 hrs the term 'further outlook' is used by the Meteorological Office to imply that not so much accuracy is to be expected as in the shorter-period forecasts. W. F.s are made by studying the arrangement on the weather maps of those features of weather, such as types of air mass and fronts between them and the wind at various heights, which experience has shown are of importance in forecasting. The forecaster then considers the factors which affect the air masses, such as sunshine by day, its absence at night, the movement of the air masses across different types of country, and the expected changes in the winds. Constant appeal both to physics and the forecaster's knowledge of similar past situations must be made. Mathematical methods, involving the use of large high-speed electronic computing machines, are now being introduced for the forecasting of the pressure distribution. (See further METEOROLOGY.) According to the use made of it, the W. F. is in different forms: (1) as printed in the press or broadcast on radio or television for general public use—this is in very general terms; (2) as broadcast for special users, such as shipping or private aviation—the Shipping Bulletins are broadcast by R/T or W/T from Post Office stations for the separate sea areas shown in the Map, aviation forecasts are broadcast by Air Traffic Control Centres; (3) as individual, local, route, and area forecasts, by request, for flying purposes; (4) as special warnings and forecasts for power authorities (with special attention to temp.), for transport authorities and road engineers (frost, fog, and snow), and for farmers (frost and prospect of dry

spells for haymaking, etc.). W. F.s can be obtained by telegraph or telephone.

See L. W. C. Pack, *Weather Forecasting*, 1949.

MAP OF COASTAL SEA AREAS USED IN FORECASTS FOR SHIPPING AND GALE WARNINGS

Weatherford, co. seat of Parker co., Texas, U.S.A., 34 m. W. of Fort Worth. It has farming, flour milling, foundry, and machine-shop industries. There are natural gas and oil wells. Pop. 8000.

Weathering, the decay and disintegration of rocks under the influence of atmospheric agencies at the surface of the earth. Chemical W. involves the solution or alteration of the rock substance by rain-water. Mechanical W. results from temp. changes, the wedging action of frost, etc., and leads to a simple disintegration of the rock. See DENUDATION; PHYSICAL GEOLOGY.

Weaver, riv. of Cheshire, England, rising in the hills of SW. Cheshire, and flowing for 50 m. into the Mersey near Frodsham. Nantwich and Northwich are towns on its banks. It is embanked for its last 20 m. and linked with the Trent and Mersey canal.

Weaver Birds, or *Ploceidae*, family of passerine birds allied to the finches, so called on account of their remarkable nests, which, in some cases, are immense structures occupied by a colony of birds. They are most numerous in Africa, but extend to Asia and Australia. Most of

them are brightly coloured, particularly in the breeding season. The bodies are somewhat elongated and the tails long, and the prominent conical bill is very powerful.

Weaving, see COTTON; FABRICS, TEXTILE; WOOL.

Webb, Sir Aston, R.A. (1849-1930), architect, b. London; began practice 1873. His huge practice was partly due to his success in important competitions. His chief buildings were the Victoria and Albert Museum, the Royal College of Science, Imperial College, the Victoria Memorial, including the Admiralty Arch and the refronting of Buckingham Palace—all in London; the Univ. and the Law Courts in Birmingham; Christ's Hospital, Horsham; and the Royal Naval College, Dartmouth.

He was President of the Royal Academy 1919-24; President R.I.B.A. 1902-4; and was awarded the R.I.B.A. Royal Gold Medal, 1905.

Webb, Beatrice (Lady Passfield) (1858-1943), social reformer, b. Standish, Gloucester. Before finally deciding to pursue social investigations, she studied conditions among the Lancs cotton operatives and acquired further experience in social institutions by association with Samuel and Henrietta Barnett at Toynbee Hall. It was, however, Charles Booth's *Life and Labour in London* which really determined her to embrace such a career. In 1891 she pub. *The Co-operative Movement in Great Britain*, which is still a standard work.

Soon after this she met Sidney Webb, whom she subsequently married (1891). The first joint pub. of the Webbs was their well-known book *The History of Trade Unionism*. A firm believer in the efficacy of Royal Commissions, she herself served on many, beginning with the Royal Commission on Poor Law and Unemployment, 1905-9. With Sidney Webb (see PASSFIELD), she issued the minority report which initiated the Socialist agitation for the reform of the old Poor Law. She joined the Fabian Society (q.v.) and later became its president. She and her husband carried out researches in the hist. of trade unionism, the Poor Law, and Russia, and their pub. on these subjects are recognised as standard works. Independently she pub. her autobiography in *My Apprenticeship*, 1926; an account of her earlier years, *Our Partnership*, appeared in 1948.

See life by Margaret Cole, 1945; and, ed. by the same author, *The Webbs and their World*, 1949.

Webb, John (1611-72), architect, b. London; became a pupil of Inigo Jones (q.v.) in 1628, and had a substantial but uncertain share in designing a new royal palace at Whitehall c. 1634. He also assisted Jones at Wilton. After his master's death in 1652 he was busily em-

played as an architect on his own account. Among his surviving buildings are Lampport Hall, Northants, c. 1654-7; and the 'King Charles 11 Block' at Greenwich Palace (later Greenwich Hospital), 1665-8.

Webb, Mary Gladys (1881-1927), novelist, b. Leighton, Salop, daughter of George E. Meredith. In 1912 she married Henry B. L. Webb, a schoolmaster. She wrote a book of poems on nature, *The Spring of Joy*, 1917, and 4 novels, *The Golden Arrow*, 1916, *Gone to Earth*, 1917, *The House in Dormer Forest*, 1920, and *Seven for a Secret*, 1922, before *Precious Bane* was pub. in 1924. This last was awarded the Femina Vie Heureuse Prize and in 1927 became suddenly and immensely popular. Shropshire is the scene of all her novels, which depict a curiously primitive rural life, with unusual imaginative power and pathos. See lives by W. R. Chappell, 1930, H. Addison, 1931, and T. Moulit, 1932.

Webb, Matthew (1848-83), popularly known as 'Captain' W., Eng. swimmer, b. Dawley, Shropshire. He was trained for the mercantile marine on the *Conway*, apprenticed in 1862, becoming mate (1866) and capt. (1875). He successfully swam the Channel (the first to do so) from Dover to Calais without artificial aid in Aug. 1875, covering about 40 m. in 21 hrs 45 min. He was drowned in an attempt to swim the rapids at the foot of the Niagara Falls.

Webb, Sidney James, see PASSFIELD, BARON.

Webbe, William (fl. 1568-91), Brit. critic. Educ. at St John's College, Cambridge, he became a private tutor. He wrote a *Discourse of English Poetrie*, 1586, in which he discusses metre and rhyme (the use of which he reprehends), and reviews Eng. poetry up to his own day.

Weber, Carl Maria von (1786-1926), Ger. composer, b. Eutin, near Lübeck, of an unsettled theatrical family. He picked up musical training under Michael Haydn at Salzburg, Valesi and Kalcher at Munich, and later, in 1810, from Vogler at Darmstadt. By that time he had produced the opera *Peter Schmoll* at Augsburg in 1803, held a conductorship at the Breslau theatre and a court appointment at Stuttgart, whence he was banished for disrespectful behaviour. In 1813 he became conductor at the German theatre in Prague and in 1816 of the Dresden Court Opera. Meanwhile *Silvana* had been produced at Frankfurt on Main, 1810 and *Abu Hassan* at Munich in 1811. *Preciosa*, a play with music, was given in Berlin in 1821 and on 18 June of that year his most famous opera, *Der Freischütz*, appeared there and consolidated the success of Ger. opera as against It. *Euryanthe* was less successful in Vienna in 1823, mainly owing to a poor libretto; but his fame had spread by this time, so that in 1824 the Covent Garden Theatre in London commissioned an Eng. opera from him. This was *Oberon*, for the production of which in 1826 he went to England, where, ill and overworked, he d. For a man of 40 who led the busy life

of a theatre conductor, he left a large amount of all kinds of music, but his fame is upheld by extraordinarily little. Apart from his 3 best operas, 2 of which are generally known only by their fine overtures, little survives but the *Concertstück* for piano and orchestra and *Invitation to the Dance* for piano solo, with perhaps the *Concertino* for clarinet and the 4 piano Sonatas. But he wrote much incidental music for plays, 3 masses and 2 offertories, 6 cantatas; overtures and other orchestral works; 2 piano concertos and other music for solo instruments and orchestra; a piano Quartet, a clarinet Quintet, and a Trio for flute, cello, and piano; variations and pieces for piano, some with another instrument; piano duets; about 100 songs; vocal duets, trios, and quartets; canons; and about 30 part-songs. See lives by J. Benedict, 1881 (new ed. 1913); E. Kroll, 1934; W. Saunders (*Master Musicians*), 1940; H. J. Moser, 1941; J. Kapp, 1944; W. Zentner, 1952; H. Schnoor, 1953; F. Grüniger, 1965.

Weber, Ernst Heinrich (1795-1878), Ger. physiologist, anatomist, and psychologist, b. Wittenberg. He studied medicine at Wittenberg and at Leipzig, where he was prof. of comparative anatomy (1818), human anatomy (1821), and from 1840 of human anatomy and physiology. In collaboration with his brother Eduard Friedrich W. (1806-71) he discovered the inhibitory power of the vagus nerve on the heart's action (1845). The W.s were also first to measure the velocity of the pulse wave (1825). In 1834 W. propounded W.'s law on the relationship between stimulus and sensation: intensity of sensation is not directly proportional to the degree of stimulus, but dependent on its mode of application; a given stimulus is less perceptible when added to a larger stimulus than to a smaller one, i.e. when the sensation increases in arithmetic progression the stimulus must vary by geometric progression. See K. F. W. Ludwig, *Rede zum Gedächtnis an E. H. Weber*, 1878.

Webern, Anton (1883-1945), Austrian composer, b. Vienna, studied musicology at the Univ., but turned to composition, and came under the influence of Schoenberg, whose 12-note system he adopted. He wrote little and was able to perform his works only against great opposition, and they were banned altogether during the Nazi domination of Austria. His compositions include 5 choral works, 6 for orchestra, instrumental and vocal chamber music, Variations for piano, and 20 songs.

Webster, Daniel (1782-1852), Amer. orator, statesman, and jurist, b. Salisbury, New Hampshire; entered Congress for the second time in 1822, was elected to the Senate in 1827, and 9 years later unsuccessfully ran for the presidency. W. became the hero of the N. in 1830 by his speech in reply to Senator Hayne. The slavery question and the threat of secession had already come up. W.'s speech, with its peroration, 'Liberty and Union, now and forever, one and inseparable,' is treasured in Amer. annals.

See *lives* by G. T. Curtis, 1869; C. M. Fuess, 1930; J. B. McMaster, 1939.

Webster, Jean (1876-1916), Amer. novelist, b. Fredonia, New York state, a niece of Mark Twain. Educ. at Vassar, she wrote *Daddy-Long-Legs*, 1912, a delightful novel which was filmed and dramatised. *Dear Enemy*, 1915, was a sequel, and she also pub. *Patty and Priscilla*, 1903, *Jerry Junior*, 1907, *The Four Pools Mystery*, 1908, *Much Ado About Peter*, 1909, and *Just Patty*, 1911. In 1915 she married Glenn Ford McKinney.

Webster, John (c. 1580-c. 1625), dramatist, b. London, son of a tailor. He was apprenticed to the same craft, and in 1603 was made a freeman of the Merchant Taylors' Company. Between 1602 and 1607 he collaborated with Heywood, Dekker, Middleton, and Chettle. W. wrote tragedies, historical plays, and comedies. The first play written entirely by himself, and printed in 1612, was a tragedy entitled *The White Devil*. His masterpiece was *The Duchess of Malfi*, also a tragedy, first performed by the King's Men at Blackfriars in 1616, and frequently revived.

Superficially, W.'s tragedies seem to be mere melodrama, because the cruelty and terror which pervade his theatrically effective scenes seem to lack adequate motive and credibility. But behind this background of macabre violence the poet in W. sees life itself as pitiless and cruel and this elevates his violence into a philosophy. Of the 3 boisterous comedies, *Westward Ho* and *Northward Ho*, 1607, were written in collaboration with Dekker; *A Cure for a Cuckold* (printed 1661) with Rowley. His *Complete Works* were ed. by F. L. Lucas, 1927. See also *lives* by E. E. Stoll, 1905, and C. Leech, 1951; F. E. Pierce, *The Collaboration of Webster and Dekker*, 1909; R. Brooke, *John Webster and the Elizabethan Drama*, 1916; C. B. Wheeler, *Elizabethan Tragedy*, 1933; C. Bax, *The Life of the White Devil*, 1940.

Webster, Noah (1758-1843), Amer. lexicographer, b. West Hartford, Connecticut. Educ. at Yale, he was a schoolmaster for a time and became an educational writer. His *Elementary Spelling Book*, 1783, is said to have sold over 70,000,000 copies. In 1828 he pub. his monumental 2-vol. *American Dictionary of the English Language*, which became accepted as a standard Amer. authority, a position still held by subsequent eds. It was due to W.'s ideas of spelling reform that forms like 'center' and 'honor' became standard in the U.S.A. See studies by H. R. Warfel, 1936, and E. C. Shoemaker, 1936.

Webster, Richard Everard, see ALVERSTONE, VISCOUNT.

Webster Groves, city of St Louis co., E. Missouri, U.S.A., W. of St Louis. It manufs. petroleum products. Webster College (part of St Louis Univ.) and Eden Theological Seminary are here. Pop. 23,390.

Wedderburn, Alexander, first Baron Loughborough, and first Earl of Rosslyn (1733-1805), lawyer and statesman, b.

Edinburgh. He was called to the Bar, 1754, but left Scotland and came to London, where he became a member of the Inner Temple, 1757. In 1778 he became attorney-general, and 1780-3 lord chief justice of common pleas.

Wedding Ceremonies, see MARRIAGE.

Wedekind, Frank (1864-1918), Ger. playwright, b. Hanover, son of a physician. He studied law at Munich and Zürich. He was on the staff of *Simplicissimus*, Munich, for a time an actor in Berlin, and produced plays in Leipzig. He ridiculed bourgeois morality, pointing out its hypocrisies; in his plays the primitive forces triumph over civilisation. Works include: *Frühlings Erwachen*, 1891 (Eng. trans. *The Awakening of Spring*, 1909), *Erdegeist*, 1895, and *Die Büchse der Pandora*, 1904 (these last 2 have been made into an opera, *Lulu*, by Alban Berg), *Der Marquis von Keith*, 1904, *Franziska*, 1912, *Leidenschaften*, 1913, and *Five Tragedies of Sex* (Eng. trans.), 1923. See A. Kutscher, *F. Wedekind* (3 vols.), 1922-31.

Wedgwood, Cicely Veronica (1910-), historian, educ. at Lady Margaret Hall, Oxford. She has written extensively and sympathetically on the Stuarts, and her pub. include *Strafford*, 1935, *The Thirty Years War*, 1936, *Velvet Studies*, 1946, *Montrose*, 1952, and *The King's Peace*, 1955.

Wedgwood, Josiah (1730-1795), potter, b. Burslem, Staffordshire. 1744-9 apprenticed in his brother's pottery; 1754-9 worked with Thomas Whieldon (see below); 1759 estab. his own factory in Burslem, where he soon made cream-coloured ware (q.v.). In 1762 his new factory, Etruria, began producing Gk-style vases, black 'basalte', and other stonewares, especially the fine Jasper stoneware for reliefs, either on vases or cameos (see PORTLAND VASE; STONEWARE). His published pamphlets and catalogues were trans. into many European languages. In the 19th and 20th cents. his factories produced fine CHINAWARE (q.v.). See *lives* by E. Meteyard, 1865-6, and A. H. Church, 1894; also W. Burton, *Josiah Wedgwood and his Pottery*, 1922; J. M. Graham and H. C. Wedgwood, *Wedgwood*, 1948. See EARTHENWARE, European.

Wedmore, vil. of Somersetshire, England, noted for the treaty (sometimes called the treaty of Chippenham) concluded here (878) between Alfred and Guthrum by which the country N. of Watling Street was ceded to the Danes (see DANELAW).

Wednesbury, municipal and parl. bor. of Staffordshire, England, 8 m. NW. of Birmingham. In Saxon times it was a fortified stronghold and was later referred to in the Domesday Book. There are manufs. of tubing, boiler plates, axles and springs, bridges and girders, railway rolling stock, and much general engineering is carried on. Lighter industries recently attracted to the tn comprise electrical and motor vehicle components, metal windows, and household accessories. Pop. 34,600.

Wednesday (A.-S. *Wodnesdæg*, Woden's Day), fourth day of the week. It was the *Dies Mercurii* of the Romans, whom the French follow in calling it *Mercredi* (Mercury's Day).

Weeds, unwanted plants on the farm and in the garden. The prevalence of certain W. indicates the state of soil fertility. Spurrey, sheep's sorrel, sorrel, and bracken indicate acidity; sedges, rushes, mare's tails, cotton-grass, and meadow-sweet suggest waterlogging; but many W. are ubiquitous. The presence of W. provides undesirable and costly competition for cultivated crops and plants.

The problem of weed-control is many-sided, and perennial W. seeds may be carried by air currents, water, transport, or foot. Perennial W. with big, underground root systems are very persistent. Great advances in control have been made during the past 25 years. It is most important to control W. early in the growing season. Ann. and biennial W. are largely controlled if they are prevented from producing seeds. Even the most persistent perennial weed can be eradicated if the top growth is persistently destroyed at the juvenile stage for 1 or 2 years. Mechanical methods are effective but laborious. Ann. and biennial W. (groundsel, goosefoot, etc.) readily succumb to hoeing and cultivating throughout spring and early summer. Surface-rooting W. (buttercup, nettles, etc.) may be destroyed in autumn digging by burying 18 in. or more deep. Deep-rooting W. (coltsfoot, bindweed, goutweed, etc.) may be brought under control by removing all roots to a depth of 24 in. and then controlling top growth for the following year by regular hoeing. Control of W. by use of flame-guns, searing with a flame of 2000° F., is efficient, and useful in sterilising seed beds before sowing. Biological control of W. is in its infancy.

The chemical control of W. is undertaken with 2 objectives: the complete elimination of all vegetation from a treated area, or the eradication or control of undesirable W. only, leaving the cultivated plants unharmed. The first objective is achieved by the use of a toxic chemical killing the vegetation and temporarily sterilising the soil, and is applicable to paths, courtyards, hard tennis courts, railways, etc., or to areas intended for reclamation. Sodium chlorate, being non-poisonous, is the most popular chemical for blanket weed-control. At rates of 50-500 lb. per acre, sodium chlorate eliminates all W. and renders the soil sterile for 4-6 months, after which it may be cultivated. Other chemicals for complete weed eradication are salt, arsenic compounds, boron compounds, oils, etc. Chemical control of W. among growing crops or plants depends on the selective action of the chemicals. Dilute solutions of sulphuric acid, copper sulphate, copper chloride, dinitro-ortho-cresol (D.N.O.C.) or certain 'growth-promoting' substances (M.C.P.A. and D.C.P.A.) may be used to kill W. in cereal and onion crops. The chemical solution runs off the narrow-leaved crop plants

but adheres to broad-leaved W. and kills them. Heavy applications of certain fertilisers (sulphate of ammonia, calcium cyanamide, kainite, nitrate of soda), have a similar selective action, chiefly on cereal and grass crops, but should not be used without reference to the state of soil fertility and condition. In the garden selective chemical weed-control is chiefly applied to lawns. Sulphate of ammonia applied alone at 1-1 oz. per sq. yd. or in conjunction with sulphate of iron in the formula for lawn sand (3 parts by weight sulphate of ammonia, 1 part sulphate of iron, 20 parts sharp sand or friable compost) at 4-6 oz. per sq. yd in spring destroys plantains, daisies, clovers, and other broad-leaved W., and by subsequent fertilising action encourages the grasses. New selective lawn weed-killers are based on growth-promoting substances of plant hormones: 2-methyl-4-chlorophenoxyacetic acid (M.C.P.A.); 2:4-dichlorophenoxyacetic acid (D.C.P.A.). These substances act directly, quickening and distorting growth so much as to encompass the death of affected plants. Broadly, dicotyledon plants are susceptible; monocotyledons are not. Consequently, applications of these weed-killers leave grasses unaffected but many weeds, such as plantains, dandelions, docks, self-heal, chickweed, buttercup, etc., are killed. A judicious use of lawn sand and a selective weed-killer based on a growth-promoting substance effectively controls most lawn W. W. in garden beds and borders among cherished plants can be chemically controlled provided the chemical is applied to the weed foliage only, either by painting or controlled spraying. Stubborn W., such as bindweed, goutweed, and coltsfoot, can be controlled by this means. See H. C. Long and W. E. Brencley, *Suppression of Weeds*, 1949; S. B. Whitehead, *Garden Weeds and their Control*, 1949; W. W. Robbins, A. S. Crafts, and R. N. Raynor, *Weed Control*, 1951.

Weehawken, township of Hudson co., New Jersey, U.S.A., on the Hudson R., 2 m. NNE. of Hoboken at W. terminus of Lincoln Tunnel. It manufs. caskets, clothing, restaurant equipment, and decalcomanias; there is also textile bleaching, dyeing, etc. It was the site of the duel (1804) between Aaron Burr and Alexander Hamilton. Pop. 14,830.

Week (O.E. *wice*), period of 7 successive days, as in Jewish and Christian calendars, especially such a period beginning with Sunday and including in addition to that day Monday, Tuesday, Wednesday, Thursday, Friday, and Saturday. The W. has been in use in E. countries from the earliest times, but was not introduced into the Rom. calendar till after the reign of Theodosius (4th cent. AD). The names of the days of the W. are derived from the planets, the hrs being allotted to the 7 planets in the order of their supposed distances from the earth, and each planet being regarded as presiding over the day whose first hr belonged to it. Thus the days of the Rom. W. were assigned in order to the Sun, the Moon, Mars, Mercury, Jupiter, Venus,

and Saturn. The Lat. nations have retained the names derived from these deities, but in the Germanic languages they are replaced by names derived from those of the corresponding Germanic deities, Tyr being regarded as the equivalent of Mars, Woden of Mercury, Thor of Jupiter, and Freya of Venus.

Weekley, Ernest (1865-1954), lexicographer, b. London. Educ. at the univs. of Cambridge, London, Paris, and Berne, he was from 1898 to 1938 Prof. of French at Univ. College, Nottingham. His popularised etymology through his books, which include, besides his *Etymological Dictionary of Modern English*, 1921, *The Romance of Words*, 1912, *The Romance of Names*, 1914, *Words Ancient and Modern* (two series), 1926-7, and *Jack and Jill, a Study in our Christian Names*, 1939.

Weeks, Ronald Morse, 1st Baron (1890-), Brit. soldier, educ. at Charterhouse and Culus College, Cambridge. In the First World War he served with the Prince of Wales Volunteers and the Rifle Brigade. In the Second World War he was Director General of Army Equipment and later Deputy C.I.G.S. (1942-5). After the War he was a member of the Allied Control Council in Germany. Following his retirement from the Army he became Dep. Chairman of Vickers, and then Chairman. He was raised to the peerage in 1956. Lord W. is the author of *Organisation and Equipment for War*, 1950.

Weelkes, Thomas (c. 1575-1623), organist and composer, of whom nothing is known before the pub. of his first book of madrigals in 1597. He took the B.Mus. at Oxford in 1602 and became organist at Chichester Cathedral. He d. during a visit to London. He contributed both to *The Triumphes of Oriana*, 1601-3, and to *Leighton's Teares or Lamentations*, 1614. Numerous services and anthems by him are preserved, but his fame rests mainly on his madrigals and similar vocal works, which show him as one of the greatest Eng. masters in that line.

Weems, an old-fashioned word formerly used in Scotland to describe any underground pit, cellar, or cavern. Often they were souterrains of prehistoric peoples. See SOUTERRAINS.

Weenen, vil. and dist. of Natal, S. Africa, 35 m. SE. of Ladysmith. W. means 'weeping,' and was so-called after the massacre by Dingaan of many Europeans between Natal and W. following the murder of Retief in Feb. 1838. See DINGAAN.

Weeping Myall, see BOREE.

Weetslade, former urb. dist. of Northumberland, England, now part of Longbenton (q.v.).

Weevils, Plant-eating Beetles, or *Curculionidae*, family of beetles of the group Rhynchophora of the order Coleoptera. They are characterised by the possession of a distinct beak or snout which is sometimes very long. The larvae are white, fleshy grubs with wrinkled skin and bent bodies, and usually have no legs. These and the beetles of many species cause great damage to cultivated plants, while many cause much loss by their destruc-

tion of grain. The brown pine weevil (*Hyllobius abietis*) is a serious pest of forest trees, often destroying ac. of young conifers, most of the damage being done by the adults. Garden W. feed at night and seek shelter during the day, and can be caught by laying sacks on the ground. See also ANOBIIUM.

Weichsel, see VISTULA.

Weigall, Arthur Edward Pearse Brome (1880-1934), Egyptologist and author, educ. at Wellington College and New College, Oxford. W. was Inspector-general of Antiquities to the Egyptian Gov., from 1905 to 1914. His works include: *Report on the Antiquities of Lower Nubia*, 1907, *Guide to the Antiquities of Upper Egypt*, 1910, *Life of Akhnaton*, 1910, *Life of Cleopatra*, 1914, *Tutankhamen and Other Essays*, 1923, *A History of the Pharaohs*, vol. i, 1925, vol. ii, 1926, *Nero*, 1930, some books on Brit. archaeology, and some novels.

Weighing Machines. The earliest form of scale was the equal-armed balance (q.v.) which is a beam, or lever, resting on a fulcrum placed exactly half-way

Avery

DIAGRAM OF A COUNTER SCALE

A, chart; B, cam; C, indicator; D, knife-edge; E, pendulum; F, connecting band.

between the end pivots from which the scale pans are suspended. The weights placed in one pan are exactly equal to the weight of the object in the other pan when the beam of the scale is in equilibrium. Counter scales have the pans above the beams or levers, an advantage made possible by the inventions of

Roberval and Béranger. The modern self-indicating counter scale with a chart showing correct weight and price computations is controlled by a pendulum or spring-resistant unit. The figure shows a typical Avery counter scale indicator mechanism consisting of a weighing pendulum pivoted upon a knife-edge; the load from the scale pan is transmitted through the levers and the connecting band to the cam fixed to the body of the pendulum. As the pendulum swings to a position of equilibrium the indicator pointer registers the weight on the chart. A dashpot is used to damp out vibrations of the pendulum.

In scales for weighing heavier loads the weights or poises are only a small proportion of the weight of the goods being weighed. Such machines consist essentially of a lever, or a system of levers, in which the fulcrum is much nearer to the load than to the balancing weights. The classical examples are the Rom. and Dan. steelyards. Platform scales and weighbridges have a compound system of such levers, and modern heavy-capacity scales can be fitted with very accurate indicating and recording mechanisms.

Weight Lifting, athletic practice of raising a weight, usually a metal bar and disks. See OLYMPIC GAMES.

Weights and Measures, see METROLOGY.

Weimar, Ger. city in the dist. of Erfurt, on the Ilm, 13 m. E. of Erfurt (q.v.). In 1547 it became the cap. of Saxe-W., and in 1815 of the grand duchy of Saxe-W.-Eisenach (q.v.). Later it was the cap. of Thuringia (q.v.). After the First World War it became the seat of the new Ger. Rep. It has a grand-ducal palace, as well as other palaces, and a fine 18th-cent. church in which are buried Lucas Cranach and Herder (qq.v.). In the latter part of the 18th cent. W. became one of the great literary centres of Europe owing to the presence of Goethe (q.v.) at its court; and to W. also at the same period came Schiller (q.v.) and Herder. The city is famous also for its musical associations: J. S. Bach was court organist, 1708-17, and Franz Liszt worked in its state theatre, 1849-61 (qq.v.). W. has a radio station and an observatory; it is much frequented by tourists; and it has textile, publishing, and engineering industries. Pop. 65,000.

Weinberger, Jaromír (1896-), Czech composer, b. Prague. His famous opera, *Štranda the Bagpiper*, was produced in Prague in 1927. With its national flavour it recalls Smetana's (q.v.) work, but it is crude by comparison. His 4 later operas did not repeat its success, but the orchestral variations on *The Chestnut Tree* made a momentary hit.

Weinheim, Ger. tn in the Land of Baden-Württemberg (q.v.), 58 m. NNW. of Stuttgart (q.v.). It has a 13th-cent. church, a castle, and a 16th-cent. tn hall. The dist. produces fine wine and fruit. There are leather and other manufs. Pop. 25,000.

Weinsberg, Ger. tn in the Land of Baden-Württemberg (q.v.), 26 m. N. by E. of Stuttgart (q.v.). It has Rom.

remains, a Romanesque church, and a ruined castle, *Weibertreu* (woman's faithfulness), which was the scene of a famous siege in 1140. There is an experimental station for vine and fruit growing. Pop. 6000.

Weir, see RESERVOIRS; RIVER ENGINEERING.

Weismann, August (1834-1914), Ger. biologist, b. Frankfurt-on-Main. He studied medicine at Göttingen and zoology at Giessen, and in 1860 was appointed physician to Archduke Stephen of Austria, a post which gave him leisure to pursue his zoological studies. In 1866 he became prof. of zoology at Freiburg im Breisgau and remained there for the rest of his life. He began important microscopical studies, but abandoned them owing to deteriorating eyesight, turning instead to the study of evolution. His theory of the unbroken continuity of the germ plasma and his evidence that acquired characteristics are not directly transmitted were at first opposed but subsequently accepted. The second, which overthrew the Lamarckian theory of acquired characteristics, is of far-reaching social significance, showing that moral qualities are not transmitted to children but have to be acquired by intensive early training. W. wrote *Studien zur Descendenz-Theorie*, 1876 (Eng. trans., 1882), *Amphimixis*, 1891, *Das Keim-plasma*, 1892, *Ueber Germinalselektion*, 1896, *Vorträge über Descendenztheorie*, 1902, *Die Selektionstheorie*, 1909. See life by E. Gaupp, 1917.

Weissbrunn, see VESZPRÉM.

Weissen, Lake, see CARINTHIA.

Weissenburg, see WISSEMBOURG.

Weissenfels, Ger. tn in the dist. of Halle, on the Saale, 18 m. S. of Halle (q.v.). It has an anct castle, and has leather, engineering, and lignite-mining industries. Pop. 50,000.

Weisshorn, mt. of the Swiss Alps, canton of Valais, between the Zermatt valley and Zinal; height 14,770 ft. It is noted for its symmetrical beauty. The first ascent was by Tyndall in 1861.

Weizmann, Chaim (1874-1952), Zionist leader and chemist, b. Motol, one of the Jewish 'pales' in Grodno, Russia. Educ. at Pinsk and at the univ. of Berlin and Freiburg, he became lecturer in chem. at Geneva and reader in biochemistry at Manchester Univ. in 1904. In the First World War he was appointed director of the Admiralty laboratories engaged in research work on behalf of the War Office. It was during this period that he made the brilliant discovery of a process for the manufacture of acetone, the basis for high explosives. Between 1917 and 1930 W., as President of the World Zionist organisation, was mainly responsible for the political relationship between the Colonial Office and the Jewish Agency in Palestine (see under ZIONISM). From 1935 to 1946 he was president of the World Zionist organisation and became chairman of the Hebrew univ. at Jerusalem in 1932. Throughout, W. stood for co-operation between the Jewish people and Great Britain in the development and

the upbuilding of Palestine, with the ultimate ideal of a Jewish Commonwealth in Palestine. He became president of the Provisional Council of Israel in 1948, and was sworn in as first president of Israel on 17 Feb. 1949. His autobiography, *Trial and Error*, was pub. in 1949. A scientific institute at Rehovot, Israel, has been named after him.

Israeli Legation

DR CHAIM WEIZMANN

Wejherowo (Ger. Neustadt), tn of Poland, in Gdańsk prov., 25 m. NW. of Gdańsk (q.v.). It has engineering, furniture, and cement industries. Pop. 15,000.

Welbeck Abbey, seat of the Duke of Portland, and incorporating the remains of a 12th-cent. abbey, stands in a park of 2283 ac., in Welbeck par., Notts, England, 3½ m. SW. of Worksop.

Welch, William Henry (1850-1934), Amer. pathologist, b. Norfolk, Connecticut. He received his medical education at the College of Physicians and Surgeons, New York, and was M.D. 1875. He then studied pathology in Germany. From 1879 to 1884 he was professor of pathology at Bellevue Hospital Medical College, New York, and then moved to a similar chair at Johns Hopkins Univ., where he estab. pathology in America as an important and independent science. He played a leading part in the foundation of Johns Hopkins Medical School and was its first dean. From 1889 to 1916 he was also pathologist to Johns Hopkins Hospital. In 1916 he resigned to become director of the Johns Hopkins School of Hygiene and Public Health, and in 1926

took up his final post as professor of the history of medicine at Johns Hopkins. W., an excellent teacher, did valuable research work in pathology and bacteriology and became one of the leading figures in American medicine. His name is perpetuated in the Welch (gas-gangrene) bacillus, which he discovered in 1892, and in the library at Johns Hopkins Medical School, which is named after him. See D. Fleming, *W. H. Welch and the Rise of Modern Medicine*, 1954.

Welch Fusiliers, The Royal. A number of companies were raised in 1686 in the Welsh marches, and in 1689 these were regimented and later numbered 23rd Foot. The regiment served under Wm III in Ireland and at Namur, and distinguished itself under Marlborough at Blenheim, Ramillies, Oudenarde, and Malplaquet. On returning home the W. F. received the title 'Prince of Wales's Own Royal Regiment of Welch Fusiliers.' It fought under George II at Dettingen, and is one of the select few 'Minden' regiments. Further laurels were gained under Wellington in the Peninsula and at Waterloo, and more in the Crimean War, Indian Mutiny, S. Africa, and China. It raised 42 battalions during the First World War, which served in France, Flanders, Italy, Macedonia, Gallipoli, Egypt, Palestine, and Iraq. In the Second World War the 1st and 2nd battalions served in Burma; the 4th, 6th, and 7th fought in the liberation of Europe. See A. D. L. Cary, etc., *Regimental Records of the Royal Welch Fusiliers*, 1921-9.

Welch Regiment, The. Formerly 41st and 69th Regiments. The 41st was raised in 1719 as a regiment of invalids and was composed of out-pensioners of Chelsea Hospital. In 1787 it became a regiment of the line. The Duke of Wellington was in the regiment for a time. It served in the W. Indies and Canada frontier campaign of 1812-14, and later in Afghanistan and Crimea. The 69th was raised in 1756 as a second battalion of the 24th (S. Wales Borderers), but became a separate regiment in 1757. It served in America and Gibraltar as marines, and as infantry at Waterloo. Both regiments were linked in 1881. During the First World War the regiment raised 34 battalions and served in France, Flanders, Macedonia, Gallipoli, Egypt, Palestine, and Mesopotamia. In the Second World War the W. R. fought on the W. front in 1944-5, taking part in all the great battles from the landing in Normandy to the Rhine crossing and beyond.

Weld, Woold, Dyer's Rocket, or Greenweed (*Rhus luteola*), tall plant (family Rosaceae) with racemes of yellow flowers. It occurs on chalky soils and was formerly grown to furnish a yellow dye.

Welding, the process of joining metals together without the use of dissimilar bonding materials. There are 2 main processes: pressure W. and fusion W., and there are sev. types of each.

Pressure Welding. In forge W. the parts to be joined are heated separately

to a temp. at which they can be easily deformed, then superimposed and forged together. In oxyacetylene pressure W. the machined parts may be heated either separately or in contact. At a suitable temp. they are pressed together so that considerable deformation takes place. Resistance W. includes spot W. and seam W. where the electrical resistance of the parts to be joined enables them to be heated electrically. The pressure is applied by the electrodes carrying the current. Some metals, particularly aluminium, can be joined without the application of heat, providing the junction is clean and is sufficiently deformed by the applied pressure.

Fusion Welding (Non Pressure). In gas W. the gas most generally used is oxyacetylene. The parts to be joined are placed in contact and the junction locally heated by the gas flame until fusion takes place. The flame is then slowly moved along the junction while a rod of a filler metal of similar composition is simultaneously melted into the join. A flux is added to remove impurities and prevent excessive oxidation. In arc W. fusion is carried out by an electric arc struck between an electrode and the parts to be joined. D.C. is used for the carbon arc; the metal arc may be either a.c. or d.c., whilst a.c. is used for the atomic hydrogen arc. In carbon arc W. the electrode is carbon; a filler metal and flux may be used if required. In metallic arc W. the filler rod acts as the electrode and is melted into the join. In argon arc W. the electrode is of tungsten and is virtually non-consumable. No flux is used and oxidation is prevented by shrouding the electrode and the arc by the inert gas argon. This method is particularly useful for aluminium and stainless steel. See METALLURGY.

Weldon, Walter (1832-85), Eng. chemist, b. Leicestershire. See CHLORINE.

Welensky, Roy (1907-), Rhodesian politician, b. and educ. in Salisbury, S. Rhodesia. Started life as an engine driver on Rhodesian Railways, then took up professional boxing, becoming heavy-weight champion of the Rhodesias, 1926-8. His trade-union activities revealed a remarkable faculty for negotiation and oratory. He formed the N. Rhodesia Labour party, 1941, and became leader of the unofficial members of N. Rhodesia legislative council. He was primarily responsible for securing for N. Rhodesia favourable terms from the Brit. S. Africa Company in respect of mineral rights and royalties hitherto vested in that Company, thus transforming N. Rhodesia's economy overnight. He took an active part in the formation of the Federation of Rhodesia and Nyasaland (q.v.) with Lord Malvern (Sir Godfrey Huggins). Impatient of Colonial Office attitude towards federation—1949-50—which he publicly termed 'waffling,' R. W. stated his intention of working independently for N. Rhodesian dominion status as an alternative to federation. He became deputy Prime Minister on federation. His dynamism and political philosophy are regarded as a gua-

rantee of intense loyalty to Brit. Commonwealth ideals. C.M.G., 1946; K.B., 1953.

Well, see GUELPHS and GIBELLINES.
Welfare, see INDUSTRIAL WELFARE and SOCIAL SERVICE.

Welfare State, name applied loosely to a social system in which the State supplies comprehensive free or subsidised services to those in need. In England the W. S. can be said to have been started by the Liberal reforms of 1906-14. It was extended between the two world wars, and was greatly enlarged following the 1942 recommendations of Lord Beveridge, who proposed that minimum standards in health services, pensions, etc., be established as *rights*. After the Second World War social insurance covering a wide range of services was applied to everyone irrespective of income. But in the late 1950's, only a few years after the W. S. in its latest form was established, criticisms began on the ground that it undermined personal initiative, was endangering the currency, and undesirably enlarging the sphere of the State in private lives. The notion that the State could create rights based on social insurance that included heavy State subsidies was also questioned. The heavy public expenditure required to distribute social benefits irrespective of need was held largely responsible for post-war inflation, and it was asked whether social benefits should not be confined to cases where need could be established.

Welhaven, Johann Sebastian Cammermeyer (1807-73), Norwegian poet and critic, b. Bergen. In 1838 he settled in Christiania and lectured on Scandinavian literature. As a poet he ranks with the great originators. He attacked the style of Wergeland (q.v.) and gave the impetus to literary forms which have shaped modern Norwegian letters and contributed to the rise of Ibsen, Hamsun, etc. From 1846 to 1868 he was prof. of philosophy at Christiania. His works include *Digte* Kunst og Poetik, 1832, *Norges Dærmring*, 1834, *Digte*, 1839, *Nyere Digte*, 1845, *Reisebilleder og Digte*, 1851, *Om Ludvig Holberg*, 1854, *Skilddringer*, 1860, *Samlade Skrifter* (collected works), 1867-8. See Eng. trans. of some of his poems in J. Dahl, *Norwegian and Swedish Poems*, 1872. See lives by G. Gran, 1922, and J. Handagard, 1926; and Sir E. Gosse, *Studies in the Literature of Northern Europe*, 1879.

Well, see ARTERIAN WELLS; WATER SUPPLY; WELLS, SACRED.

Well and Trial Boring, the operation by which a hole is made vertically downwards, through earth, rock, etc. In most instances the object of boring is to procure knowledge of the kind, disposition, and depth of the rocks below the surface. The aim may be purely scientific, as at Leipzig, where a hole 6265 ft in depth was bored for the purpose of ascertaining the depth and succession of the underlying strata, thus amplifying knowledge secured from examination of faults, outcrops, etc. More often boring has for its object the acquirement of knowledge of economic value, as in prospecting for minerals. In an area where the existence of beds of

minerals is suspected, holes are bored at various points. An indication of the disposition of mineral beds is thus given, and if the number of borings is sufficient, a fairly reliable map can be drawn. Even after the existence of minerals in paying quantity is proved, it is necessary to ascertain the nature of the overlying strata, so that the difficulties of sinking shafts can be estimated. It may be said that boring is always a necessary preliminary to mining operations, as it is for civil engineering work, involving extensive excavation or requiring foundations of particular stability. The bore-hole often becomes a permanent well in cases where water or oil rises from the lower strata by its own pressure. (See ARTESIAN WELLS; PETROLEUM.) Certain salt-beds are most economically worked by introducing water through the bore-hole for the purpose of dissolving the salt, and then pumping the brine to the surface. The apparatus required for boring depends upon the nature of the rock and the depth to which the hole extends. For shallow boring through soft soil up to about 100 ft in depth augers on the principle of the carpenter's auger are employed. The tool is mounted on jointed rods; the earth is enclosed by the spiral, brought to the surface, and removed. This common wood auger may have a diameter of 1½-2½ in. and is usually started by 1-man-power, but after being sunk a short distance 2 or more men may be employed. During the process of boring, samples are brought up and recorded together with their distances below the surface. Tools are also used which on turning enclose the earth in a metal pod or cylinder. In working on hard rock, drive-pipes are used. These consist of jointed tubes, the lowermost carrying a sharp steel circular cutting edge, and the uppermost for the time being having a screwed-on surface for hammering. For deeper boring a drill is used. This is mounted on jointed rods and operates by percussion and rotation, the rods being slightly turned at each blow. When the weight of the rods becomes considerable a wooden spring-beam is often used. This consists of a pole about 30 ft long and tapering to about 6 in. at the small end. The butt is fixed by means of a heap of stones, and it has another support about 10 ft from the fixed end. This allows a springing up-and-down movement which is communicated to the rods and minimises the labour of the men. The tool is also fitted with a sliding link, as too great rigidity would involve excessive breakage of the rods. The disadvantage of rods is that much time and labour are required to lift them for the purpose of examining the tool or removing the broken rock. The latter operation is carried out by a 'baller,' a tube with an inwardly opening valve at the bottom. The tube is dashed up and down a few times and the debris brought to the surface. The work of boring is made less tedious by using ropes instead of rods. The drill is kept dropping by its own weight on the rock, and if

it is necessary to raise the tool, the winding up of the rope is not a lengthy operation. Lost tools and broken rods have to be fished for by special apparatus. The most elaborate and efficient boring apparatus comprises a diamond drill at the end of a series of jointed tubes. The drill consists of a bit of soft steel set with about 8 diamonds of about 2 carats each. The drill is rotated by an engine geared so that the drill is advanced slightly at each revolution. The rocky core may be lifted for examination, and a stream of water forced down the tube which, rising between the rock and the tube, keeps the apparatus clear of debris. See S. H. Cox, *Prospecting for Minerals*, 1903; C. Isler, *Well-boring for Water, Brine, and Oil*, 1921.

Welland: 1. Tn. in Welland co., Ontario, Canada. It is on the W. riv. and canal, has important fruit-shipping trade, and manufs. iron castings, tubes, structural iron and steel, twine and rope, cotton, and flour. Pop. 16,290.

2. Riv. of England, rises on the boundary between Northants and Leicestershire and flowing N.E. to The Wash, navigable to Spalding and 70 m. long. At a cost of about £1½ million the riv. has been widened and strengthened above and below Spalding, including the construction of the Coronation Channel designed to discharge highland water more rapidly and to protect the fenland from flood.

National Film Board, Canada

A LOCK ON THE WELLAND SHIP CANAL,
ONTARIO

Welland Ship Canal was originally built 1824-9, between Lake Ontario (Port Weller) and Lake Erie (Port Colbourne),

parallel with Niagara R. By the enlarged route (completed 1888) it was 264 m. long, 14 ft in depth, 200 ft wide, and by means of 26 locks rose 3264 ft.

The present W. S. C. was begun in 1913, and opened to ships in 1931, construction still being carried on for the purpose of excavating the canal to a uniform depth of 25 ft. There are 7 lift locks having dimensions of 800 ft by 80 ft. Some 18,000,000 tons of cargo are carried in the 8-month season.

Welles, (George) Orson (1915-), Amer. actor and theatrical and film producer, b. Kenosha, Wisconsin, and educ. at Woodstock, Illinois. He first appeared on the stage in Dublin, 1931, and has since been notable for many outstanding productions and performances. W. became famous as a film director after his production of *Citizen Kane*, in which he also acted. This film, with its experiments in photography, did much to influence subsequent screen technique. Other films directed by W. include *The Magnificent Ambersons*, *Lady From Shanghai*, *Macbeth*, *Othello*.

Welles, Sumner (1892-), Amer. politician, b. New York, and educ. at Groton and Harvard. He entered the diplomatic service in 1915. From 1937 until 1942 he was under-secretary of state, when he resigned, supposedly over a disagreement with official U.S. policy. W. was an efficient administrator. In 1940 he went as Roosevelt's personal envoy to Rome, Berlin, Paris, and London, and wrote *The Time for Decision*, 1944, concerning this mission.

Wellesley, Arthur, see WELLINGTON, DUKE OF.

Wellesley, Henry Richard Charles, see COWLEY, FIRST EARL.

Wellesley, Richard Colley, first Marquess (1760-1842), statesman, eldest son of Garrett W., 1st Earl of Mornington, and the brother of the 1st Duke of Wellington and Lord Cowley, b. Dangan Castle, Meath and educ. at Eton and Christ Church, Oxford. He went to India in 1797 as governor-general, a position he held for 8 years, during which time he increased Brit. authority and proved an enlightened and efficient administrator. In 1809 he became foreign secretary in Perceval's ministry. He was Lord-Lieutenant of Ireland from 1821 to 1828, and again in 1833-4. His Indian despatches were pub. in 1836. See lives by W. M. Torrens, 1880; W. H. Hutton, 1893; G. B. Mallison, 1905; see also P. E. Roberts, *India under Wellesley*, 1929.

Wellesley College, at Wellesley, Massachusetts, one of the foremost women's colleges in the U.S.A. It was founded in 1870 by H. E. Durant of Boston for the express purpose of giving to young women a higher education. Opened in 1875, it now has over 40 buildings, a working library of 300,000 vols., about 1700 students and 180 teachers, and has endowments of over \$14m.

Wellesley Province, see PROVINCE WELLESLEY.

Wellesz, Egon (1885-), Austrian musicologist and composer, b. Vienna,

where he studied musical science at the Univ. and composition under Schoenberg, whose influence showed in his work for a time, together with that of Mahler and Debussy, but was shaken off by him, especially after he had settled at Oxford in 1939. As a scholar he has particularly distinguished himself as an expert in Byzantine music. His compositions include 6 operas; 4 ballets; choral and orchestral works (2 symphonies); a piano Concerto; 7 string Quartets and other chamber music; and a few piano pieces and songs.

Wellingborough, mkt. tn and urb. dist. of Northants, England, on the Nene, 10 m. NE. of Northampton. It is a centre for footwear and for agriculture. Iron is mined and foundries are worked. Pop. 28,520.

Wellington, Arthur Wellesley, first Duke of (1769-1852), soldier and statesman, third son of Garrett W., 1st Earl of Mornington, b. Upper Merion Street, Dublin, and educ. at Eton, and later at Pignerol's Military Academy at Angers. He entered as an ensign in the 73rd Regiment in 1787, and then for a few years sat as member for Trim. He commenced his military command at the head of a brigade in Holland in 1794. It was in India as a colonel in the war against Tipoo that he first gave signs of a transcendent military genius. After being left in command of the troops at Mysore, he baffled Napoleon's Oriental plan of a descent on S. India from Egypt as a base, by invading Mysore and destroying or scattering the 40,000 followers of Dhoondyah Waugh before Fr. forces could be sent there. In 1803 he was appointed chief political and military agent in the Deccan and the S. Mahratta states, and on the fresh outbreak of trouble with the native chiefs, Sindiah and Holkar, he added to his reputation by the signal defeat of an overwhelming force at Assaye. Though he received the thanks of Parliament and was knighted for his services, he does not appear to have been satisfied with either his treatment or his prospects; he resigned his command and appointment in the early part of 1805, and shortly afterwards sailed for England.

In 1806 he was returned as member for Rye, and a year later became chief secretary for Ireland and a privy councillor, but on the threat of a Fr. invasion he was soon in active service again. After a short campaign in Denmark, which ended in the complete humiliation of the Danes, he was sent to Spain. He landed at Corunna in July 1808, but, not being in sole or chief command, was almost immediately involved in difficulties with incompetent rivals like Dalrymple and Burrard, much in the same way that his genius was thwarted in India by persons whose social status was in advance of their military capacity. In 1809 he returned to England and resigned, but was afterwards sent out in sole command, and from that point onward began a series of splendid victories which culminated in the complete evacuation of Portugal and Spain by the French. For long ill-sup-

plied with men and materials, W. defeated a succession of Fr. marshals and proved to Europe that Napoleon's military system was not invincible. Though not of a character to win deep affection, he gained the profound respect of his troops; he displayed the highest strategical and tactical qualities and a fine control of supply and organisation. (See *PENINSULAR WAR*.)

In 1815, loaded with honours, W. was ambas. to the restored Bourbon court, and Brit. representative at the congress of European Powers at Vienna, when news

Fortescue, 1925; P. Guedalla, 1931; M. Wellesley, 1937; T. Lücke, 1939; J. Chastenot, 1945; R. Aldington, 1946; Sir C. A. Petrie, 1956.

Wellington: 1. Tn of Shropshire, England, 10 m. E. of Shrewsbury, near the foot of the Wrekin at the junction of the industrial and agric. dists. (see *SHROPSHIRE*). Wrekin College, founded 1880, is in the tn. Pop. 13,000.

2. Tn in Somerset, England, with manufs. of bedding and woollen goods. The Duke of Wellington took his title from this place, and on the summit of the

High Commissioner for New Zealand

WELLINGTON, LOOKING TOWARDS MOUNT VICTORIA

In the middle of the picture, following the water-front, is the business area of the city.

came of Napoleon's escape from Elba. There followed his best-known campaign, that of Waterloo (q.v.). Returning to England, he was granted £200,000 for the purchase of the estate and mansion of Strathfieldsaye in Hants. In 1818 he recommenced his political career, a staunch Tory, becoming Prime Minister in 1828. He carried through the Rom. Catholic emancipation, but resigned in 1830, refusing to agree to electoral reform. He was foreign secretary under Peel (1834-5) and minister without portfolio (1841-6), supporting Peel's repeal of the corn laws. He d. at Walmer Castle, and was buried in St Paul's Cathedral by the side of Nelson. See his *Despatches* ed. by J. Garwood, 1837-45, and *Letters (A Great Man's Friendship)*, ed. by Lady Burghclere, 1927; see also C. O. Head, *Napoleon and Wellington*, 1939; and *Lives* Sir H. Maxwell (6th ed.), 1907; J. W.

Black Downs is a monument to his memory. S. of the tn is Wellington School, a public school for boys, founded 1841. Pop. 7376.

3. Tn of New S. Wales, Australia, in Wellington co., on the Macquarie R., 65 m. NNW. of Bathurst. The dist. is agric., cattle and sheep are reared, and there is mainly wheat-growing. The W. caves contain interesting fossil remains. Pop. 5200.

4. Tn of Cape Prov., S. Africa, about 50 m. NNE. of Cape Town, not far from Bain's Kloof pass. It began as a Huguenot settlement, and the Huguenot College has made W. known all over S. Africa. W. is developing industrially, and there is a textile factory and a wool-washing and processing plant. Fruit and vegetable canning, jam factories, and wineries in W. cater for the dist., which is agriculturally rich. Pop. (Whites) 4000; (Coloureds) 6000.

Wellington: 1. Prov. dist. of N. Is., New Zealand (q.v.), bounded on the W. and S. by the Tasman Sea and Cook Strait, largely mountainous, with a fertile coastal strip. Wellington (see below) is the prin. port and the dominion cap. Area 10,870 sq. m.; pop. c. 349,400.

2. Port and cap. of New Zealand, in the prov. of the same name in the N. Is., bounded by Cook Strait to the S. The city was founded in 1840, as Britannia, by the New Zealand company with Gibbon Wakefield as the presiding spirit and his brother Wm as leader of the expedition. W. lies at the geographical centre of the dominion, and close to its centre of pop. It has an excellent harbour and good means of communication with all parts of the dominion. As the result of its situation, and as the seat of gov., W. has become the H.Q. of the chief commercial institutions and possesses many handsome buildings. The harbour is one of the prin. ports of the dominion for the shipment of wool, frozen meat, dairy produce, apples, and other exports, and a large proportion of the dominion's imports arrive through W. The city is the seat of Victoria Univ. College, and amongst its more important buildings are Parliament Buildings, Government House, the war memorial, art gallery, and museum, and a very modern municipal library. Pop. (urb. area) 138,035. See A. Mulgan, *Centennial Survey*, 1940.

Wellington College, public school for boys at Crowthorne, Berkshire. It was founded by public subscription as a memorial to the Duke of Wellington, for the education of the sons of deceased officers, and was incorporated by royal charter in 1853. There are now about 675 boys, most of whom are fee-paying.

Wellington Museum, see APSLEY HOUSE.

Wellingtonia, see SEQUOIA.

Wells, Herbert George (1866-1946), novelist and sociologist, b. Bromley, Kent, youngest son of Joseph W., ex-gardener, general dealer, and professional cricketer. W. was educ. at Morley's Academy in Bromley, which school he has scathingly described in 'The Academy for Young Gentlemen' in the *Journal of Education* (Oct. 1893). But W. also read much at home and at the local literary institute. For some years he had to combat his mother's resolve to make a draper of him; indeed, he had a month's trial at one firm which, he says, 'rejected him as unsuitable for their high trade'; the 'high trade' is duly lampooned in *The Wheels of Chance*, 1896. In 1881 he was apprenticed to a chemist in Midhurst and this uncongenial interlude finds its literary expression in *Tono-Bungay*, 1909, as Wimbleshurst.

In 1884 he went to London for three years on a science studentship, attending the Normal School of Science at S. Kensington, the life at which is touched on in his *Ann Veronica*, 1909, a novel which was a notable contribution to the cause of women's emancipation. He became later assistant master at Holt, near Wrexham, but was rendered semi-invalid by a football accident. From 1887 he taught at

Kilburn for 2 years. He took the degree of B.Sc. (1st class honours) at London Univ. in 1890. He was tutor for 2 years at the Univ. Correspondence College; there he met Amy Catherine Robbins, who became his wife. He broke a blood-vessel in his lungs (1893), and was forced, but probably not against his will, into authorship.

Karsh, Ottawa

H. G. WELLS

His first real literary success was in 1891 when Frank Harris (q.v.) accepted his 'The Rediscovery of the Unique' for the *Fortnightly Review*, and this was followed by some scientific essays in the *Gentleman's Magazine*. At this period, too, while lecturing and coaching, he wrote some books on biology and physiology. While recuperating at Eastbourne he wrote a sketch, 'On the Art of Staying at the Seaside,' which appeared in the *Pall Mall Gazette*, to which he became a regular contributor. From 1894 he was at work on a story which became *The Island of Dr Moreau* (rejected at its first offer) and then completed *The Wonderful Visit*, 1895. He first won nationwide recognition with his *War of the Worlds*, 1898, which was serialised in the *Windsor Magazine*. His earlier novels are scientific romances. In these he estab. an original type of story evolved from a combination of scientific facts, highly coloured with imagination and frequently told as of the future. The most successful are *The Time Machine*, 1895, *The Invisible Man*, 1897, and *The First Men in the Moon*, 1901. His social-science novels are of a different order. They are novels about middle-class problems and reveal great insight into the complexities of the marriage problem. The best of these are *Love and Mr Lewisham*, 1900, *Kipps*, 1905, *Mr Polly*, 1910, and *Marriage*, 1912. W. was a Fabian; he was

more than a mere social regenerator: he was a prophet of world organisation, whether in such fiction as *Mr Brilling Sees it Through*, 1916, and *The World of William Chissold*, 1926, or in non-fictional works like *God the Invisible King*, 1917, *Outline of History*, 1920, *Short History of the World*, 1922, and *Short History of Mankind*, 1925.

W.'s ruling theme was the need for man to impose his mastery upon his own creations; and, in pursuance of this concept, he became a leading advocate of planning. Yet, though in the capacity of a worker in the cause of human progress he achieved world-wide fame and some measure of assent, his predictions were sometimes hard to reconcile with his own message. W. used literature to express his views on social or other institutions and only secondarily as a craftsman and artist. But he could write with delicacy and rare verbal felicity, as, e.g., in *The Country of the Blind*, 1911, which is generally admitted to be one of the best short stories in the language.

The Outline of History, 1920, was an ambitious attempt to illustrate the continuity of hist. from the beginnings of life to the treaty of Versailles, a fine if characteristically mannered popularisation of novel educational value. It was the first vol. in a trilogy planned to popularise the historical, scientific, and sociological ideology appropriate to the task of creating a World State. The succeeding 2 vols. were *The Science of Life*, 1929, written in collaboration with Dr Julian Huxley and his son, G. P. Wells, and *The Work, Wealth and Happiness of Mankind*, 1932. *Experiment in Autobiography* was pub. in 1934. See lives by G. West (with a full bibliography), 1930; V. Browne, 1951; N. Nicholson, 1951; also F. H. Doughty, *H. G. Wells: Educationist*, 1926; M. M. Meyer, *H. G. Wells and his Family*, 1956.

Wells : 1. City, bishop's see, parl. and municipal bor. in Somerset, England. Its hist. begins in Saxon times, and Ina, King of Wessex, is said to have founded its first church in 704. The cathedral, of the diocese of Bath and Wells, was begun in the late 12th cent., and the central parts of the building—transepts, E. bays of nave and W. bays of choir—are in the Transitional Norman style of that period. Jocelin, bishop from 1206 to 1242, built the rest of the nave, the W. front and the N. porch, all superb examples of Early Eng. architecture. The E. end and the central tower belong to the early 14th cent., and the W. towers to the early 15th. The W. front, with its collection of 350 statues is unrivalled in this country. The cathedral is also famous for its lady chapel and crypt, the choir and chapter house, and its beautiful 14th-cent. stained glass. The bishop's palace, built by Jocelin, is moated and surrounded by a defensive wall. Other subordinate buildings include the 15th-cent. Deanery and the delightful Vicar's Close. W. has manufs. of paper, brushes, textiles, and there are agric. mrkts. Pop. 6000.

2. Or **Wells-next-the-Sea**, urb. dist. of

Norfolk, England, a fishing port and seaside resort. Pop. 2610.

Wells, Sacred, have been centres of worship and religious magic from the earliest times. During the Middle Ages the intervention of a saint was generally substituted for that of the original water-deity. Famous Brit. wells are those at Tasington, Derbyshire, or St Winifred (Holywell), St Chad (Lichfield), St Anthony (Maybole), St Keyne (Cornwall), St Eilian (Denbigh). Others are the sacred spring of Coventina and her temple at Carrawburgh on the Rom. Wall, and the hot springs of the goddess Sul at Bath.

Wels, Austrian tn in the prov. of Upper Austria, on the Traun. It has many Baroque buildings, a 14th-cent. church, and the castle where Maximilian I (q.v.) d. Machinery and foodstuffs are manuf., and there is an agric. fair. Pop. 38,100.

Welsbach, Carl Auer, Baron von (1858–1929), Austrian chemist, b. Vienna, chiefly remembered as the inventor of the incandescent gas-lamp, which he put on the market in 1885.

Welsh Art, see **WALES, The Arts**.

Welsh Cattle, see **CATTLE**.

Welsh Corgi, small Welsh cattle-dog; the advantage of its small size is that cattle are unable to get their horns low enough to harm it. There are 2 distinct varieties, the Pembroke and the Cardigan. The former weighs from 18 to 24 lb. and has a maximum height of 12 in. at the shoulder. The head is foxy in outline, the chest broad and deep, the body of medium length, and the legs short and straight. The favourite colour is red, or red and white. The Cardigan variety is somewhat larger and heavier, with a longer body; the head is less foxy; there are sev. colours, including red and black-and-tan, usually with white markings. The breed is very intelligent and makes a reliable guard.

Welsh Fusiliers, see **WELSH FUSILIERS**.

Welsh Guards, formed on 26 Feb. 1915, on a cadre of Welshmen in the Grenadier Guards. The then Prince of Wales was first colonel of the regiment, and the queen is colonel-in-chief. Their motto is 'Cymru-Am-Byth' ('Wales for Ever'). Two battalions were raised which served during the First World War in France and Flanders, the first battle being Loos. Other outstanding actions in which they participated are Glincy, Fiers-Coureclette, Morval, Plickem, Poelcappelle, Cambrai, 1917–18. Bapaume, 1918, Canal du Nord, and the Sambre. In the Second World War the W. G. served in NW. Europe and in Italy. Detachments were part of the Guards Armoured Div. in France (1944–5) which crossed the Orne into the Caen plain and subsequently fought in the battles for the Rhine and beyond.

Welsh Harp, harp having 3 rows of strings; the 2 exterior were tuned in unison diatonically, the inner row giving the extra sounds required to complete the chromatic scale.

Welsh Language and Literature, see **WALES, Welsh Language and Literature**.

Welsh Mountain Breed, see SHEEP.

Welsh Music, see WALES, Music.

Welsh Springer, see SPANIEL.

Welsh Terrier, small terrier of about 20 lb. in weight. Its colour is black and tan, or black, grizzle, and tan, and except for this it strongly resembles the wire-haired fox terrier, though its skull is slightly wider between the ears. The breed is eminently suitable as a small house dog and companion.

Welshing, see LARCENY.

Welshpool, bor. and co. tn of Montgomeryshire, Wales, 15 m. S. of Oswestry, on the R. Severn and Shropshire Union Canal. It is an important agric. centre for a wide area, and has one of the largest mrkts in Wales. Pop. 6000.

'Welt, Die', German daily newspaper, pub. in Hamburg, with subsidiary presses in Essen and Berlin. Founded in 1946 and independent in outlook, it has a wide circulation in W. Germany and is sold in 81 foreign countries. Circulation over 200,000.

'Weltwoche, Die', Swiss political weekly paper, founded in 1933 by Karl von Schumacher. Its outlook was rigorously anti-Nazi, and the paper was forbidden in Germany under Hitler; later it gained much popularity with the Fr. Resistance movement. After the war the W. denounced Communism, at the same time sponsoring the unification of the independent European countries and N.A.T.O. policy. Politically the W. is not attached to any party, its general attitude being liberal. It carries supplementary pages on cultural and scientific subjects, and its influence extends to most W. European countries and also overseas.

Welwitschia. The one species, *W. bainesii*, is representative of its genus and family, and unique in character. Native to almost rainless parts of SW. Africa, the trunk is oboconical, up to 3 ft in diameter, and 3-12 in. high, with 2, rarely 3, ribbon-like, leathery leaves, split into many thongs at the end, growing from the circumference of the trunk, gradually dying from the tips and being continuously replaced from the base. It is grown chiefly in botanic gardens, in special soils of rotten granite and leaf mould.

Welwyn, rural dist. and vil. of Herts, England, 3 m. NW. of W. Garden City (q.v.), from which the garden city takes its name. There is evidence of Rom. occupation. The poet Edward Young (q.v.), author of *Night Thoughts*, was rector here for 35 years and was buried in the church in 1765. Pop. 2800.

Welwyn Garden City, tn of Herts, England, situated 21 m. NNW. of London. It was the second of Howard's garden cities, estab. in 1920 by him, Sir Theodore Chambers, C. B. Purdom, W. T. (later Lord) Layton, and others associated in a joint-stock company formed on a limited dividend basis. The tn was planned for a pop. of 40,000 as a satellite tn to provide for the decentralisation of pop. and industry from London; the original pop. on the entire estate was 400. In May 1948 the minister of town and

country planning made an order under the New Towns Act (1946), establishing a development corporation to take over the tn and to complete it, having reduced the ultimate pop. to 38,500. In 1954 the minister of housing and local gov. decided that the ultimate pop. was to be raised to 50,000, and that the development corporation should develop it to 42,000, the balance being by way of natural expansion. Many experiments of public interest were undertaken in the tn, the most important of which was the Welwyn Stores, which is the tn's main shopping centre. W. has over 80 industries, mostly food and light engineering. For a detailed historical and factual account see C. B. Purdom, *The Building of Satellite Towns*, 1925, 1949. Pop. 23,000.

Wembley, municipal bor. of Middlesex, England, situated W. of Willesden, and formerly in the par. of Harrow. It was an area of grass farms until the railway first began to cross it in 1845. In 1924-5 the Brit. Empire Exhibition was held at W. The Empire Stadium, built in 1923 to hold 100,000 people, is used for the Football Association and Rugby League finals. The Empire Pool and Sports Arena is the venue of ice-hockey, boxing, and other sports. Many events of the 1948 Olympic Games were held at the stadium and at the pool and the sports arena. Greyhound and speedway racing also take place. The bor. is chiefly residential, but there are industries, including electrical, chemical, aircraft and motor manufacturing. W. returns 2 members to parliament. Pop. 129,500.

Wemyss, par. in Fife co., Scotland, on the Firth of Forth. The dists. of W. Wemyss, E. Wemyss, Coaltown, and Methilhill are situated within the boundary of the par. and are all engaged in the coal-mining industry. At E. Wemyss is situated Wemyss Castle, once visited by Mary, Queen of Scots. Pop. (par.) 34,000.

Wenceslaus, or **Wenzel**, St (*d. c.* 929), Duke of Bohemia. In consequence of his efforts to stem the tide of pagan reaction he was assassinated by his brother Boleslav. St W. is the patron of Bohemia and the 'Good King Wenceslas' of the carol. His feast is on 28 Sept.

Wenceslaus IV (1361-1419), King of Bohemia and Holy Rom. Emperor, son of the Emperor Charles IV, whom he succeeded in 1378. W. was an incompetent ruler, and in 1394 the Bohemian nobles rebelled and made him a prisoner. In 1400 four Ger. electors pronounced him deposed from the imperial throne, but he recovered Bohemia in 1404 and retained it until his death.

Wenchow, former treaty port of China, in the prov. of Chekiang. It is a walled tn, and has manufs. of paper, silk, etc. Pop. 215,800.

Wenden (now Latvian *Cēsis*), tn in Latvia, 60 m. NE. of Riga. Pop. (1939) 9000. It has the ruins of a castle (built 1210), which was the residence of the Grand Masters of the Teutonic Knights 1237-1577.

Wendover, tn of Buckinghamshire, England, 5 m. SE. of Aylesbury. The church, containing much 13th-cent. work, possesses a fine 14th-cent. tower. Pop. 5000.

Wends, people belonging to the W. group of the Slavonic peoples. They speak a Slavonic language (see under **INDO EUROPEAN LANGUAGES**), and, being Catholics, they employ an alphabet of Latin origin (not Cyrillic). Though few in number and entirely surrounded by Ger. speakers in the region of Lusatia (q.v.) in E. Germany and SW. Poland, they have maintained to a large extent their identity, their customs, language, and literature. Nowadays, the W. are concentrated principally in the Spree Forest (Spreewald) area of Lusatia, on the R. Spree between Cottbus and Lübben, but in the 6th cent. they were a powerful people, inhabiting the region extending from the Elbe to the Oder, with kindred tribes living beyond the Oder as far as the Vistula. See also **SLAVS**.

Wengen, Swiss holiday resort and winter sports centre, situated on the W. slopes of the Little Scheidegg (q.v.) in the Bernese Oberland. It is linked with Lauterbrunnen and Interlaken by a cog-railway. Altitude 4190 ft.

Wenia, see **VIENNA**.

Wenlock, municipal bor. of Shropshire, England, on the R. Severn, 12 m. SE. of Shrewsbury. The chief buildings are the 16th-cent. Guildhall, which contains some beautiful oak carving, the church of Holy Trinity, and the ruins of Wenlock Abbey. W. is an agric. centre. Coal and iron are also mined, and limestone is quarried. The bor. includes Brosely, Coulbrookdale, Iron Bridge, Madeley, and Much Wenlock. Pop. (of bor.) 15,000.

Wenlock Beds, name given to stratigraphical subdivision of the Silurian system. The Wenlock Shale is followed by the Wenlock Limestone. These beds are well seen in the Welsh borderland. The Dudley Limestone is a very fossiliferous rock of Wenlock age. Wenlock is named after the Shropshire village.

Wenning, Pieter (1873-1921), S. African artist, b. The Hague, Netherlands. Although his ambition to become an artist was opposed by his family, he left Holland for the Union of S. Africa in 1905 and worked in bookshops, eventually becoming a professional artist in 1916 with the assistance of friends. In a short but full career he produced sev. hundreds of paintings and drawings, and is now regarded as one of the founders of contemporary S. African art. See G. Roetzeler and I. Lippy Lipshitz, *Wenning*, Cape Town, 1949.

Wensleydale, in the N. Riding of Yorks, England, that part of the valley of the Ure beginning near Jervaulx Abbey and continuing until near the source of the riv. in Lunds. It is remarkable for its beauty and historical associations. Wensley, at a point where the riv. is crossed by a 15th-cent. bridge, has a fine mid-13th-cent. church. Middleham Castle dates from the 12th cent.; and Bolton Castle, a 14th-cent. fortified mansion built by Richard

le Scrope, was where Mary Queen of Scots was imprisoned in 1568. W. gives its name to a breed of long-wooled sheep, and a make of cheese—now produced in cheese factories. See M. Hartley and J. Ingilby, *The Yorkshire Dales*, 1936.

Wensleydale Peerage, Eng. peerage called after Sir James Parke, Baron Wensleydale, a judge of the court of exchequer, who was created a life-peer in 1856. The House of Lords protested that the privilege of the Crown to create life peerages had fallen into disuse, and if revived the hereditary peers might at the wish of the Crown be outnumbered in the House by life-peers. Wensleydale was accordingly created a peer in tail male. Since then a certain number of Lords of Appeal in Ordinary have been created official life-peers.

Wensleydale Sheep, see **SHEEP**.

Wentworth, Charles Watson, see **ROCKINGHAM**, SECOND MARQUESS OF.

Wentworth, Thomas, see **STRAFFORD**, FIRST EARL OF.

Wentworth, William Charles (1793-1872), Australian statesman and newspaper-owner, b. Norfolk Is. He became the first native Australian champion of civil and political rights and was known as 'the Australian patriot.' He practised law in Sydney, and in 1824 started the *Australian*, the first privately owned newspaper in Australia. In it W. supported the political enfranchisement of 'emancipists' or ex-convicts at the expense of 'exclusivists,' or voluntary immigrants, officials, and others. W. pioneered in the struggle to obtain for New S. Wales the rights and privileges generally accorded to settlement colonies. One of the leading advocates of representative gov. for New S. Wales, his agitation led to the recall of Governor Darling (1833) and, sev. years later, to the passing of the Colonial Act (1840) which gave colonial self-gov. to Australia. W. founded Sydney univ. in 1852. See A. C. V. Melbourne, *William Charles Wentworth*, 1934.

Wenzel, see **WENCESLAUS**, ST.

Wesobley, picturesque vil. of Herefordshire, England, 8 m. SW. of Leominster, with many black-and-white timbered medieval houses, a 17th-cent. grammar school (now a private house), and the moat and bailey of the 12th-cent. castle. The church, with ball-flower ornament, is largely 14th cent. Pop. 630.

Werenskiöld, Erik (1855-1938), Norwegian painter, was one of a group which included Harriet Backer (1845-1932) and Gerhard Munthe (1849-1928) which absorbed the new Impressionism in Munich and Paris. He painted Norwegian landscape and is also known for his portraits of Hendrik Ibsen and of Bjørnstjerne Bjørnson (National Gallery, Oslo). W. was also famous as a black-and-white artist, his fairy-tale illustrations showing fancy and humour.

Werfel, Franz (1890-1945), Austrian poet, novelist, and playwright, b. of Jewish stock at Prague, and educ. at Prague and Hamburg. He lived chiefly in Vienna from 1918, and went to the

U.S.A. in 1940. W. wrote verse, dramatic works (*Der Spiegelmannsch*, 1920 and *Paulus unter den Juden*, 1926), short stories, and novels, largely psychological. His most famous novels are *Verdi*, *Roman der Oper*, 1924, and *Das Lied von Bernadette*, 1941. See lives and studies by A. Luther, 1922; R. Specht, 1926.

Wergeland, Hendrik Arnoldus (1808-45), Norwegian poet, b. Kristiansand. After passing through Kristiania Univ., he pub. a successful dramatic satire which fired the young Ibsen's ambitions. His friends called him the 'Schiller of Norway'. W. entered the clerical profession in 1829, but in 1843 resigned, the sentiments expressed in a poem entitled *Creation, Man and the Messiah*, being deemed incompatible with his cloth. He studied medicine for some years and pub. a treatise on cholera in 1839, but abandoned that line of work for a literary life. He was appointed assistant librarian at Kristiania Univ., given a 'literary pension' in 1839, and in 1840 became keeper of the state archives. His popular influence has continued to this day, being a product of the constant attacks on him by Welhaven (q.v.) and his fervent nationalism. He is Norway's patriot-poet and is as much loved for his idealism as for his not always consistent writings. His death was the cause of national mourning. He is best known for extraordinarily beautiful lyrics, which reveal a deep love of nature, and a rich imagination; but his other work has often been surpassed. A collected ed. of his works was begun in 1918. See J. Handegard, *Wergeland og Welhaven*, 1915; E. Gordon, *Wergeland, the Prophet*, 1938; H. Beyer, *H. Wergeland*, 1946; H. Möller, *H. Wergeland*, 1947.

Wergeland, Jakobine Camilla, see COLLETT.

Wergild, or **Wer-geld**, in A.-S. times a money compensation for murder or manslaughter. Every man's life had a fixed pecuniary value called the W., the amount graduated according to the rank of the person slain. The W. of a murdered freeman was payable as compensation to his kin; that of a serf was paid to his master.

Werner, Abraham Gottlob (1750-1817), Ger. geologist, was b. Wehrau, Saxony. He became prof. of mineralogy at Freiberg in 1775, and taught that all rocks were marine and championed the 'Neptunists' against the 'Plutonists' led by Hutton (q.v.), who maintained that igneous rocks had solidified from molten material. W. is regarded as a founder of mineralogy and petrology.

Werner, Alfred (1866-1919), Swiss chemist of Fr. extraction, b. Mülhausen. He held the professorship of chemistry at Zürich from 1893 till 1919, and was awarded the Nobel prize in 1913. His prin. contribution to chemistry was his theory of co-ordinate valency based upon his study of complex metal-ammonia compounds. This theory has been largely incorporated in modern hypotheses as to the nature of valency (q.v.), and represented remarkable insight into the mechanism of chemical combination.

Wernher, Sir Julius Charles (1850-1912), Anglo-Jewish financier, b. Darmstadt. He was educ. at Frankfurt-on-Main, and there gained experience in a bank. He went to S. Africa in 1871, as an assistant in a Fr. diamond-house. In 1888 he became governor of De Beers, and in 1890 senior partner in Wernher, Beit, & Co. He was made a baronet in 1905. He gave large amounts to charitable and educational concerns.

Wernigerode, Ger. tn in the dist. of Magdeburg, at the foot of the Harz Mts, 40 m. SW. of Magdeburg (q.v.). It once belonged to the Hanseatic League (q.v.). Its castle was formerly the seat of the princes of Stolberg-W. There are engineering and chemical industries. Pop. 35,000.

Werther, see under GOETHE, JOHANN WOLFGANG VON.

Wervik, tn in the prov. of W. Flanders, Belgium, on the R. Lys, close to the Fr. border, 10 m. WSW. of Courtrai. Until the 14th cent. it was a very important commercial tn and had more than 50,000 inhab. in the 13th cent. It is now engaged in agriculture, and tobacco is largely cultivated. Pop. 12,300.

Wesel, Ger. tn in the Land of N. Rhine-Westphalia (q.v.), at the confluence of the Rhine (q.v.) and the Lippe, 30 m. N. by W. of Düsseldorf (q.v.). It was almost razed during the Second World War, but has been rebuilt on modern lines. The Gothic cathedral of St Willibrord dates from the 15th cent. The tn is an important communications centre. Pop. 25,000.

Weser, one of the largest rivs. of Germany, formed by the junction of the Werra and the Fulda, the latter of which rises in the Rhön Mts, in Bavaria. From the junction at Minden (q.v.) the riv. flows towards the N. Sea, into which it falls after a course of 225 m. The lower reaches are canalised, and the riv. is navigable by ocean steamers to Bremerhaven, and by smaller vessels to Bremen (qq.v.).

Wesermünde, see BREMERHAVEN.

Wesley, Charles (1707-88), hymn-writer, brother of John W. (q.v.), b. Epworth, Lincs, and educ. at Westminster School and Christ Church, Oxford. He helped his brother in furthering the cause of Methodism. His greatest contributions were the hymns he wrote, numbering over 6000, and including such well-known examples as *Jesu, Lover of My Soul* and *Love Divine, All Loves Excelling*. See also METHODISM. His *Journal* was ed. by T. Jackson, 1849. See also T. Jackson, *Life and Correspondence of Charles Wesley*, 1841; life by J. Telford, 1887; F. L. Wiseman, *Charles Wesley, Evangelist and Poet*, 1933.

Wesley, John (1703-91), founder of Methodism, b. Epworth, Lincs, a younger son of Samuel W., rector of Epworth and Wroth, and author of many poems. W. was educ. at Charterhouse, London, and Christ Church, Oxford, being elected scholar there, and took holy orders in 1725. He served his father as curate at Wroth from 1727 to 1729, and then returned

to the univ. as tutor and fellow in Lincoln College, which position he retained for 8 years. At Oxford his younger brother, Charles W. (q.v.), had formed a small group of undergraduates who followed very strictly the ordinances of the Church and were dubbed by their friends 'Methodists.' W. joined the party and became its leader. Soon after his father's death in 1735, he went to America to take charge of the Georgian mission, but in the following year retired from the charge. On his return he came under the influence of Peter Bohler, a Moravian, and became a member of that society's chapel at Fetter Lane, London. At about this time he experienced a personal conviction of salvation; it was from this time that his new movement developed. In 1739 he began open-air preaching at Bristol. In 1742 he went to Yorks and Newcastle-upon-Tyne, and his teaching took root everywhere. He is said to have delivered at least 40,000 sermons. He and his brother Charles, Whitefield, and others set up an independent society which met at the Foundry near Moorfields, London. W. made Bristol his H.Q., and he divided his followers into classes, each class being under the direction of a leader. Rules for the conduct of the classes were drawn up in 1743. He preached all over the country, and was especially successful with the poorer classes, who were less in touch with the Estab. Church than the well-to-do. It was not until 1784 that W. executed the 'deed of declaration,' from which dates the beginning of modern Methodism. At W.'s death his followers numbered 100,000. He preached his last sermon at Leatherhead, 23 Feb. 1791. *See also* METHODISM. W. wrote many books and pamphlets, and ed. the first popular series—*The Christian Library*. W.'s *Journals* (ed. by N. Curnock), 1909-16, are the best authority for his career. The 11th ed. of his *Works* appeared in 1856-62, and his *Letters* were ed. by J. Telford, 1931. *See* lives by R. Southey, 1820; C. T. Winchester, 1906; W. H. Fitchett, 1906; C. E. Vulliamy, 1931; B. Dobrée, 1933; J. Laver, 1933; Marjorie Bowen, 1937; G. E. Harrison, *Son to Susanna—the Private Life of John Wesley*, 1937, 1944; M. Plette, *John Wesley in the Evolution of Protestantism*, 1937; N. Sykes, *Wesley and the Methodist Movement*, 1950.

Wesley, Samuel (1766-1837), son of Rev. Charles W. of Bristol, nephew of the Rev. John W. He was a celebrated musical prodigy, writing an oratorio, *Ruth*, at 8. He became one of England's finest organists, and devoted considerable energy to popularising J. S. Bach.

Wesley, Samuel Sebastian (1810-76), Eng. organist and composer, son of Samuel W. (see above), b. London. One of the finest organists of his day, his appointments included Hereford Cathedral (1833-5), Leeds par. church (1842-9), and Gloucester Cathedral (1865-76). He left much magnificent church music, anthems, services, and organ pieces. *See* life by J. T. Lightwood, 1937.

Wesleyan Methodist Churches, *see* METHODISM.

Wesleyan Reform Union. The W. R. U. arose before 1850, attracting dissentients from the ideas of Jabez Bunting (q.v.). Of all the splinter churches the W. R. U., together with the Independent Methodist Church, is the only one surviving; they declined to come into the general union of all the Methodist Churches in 1932.

Wessel, Caspar (1745-1818), Norwegian surveyor and mathematician. He was the pioneer of the modern method of representing complex numbers (q.v.).

Wessex (O.E. *West seaxe*, West Saxons). The chalk uplands of W. form an archaeological prov., the distinctive cultures of which can be demonstrated from the time of the Bronze Age. There was a natural geographical route for sea traffic between Normandy and Hants, with a western spread to Dorset, which was in use in Neolithic times. At the heart of W., and the key to its archaeology, is Salisbury Plain. The historical kingdom of W. is said to have been founded by the West Saxons or Gewissas, under Cerdic (q.v.) and his son, Cynric, in AD 519. The invaders were defeated at Mons Badonicus (520), but won a great victory at Cerdic'slea (527). Cerdic d. in 534, and Cynric extended his kingdom beyond Hants. His son, Ceawlin (560-91), was a war-like king and made repeated inroads upon his Brit. neighbours. But his reign ended in confusion and disaster. In 592 his own subjects rebelled against him at Woddesbeorg, and Ceawlin d. in exile the following year. The ter. he had conquered beyond the Thames was seized by the Mercians, and W. ceased to be a powerful state. In the 7th cent. the West Saxons were converted to Christianity. During the reign of Cuthred (c. 741-56) the Mercians were defeated at Burford (752) and a code of laws drawn up. Egbert (802-39), who had spent his youth in exile at the court of Charles the Great, restored W. to its former power, and ultimately conquered the whole of England. He defeated the men of Cornwall in 815 and 835, subdued Mercia (825-29), annexed Kent, Sussex, and Essex, and before 828 was acknowledged overlord by all the peoples S. of the Tweed. W.'s ter. was increased and her power strengthened under Alfred (q.v.). He and his son Edward the Elder transformed the kingship of W. into that of England; W. lost its political individuality, and the name became only a geographical term. *See also* ENGLISH HISTORY; HARDY, THOMAS. *See* G. J. Copley, *The Conquest of Wessex in the Sixth Century*, 1954.

West, Benjamin (1738-1820), Amer. historical painter, b. Springfield, Pennsylvania. He began portrait painting at 16, but in 1760 went to Italy to study, and settled in London in 1763. Here he came under the notice of George III and soon acquired a great reputation. His 'Death of Wolfe', 1770, won deserved fame for its portrayal of the hero and his companions in contemporary dress, instead of that of classical antiquity, and did much to establish a new approach to historical painting. On the death of Reynolds he

was made president of the Royal Academy. See study by H. E. Jackson, 1900; and J. T. Fexner, *America's Old Masters*, 1939.

West, Rebecca, pen-name of Cicely Isabel Fairfield (1892-), novelist and critic, b. co. Kerry. Educ. at George Watson's Ladies' College, Edinburgh, she studied at a London dramatic academy and was on the stage for a short time. She took the pseudonym Rebecca West from the heroine of Ibsen's *Rosmersholm*, one of the parts she had played. In 1930 she married Henry M. Andrews, a banker. Her earliest book was a study of Henry James, 1916, and in 1930 she wrote *D. H. Lawrence, an Elegy*. *Black Lamb and Grey Falcon*, 1941, tells of a trip through Yugoslavia in 1937. Her novels include *The Return of the Soldier*, 1918, *The Judge*, 1922, *Harriet Hume*, 1929, *The Harsh Voice*, 1936, *The Thinking Reed*, 1936, and *The Fountain Overflows*, 1957. She also wrote 2 books about the Nuremberg war trials. In 1949 she was made a C.B.E.

West African Frontier Force, The Royal, and West African Division (81st and 82nd). The R.W.A.F.F. was formed in 1901 mainly at the instigation of Lord Lugard, though in the 17th cent. the merchants had formed various forces, composed of local tribesmen, to protect their forts against raiders of all kinds. The Royal African Colonial Corps of Light Infantry was formed by Sir Charles McCarthy in 1822, and at the same time 2 other forces were raised: the Royal Cape Coast Militia and the Royal Cape Coast Volunteer Force. All these units were stationed in what is now known as Ghana. A force was raised from Hausas of Nigeria, as it is now known, in 1862: it was first known as Glover's Hausas, then the Hausa Militia, and, finally, the Lagos Constabulary. It took part in the Ashanti war in 1873-4, and won the first battle honour of the Nigeria Regt. A detachment of this unit, left behind when the main body returned to Nigeria, formed the nucleus of the Gold Coast Regiment. In Nigeria there was also the Niger Coast Constabulary. It was a fighting force of about 1 battalion strong and had some guns. A third force, the Royal Niger Constabulary, composed of Hausas and of Yorubas, from W. Nigeria, had a high reputation in battle and also took part in the Ashanti wars.

In 1901 a regular force of African troops financed from Brit. funds was formed, and

it became known as the W. African Frontier Force. By 1914 it consisted of the Gold Coast and Nigeria Regiments, and 2 battalions from Sierra Leone and Gambia. The R.W.A.F.F. now comprises the Nigeria, Ghana, Sierra Leone, and Gambia Regiments, together with the supporting units in each of the territories from which these regiments are drawn. These troops fought in Togoland, the Cameroons, Duala, and Palestine. On 10 Mar. 1928, King George V conferred on it the title of 'Royal.'

In the Second World War units of the R.W.A.F.F. played a notable part in the defeat of the Italians at Bullo Erillo and in the capture of Merca, which led to the fall of Mogadishu. In 1943 2 newly formed divs. went to the E. and took part in Wingate's second Chindit expedition and the fighting in the Arakan peninsula. See also BURMA, SECOND WORLD WAR, CAMPAIGNS IN.

West African Indigenous Art, see NEGROES.

West Allis, tn. of Milwaukee co., Wisconsin, U.S.A., incorporated in 1906. It manufs. heavy machinery, trucks, motors, wood products, etc. Pop. 43,000.

West Bengal, see BENGAL, WEST; BENGAL, PRESIDENCY OF.

West Bromwich, parli., municipal, and co. bor. of Staffordshire, England, 6 m. NW. of Birmingham, situated on the edge of the 'Black Country' dist., immediately contiguous to the boundaries of the cos. of Warwick and Worcester, and adjoining Birmingham. The dist. gradually changed from a collection of hamlets on the Tame as small ironworks appeared. The primary cause of the tn's subsequent rapid development was the discovery of coal near by. Brindley's canal, completed in 1769, passed through W. B. Ancillary industries soon developed in W. B., and forges, furnaces, and foundries were erected. Then coal was discovered in the township itself and expansion became rapid. In 1819 the pop. was 9000: by 1854 it had risen to 36,500. Yet the bor. is not a completely built-up area and more than one-quarter of its 7000 ac. is still given over to agriculture. Heavy engineering and corollary industries are much in evidence in W. B., but the tn is also the centre of a variety of industries and trades. Pop. 88,000.

West Calder, vil. and dist. (incl. Addiewell) of Midlothian, Scotland, 16 m. from Edinburgh. Shale is mined in the dist., and crude oil and its many by-products form the chief industries. There are sev. coal mines in the area. Pop. (vil.) 5500; (dist.) 8000.

West Chester, bor. and co. seat of Chester co., Pennsylvania, U.S.A., 25 m. W. of Philadelphia. It has large mkt gardens and dairy farms and manufs. metal products, canned goods, machinery, hosiery, and lumber products. A state teachers' college is here. Pop. 15,170.

West Flanders (Flem. *West-Vlaanderen*), most westerly prov. of Belgium, bounded on the E. by the Netherlands and E. Flanders, S. by Hainaut and France, W. by France, and NW. by the

N. Sea for about 40 m. As in E. Flanders, the country is flat. The soil of the polders is very productive, and the plain of Flanders is well cultivated. Agriculture and cattle breeding are the chief occupations of the inhab. Flax, hops, and tobacco are grown. The people are also engaged in fishing, and in weaving, spinning, lace-making, bleaching, etc. In the narrow unfertile belt of sand dunes lie close to each other the famous seaside resorts of which Ostend and Knokke are the most important. Other important towns are Bruges (the cap.), Ypres, and the industrial centres of Courtrai, Mouscron, Roeselare, Menin, and Izegem. Area 1248 sq. m.; pop. (1955) 1,032,170. See also FLANDERS.

West German Republic, see FEDERAL GERMAN REPUBLIC.

West Ham, parli. and co. bor. of Essex, England, and an E. suburb of London, adjoining E. Ham. There are sev. manufs., and many workers are employed at the docks and the Stratford railway shops. During the Second World War W. H. was very heavily bombed. The pop. before the War was 270,000. The redevelopment scheme is based on a maximum pop. of 165,000.

West Hartlepool, modern tn built round the old vil. of Stranton, a co. bor. of Durham, England, on the NE. coast some 4 m. N. of the mouth of the Tees. The charter of incorporation was obtained in 1887. The main heavy industries are steel manufs., shipbuilding, and engineering, but since the Second World War new light industries have been developed. The tn has its own seaside resort at Seaton Carew, which is within the co. bor. Pop. 72,597.

West Haven, tn of New Haven co., Connecticut, U.S.A., on New Haven harbour. It manufs. aeroplane and gun parts, tyres, textiles, tiles, machinery, tools, hardware, pipe organs, beer, fertiliser, and buckles. Pop. 32,000.

West Highland White Terrier, breed of dog probably descended from the Cairn Terrier (q.v.), but existing as a separate breed for nearly a cent., and known as the Poltalloch Terrier when first exhibited. Dogs weigh from 14 to 18 lb. and bitches about 2 lb. less; its height is from 8 to 12 in. at the shoulder.

West Highlander Breed, see CATTLE.

West Hothly, vil. and par. of Sussex, England, 6½ m. from E. Grinstead. The church dates from the 13th cent., with traces of Norman work; and there is a 14th-cent. priest's house, now a museum. Pop. 1700.

West India Regiment. The regiment was formed in 1779 from Loyalist settlers who flocked to join the Brit. expedition against Savannah, Georgia. These settlers formed the S. Carolina Regiment, and the association with S. Carolina is commemorated by the crossed wreaths of laurel and Carolina laurel borne on the appointments. After the War of Independence the regiment was removed to Jamaica. In 1782 it had white and black troops. Recruits were obtained from the Negro slaves shipped from W.

Africa and were known as King's Men. After the abolition of slavery in 1841 W. Africans were still engaged, and the regiment permanently maintained 2 recruiting companies in Sierra Leone and Gambia, but from about 1880 onwards all recruiting was from the W. Indies. The officers were always British, as were most N.C.O.s, who were promoted from Brit. regiments of the line. In 1803 the regiment, which was now known as the 1st W. India, took part in the defence of Dominica, and, in 1809, in the conquest of Martinique and Guadeloupe. In the 19th cent. the regiment saw service in Central and S. America, and in the Ashanti Wars. In the Gambia campaign of 1892, 2 V.C.s were won, both by W. Indians.

In the First World War the 1st Battalion served in the Cameroons campaign and the 2nd Battalion in E. Africa. An additional W. Indian Corps, the Brit. W. Indies Regiment, was raised in 1915. This eventually comprised 11 battalions. The 1st and 2nd Battalions were sent to Egypt in 1916, followed by the 3rd and 4th. In the same year the 3rd and 4th were ordered to France as ammunition carriers, and successive battalions did service either as ammunition carriers or labour battalions in France. The 1st and 2nd Battalions saw fighting in Palestine, and a unit of 500 men took part in the E. African campaigns. The Brit. W. Indies Regiment was disbanded immediately after the war and the W. I. R. in 1927. These were revived during the Second World War as the Caribbean Regiment, which was mainly engaged on garrison duties in the W. Indies. The Caribbean Regiment was disbanded in 1947, but its Jamaican and Barbados battalions survive as the Jamaica and Barbados Regiments.

See A. B. Ellis, *History of the First West India Regiment*, 1885; J. E. Caulfield, *One Hundred Years' History of the 2nd West India Regiment*, 1899.

West Indies, archipelago extending in a curved chain from the Florida Channel (N. America) to within 7 m. of the coast of Venezuela (S. America), i.e. between 27° and 10° N. lat., and varying in size from 44,218 sq. m. the area of Cuba, to a few ac. They and their waters represent the Sp. Main of hist. and romance and, with the N. coasts of Central and S. America, enclose the Caribbean Sea, lying across the trade routes to the Panama Canal. The is. were called the W. I. because Christopher Columbus, who discovered them, believed when he cruised round Hispaniola (Santo Domingo) that he had reached India by a W. route. The alternative name is the Antilles. The total land area is nearly 100,000 sq. m., of which 73,742 sq. m. are independent, 12,500 Brit., 3556 Amer., 986 Fr., 403 Dutch, and 90 Venezuelan. (This area excludes Brit. Guiana, Brit. Honduras, Curaçao, and Netherlands Guiana or Surinam, which, having much in common with the W. I., are occasionally mentioned in this article; but includes the Bahamas, which lie outside the W. I. proper.) The archipelago may be divided

into 3 groups: (1) the Greater Antilles, consisting of Cuba, Haiti, and the Dominican Rep., all independent; Jamaica, and its dependencies (Turks and Caicos Is., and the Caymans, Brit.; and Puerto Rico, U.S.A.); (2) the Bahamas, Brit.; and (3) the Lesser Antilles, the semicircle of smaller Is. to the E. of the Greater Antilles.

The Lesser Antilles are divided among Great Britain, France, the Netherlands, the U.S.A., and Venezuela. In 1917 the U.S.A. bought the Virgin Is., formerly the Dan. W. I., from Denmark, the total area that changed hands being 132 sq. m. The Spanish called the Lesser Antilles, which are exposed to the prevailing NE. winds, the Windward Is. (*Islas de Barlovento*), and the Greater Antilles, the Leeward Is. (*Islas de Sotavento*), from their more sheltered position, but these terms are now applied exclusively to 2 entirely different groups of Brit. Is. The Windwards include Grenada, St Vincent, the Grenadines, St Lucia, and Dominica, forming the E. barrier to the Caribbean Sea between Martinique and Trinidad. The Leewards include Antigua (with Barbuda and Redonda), St Kitts-Nevis (with Anguilla and Sombbrero), Montserrat, and the Virgin Is. (the largest being Virgin Gorda). The Amer. Virgin Is. comprise St Thomas, St Croix, St John, and some neighbouring islets. The Fr. Is. are Guadeloupe, with its dependencies Marie Galante, Les Saintes, Désirade, St Barthélemy, and St Martin, and Martinique. Curaçao and its dependencies, Aruba, Bonaire, and other Is. are Dutch; and Margarita is Venezuelan.

Geology, Relief, and Hydrography. Most of the W. I. are of volcanic origin, though some, especially the Bahamas, are of coral formation. Many of the almost land-locked harbours, such as Castries, are craters of extinct volcanoes. The W. I. are really the peaks of a submerged range of mts known as the Caribbean Andes, which in the Tertiary period formed a link between N. and S. America. There is practically no running water in the W. I., though there are ample underground supplies. In the W. of Cuba are the Sierra de los Órganos, reaching a height of over 2500 ft, and at the extreme E. end of the Is. is a range of mts facing S., the Sierra Maestra (4000 ft mean altitude); but the Is. is divided into 2 parts by a large marshy depression 47 m. wide, between the N. and S. coast. In consequence of Cuba being largely composed of limestone, the drainage is partly underground, and many rvs. are lost in swamps. Hispaniola (Dominican Rep. and Haiti) is generally mountainous, the highest summit exceeding 10,000 ft. Puerto Rico is an elevated plateau with a large number of rvs. In Jamaica the Blue Mts exceed 7000 ft, but in the centre and W. is a limestone plateau with deep valleys with self-contained drainage. S. of Puerto Rico the Is. form a deeply submerged mt ridge separating the Caribbean Sea from the Atlantic Ocean.

Climate. The climate of the W. I., generally speaking, is healthy for Europeans, especially during the winter in the

season of the NE. trade winds. Many of the Is. are subject to hurricanes from Aug. to Oct.

Ethnology and Religion. The races inhabiting the W. I. when Columbus reached them were Arawak and Carib Indians. The Arawaks of the large Is. were soon exterminated, chiefly by the Spanish. There are still families of almost pure-blooded Caribs in Dominica and in St Vincent. Negroes have increased since their emancipation, and quite two-fifths of the total pop. are now of Negro or mixed blood. There has been also a considerable influx of labour from India to work in the plantations. Chinese, who came in smaller numbers, have all abandoned estate work for trade or professions. In the Guianas there are numbers of Indonesians. In Cuba and Puerto Rico whites are in the majority, but they are greatly outnumbered in the other Is., and in Haiti practically the whole pop. is Negro.

The Negroes are generally nominally Protestant, but in Cuba and Puerto Rico the religion is Rom. Catholic, the people being of Sp. descent. The Brit. colonies, except those taken from Spain or France, are mostly Protestant.

The hist. of the Brit. and other colonies in the separate articles on the different Is. indicates the origin and progress of the white pop. of the W. I.

Slavery and the Slave Trade. The Spanish were the first to carry slaves from Africa to the W. I. At the end of the 16th cent. the Dutch entered the trade, and in 1662 and 1672 Eng. African Companies were formed to carry on the trade. At the end of the next cent. some 25,000 Negroes were shipped annually to the Brit. colonies. In 1807 an Act was passed in the Commons for the abolition of the trade, and in 1834 slavery was abolished. Slavery was finally abolished in the Fr. W. I. in 1848; in the Netherlands W. I. in 1863; and in Puerto Rico in 1873. Slaves were gradually manumitted in Cuba under an Act of 1879, total abolition being decreed in 1886.

Production. The flora of the W. I. is of great variety and richness. The sugar cane and tobacco plant are extensively grown, bananas, citrus, and cocoa are exported, and among other crops are beans, peas, rice, maize, and Guinea corn. Forests are numerous and wide-spreading, and produce valuable woods and abundant fruits. Palms are in great variety, and there are sev. species of gum-producing trees. Where possible, cattle-breeding is practised. Goats and large flocks of sheep are kept. Trinidad boasts a famous natural phenomenon, a pitch lake which provides asphalt for export, recent ann. production being about 143,000 tons. Trinidad also produces petroleum. Jamaica has large deposits of bauxite.

The Cane-sugar Industry. The total production of cane-sugar in the W. I. in the year 1953-4 was 10,000,000 tons (estimated), total world production being some 35,000,000 tons. The extension of the cane-sugar industry has caused a slump in the cane-sugar industry, but

various factors have combined to improve the position in the Brit. W. I.

West Indian Development. Economic distress led to widespread rioting in the Brit. W. I. in 1938, and a Royal Commission was appointed to inquire into conditions there. Its recommendations were embodied in the Colonial Development and Welfare Act of 1940 (see COLONIAL DEVELOPMENT AND WELFARE), which provided funds for the social and economic improvement not only of the Brit. W. I. but of all the Brit. dependencies. A comptroller with a staff of expert advisers was appointed to the Brit. W. I. to assist W. I. govts. in pro-

Tobago, and the Windward Is. The federal legislature consists of a governor-general, a senate, and a house of assembly, making a div. of powers on lines rather similar to the general pattern of the Australian constitution. The federal cap. will be sited in Trinidad. The estab. of the federation is seen as a final step towards the attainment of full dominion status (q.v.), the combination of the is. into a larger economic unit helping them to attain collective self-sufficiency and an enhanced bargaining power in negotiation. Provision is made for the subsequent adherence to the federation of Brit. Guiana or Brit. Honduras if their peoples

Studio Briggs

TRINIDAD: WORKERS AT THE PITCH LAKE

paring development plans which their Colonial Development and Welfare grants helped to finance. Grants and loans to the Brit. W. I. (including Brit. Guiana and Brit. Honduras but excluding the Bahamas) approved under the first and subsequent Colonial Development and Welfare Acts amounted at the end of Mar. 1956 to nearly £35m. The W. I. also benefited from certain carefully administered schemes. The Colonial Development Corporation (q.v.) operates 18 projects in the Brit. W. I. with a total authorised capital of £7,500,000. The problems of the Brit. W. I. spring largely from over-population and economies insufficiently diversified.

West Indian Federation. A series of conferences beginning at Montego Bay, Jamaica, in 1947 led to the signing in London in 1956 of an agreement to set up a federation of the W. I. comprising Barbados, Jamaica, the Leeward Is. (excluding the Virgin Is.), Trinidad and

declare themselves in favour—which up to date they have not done. Lord Hailes was appointed first governor-general in 1957. See also articles on separate is.

West Kazakhstan, oblast (prov.) of the Kazakh S.S.R., extending to the W. and NW. frontiers of the rep. Livestock raising is main occupation, but wheat and millet are grown in the N. Pop. 360,000.

West Kent Regiment, The Queen's Own Royal, formerly the 50th and 97th Regiments. The 50th was raised as the 52nd in 1755 and was renumbered in 1756. The title 'West Kent' was adopted in 1782. The 50th became Queen's (Adelaide's) Own in 1831, having served in Egypt, the Peninsula, and in India. It formed part of Sir John Moore's columns on the retreat to Corunna. The 97th Foot, raised in 1824, fought in the Crimea and in the Indian Mutiny. Since the amalgamation of the 50th and 97th in 1881 the regiment has served in the Egyptian and Sudanese campaigns of the eighties, in S. Africa, and in both world wars. Eighteen battalions were raised in 1914-18, and 11 of them served in France, Italy, Gallipoli, Palestine, and Mesopotamia.

In the Second World War both regular and Territorial battalions served in France up to June 1940; the fourth battalion was at the taking of Kohima in Burma, and others fought in the Mediterranean. The W. Kents and the Buffs are to be amalgamated by 1962. See H. D. Chaplin, *The Queen's Own Royal West Kent Regiment, 1920-1950*, 1954.

West Kirby, holiday resort of Cheshire, England, at the mouth of the Dee in the Wirral Peninsula, 8 m. from Birkenhead. It has a large marine lake and sporting facilities. It is part of the urb. dist. of Hoylake (pop. 31,200). Pop. 17,000.

West Lothian, formerly Linlithgowshire, co. of Scotland, bounded by Lanarkshire and Stirlingshire to the W. and NW., Midlothian to the E., and the frith of Forth to the N. The E. termination of the Antonine Wall is just S. of Bo'ness. The interior is hilly in the S., with heights of up to 1000 ft., and there is a low coastal belt. The Avon and the Almond are the only rvs., and Linlithgow Loch the only lake. Arable and considerable dairy farming is carried on, with oats, barley, grasses, wheat, and potatoes the chief crops. Coal and fireclay are extensively mined, and there is an important shale-oil industry. There are steel and iron foundries, engineering works, also chemical, fertiliser, refractories, and electronic equipment manufs., and sev. distilleries and paper mills in the co. Linlithgow is the co. tn, other tns being Bathgate (with important railway marshalling yards), South Queensferry, Bo'ness (with a harbour and docks), Armadale, Whitburn, and Broxburn. The co. returns 1 member to Parliament. Area 120 sq. m.; pop. 90,112.

West Lulworth, and **East Lulworth**, 2 vils. of S. Dorset, England. W. L. is 8 m. from Wareham, and near by in the

par. are Lulworth Cove, a famous beauty spot and bay about 500 yds across almost enclosed by hills, and Durdle Door. E. Lulworth, with the Purbeck Hills and woodlands, is one of the most famous beauty spots in the country. Near Lulworth Castle (destroyed by fire in 1929) at E. L. stands the Rom. Catholic chapel, built in 1786, and the first to be erected openly as such in England since the Reformation (apart from those attached to foreign embassies, etc.) Pop. (of W. L.) 650; (of E. L.) 300.

West Malling, see EAST MALLING.

West New York, tn in Hudson co., New Jersey, U.S.A. Its chief manufs. are radio parts, clothing, textiles, embroideries, leather goods, and toys. Pop. 37,680.

West Orange, tn of Essex co., New Jersey, U.S.A., adjoining Orange co., and 13 m. W. of New York city. It was chartered as a tn in 1900. The Edison plant produces electrical accessories; Edison estab. laboratories and his home here in 1887. Other manufs. are metal products, tiles, and clothing. There are stone quarries and some poultry-keeping. Pop. 28,600.

West Palm Beach, tn of Florida, U.S.A., co. seat of Palm Beach co., c. 70 m. N. of Miami. It is connected by bridges and ferry with Palm Beach, for which it is the traffic and business centre. It is a port of entry, with a deep harbour, and a fashionable resort. It manufs. air-conditioning equipment, prefabricated buildings, concrete products, mirrors, beverages, and preserves. Pop. 43,162.

West Point Military Academy. The U.S. Military Academy is situated at W. Point, on the r. b. of the Hudson R., in Orange co., New York, about 50 m. N. of New York city. With one or two exceptions the theoretical and practical instruction of the strength of 2496 cadets is carried on by commissioned officers, aided by detachments of enlisted men from the sev. arms and services. Cadets are appointed between the ages of 17 and 22 years (or 19 and 22 years if selected from the Army or the National Guard); and the course of study is 4 years, and upon graduation cadets may be commissioned as second-lieutenants in the Regular Army. See S. Forman, *West Point*, 1955; Col. F. P. Todd, *Cadet Gray*, 1955; J. Engeman, *West Point, the Life of a Cadet*, 1956.

West Prussia, former Prussian prov. with a coast-line on the Baltic, between Pomerania and E. Prussia (qq.v.). Its ter. was acquired from Poland in the partition of 1772, and from 1824 to 1878 it was amalgamated with E. Prussia. Part of W. P. passed to Poland and Danzig (q.v.) in 1918, but was retaken by the Germans in 1939. The ter. of W. P. now forms part of the Polish provs. of Gdańsk and Bydgoszcz (qq.v.).

West Riding Regiment, see DUKE OF WELLINGTON'S REGIMENT.

West Saxon Dialect, see ENGLISH LANGUAGE.

West Surrey Regiment, see QUEEN'S ROYAL REGIMENT (WEST SURREY).

West Virginia, the 'Panhandle State,' S. Atlantic state of the U.S.A., separated from Virginia in 1863. It has an area of 24,181 sq. m., and is bounded on the NE. by Pennsylvania and Maryland, on the S. and E. by Virginia, and W. by Kentucky and Ohio. It is about 240 m. long from N. to S. and 160 m. broad. The Ohio R. forms the W. boundary of the state and many of its tribs. flow through it. The Potomac forms part of the N. boundary, while the Allegheny and Shenandoah Mts border the SE. The climate is agreeable and healthy. About 60 per cent of the soil is covered with forest; W. V. produces more hardwood than any other state, except Arkansas. The soil is fertile, and many of the mts are topped with flat meadows. The chief agric. crops are Indian corn, wheat, oats, rye, buckwheat, potatoes, hay, and tobacco. The chief fruits grown are grapes, apples, plums, peaches, and pears. Farming units are small, averaging about 89 ac. Soft coal, natural gas, petroleum, and stone are produced. Manufs. include iron and steel products, glass, and chemicals. Primary education is free for all from 6 to 21 years, and compulsory between the ages of 7 and 16. W. V. has 25 institutions of higher learning—9 colleges and univs., teachers' and junior colleges, and 3 negro colleges. Pop. (1950) 2,005,552. The state cap. is Charleston (q.v.), but among the most important cities is Wheeling (q.v.), where most of the important industries, except salt manuf., are located. The largest city is Huntington (q.v.); other tns are Clarksburg, Parkersburg, and Fairmount (qq.v.). There are over 4000 m. of railway, and the state has a new system of improved highways totalling 33,000 m. There are 33 airports. There is a senate of 32 members and a House of Delegates of 94; W. V. sends 2 senators and 6 representatives to Congress. See C. H. Ambler, *West Virginia: The Mountain State*, 1940.

West Wall ('Siegfried Line'), Ger. line of fortifications constructed opposite the Fr. Maginot line before the Second World War. The first defences of the W. W., actually begun in 1934, passed between the R. Main and the Wetterau dist. and across the plain bounded by the Taunus and Vogelsberg. This line, about 100 km. long, ran from Aschaffenburg through Heiber, Gelnhausen, Wächtersburg, Büdingen, Stockheim, and Reichelsheim. Another line of defences ran from Mosbach, at the foot of the Odenwald, Gundelsheim, Heilbronn, Lauffen, and Beilighheim to the region between Leonberg and Sindelfingen, 15 km. W. of Stuttgart. Other defences in the former demilitarised zone ran along the ridge of the Black Forest, beginning S. of Pforzheim and ending on the Swiss frontier, and from Voreifel to the Palatinate. Later work was begun on the line of defences from the Emmerich region to the vicinity of Düsseldorf. The view taken by the Ger. general staff was that this huge fortified girdle could be held by very small forces against the entire Fr. and Belgian armies,

so that Germany's main offensives could be conducted freely elsewhere. After the Second World War had begun the Germans extended the W. W. eastwards from its S. extremity at Basel to Lake Constance, for a length of about 100 m. along the Ger.-Swiss frontier.

The W. W. proved a formidable obstacle to the advance of the Anglo-Amer. armies, who, however, aided by the air forces, overcame the defences in about 6 months. One fatal flaw in the W. W. was that, in the Palatinate, and in the Eifelberg, the Germans were compelled to fight with the Rhine at their backs.

West Wycombe, see WYCOMBE, WEST.

West Yorkshire Regiment, The (The Prince of Wales's Own), formerly the 14th Foot, raised in 1685. It served at Namur (1695) and later at Gibraltar. From 1766 to 1778 it served in the W. Indies and America. It distinguished itself at Farns, 1793, with which its regimental march 'Ca Ira' is associated. The regiment took part in Moore's retreat on Corunna, in Wellington's victory at Waterloo, in the capture of Bhurtpore, 1825, and in the Crimean, Afghan, and S. African wars. During the First World War it raised 31 battalions and served in France, Flanders, Italy, Gallipoli, and Egypt. In the Second World War some units of the regiment served on the W. front, others in N. Africa and Burma. The E. and W. Yorks Regiments were amalgamated in 1958 to form the Prince of Wales's Own.

Westbury, Richard Bethell, first Baron (1800-73), lawyer and politician, b. Bradford-on-Avon, and educ. at Bristol and Wadham College, Oxford. He was called to the Bar in 1823, and entered Parliament as a Liberal in 1851. He became solicitor-general, 1852, and attorney-general, 1856. In 1861 he was made lord chancellor with the title of Baron W. W. was especially interested in law reform, the first and second Statute Law Revision Acts being passed under his guidance. Popularly he was known for his biting sarcasm.

Westbury, mkt tn of Wilts, England, 5 m. SSE. of Trowbridge, and an important railway junction. It has a fine old church with historic associations. The main industries of W. include leather working, the making of W. of England cloth, gloves, tobacco, food manuf., building, and there is a large engineering contracting firm. Pop. 5385.

Westdeutsche Allgemeine, Ger. daily newspaper, founded in 1948. It is the largest paper in the densely industrial area of the Ruhr, and is pub. in Essen, with 22 local eds. in different cities of the Ruhr area. The paper has a circulation of 375,000, and enlarged week-end eds. with supplements on technical and legal matters, automobiles, and travel.

Westerham, mkt tn of Kent, England, 5 m. from Sevenoaks, and 26 m. from London. James Wolfe was b. at the Vicarage there, and lived at the house now known as Quebec House. Westerham Hill (810 ft) is the highest ground

in Kent. Sir Winston Churchill acquired Chartwell as his home in 1925. Pop. 3000. *Westerland, see SYLT.*

Westermark, Edward Alexander, (1862-1939), Finnish philosopher and sociologist. His *History of Human Marriage* and *The Origin and Development of Moral Ideas* were pub. in England. He was attached to the univ. of London from 1904 as lecturer in and later prof. of sociology and also held the Chair of Philosophy at Helsinki Univ.

Western Australia, state of the Commonwealth of Australia (q.v.), comprising nearly one-third of the Australian continent, or all that portion W. of 129° E. long. It is bounded on the NW. and S. by the Indian Ocean, and on the E. by N. Central, and S. Australia. The total area is 975,920 sq. m., extreme length from NE. to SW. 1480 m., extreme width from E. to W. 1000 m.

Physical Features. The S. and W. coast-lands are more or less flat and sandy, with comparatively few natural harbours or other indentations, until the Kimberley div. is reached, where the character of the coast becomes bold and broken, and fringed with numerous is. The total length of the coast-line is estimated to be 4350 m. The is. are generally unimportant. The greater portion of the far interior may be described as an immense table-land, with an altitude of from 1000 to 2000 ft above sea-level, the surface of which consists in parts of sand-dunes, varied by wide stretches of clayey soils. Long, straggling rivs., broken during the summer into a series of pools, cross the country as far inland as the hills extend, widening in many cases nearer the coast into large sea-estuaries. In the Kimberley dist. the prin. range of hills is the King Leopold Range, the highest point of which is Mt Broome (3040 ft). In the NW., between the Fortescue and Ashburton R.s. the highest range is the Hamersley, with Mt Bruce (4024 ft) in the vicinity. The Darling Range, which extends from Yatheroo in the N. to Point d'Entrecasteaux in the S., a distance of 300 m., reaches its highest elevation, 1910 ft above sea-level, at Mt Cooke in the Cockburn Sound dist. In the S. the loftiest range is the Stirling Range, with Bluff Knoll (3840 ft). Between it and the coast, and parallel with both, extends the less elevated Porongorup Range.

The prin. rivs. are: in the N., the Ord, with its tribs., Denham, Bow, Negri, and Panton; the Pentecost, with its trib., the Chamberlain; the Durack, Drysdale, King Edward, Prince Regent, Charnley, Isdell, and the Fitzroy, with its tribs., the Margaret and Hann R.s. and Christmas Creek; in the NW., the De Gray, with tribs., Oakover and Shaw; the Yule, Fortescue, and Ashburton, with its tribs., the Henry and Hardy. Draining into the W. coast are the Minilya, Gascoyne, with its trib., the Lyons; the Wooremele, the Murchison, the Greenough, the Swan, on which is Perth, which inland is called the Avon (W. A. was originally known as the Swan R. Settlement); the Murray, the Collie, and the

Preston; and, on the S. coast, the Blackwood, Donnelly, Warren, Deep, Frankland, Denmark, Hay, Kalgar, Pallenu, Gairdner, Fitzgerald, and Phillips R.s. There are no lakes of any considerable importance. Between the Darling Range and the coast are a few salt-water lagoons, and many fresh-water lakes, mostly nothing more than swamps during the dry season, and none of any economic importance. The so-called lakes of the interior, which are frequently of very considerable area, are, except after the occasional heavy rains, merely immense salt marshes. W. A., though not possessed of majestic mt heights, has a share of natural beauty as rich and varied as may be found, exhibited in, to name 2 features out of sev., the ruggedness of its hills and the grandeur of its forests. On the Warren R. in the SW. it is not unusual to find Karri trees which attain 300 ft in height. The most remarkable special feature is found in the many beautiful limestone caves, those of the Margaret R. being of exceptional grandeur and picturesqueness. The climate is most temperate, especially in the SW. where excessive cold is never, and excessive heat very rarely, known.

Land Settlement. Some two-thirds of the area of the state is suitable for pastoral purposes, immense tracts having been proved eminently so. The portion of the state more immediately fitted for agric. purposes and closer settlement is the SW. div. It has large areas specially suitable for mixed farming, dairying, potato and fruit growing, and large portions are covered with forests of considerable commercial value.

Production and Industries. It is now some time since the immense capabilities of the state as one of the world's great wheat producers were generally realised. During the period 1920-39 marked progress was made in the production of wheat and also wool. Until about 1900 the state did not produce enough wheat for its own requirements, but for some years past the export of wheat has been one of the state's chief assets. In 1919 the production of wheat totalled 11,222,950 bushels, and by 1924 this had been more than doubled. Between the latter year and 1930 the production increased from 23,887,397 to 53,504,149 bushels. In 1954-55, 34,300,000 bushels were produced from over 2,979,151 ac. Other crops included oats (9,584,559 bushels), barley (2,804,706 bushels), hay (305,052 tons), and potatoes (43,565 tons). From 1924 to 1929 the production of wool increased from 43,000,000 to 67,000,000 lb. The wool clip in 1948 was 93,000,000 lb. Fruit production has increased considerably in recent years and has created a large export trade to foreign markets. In 1954-55, 1,704,635 bushels of apples were produced, and 2322 tons of currants and raisins. Over 8951 cwt. of tobacco was grown. A very extensive portion of the SW. of the state, containing many millions of ac., is especially suitable for wheat-growing, whilst the hills of Darling Range and many other portions of the

state produce apples, oranges, grapes, and other excellent fruit in the greatest variety. Along the SW. coastal plain irrigation has been developed in 3 main areas totalling 72,000 ac. Stock raising and dairying are the chief beneficiaries.

Government of Western Australia
KALGOORLIE: POURING GOLD
AT CHAFFER'S MINE

For a long period lead and copper mines were worked in the vicinity of Geraldton, but activity gradually declined until the Second World War; lately there has been renewed interest in the field. Copper is found, however, in other dists., notably those of Mt Morgan, Phillips R., and W. Pilbarra. The other mineral resources of W. A. were almost unknown and quite undeveloped until about 1900. Gold was found in considerable quantities in the Kimberley goldfields in 1887 and this, attracting experienced miners, led to the discovery of great quantities at Coolgardie and Kalgoorlie in 1892-3. After the opening up of the goldfields of W. A., gold mining became for a time the prin. industry of the state, and indeed the state produces as much as 79 per cent of the total gold output of Australia. The aggregate output to the end of 1954 was

valued at £2363,284,275. The output in 1954 was 850,540 fine oz., valued at £213,318,818. Good coal is found at Collie in the SW., and there is evidence of its existence in the Champion Bay and Irwin R. dists.; output in 1954 was 1,018,343 tons. Large deposits of stream tin were discovered in 1888 at Greenbushes, on the Blackwood R., and much tin has also been raised at Marble Bar. Other prin. minerals are arsenic, silver, asbestos, and pyritic ore. In 1953-54 the value of the total mineral output was £14m. Over half a million gallons of wine are made annually. Timber is also an important product, W. A. Jarrah being known throughout the world for its durability. The value of timber exports is over £1m. annually. There are pearling banks at Broome and on the NW. coast generally. The more important exports of local products for the year 1954-55 with Australian currency values were wheat (£13,738,862), flour (£3,609,745), wool (£29,648,228), timber (£1,920,987), hides and skins (£1,378,747), meat (£2,272,247), fresh fruit (£1,922,627), and butter (£70,813).

Education. Free education is available. Primary education is compulsory. Technical schools are estab. in the prin. centres. The Univ. of W. A. in Perth (also free) provides courses for degrees in arts, science (including agriculture), engineering, etc.

Communications and Population. There are 4348 m. of main railroads, owned and worked by the W. A. Gov. There are also 277 m. owned by the Midland Railway of W. A., and 450 m. of Commonwealth line. There are 2 Commonwealth Gov. interstate airlines from Perth to other state caps., and 2 main companies maintain air communication within W. A. There is a high-power Commonwealth Gov. wireless station at Applecross, between Perth and Fremantle. There are also lower-power stations at Esperance, Geraldton, Broome, and Wyndham. The chief port is Fremantle, which is the first and last port of call in Australia for all mail and other liners using the Suez route, and for many on the Cape route. The chief town is Perth, which had a census pop. in 1955, within the 10 m. radius area of the metropolitan dist., of 359,000, which total includes the Fremantle suburbs, the pop. of which was 32,061. The ports, besides Fremantle, are Albany (8265), Bunbury (9870), Geraldton (8308), and Broome (1264).

The chief centre of the agric. dists. is Northam (5725), of the goldfields areas, Kalgoorlie-Boulder (22,834), and of the coal mines, Collie (8668).

Constitution and Government. Responsible gov. was granted to W. A. in 1890. The legislature consists of 2 Houses: the Legislative Council, with 30 members, and the Legislative Assembly, with 50 members. Both Houses are elective. Women are not disqualified by reason of sex either for election or as voters.

Early History. Probably the earliest exploration was that which is recorded in the words cut into the tin plate now in

the State Museum at Amsterdam, which was nailed on 25 Oct. 1616 by Dirk Hartog, the commander of the Dutch vessel *Eendracht*, to a post erected on Point Inscription on what is now Dirk Hartog Is. The first Englishman to land on these coasts was Wm Dampier, who, in 1688, in the *Cygnel*, landed at King Sound. Fr. navigators followed during the next cent., notably d'Entrecasteaux in *La Recherche* in 1792, de Freycinet in 1818, and de Bougainville in 1825. In 1791 Vancouver, in the *Discovery*, took formal possession of the country above King George Sound; in 1801 Matthew Flinders in the *Investigator* explored the S. coast, which, at his suggestion, subsequently received the name of Australia; whilst between 1818 and 1822 Philip Parker King charted the N. coast. In 1826 the gov. of New S. Wales sent some convicts and a detachment of soldiers to King George Sound and formed a settlement then called Fredericks Town. In 1827 Capt. James (later Sir James) Stirling surveyed the coast from the Sound to Swan R. and in 1829 Capt. (later Sir Charles) Fremantle in H.M.S. *Challenger* took possession of the ter., and founded the Swan R. Settlement, which is now the state of W. A., and the tns of Perth and Fremantle. Capt. Stirling was the first lieutenant-governor.

Aborigines. The aboriginal pop. was estimated in 1954 to be 14,500 (excluding half-castes), some 8500 of whom are in touch with civilisation, and the remainder in those parts of the state as yet uninhabited by the white man. The aborigines are still assisting to no small extent in the development of the N. portion of the state, chiefly as stock boys, shepherds, station hands, domestic servants, etc. Generally speaking, the aborigines are not hostile, though at times they are troublesome owing to their proneness to cattle-killing. The policy of the Aborigines Dept is in the direction of inducing the natives to support themselves by their own labours, and this policy is worked through a number of native stations and settlements set up in the N. and S.

Western Breed, see SHEEP.

Western Desert, administrative div. of Egypt comprising the Egyptian portion of the Libyan desert. The area was first called W. D. during the First World War, to distinguish it from the E. (Sinai) Desert. During the Second World War the term was sometimes extended to cover the desert in Libya.

Western Front in Second World War. For events leading up to the outbreak of

war in 1939 and the opening up of a W. F., see EUROPE (*History*) and WORLD WAR, SECOND.

A. CAMPAIGNS OF 1939-40.

September 1939-April 1940. There was no serious fighting on the W. F. before May 1940. When the Second World War started the urgent problem of the W. Allies was to render effective aid to Poland. Direct aid was possible only by attempting the hazardous task of forcing a military expedition through the Baltic. Indirect aid could only be really effective if adequate forces were deployed on the W. F. to compel the Germans to divert a substantial part of their E. armies to the defence of the Rhineland. With a half-hearted France relying passively on the Maginot Line (q.v.) and a few Brit. divisions with no armour, a frontal assault on the W. Wall (q.v.) or Siegfried Line was out of the question. At the start of the war, however, the Fr. armies under Gen. Gamelin advanced with cautious deliberation against the Siegfried Line; by 5 Sept. they were along the frontier between the Rhine and Moselle, and finally they occupied an area of about 250 sq. m. within the Ger. frontier. There was strong Ger. resistance by 12 Sept. and counter-attacks began 3 days later, when the Germans were free to switch all their forces from Poland to the W. By the end of Oct. the Fr. armies had fallen back on their own frontier and operations were reduced to a few raids and artillery duels, with patrol activity. During this time Brit. troops were crossing the Channel and by 11 Oct. about 160,000 men had reached France. Early in Dec. Brit. troops were in occupation of a portion of the Maginot Line in contact with the Germans, who, however, far from contemplating any direct assault, were making strenuous preparations to deliver a flank attack through the Low Countries. There was no intensive activity in the air in this early period of war on the W. F. There was no bombing of back areas or communications. Troop movements on both sides took place without interference from the air. There were only reconnaissance flights and 'leaflet raids' by the R.A.F. over Germany.

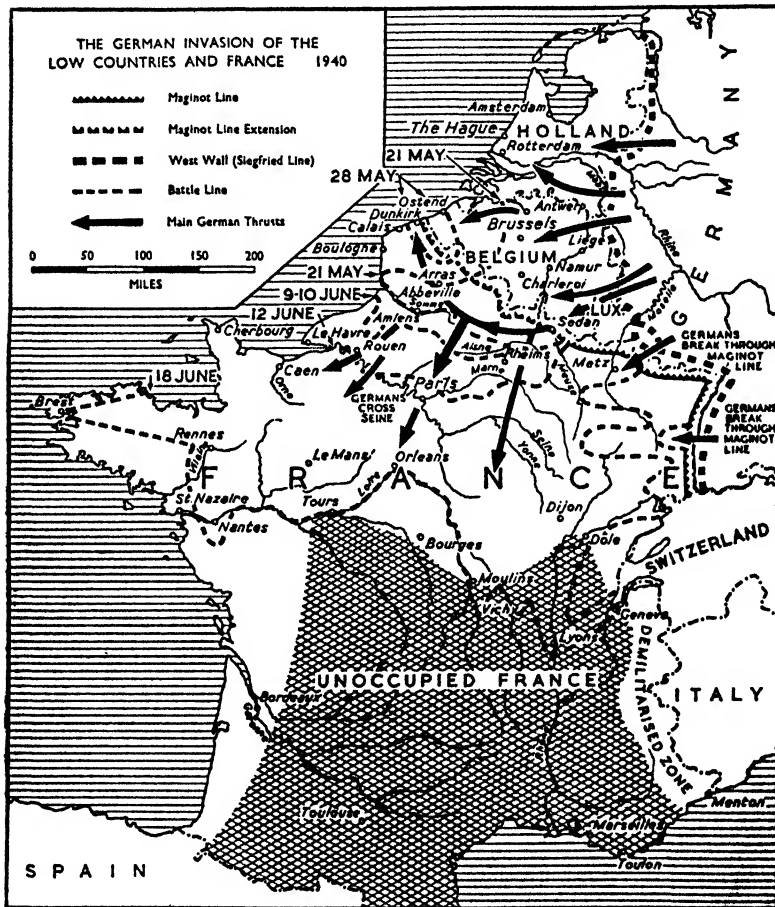

Invasion of the Low Countries, 1940. At 3 a.m. on 10 May Ger. land and air forces launched an attack on the Netherlands, Belgium, and Luxembourg, and simultaneously carried out extensive bombing raids at many places in the Low Countries and also on a number of tns in France. In the meantime, fierce resistance was offered by Dutch and Belgian troops and immediate appeals for help were made to Britain and France. In Luxembourg, a large part of which was immediately overrun by the enemy, the Grand Duchess and the gov. left the country and reached N. France.

The Ger. assault was accompanied by heavy air attacks on the main aerodromes in Holland and Belgium and the movement of masses of mechanised troops across the frontiers. The Dutch resisted

desperately throughout the day (10 May), while thousands of Ger. parachute troops landed in many parts of the country in an effort to seize important strategic points.

The Belgian army put up a fierce resistance and, having destroyed the roads,

very large air forces during the night, and many Fr. aerodromes were bombed. Attacks were carried out on the civilian pop. in the Low Countries and in France. It was soon evident that Holland would not be able to prolong her resistance. Parachutists continued to be dropped on

prevented the enemy from making any progress on that day, though Brussels, Antwerp, and other cities were indiscriminately bombed. In the early morning Brit. and Fr. mechanised forces, which in response to the Belgian appeal had crossed the frontier, proceeded swiftly towards the E. and N. frontiers, while Allied planes and Brit. naval units co-operated with Dutch planes and ships.

In France the Germans attacked with

Dutch soil in great numbers: soldiers landed from barges which had been lurking in Dutch rivers for days, while Nazi sympathisers in the Dutch towns co-operated in operations by sabotage and other forms of treachery. Moreover, bombing continued on the crowded cities, which were almost totally unprepared for air raids. In the land operations the Ger. capture of Maastricht (11 May) was the beginning of the end in that quarter of the W. F. In

Belgium, however, the Belgian army continued to hold the 'demolition line,' considerably in advance of the first defence line, and there was heavy fighting on the Albert Canal, on the Meuse, and in the Ardennes.

British and French Advance through Belgium. On the succeeding day, fighting on the whole W. F. from Holland to N. France was very fierce, the Brit. and Fr. march through Belgium continuing with great speed. Intense Ger. air activity, however, continued on a large scale over the Low Countries and N. France, hundreds of planes being in action. Despite the flooding of low land by the Dutch, the enemy crossed the Meuse in the prov. of Limburg and penetrated into Belgium, thrusting across the Albert Canal towards Hasselt. The success of this decisive manoeuvre was due to an overwhelming air superiority. The activities of spies or 'fifth columnists' (see FIFTH COLUMN), the masses of tanks, the thrust of heavily armed motor cyclists racing far ahead of the tanks into the Belgian and Dutch cities, the merciless bombing of open cities and towns, and the hampering of the movements of the troops by masses of terrified and panic-stricken civilians, inevitably spelled ultimate disaster. But it is conceivable that if certain bridges over the Meuse had been destroyed the German advance might have been halted and perhaps eventually the lines might have become stabilised as in the First World War. On 13 May the Ger. forces in Holland broke through the first line of defence on the IJssel and made a bold thrust along the Maas and the Waal, with the obvious intention of driving a wedge between Belgium and Holland. Here again an important factor in the Ger. success was the omission to blow up a bridge near Arnhem, an omission due to fifth-column activities, as indeed it was in most of the notorious cases on the W. F. where bridges were left intact; over these the Ger. tanks, armoured cars, and cyclists passed at will. On this day, 13 May, the Germans employed about 1000 heavy tanks in Belgium, the centre of their attack being the Ardennes area, where immense armoured forces and bombing planes made a combined effort to force the way through to the Meuse and towards Longwy and Montmédy. On the succeeding day (14 May) the Germans had reached the Meuse from Liège to Sedan and the battle raged from the Moselle to Longwy.

Allied Evacuation of Sedan. Sedan was evacuated in the evening of 14 May. The Germans, by the power of their mechanised forces, broke through the vitally important Belgian defences at the angle of the Meuse and the Albert Canal, their object being to overwhelm Belgian resistance before liaison could be established with the Fr. and Brit. Forces. Meanwhile the R.A.F. continued incessant day and night attacks on Ger. strategic points and columns, often against vastly superior numbers. In Holland on the 13th the position for the Dutch had suddenly become desperate owing to the Germans

crossing the Moerdijk bridge which brought their forces in rear of the flood defences and linked up with their troops at Rotterdam. This city was the scene of ceaseless air attacks.

On 15 May the Brit. Expeditionary Force in Belgium was heavily attacked on its entire front, fighting being especially severe around Louvain. Farther S. the enemy drove a salient into the Fr. lines, though their advance was hampered by air attack from the Fr. and Brit. aircraft. In Holland the Dutch continued to hold out in the is. of Zeeland, but the Germans now entered the remainder of Rotterdam, Amsterdam, and The Hague and, indeed, were in full possession of the country. The Dutch Army was ordered to lay down its arms. Fighting in Belgium continued with unabated violence, the Belgian army retreating in good order in the N. and central parts of the country. On the Meuse the battle also continued, and, in the S., the French withdrew to their main defensive positions (a continuation of the Maginot Line), leaving Sedan uncovered. At Liège the forts were still holding out, though isolated, and the enemy penetrated beyond the city. On 14 May von Rundstedt's armoured columns crossed the Meuse between Sedan and Namur, breaking the hinge of the Allied advance into Belgium. The tanks drove on westward, whilst behind them the gap was widened. The Brit. and Fr. forces were thus compelled to retreat, and abandon Brussels and Antwerp: the movement began on the night of the 16/17th. On 17 May the Germans entered Brussels, Louvain, and Malines, the Allies establishing themselves E. of the cap. in good defensive positions. The Belgian Gov. moved to Ostend. The Germans entered Antwerp on 18 May but the Brit.-Belgian line remained intact and repulsed all attacks. On the next day Weygand succeeded Gamelin as commander-in-chief of the Allied forces. At the same time some 15 Fr. gens. were relieved of their commands. By these changes it was hoped to retrieve the desperate situation, but the will to fight of the troops was more important, and this seemed to be disappearing. (See FRANCE, History.)

German Advance on the Channel Ports. On 19 May the main Ger. drive from the Meuse, having pierced the Fr. line between Valenciennes and Sedan, turned westward towards the Channel ports, both Le Cateau and St Quentin falling into their hands after stubborn resistance.

On 20 May the drive was vigorously continued, and on that day Laon fell and the Germans advanced S. to the historic Chemin-des-Dames. They then reached Abbeville, Amiens, and Arras on the following day; but in Belgium the Brit. and Fr. forces still held the line of the Scheldt and threw back the enemy both there and S. of the Scarpe. The situation was still more ominous on the morrow when the Ger. motorised forces advanced farther towards the Channel N. of the Somme in the direction of St Pol and Montreuil-sur-Mer. But there were fierce

counter-attacks between Arras and Douai by the Brit. troops and heavy fighting between Cambrai and Valenciennes. The Germans now held an immense bridgehead over the Somme, and the B.E.F., the Fr. First Army and other units, and the Belgians were cut off, though their S. flank was reasonably solid along the canals between Escaut and La Bassée, and to St Omer along the R. Aa. The main communications were cut and only N. Channel ports available. The B.E.F. and the Fr. First Army began to withdraw to the R. Lys, and whilst this movement was in progress another calamity befell them. On 28 May King Leopold of the Belgians capitulated to the enemy.

Evacuation of B.E.F. at Dunkirk. As late as 27 May the Brit. front remained intact, and at Aire, on the Lys, the B.E.F. counter-attacked successfully with the co-operation of Fr. tanks. But the surrender of Belgium created a situation of extreme gravity for the isolated Brit. and Fr. forces in Flanders, now surrounded on all sides by the enemy's armoured forces and subjected to continual intense air bombardment, with only one small corridor to the sea at Dunkirk remaining. At Boulogne the R.N. evacuated a brigade of Guards on 23-24 May. A few days earlier a brigade drawn from the Rifle Brigade, the 60th Rifles, the Queen Victoria Rifles, and the Royal Tank Regt. was sent from England to hold Calais, with an equal number of Fr. troops, and to maintain communications with the B.E.F. Finding it impossible in face of strong enemy mechanised forces to carry out the latter task, it concentrated on the defence of Calais and, in spite of repeated attacks of 2 armoured divs. and continuous air and artillery bombardment held out until 27 May, losing most of its personnel (only 30 survivors of a total force of 4000 were brought off by the Navy), but by its epic heroism it gave the greatest assistance to the main body of the B.E.F. in its withdrawal on Dunkirk (q.v.). Time gained enabled the Gravelines waterlines to be flooded and to be held by the Fr. troops. Thus it was that the port of Dunkirk was kept open. The Ger. High Command now declared that 'the fate of the Fr. armies in Artois was sealed' and that 'the Brit. army was threatened with annihilation.' This was true. But the B.E.F. were resisting fiercely and were inflicting enormous losses on the enemy. Meanwhile Prioux's Fr. forces were desperately striving to cut their way through at Cassel, 20 m. S. of Dunkirk and at Kemmel, to the SW. of Ypres, and there was more desperate fighting on the banks of the Yser. On 29 May the Brit. were occupying a narrow tongue of land extending from a point W. of Dunkirk, through Bailleul to Armentières and thence back towards Ypres and Dixmude. But their operations were impeded by the thousands of refugees caught between the fire of the opposing forces, and heavy pressure from opposite quarters compelled the British still further to shorten their line. The following day the Brit. and Fr. forces

in the N. continued to fall back on the coast in face of some 40 Ger. divs. With the Allied forces in desperate straits and packed into a small bridgehead, the Ger. armoured forces were forbidden to attack. This order, which was received with astonishment by the local commanders, emanated directly from Hitler and has never been satisfactorily explained. It certainly made the task of evacuation possible, but the troops still had to endure artillery bombardment and air attack upon the beaches and the rescuing craft. The tenacity of the men of the B.E.F. and the firmness of the rearguards never wavered, and over the next few days was enacted one of the greatest feats of rescue in the hist. of war. The troops, Brit., French, and Belgian, were being embarked in full view of the enemy, and from the open beaches, with the men often wading up to their necks to reach the boats. But c. 337,000 men (War Office records, 336,427; Admiralty, 338,226) were taken off and reached England by 4 June by a relay fleet of small ships. The work of the R.A.F. and the Fr. Navy at this time was outstanding. Elements of Prioux's army fought their way to the coast. Thus was palliated one of the greatest military disasters in Brit. hist., in which the Brit. army had lost all its guns and transport, and all the armoured vehicles that were with the army in the N. Not all the Brit. troops were evacuated from Dunkirk: large numbers moved across France to Normandy and Brittany to be evacuated from there. At this date the Fr. army had been gravely weakened, the Belgian army had been lost, a large part of the fortified lines upon which so much faith had been reposed was gone, many valuable dists. and factories had passed into the possession of the Germans, the whole of the Channel ports were now in their hands, and a mortal blow, either at Britain or at France, was to be expected at any moment.

The Battle of France. The Fr. armies, demoralised, now faced their enemy alone. The fighting around Dunkirk gave some respite to the French in the S., and Weygand created a defensive system in depth, though of an elementary nature, on the Aisne and the Somme, where, however, the Ger. bridgehead already existed. Early on 5 June the Germans delivered a new offensive along the whole of this improvised Fr. front from the Channel to the Laon-Soissons road, the attack being violently pressed against the left wing of the French on the Somme and, the following day, this so-called battle of France was waged with unabated violence between the sea and the Chemin-des-Dames, the Germans throwing in masses of tanks in groups of 200 or more at numerous points. On 7 June the Germans were making a particularly heavy thrust on the lower Somme near Abbeville, S. of Amiens in the Oise valley, and in the direction of Rheims. The next day they launched a violent attack between Amiens, near the source of the R. Bresle, and Noyon, 27 m. S. of Péronne. In face of 7 armoured divs. and 20 fresh infantry

divs., the Fr. line withdrew between the Somme and the Channel. On the same day a group of Ger. tanks penetrated to the Dieppe-Paris road at Forges-les-Eaux, 40 m. SW. of Abbeville.

On the sixth day of this great battle Italy declared war on Britain and France. Already the enemy was almost at the gates of Paris, and on 10 June Reynaud appealed to Roosevelt for material aid and said that France would continue to fight, if necessary from N. Africa. But he reckoned without the disintegrating forces within France itself. On 9 June Ger. armoured units in the region of Forges-les-Eaux and Argeuil, on the left of the Fr. line, were advancing towards Rouen and Gisors; but between Montdidier and Noyon, at Soissons and in the Champagne, their advance seemed temporarily checked. The next day some Ger. units had crossed the Lower Seine, while furious fighting was in progress E. of the Aisne as far as the Argonne. At Réthel, NE. of Rheims, 11 June, they suffered very heavy casualties, but farther W. their advance guards had penetrated to within 20 m. NE. of Meaux, while a thrust NW. of Paris towards Pontoise brought the enemy within striking distance of the Fr. cap. The Fr. Gov. depts now left Paris for Tours, and the Ger. approach also led to a vast exodus of civilians. The enemy, now in Rouen, was increasing his attacks from that city to Vernon in order to extend the bridgeheads estab. S. of the Oise; while near Château Thierry he was already securing a foothold S. of the Marne. The estab. of these bridgeheads over the Seine and Marne now disclosed the menace of the huge pincer movement on Paris which was closing in on the city from NE. and NW.; while W. of the city the Germans were attacking with fresh forces S. of Rouen and towards Evreux. Ger. advanced units were moving on Le Havre by 13 June. On that day, the bulk of the 51st Highland Div., which had been in action in Normandy, was surrounded by superior forces and obliged to surrender, attempts at evacuation being only partially successful owing to fog. The 1st Canadian Div. and the 52nd Lowland Div., sent from England early in June, were withdrawn by the 17th, only the 157th Brigade of the 52nd having gone into action. The embarkation of other Brit. troops proceeded: in all, 136,000 Brit. and 20,000 Poles were evacuated from Fr. ports. On 14 June the enemy entered Paris. Meanwhile, the battle of France continued along the whole front. Le Havre fell; Verdun was stormed; and Montmédy, the cornerstone of the Maginot Line, was taken. The entire Fr. line was crumbling. The Fr. armies S. of Paris were still retreating, and in Alsace-Lorraine the Germans broke through the Maginot Line at Saarbrücken. The citadel of Verdun was captured. The fact that some 200,000 Fr. prisoners had been taken between 5 June and 15 June gives an indication of the rapidity and weight of the Ger. offensive and of the poor morale of much of the Fr. Army. The French Gov. then

left Tours for Bordeaux (15 June), where it resigned and was replaced by a new gov. under Marshal Pétain, whose function was simply to ask Hitler for an armistice, leaving Britain alone to defend the world cause. In an eleventh-hour hope of restoring Fr. morale, the Brit. Gov. offered to conclude a solemn Act of Union between the 2 countries, involving a single war cabinet and common citizenship. The proposal was rejected.

Franco-German Armistice. Meanwhile de Gaulle (q.v.), *chef du cabinet militaire* under Reynaud, who was now in London, withstood the attitude of the Pétain Gov. From London he made an appeal to all Fr. officers, soldiers, engineers, and skilled workers in Britain to get into touch with him.

His difficulties, however, were very great, for Fr. morale had so deteriorated that most of the nation followed the lead of Marshal Pétain. By 18-19 June the Germans were pushing forward towards Nantes and Lyons, besides having captured Strassburg, Lunéville, Toul, and Nancy. This marked the end of organised fighting and on 20 June Pétain broadcast a message telling the world that he had asked the enemy to put an end to hostilities. On 21 June the enemy took the naval base at Brest and had reached the Lower Loire between Nantes and Tours. Hitler handed the armistice terms to the Fr. plenipotentiaries in the forest of Compiègne on 21 June and, pending communication with the Bordeaux Gov., hostilities continued on the Western Front, chiefly in the region of Thionville and Colmar—where it was very bitter—and in the Vosges. On the next day there were only local engagements S. of the Loire, while in the N. the Germans took St. Malo and Lorient in Brittany. At this moment it. troops were attacking the French at various points between Mt Blanc and the Mediterranean with little success. But this desultory fighting marked the close of hostilities on the W. F., for on the same day the Fr. Gov. accepted the Ger. terms. Churchill immediately took speedy action to prevent Hitler from capturing the Fr. Navy, and so saved Britain (*see* NAVAL OPERATIONS). On the same day de Gaulle announced the formation of a Fr. National Committee in London which would carry on the war at the side of the Brit. Army until final victory.

B. CAMPAIGNS OF 1944-5.

I. INVASION OF NORMANDY. *Plans and Preparations.* Informal discussions for the cross-Channel invasion of Ger.-occupied Europe began as early as 1942, and at the Casablanca conference of Jan. 1943 it was decided to evolve outline tactical plans. Such a plan, to be known as 'Operation Overlord,' was approved at the Quebec conference in Aug. At the beginning of 1944 Gen. Eisenhower (q.v.), appointed supreme commander of the Allied Expeditionary Force, left the Mediterranean for England. Both he and Gen. Montgomery, who was to command

the land forces, agreed that the initial assaulting force should be increased to 5 divs. from the 3 originally planned. Two follow-up divs. and 3 airborne divs. were also used. The initial objectives were to be Caen, Bayeux, Isigny, and Carentan, and the port of Cherbourg, then the Breton ports southwards to Nantes; after this was to come a drive eastward on the line of the Loire towards Paris and N. across the Seine area with the object of destroying as many enemy forces in this area as possible

said that if a defensive success were to be obtained it would require the breaking-up of the invasion on the beaches.

Allied Landings in Normandy. The invasion began at 2 a.m. on 6 June (known as 'D-Day'), with mass airborne para-troop landings behind the Ger. lines; 2 Amer. divs. then landed at the base of the Cotentin Peninsula, and 2 Brit. and 1 Canadian farther E. to hold the left flank on the R. Orne. An immense force of 4000 ships, with sev. thousand smaller craft, crossed the Eng. Channel

Medical personnel are attending to casualties, landing craft are seen in the background

A very great deal would depend on the enemy's rate of concentration. Efforts to delay this included air attacks on his troops and communications, the threat of other landings, particularly in the Pas de Calais, and the aid of the Fr. Forces of the Interior. All these measures proved highly effective. Moreover, overwhelming air supremacy was obtained.

On the Ger side F. M. von Rundstedt was Commander-in-Chief West, and F. M. Rommel commanded the N. and larger army group. By June von Rundstedt had 60 divs. in France, Belgium, and Holland, 10 being armoured or motorised. In the immediate area of the Allied landing there were 9 Infantry and 1 panzer divs. Rommel had been urging on the strengthening of the coastal defences; he

with the land forces and their equipment. More than 640 naval guns from 16 in. to 4-in. bombarded the beaches and enemy strongpoints in support of the invading armies. The landings were, after heavy fighting and some anxious moments, successfully effected on the 5 sectors as planned. the Americans of Bradley's First Army on the 2 westerly, and the Brit. of Dempsey's Second Army with the Canadian First Army on the 3 easterly beaches, all under Montgomery. By 11 June a beachhead 50 m. wide and 10-15 m. deep had been gained, so that further landings of troops with every kind of necessary equipment could be carried out on a large scale. For the greatest amphibious operation in world hist., the combined losses of the Brit. and Amer.

fleets were remarkably small. On 8 June Bayeux fell to the allies in fierce armoured and infantry battles. Contact was now estab. between the seaborne and airborne troops. Tanks were landed both by ship and by big transport gliders, and a tank battle was soon in progress near Caen. Beach landings continued on the ensuing days. On 8 June 1000 Flying Fortresses and Liberators attacked bridges and railway junctions and airfields within an arc 100-150 m. around the beachhead, while medium and light bombers kept up the assault on railway targets nearer the troops. The Allies now thrust forward from Bayeux SW. towards St Lô, while von Rundstedt counter-attacked in the Caen area. Montgomery advanced in the Caen area so as to engage in a bitter, tense holding struggle while Amer. troops under Bradley crossed the Carentan-Valognes road and cut the railway to Cherbourg. Montgomery's tactics were to lead von Rundstedt to believe that his main attack would be directed towards Paris, while, at the same time, by holding the enemy at Caen, he enabled the Americans to advance up and across the Cotentin or Cherbourg Peninsula. Thus at this early stage in the battle of Normandy the Germans were forced to make a complete change of front from a line parallel to the coast to one running straight across from sea to sea. At the same time this involved a lengthening of their front.

Capture of Cherbourg. On 11 June the Americans reached the outskirts of the tn of Montebourg 16 m. S. of Cherbourg. On the 12th Amer. troops by-passed Montebourg and passed on to Valognes and Cherbourg. Two days later W. of Caen Brit. forces fought their way to Caumont and Villers-Bocage. On the 16th the threat to Cherbourg grew with the capture of St Sauveur. By reaching the W. coast on 17 June, the Americans isolated the Ger. troops to the N. as well as Cherbourg. On 22 June an all-out attack was launched by the Americans after an intense artillery and air bombardment. To the E. the Brit. and Canadian forces, by pinning down 4 panzer divisions, made it impossible for the enemy to undertake any effective counter-attack in relief of forces in the Peninsula. The joint Ger. commanders gave themselves up on 26 June and all resistance in this N. sector had ended by 1 July.

The Battle for Caen. Capture of La Haye du Puits. With Cherbourg in the hands of the Allies, the centre of gravity shifted to SW. of Caen, where Montgomery's forces were pressing on against bitter resistance. Here the Germans had not yet made a major counter-attack but were bringing up first-class reinforcements. Previously, on 25 June, Montgomery's forces had begun an attack E. of Tilly-sur-Seuilles. Brit. forces crossed the Odon on the 28th. The battle for Caen was now joined. The British held firm on the Odon salient against repeated counter-attacks, and it was obvious that hard fighting remained before the enemy hold

on Caen, with its network of communications, could be broken. At the beginning of July the initiative was indubitably with Gen. Montgomery. Except for a little ter. W. of Villers-Bocage and near Troarn, his forces held all their gains since the landings, besides establishing a broadening salient directed at Caen from the SW. To have reached this position in 3 weeks from the initial landings was an astonishing achievement. On 3 July, the Americans started an offensive in the direction of La Haye du Puits, the opening attack being delivered in driving rain on a 20-m. front. In the Second Army area the Canadians battled towards Caen from the W. and there was a 3-day struggle for the Carpiquet airfield (4-6 July). On 8 July Montgomery launched a massive attack upon Caen preceded by a heavy aerial bombardment. The Germans, with their supplies cut off, broke, and the tn N. and W. of the Orne was occupied.

The Battle of the Rivers (Odon and Orne). Americans take St Lô. Though Caen was in Brit. hands, the enemy remained firmly in possession of the Faubourg de Vaucelles across the riv. Moreover, the difficult Bocage country and high ground overlooking the vls. of the Odon and Orne would only yield to a kind of crowbar process of attrition. The Second Army, however, exploited its victory at Caen, for on the morning of 10 July fresh infantry and armour struck through the bridgehead estab. over the Odon by the 15th Scottish Div. and headed SE. for the Orne. The impetus of the Brit. movement across the Odon carried them to high ground above Maltot and Esquay in the direction of the Orne. The enemy reaction was vigorous, and once more he was forced to use the armoured units which he had been trying to withdraw to form a strong striking force. On the night of 15 July the Brit. Second Army made a double thrust between the rivs. towards Noyers astride the main road to Villers-Bocage and against the tn of Evrecy. Meanwhile the Germans were fighting fanatically to retain the heights surrounding St Lô, but the Americans were gradually closing in round the tn. By 16 July none of the main roads out of the tn was of much use to the enemy as a traffic artery, for the Americans were astride most of them. But the Germans still held high ground N. and S. of the Periers-St Lô road, and from these dominating heights poured down harassing artillery and mortar fire, the heaviest barrage theretofore experienced by the Americans. On the next day the Americans reached the outskirts of St Lô, and on 18 July they took the tn.

The Allies were now ready for the breakthrough, disposing of 30 divs. The Germans had lost 160,000 men and 30 per cent of their tanks, and few reinforcements were available.

British Second Army Reach Cagny. The operations in the Evrecy-Esquay area deceived the enemy, and the drive to the S. and SE. of Caen achieved complete tactical surprise. Following a fierce air

assault, the Brit. Second and Canadian First Armies struck across the riv. By 16 July Vimont was reached by the Guards' Armoured Div., Bourguébus by 11th Armoured Div., and a point S. of Dêmoville by 7th Armoured Div. The enemy's resistance then began to stiffen, and he counter-attacked S. of Bourguébus with 50 tanks. By nightfall a strong anti-tank screen was estab. which halted the Allied advance, on the line Emfêville-Cagny-Soliers. Then the weather broke, and the battle area became a sea of mud, which checked further tank operations.

Anglo-Canadian Offensive S. of Caen. Americans take Avranches. A new attack was launched S. of Caen on 25 July by Montgomery's 21st Army Group. An area to the W. of St Lô was blasted by 4700 tons of bombs on the morning of 25 July, and the Amer. advance on a 3-div. front began, whilst S. of Caen the Canadians advanced astride the Falaise road. The Americans entered Coutances on 28 July. The Canadians came up against a strong defensive belt which they began to probe, with heavy air support. After the fall of Coutances the Amer. attack gathered speed. The Siennne R. was crossed on 29 July, and on the 31st Avranches and Granville were taken. No effective barrier remained between the Americans and Brittany, and an open flank had been created.

American Blitzkrieg through Brittany. Gen. Dempsey Takes Villers-Bocage. On 1 Aug. the Americans crossed the Selune R. and began their sweeping invasion of Brittany. Armoured forces, in 3 powerful thrusts, struck far ahead of their main forces. One thrust reached Rennes on 2 Aug., while others drove northward, taking Dinan and isolating St Malo and Combourg. While the Brit. Second Army gathered against itself most of Rommel's first-class armour, Bradley's forces were driving swiftly into the peninsula of Brittany. The whole manoeuvre was brilliantly co-ordinated, and the immediate result was that in a few days the Ger. line in Normandy had gone and a new extraordinarily confusing type of fluid warfare began to develop, the Allies holding the initiative. The Brit. thrust S. of Caumont made good progress. To the NE. Villers-Bocage fell on 5 Aug., and to the SW. of Caen, Evrecy and Esauy on the 4th. The flank of the Amer. salient was thus protected. Ger. resistance stiffened with the arrival of reinforcements. The Americans continued their spectacular advance against negligible opposition into Brittany; for their tanks, sweeping 60 m. S. from Rennes in a few hrs. reached the Loire and cut off the whole of Brittany. Other U.S. armoured forces, in an 80-m. drive to the W., reached Brest; while the other 3 great ports of Brittany—Lorient, St Nazaire, and St Malo—were completely isolated.

German Counter-attack towards Avranches. With the Brest peninsula sealed off by the Amer. advance to the Loire, the main Allied weight began to turn eastward. In quick succession the Amer.

Third Army took Mayenne and Laval (6 Aug.), Château Gontier, and Châteaubriant, and then pressed on towards Le Mans on the highway to Paris. Simultaneously the Brit. Second Army advanced through Aunay-sur-Odon to Thury Harcourt on the r. b. of the Orne. With the capture of Mont Pinçon in the Bocage country by the Second Army on 7 Aug., the Allies now commanded nearly all the wooded ridge from the Orne to St Martin-des-Bésaces and the S. slopes which fall away towards Condé sur Noireau. Very soon the Canadian First Army had driven a wedge 5 m. into the Ger. lines and an armour and infantry battle was being fought between Caen and Falaise. Meanwhile the Ger. command made a strong counter-attack at Mortain to the E. of Avranches, hoping to find the Allied line weak at the junction of the Brit. and Amer. forces, and to sever the communications of the Third Army. But Bradley had prepared to meet the expected attack, and R.A.F. rocket-firing Typhoons gave the greatest assistance in destroying the Ger. armour. Not until 12 Aug., however, did signs of a contemplated Ger. withdrawal become apparent, and once again the enemy held too long to a position from which he would have been wiser to retreat. By that date the decision had been taken to seize the opportunity given by the enemy tactics, and encircle him, Montgomery having apparently taken the initiative in this decision. The Caen sector still remained the most sensitive part of the N. front. On the line of the Laison R. the Germans held the Canadians for sev. days. Following a heavy air attack this line cracked on 14 Aug. and on the 17th Falaise was at last occupied. Without the heavy, persistent, and bloody battles fought for Caen and for Falaise the rapid advances made elsewhere would have been impossible.

From Paris to the mouth of the Seine every bridge had been destroyed by the Allies excepting those at Le Manoir and Oissel above Rouen. The bridges in Paris itself were still intact. But these latter alone were inadequate as a means of escape for a large army with heavy equipment. It was into this trap that von Kluge's Ger. Seventh Army was gradually falling. The Amer. sweep into Anjou and Maine had turned the enemy's front and compelled him to extend it; and now the bulk of Third Army was moved eastward to carry out the encircling operation. The sudden double threat to Falaise from the Brit.-Canadian forces and to Alençon and Argentan from the Americans brought home to von Kluge the danger to his whole Seventh Army. He began to retreat on 11 and 12 Aug., moving perforce for the first time in daylight, and suffering devastating blows from the Allied air forces.

The Falaise 'Pocket' and the Caen 'Hinge.' The Ger. situation was precarious. On the night of 12 Aug. Amer. units had reached Argentan and the Fr. 2nd Armoured Div., Écouche. The vital importance to the Germans of holding on at all costs at Falaise became obvious, for

the mobile Allied right had already swept right round his main body and had come within 20 m. of making contact with the almost stationary left. A large part of 8 panzer divs. escaped, but lost much of their equipment; 7 infantry divs., part of an eighth, and some panzer units were trapped. The orderly progress of the Ger. retreat collapsed on 17 Aug., when Falaise was occupied, and chaos ensued, intensified by Allied air attacks on the shrinking corridor. The gap was sealed at Chambois, on 20 Aug., and the pocket was eliminated on the 22nd. The remnants of the Seventh and Fifth Panzer armies fled headlong to the Seine, and there was no possibility of a further stand W. of that riv.

Meanwhile Patton with 12th and 20th Corps began an eastward dash in a wider encircling movement towards Paris and the Seine. On 17 Aug. Chartres and Dreux were entered. Mantes, Gassicourt was reached by 15th Corps 2 days later, and thus the roads from Normandy to Paris were cut. Forries alone remained as a way across the Seine for the retreating Germans. Meanwhile, to the S., 12th Corps reached Orleans on 17 Aug., and patrols of 20th Corps entered Fontainebleau on 20 Aug. The tanks then swept around the SE. of Paris of Melun, other units crossed the Loing and Yonne rvs., and on 25 Aug. 12th Corps was 40 m. E. of Troyes. After the elimination of the Falaise pocket, Brit. and Canadian troops, advancing eastwards, soon reached Deauville, Lisieux, and Orbec. By 30 Aug. no Germans remained W. of the Seine except those shut up in Brittany.

The End of the Battle of Normandy. By a skilful use of pontoons and ferries the Germans managed to bring 27,000 troops back across the Seine, but the losses inflicted on them were enormous, the concentrations of vehicles and tanks forming an ideal target for the air forces.

Since the beginning of the campaign the equivalent of 5 panzer divs. had been destroyed and 6 severely mauled. The equivalent of 20 infantry divs. had been wiped out and 12 more badly cut up. Two infantry divs. and a parachute div. were locked up in Brittany and another infantry div. cut off in the Channel Is. By 25 Aug. 400,000 casualties had been inflicted; these included 200,000 prisoners, of whom 135,000 had been taken after the break-out of 25 July. 1500 guns, 500 assault guns, 20,000 vehicles, and 1300 tanks had been destroyed or captured, and heavy losses inflicted on the Luftwaffe.

II. THE LIBERATION OF FRANCE AND THE LOW COUNTRIES.

Allies Cross the Seine. Flying-bomb Siles. While the remnants of the Ger. Seventh Army were retreating to the Seine, Allied troops were securing crossings of that riv. between Paris and the sea. Sev. Allied forces were now threatening the Ger. line of the Somme, where it was expected that the enemy might try to make a stand to defend the Pas-de-Calais

coast. This was of especial importance to the enemy on account of the propaganda value of the 'V1' pilotless or flying bombs (q.v.), which for many weeks had been fired over London, and also, of the rocket bombs ('V2', see ROCKETS), which it was believed the Germans were preparing to launch. S. of Paris Amer. forces advanced rapidly, and without meeting much resistance, to the Marne. Soon they were in possession of Meaux, Épernay, Château Thierry, and Soissons. Brit. tanks, with following infantry, moved forward in the whole area between the Seine and Marne. Brit. tanks had split the Ger. Fifteenth Army, now committed to action for the first time, and the enemy, threatened by Canadian and Brit. forces, which had estab. bridgeheads at Elbœuf and Louviers as well as Vernon, left Rouen. The Brit. Second Army made the passage of the Seine on 26-27 Aug. Two crossings were developed very well and quickly at Louviers and Vernon, and on 27-28 Aug. these bridgeheads were expanded, and an advance started on 29 Aug. The first objective was Amiens, a great communication centre, the capture of which would trap many Germans between the Somme and the sea.

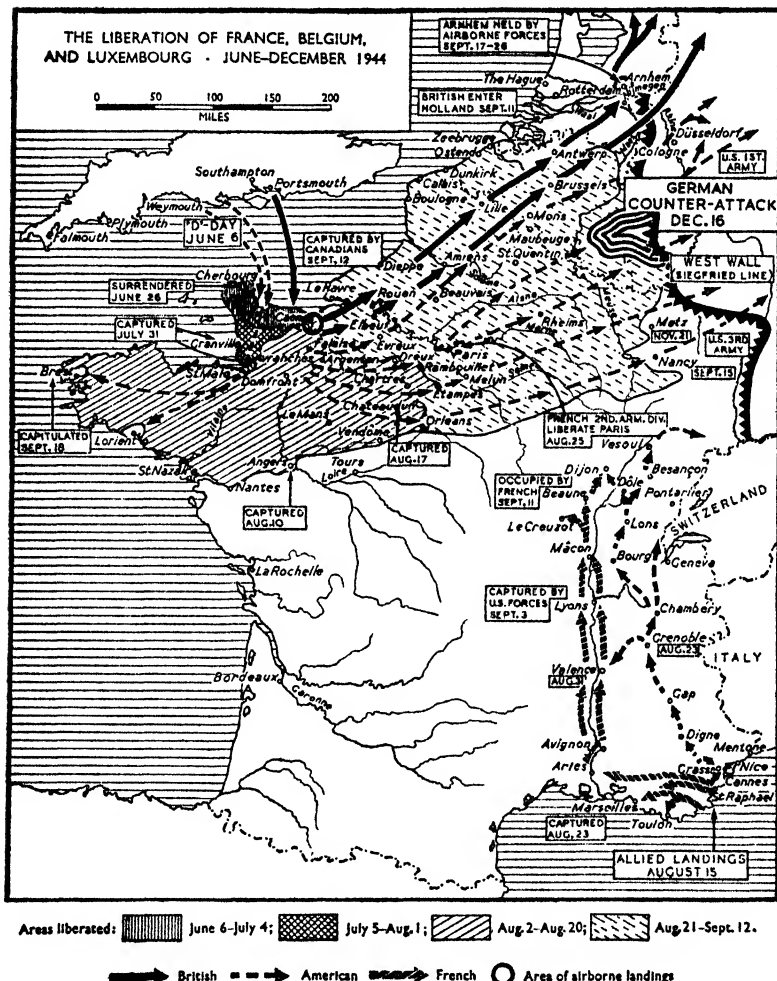

Allied Landing in Southern France. The outer flank of the Amer. sweep was protected by keeping the rest of the Ger. forces in France occupied, by the Allied landing on the Riviera, and by the operations of the Fr. Forces of the Interior under the general command of Koenig. It was planned that the landing force should march swiftly northward and eventually make contact with Gen. Patton's Third Army advancing towards the Meuse. Amer., Brit., and Fr. forces under the general command of Gen. Maitland Wilson landed in the S. of France on 15 Aug., between Nice and Marseilles. The Is. of Port Cros and Levant in the Bay of Hyères, and Cap Nègre on the mainland were soon taken by Amer. and Fr. troops. Airborne troops, dropped in considerable numbers behind the enemy coastal defences, accounted in part for the light opposition encountered. Only 8 days after landing, forces of the Amer. Seventh Army reached Grenoble—a 150-m. advance rendered possible by the activities of Fr. 'maquis' in opening the road to their Allies. By 24 Aug. 17,000 prisoners had been taken, the port of Marseilles was occupied by Fr. troops of the F.F.I., and enemy forces in Toulon were being fiercely assailed by the maquis. Hyères, a Ger. stronghold, also fell on the same day as Marseilles. The advance of the Seventh Army N. along the Rhône valley was maintained against desperate resistance, mainly by 4th Panzer Div. Other Amer. units passed through Nice and headed for the It. frontier. On 31 Aug. the Americans occupied Valence, while to the SW. the French entered Montpellier, Béziers, and Narbonne.

The Fall of Paris. After a 4-day battle in which 50,000 members of the F.F.I. under Koenig, supported by several hundred thousand unarmed patriots,

fought the Germans in the cap., the enemy were driven out of most of the chief buildings. On 24 Aug. troops of the Fr. Second Armoured Div. under Leclerc forced their way into Paris, and the next day the Germans officially surrendered.

seized Amiens on 31 Aug., and estab. a 12-m. bridgehead on the N. bank of the Somme. The Canadians swept along the coast, and Dieppe fell on 1 Sept.

Eisenhower moved his H.Q. to France on 1 Sept., and took direct command of

Allied Troops Cross the Aisne, Oise, Somme, and Meuse. The Ger. front in N. France had now completely broken, and the battle of France had turned into a rout. The Amer. 7th Corps crossed the Aisne on 29 Aug. Armoured columns of Gen. Dempsey's Brit. Second Army

all land forces. F.M. Montgomery continued in command of 21 (or Northern) Army Group. Gen. Bradley commanded 12 (or Central) Army Group, comprising the First Army under Gen. Hodges, the Third under Gen. Patton, and the Ninth under Gen. Simpson. On 15 Sept., the

forces from the S. became Sixth (or Southern) Army Group under Lt.-Gen. Devers, comprising Gen. de Lattre de Tassigny's First Fr. Army, and Gen. Patch's Seventh Army. Along the whole front from the Pas de Calais to the Argonne the Allied armies drove on towards Belgium, Luxembourg, and Germany, overrunning such historic places as Arras, Vimy Ridge, Leon, Rheims, and Verdun almost without a fight. The British swept into the Pas de Calais to wipe out a number of the original flying-bomb sites. While Brit. troops were still (1 Sept.) fighting in the vicinity of Le Havre, where the Germans had strong positions, F.F.I. entered Arras and fought the Germans there before the arrival of the Brit. troops, which latter then pressed on to Lens, while other Brit. forces were close to Abbeville.

Allies Advance through Belgium and North-Eastern France. Americans on the Moselle. Lyons Taken. On the left was Crerar's First Canadian Army advancing through Abbeville and towards Dunkirk, next, Dempsey's Army advancing to Lille and Brussels, then the Amer. Armies under Hodges and Patton advancing on Namur and the Moselle respectively. Dempsey's armoured columns, in a remarkable advance, reached Brussels on 3 Sept., having covered 45 m. in 1 day. Namur fell on 4 Sept., while Patton's patrols were in the vicinity of Nancy and Metz. Antwerp was taken by Brit. troops on 4 Sept., and this meant that the Pas de Calais was isolated and the last chance which the remaining Ger. troops there had of escaping had gone. Canadian forces were closing in on Boulogne, Calais, and Dunkirk, where Ger. garrisons of some few thousands still remained. With the fall of Namur on the Meuse, the Amer. First Army and the Brit. Second Army were now linked in a double offensive. Amer. and Fr. forces entered Lyons on 3 Sept., and by that date the Germans had retreated from virtually all S. France, from Lyons westward to the Atlantic. Ger. hopes of making a stand in the Rhône valley at Lyons were dispelled after troops of the Amer. Seventh Army had crossed the Rhône and its trib. the Ain some 20 m. E. of the city. On 6 Sept. the British reached Ghent. At Louvain most of the bridges across the Dyle were, with the assistance of Belgian resistance forces, captured intact. Sedan was soon enveloped in the Amer. onward surge. First Army units crossed the Meuse on 4-5 Sept. near Dinant and advanced down both banks of the riv. to Liège. The Allied armies in France and Belgium were now massing for a series of assaults on a front of more than 200 m. from the Albert Canal in the N. to Metz in the S. Still farther S. the forces of Gen. Patch were in the vicinity of Macon and Besançon. Patrols of the Seventh and First Amer. armies were now in touch with each other (11 Sept.). This contact realised a continuous Allied line from the Low Countries to the Riviera.

Allies Reach the Siegfried Line. Continuing the advance through Belgium, the

Canadians occupied Ostend and Nieuwpoort, Hodges's Amer. troops took Liège, and Dempsey's troops crossed the Albert Canal. On the Moselle Patton's troops won sev. bridgeheads. Resistance stiffened as the Allied forces approached Germany, and it was no longer possible to make the swift advances which had brought about the fall of Antwerp. Fr. and Amer. forces took Besançon, on the Rhône-Rhine Canal. Hodges's American's liberated the city of Luxembourg on 10 Sept., and in the Aachen area the Siegfried Line came within range of their artillery. The Brit. bridgehead on the Albert Canal, estab. by attacking NE. from Louvain on 7 Sept., was consolidated. Zeebrugge fell to the Canadians on 10 Sept. On the next day Hodges's troops crossed the Ger. frontier N. of Trier, and in the Aachen area E. of Eupen on the 12th. Bruges, Spa, Malmédy, and Bourg Leopold fell to various Allied forces, and the Ger. garrison at Le Havre, numbering 7000, surrendered to the Canadians on 12 Sept. S. of the Scheldt estuary other Canadians were meeting increased resistance on the Leopold Canal. Infantry of Patton's Army entered Nancy and captured Epinal on the 15th, while Hodges's infantry and tanks broke into the Siegfried Line N. of Aachen, meeting little resistance, but the line of defence extended backwards in considerable depth. Much stiffer resistance was encountered whenever the Allies threatened an advance on the lower course of the Rhine, for that way lay the road into the heart of Germany. Also, on the 15th, Maastricht was liberated by Americans and Dutch patriots. On 23 Sept. Boulogne finally fell to the Czech Brigade under Canadian command; Calais was taken on the 30th by the Canadian 2nd Corps.

III. CAMPAIGNS IN HOLLAND. BATTLES OF ARNHEM AND AACHEN.

Airborne Troops Land in Holland. German Resistance at Nijmegen and Arnhem. Metz Encircled. A new turn was given to the campaign in Holland on the afternoon of 17 Sept., when strong forces of the First Allied Airborne Army landed in the Rhine delta as part of an attempt to strike at the N. flank of the Ger. defence line in the W. This was the greatest airborne operation so far launched in the war, more than 1000 aircraft taking part. R.A.F. and Amer. bombers prepared the way with massive assaults on airfields and gun positions. Next day more airborne troops and supplies were poured into Holland, and by the 19th advanced armoured patrols of the Brit. Second Army estab. contact with all the airborne forces except those N. of the Lower Rhine in the Arnhem area. On 17 Sept. the Guards' Armoured Div. had pushed N. against heavy resistance which delayed its advance into Findhoven, captured by the 101st U.S. Airborne Div. Contact was made on the 18th, and the Guards made swift progress to Grave, captured by the 82nd U.S. Airborne Div., which also held the area to

Nijmegen, but the Germans held the town and the vital bridge across the Waal. Near Arnhem, the other main landing area, the Germans launched their most powerful counter-attacks, comparable with those in the fighting for Caen. Along the line of Dempsey's advance the Brit. tanks encountered Ger. 88-mm. anti-tank guns and Panther tanks estab. in concrete emplacements, and groups of Brit. tanks had to turn off from the columns to reduce these strongholds while the main body swept ahead.

It was also evident that around and beyond Aachen, the Germans were preparing to make a most powerful stand. There was house-to-house fighting in the factory area of Stolberg. N.E. of Nancy, Patton's troops were engaged in a violent tank battle, while in the battle for Metz his infantry were fighting hard to gain the dominating NW. heights and so complete the encirclement of the city.

The Battle of Arnhem. The crisis in the important battle of Arnhem for the Brit. airborne troops W. of the town was now obvious, for Brit. tanks driving N. from the bridgehead at Nijmegen to relieve them were delayed by counter-attacks against the bridgehead. The airborne troops at Arnhem had now been holding out for 6 days against heavy and continuous attacks from all sides; but so long as there was a prospect of relief, the situation, though critical, was not hopeless. Polish airborne reinforcements had joined the Arnhem men. Other reinforcements were moving along the 40-m. corridor to strengthen Dempsey's troops; but the road from Nijmegen northward to Arnhem was a hard one for the Brit. ground troops and Amer. airborne forces who were fighting their way forward against very powerful Ger. infantry and anti-tank opposition. But the position of the Arnhem men was steadily deteriorating. On 25-26 Sept. those troops of the 1st and 6th Airborne Div. who could be withdrawn were brought back across the Lower Rhine. 2163 men of the 1st Airborne Div. were withdrawn, but 7000 killed, wounded, and missing were lost. Their stand at Arnhem, however, was not entirely fruitless. Apart from inflicting casualties twice as great as their own, the div. achieved a second aim; for at Nijmegen the Ger. forces on the spot were overwhelmed by Brit. ground armoured forces and by Amer. airborne men dropped to the S. of the bridge over the Waal, which was thus secured and put behind the advancing Brit. Second Army. This was so far the most important tactical success that the Germans had gained in the W. since the opening of the Allied invasion.

Allied strategy had now to be re-adapted to the closing of what had looked for a time like a short cut to victory against the Rhenish defences. Positive advantages had, nevertheless, been won. The widening of the corridor, in conjunction with other northward attacks estab. a firm line eventually running along the Waal and Maas. A similar extension on the E. brought 21 Army Group in line

with 12 Army Group and within striking range of Kleve. Firm bridgeheads across the Waal and Maas had been estab., and the watershed between these 2 rivs. later became a valuable line of approach to the Rhine.

Fall of Brest. Brest (q.v.), in Brittany, which had been closely besieged for more than 6 weeks, at last fell to the Americans. Some 36,000 Ger. prisoners were cut off in the port and captured.

Battle of Aachen. Canadians Cross the Leopold Canal. There followed a period of more static warfare, with stiffening Ger. resistance. The main centres of attack were between Nancy and Metz, in the Aachen area, and in the Scheldt estuary. At Metz and along the Moselle, tenacious resistance was maintained. But farther N. the Americans had liberated all but a small portion of the Grand Duchy of Luxembourg. Between Aachen and Gellenkirchen the Amer. First Army on 2 Oct. drove a wedge 2 m. deep through the Siegfried Line. By capturing Ubach, S. of Gellenkirchen, they made a definite break through the line and were now in more open country E. of those defences. But one of the most urgent objectives of the Allies was to dispose of the Ger. defences on the Scheldt estuary; for so long as these were intact the great port of Antwerp was useless to them. I.A.F. bombers therefore began operations by breaching the dyke at Walcheren so as to flood the ls. Three days later the Canadian First Army began a general assault towards the S. bank of the Scheldt, establishing a bridgehead over the Leopold Canal. Later, Canadian and Brit. troops landed from the Scheldt behind the Ger. positions in the bridgehead on the S. bank of the riv., thereby easing the pressure on the Canadian forces. By 10 Oct. the Canadian and Brit. troops who had landed behind the Germans had joined hands, and the combined bridgehead was 2 m. deep and 3 m. wide; while the bridgehead over the Leopold Canal was consolidated, a considerable success achieved in spite of 30 Ger. counter-attacks in 4 days. Meanwhile the great struggle for Aachen was reaching its climax, for the city was almost completely encircled following Hodge's successful assault on Crucifix Hill, an 800-ft high feature 4 m. N.E. of Aachen. The city was first entered on 13 Oct. and the final surrender of the garrison took place on 21 Oct.

Conquest of Walcheren and Scheldt Estuary. Antwerp Port Cleared. The chief task of the Brit. forces was now to clear the Scheldt estuary in order to render Antwerp practicable as a port for direct supply to the Allies. Hence efforts were made by the Brit. and Canadian armies to isolate large forces of the enemy in W. Holland, and, while the Canadian First Army were fighting to clear the estuary and hold the Beveland peninsula, Dempsey's forces delivered 2 converging blows in the general direction of s'Her-togenbosch, an important junction on the railway running from the N. to Tilburg and Bergen-op-Zoom and then to Flush-

ing. On 22 Oct. the Canadians captured the port of Breskens and also Eschen, on the Belgian-Dutch frontier, N. of Antwerp. The struggle for s'Hertogenbosch was protracted and bitter, but on 24 Oct. Dempsey launched his fourth attack, as a result of which Brit. troops fought their way into the tn. Meanwhile the Canadians succeeded in sealing off the S. Beveland causeway where it joins the Dutch mainland. On 25 Oct. Canadian forces captured Fort Frederik Hendrik, the key to the Ger. positions on the S. bank of the Scheldt, and the Ger. forces holding what was the Breskens 'pocket' fell back on their last line of defence in front of the Belgian seaside resorts of Knocke and Heyst. On 29 Oct. the important tn of Breda was captured by Polish troops attached to the Canadian First Army, and the whole Allied line in SW. Holland was advancing swiftly forward to the Maas. The operations to clear the Scheldt undertaken by the Canadian Army were planned to culminate in an attack on Walcheren Is., the most heavily defended area of the approaches to Antwerp. The attacks were to be made simultaneously across the S. Beveland causeway, across the Scheldt from Breskens to Flushing, while a landing was also to be made at Westkapelle mounted from Ostend. By breaching the dyke, heavy bombers of the R.A.F. had previously flooded a large area of the is.; this had resulted in preventing the mutual support of sections of the invading garrisons though enabling the assault troops to make full use of amphibious vehicles. In view of the vital need to clear the Scheldt as soon as possible the Canadian First Army commander decided to launch the Breskens-Flushing attack on 1 Nov., by which time Allied troops would be on the S. Beveland causeway, whether or not the Westkapelle attack, which would be more dependent on weather, could go on. Hence at dawn on 1 Nov. Brit. commandos and Foot Guards landed on the SW. coast of Walcheren, while Canadians fought their way along the causeway from S. Beveland to gain a footing on Walcheren. Canadian troops also attacked the Knocke-Heyst 'pocket' and stormed their way into Knocke. The Brit. assault troops landed at two places on Walcheren; at Westkapelle they took the vital dyke on which were mounted most of the Ger. heavy naval guns which had for so long been denying the Allies the use of the port of Antwerp, while another series of landings made head-on against Flushing resulted in the greater part of the tn being in Brit. hands by nightfall. Much assistance was given the assault troops by the rocket-firing Brit. Typhoons. Meanwhile N.E. of s'Hertogenbosch (Bols-le-Duc), the Brit. had reached the Maas and were converging on the Ger. escape bridge at Geertruidenburg. On 3 Nov. Flushing was entirely in Brit. hands, and other forces were advancing on Middelburg. To the N., Royal Marines captured Domburg. Heavy fighting was, however, still in progress on the causeway from

Beveland. But Ger. resistance on the mainland S. of Walcheren ended with the surrender of Zeebrugge, Knocke, and Heyst, and with these places taken, all Belgium was liberated.

Little resistance was left on Walcheren by 7 Nov. Middelburg had now fallen, 2000 prisoners being taken there. The crowning achievement was the opening of Antwerp to the flow of supplies, for now the enemy had been removed from both banks of the Scheldt estuary, and as the swift descent of the 11th Brit. Armoured Div. much earlier had forced the Germans to leave the dock area intact, the port came into operation with little delay, in spite of flying-bomb and rocket attacks. With the capture of Vrouwenpolder in the N. of Walcheren the enemy's long resistance to the Allied advance westward was at length overcome. Eastward, on the Hollandsche Diep, only a few rear-guards were left to fight on the Moerdijk road and railway bridges.

As a result of the month's campaigning which began on 6 Oct. 2 Ger. divs. were destroyed and 2 others most severely handled. The Ger. Fifteenth Army had suffered another crippling blow, within a few weeks of its heavy losses during the Allied pursuit across N. France. Allied casualties in these operations were not far short of 40,000 in all.

IV. ALLIED ADVANCE ON THE RHINE AND SAAR.

The Allied plan now envisaged an advance by the N. and Central groups of armies to the Rhine, for it was necessary to hold the l. b. of the riv. from its mouth at least up to Düsseldorf before striking across it into Germany.

Americans Belvaquer and Capture Metz. The Amer. Third Army launched a new attack on 8 Nov. N.E. of Nancy. Despite rain and mud, the Americans estab. 2 more crossings of the Moselle N. of Metz. On 10 Nov., the Third Army was advancing all along its front to the N.E. of Nancy. Château Salins, which had been enveloped on both sides, fell on the night of 9 Nov. Even more important strategically was the capture of a 1200-ft-high ridge, the Côte de Delme, 7 m. NW. of Château Salins. Ger. resistance was scattered and variable—stronger to the N. around beleaguered Metz and weaker to the S. SE. of Metz the Germans were now withdrawing at sev. points, but to the N. of the great fortress in their resistance grew still stiffer, and in one counter-attack they made a salient 1½ m. deep in the Amer. bridgehead across the riv. Violent Ger. counter-attacks were launched against the flanks of the Amer. Third Army's offensive in the Moselle valley, but failed to halt Patton's advance, which now threatened to envelop Metz from the SE. Due S. Amer. troops were now less than 6 m. from the city, the prin. key to the route into Germany by the Moselle gap. On the 17th, the Americans were within less than a m. of Metz. The city itself fell on 21-22 Nov., but 7 of the forts held out, and not until 13 Dec. was

the difficult task of reducing them finally accomplished.

German Retreat Ended. Allied Attack on the Roer. The Ger. retreat had almost ended by the end of Nov., and the Germans had fallen back on their home bases, with the advantage of their own elaborate frontier networks of strategic railways and arterial motor roads. They had chosen their fronts, as in E. Europe, with a view to the greatest possible economy in manpower. The 'West Wall' (Siegfried Line) was not a line of great forts of the Maginot type; rather was it a fortified zone, incorporating the natural defensive features of the mts from Hürtgen Forest to the Rhine corridor; and on this whole front of 250 m. there were only 2 weak spots—that of the Saar coal-basin, into which Patton was now advancing, and the Rhine corridor (the real entrance to central Germany), where it runs northward from Baden and Strasbourg, to Karlsruhe and Neustadt. Von Rundstedt, now in chief command, had reinforced his vital Aachen sector, concentrating against the Allies a dozen first-class divs., of which half were panzer or panzer grenadier, with a group of fresh panzer divs. in hand for counter-attack.

Under a tremendous barrage from 400 guns the Brit. Second Army launched a new attack on 15 Nov., W. of the Maas on the E. flank of the Dutch salient 15 m. SE. of Eindhoven in the direction of Roermond, and they were soon across the Noorder and Wessem canals. A new Amer. army, the Ninth under Simpson, had joined the Allied offensive, and the whole W. F. was now on the move. The Amer. Army of Hodges also joined in the attack E. of Aachen. In a brilliant combined action by Brit. and Amer. forces the important tn of Gellenkirchen, with its network of road communications, was captured on 19 Nov. Meanwhile the Fr. First Army was at the gates of Belfort in the S., and entering Alsace. Next day the Fr. Army, thrusting through the famous Belfort gap, had reached the Rhine between Mulhouse and the Swiss frontier. Belfort itself was entered the same day. While grim fighting continued at the N. end of the battlefield, the Germans were now faced with a vast turning movement of their S. flank by the army group under Gen. Devers, Strasbourg being threatened by a swift Fr. advance beyond Sarrebourg astride the historic route through Saverne. This brilliant stroke by Fr. troops under de Lattre de Tassigny and the Amer. Seventh Army of Patch, planned with masterly skill to take the utmost advantage of every defensive manoeuvre by the Germans, was executed in appalling conditions of weather and terrain. In the N., at the same time, Amer. First Army troops captured Eschweiler by 21 Nov., while the Ninth Army was within sight of the Roer R. along a large part of their front.

Campaign in Alsace. Fall of Strasbourg. Battles of the Aachen Gap. Forces of Patch's army, including Leclerc's Fr. armoured div. which had fought as the

spearhead of a most remarkable lunge through the Vosges, were fighting in Strasbourg on the night of 23 Nov. Owing to the collapse of the Fifteenth Army in Alsace the Ger. resistance was light. Elsewhere the Allied advance towards the Rhine was implacably maintained. The most decisive battle was that being fought in the Aachen gap along the direct approaches to Cologne and the Ger. Rhine; for it was here, at the core of the Siegfried defences, that Brit. and Amer. forces under Montgomery, Hodges, and Simpson were battling their way slowly forward against the best fighting units of the Ger. *Wehrmacht*, and they were doing so in the most unfavourable weather. Equally hard was the going in the S., where Patton's tanks were now across the Saar and fighting in a country of woods, hills, and abnormally swollen waterways. But by the end of Nov. most of Lorraine was cleared of the enemy, W. of Metz. Amer. tanks and infantry were now fighting on Ger. soil, and elsewhere the Americans were in some of the strongest positions of the Maginot Line. Saarlautern (or Saarlouis), Saarbrücken, and Saarguemines were now all threatened, for Amer. Third Army forces had reached the Saar at sev. points (5 Dec.), and held a 10-m. stretch of the riv., having overcome determined opposition of every kind. But the major battle was still that which was being fought along the direct route to the Ger. Rhine; yet with Patch in Alsace, moving down the W. bank of the riv., and Patton in Lorraine, gradually closing up the Saar frontier, there were other vital approaches that must soon sap von Rundstedt's reserves. Meanwhile the battle of the Roer was being fought on in foul weather and unending mud, with the Germans making redoubled efforts to strengthen their defences on the E. bank of the riv., particularly with formidable minefields and mortar fire, and indeed to launch a very dangerous counter-offensive from Monschau. In a brilliant surprise attack on 3 Dec., the 95th Infantry Div. of Patton's Army pushed through Saarlautern, captured the main bridge intact, and consolidated their hold on the E. bank of the Saar.

The Ardennes Counter-offensive. The campaign on the W. F., judged by the standards of the mobile warfare of the summer, now, however, seemed stationary; although the methodical massing of force opposite the Ger. field fortifications still involved hard fighting. The main battles were brought about by operations to extend the Allied grip on the well-known gateways to the Reich, the gaps of Belfort, the Saar, and Aachen. To deploy the maximum Allied effort in the Aachen sector and to continue the successful progress of the operations in the Saar-Wissembourg area, other parts of the front were lightly held, and, in particular, only 4 divs. held the Eifel sector of 75 m. between Monschau and Trier.

Meanwhile von Rundstedt had refitted 8 panzer divs., received reinforcements from the E. front, and had assembled 2 panzer armies equipped with the new

Tiger and Panther tanks. He had also managed to concentrate a strong air striking force, though he counted on bad weather to reduce air operations to a minimum. His general plan was to break by a blitz offensive the thinly held Amer. front, and drive to the Meuse in the Namur-Liège area, the latter city being a communications centre for Twelfth Army Group. Once this was seized von Rundstedt planned to drive on Antwerp as fast and as strongly as possible. If Antwerp fell the supply position of the Allies would become highly critical and, moreover, the Brit. forces with the Amer. First and Ninth Armies in the N. would be isolated from the Amer. and Fr. forces in the S. The Ger. forces were the Fifth Panzer and Sixth S.S. Panzer Armies (10 divs.), and Seventh Army (14 divs.), under von Rundstedt's personal command. Also, one panzer brigade operated in Amer. equipment to spread confusion. Paratroops were dropped throughout the area, especially at Malmédy, while small units and agents attempted sabotage as far in the rear as Paris. The attack began on 16th Dec., and Eisenhower at once ordered movements of reserves to the flanks of the attack and reserve divs. forward; an important move was that of the 101st Airborne Div. to Bastogne, from S.H.A.E.F. reserve. During the 17th and 18th it became clear that a full-scale attack was in progress. Against it, all Allied attacks elsewhere were halted and every available reserve was collected to strike both flanks of the penetration. It was planned to hold firmly the shoulders of the wedge, especially Bastogne in the S. and Monschau in the N., to prevent advances in the Liège-Namur area or W. of the Meuse, and then to counter-attack with Patton's forces in the Bastogne-Cologne direction, followed up with those of Montgomery. On 19 Dec. the command system was reorganised to place all forces N. of the line Givet-Prüm under Montgomery, and all S. under Bradley. The 4 divs. which received the full force of the attack were by-passed and isolated, but they slowed down the enemy, and the 7th Armoured Div. held St Vith in the critical early days. The 101st Airborne Div., reinforced with armour, held the vital Bastogne road sector, though they were surrounded by superior forces for 5 days. Reserves were assembled in rear areas, and infantry divs. brought across the Channel. During the first week the N. shoulder of the wedge was held, and an Amer. corps assembled for the counter-attack. Six divs. were moved from the S. to the N. of the Moselle, and a corps was estab. in the Brussels area. At Monschau and Echter-nach the flanks were held, but the westward penetration moved on. From 16 to 22 Dec. a thick ground fog deprived the Allies of the invaluable air support and the Germans were able to achieve the maximum surprise. But from the 22nd, paralysing attacks on von Rundstedt's communications were begun, whilst simultaneously the Third Army began to attack north-eastward from the Arlon-Luxem-

bourg area. By 26 Dec. the 4th Armoured Div. of the Third Army had estab. a firm link with the defenders of Bastogne, and checked the Ger. advance on that flank, whilst also attracting strong enemy forces from the N. of the salient. By this date also the Meuse sector had been adequately covered, and the failure of the enemy's main intentions was obvious. By the time von Rundstedt's offensive was stopped, he had breached a gap of 45 m. in the Allied line and penetrated over 60 m. westward to within 4 m. of the Meuse near Celles. On 3 Jan. the First Army attacked from the N. towards Houffalize, through which ran the Ger. supply route. The Brit. 30th Corps conformed on its right. Towards the same point the Third Army, from the S., launched an attack on 9 Jan. By 10 Jan. the 2 attacks were within 10 m. of each other. The Germans had now begun to withdraw from the W. tip of their salient whilst trying to hold the N. and S. flanks. The First and Third Armies estab. firm contact at Houffalize on 16 Jan. and turned eastwards. St Vith fell on 23 Jan., and by the end of the month the Allies were back on their original line with advance forces attacking beyond. The result was that the Allied offensive against Germany was delayed by at least 6 weeks, and, also, the strategic Air Force had had to neglect its targets deeper in Germany for about a month. Though von Rundstedt had conducted his retreat skillfully, his losses were heavy. By the end of the Allied counter-blow, the enemy had lost 220,000 men, including 110,000 prisoners of war; 600 tanks and assault guns, 1620 aircraft, and large numbers of motor transport were also lost.

German Offensive in Alsace. The Battle for Colmar. Meanwhile Alsace presented a picture of confused fighting. The great Haguenau forest, having little in the way of natural defences, was yielded by the Americans, who had taken up better positions S. of Bitche, which had been the scene of bitter fighting. In Colmar the Germans had built up a formidable 'hedgehog' position, but de Tassigny's Fr. Army late in Jan. delivered new attacks N. and S. of the Ger. position. On 25 Jan. von Rundstedt launched his expected offensive in Alsace and, to the W. of Haguenau, crossed the Moder R. and cut the railway through the N. Vosges to Sarreguemines; but his attacks were held. During the same week the British advanced towards the Roer R. from Holland and captured Heinsberg, the biggest tn in the triangle between the Maas and Roer rivs.; while the Amer. Ninth Army on their right took Brachelen. The Germans were now falling back from the Ardennes bulge to the Siegfried defences. Troops of Patton's Third Army had now crossed the Our R. into Germany. The French in Alsace were close to the outskirts of Colmar. At the end of Jan. the Americans were steadily advancing against the 40-m. stretch of the Ger. frontier between Monschau and Echter-nach. Far from developing his vaunted attack in N. Alsace, the enemy was faced

with the Fr. Army's flanking manoeuvres on the Colmar 'pocket', while Allied forces stood solidly on the line of the Roer with the threat of further incursion across the Ger. frontier by Amer. forces which, in snow and bitter cold, were methodically following up the Ger. retreat from the Ardennes. On 31 Jan. vanguards of the Amer. First Army crossed the Reich frontier and estab. themselves within 2 m. of the Siegfried Line. On 1 Feb. in N. Alsace troops of Patch's Seventh Army crossed the Moder in force and entered Oberhofen, SE. of Haguenau and, on the same day, de Tassigny's army drove through the Ger. corridor N. of Colmar and, at night, his troops and tanks were on the Rhine, NE. of the city. The Fr. Army, together with Amer. forces under de Tassigny, reached the centre of Colmar on 2 Feb. thus sealing the fate of the formations of the Ger. Nineteenth Army remaining in the so-called pocket. To the N. and W. of Mulhouse the Ger. main route of supply and retreat was cut by forces advancing on Neuf Brisach astride the main Colmar road. On 4 Feb. Fr. and Amer. forces met in the centre of the Colmar 'pocket', cutting the Ger. forces in two, while all the Germans remaining in the Vosges were surrounded. By 9 Feb. the Colmar 'pocket' was eliminated, and organised resistance there was ended. Patton's forces broke clean through the main Siegfried fortifications 41 m. N. of Prüm on 5 Feb. Two days later Amer. troops crossed the border on the Ardennes front at numerous points from near Clervaux to Echternach over the Our R. and were at once up against the Siegfried defences.

Plan of Operations to Reach the Rhine. It was planned that in operations W. of the Rhine the main effort was to be made in the N. sector looking to the seizure of crossings N. of the Ruhr. Three distinct phases were envisaged, viz.: (1) the Canadians and the Amer. Ninth Army were to close up to the Rhine N. of Düsseldorf whilst the Amer. First Army seized the line of the R. Frft W. and NW. of Cologne. The offensive in the Ardennes was to be reduced, the Germans contained, and the breaches in the Siegfried Line developed. (2) Whilst in the N. the Rhine-crossing was prepared and accomplished, the Germans were to be forced back to the riv. N. of its confluence with the Moselle, and when this was done the S. forces were to capture the Saar basin and advance towards the Rhine. (3) Whilst the N. bridgehead was developed and the central group of armies held a defensive position N. of the Moselle, the remaining S. forces were to close up to the Rhine.

Canadian-British Offensive in the Reichswald. The Canadian First Army under Crerar, with large numbers of Brit. troops, launched the offensive between the Maas and the Rhine as planned on 8 Feb. Crerar's army was fighting in most difficult country. Scottish troops entered Klieve on 11 Feb.; but though the Canadians took Millingen on the Rhine, they were much hindered by floods and, by blowing up dykes, the enemy

had increased the riv. floods. Next day Brit. troops took Gennep, an important stronghold, and Crerar's forces were now through the outer Siegfried defences. A day later most of the Reichswald had been cleared. Meanwhile the Amer. First Army, having taken Schmidt, were fighting for the reservoir system and the great Schwammenauel dam; and the Amer. Third Army had crossed the Prüm and fought their way through the Schnee Eifel forest. In the reservoir area the Americans soon cleared all Ger. troops from the l. b. of the Roer, while the Schwammenauel dam was under Allied control, though not intact, by 10 Feb. The Third Army, which was fighting on the banks of the Sure and Our, were faced by swollen and swiftly flowing rivs. Yet the Americans had secured at least 10 crossings on a 24-m. crescent and were estab. on Ger. soil near Echternach. Troops of the Third Army entered Prüm on 12 Feb. The Canadians, in spite of a number of Ger. counter-attacks, made good progress S. of the Reichswald. Brit. troops had completed their task of fighting a way through the Reichswald, and the enemy, consisting of elements of 7 divs., had withdrawn to the next Siegfried belt through Hochwald, while still holding the important positions of Goch and Kalkar in advance of that belt. Scottish troops of the First Canadian Army were battling relentlessly from house to house through Goch. On 19 Feb. the Germans were surrounded. Next day Patton's troops, in a sudden thrust between the Moselle and Saar, captured Sarrebourg and a score of other towns and vills. On 22 Feb. Brit. and Amer. bombers made their biggest bid to wreck the Ger. railway system. This tremendous air onslaught was the prelude to the offensive of the Amer. First and Ninth Armies across the R. Roer, E. of Aachen. The same day (22 Feb.), the Third Army crossed the Saar at sev. points.

On the next afternoon Hodge's First and Simpson's Ninth Armies launched a surprise offensive across the R. Roer E. of Aachen. The following day the 2 Armies broke into the Rhine plain about 18 m. from Cologne. Tanks and guns were moved across the Roer and a bridgehead secured on a 30-m. front. The fall of the bastions of Jülich (24 Feb.), and Düren (25 Feb.), sealed the fate of Cologne, particularly as the overwhelming power of the Brit. and Amer. air forces, in isolating the enemy on the battlefield, prevented him from delivering any determined counter-attacks. On 26 Feb. the First Army was within 12 m. of Cologne, while the Third had advanced up to 7 m. N. of Echternach and repulsed 7 desperate counter-attacks across the Saar. Next day Crerar's Canadians penetrated into the last belt of the Siegfried defences in the Hochwald, which lies between Goch and Xanten; while Amer. troops were advancing on München-Gladbach, and had reached the R. Erft., Cologne was now under fire from Amer. guns, forces of Simpson's army having secured 3 bridgeheads across the Erft, one of them at

Modrath on the main Cologne-Düren road. Approaching behind the main Siegfried fortifications E. of the Saar, Amer. armoured columns of Patton's army entered the outskirts of the ancient city of Trier on 1 Mar. München-Gladbach was captured on 1 Mar. Swiftly on this success the Ninth Army captured Krefeld and Roermond. In addition to these places, the long and bitterly contested strongholds of Venlo fell to them, thus outflanking at last the barrier of the Maas; and farther S., Patton completed the capture of Trier.

Fall of Cologne. In the N. part of the Allied line the fiercest fighting was now in the E. of the Hochwald, where the Germans were striving to cover the Rhine bridges at Wesel, 20 m. NW of Essen. The momentum of the whole campaign was increasing. Amer. armour and infantry were at the very gates of Cologne (4 Mar.). The whole Allied line, now that the Siegfried defences had been largely overcome, was fast closing to the l. b. of the Rhine, and the enemy forces still remaining W. of the riv. were being split and destroyed in detail. Most of the organised Ger. resistance still maintained on the l. b. was now manifestly intended to cover vital crossings to Wesel and Duisburg. Brit. troops in Crerar's command joined up with Ninth Army forces at Geldern, thus carrying a stage farther F.-M. Montgomery's plan to crush the Ger. First Parachute Army. Moreover, this junction at Geldern with the British had carried a long way farther the envelopment of the whole of the enemy forces between the Maas and the Rhine. For after the Hochwald had been cleared the Germans were reduced to a bridgehead 20 m. by 10, from a point opposite Duisburg to the W. of Xanten, these being virtually the last Rhine bridges available to the enemy. After the passage of the Ertf Cologne had ceased to have much tactical value for the enemy, for Allied forces now stood along the riv. between Cologne and Düsseldorf and were also threatening the city from NW. and W. Amer. tanks and infantry broke through the outer defence belts into Cologne on 5 Mar. and took 2 suburbs. The city was finally in Allied hands on 7 Mar. As the Allies had desired, von Rundstedt had fought his main battle W. of the riv.

The Remagen Crossing. Rhineland Bombing. A junior Amer. officer, Lieut. Burrows, made a crossing of the Rhine by a bridge at Remagen, on 7 Mar., only 10 min. before the Germans had planned to destroy it. His platoon of infantry maintained its position on the r. b. until units of the 9th Armoured Div. consolidated the position. By 9 Mar. a lodgement area 3 m. deep was held. Enemy reinforcements failed to contain it; as it grew the vital N.-S. autobahn was cut. By 24 Mar., when the main eastward attack in the N. was begun, an area 10 m. deep and 25 m. long was held, with 3 corps within it. Meanwhile, the junction between the Amer. First and Third Armies on the Rhine was firmly estab. by 10 Mar., with the result that some 10

enemy divs. were enveloped. In a savage battle to the N. the British fought their way into Xanten, while the Canadians were driving up to the S. of the city. The Amer. grip was extended on the l. b. of the Rhine below Coblenz. Northward, the notorious salient at Wesel was at length wiped out by the Canadian First and Amer. Ninth Armies. Thus the Allies now stood on the line of the Rhine the whole way from Nijmegen to Coblenz. Throughout these operations the Allies had ceaselessly carried out strategic bombing of Rhineland industrial centres.

German First and Seventh Armies Annihilated in Saar-Moselle-Rhine Salient. The Germans still held a large triangle of ter. between the Saar, Moselle, and Rhine. But Patton's forces were now converging along the N. bank of the Moselle from the direction of Trier and Coblenz respectively, and steadily reducing the gap of escape across the Rhine to the S., while Gen. Patch's forces were preparing to attack the triangle from the S. The Ger. Seventh Army having been scattered by Patton in the Eifel and driven southward into the riv. triangle, the Ger. First Army was now the only stable enemy command left W. of the Rhine. The combined offensive of the Amer. Third and Seventh Armies (phase 3) now grew ever more menacing. Patton's army crossed the Moselle SW. of Coblenz, while the Seventh Army struck frontally at the remaining Siegfried defences between the Saar and Hagenau preparatory to recovering all the places lost in the enemy's recent counter-offensive in the Palatinate. The 4th Armoured Div. now began its advance to threaten the entire Ger. salient (16 Mar.). Another armoured div. was thrown in soon afterwards to exploit the mounting confusion of the enemy. The Third Army now had 4 tank divs. thrusting through the broken ranks of the Ger. Seventh Army; while Patch's army kept the Ger. First Army impotent by battering it back into the Siegfried Line and crowding into the outer defences in a non-stop onslaught. Along the Saar line Patch's forces in a furious attack penetrated the Siegfried's concrete defences and began to outflank Saarbrücken (18 Mar.). Coblenz was carried by storm on 18 Mar., and Amer. tanks entered Bad Kreuznach and Bingen. Saarbrücken and Zweibrücken were taken by Patch on the 20th, while Patton's forces reached Mainz and the ancient city of Worms and passed through the vital centre of Kaiserslautern 12 m. W. of which place the Third and Seventh Amer. Armies had joined hands. The entire Ger. forces in the salient were now demoralised and racing for the Rhine with Amer. tanks hard on them and fighter-bombers attacking them. On 21 Mar. Patton's army entered Ludwigshafen. Patton's aggressive tactics reached their peak on 22 Mar. in a surprise night crossing of the Rhine, the 5th Div. being sent over without any formal preparations and with negligible losses. Thus 2 bridgeheads were already held before the main assault of 21st Army Group was attempted.

All organised resistance W. of the Rhine ended by 25 Mar., and phase (3) of the operations to close the riv. was completed. The operations had gone entirely according to plan, with the additional gains of the rapid seizure of the Cologne area, and the estab. of 2 bridgeheads. The Ger. armies needed to man the last barrier were shattered to the W. of the riv.

V. FINAL ALLIED ADVANCE ACROSS GERMANY.

Preparations. The Allied strength on the W. F. now reached almost 4,000,000 men. The Ger. position was precarious, and their strength inadequate to man the Rhine barrier. The features of the Allied plan were a main attack to the N. of the Ruhr, aided by a strong secondary drive from bridgeheads around Frankfurt towards Kassel, thus enveloping the Ruhr. Three armies were to be used in the main N. assault. The Brit. Second Army was to attack N. of Wesel, capturing the tn to allow the Amer. Ninth to begin bridging there, the 2 forces then expanding the foothold gained. To assist Second Army the 18th Airborne Corps were to be dropped in the key area N. and NW. of Wesel. On the left flank the Canadian Army was to hold the Rhine and the Maas from Emmerich to the sea. The air arm had a most important task, namely to isolate the Ruhr from the rest of Germany, and to deny the use of its resources to the enemy. Their main effort began on 21 Feb. 1945. Ten of the 18 vital bridges and viaducts were destroyed by 14 Mar., and the communications centres of Dortmund and Essen were heavily raided on 11 and 12 Mar.

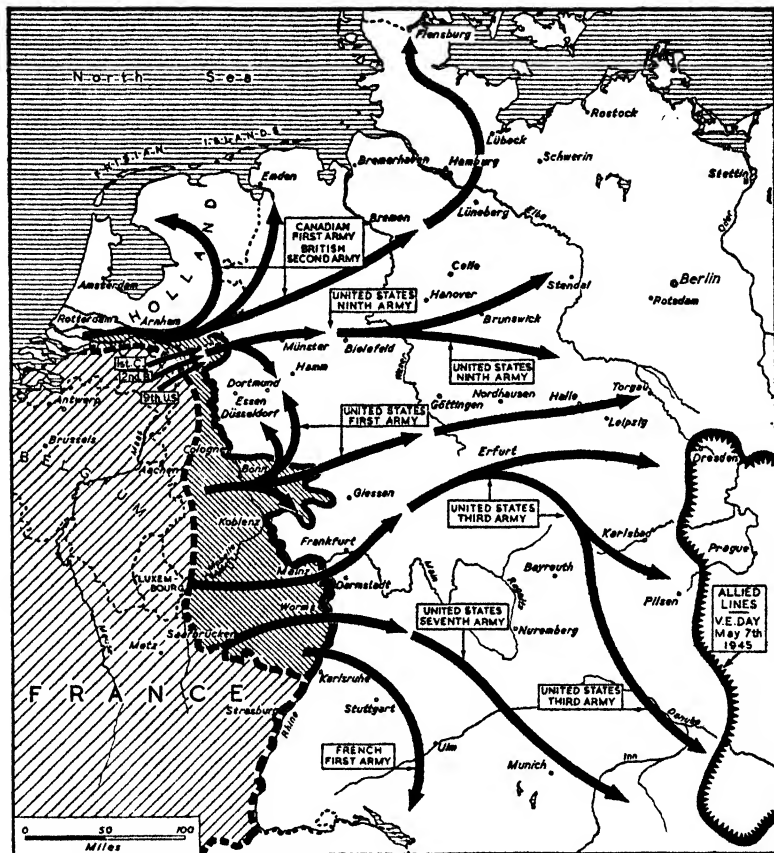

Montgomery Crosses the Rhine. At 8 p.m. on 23 Mar. an artillery barrage lasting an hr opened the offensive. At 9 p.m. the Brit. 1st Commando brigade began the assault on Wesel, and, so accurate and heavy had been the air assault, captured it for 36 casualties. The next night 4 major landings were merged in a solid bridgehead 7 m. deep. 8000 prisoners were taken, and complete contact was soon made with the airborne forces who had landed during the morning. In a day both Dempsey's Second Brit. Army and Smith's Ninth Amer. Army had floating bridges over the wide, swift-flowing Rhine, an outstanding feat of military engineering. Enemy resistance was remarkably light, due largely to the combined weight of air and artillery preparation on a massive scale, and to Allied air supremacy over the battle-area. On the 25th there was stiff fighting near Emmerich, it being the obvious intention of the Germans to hold the front there against a probable Brit. attack northwards into Holland; but NE. of Wesel the British advanced almost unopposed after taking Brünen. There was also very stiff fighting for Rees, but the tn was finally cleared by Scottish troops. Meanwhile the Ninth Army was threatening the whole region S. of the Lippe Canal flowing eastwards from the Rhine near Wesel.

The Amer. First Army had concurrently advanced southwards 35 m. from the Remagen bridgehead, while the Third Army tanks, from new bridgeheads at Boppard and N. of Braubach, had entered the suburbs of Frankfurt-on-Main and penetrated into Bavaria. In the far S. Patch's Seventh Amer. Army crossed the Rhine S. of Worms on 26 Mar. On 1 April the French estab. a foothold across the riv. at Philippsburg, and built up a base from which later to attack SE. towards Stuttgart, and to clear the r. b. up to the Swiss frontier.

Kesselring's Armies in Retreat. Von Rundstedt, having been reinstated to carry out the Ardennes offensive, was again dismissed when the Allies crossed the Rhine, and Kesselring was brought from Italy to face the task of holding the Ger. armies together. As reinforcements of men, guns, and armour flowed across the Rhine, the vanguards of the Brit. and Amer. forces under Montgomery were steadily expanding the Westphalian bridgehead and so putting the crossing sites beyond the range of enemy artillery. It was now evident that the main Ger. defence line had been broken in crossing the Rhine, and in the N. sector of the Allied advance the Ger. front appeared to be collapsing, though Montgomery's major attack was yet to come. The Canadians were steadily moving on towards Emmerich, while the British advanced on Isselburg. Organised Ger. resistance on the centre and S. parts of the front opposite the 21st Army Group had, for the time being, ceased to exist, and the same could be said of the front opposite Gen. Bradley's 12th Group. Realising the peril to the Rhine front, some time previously the Germans started digging intensively on a line running S. from the point where the Ems enters the Dollart, S. of Emden, down to the Dortmund-Ems canal and thence along the line of the Lippe to the Rhine itself and Wesel. But already Brit. and Amer. troops were astride the Lippe, and Ger. power was dwindling so fast that it was difficult to say where forces to man this line were to be found. On the 28th, with the Allied armour driving E. in great strength, the whole of Kesselring's front was now in retreat, in places becoming a rout. As the Ger. columns fled eastward Brit. forces of the 6th Guards Armoured Brigade captured Dorsten 20 m. E. of the Rhine. In the S. Patton's forces, which were now clearing Frankfurt, reached Gemünden in their drive from Aschaffenburg; while Patch had advanced to the Main, E. of Worms. Next day Montgomery's forces were 40 m. beyond the Rhine. On their N. flank the Canadians took Emmerich on 30 Mar.; in the S. forces of the Amer. Ninth Army, advancing 130 m. in 5 days, had captured Paderborn, 60 m. SW. of Hanover and outflanked the Ruhr valley in the S. Patton's tanks, in swift thrusts, were overwhelming the enemy, and at Lauterbach the Americans were only about 200 m. from Berlin. On the same date Patch's infantry occupied Heidelberg.

The Ruhr Encircled. Fall of Münster. By the junction on 1 April of the Amer. First and Ninth Armies near Lippstadt (N.E. of Hamm), the encirclement of the Ruhr was completed. Some 21 divs. were trapped. On the 14th the pocket

Erfurt and Leipzig, to Dresden, cutting in two the remains of the Reich; third, through Nuremberg and Regensburg and via the Danube into Austria. Eisenhower selected the second as the most effective, to be supported by more limited

Approximate areas liberated or occupied to March 1, 1945.

The advance to the Rhine: March 1 to 23.

THE ALLIED ADVANCE INTO GERMANY, 1945

A map showing Russian advances in the East is printed in the article EASTERN FRONT.

was divided at Hagen, and on the 18th it was finally eliminated. Prisoners numbered 325,000, including 30 general officers. The main front was by this date over 100 m. to the E.

Three main avenues for the advance into Germany were available: first, across the N. Ger. plain to the Baltic and Berlin; second from Kassel, through

operations to the N. and S. by Montgomery and Devers respectively. When the central thrust met the advancing Red Army the chief task would be to reach the Baltic and clear the whole N. area, and then to drive down the Danube into the Alpine Redoubt which Hitler intended to garrison with as many of his forces as possible. From Holland to the State of

Baden more than 12 armoured divs. drove deep into Germany. The vanguard of Montgomery's forces were already over 80 m. beyond the Rhine.

Roads from the N. of Holland were seen to be packed with transport of Ger. troops moving out of the country. Münster was entered on 2 April by Brit. and Amer. forces of the 21st Army Group and, at the same time, the Brit. 6th Airborne Div. crossed the Dortmund-Ems Canal and advanced on Osnabrück. Farther W., Rheins, centre of an airfield system, and Enschede, the Dutch border tn, were occupied. Patton's infantry advanced to the outskirts of Kassel.

Allied Advance to the Weser. Hamm Captured. Montgomery made a general advance to the Weser, where the enemy was frenziedly building defensive positions, though his line was already being turned by Amer. armour operating in Thuringia and Bavaria. Columns of Patton's armoured forces entered Gotha on 2 April, after an advance of 20 m. through the N. fringe of the Thuringian Forest. Advancing along the Dutch border to capture Nordhorn, the Canadians crossed the Twente Canal, thus threatening all the Ger. supply lines into Holland. On 3 April, the Brit. 11th Armoured Div. reached the outskirts of Osnabrück. Thus, with Rheine and Münster cleared, the enemy had lost the use of the group of fighter-airfields within the Rheine-Münster-Osnabrück triangle on which the Allied air forces had concentrated so many fierce attacks before the crossing of the Rhine. Twenty m. S. of Münster the tn of Hamm, whose vast railway marshalling yards had been bombed repeatedly for years, was entered by the Amer. 83rd Infantry Div. Forces of the same Amer. Army, the Ninth, also captured the tn of Recklinghausen, and part of the Teutoburger Wald which skirts the railway centre of Bielefeld. On 4 April Montgomery's forces were on the line of the Weser near Minden, on the most direct route to Berlin, though Gen. Patton's columns in Thuringia were still nearer the cap.

Americans take Kassel and Gotha. French Take Karlsruhe. Farther S., Patch's tanks were less than 40 m. from Nuremberg; while in the extreme S. the Fr. Army in Baden entered Karlsruhe on 4 April. Thus, from Holland to Switzerland, operations were in swift progress to engulf the whole *Wehrmacht* in disaster, though large if isolated pockets of resistance still remained.

Allies Across the Hanoverian Plain. Canadians Advance into Holland. Bremen Captured. Tanks and infantry of the Amer. Ninth Army crossed the Weser S. of Hameln on 6 April. Units of the Brit. 11th Armoured and 6th Airborne Divs. held a long stretch of the W. bank near Minden. The 7th Armoured Div. was approaching Bremen. Canadian armour crossed the Twente Canal and advanced N. of Almelo. More Brit. and Amer. tanks had crossed the Weser in sev. places next day, and the highway to Hanover lay open before them. The

Brit. and Canadian armies under Montgomery were now engaged in a great fanning manoeuvre spreading N.E. across the Hanoverian plain and NW. against the enemy's last strongholds in Holland, which latter were now closely threatened by a rapid advance of Canadian armour in the direction of Groningen. Allied parachute troops were dropped over Drenthe and Friesland E. of the Zuider Zee (7 April), while farther S. Zutphen was also captured. By now the city of Hanover was almost enveloped by Allied tanks, while a Brit. column was closing on Bremen. Fifty m. to the S. of Hanover Amer. troops cleared Göttingen. Between Kassel and Mühlhausen the enemy made lunges at the Third Army's flank, but without avail and at heavy loss to himself in armour. An advance by 10th Armoured Div. of the Seventh Army, which drove forward SE. of Würzburg, to within 20 m. of Kralleheim on 7 April, had temporarily to be abandoned in face of enemy pressure. There was bitter street fighting in Heilbronn until 12 April, but the area within the great loop of the Main R. near Würzburg was now largely cleared and Amer. tanks were making for Schweinfurt. Forces of the First Fr. Army, advancing on the line of the Neckar, took the important traffic junction of Pforzheim, while other units, advancing on Stuttgart, seized the enemy broadcasting station, which lay outside the city. S. of Bremen the Germans strongly contested the advance of 30th Corps; the outskirts of the city were reached by 22 April, and opposition was finally crushed on 26 April.

Allied Advance on the Elbe. Hanover captured. North-West Holland Isolated. The left thrust of the Allied offensive was now driving across the N. plains of Germany towards the Elbe, the last natural barrier on the road to Berlin, and the 11th Armoured Div. reached it at Lauenberg on 19 April. Farther N. 12th Corps reached the S. bank opposite Hamburg on 20 April. Hanover, vital as a Ger. communications centre, was captured in April by Simpson's army. Amer. armour, advancing S. of the city, on this day cut the motor road to Brunswick at a point about 20 m. from Hanover. Meanwhile Crerar's Canadians had made much progress in isolating the remaining forces in N. Holland, as the result of masterly manoeuvres. Pivoting on Arnhem (not yet taken), a wide wheeling movement had been made to the line of the IJssel, while armoured columns were thrusting due N. to the sea, amidst considerable difficulties in flooded terrain. Bitter resistance was encountered on the approaches to Deventer, which fell on 10 April, and Zwolle. The Germans W. of IJssel were now cut off in a swiftly closing pocket that contained nearly all the prin. cities of Holland.

The Americans Reach the Elbe. Fall of Essen, Schweinfurt, and Coburg. The Ninth Army continued its N.E. advance which it had begun under 21 Army Group after its successful envelopment of the N. Ruhr. Its 19th Corps reached the

Elbe, S. of Magdeburg (70 m. from Berlin), after a more or less unopposed advance of 50 m. on 11 April. The same day the Amer. 17th Airborne Div. attached to the Ninth Army had completed the capture of Essen. Amer. troops of the Seventh Army entered Schweinfurt from 2 directions, but severe fighting followed their entry. Patton's troops, on this date, captured Coburg and entered the outskirts of Erfurt.

Americans Take Weimar. British and Canadians in Arnheim. The 2nd Armoured Div. of the Ninth Army crossed the Elbe early on 12 April. Patton's forces captured Weimar, while one armoured column crossed the Saale 24 m. SW. of Leipzig, by-passing Jena. Scottish troops took Celle on the main Hanover-Bremen railway. Dempsey's troops crossed the Aller SE. of Bremen. In the S. Patch's forces finally cleared Heilbronn after a week-long battle. Brit. and Canadian troops made a new crossing of the hotly contested IJssel and entered Arnheim on 15 April. Brit. troops were now approaching Belsen (q.v.), 10 m. NW. of Celle. Canadian reconnaissance troops reached the N. Sea near the Ems estuary on 15 April and occupied Leeuwarden. The Ger. escape route across the Zuider Zee along the N. causeway was now outflanked. The enemy withdrew behind the Grebbe and New Water lines into 'Fortress Holland,' and no further Allied advance was attempted. The destruction of the Ger. forces still at large was the main concern.

French Combined Operation in the Gironde. A combined assault was launched on 14 April against some 20,000 Germans still entrenched at the mouth of the Gironde covering Bordeaux. More than 2300 Amer. heavy bombers attacked the naval fortifications at Royan and the Pointe de Graves at Le Verdon, while the land attack was opened by Fr. troops under de Laminat. A Fr. naval task force under Adm. Rue bombarded the coastal batteries which commanded the entrance to the estuary. This was the first time since 1940 that the Fr. Navy had put a completely national force into operation. On 15 April troops of Leclerc's armoured div. entered Royan, the strongpoint covering the mouth of the Gironde from the N. Fighting in this sector ceased on 18 April, and on the 21st Pointe de Graves, on the S. bank, was captured. The is. of Oléron fell on 1 May. Farther N. the St Nazaire-Lorient 'fortress' held out until the final Ger. surrender.

Leipzig Taken by the Americans. Czechoslovakia Reached. To the W. and SW. of Leipzig the enemy resisted strongly, although Allied penetrations had been made to the SE. After 2 days of hard fighting the 69th Div. cleared the city on 19 April. The Americans also made an end of the enemy's strenuous resistance in Halle. The 15th Corps reached Nuremberg on 16 April, but the tn. held out until the 20th, owing to bitter resistance of the 17th S.S. Panzer Grenadier Div. Allied units closed up

to the R. Mulde. S. of the Harz Mts the First Army offensive, begun on 11 April, progressed with speed against usually limited resistance. Dessau was reached on 14 April, this thrust almost surrounding a pocket of some 10,000 Germans in the mts. Helped by difficult country, they held off the Allies and maintained a corridor to the E. This was cut on 18 April, and organised resistance collapsed 3 days later. A rescue attempt across 50 m. of Allied-held ter. by the von Clausewitz Panzer Div. was frustrated. On the Third Army front, whilst 20th Corps advanced to the N. of Czechoslovakia, 12th and 8th Corps drove towards the SW. frontier, and units entered the country on 18 April. The junction with the Russians which cut Germany in two and achieved the object of the central thrust, was effected on 25 April, when the 273rd Regiment of 69th Div., probing eastward from the R. Mulde, met units of the Russian 58th Guards Div. on the Elbe in the Torgau area.

Troops of de Tassigny's army, E. of the Rhine, almost completely turned the Ger. positions in the Black Forest and advanced to Tübingen, whence a column swiftly raced up the Upper Neckar valley to capture Rottweil near the Danube.

VI. THE LAST PHASE.

The General Situation. The junction of the W. and E. fronts at Torgau split the Ger. forces into 2 unco-ordinated sections, in both of which a weaker resistance became apparent; over 1,000,000 prisoners had been taken by the W. Allies in the first 3 weeks of April, and such losses made collapse inevitable. The administration of the entire country, moreover, was paralysed. The 'National Redoubt' was a major question in the minds of the Allied command. This area, some 240 m. by 80 m. in W. Austria with small parts of Germany and Italy, was extremely mountainous, and though the junction at Torgau prevented the main body of the Ger. Gov. reaching it, there remained the possibility that the more fanatic elements in the S. part might make a last stand there. In the N. part some 50 Ger. divs. remained, the First Parachute Army being the only formidable troops. To prevent a withdrawal into Denmark and Norway, a rapid drive to the Baltic became the primary objective. On the central sector the main Allied forces were halted on the Erzgebirge and the Mulde and Elbe rvs., chiefly because of supply factors.

Whilst the central forces were halted, those to the N. and S. were further to subdivide the enemy and neutralise the possible areas of resistance. Thus 21 Army Group, having crossed the Elbe, was to take Hamburg and advance as fast as possible to the Kiel-Lübeck area, and afterwards liberate Denmark. Meanwhile, the coastal belt was to be cleared. In the S. a similar thrust was to be made down the Danube valley to Linz by the Third Army. In addition, Salzburg was to be taken, and the Seventh Army was

to advance on Munich and penetrate the mts of the fortress area. The Fr. Army was to clear the Black Forest and the Swiss border.

Operations in the North. The British Take Bremen and Hamburg. Conditions in Holland. The Brit. Second Army met steady resistance in its drive towards Bremen and Hamburg. After the fall of the former, on 26 April, the main effort was transferred to the 8th Corps, which crossed the Elbe at Lauenburg on 29 April and rapidly developed a

but without success. Wholesale surrenders took place to the Amer. units halted at the Elbe, whilst the Second Army drove unopposed to the Baltic. The Canadian Army continued mopping-up operations in Groningen prov. and the coastal belt, and Oldenburg fell on 2 May after strong resistance. W. of the IJsselmeer the situation was delicate. The civil pop. was threatened with starvation, the Germans were strongly placed and, moreover, would have opened the dykes and flooded the country if an Allied

7 MAY 1945: THE GERMAN SURRENDER AT GENERAL EISENHOWER'S HEAD-QUARTERS IN THE COLLÈGE MODERNE ET TECHNIQUE AT RHEIMS

Facing, left to right: Gen. Sir F. E. Morgan, Gen. Savez, Adm. Sir H. Burrough, Lt.-Gen. W. Bedell Smith, Maj.-Gen. Ivan Suslaparov, Gen. C. Spaatz, Air Marshal Sir J. M. Robb. Facing the Allied officers: Adm. H. von Friedeburg, Gen. A. Jodl, Maj. W. Oxenius.

bridgehead. The Amer. 18th Airborne Corps, fighting as ground troops, crossed to the S., and gave flank protection for further advances. On 1 May, 11th Armoured Div. set out from the bridgehead, moved swiftly across Schleswig-Holstein and entered Lübeck on 2 May, cordoning off the enemy in Denmark. On the same day the Brit. 6th Airborne Div. arrived at Wismar, farther E., and inland Schwerin was taken. Meanwhile other forces moved down the E. bank of the Elbe and occupied Hamburg on 3 May, whilst the region between the Elbe and the Weser was cleared of the enemy. Contact with the Red Army was estab. on 3 May from Wismar to Lake Grabow. By the end of April the enemy abandoned the fight against the W. Allies, and tried to make a last effort to hold the Russians,

assault were made. Seyss-Inquart, the Nazi commissioner, offered a solution by proposing that the Allies should stand on the line of the Grebbe, whilst the Germans allowed relief supplies to be introduced, ceased repressive measures, and made no further flooding. This was accepted and put into operation. Gen. Blaskowitz refused to surrender until the Ger. forces in N. Germany did so.

Operations in the South. The Third Army from 22 April thrust down the Danube valley through crumbling resistance, crossing the riv. on the 25th (leaving Regensburg to be taken on the 26th), and advancing down the r. b. with 20th Corps and the 1. b. with 12th Corps. Passau was reached on 2 May, and 11th Armoured Div. raced ahead to take Linz on 5 May. The Czech frontier was

crossed, and Pilsen fell on 6 May. Amer. forces were halted on the line Budweis-Pilsen-Karlsbad, whilst the Red Army cleared the banks of the Moldau R. and occupied Prague. Contact along the Elbe valley was estab. as agreed.

20th Corps, S. of the Danube, crossed the Isar R. on 29 April, and on 1 May reached the R. Inn at Braunau. To the right, 3rd Corps crossed the Danube near Ingolstadt on 26 April, crossed the Isar on the 28th, and reached the Inn on 2 May.

Nuremberg fell on 25 April, and 2 days later Seventh Army began its last offensive. 15th Corps took Munich on 30 April. Berchtesgaden was occupied on 4 May, other units took Salzburg, and from there to Linz Ger. resistance disintegrated. Meanwhile 21st and 6th Corps crossed the Danube near Dillingen on 22 April, and at Donaauwörth on the 24th. Enemy pockets were cleared, and Augsburg fell on 28 April. To the W., 6th Corps reached Ulm and then drove on to the foothills of the Alps. Innsbruck fell on 3 May, and units pressed on to the Brenner Pass, where, on 4 May, contact was made with units of the Amer. Fifth Army driving into the Alps from Italy. No danger of a last stand in the Redoubt existed. On 5 May, the Ger. Nineteenth Army surrendered, as did the whole of Army Group G the next day.

Operations by the French Army. Simultaneously with Seventh Army's thrust into the Redoubt, the Fr. Army dealt with the Germans farther W. After enemy resistance in the Black Forest area broke, the French moved on swiftly. Lake Constance was reached on 22 April, and the corridor then widened. The advance turned N.E. to Ulm, and on 24 April contact with the Seventh Army was made. Meanwhile the encircling process was completed by another Fr. advance up the E. bank of the Rhine to Basel, and then eastward. Stuttgart had been occupied on 21 April. By the 26th the Swiss border was reached from Basel to Lake Constance, and by the 27th organised resistance ceased despite locally strong opposition. Fr. armour, relieved at Ulm by Seventh Army, now advanced along the N. shore of Lake Constance and on 30 April turned S. into Austria. The advance went on up the Ill and Kloster valleys into the W. end of the Redoubt, where the Seventh Army was met as the Germans capitulated.

By 5 May, the war in Europe was virtually finished, and no Ger. army capable of fighting on existed. Contact with the Red Army was estab. from the Alps to the Baltic, and with the forces in Italy. The Redoubt was occupied, Norway isolated, and the Germans in Holland and Denmark had just surrendered. The Channel Is., the ports of Brittany, and Dunkirk were powerless.

The Surrender. In Mar. 1945 the Nazi Gov. tried, through Stockholm, to arrange a truce with the W. Allies in order to concentrate on the Russians, but immediate rejection was encountered. In the last week of April Himmler offered, through the Swedish Gov., to surrender

all forces fighting on the W. F. Again it was replied that simultaneous and unconditional surrender on both fronts was the only course open. Hitler and his entourage, with nothing to lose, maintained the hopeless fight, but individual commanders began to face the facts. All fighting in Italy ceased on 2 May. Army Group G capitulated on 6 May. The commanders in Norway and Denmark seemed ready to surrender in the last weeks of April, but on 3 May Doenitz, Hitler's successor, who had instructed the forces facing E. to turn around and surrender to the W. Allies, came into the picture. After attempting unsuccessfully to avoid surrendering to the Red Army, his emissaries on 4 May signed a capitulation, effective on 5 May, for all Ger. armed forces in NW. Germany, Holland, Schleswig-Holstein, and Denmark. Adm. von Friedeburg, representing Doenitz, arrived at Eisenhower's H.Q. on the evening of 5 May, and was told that unconditional surrender was the only course open to him. Jodl arrived on 6 May, and it became clear that the Germans were merely playing for time to evacuate as many soldiers and civilians as possible behind the Allied lines, and to cut this short Eisenhower threatened to seal off the W. F. against any westward movement of Germans unless all hostilities on both fronts ceased within 48 hrs. This was immediately effective, and Doenitz approved acceptance of the terms. At 2.41 a.m. on the morning of 7 May Jodl signed the act of surrender on behalf of the Ger. High Command, the terms to become effective at midnight of 8/9 May. Formal ratification was signed in Berlin on the night of 9 May. In these discussions at Allied H.Q. the Russians and the French were associated with the Americans and British.

Eisenhower, *Report by the Supreme Commander to the Combined Chiefs of Staff on the Operations in Europe of the Allied Expeditionary Force, 6 June, 1944, to 8 May 1945* (H.M.S.O.), 1946, and *Crusade in Europe*, 1948; F. M. Viscount Montgomery of Alamein, *Normandy to the Baltic*, 1947; and the bibliography to WORLD WAR, SECOND.

Western Islands, see HEBRIDES.

'Western Mail, The.' only morning newspaper pub. in Wales (at Cardiff), founded in 1869, a Kemsley paper, Conservative in politics. Welsh affairs are emphasised in the news services, which include home and foreign affairs. It pub. social, political, and literary articles, covers sporting news, and is notable for commercial and industrial features.

Western Union, name given to an association of the nations of W. Europe for the defence of themselves and their way of life, dating, in its existing form, from May 1955. W. U. has been built on the foundation of a number of specialised institutions set up for limited, clearly defined, and urgent tasks. First of these is the Brussels Pact, a 5-country defensive alliance (see BENELUX; BRUSSELS TREATY). Next is the wider N. Atlantic Pact (see NORTH ATLANTIC TREATY),

which in addition to the Benelux countries includes Britain, France, the U.S.A., Canada, Norway, Denmark, Iceland, Italy, Portugal, Greece, Turkey, and the Federal Ger. Rep. In May 1949 was estab. a European Council with its 2 wings, already noticed, the committee of ministers and the consultative assembly of all-party members of parliaments. This latter is only a consultative body, and is therefore unlike the conferences and meetings of the Inter-Parliamentary Union, an important but unofficial union. It is an official body of members of Parliament meeting with status and functions defined in an international treaty, and is thus part of a great international official machine. On the economic side of the W. U. is the Organisation for European Economic Co-Operation (q.v.) set up in Paris originally for the purpose of distributing Marshall Aid. In Dec. 1949 the W. U. defence organisation that then existed was incorporated with the N. Atlantic Treaty command.

In Aug. 1954 France rejected E.D.C. (the European Defence Community, q.v.). At a conference held in London Sept./Oct. 1954 attended by the original E.D.C. countries and also by Britain, the U.S.A., and Canada, it was agreed to invite W. Germany and Italy to join the Brussels Treaty; to end the occupation of W. Germany and invite her to join N.A.T.O.; and in addition arrangements were made for controlling armaments, and Britain guaranteed to keep substantial forces on the Continent for Europe's defence. The machinery for enforcing these agreements was settled by a conference at Paris in Oct. 1954 (see LONDON AND PARIS AGREEMENTS). The W. U. thus estab. was brought formally into being on 7 May 1955.

Westernisers, philosophical and political movement in 19th-cent. Russia which, contrary to Slavophiles (q.v.), held that the historical development of Russia was subject to the same laws as that of Western Europe. Among the leading W. were Belinskiy and Herzen.

Westfalen, see WESTPHALIA.

Westfield: 1. City of Hampden co., SW. Massachusetts, U.S.A., on Westfield R. 7 m. W. of Springfield. It has foundries and lumber mills and produces machinery, bicycles, prefabricated houses, paper products, and tobacco. It has a state teachers' college. W. was settled c. 1660, and incorporated as a city in 1920. Pop. 20,962.

2. Residential tn in Union co., New Jersey, U.S.A., 11 m. SW. of Newark. Its products include crushed stone, cinder, concrete, toys, paint, and dairy products. Pop. 21,240.

Westfield College, women's residential college of London Univ. (q.v.), founded in 1882 by Miss Dudin Brown for the higher education of women. The college is situated near Hampstead Heath; there are about 300 students.

Westhoughton, tn in Lancs, England, situated between Bolton and Wigan, 5 m. from each. The chief industry is cotton manuf. Pop. (estimated) 15,000.

Westland, prov. dist. of S. Is., New Zealand, lying between the S. Alps and the Pacific Ocean, and between Grey R. in the N. and Big Bay in the S. There are gold deposits and coal; sawmilling, dairying, and cattle rearing are carried on. The chief tns are Greymouth and Hokitika. Area 4880 sq. m.; pop. 18,502.

Westmacott, Sir Richard (1775-1856), sculptor, b. London, trained in Rome under Canova. He was elected R.A., 1811, prof. of sculpture, 1827, knighted, 1837. W. was responsible for many of London's sculptural landmarks, including the colossal bronze 'Achilles' in Hyde Park; reliefs on the Marble Arch and the pediment over the Brit. Museum portico. His son, Richard W. (1799-1872), was also a sculptor.

Westmeath, Earl of, see NUGENT, SIR RICHARD.

Westmeath, inland co. of Leinster prov. Rep. of Ireland, bounded N. by Cavan, S. by Offaly, E. by Meath, and W. by Roscommon. The surface is varied and is some 250 ft above sea-level. It contains some very fine scenery and is a co. of loughs, the largest being Lough Ree on the Shannon, and others are Loughs Sheelin, Ennel, Derrewagh, and Owel, all of which are noted brown-trout lakes. The prin. rivs. are the Shannon, the Inny, and the Boyne. The Royal Canal cuts through the co., affording easy communication with Dublin. Agriculture is the staple industry, and dairy farming is largely carried on. Some friezes and coarse woollen materials are manufactured. The chief tns are Athlone and Mullingar, the co. tn. For electoral purposes the constituency is Westmeath-Longford. The co. contains many anct monuments, and the ruins of Multyfarnham Abbey (1236) with its lofty towers are noteworthy. Area 680 sq. m.; pop. 54,880.

Westminster, Dukes of. The first to hold this title was Hugh Lupus Grosvenor (1825-99), who was created Duke of W. in 1874. He was the grandson of Robert Grosvenor, 2nd Earl Grosvenor (1787-1845), upon whom the title of Marquess of Westminster was bestowed in 1831. The 3rd Duke, William Grosvenor, succeeded his cousin in 1953.

Westminster, City of, pre-eminent among the metropolitan bors. of London because in it are situated the Houses of Parliament, Westminster Abbey, Buckingham Palace, and the chief gov. offices (q.v.). The fact that it was a royal residence from Edward the Confessor's time, if not earlier, close to the city of London, led to its supplanting Winchester as the legislative capital of the country. It is not clear why the name *Westminster* arose, for there is no clear evidence of any *east* minister so designated in the city of London. The legislative associations began with the setting up of some courts of law and of finance by Norman and Angevin kings in their palace here. The setting up of the Wool Staple in the 14th cent. greatly accelerated the development of W. in the Middle

Ages. After a fire in 1512 W. palace ceased to be a royal residence, and by the end of the 18th cent. the administration of W. had passed to a body of citizens. The city's development was considerable in subsequent cents., but residential expansions resulted in sev. centres each governed by its own vestry, until it was created a metropolitan bor. in 1899. In the same year W. was created a city by royal charter. W. and the city of London jointly return 1 member to Parliament. Area 2503 ac. (including 723 ac. of parks and public gardens); pop. 103,000. See Charles White, *The City of Westminster: official guide*.

Westminster, Palace of, see PARLIAMENT, HOUSES OF; WESTMINSTER HALL.

Westminster, Statute of (1931), Brit. Act of Parliament which estab. the relation of Britain and the dominions as defined at the Imperial Conference in 1926. It repealed certain provisions of the Colonial Laws Validity Act, 1885, thereby abolishing the power of Parliament to legislate for the dominions and to veto dominion Acts; and it acknowledged the right of the dominion parliaments to amend or repeal any Act of the Brit. Parliament applying to them. The S. of W. also recognises the essential link between the members of the commonwealth in the Crown. See also COLONIAL LAW. For earlier S.s of W. see DE DONIS CONDITIONALIBUS; QUIA EMPTORES.

Westminster Abbey. The legendary hist. of the abbey goes back to the foundation of a church by Lucius, the legendary 2nd-cent. 'first Christian king' of Britain, upon the alleged site of a temple of Apollo; to be followed by the building of another church by Sebert, the first Christian king of the East Saxons, consecrated in 616 by the Apostle St Peter, who appeared on earth for the occasion. (The official title of the abbey is The Collegiate Church of St Peter, Westminster.) Authentic hist. begins with a charter (preserved in the chapter house) of Offa of Mercia, who in 785 granted lands and privileges to the church of St Peter at Thorney, but whether this is Sebert's church, if such existed, or a later building, is not known; but certainly there was a Benedictine monastery here in the 8th cent. About 1050 Edward the Confessor began building an immense church on this site, the island of Thorney, which was formed by the effluents of the R. Tyburn where it flowed into the Thames. Fragments of this church, which was consecrated in 1065, are embodied in the present structure. The style was that of the advanced schools of Romanesque architecture which had developed in Normandy and Touraine. For many years Edward the Confessor's church met all requirements, but by the early 13th cent. the old Norman sanctuary had become cramped and inconvenient, and Henry III decided on a new building and a fitting shrine for the canonised Confessor. Demolition began in 1245, and by 1258 the new E. sanctuary was completed. In 1258 the demolition of the Norman nave was begun, and in

1269 the body of St Edward was placed in a splendid gold shrine which stood on the present marble mosaic base. The original design of the E. part was by Master Henry de Keyns, who was succeeded by John of Gloucester, who did little. The third master mason, Robert of Beverley, finished these parts. The nave followed this design in general form, but was changed in much of its detail by that great craftsman Henry Yevele. The nave took over 200 years to complete, nothing being done to it between c. 1269 and c. 1350, being finally completed c. 1528 under Abbot Islip. The W. towers are the work of Wren and Hawksmoor, c. 1722-40.

The building of the last of the great works of W. A., Henry VII's Chapel, which replaced the Lady Chapel of 1220, was begun in 1503. This great artistic achievement was the work of the brothers Robert and Wm. Vertue. The fan vault is technically remarkable from the fact that the architects discarded the use of ribs, the unribbed vault being fitted together with as much precision and accuracy as the parts of a mosaic. Everywhere, with the sole exception of the external plinth, the chapel is crowded with ornament.

In 1298 a great fire destroyed all the monastic buildings. The whole of the damage was not made good until the time of Abbot Nicholas Litleyngton (1362-86). The monastery, which had been one of the greater Benedictine houses for over 400 years, was suppressed in 1540, and the abbey raised to the rank of a cathedral. When the only Bishop of Westminster ever appointed resigned in 1550 the see was united to that of London. In 1556 under Mary I it became again a monastery, which was suppressed in 1560 by Elizabeth I, who estab. it as a collegiate church with a dean and chapter, a 'Crown peculiar,' which it has remained ever since.

Design, Architecture, Ornaments. The general plan of Henry III's church is very complex and unsuited for modern congregational worship; but it was designed to meet the diverse needs of the monks, the king and his court whose royal chapel it was, the pilgrims to the altars and shrines, and lay folk at prayers in the nave. The church is very large, long, and high. The extreme length is 530 ft 9 in., breadth 220 ft, length of the nave 154 ft, and its height 105 ft. The height of the towers is 225 ft. The piers are of Purbeck marble. The triforium is one of the most impressive of all the constituent portions of an early Gothic church in England, and the vaulting of the nave is particularly fine. Structurally, Henry III's is a Fr. church, but much of the detail is English.

The royal chapels at the E. end contain several monumental tombs of the highest medieval craftsmanship, especially those of Wm de Valence, Edward III, Eleanor of Castile, Edmund Crouchback, Eleanor de Bohun, Margaret Beaufort, and Henry VII. On the back of the tomb of Philippa of Hainault is the Westminster Retable,

a 13th-cent. oak altar-piece with what is considered to be probably the finest early medieval painting in Europe. W. A. is not only the scene of the coronation of Brit. sovereigns (the Coronation Chair and Stone of Scone are in the Confessor's Chapel), but the great national mausoleum, and many kings, statesmen,

Valentine & Sons, Ltd., Dundee

WESTMINSTER ABBEY

The West Front, showing the 18th-cent. towers.

soldiers, writers, and others are buried or commemorated there. In the centre of the nave is the tomb of an 'Unknown Warrior' of the First World War. Airmen of the Battle of Britain are commemorated by a memorial in the apse bay of Henry VII's Chapel. From a very early date the E. corner of the S. transept has been called Poets' Corner; the earliest represented is Chaucer, and amongst the last is Thomas Hardy.

The chapter house was built 1250-3 and is one of the largest in England. From the reign of Edward I until 1547 parliament generally met here. It was completely restored by Sir Gilbert Scott in 1865, its beauty having been largely impaired by use as a record office. The tile pavement dates back to c. 1250. The mural paintings have been skillfully restored. S. of the chapter house is the chapel of the Pyx, a vaulted chamber

built c. 1050. The king's treasure chamber was once the crypt under the chapter house. On the left is the dark cloister, from which a doorway leads to the Norman undercroft of the dormitory, now the Abbey Museum. W. A. suffered minor damage in the Second World War. Since then much of the fabric has been found to be badly affected by corrosion. £1m. for restoration was raised as the result of an appeal in 1952-3, and the work of restoration will not be complete under 10 years from that date.

See E. W. Brayley, *The History and Antiquities of the Abbey Church of St Peter, Westminster*, illus. by J. P. Neale, 1818 (the standard authority); J. L. Chester, *Registers of the Abbey of St Peter, Westminster*, 1876; Dean Stanley, *Historic Memorials of Westminster Abbey* (7th ed.), 1890; W. R. Lethaby, *Westminster Abbey and the King's Craftsmen*, 1906, and *Westminster Abbey Re-examined*, 1925; F. Bond, *Westminster Abbey*, 1909; Lawrence E. Tanner, *The History and Treasures of Westminster Abbey*, 1953.

Westminster Assembly of Divines, Puritan assembly, which sat at Westminster from Aug. 1643 to Feb. 1649. It formulated a Presbyterian system of church gov. in England, but this was never fully applied in practice, and all its work was swept away at the Restoration.

Westminster Bank, one of the 'big five' U.K. banks, estab. originally, in 1834, as the London and Westminster Bank and amalgamated with the London and County Banking Company (estab. in 1836) in 1909 under the name of the London County and Westminster Bank. It acquired Parr's Bank (estab. 1865) in 1918, the Nottingham and Nottinghamshire Banking Company in 1919, Beckett and Company, of Leeds and York, in 1921, and later the Guernsey Commercial Banking Company, Stillwell and Sons, besides a large share of the capital of the Bank of Brit. W. Africa. Affiliated banks are the Westminster Foreign Bank and the Ulster Bank. See also BANKS and BANKING.

Westminster Bridge, London, originally built in 1739-50 by the Swiss architect Charles Labelye, London Bridge (q.v.) being up to that date the only bridge across the Thames. It was replaced in 1854-62 by the present steel structure.

Westminster Cathedral, Eng. Rom. Catholic Metropolitan church, London. The site, part of what was once known as Tothill Fields, was acquired by Cardinal Manning (q.v.); his successor, Cardinal Vaughan (q.v.), carried out the building of the cathedral, 1895-1903. The architect, J. F. Bentley, designed a remarkable building in early Byzantine style. It is 385 ft long and 156 ft wide, and covers 54,000 sq. ft; the height of the campanile is 284 ft, and of the nave (the widest in England) 117 ft. The Stations of the Cross on the piers were carved by Eric Gill. There are 11 chapels, and in the chapel of St George and the English Martyrs (N. aisle) are the remains of John Southworth, executed under Cromwell in 1654. The decoration of the cathedral has never been completed, and in 1955

the authorities decided to proceed with the execution of coloured mosaics, etc., for the nave walls, the chapels, and domes.

Westminster College, founded in 1851, Methodist residential college in London for training of men teachers. A constituent college of the Univ. of London Institute of Education, it provides 2-year courses for teacher's certificate, 4-year courses for degree and teacher's certificate, and 1-year supplementary courses in religious education.

'**Westminster Gazette**,' former London Liberal evening daily paper, estab. in 1892 by George Newnes (q.v.) and remarkable for being printed on pale-green paper. An outstanding feature was the strong front-page article on the political issue of the day; amalgamated in 1928 with the *Daily News* (see 'NEWS CHRONICLE').

Westminster Hall, London, was built by William II in 1097-9 as the banqueting hall for his palace of Westminster. It has been the meeting-place of the chief law courts and some early parliaments, the scene of coronations and other festivals, but is most famous for the great state trials held there. Under Richard II the hall was reconstructed, and a wonderful hammerbeam roof constructed by Hugh Herland, the earliest dateable example (c. 1395) of its kind. Except for modern steel erections, it is probably the largest roof unsupported by pillars. Great care has been needed for its preservation; it has been repaired sev. times, and escaped serious damage when the House of Commons was bombed. Among the great dramas of Eng. hist. enacted here were the trials of Wm. Wallace, Sir Thomas More, Guy Fawkes, Charles I., Warren Hastings, and the deposition of Richard II. The chief law courts sat in the hall until moved to buildings on the W. side, and then moved to the Strand in 1882. W. H. is now used mainly for royal receptions and lyings-in-state. See H. St G. Saunders, *Westminster Hall*, 1951.

Westminster Hospital, first London hospital to be erected by public subscription, founded in 1719 on a site in Petty France. After sev. moves the W. H. was finally estab. in Page Street in 1936-7. A medical school has existed in Westminster since 1834; it was formally associated with W. H. in 1849. Under the National Health Service Act, W. H. was designated an undergraduate teaching hospital. Other hospitals within the group are the Westminster Children's Hospital, the Gordon Hospital, All Saints' Hospital, and 3 convalescent homes. There are 914 beds.

Westminster School, public school for boys in Westminster, London. Early 14th-cent. writers describe it as a grammar school attached to the collegiate church of St Peter, Westminster. Queen Elizabeth refounded it in 1561. The Abbey remains the school chapel, but the legal connection of abbey and school was severed by the Public Schools' Act, 1868.

Westminster Theatre, in Palace Street, London, opened in Oct. 1931. It was at one time noted for its production of ex-

perimental works, and was also under the control of the Oxford Group for a short period. Productions include *Tobias and the Angel*, 1932, *Mourning Becomes Electra*, 1937, *Black Chiffon*, 1949, *Journey's End* (revival), 1950, and *Dial 'M' for Murder*, 1952.

Westmorland, northern co. of England, bounded on the N. and W. by Cumberland, on the S. and E. by Lancs. and Yorks. W. suffered from the invasions of the Scots in ant. times, Appleby being twice sacked and burnt. During the Civil war the co. was royalist; many of its gentry later espoused the Jacobite cause, though the people took little interest in the rebellion of 1745. Sev. writers are associated with W., including Wordsworth, Hartley Coleridge, De Quincey, Harriet Martineau, and Beatrix Potter. Romney served as an apprentice at Kendal. There are castles at Appleby, Brough, Brougham, Kendal, and elsewhere, the ruins of Shap Abbey at Shap vil, and there are many peel towers, fortified dwellings forming a defence against Scottish raiders. W. comprises a considerable part of what is called the fell country and also of the Lake Dist. (q.v.). The mountainous regions, with great tracts of moorland, afford some magnificent scenery, and include Helvellyn (3118 ft), Bow Fell (2960 ft), Great Dun Fell (2780 ft), and many others; while the lakes include Windermere, Ullswater (in part), Grasmere, and Haweswater. The prin. rvs. are the Eden running through what is known as the Vale of Eden, the Lune, and the Kent. The W. of the co. has a high rainfall, and the E., lying under the Pennines, is cold in winter. Only about half the co. is under cultivation, and of this the greater part is devoted to pasturage, sheep and cattle being raised in large numbers, while dairy herds are reared in the valleys. Lead, gypsum, and diatomite are produced; slate, granite, and limestone are quarried. Manufs. include woollen goods, paper, boots and shoes, tobacco, wood turnery, limestone bricks, and water turbines. The prin. tn.s are Appleby (the co. tn) and Kendal; the co. returns 1 member to Parliament. Area 790 sq. m.; pop. 67,400. See H. D. Rawnsley, *Literary Associations of the English Lakes*, 1894; H. Collingwood, *The Lake Counties*, 1949; Sir Clement Jones, *A Tour in Westmorland*, 1949, and *Walks in North Westmorland*, 1955; N. Nicholson, *Cumberland and Westmorland*, 1949.

Weston-super-Mare, seaside resort and co. bor. of Somerset, England, 20 m. from Bristol, on the Bristol Channel. Until the middle of the 19th cent. it was a tiny fishing hamlet, but recognition of the invigorating qualities of its air has made it the largest resort of its kind between Land's End and Lance. W. caters for every taste in amusement. Amenities include golf-links, tennis and badminton courts, the Grand Pier, with an amusement pavilion, a number of public parks and gardens, and a large swimming-pool on the sea-front, which can accommodate 1500 bathers. Pop. 39,650.

Westonbirt, a public school of 300 girls, founded in 1928 at Tetbury, Gloucestershire, on the estate of the late Sir George Bolford. It stands in a large park well known for its fine collection of trees.

Westphalia (Ger. *Westfalen*), name given to that part of the N. Ger. plain which is bounded by the Netherlands, Hanover, Hessen, and the Rhine (qq.v.). At different periods the name has been given to:

1. The Duchy of W., which was part of the old Saxon Duchy and which belonged to the Elector-archbishop of Cologne (q.v.). After the sequestration of the church lands, W. went to Prussia and Hesse-Darmstadt (qq.v.).

2. The Kingdom of W., formed at the Peace of Tilsit (q.v.) in 1807 by Napoleon for his brother Jerome (see BONAPARTE). It included dists. in the E. not usually associated with Westphalia.

3. The Prussian prov. of W., constituted in 1815. Its area was 7801 sq. m.

4. A part of the present *Land* of N. Rhine-W., (q.v.). The greater part of Germany's coal and heavy industry is in W. (see RUHR).

Westphalia, Treaty of, peace treaty signed at Münster, 21 Oct. 1648, ending the Thirty Years' War (q.v.). By its articles France was confirmed in her possession of Metz, Toul, and Verdun, and also obtained the sovereignty of Alsace; Sweden was given W. Pomerania, Bremen, and Verden; and Bavaria, Brandenburg, and Saxony also received accessions of ter. A federation of some 300 independent states replaced the former empire. The independence of Switzerland and the United Provs. of Dutch Netherlands was recognised. Religious toleration was granted to Calvinists as well as Lutherans in Germany, but the principle was not estab. in the Hapsburg ters. The treaty marks the failure of the Austro-Sp. attempt to restore Rom. Catholicism in Central Europe and the beginning of Fr. hegemony in Europe.

Westport: 1. Urb. dist., mrkt tn, and seaport of Clew Bay, co. Mayo, Rep. of Ireland, 12 m. SW. of Castlebar, connected by steamer with Glasgow and Liverpool. Clothing, mineral waters, boots and shoes, cotton thread, shirts, furniture, leather goods are manufactured. W. is a railroad and W. depot for the C.I.E. railway system, and the junction for tourist traffic to Connemara and Achill. It is a noted fishing centre for salmon and trout.

2. Bor. in Nelson Prov., S. Is., New Zealand, at the mouth of Buller R. Over £1m. have been spent on the harbour works designed by Sir John Coode. W. is the place of shipment for the coalfields in the neighbourhood. To the S. are the alluvial gold-mining centres of Addison's Flat, Croninville, Nine-Mile Beach, and Charleston, the latter now producing much lignite coal, open-cast methods being used. Pop. 5510.

Westrosol, see ACEFYLENE.

Westward Hol, seaside resort in N. Devon, England, incorporated in Northam (q.v.) urb. dist. W. H. takes its name

from Charles Kingsley's (q.v.) novel. Rudyard Kipling was educ. at the United Services College (now a terrace of houses), which he immortalised in *Stalky and Co.* On Northam Burrows is the championship course of the Royal N. Devon Golf Club, where J. H. Taylor, 5 times open champion, learned and played. Pop. included in Northam (q.v.).

Wet, De, and Wette, De, see DE WET, and DE WETTE.

Wetaskiwin, city (incorporated in 1906) of Alberta, Canada, 42 m. S. of Edmonton, a junction of the Canadian Pacific Railway. The name is derived from the Cree word meaning 'hills of peace.' W. is situated in the centre of a fine mixed farming and live-stock area; the region has rarely known a crop failure. Flour mills, stock yards, and coal beds are located in the area, and there are creameries and lumber works. New industries are a small packing plant, a tannery, an oil well supply concern, and an oil refinery. Pop. 4200.

Wetherby, mrkt tn of the W. Riding of Yorks, England, on the Wharfe, 8 m. SE. of Harrogate. It has mineral-water and light-engineering industries, a cattle mrkt, and trade in agric. produce. Steeple-chasing events are held here. Pop. (tn) 4200; (rural dist.) 21,800.

Wetherell, Elizabeth, see WARNER, SUSAN BOGERT.

Wettach, Adrien, see GROCK.

Wetteren, tn in the prov. of E. Flanders, Belgium, 8 m. SE. of Ghent, on the Scheldt. Chief manufs. are cotton and woollen goods, lace, and tobacco. It is the site of the Belgian national powder-mill. Pop. (1955) 19,800.

Wetterhorn, mt in the Bernese Oberland, Switzerland, E. of Grindelwald. It has 3 peaks, of which the middle, or Mittelhorn, is the highest (12,166 ft). The mt was ascended first in 1844.

Wettin, House of, Ger. royal family dating from about the mid-10th cent. It gave rise to sev. European royal houses, including the Eng. (through Prince Albert, husband of Queen Victoria). The founder of the line was Count Dedo (d. 957). Dietrich II married a daughter of the margrave of Meissen. The importance and extent of the dominions of the H. of W. increased greatly. Lower Lusatia (1135) and the Mark of Meissen (1130) being recognised as possessions. Nuremberg became their cap. Conrad I and his descendants were rulers from 1123 to 1288, when W. co. and castle near the Saale were sold to the Archbishop of Magdeburg. He retained them till the Peace of Westphalia (1648); the elector of Brandenburg then claimed them, and they were finally annexed to Prussia (Saxony).

Wetzlar, Ger. tn in the *Land* of Hessen (q.v.), on the Lahn (q.v.), 34 m. NNE. of Wiesbaden. Its splendid abbey church dates back to the 9th cent., and the tn provided the background of Goethe's (q.v.) *Sorrows of Werther*; there is a Goethe museum. There is a famous camera and optical-instruments industry, and textiles are manufactured. Pop. 28,000.

Wewak, airfield and harbour on the N. coast of Brit. New Guinea. From 1942 it was developed by the Japanese as a main supply base, and was recaptured during May 1945.

Wexford: 1. Maritime co., in the SE. corner of the Rep. of Ireland. The surface is hilly in the N. and W., the greatest heights being reached in Mt Leinster (2610 ft), and Blackstairs Mt (2409 ft). Owing to sandbanks, the coast is dangerous, and the only opening of importance is Wexford Harbour and Bay, while Waterford Harbour divides it from the co. of that name in the S. Off the coast to the SE. is Tusker Rock with a lighthouse, and farther S. are the Saltee Is., beyond which there is a lightship. The prin. rivs. are the Barrow and the Slaney, both navigable for a long distance. Agriculture is successfully carried on, and sheep and cattle, pigs and poultry are reared. Barley is the main crop; other cereals and sugar-beet are grown extensively; the fisheries are important. The prin. tns are Wexford (the co. tn), New Ross, Enniscorthy, and Gorey. The co. returns 5 members to Dail Eireann. There are a number of anct monuments in the co., including Dunbrody Abbey, Ferns Abbey, and the castles at Ferns and Enniscorthy. The area is 908 sq. m.; pop. 91,700.

2. Municipal bor. and seaport, cap. of co. Wexford, Rep. of Ireland, on the R. Slaney. Its importance is mainly due to the harbour, which is formed by the estuary of the riv., but owing to a bar across the mouth big vessels are unable to enter at ebb tide, and in consequence the harbour of Rosslare was built and connected by rail with W. (8 m.). The tn is of anct foundation. It was walled by the Danes in the 9th cent., and occupied by them until 1169; it received its first charter in 1318; it contains the ruins of St Sepulchre's Abbey and some fragments of the old tn walls, and the barracks are on the site of an anct castle. The tn was besieged by Cromwell in 1649, garrisoned by Wm III, 1690, and was captured and held for a month by the Irish pikemen during the rebellion of 1798. The chief industries are the manuf. of agric. machinery, and farm implements, laminated springs, and furniture. The tn is the centre of important fisheries. Pop. 12,300. See P. H. Horc, *History of Wexford*, 1906.

Wey, riv. of England, rising in 2 streams, one near Alton in Hants and one near Haslemere in Surrey, which join at Farnham and flow NE. past Godalming and Guildford to the Thames at Weybridge. Length 35 m.

Weybridge, urb. dist. (with Walton) of Surrey, England, at the junction of the Wey and the Thames. W. is mainly a residential tn. Pop. (Walton and Weybridge) 39,420.

Weyburn, city of S. Saskatchewan, Canada, 70 m. SE. of Regina on the main route from the U.S.A. into W. Canada. Centre of a rich agric. area, and near the Williston Basin oilfields, the city has elevators, creameries, flour mills, and a

wire and cable plant. It is the site of a prov. mental hospital. Pop. 7150.

Weyden, Rogier van der, see ROGIER VAN DER WEYDEN.

Weygand, Maxime (1867-), Fr. soldier of Belgian descent, b. Brussels. Educ. at St Cyr, he was commissioned in the cavalry in 1888. He served in the colonial army until 1914, when he became chief-of-staff to Foch. He went to Poland in 1920, reorganised the Polish Army, and inflicted a defeat upon the Russians. From 1923 to 1924 he was high commissioner in Syria. In 1930 he became chief of the general staff, and in 1931 president of the supreme war council.

On 19 May 1940 he was appointed chief of the Fr. general staff and commander-in-chief in all war theatres. After the Ger. break-through he organised a defensive line on the Somme, which was broken during early July. On the eve of the Fr. collapse, when Reynaud resigned, Pétain (q.v.) appointed W. his vice-premier, and thereafter it was never evident on which side he was really acting. In Sept. 1940 he was appointed High Commissioner for Fr. Africa, and in July 1941 governor-general of Algeria, while retaining his position as delegate-general of the Vichy Gov. in Fr. N. Africa, to which he had been appointed a month earlier. But his administration evidently did not satisfy Pétain, for in Aug. 1941 Darlan was given power to direct Vichy's general policy in N. Africa, thus rendering W. subordinate to him, and soon afterwards W. was divested of all military powers, while remaining nominally delegate-general. After the Allied landings (Nov. 1942) matters came to a climax, his post of delegate-general was abolished, and he retired, probably at the instance of Hitler. He was arrested by the Germans in 1942 and interned until freed in 1945. In 1948 the sentence of infamy, passed upon him as a member of the Vichy Gov., was quashed. See J. Weygand (trans. by J. H. McEwen), *The Role of General Weygand; Conversations with his Son*, 1948.

Weyman, Stanley John (1855-1928), novelist, b. Ludlow, Salop. Educ. at Shrewsbury and Christ Church, Oxford, he studied law, was called to the Bar in 1881, and practised for about 8 years. His novels are nearly all historical, and in this vein he was specially popular. His books include: *A Gentleman of France*, 1893, *Under the Red Robe*, 1894, *The Red Cockade*, 1895, *Chipping*, 1906, and *Queen's Folly*, 1925.

Weymouth: 1. And Melcombe Regis, seaport, holiday resort, municipal bor. of Dorset, England, at the mouth of the Wey. Its popularity as a seaside resort dates from the time of George III, who often resided at Gloucester House. W. and M. R., on opposite banks of the riv., are connected by bridges. To the S. of Weymouth Bay is the Is. of Portland. The chief industries are the quarrying of Portland stone, shipbuilding, sail and ropemaking, brewing, and fishing. Pop. 36,830.

2. Township of Norfolk co., Massachusetts, U.S.A., 11 m. SSE. of Boston. It manufs. boots and shoes, tools, machinery, fertiliser, rubber belting, and lacquer; there is also wool processing. Pop. 32,690.

Whale, name for most of the members of the family Cetacea, in the class of mammals, hunted for the oil, whalebone, spermaceti, ivory, etc., which they yield. The family of Cetacea is divided into 2 groups, the toothed W.s (Odontoceti) and the whalebone W.s (Mystacoceti), the former including the sperm W., or cachalot (q.v.), the dolphins, porpoises, and narwhal; the latter the right W.s and the rorquals from which are derived oil and whalebone. The largest of the toothed W.s is the sperm W. (*Physeter catodon*). It yields the most valuable of the W. oils, in addition to spermaceti and ambergris. The bottle-nosed W. occasionally visits Brit. waters. The white W. is found mostly off Labrador and Canada. Of the whalebone or right W.s the most important formerly were the Greenland W. (*Balaena mysticetus*) and the Biscayan W. or Nordkaper (*B. glacialis*). W.s are the most thoroughly aquatic of all mammals, the forelimbs being reduced to fin-like paddles and all external traces of the hind limbs having virtually disappeared. They occur in all seas. Most W.s are inoffensive creatures and swim in herds. When they rise to the surface the heated air expelled condenses and forms a column of spray, the 'spouting' of the W. The whalebone W.s still develop rudimentary teeth before birth, but then these are displaced by a large number of flattened plates of bone or baleen fringed at the edges, which strain the food from the water. Whalebone is derived principally from the right W., and, being strong, light, and flexible, has many uses. W.s stranded on shore die by suffocation, their own weight crushing the lungs.

Whale Fisheries are of ancient origin, the Norwegians and the Basques having sought the valuable whalebone- and oil-producing mammals as early as the 9th cent.; the Norwegians are still foremost in this industry. In modern times whale fishing, chiefly of rorquals, has become so profitable commercially that the W., a slow-breeding animal, is in danger of being overfished, and international agreements limit the total kill. (See DISCOVERY COMMITTEE.) Practically the whole of the animal is utilised in one form or another: the oil as a lubricant, or for making soap, candles, and margarine (W. oil forms 10 per cent of the total world production of edible oils); the whalebone is employed by corset manufacturers and in the brush trade; the prepared flesh is used as a cattle-food; the flesh and ground bones as soil fertilisers; ambergris, an intestinal exudation of diseased sperm W.s, is a valuable ingredient in the manuf. of perfumes. Some parts of the flesh are suitable for human consumption.

In 1870 Foyn, a Norwegian, invented the shot-harpoon, which revolutionised

whale fishing and made it more deadly, the harpoon being shot from a gun into a vital part of the sea-monster. An electric harpoon has been used since 1949, passing an electric current to paralyse or kill the animal, but crews assert that cruelty is still involved. A 'factory ship', for processing the catch, is used, with some 10 vessels for hunting. In 1955-6, 58,158 W.s were killed. W. fisheries are carried on near the coasts of Greenland and Newfoundland, but the Antarctic, in the summer months, supplies 80 per cent of the catch. In the Azores the sperm W. is still hunted by a hand harpoon in the 19th-cent. style. Herman Melville's *Moby Dick*, and *The Cruise of the Cachalot*, 1906, by F. T. Bullen, give a good description of whaling. See also A. G. Bennett, *Whaling in the Antarctic*, 1931; A. G. Villiers, *Whaling in the Frozen South*, 1931; J. J. Jenkins, *Whales and Modern Whaling* (new ed.), 1945; R. C. Murphy, *Logbook for Grace*, 1948; J. Grierson, *Air Whaler*, 1949; J. R. Norman and F. C. Fraser, *Giant Fishes—Whales and Dolphins*, 1949; R. B. Robertson, *Of Whales and Men*, 1956.

Whale, Sperm, see CACHALOT.

Whale, White, see BELUGA.

Whalley, vil. of Lanes, England, on the Calder, 8 m. from Blackburn. Here in 1206 was founded a Cistercian Abbey, of which some remains exist. Pop. 4000.

Whangarei, tn of W. co., N. Is., New Zealand, 131 m. N. of Auckland by rail. It is the chief tn and seaport for an extensive agric., pastoral, and fruit-growing dist. Coal mining is carried on at Kamo 4 m. away, whilst dairying is also an important industry, there being sev. factories in the dist. There are also cement works and sawmills. Pop. 13,356.

Wharfedale, in the W. Riding of Yorks, England, is that part of the valley of the Wharfe beginning near Wetherby and continuing until the source of the riv. on Cam Fell. Lower W. is a rich agric. dist. At Harewood stands a ruined medieval 'tower type' castle. Ilkley, the largest tn, was the Rom. settlement of Ollicana. Upper W., above the ruins of Bolton Priory (q.v.) founded in 1121, and Barden Tower built by Henry, Lord Clifford, is pastoral country of great beauty with noted literary associations: its centre is Grassington. Hubberholme church with its rood-loft is at the head of W. See ELLA PONTEFRAC, *Wharfedale*, 1938.

Wharton, Edith Newbold (1862-1937), Amer. novelist, b. New York City, daughter of George F. Jones. In 1885 she married Edward Wharton; he later became insane, and they were divorced in 1912. She excelled in her short stories, collections of which are *The Greater Inclination*, 1899, *Crucial Instances*, 1901, *Tales of Men and Ghosts*, 1910, *Xingu*, 1916, and *Here and Beyond*, 1926. During the First World War she organised a French ambulance unit, and in 1924 she was made an officer of the Legion of Honour. Of her novels *Ethan Frome*, 1911, is sometimes thought the greatest. *The Age of Innocence*, 1920, a satire on society, was awarded the Pulitzer Prize, as also was *Old New York*, 1924, in its

dramatic form with the title *Old Maid*; other novels are *The Valley of Decision*, 1902, *The House of Mirth*, 1906, *The Reef*, 1912, *The Custom of the Country*, 1913, *Summer*, 1917, *False Dawn*, 1924, *The Children*, 1928, *The Gods Arrive*, 1932, and the unfinished *Buccaneers*, 1938. *A Backward Glance*, 1934, is a book of memoirs. See studies by R. M. Lovett, 1925; E. K. Brown, 1935; P. Lubbock, 1947; B. Nevius, 1953.

Wharton, Philip Wharton, first Duke of (1698-1731), Eng. Jacobite, only son of Thomas, 1st Marquess of Wharton. Philip went abroad in 1716 and vowed allegiance to the Old Pretender, but the following year he returned to England, and submitted to George I, who created him Duke of Wharton. He opposed the attainder of Atterbury (1723) and shortly after again joined the Pretender, and later entered the Sp. service and fought at Gibraltar, being declared a traitor and outlaw by the House of Lords.

to one of the schemes they are classified as varieties or sub-varieties of the 3 following species: one-grained W. (*T. monococcum*), which possesses a flat, short, compact ear; the 2 flowers of the spikelets produce only a single ripe grain. It is sometimes cultivated on poor soils, in mountainous dists. of Central Europe. Polish W. (*T. polonicum*) has awned glumes, which enclose all the flowers in the spikelet, only 2 of which are fertile. The grain is large and very hard; the crop is grown in S. Europe, but is unsuited to Brit. climate. *T. sativum* is divided into 3 races: (1) ordinary spelt W.s, grown on poor soils, in Central Europe; (2) two-grained spelt W.s, grown in S. Europe chiefly for the manuf. of starch; (3) *T. sativum tenax*, which has given rise to all the most important varieties, classified in 4 sub-races, each of which is commonly regarded as a separate species. Hard or flint W. (*T. durum*) is grown around the Mediterranean, chiefly

THE ACREAGE UNDER WHEAT AND PRODUCTION IN THE CHIEF FOREIGN PRODUCING COUNTRIES

Country	Area Harvested (thousands of acres)		Production (thousands of tons)	
	Average 1937-40	1953-54	Average 1937-40	1953-54

e = estimated

Wharton, Thomas (1614-73), anatomist and physician at St Thomas's Hospital, London. He is chiefly known for *W.'s duct*, the duct of the submaxillary salivary gland, and for *W.'s jelly*, the connective tissue of the umbilical cord. He was one of the few physicians who remained in London during the plague of 1665.

Wharton, Thomas Wharton, first Marquess of (1648-1715), statesman, b. Woburn, was a prominent supporter of the Revolution of 1688. He is the reputed author of *Lilli-Burlero* or *Lilli-bullero* (q.v.). He was a commissioner for the union with Scotland, 1706, and in that year was given an earldom. He was one of those who proclaimed George I as King of England, and was rewarded with a marquessate, and the office of lord privy seal.

Wheat, or *Triticum*, grass, the origin of which has not been definitely estab. There are many hundreds of forms in cultivation, and many schemes of classification have been suggested. According

for making macaroni. Turgid or rivet W. (*T. turgidum*) produces red grain with very tall, stiff straw, used for thatching purposes. The grain makes dark-coloured flour, and is too poor in gluten for bread-making. Dwarf W.s have short, stiff straw with small grains. Common W. (*T. vulgare*) includes all the more important varieties grown in the great W. dists. The most modern view of W. classification is based upon the number of chromosomes, which are divided into sets of 7 (genomes).

Winter W.s are sown in autumn, and spring varieties usually in Feb. The yield in different parts of the world in 1937-40 and 1953-54 is shown in the table above. Cases of low average are due to varying causes. In Australia there is a scanty rainfall, e.g. it is only 9 in. in the growing regions of W. Australia, but the abounding sunshine results in superior quality. In Russia the low average, which has persisted for sev. decades, is due to the backward state of

the industry, the expectations of a rapid increase through present-day activity not having been fulfilled. In Argentina droughts, floods, frosts, and locusts seriously interfere with a regular W. yield. The low yield in India is due partly to the arid soil and partly to backward methods.

For diseases of W., see HESSIAN FLY; RUST; SMUT.

The great W.-importing countries are in the W. of Europe, where the pop. is largely industrial, the U.K. standing at the head of the list. The acreage and production of W. in some of the Brit. Commonwealth countries for 1954 are shown in the following table.

	Acreage 1953-54	Pro- duction (thousands of tons)
U.K.	2,217,000	2,664
Canada	25,513,000	16,445
Australia	10,751,000	5,302
India	24,285,000	7,383
Union of S. Africa	3,014,000	567
New Zealand	114,000	128

See J. Percival, *Wheat in Great Britain*, 1934; H. I. Moore, *Crops and Cropping*, 1949; *Statistical Abstract of British and Foreign Trade and Industry* (for years after 1931); *Cereals* (Commonwealth Economic Committee), 1955.

Wheat Fly, see HESSIAN FLY.

Wheatleat, Fallow Chat, Fallow Finch, or *Oenanthe aenanthe*, Brit. bird, being a summer migrant to Britain, often arriving in Feb. It winters in tropical Africa and India. It is about 6 in. long, grey on the upper parts with a black streak from beak to ear and with black quill feathers, wing coverts, and tail feathers. In flight a white patch on the lower back and tail is conspicuous. The underparts are white with a buff tinge on the breast. Its food consists chiefly of insects.

Wheatthampstead, vil. of Herts, England, 5 m. NNE. of St Albans, where is the 16th-cent. farmhouse, Mackery End, beloved of Charles Lamb (q.v.) and described by him in one of his essays. Pop. 3400.

Wheatley, Francis (1747-1801), painter, b. London. His fame rests chiefly on the series 'Cries of London'; he also painted landscapes and portraits and decorations for Vauxhall. In 1778 he first exhibited at the Royal Academy, becoming associate in 1790, and R.A. in 1791.

Wheatstone, Sir Charles (1802-75), physicist, b. Gloucester. He was engaged with his uncle as a musical-instrument maker in his earlier life, but his main interest at that time was in experiments in acoustics. In 1823, he pub. a paper, 'New Experiments in Sound', in Thomson's *Annals of Philosophy*. He was appointed prof. of experimental philosophy at King's College, London, in 1834; 3 years later he was elected F.R.S. He had a wide range of interests, and invented many intriguing instruments (including the Eng. concertina), most of them in connection with electricity. In 1837, in co-operation with Cooke, he took out the first patent for the electric

telegraph. He invented the rotating-mirror method for examining vibrating bodies, and used a similar apparatus to measure the velocity of an electric discharge in conductors, obtaining a value close to that of light. He was a gifted cryptographer, invented the stereoscope, and did work on colours and spectra. His polar clock measured the position of the sun, and therefore the time, by means of the plane of polarisation of scattered light. His name is best known from the so-called W. Bridge, which was devised by S. H. Christie in 1833 and rearranged and recognised by W. See *Scientific Papers of Sir Charles Wheatstone*, 1878.

Wheatstone Bridge, an electrical circuit designed to determine the ratio of 2 resistances. The arrangement is as shown in Fig. 1, where E is a source of E.M.F.,

FIG. 1

G is a galvanometer, R_1 and R_2 are two fixed resistances, R_3 is the unknown resistance, and R_4 is a variable known resistance. The value of R_4 is adjusted until no current flows through G, i.e. the potential of B is the same as that of D, and therefore the Potential Difference (P.D.) across $R_1 =$ P.D. across R_3 ; \therefore by Ohm's Law, $i_1 R_1 = i_3 R_3$. Similarly, since no current flows through G, $i_2 R_2 = i_4 R_4$, and it follows that $R_1/R_2 = R_3/R_4$. Hence R_3 is given in terms of the ratio R_1/R_2 , and the value of R_4 for 'balance', i.e. no current through G. Two laboratory instruments based on this arrangement are the metre bridge and the post-office box. In the *metre bridge* a long, thin, uniform wire, AB, is stretched alongside a scale (Fig. 2). The ends are soldered to thick copper bars, AH and BD, of negligible resistance. GE is another thick copper bar. A known resistance, R , is placed in the gap HG, and the unknown resistance, S , in gap ED. A galvanometer is connected to the copper bar, EG (at F), on the one hand, and to a movable jockey, C, on the other. The bars AH and BD are connected to the terminals of a battery. The jockey, C, is moved along the wire until the deflection of the galvanometer is reduced to zero. It then follows that $\frac{R}{S} = \frac{\text{resistance of AC}}{\text{resistance of BC}}$.

If the wire is uniform the ratio of the resistances of AC and BC is equal to the ratio of their lengths, which can be read

off. A modification of this bridge has been devised by Carey Foster for accurate work. In the *post-office box* the resistances p , q , and r are all arranged in a box. The arrangement is shown in Fig. 3. A number of brass blocks are connected together, inside the box, by carefully adjusted resistance coils of various values. By inserting a plug between adjacent brass

FIG. 2

blocks the resistance that was connecting those blocks is thus cut out. In the actual arrangement the resistances of the arms AC and CB are such that p may be made 10 or 100 times as great as q , and vice versa. The resistance in the arm AD may be made anything from 1 to 10,000 ohms. The unknown resistance is inserted between B and D, the galvanometer between D and C, and the battery between A and B. Both the galvanometer connection and the battery connection can be made or broken by means of the keys K_1 and K_2 , respectively. The value of r is adjusted so that no current flows in the galvanometer when K_1 and K_2 are pressed down in the order named, the condition for which is $p/q = r/s$. Thus s can be found with considerable accuracy.

FIG. 3

The resistance of a galvanometer can be found by inserting it in the arm BD instead of s . No galvanometer is then used in the arm DC, and the resistance r is adjusted until the galvanometer deflection remains unchanged when K , is opened and closed. The usual relation holds, where the unknown resistance, s , is that of the galvanometer. With moving-coil instruments, however, it is better to clamp the coil of the galvanometer under test, place it in the arm BD and measure its resistance in the usual way with the aid of a

second galvanometer in the arm DC. The resistance of a cell can be found by placing it instead of s in BD and removing the battery in the arm BA.

Wheel, Breaking on the, a form of capital punishment once common in France and Germany, and employed on a few occasions in Scotland. The victim was stretched on a cart-wheel, which then revolved slowly while his limbs were broken with an iron bar. The penalty was sometimes mitigated, either by ordering the executioner to deliver an immediately fatal blow (*coup de grâce*), or, as was general in France, by strangling the condemned after the second or third stroke. B. on the W. was abolished in France at the Revolution; but it was used in Germany down to 1827.

Wheel Animalcules, see ROTIFERA.

Wheel-lock, see FIREARMS.

Wheeler, Sir Charles Thomas (1892-) sculptor, b. Wolverhampton. He studied at S. Kensington. Among examples of his work are the decorative figures and reliefs on India House, S. Africa House, the Bank of England, etc., and the Indian war memorial at Neuve Chapelle. He became A.R.A. in 1930, R.A. in 1940, and in 1944 president of the Royal Society of British Sculptors. In Dec. 1956 he was elected president of the Royal Academy of Arts. He was knighted in 1958.

Wheeler, Sir Robert Eric Mortimer (1890-), a leading Brit. archaeologist. Prof. of the Archaeology of the Rom. Provinces, univ. of London, 1948-53; President of the Society of Antiquaries, 1954; Commissioner Royal Commission on Historical Monuments, England; Member Ancient Monuments Board for England and Wales; Adviser in Archaeology to Dominion of Pakistan, 1948-9; Director-General of Archaeology, India, 1944-8; Director of the National Museum of Wales, 1924-6; of the London Museum, 1926-44. Has been president and served on the Committees of many archaeological bodies. Directed excavations at Colchester, 1917 and 1920; Carnarvon, 1921-3; Brecon, 1924-5; Caerleon, 1926-7; Lydney, 1928-9; St Albans, 1930-3; Maiden Castle, Dorset, 1934-7; in Brittany and Normandy 1938-9; India, 1944-8; Lulworth, Dorset, 1950; Stanwick, Yorks, 1951, etc. Author of many pubs. on archaeology, including books on Rom. London, Prehistoric and Rom. Wales, the Rom. Fort near Brecon, and Research Reports for the Society of Antiquaries on Lydney, Verulamium, and Maiden Castle which are models of their kind in learning and presentation. From his long experience in archaeological method, both in Europe and in the E., his book, *Archaeology from the Earth*, 1954, derives a particular authenticity and is likely to remain a standard for very many years. His autobiography, *Still Digging*, was pub. in 1955.

Wheeling, city and co. seat of Ohio co., W. Virginia, U.S.A., 45 m. by rail SW. of Pittsburgh on the Ohio R. W. is the industrial and commercial metropolis of the N. Panhandle coal- and gas-producing

region. It has iron and steel works, and manufactures tin-plate, sheet-metal products, tiles, glass, clothing, textiles, tobacco products, food products, and medicine. It also has railroad shops, and is a port of entry. Pop. 58,890.

Wheels. The invention of W. was part of the Bronze Age economy, and is associated with bronze tools and weapons. The wheeled cart was known in Mesopotamia about 3000 BC, in Egypt not before 1600 BC, in Britain during the Late Bronze Age (nave-bands occur in the large hoard from Heatherly Burn Cave, Durham), while in America and other places it was not known until it was brought by modern European trade and settlement. Many prehistoric monuments were constructed from blocks of stone hauled with the aid, no doubt, of rollers beneath a sledge. From this apparatus was evolved the earliest wheel, a slice from a log attached solidly to an axle. Later the wheel, still crude in form, revolved upon a fixed axle. This solid form, however, was necessarily heavy, and as an improvement, in Near E. lands, spokes were introduced about 2000 BC, thus lightening the structure and providing levers to propel the vehicle if the need arose. The potter's wheel, another great milestone in human civilisation, was known, with the cart, in Mesopotamia; it was introduced to Britain by Belgic tribes soon after 75 BC. To-day W. are indispensable, and assume many forms of varied complexity and use, not only in transport but in the internal structure of machines.

Whelk, or Buokle (*Buccinum undatum*), carnivorous mollusc, common off Brit. coasts, much used as an article of food. The shell is grey or brownish white, spirally grooved, and with numerous raised ridges. There are other species to which the name is also applied. The name dog whelk is commonly given to *Purpura lapillus*, and also to *Nassa reticulata*.

Whenside, mt in Yorks, England, in the moorlands at the junction of the co. with Westmorland and Lancs. It is one of the highest of the Pennine peaks, rising to 2414 ft.

Whewell, William (1794-1866), philosophical and scientific writer, b. Lancaster; educ. at Trinity College, Cambridge, of which he was master from 1841 until 1866; vice-chancellor of the univ. in 1843 and 1856. W. was not an original observer, and his encyclopaedic knowledge was devoted to co-ordinating the researches of others. His writings in this field are a *History of the Inductive Sciences*, 1837, *The Philosophy of the Inductive Sciences*, 1840, and *History of Moral Philosophy in England*, 1852.

Whickham, urb. dist. of Durham, England, near the R. Derwent. It has coal mines, iron, steel, and soap works, a flour mill, and an electric power station. Pop. 23,000.

Whieldon Ware, term derived from Thomas Whieldon of Fenton (1719-95), the most prominent potter of his time in Staffordshire, which is given to a type of earthenware (a.v.) decorated with multi-

coloured lead-glazes to produce marbling, clouding, and 'tortoiseshell' effects.

Whig, formerly the designation of one of the great political parties in England. The term is of Scottish origin, and was first used in Charles II's reign. According to some, it was derived from *whigamores* or horse drovers, and applied as a term of contempt, though Burnet, in his *History of His Own Times*, gives a different derivation. In England it was eventually assumed as an honoured party name by those politicians who took the lead in placing Wm III on the throne.

Whimbrel, see CURLEW.

Whin, see ULEX.

Whinberry, name given to *Vaccinium myrtillus* (see BILBERRY).

Whinchat, or *Saricola rubetra*, bird that visits Britain in summer, favouring heaths and open places, where it feeds principally on insects. The centre of the throat and breast are a light cinnamon-rufous, as also are the sides of the body, and the abdomen; the general colour above is brown; the head-feathers are edged with sandy-buff. It is a summer visitor to most parts of Europe, and breeds as far N. as the Arctic Circle.

Whip, Brit. party official. All major parties in Parliament have W.s, who see that the members of their parties vote as required by the party leaders. Gov. W.s are members of the administration, but opposition W.s are unpaid. Administrative bodies such as the L.C.C. also have W.s. The term is sometimes used of the message sent to members advising them to be present in Parliament. The importance of the occasion is gauged by the amount of underlining of certain words: thus the term 'three-line Whip.'

Whip-poor-will, or *Antrostomus vociferus*, N. Amer. goatsucker, or night-jar, so called from its cry during the nights of its breeding season. It is about 10 in. long, mottled tawny brown in colour, with a white collar on the throat, and has long, stiff bristles at the base of the bill.

Whip-snake, see DRYOPHIS.

T. Fall

WHIPPET

Whippet, dog particularly favoured in the N. of England, where it is much used for running races, being capable of tremendous speed; trained to make for the

towel held at the end of the course by its owner. The W. was produced by crossing the fox terrier with the lt. greyhound, and then breeding back to the Eng. greyhound. It is bred in various colours, including black, red, white, fawn, and brindle, and its appearance is that of a greyhound in miniature. Its head is long and lean, with small rose-shaped ears, long, muscular neck, deep, capacious chest, long back, arched over the loins; the fore legs are moderately long, and the hind-quarters strong and broad with muscular thighs; the tail is long and tapering.

Whipping, see FLOGGING.

Whipple, George Hoyt (1878-), Amer. pathologist, b. Ashland, New Hampshire. He studied at Yale and Johns Hopkins Univs. From 1914 to 1921 he was research prof. at California Univ., becoming prof. of pathology at Rochester Univ. in 1921. He is especially known for the introduction of the liver diet for pernicious anaemia, and for this work he shared the Nobel prize for medicine in 1934.

Whipsnade Park, property of the Zoological Society of London, is designed for the breeding and exhibition of wild animals and as a sanctuary for native Eng. wild birds and plants. W. P. is on the edge of the Dunstable Downs, Beds. The park is 500 ac. in extent. Some animals and birds are without enclosures or kept in enclosures to which the public are admitted. The park was opened in May 1931.

Whirlpool, vortex (q.v.) or eddy in water caused by interaction of 2 or more currents of different strength, often by the re-uniting of a current divided by an obstacle. Dangerous W.s may occur where tidal currents mingle on coasts; in myth and fiction the dangers are largely exaggerated, as in the case of Charybdis in the Straits of Messina and the Maelstrom of the Norwegian coast.

Whirlwinds, general, unscientific term for atmospheric vortices more usually applied to those not as large or as destructive as typhoons or tornadoes, but sufficiently marked to cause minor acts of damage. They are liable to spring up in deserts as dust devils. Some portion of the ground becomes more strongly heated than surrounding parts, the air in contact rises in temp., becomes less dense, and therefore rises, taking dust and loose paper, etc., with it. The central fall in pressure causes the swirling motions, which may be either clockwise or anti-clockwise. When of large size, a m. or so, and in humid weather, they may have developed from thunderstorms. The lifting action is sometimes considerable, carts, trees, etc., being bodily transported. Sometimes the vertical height of the disturbance is quite small.

See HURRICANE; TORNADO; TYPHOONS; WATER-SPOUT.

Whisk, see RUFF.

Whisky (Scotch), **Whiskey** (Irish). The word is derived from the Gaelic *uisge beatha*, the alchemist's *aqua vitae*, 'water of life.' It is the grain spirit distilled

from barley and other cereals which are malted, mashed, and then fermented (*see BREWING*), and the resulting liquid called the 'wash' passes into the still. W. in Ireland is purely the product of the pot-still, and Scotch W. owes to the pot-still all its character. These malt W.s at their best are, in Scotland, made from barley malt alone, but in Ireland a mixture of malted and unmalted barley, wheat, oats, or rye is mashed together. The pot-still consists of a large copper kettle with a pear-shaped head and connected to a receiver by a copper worm which runs through cold water. The first liquid distilled is of low alcoholic degree and is known as *low wines*, and it is returned to the still to be distilled a second time to become W. The first and last portions of the distillate containing impurities as well as a certain amount of alcohol, called *feints*, are returned to the low wines for redistillation. The W. which leaves the still colourless, is stored in oak casks, in some cases previously used for sherry or malt W., and may remain in them maturing for some 15 years. In Ireland the process of blending various W.s resulting from this process is far less common than in Scotland. In Scotland the great variety of the W.s produced in the malt distilleries led to the extension of the practice of *vatting* (the mixing of spirits distilled at different periods of the year to obtain uniform character) and to an elaborate system of blending. Scotch W. became very popular in England from the mid-19th cent. In 1853 Ushers of Edinburgh began to blend their malt W. with grain W. made by the patent still (*see COFFEY'S STILL*). There was considerable dispute at first whether the patent-still spirit, distilled at a much higher alcoholic degree and therefore lacking most of the constituents which give true malt W. its flavour and character, deserved the name of W. at all, and it was only admitted to the title by a Royal Commission in 1909. The admixture of this almost neutral spirit toned down the heaviness and richness of flavour of the malt W.s, which were too powerful for sedentary town-dwellers and suited a N. climate. Blending made it possible to adapt Scotch W. to any taste and any climate, ranging from the fine all malt, still drunk in the Highlands and by W. connoisseurs, to W.s of so little individual taste that only experts can discern the differences which justify different labels. The malt W.s of Glenlivet and Speyside rank as the finest of the Highland Malts. Campbeltown Malts are potent, full-bodied, and pungent, Islay Malts, with Lagavulin at their head, are less heavy and powerful, and the Lowland Malts the lightest and least smoky of all. Rye W. is distilled from a mash containing more than 50 per cent of rye, and Bourbon W., originally distilled in Kentucky at Georgetown, Bourbon Co., is from a mash consisting mainly of maize grain. *See* Aeneas Macdonald, *Whisky*, 1930; Scotch Whisky Association, *Scotch Whisky, Questions and Answers*, 1953.

Whisky Insurrection, uprising in W. Pennsylvania in 1794 against the imposition by the Federal Gov. of the excise law on domestic spirits. Washington sent a body of militia, who without bloodshed pacified the insurgents. This was the first time federal authority was used against a state.

Whispering Gallery, see ACOUSTICS.

Whist, card game for 4 players in which a full pack of 52 cards is used. It was developed from earlier games, such as *Triumph* and *Ombre*, about 1621, and derived its name, apparently, from the Cornish *huist* (silence), owing to the concentration it demanded of its players.

The 4 players cut for partners, and the cards are dealt face downwards to each of them in turn by the player who drew the lowest card. The dealer exposes his last card, which determines the trump suit. The object of each deal is to take as many tricks as possible. The player to the dealer's left leads to the first trick. The remaining players must follow suit if they can; those who cannot may either ruff or discard. The winner of a trick leads to the next one until the 13 have been played, when scores are recorded. Every trick made in excess of 6 scores 1 point. In *short W.* 5 points make a game, and a score of 2 games out of 3 wins the 'rubber'; in *long W.* 10 points make a game. These methods of scoring are seldom used today, and *W.* now survives chiefly in its most elementary forms, as in *German W.* and *W. Drives*. In a *W. Drive* each deal is a separate event and there is no rubber; the trump suit is prescribed beforehand and honours do not count. Since the individual players move from table to table according to the result of each hand, there are no fixed partnerships, and the winners are those who score the highest number of tricks or points at the conclusion of the movement. *German W.* is a game for two players. Thirteen cards are dealt to each as in *W.*, and the top card of the remainder is turned up to determine the trump suit. The dealer's opponent now leads; the winner of the trick takes into his hand the exposed card, and his opponent takes the card below, which he must turn up before he adds it to his hand. The next card on the undealt pile is now turned up, and play continues until the last trick is taken. Scoring is by points, the winner scoring 1 point for every trick he holds in excess of his opponent. A game is 50 points. See also SOLO WHIST; BRIDGE; AUCTION BRIDGE; CONTRACT BRIDGE.

Whistler, James Abbott McNeill (1834-1903), Amer. painter, lithographer, and etcher, b. Lowell, Massachusetts. In 1851 he became a cadet at the military college at W. Point, but decided to follow art as a profession, and in 1856 went to Paris, entering the studio of Gleyre. He was greatly influenced by the newly discovered Jap. colour print and by the work of Courbet. In 1859 he settled in London, there producing his exquisite series of Thames etchings. In portraiture and landscape he evolved a style all his own, his so-called 'nocturnes' showing the Jap.

influence, but in 1877, when some were shown at the Grosvenor Gallery, they were so fiercely assailed by Ruskin in *Fora Clavigera* that *W.* retaliated, suing his critic for libel, and claiming £1000. The case resulted in the plaintiff being granted one farthing damages, but throughout the trial *W.* had shown himself a master of wit. Famous masterpieces are the 'Thomas Carlyle' (Glasgow), the 'Portrait of the Painter's Mother' (Louvre), and the 'Old Battersea Bridge' (Tate Gallery). His painting was beautifully balanced and harmonious; in etchings, lithographs, pastel, and water-colour the delicacy of his art is also seen to advantage, and his 'Peacock Room' (now at Washington) was an original departure in interior decoration.

The Ruskin trial is in *W.*'s own book, *The Gentle Art of Making Enemies*, 1890, which embodies also stimulating critical comment on art. See the life by E. and J. Pennell, 1909; T. R. Way and G. R. Dennis, *The Art of Whistler*, 1903; J. Laver, *Life of Whistler*, 1930; W. Gaunt, *The Aesthetic Adventure*, 1946.

Whistler, Rex (1905-44), painter, illustrator, and stage designer, b. London. He was educ. at Haileybury and the Slade School of Art. Gifted with extreme imagination and little influenced by contemporary artists, *W.* excelled in portraying classical subjects in a romantic vein, while his exquisite illustrations, notably of *Gulliver's Travels* and *Hans Andersen's Fairy Tales*, are masterpieces of draughtsmanship and design. His main achievement is the murals he painted, mostly for private patrons, though the Tate Gallery restaurant, an early work, is widely known. He was killed in the Second World War, leading tanks into battle in Normandy. See life by L. Whistler, 1948.

Whit Sunday, or **Pentecost** (Gk 'fiftieth') festival of the Christian Church celebrated on the seventh Sunday and the fiftieth day after Easter, to commemorate the descent of the Holy Ghost on the Apostles (Acts ii. 1). Its name is probably an abbreviation of White Sunday, a name given to it on account of the white robes then worn by the newly baptised. Whitsuntide corresponds with the Jewish Feast of Pentecost, which commemorated the delivery of the Law on Mt Sinai, 50 days after the Passover.

Whitaker, Joseph W. (1820-95), London publisher. He began business, 1855, as a publisher of theological and fine-art works, and founded the *Bookseller*, 1858. In 1869 he brought out the first issue of *Whitaker's Almanack*, a comprehensive reference book in 1 vol. which has become a standard work of its kind and is pub. annually by the firm which still flourishes under the name of its founder.

Whitbread, Samuel (1758-1815), politician, b. Cardington, Beds, the son of a London brewer, educ. at Eton, Christ Church, Oxford, and St John's College, Cambridge. He became a leading spirit in the opposition to Pitt's gov. He disapproved of the Regency Bill in 1811, and championed the cause of the Princess of Wales in the House of Commons. He

advocated poor-law reform, popular education, the suppression of the slave trade, and other progressive measures.

Whitburn: 1. Par. and vil. of Durham, England, 3 m. N. of Sunderland. It is a seaside resort, and is being developed by the Boldon U.D.C. Pop. 2600.

2. Par. and burgh of West Lothian, Scotland, 34 m. SW. of Bathgate. It has coal and clay mines. Pop. of burgh, 5500.

Whitby, seaport and health resort of the N. Riding of Yorks, England, at the mouth of the R. Esk, 20 m. NW. of Scarborough. The Abbess Hilda built a monastery at Streoneshalh, near W., in AD 656, and here in the year 664 was held a Synod or Council (see next article). Here, too, lived the poet Caedmon, q.v. (fl. 670). The present abbey, reached from the tn by 199 steps, dates from 1220. Near the abbey stands the partly Norman par. church of St Mary. W. has associations with Capt. James Cook, and with the Scoresbys, famous for their whaling exploits and scientific and navigational discoveries, and W. Museum holds many interesting objects connected with them. The old tn has modern holiday amenities and the beautiful Pannett Park. There are local potash deposits; the manuf. of jet ornaments is still carried on on a small scale, and the fisheries are of growing importance. Pop. 11,380.

Whitby Synod of, or Council of Whitby, held AD 663, as the outcome of which England acknowledged the authority and accepted the usages of the Rom. Church. It was convened at a time when Northumbria and Mercia followed the Welsh or Celtic ritual while the rest of England followed the nations of the Continent. The issue was settled after discussion between Colman, the representative of the Celts, and St Wilfrid (q.v.), who obtained from the former the admission that the Pope was the successor of St Peter.

Whitechurch: 1. Par. of Glamorgan, Wales, 1½ m. N. of Llandaff. There are iron and tinplate works. Pop. 19,900.

2. Urb. dist. and mkt tn of Shropshire, England, 19 m. N. of Shrewsbury. There are metal-working and cheese-manufacturing industries. Pop. 7000.

3. Tn of Hants, England, on the R. Test. There are textile and silk industries, and soap and jam factories. Pop. 2800.

White, Elwyn Brooks (1899—), Amer. journalist and essayist, b. Mount Vernon, New York state. Educ. at Cornell, he served as a private in the First World War. Becoming a journalist, he wrote the 'Talk of the Town' column for the *New Yorker*. A brilliant humorist, he collaborated with J. G. Thurber (q.v.) in *Is Sex Necessary?*, 1929. His own books include *Every Day is Saturday*, 1934, *The Fox of Peapack*, 1938, *Quo Vadimus*, 1939, and *The Second Tree from the Corner*, 1954. *Stuart Little*, 1945, and *Charlotte's Webb*, 1952, have become accepted children's classics.

White, Sir George Stewart (1835–1912), soldier, b. Ballymena, co. Antrim. In 1853 he entered the Royal Inniskilling Dragoons, and later became colonel of the

Gordon Highlanders. He accompanied Lord Roberts to Kandahar, and was awarded the V.C. W. fought in the Sudan War of 1884–5 and in the Burmese Campaign of 1885, being made K.C.B. and maj.-gen. In 1893 he succeeded Lord Roberts as Indian commander-in-chief, and in 1897 became quartermaster-general of the forces. During the Boer War he successfully defended Ladysmith (1899–1900). He was governor of Gibraltar (1900–4), and was made a F.M. in 1903. See life by Sir M. Durand, 1914.

White, Gilbert (1720–93), naturalist, b. Selborne, Hants, and educ. at Basingstoke Grammar School and at Oriel College, Oxford. He took holy orders and held curacies at Swarraton, Selborne, and elsewhere. He devoted himself to the study of natural hist. around his par. In 1788 he pub. *The Natural History and Antiquities of Selborne* (new ed. pub. in Everyman's Library, 1950), which had been in preparation since 1771. This is his only famous work, though he pub. other papers on natural hist., and some sermons. *The Natural History* is founded on letters and retains the epistolary style throughout: it reflects W.'s unrivalled powers of observation, and is simple and informal in manner. The ed. of this work by T. Bell (1877) contains the rest of W.'s pub. works in a second vol. The Selborne Society (q.v.) pub. a facsimile ed. of his *Flora Selborniensis* in 1911. See life by W. S. Scott, 1946.

White, John (1576–1638), monk, b. near Worcester, became a Benedictine in Spain. He returned to England in 1602 as a missionary. The college of Douai was founded in 1605 in accordance with W.'s plans, and he also brought about the foundation of the monastery there in 1607, transferred first to Acton Burnell and then to Downside (q.v.) after the Fr. Revolution.

White, Sir Thomas (1492–1567), merchant, b. Reading. He was the founder of St John's College, Oxford, and co-founder of Merchant Taylors' School. As Lord Mayor he defended the City against Sir Thomas Wyatt the Younger.

White, William Hale, better known as Mark Rutherford (1831–1913), novelist, b. Bedford. He entered the Admiralty as a clerk, and rose to be assistant director of contracts. His works include: *The Autobiography of Mark Rutherford*, 1881, *Mark Rutherford's Deliverance*, 1885, *The Revolution in Tanner's Lane*, 1887, *Catherine Furze*, 1893, and *John Bunyan*, 1905. See his *Early Life and Autobiographical Notes*, 1913, and *Letters to Three Friends*, 1924; also studies by A. E. Taylor, 1914, and Sir W. R. Nicoll, 1924.

White Army, general name for the anti-Bolshevik forces in the Russian Civil War, 1918–20. See CIVIL WAR, RUSSIAN.

White Arum, or Arum Lily, see ZANTE-DESCHIA.

White Beam, see BEAM-TREE.

White Flux, see FLUX.

White Horse, Vale of the, in Berkshire, England, see WHITE HORSES AND HILL-FIGURES.

White Horses and Hill-figures are among the most interesting and popular features of the topography of the chalk downland country of S. England. Nearly 50 hill-figures are known in Britain; of which all but 4 are in the chalk country; in this series are 17 white horses, of which no less than 11 are in Wessex, while the rest include giants, crosses, a stag of white quartz at Mormond Hill, Aberdeenshire, an aeroplane, a crown, and an ingenious collection of military badges made in 1916 at Fovant Down in Wilts. The most widely known of the hill-figures are the Uffington White Horse, below Uffington Castle, a hill-fort on the Berkshire Downs; the Cerne Giant, on the hillside above Cerne Abbas village, near Dorchester, Dorset; the Long Man of

to Christianity; and that it was made for some purpose unknown by the Druids or the Romans. It is in fact of very ancient origin, as Sir John Evans pointed out in 1864, when he considered the similarity between this attenuated White Horse with disjointed limbs and beak-shaped head and the horse represented on the gold and silver coins current in SE. England at the end of the Early Iron Age. The study has been developed further by Prof. Stuart Piggott, who calls attention to the horses which appear on the Aylesford and Marlborough buckets, 2 well-known antiquities of the same period, and to the proximity of Uffington Castle, itself a hill-fort of the Early Iron Age. General opinion is that the Uffington Horse was a totem or cult object of the

Ashmolean Museum

THE WHITE HORSE OF UFFINGTON AND UFFINGTON CASTLE

Wilmington on Windover Hill on the escarpment of the S. Downs; and the Bledlow and Whiteleaf Crosses, close together on the Chiltern Hills. These figures are in all probability of ancient construction. With a very few possible exceptions, all the others are modern. The Uffington Horse has inspired many imitations, of which a great number date from the 18th and early 19th cents. The purpose of each hill-figure must be considered on its own merits. Some are landmarks, others have a religious purpose or are memorials, while one at least (the Cerne Giant, *see below*) is associated with a pagan fertility cult.

The Uffington White Horse, length 360 ft., has been known familiarly at least since 1084, when it is noted as a landmark in a charter of the Abbey of Abingdon, and by the 14th cent. it had given its name to the Vale of the White Horse. Sev. theories of its origin have been advanced: that it was cut by Alfred to commemorate his victory over the Dan. host in 871 at Ashdown; that it was a memorial of the conversion of the Saxons

Belgae, a tribe who occupied much of SE. England in the cent. between 50 BC and AD 50.

The Cerne Giant lies in an area rich in prehistoric remains. Just beyond his head is a small 4-sided earthwork, probably of the Early Iron Age, in which an ann. maypole celebration took place until quite recent years. Quite close by are the foundations of the Benedictine abbey of Cerne. These points must be considered in any attempt to explain the age and purpose of this blatantly male figure, 180 ft. in height, with a great club in his right hand, his left outstretched as though in the act of grasping. He is represented in outline, marked by a 2-ft trench. A great deal of legend and speculation has grown up in association with the Cerne Giant, but Prof. Piggott, in a recent study, has put forward a most convincing case for his identification with Hercules and his association with a fertility or Priapus worship revived by the Emperor Commodus towards the end of the 2nd cent. AD.

The Long Man of Wilmington, 231 ft

in height, has a staff in each hand; the figure is outlined by trenches defined by white-painted bricks, and is in the care of the Sussex Archaeological Trust. Nothing is known of its early hist., but there has been a great mass of conjecture, most of it quite fanciful, associating the Giant with the Celts, Romans, Saxons, and Druids, various mythological characters, astronomers, and the Benedictine monks of the nearby priory of Wilmingtong, which was dissolved in 1414. The latest writer, Morris Marples, inclines to the view that the Giant was 'something in the nature of an advertisement, like an inn sign to catch the eye of the traveller from a distance . . . and direct him towards the priory below, where rest and refreshment were to be found.'

The following may also be noted: the Westbury Horse on Bratton Down, Wilts, made in 1778 on the site of an older horse; Cherhill Horse on Marlborough Down, 1780; the new Horse at Pewsey to commemorate the Coronation, 1937; the Osmington Horse near Weymouth with its rider, usually identified as George III.

See Sir F. Petrie, *The Hill-figures of England* (occasional papers of the Royal Anthropol. Inst. No. 7), 1926; S. Piggott, 'The Uffington White Horse,' in *Antiquity*, vol. v, and 'The Cerne Giant' in *Antiquity*, vols. vi and xii; M. Marples, *White Horses and other Hill-figures*, 1949.

White House, official residence of the U.S. president, in Washington. It is built of freestone, in the Eng. Renaissance style, and constructed between 1792 and 1799. The original interior and part of the walls were burned by Brit. troops during their occupation of the city in 1814. Early in 1949 it was discovered that the whole interior structure had become unsafe, and that a new building would have to be erected inside the old walls. The \$5m. worth of repair work and improvements was completed by the beginning of 1952.

White Lead, basic carbonate of lead, having the formula $2PbCO_3 \cdot Pb(OH)_2$. The compound is manufactured by sev. processes, the simplest of which consists in grinding litharge with water and sodium bicarbonate. The Dutch process, by which the best-quality W. L. is prepared, is carried out by placing spirals of sheet lead in pots at the bottom of which is vinegar, and covering with spent tan or dung for 4 or 5 weeks. The vinegar gradually evaporates through the heat generated by the tan and attacks the lead, forming a basic acetate. This is converted to W. L. by the action of the carbon dioxide evolved from the decaying tan. W. L. is a heavy powder, which is used as a pigment. Although very poisonous and liable to blacken in the presence of hydrogen sulphide, it is used extensively, as no substitute has been found which possesses the same covering power or 'body'.

White Leg, popular term for a condition in which the lower limb becomes white, swollen, and painful as a result of thrombophlebitis in the veins, i.e. infection causing inflammation of their walls and

clot formation in their cavities. W. L. is most commonly seen following childbirth, though it may also occur during convalescence from febrile diseases such as pneumonia and typhoid fever. There may be a danger of blood clots becoming detached and passing to other parts (see EMBOLISM). Now that puerperal infections occur less frequently and, if they do occur, can be treated more effectively, W. L. is not so common as it was.

White Magic, see MAGIC.

White Metal (anti-friction metal), metallurgical term. It is applied either to the copper sulphide produced in the primary stages of obtaining blister copper from copper matte or to the range of tin-base alloys used in engineering for manufacturing bearings. It is used for the lining of bearings, e.g. in locomotives, See METALLURGY.

White Mountains, range of mts in New Hampshire (N.E.), U.S.A., especially the Presidential range in Coos co. (S.), forming a detached portion of the Appalachian system. A tableland, 10-15 m. broad, separates the 2 main groups, the East or White Mts and the Franconia (with Lafayette Peak). Mt Washington, the culminating peak, is over 6200 ft high.

White Nile, see BAHR-EL-ABIAI.

White Pigments, see PIGMENTS.

White Plains, co. seat of Westchester co., New York, U.S.A., 25 m. from downtown Manhattan, on the Bronx R. It is a residential suburb of New York, and manufs. plumbing and heating equipment, wire, cables, concrete pipe, tiles, clothing, dairy foods, textiles, and chemicals. It was the scene of many Revolutionary events and the battle on Chatterton Hill. Pop. 43,460.

White River, a riv. of Arkansas and Missouri, U.S.A., rising in NW. Arkansas, running N.E. into S. Missouri, where it drains part of the Ozark plateau, and returning to Arkansas flowing SE. and S. to join the Mississippi. Total length about 690 m.

White Russia, see BELORUSSIA.

White Sea, gulf of the Barents Sea in N. Russia. Area over 30,000 sq. m. The main rivs. flowing into it are the N. Dvina, the Mezen', and the Onega. The chief port is Archangel. The sea is frozen from Sept. to May. On the Solovetskiy Is. there is a famous former monastery, now a concentration camp.

White Sea-Baltic Canal, artificial water, way connecting the White Sea with Lacc Onega, and through it with the Baltic Sea and the Volga. Length 142 m., including 32 m. of canals. The idea was first mooted at the time of Peter the Great, and surveying was carried out in 1915-16. It was built in 1931-3 by forced labour.

White Sulphur Springs, spa and holiday resort of the U.S.A., in Greenbrier Co., W. Virginia. Its mineral springs have made it since the early 1800's a spa comparable with Bath, England. It is 1917 ft above sea-level, in the Allegheny Mts. Pop. 2643.

White Terrier, see TERRIER, OLD ENGLISH.

White Vitriol, see ZINC.

Whitebait, fry of herrings and sprats. In the winter and spring young sprats form the great proportion of what is sold under the name, but in the summer W. consists chiefly of young herrings.

Whiteboys, Irish secret agrarian association of the type known as Ribbonism, formed about 1860. Its members, who were all of the poorest class, had to be Catholics, although the movement was strongly condemned by the Catholic clergy. The aims and methods of the W. varied in different parts of the country, but generally they assembled at night, wearing white shirts, to destroy the property of landlords, Protestant clergy, tax and tithe collectors, and others who were unpopular in the neighbourhood. The movement died down about 1885. The Westminster Act (1871) declared Ribbonism to be illegal.

Whitechapel, dist. in the bor. of Stepney, E. London, deriving its name from the mediaeval white chapel of St Mary Matfellow. It is the main centre of the clothing industry in Stepney. In W. are Toynbee Hall (q.v.), the London Hospital (q.v.), and an art gallery estab. 1901.

Whitefield, George (1714-70), founder of the Calvinistic Methodists in England, and one of their leaders in Wales. b. Gloucester, studied at Pembroke College, Oxford. W. was ordained deacon by Bishop Benson (1736). After a visit to Gloucester and Bristol he set off to join the Wesleys in America (1737). W. remained in America till towards the close of the year. He then began that course of preaching in association with Wesley which estab. Methodism (q.v.) as a popular faith. W. set the example of open-air preaching (1739) near Bristol, and made a great impression as an orator. His stern Calvinism led to a breach with the Wesleys, but he received great support from others, who in 1741 built a tabernacle for him in Moorfields, London. He was provided with a centre in Tottenham Court Road, London, where the Whitefield Tabernacle was built. His type of Methodism developed in the Calvinistic Methodist Church. His *Select Works* were ed. by J. Smith in 1850. See lives by L. Tyrnham, 1876-7; J. P. Gledstone, 1900; A. Belden, 1930.

Whitefield, urb. dist. of Lancs, England, also known as Stand, 5 m. N. of Manchester. It is mainly residential. Pop. 13,000.

Whitefish, see COREGONUS.

Whitefish Bay, vil. in Wisconsin, U.S.A., N. residential suburb of Milwaukee. Pop. 14,700.

Whitehall, London, main thoroughfare between Trafalgar Square and the Houses of Parliament, and the administrative centre of the U.K. It derives its name from, and is situated on, the main courtyard of the old palace of Whitehall that was largely destroyed by fire in 1698. A mansion was built here in the early 13th cent. by the great justiciar Hubert de Burgh (q.v.), who bequeathed it to the Black Friars of London, from whom it was

bought by Walter Gray, Archbishop of York, c. 1250. It became the residence of the Archbishops of York until taken from Wolsey by Henry VIII, who enlarged it and renamed it Whitehall, and it remained the chief royal residence in London for about 150 years. There were additions to the buildings at various periods. The fine Banqueting House which survives, the first building in England in the Palladian style, was built by Inigo Jones for James I. From a window in the hall Charles I. stepped to his execution in the street below. Later it became a chapel until closed by Queen Victoria, who allowed it to be used by the Royal United Service Institution (q.v.) and its Museum. Among the gov. offices in W. are the Admiralty, Home Office, War Office, and Ministry of Health. Much rebuilding and resiting of gov. offices is proceeding on the E. side. Parliament Street is the S. continuation of W. and West of their junction is Downing Street (q.v.). See also CENOTAPH; HORSE GUARDS. See G. S. Dugdale, *Whitehall Through the Centuries*, 1950.

Whitehaven, municipal bor., seaport, and mkt. tn of Cumberland, England, 41 m. SW. of Carlisle. There is a light-house on the W. pier of the harbour. It has extensive docks, collieries (some of which extend under the sea), clothing and silk manufs., chemical and cement works, brickworks, and a tannery and flour mill. Pop. 24,940.

Whitehead, Alfred North (1861-1947), mathematician and philosopher, b. Ramsgate, educ. at Sherborne School and Trinity College, Cambridge, where he became a Fellow in 1884 and lecturer (1885-1910) in applied mathematics and mechanics. He was lecturer in applied mathematics, Univ. College, London (1911-14), prof. at the Imperial College of Science, London (1914-24) and prof. of philosophy at Harvard Univ. (1924-37). W. was president of the Mathematical Association (1915-16). He was elected Fellow of the Royal Society (1903), and of the Brit. Academy (1931), and gained the O.M. (1945). He collaborated with Bertrand Russell in *Principia Mathematica* in 3 large vols., 1910-13, and was the author of many valuable philosophical works. His first work in the field of logic and mathematics was *A Treatise of Universal Algebra*, 1898. Amongst his other numerous works on various subjects may be noticed the following: *The Organisation of Thought*, 1916, repub. in 1928 as *The Aim of Education*, is a criticism of the examination system. His *Principle of Relativity*, 1922, supplies an alternative rendering to that of Einstein. *W's Process and Reality*, an essay in cosmology, 1929, along with his Lowell Lectures *Science and the Modern World*, 1926, and *Adventures of Ideas*, 1933, formed a trilogy. His other philosophical works included: *Religion in the Making*, 1926, *The Function of Reason*, 1929, *Symbolism*, 1932, *Nature and Life*, 1934, and *Essays in Science and Philosophy*, 1948.

In W.'s *Tarner Lectures* (1919) he

rejected the conceptions of Nature which at that time formed the starting-point of physics—that space and time provide the stage on which an endless performance is maintained by ponderable bodies, aether and electricity. He propounded the view that *events* constitute the ultimate components of reality. *Process and Reality* shows the close correspondence between his philosophy and that set forth in Plato's *Timaeus*. The fundamental idea is a process of divine development through which order is gradually evolved out of primeval chaos. The demiourgos of the *Timaeus* corresponds to W.'s 'God' and the Platonic 'ideas' or 'forms' to his 'eternal objects.' See P. A. Schilpp, *The Philosophy of Alfred North Whitehead*, 1941.

Whitehead, George (c. 1636–1723), Eng. Quaker leader, b. near Orton, Westmorland, and converted by Fox. He wandered through England, preaching, and wrote many tracts in support of Quakerism. In 1661 he was heard by Parliament in defence of Quakers at the reading of the anti-Quaker bill. He was imprisoned sev. times, being in gaol almost continuously between 1662 and 1672.

Whiteman, Paul (1890–), Amer. bandleader, b. Denver, Colorado. He started his own jazz band in 1919. This became famous owing to the experimental orchestrations of Ferdy Grofé, the pianist. W. 'discovered' Bing Crosby in 1927. After 1930 he played a large part in commercialising jazz.

Whitening Agents, see BLEACHING.

Whitethroat, migratory bird of the genus *Sylvia*, classified among the Warblers. Two species occur in Britain, *Sylvia communis* and *Sylvia curruca*. The *Sylvia communis*, or greater W., is greyish-brown, with the wing-tips rather darker and the head ashy-grey, tail feathers dark greyish brown, under-surface of the body white, and the breast pinkish. It is a summer visitor and is found everywhere in England and Wales, Ireland, and over most of Scotland except the N. The general colour of the *Sylvia curruca*, or lesser W., is rather greyer.

Whitford, par. and vil. of Flintshire, Wales, 3 m. NW. of Holywell. Its chief industries are iron works, limestone quarries, and agriculture. Pop. (estimated) 3500.

Whitgift, John (c. 1530–1604), prelate, b. Grimsby, and probably educ. at St Anthony's School, London. He then studied at Cambridge, and became a fellow of Peterhouse (1555), Lady Margaret prof. of divinity at Cambridge (1563–7), master of Pembroke Hall and of Trinity College, Cambridge (1567–77), dean of Lincoln (1571), Bishop of Worcester (1577), and Archbishop of Canterbury (1583–1604). He advocated the doctrines of Calvin, but supported Anglican ritual and was a strenuous opponent of the Puritans. In his primacy the High Commission Court (q.v.) was permanently estab. He founded an almshouse and W. School (q.v.) at Croydon (1595). See life by J. Strype, 1718.

Whitgift School, public school for boys, founded by Archbishop Whitgift in 1595. It was moved to new buildings in Haling Park, Croydon (q.v.), in 1931.

Whithorn, royal burgh of Wigtownshire, Scotland, 11 m. S. of Wigtown. W. was the landing-place of St Ninian (q.v.), who built a monastery called 'Candida Casa' (397), in which he was buried in 432 and which was long a place of pilgrimage. The priory, now ruined, was rebuilt in the 12th cent. On Wigtown Bay 4 m. SE. of W. is Is. of W., a small port having the ruins of a 13th-cent. chapel. Pop. 950.

Whiting (*Gadus merlangus*), one of the important European members of the cod family. It is abundant in shallow water round the coasts of Britain and Ireland, and extends into the Mediterranean. It is slender in form and differs from most of the other species of the genus in the absence of a barbel. It makes rapid growth, but rarely exceeds 20 in. in length or 2 lb. in weight, and is commonly taken much smaller.

Whiting, see CHALK.

Whiting-pount, see RIB.

Whitley, John Henry (1866–1935), politician, b. Halifax, Yorks, and educ. at Clifton College and London Univ. He was a Liberal M.P. for Halifax (1900–28), junior lord of the Treasury (1907–10), chairman of committees (1911–21), and P.C. (1911). In 1917 he presided over a committee that suggested joint industrial councils of employers and employed, named 'Whitley Councils' (q.v.). He was Speaker from 1921 to 1928, and chairman of the B.B.C. from 1930 to his death.

Whitley Bay, bor. and seaside resort of Northumberland, England, on the N. Sea, 2 m. N. of Tynemouth. Pop. 32,000.

Whitley Councils, or **Whitleyism**, device for securing improved relations between employers and employed. It had its origin in 1916, when the gov. set up the Committee on Relations between Employers and Employed, known, from the name of its chairman, J. H. Whitley (1866–1935), as the 'Whitley Committee.' In one of its reports the Whitley Committee made recommendations regarding conciliation and arbitration which were embodied in the Industrial Courts Act, 1919. Later the committee recommended the formation of joint industrial councils of employers and employees for the consideration of a variety of questions. Labour representatives regarded these recommendations as an unsatisfactory compromise. With gov. approval, however, councils were brought into existence in many important industries and the principle was applied to the Civil Service and to the local authorities. Subsequently, the Whitley Councils sank into the background. There were, however, some successful instances, notably in the flour-milling industry. During the Second World War similar bodies were set up, called joint production committees. See also under INDUSTRIAL RELATIONS; COLLECTIVE BARGAINING.

Whitlow, inflammation of the tissues of the hand. When it occurs in the tissues of the terminal phalanx of a finger it is

sometimes known as a *felon*. Inflammation round the nail bed is known as *paronychia*. W.s have been classified as *subcuticular*, i.e. superficial and immediate, i.e. underneath the epidermis or cuticle (see SKIN); *subcutaneous*, i.e. underneath the skin and within the soft tissues; *thechal*, i.e. within the theca or tendon sheath; and *subperiosteal*, i.e. underneath the periosteum or covering of the bone (q.v.). This classification is somewhat arbitrary, however, since septic infections are apt to disregard anatomical boundaries. The inflammation is due to bacterial infection, and unless checked leads to suppuration. Fortunately antibiotic therapy usually proves effective against W.s; nevertheless, they should not be regarded lightly, particularly those in the deeper structures, as they may cause necrosis (death) of bone or tendon, with consequent deformity or even loss of a finger, or the infection may spread up the arm. As with any septic focus, septicaemia (q.v.) may be caused by a W. In addition to antibiotic treatment it is essential that surgical drainage should be provided for any pus formed.

Whitman, Walt, originally Walter (1818-92), Amer. poet, b. W. Hills, Long Is., of Eng. and Dutch descent. He was educ. at public schools in Brooklyn and New York. His early career was very varied. He found an outlet for expressing his democratic sentiments by writing verse, which he pub. in 1855 under the title of *Leaves of Grass*. The metre he employed was entirely original. He discarded the conventional laws of feet and rhyme, and wrote in musical, rhythmic sentences of varied length, modelled on the rhythms of the Old Testament. He was accused of indecency and immorality for his frankness in speaking of subjects usually tabooed, and the book was banned in Massachusetts in 1881, but was given the highest praise by Emerson and Thoreau. W. was an ardent opponent of slavery, and lost an editorial post because of this. From 1863 to 1873 he was in Washington, first as war correspondent and later as a gov. clerk. He devoted all his spare time in visits to the hospitals where he acted as a volunteer nurse. He also lost his position in the dept of the interior because of objections there to poems in *Leaves of Grass*, but obtained another in the office of the attorney-general, which he held until he was partially paralysed in 1873.

The worth of *Leaves of Grass*, W.'s masterpiece, was not fully acknowledged until after his death. Sometimes his disregard for the conventions of metre is obviously self-conscious and forced, and his poetry sinks into a string of names or adjectives. The controversies aroused during his lifetime, however, were largely due to his frank enjoyment of physical beauty, and physical love. His poetry reflected the conflicting moods of his impulsive, highly-emotional and somewhat muddled personality, and, in some of its quieter, more wistful passages, with their skillfully spontaneous onomatopoeia, shows sev. of the characteristics of Ver-

laine (q.v.). His threnodies on death have few equals in any language, and this is especially true of his poem on Lincoln, 'When Lilacs Last in the Dooryard Bloom'd.' His triumphant 'Pioneers, O Pioneers' has become almost a national hymn. W.'s other works include, *Drum Taps*, 1865, *Democratic Vistas*, 1871, and *November Boughs*, 1888. His autobiography was pub. in 1892. See studies by J. A. Symonds, 1906; B. de Selincourt, 1913; E. L. Keller, 1921; C. Wells and A. F. Goldsmith, 1922; J. Bailey, 1926; G. Bullett, 1935; H. S. Canby, 1943; R. V. Chase, 1944; also G. W. Allen, *The Solitary Singer*, 1955.

Whitney, Eli (1765-1825), Amer. inventor, b. Westborough, Mass. He graduated from Yale in 1792. He went to Georgia and there devised his machine, the cotton gin. The neighbours stole it and forestalled his patent, so that when, with Miller, he set up a factory in Connecticut in 1793 litigation consumed the proceeds. In 1798 he got a gov. contract for firearms, which provided him with a fortune.

Whitney, Mount, peak of the Sierra Nevada, S. California. It has an altitude of 14,495 ft and is the highest peak in the U.S.A. proper.

Whitstable, urb. dist. and seaside resort of Kent, England, on the Thames estuary, 6 m. NW. of Canterbury, to which it was linked by one of Stephenson's earliest railways. It has famous oyster fisheries, and yacht-building yards. Pop. 17,647.

Whitten-Brown, Sir Arthur (1886-1948), airman, b. Glasgow. In the First World War he served in the R.F.C. and the R.A.F. In 1919 he made the first direct transatlantic flight with Sir John Alcock (q.v.), and was knighted later that year.

Whittier, John Greenleaf (1807-92), Amer. poet, b. Haverhill, Massachusetts, of Quaker parents. Brought up as a farmer's boy, he had little formal schooling, but read avidly, and gained inspiration from the poems of Burns. He became a journalist, and in 1833 pub. an anti-slavery work, *Justice and Expediency*. For 30 years he devoted himself to the cause of abolishing slavery, so that he became venerated as the apostle of human freedom. His vols. of verse include *Songs of Labor*, 1850, *The Chapel of the Hermits*, 1853, *The Panorama*, 1856, which contains the well-known 'Maud Muller' and 'Barefoot Boy,' *Home Ballads*, 1860, *In War Time*, 1864, containing the famous 'Barbara Frietohie,' *Snow Bound*, 1866, named from a poem that is sometimes accounted his best, *Among the Hills*, 1869, *Miriam*, 1871, *Hazel Blossoms*, 1875, and *At Sundown*, 1890. Greatest in his nature pieces, he was in his day the most popular Amer. poet after Longfellow. His *Life and Letters* was ed. by S. T. Pickard, 1907; see also A. Mordell *Quaker Militant*, 1933; W. Bennett, *Whittier, Bard of Freedom*, 1941; A. Rowntree, *Crusader and Prophet*, 1946.

Whittington, Richard (d. 1423), Lord Mayor of London, son of Sir Wm Whittington, a Gloucester knight. He was a

London mercer, who held sev. municipal offices, and was thrice Lord Mayor of London (1397, 1406, and 1419). He became extremely rich, lending money successively to Richard II, Henry IV, and Henry V. Around him has grown a legend, the original basis of which is lost. See life by Sir W. Beaunt, 1881; and H. Pearson and H. Kingsmill, *Talking of Dick Whittington*, 1947.

Whittington and Newbold, or **Newbold and Dunstan**, par. of Derbyshire, England, 2 m. N. of Chesterfield (q.v.).

Whittle, Sir Frank (1907-), inventor, b. Leamington. He entered the R.A.F. as a boy apprentice and gained a cadetship to Cranwell college. While still a cadet he became interested in jet-propulsion (q.v.), but received little encouragement until 1936, when he was placed on the special duties list. His first engine ran in the following year, and in 1941 it powered the Gloster E 28/39. He was knighted in 1948.

Whittlesey, or **Whittlesea**, tn of Cambridgeshire, on the Nene, 5 m. E. of Peterborough, with brick manufs. Pop. 8700.

Whitty, Dame May (1865-1948), stage name of Mrs May Webster, actress, b. Liverpool, where she first appeared in 1881. A year later she played in London. She acted with Irving, but later turned mainly to comedy. Her plays include *Quality Street*, 1903, and *Night Must Fall*, 1935; her films include *The Lady Vanishes*, 1938.

Whitwood, see CASTLEFORD.

Whitworth, Sir Joseph (1803-87), engineer, b. Stockport. After serving his apprenticeship as a mechanic, he set up in 1833 as a toolmaker in Manchester, and made experiments in rifles, cannons, etc. The Whitworth rifle was invented in 1857, and was adopted by the National Rifle Association in 1860 and by the War Office in 1869. His development of standards for screw-thread and gauge measurements was of great importance. See also ARMSTRONG, SIR WILLIAM GEORGE.

Whitworth, urb. dist. of SE. Lancs, England. It has stone quarries, felt works, cotton works, mills, and engineering works. Pop. 7400.

Whizzer, or **Whizzing Stick**, see BULL-ROARER.

Whooper, see SWAN.

Whooping-cough, an infectious disease due to the *Bacillus pertussis*, and characterised by recurrent spasms of coughing consisting of prolonged expiratory effort followed by a deep inspiration giving the typical 'whoop.' During a severe expiratory phase the face becomes purple, as in suffocation, and is relieved by the inspiration. Paroxysms of coughing occur at night, and during the day are started by anything which increases the depth and rate of breathing, such as running, laughing, or singing. Eating also tends to cause paroxysms. W. is commonly a disease of childhood, but no age is immune, unless immunity has been conferred by a previous attack or by vaccination. The incubation period of about

4 weeks is longer than most infectious illnesses. The quarantine period is usually put at 6 weeks. The early symptoms are catarrhal, as in a cold, but after 7-10 days an irritating cough begins, becoming typically paroxysmal and increasing in frequency and severity until a height is reached during the 3rd and 4th weeks, after which the symptoms recede. The disease can be dangerous in infants and young children of poor physique, pneumonic secondary infection being a complication. In 1954, however, there were only 95 deaths from W. in infants under 1 year old, compared with 2000 in 1920. This reflects improved standards of living and health and better therapeutics. Bronchiectasis and fibrosis of the lung may be sequelae. Immunisation against W. may be obtained by means of a prophylactic vaccine of proved potency, and this is now given to infants, usually in combination with diphtheria prophylaxis. Placing patients in a decompression chamber for 30 min., where they are subjected to a reduced atmospheric pressure equivalent to an altitude of some 12,000 ft, has proved effective in treatment.

Whorl, in botany, a ring of leaves or flowers springing from the stem all in one plane. It is also used in zoology to denote a set of parts arranged in similar fashion. See INFLORESCENCE.

Whortleberry, see BILBERRY.

'Who's Who', Brit. biographical reference work founded in 1848 by Alfred Baily. The first ed. had 250 pages, and sold at half a crown. During the 45 years in which Baily pub. it there was little change in style or content, i.e. list of names of titled and official persons, with no biographical details beyond dates of birth and appointment.

In 1896 copyright and right of continuation in *Who's Who* were offered for sale by auction, and were secured for £30 by the publishers Adam and Charles Black (q.v.). The new publishers announced that what had been a handbook of the titled and official classes only would now embrace all the most prominent persons in the kingdom. For this purpose a *questionnaire*, such as is still used, was devised and the entries written up from the answers. The 1897 ed. contained some 5000 biographies of most of the prominent persons in the kingdom; in later years the number has increased by more than 5 times, and now includes a number of Amer. and foreign personalities of particular interest to the Brit. public. *Who's Who* now has its imitators in almost every country of the world.

Whyalla, tn of S. Australia, on the W. side of Spencer's Gulf, 250 m. from Adelaide by road. It is the shipping outlet for iron ore mined at Iron Knob, 35 m. inland, and has a blast furnace and ship-yards; construction of a steel works was planned in 1955. The tn obtains its water by pipeline from the R. Murray 223 m. away. Pop. 7700.

Whymper, Edward (1840-1911), artist, author, and mountaineer, b. London. He travelled among the Central and W. Alps

(1860) to obtain sketches of Alpine scenery, and ascended Mont Pelvoux (1861). His ascent of the Pointe des Ecrins with a party (1864) was a remarkable mountaineering feat. W. also made the first ascent of the Aiguille Verte and in 1865 the famous first ascent of the Matterhorn (q.v.) by the N.E. ridge. W.'s successful ascent was his seventh attempt; during the descent 4 out of the party of 7 were killed. He next visited Greenland (1867, 1872), Ecuador and the Andes (1879-80), and Canada (1901-5). Among his works are: *Scrambles among the Alps*, 1871; *Ascent of the Matterhorn*, 1871; *Chamonix and Mont Blanc and The Valley of Zermatt and the Matterhorn*, 1897-1901. See life by F. S. Smythe, 1940, 1942.

Whyte-Melville, George John (1821-78), soldier and novelist, b. Strathkinness in Fiffe. Educ. at Eton, he served in the Crimean War. He wrote a number of novels, mainly of a sporting nature, though a few were historical. They include *Kate Coventry*, 1856, *The Queen's Maries*, 1862, *The Gladiators*, 1863, *Satanella*, 1873, and *Black but Comely*, 1879. His *Fading Recollections* appeared in 1875. He died from an accident in the hunting field.

Wiborg, see VYBORG.

Wichita, co. seat of Sedgwick co., Kansas, U.S.A., the largest city in the state, 210 m. SW. of Kansas City. It stands in the centre of a farming, agric., and oil dist., the chief product being wheat. The tn is a milling centre. There are also oil refineries, packing establs., motor-vehicle works, foundries, and machine shops. Friends Univ. and the Municipal Univ. of W. are here. Pop. 168,280.

Wichita Falls, tn of Wichita co., Texas, U.S.A., on the Wichita R., 95 m. NW. of Fort Worth. It exports grain, and manufs. tanks, glass, mattresses, etc. There are oil-wells in the neighbourhood. Pop. 68,000.

Wick, seaport, co. tn, and royal burgh of Caithness, in the extreme N. of Scotland, situated at the mouth of the riv. of the same name. It has a good harbour, herring and white fishing, and cattle marketing. The ruins of the castle, known as the Old Man of Wick, are a prominent landmark. Pop. 7300.

Wick and Lamp Time Measurers. Among primitive time-measuring devices (see HOROLOGY) adopted by the ancients was a flax or hempen wick, so treated that when ignited it smouldered slowly without breaking into flame. Knots were tied at definite intervals in the flax or hemp, and intervals of time were represented by the distance between the knots. Of more recent date are lamp-clocks, which measured time by the amount of oil they consumed. The construction embodied a glass reservoir fixed on a stand, with a graduated scale to indicate the hrs. The wick was led from the reservoir through an upturned projecting arm, where it was lit to give illumination, thus acting both as clock and night-light, and time was told by the amount of oil left. According to the historian

Asser, Alfred the Great used candles to apportion his day's work. These candles were 12 in. long and burnt away completely in 4 hrs at the rate of an in. every 20 min. They were enclosed in a lantern made of wood to protect them from draughts.

Wicken Fen, nature reserve in Cambridgeshire, England, part of which has been acquired by the National Trust.

Wickford, part of Basildon (q.v.) urb. dist. Pop. 10,000.

Wickham Steed, Henry, see STEED.

Wickliffe, John, see WYCLIFFE.

Wicklow: 1. Maritime co. of Leinster, Rep. of Ireland, bounded on the N. by Dublin, S. by Wexford, E. by St George's Channel, and W. by Carlow and Kildare. The co. is famous for its beautiful scenery. Running through the centre from N. to S. are the Wicklow Mts, with the heights of Lugnaquilla (3039 ft), Kippure (2473 ft), and Duff Hill (2369 ft), between which lie many fine gorges and valleys. The coast is a succession of steep cliffs and sandy beaches. W. and Arklow are the 2 main harbours. The prin. rivs. are the Dargle, Vartry, and Avonmore (Avoca, q.v.); the Slaney and Liffey rise in the W. Mts. Glenmalur (7 m.) reaches into the co.'s finest mt scenery; Glendalough (q.v.) is the site of the world-famous monastery city (7th cent.), and Glencree (the Dargle ravine, has a 300-ft waterfall at Powerscourt Demesne. Lakes include Glendalough, Loch Bray, Lough Dan, the artificial lake at Roundwood, which is the Dublin reservoir, and Poulaphuca (Blessington hydro-electric scheme). Minerals are lead at Glendalough, copper at Avoca, and gold near Woodenbridge, and there is granite at Aughrim and Ballyknockan. There are many castles and eccles. remains. Industries include stock-raising (a special breed of W. mt sheep), milk and dairy products, wheat, oats, seed potatoes, and bulbs. The chief tns are W. (the co. tn), Bray, Arklow, and Balinglass. The co. comprises 8 baronies and returns 3 members to the Dail. Area 500,250 ac.; pop. 60,300.

2. Seaport and co. tn of W., on the R. Vartry, 31 m. SE. of Dublin. St Patrick and St. Mannatt landed at W. in 431; from the latter is derived the Irish name *Cill (Church) Mannattain*. The Danes occupied it and gave it the name 'Vikín-lo' or Wicklow. Following the Norman invasion and the building by Fitzgerald of Black Castle, W. was the scene of constant fighting between the clans O'Bryne and O'Toole, down to the final struggle with Cromwell in 1649. The harbour, built at a cost of about £100,000, provides the best shipping accommodation on the SE. coast. Imports are fertilisers, coal, and timber; exports are timber, lead, oatmeal, and sweets. There are remains of a Franciscan friary, 13th cent., built by Fitzgerald, and later under the patronage of the O'Bryne clan. Pop. 3300.

Widcombe-in-the-Moor, vil. of Devon, England, on Dartmoor, 5½ m. from Ashburton. It is famous through the ballad *Widcombe Fair*. Pop. 700.

Widgeon, *Widgeon*, or *Mareca penelope*, duck which visits Britain in winter, usually breeding farther N. It is about 18 in. long. The plumage is grey and brown pencilled with black, the head and neck reddish-chestnut, the underparts white. Its flesh is valued for the table. The Amer. W. (*M. americana*) is a larger bird and has occasionally reached Britain.

Widnes, municipal bor. and tn of Lancs., England, on the Mersey 12 m. E. of Liverpool. The W. Transporter Bridge across the Mersey links W. with Runcorn on the Cheshire side; it is proposed to replace this by a new high-level road bridge. The chief industries are chemicals, fertilisers, asbestos, cement, copper, and metal castings. W. with part of the rural dist. of Whiston returns 1 member to Parliament. Pop. 48,860.

Widor, Charles Marie (1844-1937), Fr. organist and composer, b. Lyons. He studied under Lemmens and Fétis in Brussels. In 1870 he became organist of Saint-Sulpice, in Paris, and in 1890 succeeded Franck as organ prof. at the Conservatoire there. Later he succeeded Dubois as prof. of composition. He is principally remembered for his 10 symphonies for the organ. He also wrote songs, concertos, ballets, and operas, including *Les Pêcheurs de Saint-Jean*, 1905.

Widow, name given to a woman whose husband is deceased, who has not remarried. For her legal rights, see SUCCESSION, INTESTATE; WILLS; JUS RELICTAE SATT.

Widows; Perions, see NATIONAL INSURANCE ACT (1946).

Wieschert, Ernst (1887-1950), Ger. novelist and poet, b. Kleinort, E. Prussia. His novels, written in a musical, clear style, are preoccupied with psychological and spiritual questions. In his studies of the impact of war, death, and the artificialities of 20th-cent. civilisation upon mankind, W. attempts to reach past the everyday world to find his solution to the problems he raises, and often achieves heights of thought approaching the mystical. His pubs. include *Der Wald*, 1922, *Die Majorin*, 1934, *Das einfache Leben*, 1939; *Der Totenwald*, 1946, drawn from W.'s own experiences in the concentration camp of Buchenwald, and *Missa sine nomine*, 1950. See Eberling, E. *Wieschert, der Weg eines Dichters*, 1937.

Wiesck, Clara, see SCHUMANN.

Wieland, Christopher Martin (1733-1813), Ger. poet and novelist, b. Oberbolzheim near Biberach in Württemberg; he studied at the univ. of Tübingen. He was of a religious, optimistic outlook, as seen in *Moralische Briefe in Versen*, and *Anti-Ovid*, obviously influenced by Klopstock. In 1759 he became a tutor in Bern and in 1760 at Warthausen Castle near Biberach. Here he came into contact with Eng. and Fr. rococo; his novel, *Der Sieg der Natur über die Schwärmerci*, 1764, ridiculed the romantic novels of his time. Then followed sev. important works: the educational novel *Agathon*, 1766, the educational poem *Musartion, oder die Philosophie der Grazien*, 1768, and

prose trans. of 22 of Shakespeare's plays, 1762-6.

W. greatly influenced Goethe and Schiller, and the school of the later Ger. romantics. His work was the peak of Ger. rococo poetry. There is a good ed. of his works by H. Düntzer, 1882, and by the Preussische Akademie der Wissenschaften, 1909. See W. Lenz, *Wielands Verhältnis zu Spenser, Pope und Swift*, 1903; V. Michel, C. M. *Wieland; la formation et l'évolution de son esprit jusqu'en 1772*, 1938; M. Barthel, *Das Gespräch bei Wieland*, 1939.

Wieland, Heinrich (1877-), Ger. chemist, b. Pforzheim. He studied at Munich, Berlin, and Stuttgart. From 1913 he was prof. of organic chemistry at Munich Univ., moving to the technical univ. there in 1917. From 1921 until 1925 he was on the faculty at Freiburg Univ. In 1925 he succeeded Willstätter (q.v.) at Munich. In 1927 he was awarded the Nobel Prize for chemistry for his research on biological oxidation.

Wieliczka, in Poland, in Crakow prov., 8 m. S.E. of Crakow (q.v.). There are vast salt deposits under the tn; they have been mined since the 11th cent., and contain remarkable chambers and chapels richly decorated with statues carved out of salt. Pop. 9000.

Wien, Wilhelm (1864-1928), Ger. physicist, b. Gaffken, E. Prussia, prof. of physics at Gießen, Würzburg, and Munich successively; he was awarded the Nobel prize in 1911 for his discovery of 2 laws named after him. His chief work was in connection with radiation in which branch of physics he discovered that the product of the wavelength for maximum energy density and the absolute temperature is constant.

Wien, see VIENNA.

Wiener-Neustadt, Austrian tn in the prov. of Lower Austria, 30 m. S. of Vienna. It was the Imperial seat under the Holy Rom. Emperor Frederick III (q.v.). The Romanesque and Gothic Liebfrauenkirche was formerly a cathedral. There are arcaded Gothic houses and other interesting buildings, including a Babenberg (q.v.) castle in which Maximilian I (q.v.) was b. The tn was severely damaged in the Second World War. Engines, automobiles, and leather goods are manuf. Pop. 30,550.

Wiener-Wald, see VIENNA.

Wieringen, former Dutch ls. in the N. waters of the anct Zuider Zee, prov. of N. Holland. A dyke of about 1½ m., connecting W. with the mainland to the West, was the first step in the reclamation of the Zuider Zee. The enclosing dam of about 19 m. from the other end of W. to the E. was built in 1927-33. S. of W. is the N. West Polder or Wieringermeer, which was the first area of 50,000 acres to be converted into agric. land. It was inundated by the Germans 3 weeks before their final capitulation in 1945, but the area was drained again in the same year.

Wiesbaden (anct *Visbadia*), city of W. Germany, cap. of the *Land* of Hessen (q.v.). It stands in a valley in the Taunus (q.v.) mts, facing S. across the

Rhine (q.v.). It has been known as a spa since Rom. times; its springs are the *Fontes Matthiaci* mentioned by Pliny. Parts of its ancient walls are thought to date from the time of Diocletian. There is a palace (1837-40), which was the seat of the Duke of Nassau until 1866, and was subsequently a residence of the Ger. Emperor. The tn is a cosmopolitan resort, and has a casino, sporting facilities, and good museums and theatres. It produces sparkling wine (*sekt*), and has publishing and film industries. Pop. 247,200.

Wife, see HUSBAND AND WIFE; MARRIAGE AND MARRIAGE LAW.

Wig, artificial head of hair. The use of W.s is very old, and nothing is known of their date of origin, though more details are known concerning particular styles of W.s. There is evidence in Ovid that the Rom. ladies wore blond wigs to enhance their charms. In France they appear to have been worn even before the Middle Ages. They were worn by women in England during the Tudor period: Mary Queen of Scots wore added blond hair at her execution, and Queen Elizabeth I had many W.s in her wardrobe. In the middle of the 17th cent. W.s began to be universally worn by men of the W. civilisations, first to reinforce their own long curls, and at the end of the cent. as separate articles of apparel, hanging long on to the shoulders, worn over a shaved head and, informally, in the house, replaced by a silk or velvet cap. This practice continued until the middle of the 18th cent., when some men began once more to wear their own hair dressed and often powdered (see DRESS; HAIR-DRESSING). At the end of the 18th cent. W.s passed out of general use except for professional and medical purposes. W.s are still worn in England by judges and barristers, and by the Speaker of the House of Commons, during the exercise of their duties.

Wigan, mkt tn, parl. and co. bor. of Lancs, England, on the R. Douglas 18 m. NE. of Liverpool and 18 m. NW. of Manchester. Evidence exists of a Rom. settlement at W., and there was probably a Celtic settlement even earlier. W. developed gradually as a mkt tn under the Normans. It bases its claim to be the oldest bor. in Lancs upon a charter of incorporation given by Henry I in 1100. But the first authentic record of W.'s corporate existence is the charter of 1246 granted by Henry III, which constituted the tn a free bor. W. was royalist during the Civil wars. Coal was worked in W. from very early times, but the great coalfield was opened out in the 19th cent., and the working of cotton on a large scale was also begun at this period. In 1888 W. became a co. bor. One member is returned to Parliament.

The most interesting of the older buildings is the magnificent 14th-cent. par. church of All Saints', in the centre of the tn, in Early Perpendicular style. There is a mining and technical college, and a grammar school founded in 1597. The Leeds and Liverpool canal passes

through the tn; the pier on this canal has attained some fame, but its connection with 'Wigan Pier' is now disputed. W.'s industrial development is due to its position on the SW. Lancs. coalfield. Engineering and allied industries occupy an important place in the tn's industrial life. Machinery and equipment for use in Lancs industries is produced. Other industries include artificial silk, bricks and drain pipes, oil and grease manuf., clothing, mining machinery, motor vehicles, rail cars, explosives, shoes and slippers, timber and saw-mills, breweries, chemicals, castings, vulcanite, printing and dyeing, gun-metal steam fittings, and colliery requisites of all kinds. Pop. 84,000.

Wiggin, Kate Douglas (1856-1923), Amer. novelist, b. Philadelphia, daughter of Robert N. Smith. For a time she was a teacher, then in 1881 she married Samuel B. Wiggin. *Timothy's Quest*, 1890, was a successful novel and after a visit to England she pub. *Penelope's Progress*, 1898, with sequels telling of England and Ireland. *Rebecca of Sunnybrook Farm*, 1903, a very popular story, was followed by *New Chronicles of Rebecca*, 1907, and others. *My Garden of Memory*, 1923, is an autobiography.

Wight, Isle of, off the coast of Hants, England, in which co. it is included, in the Eng. Channel, separated from the mainland by the Solent and Spithead. It forms, however, a separate administrative co. returning 1 member to Parliament. Area 147 sq. m.; greatest length 23½ m.; greatest breadth 13 m. It has chalk cliffs and downs, the highest elevation being St Boniface Down (787 ft). Off the W. coast are the rocks known as the 'Needles.' The scenery of the I. of W. is picturesque, with its ravines or 'chines,' Yachting is a favourite sport in the Is., and Regatta Week at Cowes an outstanding ann. event. Agriculture and tourism are the chief industries; there is boat and shipbuilding, and sawmills. Important tns are Newport (the cap.), Ryde, Shanklin, Ventnor, Cowes, Sandown, and Freshwater (qq.v.). It was the Rom. Vectis, and there are Rom. remains, including villas at Newport and Brading. There is a castle at Carisbrooke, and a Benedictine monastery at Quarr Abbey. Osborne House, 1 m. SE. of Cowes was a favourite residence of Queen Victoria, and Tennyson's home at Farringdon still exists. Parkhurst Prison is on the I. of W. Pop. 95,594. See T. Varley, *Isle of Wight*, 1924; E. Burton, *England's Eden*, 1946; A. de Selincourt, *Isle of Wight*, 1948; G. Church, *The Isle of Wight*, 1949; and separate articles under the tns and vils.

Wightman Cup, lawn-tennis trophy. Mrs George W. Wightman presented it in 1923, to be competed for annually by Brit. and Amer. women amateurs. By 1958 it had been won by Britain 5 times and the U.S.A. 25 times, Britain winning in 1958 for the first time since 1930.

Wigston, urb. dist. of Leicestershire, England, 4 m. S. of Leicester, constituted in 1894; a progressive township, it includes the dist. of Wigston Magna, S.

Wigston, Wigston Fields, and E. Wigston. The dist. comprises residential and industrial areas; industrial development has considerably increased since 1945. There has been a long association with the Royal Leicestershire Regiment, whose barracks are in the urb. dist. Pop. 16,720.

Wigtown: 1. Peninsular co. in SW Scotland, bounded N. and E. by Ayr and Kirkcudbright cos. and S. and W. by the Irish Sea and N. Channel. Pigny flints found on the sands of Luce Bay indicate the existence of bands of hunting people here about 4000-3000 B.C., and standing stones and remains of hill forts and Bronze Age occupation. There are numerous early Christian monuments, including carved stones from the 4th cent. The remains of the Norman priory at Whithorn (where the foundations of the church built by St Ninian in the 4th or early 5th cent. have recently been uncovered) and of the Cistercian abbey of Glenluce (founded 1190) are of interest. No part of the co. is far from the coast, and the sea ensures a mild climate. The surface of the co. is hilly and rough in the N. and level and fertile in the S. The prin. rivs. are the Cree and the Bladnoch, but both are minor streams. In spite of the long coast-line, little sea-fishing is carried on, and the prin. industry is agriculture, with dairy-farming predominating. There is sheep-farming on the hills, some arable farming and raising of beef cattle and other stock are carried on. The chief tns. are Stranraer, Wigtown (the co. tn), Newton Stewart, and Whithorn. With Kirkcudbright W. forms the parl. constituency of Galloway, returning 1 member. Area 311,984 ac.; pop. 31,620. 2. Royal burgh (since 1457), and co. tn of the above. Pop. 1400.

Wigwam: hut or cabin of N. Amer. Indians, which consists of a rough conical framework of poles stuck into the ground below and converging above, covered with bark, matting, or tanned hides.

Willamowitz-Möllendorf, Ulrich von (1848-1931). Ger. classical scholar; b. Markowitz, Posen. He was educ. at Bonn and Berlin. He was prof. of classical philology at Greifswald, 1876, Göttingen, 1883, and Berlin, 1897. He was foremost among the learned men of his day in politics, religion, literature, and philosophy. See study by M. Pohlenz, 1932.

Wilberforce, Samuel (1805-73), churchman, b. London, the third son of Wm W. (n.v.). He upheld the traditions of Anglican orthodoxy during the days of the Tractarian movement and the submission to Rome of Newman, Manning, and others. He became Bishop of Oxford, 1845, and Winchester in 1869. He pub. *Ished Eucharistica*, 1839, *Agathos*, 1840, and *The History of the Protestant Episcopal Church in America*, 1844.

Wilberforce, William (1759-1833), reformer and philanthropist. He entered Parliament when 21 years old, and soon became friendly with the leading statesmen of the day (especially with Wm Pitt the Younger). He was prominent in

many philanthropic movements, but the great work of his life was in connection with the abolition of slavery, of which cause he assumed the leadership in 1787, though it was not until 20 years later that a Bill providing for the abolition of the slave trade in the Brit. Colonies received the royal assent. (Slavery itself, that is, the status in which many slaves lived after 1807, was abolished in 1833.) See life by R. Coupland (revised ed.), 1945; W. L. Mathieson, *British Slave Emancipation*, 1932; and **ANTI-SLAVERY**. **Wilbye, John** (1574-1638), composer, b. Diss, Norfolk, went into the service of Sir Thomas Kyteon near Bury St Edmunds about 1595 and remained with the family all his life, lastly with Lady Rivers at Colchester, where he d. He contributed both to *The Triumphes of Oriana*, 1601-3, and to *Leighton's Teares or Lamentacions*, 1614, and his 64 madrigals place him among the greatest Eng. representatives of that form.

Wilcox, Ella Wheeler (1850-1919), Amer. poetess, b. Johnstown Center, Wisconsin, daughter of Marthus H. Wheeler. Educ. at the univ. of Wisconsin, she first became famous with her *Poems of Passion*, 1883, which were criticised as immoral, though they seem quite innocuous to modern readers. In 1884 she married Robert M. Wilcox, a silversmith. She pub. nearly 40 vols. of verse, which had a wide popularity, her *Collected Poems* being pub. in 1921. *The Story of a Literary Career*, 1905, and *The Worlds and I*, 1918, are autobiographical.

Wild, Frank (1874-1939), naval officer and Antarctic explorer, b. Skelton, Yorks. He was a descendant of Capt. Cook, and served in Scott's Antarctic Expedition (1901); in Shackleton's Expedition (1907-9); in the Australian Antarctic Expedition (1911); and in 1921 he sailed with Shackleton for the Antarctic, and, after the latter's death at S. Georgia, assumed command of the *Quest*. He pub. *Shackleton's Last Voyage*, 1923. See the *Geographical Journal*, Vol. 95, No. 3, 1940.

Wild Boar, see BOAR, WILD.

Wilde, Oscar Fingall O'Flahertie Wills (1854-1900), dramatist and essayist, b. Dublin. He studied at Trinity College, Dublin, and at Magdalen College, Oxford, W. was a disciple of Pater, there founded an aesthetic cult. He won the Newdigate Prize in 1878. In 1882 W. went to America and lectured on aesthetic philosophy. He had already, in 1881, pub. a vol. of poems, which, in spite of affectations, attracted attention by their finish and the music of the verse. Seven years later he issued *The Happy Prince* (a fantasy) and *Other Tales*. *Lord Arthur Savile's Crime and other Stories*, and his only novel, *The Picture of Dorian Gray*, both appeared in 1891. *Dorian Gray* shows W.'s aestheticism in all its aspects: the search for intense or rare sensations, the ban put on every feeling and belief which sets a limit to the faculty of enjoyment, or captures the soul; the superiority of the true artist over the rules of society or morality.

W. will ultimately be remembered chiefly as a dramatist. With the exception of *Salome*, 1893, his successes were made in the realm of light comedy, where he could give full play to his fantastic wit. *Lady Windermere's Fan*, 1892, *A Woman of No Importance*, 1893, and *The Ideal Husband*, 1895, were each and all successful, but his masterpiece was *The Importance of Being Earnest*, 1895, which places him in the rank of Goldsmith and Sheridan (q.v.). His regard for literary style, gift of epigram, and rapier-like play of dialogue, produced a drama of brilliant extravagance; however, the insincerity of his sentiments suggest an incurable cynicism. In 1895, following W.'s libel action against the Marquess of Queensberry, who had accused him of perversion, he was convicted of immoral conduct and sentenced to 2 years' imprisonment. From 1897 until his death in obscurity and poverty in 1900, W. lived on the Continent, mainly in Paris. In his humiliation W. found the inspiration of the most powerful lines and of the only moving words which he ever wrote, in *The Ballad of Reading Gaol*, 1898.

See lives and studies by A. Gide, 1905; A. Ransome, 1912; F. Harris, 1916; A. Symons, 1930; G. J. Renier, 1933; H. Pearson, 1946. See also J. E. Agate, *Oscar Wilde and the Theatre*, 1947; H. Montgomery Hyde, *The Trials of Oscar Wilde*, 1948; Marquess of Queensberry and P. Colson, *Oscar Wilde and the Black Douglas*, 1949; G. Woodcock, *The Paradox of Oscar Wilde*, 1949; *De Profundis*, *The Complete Text* (with introduction by Vyvyan Holland), 1949, and Vyvyan Holland, *Son of Oscar Wilde*, 1957.

Wildebeest, see Gnu.

Wilder, Thornton Niven (1897-), Amer. novelist and playwright, b. Madison, Wisconsin. He was educ. in China, where his father was in the Amer. consular service, in California, and at Yale. From 1930 to 1936 he was on the faculty of Chicago Univ. His first novel, *The Cabala*, was pub. in 1925. In 1927 appeared *The Bridge of San Luis Rey*, which brought him international fame and for which he gained the Pulitzer Prize. His play, *Our Town*, won the Pulitzer Prize in 1938, and he won this prize for the third time in 1942, with another play, *The Skin of Our Teeth*. *The Ides of March*, a study of Caesar's downfall, told in letter-form, was pub. in 1948.

Wilderness, term applied to barren and desolate regions. It is used especially of an area S. of the Rapidan R. in Virginia, U.S.A., 15 m. W. of Fredericksburg, where a battle of the Civil war was fought between Grant and Lee.

Wilderspin, Samuel, see INFANT SCHOOLS.

Wildspitze, see ÖTTZAL.

Wildstrubel, peak in the Bernese Alps, Switzerland, rising to 10,876 ft. It is near Leukerbad.

Wilenski, Reginald Howard (1887-), art critic, b. London. He was educ. at St Paul's School and Balliol College, Oxford. He has occasioned much con-

trovery over the works of both modern and the older schools of art. He was special lecturer in Manchester Univ., 1933-9, and is editor of the 'Faber Gallery' Art Books. His books include *The Modern Movement in Art*, 1927, *An Introduction to Dutch Art*, 1929, *French Painting*, 1931, *English Painting*, 1933, and *Modern French Painters*, 1940, Stanley Spencer: *Remembrance Picture 1945-1950*, 1951, *Hieronymus Bosch*, 1953, *Douanier Rousseau (1844-1910)*, 1953.

Wilfrid, St. (d. 709), ecclesiastic. He was a Northumbrian, b. Ripon, and educ. at Lindisfarne according to the customs of the Celtic church, but later adopted the Rom. usages. W. travelled in France and Italy, and returned to Ripon to found an abbey under the Rom. observance. He was consecrated Bishop of York at Compiègne in 664, and in the same year was the leading advocate of the Rom. view at the Synod of Whitby. W. did much missionary work among the Frisians and S. Saxons; but his lengthy absences from his see led to efforts to supplant him, against which he appealed successfully to Rome. His feast is on 12 Oct. See study by J. Fletcher, 1925.

Wilhelmina, Helena Paulina Maria, Princess of the Netherlands (1880-), daughter of King William II and his second wife, Princess Emma von Waldeck-Pyrmont, b. The Hague. In 1890, after the death of her father, W. succeeded him on the throne, but until her majority under the regency of her mother. On 6 Sept. 1898 she was enthroned at Amsterdam. Queen W.'s simple tastes, sincerity, and complete identification with and devotion to her people made her beloved by all sections of the community. She married Heinrich Wladimir Albrecht Ernst, Duke of Mecklenburg-Schwerin, in 1901. He d. 1934. Their only child, Princess Juliana was b. in 1909. After the Ger. invasion in May 1940, Queen W. and her gov. went to London, from where she broadcast sev. times to her people. After the liberation of her country she returned to the Netherlands with her daughter, who had been living in Canada. In 1948, when she felt that the gov. had been firmly re-established, and having ruled for half a cent., she abdicated for reasons of health in favour of her daughter, who succeeded her as Queen Juliana on 6 Sept., while W. took over the title of Princess of the Netherlands. See life by P. Paneth, 1944.

Wilhelmshaven, Ger. N. Sea port, in the Land of Lower Saxony (q.v.), 102 m. NW. of Hanover (q.v.). It is on the W. arm of the Jadebusen, at the end of the Jade-Ems canal. It was founded in 1853, and after the opening of the harbour in 1869 became the H.Q. of the Prussian N. Sea fleet. After the First World War its fortifications were dismantled, but before the outbreak of the Second World War it had regained its former position. During the War it was the target of many mass assaults by the R.A.F. and in Nov. 1948 the R.N. demolished the gigantic dry dock, the greatest of its kind in

Europe. The tn has various light industries, is a holiday resort, and has therapeutic installations (mud baths). Pop. 101,000.

Wilkes, John (1727-97), political agitator, b. Clerkenwell, London, and educ. at Leyden Univ. He entered Parliament in 1757, and was later active in opposition to the Tory minister, Bute. He founded, in 1762, the *North Briton*, to which Charles Churchill was a valuable contributor, and in the following year was arrested for a libel uttered in the famous No. 45, in which he described the king's speech as false. He was found guilty but pleaded privilege as a member of Parliament. He was expelled from Westminster in 1764, and went abroad for 4 years. After his return he was elected member for Middx by a large majority, but was expelled in 1769 for another libel. He was thrice returned for Middx on the strength of his enormous popularity, but was not allowed to sit until 1790. In 1774 he was elected Lord Mayor of London. W. was a debauchee and a political adventurer; but he had great constitutional importance, for his actions caused the collapse of the much-abused general warrant, gave the Press recognised entry to parl. debates, and estab. the right of an elected member to take his seat in spite of gov. attempts at exclusion. See J. Almon (ed.), *Wilkes' Correspondence*, 1905. See also lives by O. A. Sherrard, 1930; R. Postgate, 1930; and study in P. Quennell's *Four Portraits*, 1945; E. H. Weatherly (ed.), *The Correspondence of John Wilkes with Charles Churchill*, 1954.

Wilkes-Barre, city and co. seat of Luzerne co., Pennsylvania, on the Susquehanna R., in an anthracite coal-mining dist. It has iron and steel industries, cigar factories, silk and other textile mills, and railroad shops. It is the seat of Wilkes College and King's College. Pop. 76,826.

Wilkes Land, part of Australian Antarctic territory, see ANTARCTIC.

Wilkie, Sir David (1785-1841), painter, b. Culter, in Fife. He studied art in Edinburgh and London, and became R.A. in 1811. He died at sea during his return from travels in Turkey and Palestine. He is famous for such pictures of popular life as 'The Blind Fiddler,' 1806, and 'The Village Festival,' 1811 (both in the Tate Gallery). He also made some able etchings.

Wilkins, Sir George Hubert (1888-), Australian explorer, naturalist, and aeronautical photographer; b. Mt Bryan E., S. Australia, and educ. at the state school, and the Adelaide School of Mines. He served in the Australian Flying Corps in the First World War, and was official photographer, military hist. dept, 1917-18. W. commanded 2 Arctic expeditions, 1926-7 and 1928; led Antarctic expedition, 1928-9, and flew from Deception Island across Graham Land. He was commander of the *Nautilus* submarine expedition to the Arctic, 1931, and manager of the Ellsworth trans-Antarctic expedition, 1933-9. W. was knighted in 1928. His works include *Flying in the*

Arctic, 1928, *Undiscovered Australia*, 1928, *Under the North Pole*, 1931. See also ANTARCTIC EXPLORATION; ARCTIC EXPLORATION.

Wilkins, William, R.A. (1778-1839), architect; b. Norwich, son of an architect. After graduating at Cambridge, travelled in Greece, Italy, etc., 1801-5. Starting practice c. 1806, he designed, among other important buildings, Hailybury College, 1806-9; Downing College, Cambridge, 1807-20; Univ. College, London (his masterpiece), 1827-8; St George's Hospital, London, 1828-9; and the National Gallery, 1834-8. All these buildings are classic in style; but in his extensions of Corpus, King's, and Trinity Colleges at Cambridge he adopted Gothic.

Wilkinsburg, residential bor. of Allegheny co., Pennsylvania, U.S.A., adjacent to E. Pittsburgh. Pop. 31,418.

Wilkinson, Ellen Cicely (1891-1947), politician, daughter of a cotton operative, b. Manchester. She studied at Manchester Univ. She was Labour M.P. for Middlesbrough E. from 1924 to 1931, and for Jarrow from 1935 till her death. In 1945 she was elected chairman of the Labour party, and entered the first Attlee Cabinet as minister of education.

Wilkinson, Norman (1878-), marine painter, b. Cambridge, President of the Royal Institute of Painters in Water Colours and Marine Painter to the Royal Yacht Squadron. He originated the 'dazzle painting' used for ship camouflage in the First World War; was adviser on camouflage to the Air Ministry, 1938-42; and presented 54 pictures of the war at sea to the nation in 1944.

Will, term sometimes used in psychology synonymously with conation to cover all activity, desiring, and striving. It then stands for one of the 3 traditional aspects of mind: feeling, knowing, and conation. More commonly it is used in a more restricted sense, which is also closer to the usage of ordinary speech, to stand for the mind's control of its conative impulses. Thus a man acting under a mere impulse to take what he desires is acting under a conative drive. His will comes into play when he decides to check the impulse, or equally when he decides to give way to it. The essential feature which makes his activity a willed one is that he himself decides whether to check the impulse or to give it free play. Many psychologists believe that W. in this sense is illusory; that in all cases it is the strongest impulse that wins. Thus if a person gets out of bed on a cold morning it is because the impulse to get up is stronger than the impulse to stay in bed, though it may not appear to be so. W. James thought that the appearance of control of impulse arose only from the fact that, in apparently willed activity, use is made of the law of ideo-motor action by which an impulse is carried into action as a result of the mind paying concentrated attention to it. Thus he would explain getting up on a cold morning by supposing that concentrated attention is paid to the idea of getting up so that that idea automatically realises itself and the

person does get up. This puts the difficulty only one step farther back, since W. must be supposed to be effective in changing the train of ideas, if not in affecting action directly. There seems sufficient reason for affirming that our decisions do affect our conduct, and that although there are impulses, desires, etc., which tend to drive us in certain directions, we also have a capacity for resisting those impulses and of making a choice between them. Such a conception is necessary to the ethical idea of sin, which is not merely the carrying out of wrong action but a willed consent to wrong action. It is also necessary to explain the very real difference between the character of the young child acted upon by impulses and the more mature personality able to control its impulses, and also the character differences between those adults with great and little power of control of primitive impulses. Various attempts have been made to measure the difference between persons of strong and weak will, but so far with little success.

One of the objections that has been made to the idea of W. as self-determination is that it seems to contradict the principle of causality on which the mechanical sciences have been built. If the impulses are regarded as forces acting on the personality, the resulting behaviour must be regarded as a resultant of those forces unless there is introduced indeterminacy which corresponds to the W. or unless the W. is regarded as itself caused, that is, determined by some impulse. This line of argument seems less convincing than it once did, since the principle that whatever happens must have a cause seems no longer self-evident. It may mean little more than the linguistic statement that if we are asked why something happened, we can generally give some sort of answer. To the question of why a man chose to do a certain action there may often be an answer in terms of impulses, desires, etc. Sometimes there may be no answer other than that that was what he chose to do. See DETERMINISM; PSYCHOLOGY; CALVIN, JOHN; DESCARTES, RENÉ; HOBBS, THOMAS; HUME, DAVID. See W. James, *Principles of Psychology* (2 vols.), 1907; G. F. Stout, *Manual of Psychology*, 1924.

Will and Testament, see NUNCUPATIVE WILL; WILLS AND TESTAMENTS.

Willaert, Adriaen (c. 1490-1562), Flemish composer, b. Bruges. In 1527 he became chapelmaster at St Mark's, Venice. His compositions included masses, motets, psalms, and hymns. His influence on church music was great; he broadened its character and achieved effect by a wide use of chromatic scales. He also influenced the development of the madrigal. See study by R. Lenaerts, 1935.

Willamette, riv. of W. Oregon, U.S.A. It is formed by the fusion of the Coast Fork and Middle Fork R.s., and joins the Columbia R. near Portland. It is nearly 300 m. in length, and drains an area of 11,250 sq. m.

Willecocks, Sir William (1852-1932), engineer, b. India and educ. at Roorkee College, India. He was attached to the Indian Public Works, 1872-83, and to the Egyptian Public Works, 1883-87. W. projected and designed the Asyut Barrage, 1898. K.C.M.G., 1902. His most important work was the irrigation of over 3,000,000 ac. in Mesopotamia begun in 1911. His books include *Egyptian Irrigation*, 1889, *Irrigation of Mesopotamia*, 1905, *From the Garden of Eden to the Crossing of the Jordan*, 1918, and *The Nile Projects*, 1919. He wrote also on biblical subjects.

Willebrod, Saint, see WILLIBROD, ST. **Willebroek**, tn in Belgium, 12 m. S. of Antwerp, on the maritime canal from the Rupel to Brussels. It has important paper-mills, engineering workshops, bleacheries, distilleries, salt-works, and manufs. of furniture and chemicals. Pop. 15,200.

Willemstad, city, port, and cap. of the Netherlands W. Indian Terr., and of the is. of Curaçao (q.v.), long noted for its quaint 17th-cent. gabled houses. The famous 16th-cent. governor Peter Stuyvesant (q.v.) is commemorated by a fine statue. W. has one of the finest harbours in the Caribbean, well known for the Queen Emma pontoon bridge, 615 ft long. It has one of the largest oil refineries in the world, which now produces 400,000 barrels of petroleum a day. Pop. 44,062.

Willenhall, tn of S. Staffordshire, England, situated between Walsall and Wolverhampton, about 3 m. from each. W. stands on a coalfield, and coal was dug in the 16th cent. About the same time the manuf. of locks and bolts, still the main industry, was begun, and W. now manufs. 90 per cent of the locks produced in the Brit. Is. Pop. 30,960.

Willesden, municipal bor. of Middx, England, situated by the N.E. corner of the co. of London. The bor., created in 1933, includes the dists. of Brondesbury, Dollis Hill, Harlesden, Kensal Rise, Neasden, Queen's Park, Stonebridge Park, W. Green, and part of Cricklewood, Kilburn (q.v.) and the old par. of W. Twyford. W. was a centre of pilgrimage in the Middle Ages, and was undeveloped until urbanisation followed, mainly in the late 19th cent. The famous W. railway junction is mostly in the bor. of Acton. W. returns 2 members to Parliament. Pop. 177,300.

Willlett, William, see DAYLIGHT SAVING.

William I, surnamed *The Conqueror* (1027-87), King of England, natural son of Robert I, Duke of Normandy (see ROBERT I). He succeeded at the age of 7 to the duchy of Normandy and to the suzerainty of Brittany, with claims to Maine and the Fr. Vexin (q.v.). In 1053 he consolidated his hold on Normandy by his marriage to Matilda, daughter of Baldwin, count of Flanders (see BALDWIN, Baldwin IV). In 1063 W. invaded Maine and adopted the title of count of Maine. In 1064 he conquered Brittany by his victory at Dinan. W. visited Edward the Confessor in 1051,

when it seems he was recognised by the latter as his heir. It is traditionally said that in 1064 Harold (q.v.) promised to support W.'s claim to the Eng. throne on the death of Edward the Confessor. But in 1066 Harold ascended the throne. W. then invaded England, landing at Pevensey near Hastings with a force which has been estimated at about 10,000 men (including 2000 mounted knights) on 28 Sept., and on the following 14 Oct. met and defeated H.'s army at a place since called Battle, in which Harold was killed. W.'s claim to the throne was by contemporary views fairly sound. He claimed not to have conquered the English but to have defeated a usurper; and he acknowledged the validity of Eng. laws and customs and claimed no prerogative not exercised previously by Eng. kings. By an economic blockade W. secured the surrender of London, and was crowned by Aldred in Westminster Abbey (25 Dec.). In Mar. 1067 he returned to Normandy, leaving his half-brother, Odo of Bayeux, and Wm FitzOsbern as regents. The consequences were a series of rebellions by the barons beginning in the autumn of that year and continuing till 1072, when the last of them was ruthlessly quelled. By this date all Eng. and foreign resistance to W. had also been crushed. In the process, W. ravaged the lands between the Tyne and the Ouse leaving a trail of desolation, especially in Yorkshire.

Some historians have represented the Conquest as an almost entirely destructive *coup de main*, organised by a tyrannous governing clique imbued with alien traditions and intent on the extirpation of the Anglo-Saxon culture and institutions. This, however, is an oversimplification of the question. While modern historians no longer underestimate the great achievements of A.-S. England, nor the suffering which the Conquest must have occasioned, W.'s successful invasion was ultimately to confer many benefits. He brought England within the European system, gave it a gov., an administrative system, and an army, and at the same time a reformed Church subject to the discipline of the common law.

Under W. a system of dependent military tenure became the normal form of tenure. Though the process by which the land was granted by W. is not known, the outcome of the process is set forth in detail in the survey which is known as Domesday Book (q.v.). In the grant of fiefs to his supporters W. kept about one-fourth of the land of England for himself, and the immediate effect of his feudal settlement was greatly to enhance the power of the Crown. In Sept. 1086 W. left England for the last time, and on 9 Sept. 1087 he d. from wounds received at the siege of Mantes.

William II, commonly known as William Rufus (c. 1056-1100), King of England, second son of Wm I. He succeeded to the Eng. throne on the death of his father, his elder brother, Robert, being Duke of Normandy. In 1090 W. acquired E. Normandy and Fécamp from Robert: his intervention in Scottish affairs met with mixed success, but in 1092 he secured the annexation of Cumberland and Westmorland to the Eng. Crown. The last years of W.'s reign were spent in inconclusive wars with the King of France and the count of Touraine. Much of W.'s reign was occupied in disputes with the Church, which became intense after Anselm's (q.v.) appointment to Canterbury. W.'s policy has received much criticism from monastic chroniclers: he was grasping, tyrannical, a degenerate, and apparently irreligious, but in fact he was merely following, though with less finesse and fewer scruples, the policy of his father. He was killed by an arrow while hunting in the New Forest. See also under ANSELM. See E. A. Freeman, *The Reign of Rufus*, 1882; Z. N. Brooke, *The English Church and the Papacy*, 1931; A. Lane Poole, *From Domesday Book to Magna Carta* (Oxford History of England series), 1951.

William III (1650-1702), King of England, Scotland, and Ireland, and stadtholder of Holland, was the posthumous son of Wm II, Prince of Orange, and Mary, Princess Royal of England, daughter of Charles I. b. The Hague. The de Witt party was in the ascendancy during his childhood, but in 1672 W.'s supporters murdered the de Witts. At 22 he was appointed captain-general of the Dutch forces and, not long after, stadtholder. He was largely responsible for the direction of the war against France. But the most far-reaching event of his life was his marriage, in 1677, to Mary, daughter of James, Duke of York, afterwards James II of England. This was the triumph of Danby and W. over Louis XIV. W. cultivated the growing opposition to James II, and when eventually overtures were made to him to invade England he accepted them, and landed with a small force at Torbay, on 5 Nov. 1688. He was crowned joint sovereign with Mary in April 1689. In the following year he defeated James II at the battle of the Boyne, and, having conquered Ireland, proceeded to subdue Scotland. He went to Holland in 1693 and commanded the Dutch army. The peace of Ryswick (1697) was W.'s greatest diplomatic achievement. W. was generally unpopular, though respected king. His reserve, his apparent neglect of his wife, his Dutch favourites, and his obvious use of England primarily as an instrument for saving Holland from France alienated Eng. affection. His treatment of the Whig party was skilful: though he in fact owed his throne to them, he managed to estab. himself securely enough to rule independently, and often in opposition to

their views. He was hated by the Irish Catholics, who held the treaty of Limerick treacherous, and to a number of the Scots his name was associated mainly with the massacre of Glencoe. His real greatness lies in his struggle against Louis XIV.

WILLIAM III

Engraving after a picture by Netscher.

See lives by G. J. Renier, 1932, and D. Ogg, 1956; G. Burnet, *History of His Own Times* (1897 ed.); M. C. Trevelyan, *William III and the Defence of Holland*, 1930; G. M. Trevelyan, *The English Revolution, 1688, 1689*.

William IV (1765-1837). King of Great Britain and Ireland, was the third son of George III, b. Buckingham Palace. He went to sea in 1780, and in 5 years was promoted capt. He was created Duke of Clarence in 1789. Shortly after this he became the lover of the actress, Dorothea Jordan (q.v.). In the interests of the royal succession he married in 1818 Adelaide, eldest daughter of George, Duke of Saxe-Coburg-Meiningen, but none of their children survived infancy. He was appointed Lord High Adm. in 1827 and 3 years later, on the death of George IV, succeeded to the throne. He was boisterous, tactless, but good-hearted, and occasionally as king showed unexpectedly sound common sense, as in his handling of the constitutional crisis, 1830-2. See lives by P. Fitzgerald, 1884, and G. E. Thompson, 1932.

William I (1797-1888). King of Prussia, and emperor of Germany, b. Berlin. He was in large part responsible for the absolutist and autocratic ideas which pervaded the rule of the imperial house of Germany. He found in Bismarck a minister anxious to govern according to

his own view, and it may be said that between them they had a large part in the making of Germany as it was before 1914. During the Franco-Prussian War W. commanded the Prussian Army and led his soldiers to the victories of Gravelotte and Sedan. He was proclaimed emperor of Germany in the Palace of Versailles on 18 Jan. 1871. See life by A. Forbes, 1888; see also E. Simon, *The Emperor William and his Reign* (Eng. trans.), 1886; P. Wiegler, *William the First* (Eng. trans.), 1929.

William II (Friedrich Wilhelm Victor Albrecht) (1859-1941). Ger. emperor and King of Prussia; b. Berlin; eldest son of the Crown Prince Frederick (afterwards Frederick III) and of Victoria, Princess Royal of Great Britain; and grandson of William I.

He received a military training, and in 1885 had risen to the rank of colonel in the Hussars of the Guard. He married the Princess Augusta Victoria of Schleswig-Holstein. On the death of his father he succeeded as ninth King of Prussia and third Ger. emperor, 15 June 1888. His first action after accession was to pay a round of visits to European countries, including those that had recently been hostile to Prussia. His obvious intention of reducing the chancellor to a mere instrument of his own will led to Bismarck's resignation on 20 Mar. 1890. He attempted, however, to pursue the main lines of Bismarck's policy without possessing Bismarck's skill or powers of adaptability. W., like Bismarck, disliked Parliaments and relied on the Army. W.'s chief ambition was to strengthen Germany's power in Europe by colonial expansion. Too much has been made perhaps of his responsibility for the catastrophic failure of Germany's foreign policy or for the tremendous development of her internal prosperity and her position as a Great Power, for in many respects he acted as a constitutional sovereign, and the blunders of his ministers were not his.

In his strenuous endeavours to widen Ger. influence, he visited Abdul-Hamid at Constantinople in 1889 and 1893; and, while maintaining the Triple Alliance (q.v.), he tried for some years to cement a friendship with Russia. He was a frequent and welcome visitor to England until 1895. Eng. people resented his congratulatory telegram to President Kruger after the Jameson Raid, 1896. Relations of Germany with Britain had improved by 1907; but an interview W. granted to the *Daily Telegraph* in 1908, concerning naval co-operation, caused him trouble with his own subjects, and for a while he showed more reticence.

W. was at Kiel regatta on 28 June 1914, when news of the Sarajevo assassination reached him. Probably he personally did not desire, at this stage, anything more than a short, localised war. But he pushed on with war preparations so openly, and showed such complete disregard of the most solemn international agreements, that Russia, France, and Great Britain were soon

irrevocably committed, and a world conflict was inevitable. This had been the aim of the extreme militarists in Germany, and W. thus played entirely into their hands. At first he directed operations and selected the leaders; but after a few months he was virtually subordinate to Hindenburg and Ludendorff. *See also* WORLD WAR, FIRST.

On 3 Oct. 1918, when defeat of the Ger. forces was imminent, he appointed Prince Max of Baden to the chancellorship. In Nov. Prince Max demanded his abdication, and announced it as a fact on the 9th. He thenceforth resided at Doorn Castle in Holland. There was at first talk, especially in England, of bringing him to trial; but, as the peace-temper revived, the idea of holding him individually responsible for the war took on an aspect of absurdity that killed the project. *See* lives by E. Ludwig, 1926; M. Muret, 1940; J. von Kürnberg, 1954.

William le Clito, *see* ROBERT II.

William of Auvergne (c. 1180–1249), Fr. scholar and theologian, b. Aurillac. He became Bishop of Paris. He was a prominent schoolman, and was one of the first to attempt a synthesis of Aristotelianism and Christianity. *See* study by C. Werner, 1873.

William of Champeaux (c. 1070–1121), Fr. philosopher, b. Champeaux. He was one of the founders of scholastic realism. He set up a school of logic in Paris, which was attended by Abélard (q.v.), his future rival. In 1113 he became Bishop of Châlons-sur-Marne.

William of Durham, *see* under UNIVERSITY COLLEGE (Oxford).

William of Jumièges, *see* JUMIÈGES.

William of Malmesbury (c. 1095–1143), Anglo-Norman chronicler. He became a monk in the monastery at Malmesbury and inter-librarian and precentor. His *De Gestis Regum Anglorum* (AD 449–1127), gives the hist. of the kings of England from the Saxon invasion to 1127. He also wrote *De Gestis Pontificum Anglorum*, 1125 (revised 1135–40); *De Antiquitate Glastoniensis Ecclesiae*, an account of the church of Glastonbury; *Historiae Norwællæ* (a sequel to the *De Gestis Regum*); and a *Life of St Dunstan*. M. gives a careful record of contemporary events at the Council of Winchester against Stephen in 1141. Master of a vivid and elegant style, he enhanced the interest of his narrative by introducing lively anecdote and pictorial description. But his particular merit was to substitute, for a laborious chronological presentation of events, a story illustrated by many agreeable digressions, which brings out the significance and inter-relation of incidents as he conceived them.

William of Newburgh, or Newbury (1136–c. 1198), historian, who wrote his *Historia Rerum Anglicarum* towards the end of the 12th cent. His hist. begins in the year of the Conquest and extends to his own time. W. was a monk of the Augustinian priory at Newburgh in Yorks.

William of Ockham, *see* OCKHAM, WILLIAM OF.

William of Orange: (1533–84), *see* WILLIAM THE SILENT; (1650–1702), *see* WILLIAM III.

William of St Calais (d. 1096), Norman prelate. He came to England with the Conqueror, and was made Bishop of Durham in 1081. The rebuilding of Durham Cathedral (*see* further under DURHAM) in its lasting form was begun in 1092 by W.

William of Tyre (c. 1130–c. 1186), Fr. prelate and chronicler. He was appointed archdeacon of Tyre at the request of Amalric, King of Jerusalem, in 1167, and was consecrated Archbishop of Tyre in 1175. W. was among the foremost of medieval historians, his chief work, *Historia Rerum in Partibus Transmarinis Gedarum*, being one of the main authorities for events in the Lat. kingdom of the E. in the 12th cent. In it all topics, archæological, political, eccles., social, and topographical are treated, though fault has been found with its chronology.

William of Wied, Prince, *see* under ALBANIA.

William of Wykeham, *see* WYKEHAM.

William the Lion (1143–1214), King of Scotland. He succeeded his brother, Malcolm IV, in 1165. W. made an alliance with France against England in 1168. In 1174 he invaded England in alliance with Henry's own sons, was defeated at Alnwick, and sent as a prisoner to Falaise in Normandy. By the treaty of Falaise he was liberated, but he agreed to do homage to Henry for Scotland and all his other terts. By the treaty of Canterbury (1189) between him and Richard I the independence of Scotland was recognised on payment of 10,000 marks. During his reign the Church in Scotland strongly asserted its independence of the Church in England.

William the Silent, Prince of Orange (1533–84), soldier, statesman, and founder of the Dutch rep., the eldest son of Wm, count of Nassau, was b. at Dillenburg in Nassau. In 1544 he succeeded a cousin in the principality of Orange and estates in Flanders and Holland, and before he was 21 Charles V appointed him general-in-chief of the Army and stadtholder of Holland, Utrecht, and Zeeland. In 1567 he was head of the national rising against Sp. persecution, and openly embraced Protestantism. He was at first defeated by Alva, largely through want of means, but in 1579 he estab. the union of the 7 northern provs. He was assassinated by Balthazar Gérard, an agent of Philip II. *See* J. L. Motley, *Rise of the Dutch Republic* 1856 (reprinted in Everyman's Library); *Cambridge Modern History* (vol. iii, 1904). *See* also lives by F. Harrison, 1897; Ruth Putnam, 1911; and C. V. Wedgwood, 1944.

Williams, Arthur Frederick Basil (1867–1950), historian, b. London and educ. at Marlborough and at New College, Oxford. In 1921 he was Ford Lecturer at Oxford and held the chairs of hist. from 1921 to 1925 at McGill Univ., Montreal, and from 1925 to 1927 at Edinburgh Univ. An Eng. historian of distinction, W. will be

remembered especially for his monumental, well-documented, 2-vol. biography of Chatham, *The Life of William Pitt, Earl of Chatham*, 1913, a standard work, his equally well documented life of *Stanhope*, 1932; and also for his later works, *Cecil Rhodes*, 1921, and *Carteret and Newcastle*, 1943.

Williams, Emyln (1905-), actor, dramatist, and producer, b. Penryffordd, Flintshire; educ. Holywell County School, Switzerland, and Christ Church, Oxford, he was originally intended for a schoolmaster. He became a member of the O.U.D.S. and made his first appearance on the stage at the Savoy Theatre, 1927, in *And So To Bed*. His first big success as actor-dramatist was with his play *Night Must Fall* at the Duchess Theatre, which ran for over a year. This play thrilled its audience in an uncanny way, and his own performance therein stamped him as an actor of outstanding power. He also played it at the Barrymore Theatre, New York. Among subsequent successes in his own plays were *The Corn is Green*, 1938, *The Light of Heart*, 1946, *The Wind of Heaven*, 1945, *Trespass*, 1947, *Accolade*, 1950, and *Someone Waiting*, 1953. He made a very great success as 'Charles Dickens' in readings from Dickens' works, a solo performance of immense virtuosity in which he toured the world, and which was paralleled by his readings from Dylan Thomas. *The Corn is Green* gained the New York Drama Critics Circle Award for the best foreign play in 1941. He produced his own play *Beth* in 1958.

Williams, Sir George (1821-1905), see YOUNG MEN'S CHRISTIAN ASSOCIATION.

Williams, John (1796-1839), missionary, b. High Cross, Tottenham. In 1816 he offered himself to the Missionary Society (now London Missionary Society) and was appointed to the S. Seas. He was given charge of the Is. of Raiatea in the Society Group, but his restless activity led him to explore further Polynesian is. He voyaged among the Cook Is. Stranded on the is. of Rarotonga, he built *Messenger of Peace*, in which he explored the S. Seas for 10 years, opening up the Samoan is. to Christian missions. In Nov. 1839 he left to visit the cannibalistic New Hebrides, and on the is. of Erromanga he was murdered. See life by B. Mathews, 1935.

Williams, Ralph Vaughan, see VAUGHAN WILLIAMS.

Williams, Roger (c. 1600-83), founder of Rhode Is., U.S.A., b. (probably) London, and educ. at the Charterhouse and Pembroke College, Cambridge. He took orders, but became a Puritan, and in 1631 sailed for the New World in search of religious freedom. He preached at Salem (1631 and 1634) and at Plymouth (1631-3), and in 1636 founded the city of Providence, where all believing in religious freedom might live. Here, too, he estab. the Baptist church. He was president of Rhode Is. 1654-7, and pub. many religious works. W.'s importance lies in his belief in toleration for all opinions.

Williams, Tennessee (1912-), Amer. playwright, b. Columbus, Mississippi, his original name being Thomas Lanier Williams. Educ. at the univ. of Missouri and Iowa, he was employed for a time by one of the film companies in Hollywood, where he wrote *The Glass Menagerie*, 1945. This play, together with *A Streetcar Named Desire*, 1947, estab. him as one of America's leading dramatists. Later plays are *Summer and Smoke*, 1948, *The Rose Tattoo*, 1951, *Camino Real*, 1953, and *Cat on a Hot Tin Roof*, 1955. 27 *Wagons Full of Cotton*, 1946, is a collection of one-act plays, and *One Arm*, 1948, and *Hard Candy*, 1954, are vols. of short stories.

Williams, William Carlos (1883-), Amer. poet and novelist, b. Rutherford, New Jersey. He was educ. at Geneva and the univ. of Pennsylvania, where he studied medicine. As a poet he set himself to develop a distinctive Amer. technique which would be non-derivative. His vols. of verse include *Poems*, 1909, *The Tempers*, 1913, *Al Que Quere*, 1917, *Kora in Hell*, 1920, *Sour Grapes*, 1921, *Spring and All*, 1922, *Adam and Eve and the City*, 1936, *Broken Span*, 1941, *The Wedge*, 1944, and his 'personal epic', *Paterson*, 1946-51, which received the National Book Award. He wrote 3 novels which form a trilogy, *White Mule*, 1937, *In the Money*, 1940, and *The Build-Up*, 1952. He also pub. 2 books of critical essays, *The Great American Novel*, 1923, and *In the American Grain*, 1925, and an *Autobiography*, 1951. See study by V. Koch, 1950.

Williamsburg, city in, but independent of, James City co., Virginia, U.S.A., 45 m. SE. of Richmond; it contains the Wm and Mary College (1693) and E. State Lunatic Asylum (1769). It was the first cap. of Virginia. Through the munificence of J. D. Rockefeller, Jr., it has been uniquely restored to its former condition of 300 years ago, and is included in Colonial National Historical Park. Pop. 6735. See W. Tyler, *The Old Colonial Capital*, 1909.

Williamson, Henry (1897-), novelist and nature writer, b. Beds. He first came into prominence through his tetralogy, *The Flax of Dreams*, made up of *The Beautiful Years*, 1921, *Dandelion Days*, 1922, *Dream of Fair Women*, 1924, and *The Pathway*, 1928. But he is best known for his animal stories, such as *Tarka the Otter*, 1927, which was awarded the Hawthornden Prize, *The Old Stag*, 1926, *Salar the Salmon*, 1935, and *Tales of Moorland and Estuary*, 1953. *Life in a Devon Village*, 1932, is partly autobiographical.

WilliamSPORT, city and co. seat of Lycoming co., Pennsylvania, U.S.A. It is a well-built and imposing tn, standing in pleasant country 75 m. WSW. of Scranton. It has manufs. of motors, steel and iron goods, aircraft parts, wood, wire, and electrical products, leather, furniture, and textiles. It is the seat of Lycoming College. Pop. 45,000.

Williamstown, city of Victoria, Australia, on the shore of Hobson's Bay. The

distance from Melbourne by rail is 9½ m., but a steam ferry across the R. Yarra reduces the distance to 4½ m. W. is the centre of a busy dock area and the site of engineering and other factories. Pop. (estimated) 27,000.

Willibald, or **Willebald**, St. (d. c. 700-736). Eng. missionary. b. Wessex, a cousin of St. Boniface. He was offered as an oblate at Waltham abbey at the age of 5, and afterwards took vows in that monastery. Later he went on pilgrimage to Rome and Palestine, and studied at Monte Cassino. He was sent to Germany by the Pope to help St. Boniface, and by the latter was consecrated Bishop of Eichstätt. W. was canonized in 938; his feast is on 7 July.

Willibrord (or **Willebrod**), St. (c. 658-736). Eng. Benedictine monk of Ripon, b. Northumbria. After being trained in Ireland for the missionary life, he sailed with 11 companions to Friesland (c. 690). Consecrated bishop 6 years later, he estab. his see at Utrecht, and founded the monastery of Echternach, in Luxemburg, where he d. He is regarded as the apostle of the Netherlands; his feast is on 7 Nov.

Willington, **Freeman Freeman-Thomas**, first Marquess of (1866-1941), administrator, educ. at Eton and Trinity College, Cambridge. He entered Parliament as Liberal member for Hastings in 1900; for Bodmin in 1906. He was junior lord of the Treasury from 1905 to 1912 and was raised to the peerage in 1910. W. received the G.C.S.I. in 1924 and was raised to a viscountcy. He succeeded Lord Byng as governor-general of Canada, 1926. He received G.C.M.G., 1926, and succeeded Lord Irwin as viceroy of India in 1931. During his first year of office he induced Gandhi to visit London for the Second Round Table Conference (see *INDIA—History*), and dealt firmly with the civil disobedience movement, 1932-4. He was created marquess in 1936, when he relinquished his viceroyalty.

Willington, see **CROOK**.

Wills, **Thomas** (1821-75), physician, b. Great Bedwin, Wilts, and educ. at Oxford Univ., graduating B.A., 1839. He was a Royalist and served in the King's army. He qualified in medicine in 1846 and practised in Oxford. In 1860, shortly after the Restoration, he was appointed Sedleian prof. of natural philosophy, and in the same year was M.D. He was one of the early fellows of the Royal Society and was elected an honorary fellow of the Royal College of Physicians in 1864. W. removed to London in 1866, where his reputation assured him of a lucrative practice. He was also physician to James II. His *Cerebri Anatome*, 1664, was the most complete and accurate account of the nervous system which had hitherto appeared. W. was a remarkably observant clinician; he was first to note the characteristic sweet taste of diabetic urine, he described whooping cough, myasthenia gravis, and hysteria, gave the first account of epidemic typhoid and epidemic cerebrospinal fever, was first to

describe and name puerperal fever, and introduced the modern treatment of asthma. Besides the *Cerebri*, he wrote *Pathologiae Cerebri*, 1687, *De Anima Brutorum*, 1672, *Pharmacaceutice Rationis*, 1674-5, and *Practice of Physick*, 1684. His *Opera Omnia* appeared in 2 vols., 1678-80. W. was buried in Westminster Abbey.

Wills's Rooms, see **CLUB**.

Willkie, **Wendell** (1892-1944), Amer. politician, lawyer, and businessman, b. Elwood, Indiana, of Ger. stock. He was educ. at a local school in Elwood and, afterwards, at Indiana Univ.; studied law at Oberlin College. He was called to the Ohio Bar 1914. In 1923 he became a member of the Bar of New York City, and in 1933 was appointed president of the Commonwealth and Southern Corporation. W. embarked on a long struggle against Roosevelt's New Deal policy, notably in relation to the Tennessee Valley Authority (q.v.). In 1940 he was the Republican candidate for the presidency of the U.S.A., when Roosevelt was elected for his third term. However, he later served as Roosevelt's personal representative abroad, and at home took a leading part in the attempt to liberalise the Republican party.

He consistently supported Great Britain and encouraged the Amer. war effort. He visited England in 1941, and on his return gave evidence in favour of the Lend-Lease Bill, and urged the repeal of the Neutrality Act. In Aug. 1942 he set out for the Near E., Russia, and China, as a special representative of the U.S.A., appointed by Roosevelt. His book, *One World*, appeared in 1943.

Will-of-the-Wisp, see **IGNIS FATUUS**.

Willoughby, de **Eresby**, see **BERTIE**.

Willoughby, metropolitan municipality of Sydney in Cumberland co., New S. Wales, Australia. Pop. 52,240.

Willow, see **SALIX**.

Willow Herb, French **Willow**, or **Rosebay**, see **EPHEDRUM**.

Willow Pattern, a design in the pseudo-Chinese style for underglaze blue transfer-printing on Eng. pottery and porcelain. The type was introduced by Thomas Turner (1749-1809), the proprietor of the Caughley pottery near Broseley, Shropshire, about 1775-80, and is said to have been engraved by Thomas Minton (q.v.). It was greatly copied at many other Eng. factories. The legend attached to the scene is apparently of Eng. and not of Chinese origin. Chinese porcelain examples are later than the Eng., from which they were copied.

Willow Run, residential and industrial suburb in Washtenaw co., SE. Michigan, U.S.A. Automobiles and farm machinery are made in the huge W. R. plant, which produced bombers during the Second World War. The Univ. of Michigan has an aeronautical research centre at the airport here. Pop. 11,365.

Willow Wren, see **WARBLERS**.

Wills and Testaments. A will or testament is a declaration in which its maker, the testator (q.v.), directs the manner in which his assets shall be distributed after

his death. With certain exceptions, only persons under 21 or of unsound mind are unable to make a valid will.

The will or codicil (q.v.) of a testator domiciled in England or Wales must (Wills Act, 1837), with the exceptions mentioned later, be written, be signed at the end by him or some other person at his direction and in his presence, and such signature must be either made or acknowledged by him in the presence of 2 witnesses who, being present at the same time, must sign the will in his presence. A document executed in this manner described as instructions for a will may have effect as such, if it is apparent that it was intended to operate in the absence of a more formal instrument. A will is always revocable, even though the testator may expressly declare it to be irrevocable. It may be revoked by a subsequent will or codicil; or by a written declaration of an intention to revoke, executed like a will; or by destruction by burning, tearing, cancellation, etc., provided that such destruction was intended as a revocation. A will, unless expressed to be made in contemplation of marriage, is automatically revoked by the subsequent marriage of the testator (wills made in exercise of a power of appointment are not so revoked). A revoked will can be revived only if it is re-executed or by a codicil showing an intention to revive it. By Lord Kingsdown's Act, no will or testament is revoked, made invalid, or its construction altered because the testator subsequently changes his domicile. Any alteration in a will, made after its execution, must itself be executed in the same way as a will, or the testator and his witnesses must sign their names in a position close to the alteration or in a signed memorandum at the end of the will referring to the alteration. Alterations not so executed will be ineffective, although they can be validated by a codicil confirming the will (*see also EVIDENCE*). A will can be witnessed by anyone not totally blind or mentally deficient. Executors or creditors may witness a will. If a beneficiary or the spouse of a beneficiary under a will witnesses it, the will is valid but the bequest is void.

By virtue of the Wills Act, 1837, and the Wills (Soldiers and Sailors) Act, 1918, in certain circumstances the wills of members of the Armed Forces and mercantile marine need not comply with the formalities required to validate a civilian's will. Such wills need not be signed, witnessed, or even written, and can be made by persons under 21. This privilege applies to any soldier or airman being in actual military service or any seaman or mariner at sea or to any member of Her Majesty's naval or marine forces, not only when at sea but also when he is so circumstanced that, if he were a soldier, he would be 'in actual military service.' A 'soldier's' will, even if not in legal form or made by a testator under 21, can validly dispose of real (q.v.) or personal property (q.v.). Members of

women's services, a nurse in a hospital ship, and a seaman-typist are among those whose wills have been held to be entitled to exemption from the usual legal formalities.

Unless a will expresses a contrary intention, it disposes only of property owned at the testator's death. Thus, if a testator makes a will in 1958 bequeathing a ring to X, but later sells it, the bequest lapses. On the other hand, the testator might indicate in his will that if at the time of his death he had sold the particular ring, another ring should be bought for X out of the testator's estate. A person may validly dispose of any property acquired subsequently to the making of his will. Where a beneficiary under a will predeceases the testator, the gift lapses except in certain cases (*see LAPSE*).

A bequest or devise to 2 or more persons by name or by a general description of them as a class (e.g. 'the nephews of X') is construed as a joint gift (*see also JOINT TENANCY*), and where any of the joint beneficiaries predecease the testator their shares go to the surviving joint beneficiaries. If, however, the testator uses words implying separate interests (e.g. 'equally' or 'among'), the beneficiaries will take 'in common' (*see COMMON TENANCY*). But a gift to a class, even though as tenants in common, e.g. a bequest of £10,000 to the children of X in equal shares, will be construed as a gift to such of the children of X as shall be living at the death of the testator, and the predecease of any one of them does not cause a lapse.

A testator's right to dispose of his property may be curtailed by the High Court's power under the Inheritance (Family Provisions) Act, 1938, as amended by the Intestates' Estates Act, 1952, to protect his needy dependants from the effects of a capricious or vindictive will which makes them no 'reasonable provision' out of his estate. The term 'dependants' includes: (1) a surviving spouse; (2) an infant son; (3) an incapacitated son; (4) an unmarried daughter; (5) an incapacitated daughter. Such dependants may apply to the Court for an order for maintenance to be paid to them out of the testator's estate. Maintenance from an estate of less than £5000 may be payable by a lump sum. Where the net estate exceeds that sum, dependants may receive only 'periodical payments' out of income. No order for maintenance can be made if the only 'dependants' are a surviving spouse and her children and she is already entitled to two-thirds of the income. Since 1953, 'dependants' may also obtain maintenance if the deceased died completely intestate (*see SUCCESSION, INTESTATE*). Applications for maintenance must be made within 6 months of the grant of probate or letters of administration (q.v.), although the time limit may be extended in certain circumstances (e.g. where a new will or codicil is found after probate).

Though a will is not required by law to be made in any particular form, more

or less common forms have been evolved in process of time. The Law of Property Act, 1925, provides that the Lord Chancellor may prescribe forms to which a testator may refer in his will, but that unless so referred to, such forms are not to be deemed incorporated in a will. Such an Order has already been made under that provision (Statutory Will Forms, 1925; Statutory Rules and Orders, 1925, No. 780).

Scots Law of Wills. A domiciled Scotsman cannot, in certain circumstances, dispose of the entirety of his estate. If he leave a widow and children, the widow is entitled to one-third share in the whole of the moveable estate (*see JUS RELICTAE*), and the children to another third (*see LEGITIM*). If he leave a widow but no children, or children but no widow, these shares are increased to one-half of the estate. The remaining portion is known as the dead's part (q.v.). The widow is also entitled to *terce*, i.e. a life rent in one-third of her husband's heritable property. A surviving husband and children have comparable rights in the wife's estate. The dead's part is the only portion of which the testator can freely dispose. A pupil cannot make a valid will. A minor may dispose of moveables without the consent of any other person, but, unless he is a member of the forces, he cannot dispose of heritage. Wills must be in writing (except that a person may leave a legacy verbally if the amount does not exceed £8 6s. 8d. sterling). They may be either *holograph* (q.v.), in which case no witnesses are necessary; or *testat*, i.e. signed in the presence of 2 witnesses. It is not necessary that these witnesses should sign in the presence of one another or even that they should see the testator signing, so long as the latter acknowledges his signature to the witnesses. It is better that the will be not witnessed by a beneficiary, but if it is, that fact will not invalidate the attestation or the gift. A Scottish will is not revoked by the subsequent marriage of the testator. The subsequent birth of a child, for whom no testamentary provision has been made, may revoke a will in whole or in part. A will is revoked by a later will either expressly or by implication, but in so far as the deeds can be read together, both will have effect. Confirmation, the Scottish equivalent of probate, is obtained in the Sheriff Court of the county in which the testator was domiciled at the time of his death or, where he had no fixed domicile, in the commissariat of Edinburgh.

The Wills Act, 1837, does not apply to Scotland; it is not clear whether the Wills (Soldiers and Sailors) Act, 1918 (which amends the 1837 Act), applies to Scotland or not.

By the common law of Scotland, a Scottish soldier, sailor, or airman, like any other domiciled Scot, can make a valid will without having it witnessed, provided that it is written, or that the essential parts of it are written, in his own hand.

In the U.S.A. the general age of testa-

mentary capacity is 18. By the constitutions of many states laws giving effect to informal or invalid wills are forbidden. In some states children cannot be disinherited without good cause. Holograph wills are in use. Two witnesses are necessary and, as in England, wills of members of the Armed Forces are privileged.

Will's Coffee House, *see* COFFEE-HOUSES.

Willneck, *see* QUANTOCK HILLS.

Willstätter, Richard (1872-), Ger. chemist. He was prof. in Berlin and Munich and investigated alkaloids and their derivatives, e.g. atropine and cocaine. Did work on betaine, lecithin, quinones and their derivatives, chlorophyll, enzymes, and the colouring matter of flowers. He prepared the first anthocyanin (q.v.) (cyanin from cornflower) in a state of purity, and was the first to prepare *cyclo-octatetraene*. Concerned with the syntheses of aromatic compounds from aliphatic ones, e.g. the conversion of cyclohexanol to cyclohexene, thence to cyclohexadiene and finally to benzene. Contributed to knowledge of the modern electronic theory of organic chemistry by his work on conjugation.

Willughby, Francis (1635-72), ornithologist and ichthyologist, son of Sir Francis W. He was educ. at Cambridge and Oxford Univs. He was a fellow pupil and, later, patron, of John Ray (q.v.), with whom he made an extensive continental tour, accumulating specimens and notes which were subsequently elaborated into his *Ornithologia* (pub. posthumously) (1676), trans. by Ray as the *Ornithology of Francis Willughby*, 1678. Ray also pub. W.'s *Historia Piscum*, 1686. In Ray's preface to the first-named work he gives W. most of the credit commonly assigned to himself both as critic and systematist.

'Willie-willy,' *see* FARNADO.

Wilmoots, vil. of Warwickshire, England, 3½ m. W. of Stratford-upon-Avon, where Mary Arden's House, home of Shakespeare's mother, may be visited.

Wilmotte, residential vil. in NE. Illinois, U.S.A., suburb of Chicago on Lake Michigan, N. of Evanston. W. is the seat of a Bahá'í temple and Mallinckrodt College. Pop. 18,200.

Wilmington: 1. Vil. of Sussex, England, 6 m. from Eastbourne. Near it is the 'Long Man of Wilmington' (*see* WHITE HORSES AND HILL-FIGURES). There are also the ruins of a Benedictine priory.

2. Co. seat of New Castle co., Delaware, U.S.A., on the Delaware R., 25 m. SW. of Philadelphia. Among its notable buildings is the Old Swedes Church (1698). Its manufs. include chemicals, leather, iron and steel products, cork, rubber, and textile goods, paper, machinery, and railroad cars. Oil refining and automobile

assembling are also carried on. W. is the seat of Delaware Academy of Medicine, and has an art centre. It is a deep-water port, with a municipal marine terminal and docks along the Christina R. Pop. 110,355.

3. Co. seat of New Hanover co., N. Carolina, U.S.A., on the Cape Fear R., 30 m. from the sea. It is a railroad and manufacturing centre with cotton-seed oil mills, naval stores, dye works, and lumber mills. It also has clothing, textile, fertiliser, metal, creosoting, shipbuilding, and meat-packing industries; centre for petroleum products and chief port of entry of N. Carolina. Pop. 46,043.

Wilmslow, urb. dist. of Cheshire, England, 6 m. SE. of Stockport and 177 m. from London. It is a residential dist. Pop. 18,870.

Wilno, see VILNIUS.

Wilrijk, S. suburb of Antwerp, Belgium. Pop. (1955) 29,900.

Wilson, Charles Thomson Rees (1869-), physicist, b. Glencorse, Midlothian, and educ. at Owens College, Manchester, and Sidney Sussex College, Cambridge, of which he was Fellow. Prof. at Cambridge, 1925-34. He did research on condensation nuclei, ions, and atmospheric electricity (see WILSON CLOUD CHAMBER). He won the Nobel Prize for physics in 1927.

Wilson, Edmund (1895-), Amer. critic and novelist, b. Red Bank, New Jersey. Educ. at Princeton, he became a reporter, in 1920 was appointed editor of *Vanity Fair*, and from 1944 to 1948 was book reviewer for the *New Yorker*. One of the leading critics of his time, he pub. *Azel's Castle*, 1931, a study of the Symbolist movement, and *To The Finland Station*, 1940, a history of revolutionary traditions. Others of his books are *The American Jitters*, 1932, *Travels in Two Democracies*, 1936, *The Triple Thinkers*, 1938, *The Wound and the Bow*, 1941, *The Boys in the Back Room*, 1941, *Memoirs of Hecate County*, 1946, *Classics and Commercial: A Literary Chronicle of the Forties*, 1950, and *The Scrolls from the Dead Sea*, 1955. He also wrote sev. plays, including *This Room and This Gin* and *These Sandwiches*, 1937, and *Little Blue Light*, 1951. *I Thought of Daisy*, 1929, is a novel.

Wilson, Edward (1872-1912), explorer, scientist, and artist. Member of Scott's (q.v.) Antarctic expeditions of 1901-3 and 1910-13. His water-colours of Antarctic scenes are well known. He d. on the return from the Pole. See G. Seaver, *Edward Wilson of the Antarctic*, 1933, *Edward Wilson, nature-lover*, 1937.

Wilson, Florence Roma Muir (1891-1930), novelist who wrote under the name Romer Wilson, b. Sheffield. She studied law at Girton College, Cambridge, and in 1923 married Edward J. H. O'Brien, an Amer. anthologist. Her first novel, *Martin Schuler*, appeared in 1918, and in 1921 she won the Hawthornden Prize with *The Death of Society*. Later novels are *The Grand Tour*, 1923, *Dragon's Blood*, 1926, *Later Day Symphony*, 1927, *Greenlow*, 1927, *The Hill of Cloves*, 1929,

and *Tender Advice*, 1935. *The Social Climbers*, 1927, is a play, and *All Alone*, 1928, is a life of Emily Brontë. She also pub. 3 vols. of fairy stories.

Wilson, Henry Maitland, 1st Baron (1881-), Brit. soldier, educ. at Eton and Sandhurst. He served in the South African War and First World War. From 1927-30 he commanded 1st Battalion the Rifle Brigade. In 1935 he became a major-general, and from 1937-39 commanded the 2nd Division at Aldershot. A lieutenant-general in 1939, general in 1941, and field-marshal in 1944, his commands during the Second World War comprised G.O.C.-in-C. in Egypt, 1939; in Cyrenaica, in Greece, and in Palestine and Transjordan, 1941; commander-in-chief Allied forces in Syria, and G.O.C. 9th Army, 1941; commander-in-chief Persia and Iraq, 1942-3; Middle East, 1943; and Supreme Commander, Mediterranean, 1944. He was raised to the peerage in 1946. See his *Eight Years Overseas*, 1950.

Wilson, (James) Harold (1916-), politician, educ. at council schools, Wirral Grammar School, and Jesus College, Cambridge. He had a brilliant academic career and became a lecturer in economics at Oxford Univ. Since 1945 he has been a Labour M.P. He held a number of junior posts in the Labour Govs. of 1945-51 before being made President of the Board of Trade, 1947. In this position, and, subsequently, as one of the prin. members of the Opposition, he became known as an expert on economic affairs, and has had great influence on Socialist economic policies. Since 1955 W. has done much to reorganise the national organisation of his party in readiness for the next General Election.

Wilson, John (1785-1854), poet and essayist who wrote under the pseudonym Christopher North, b. Paisley. He was educ. at Paisley Grammar School, Glasgow Univ., and Magdalen College, Oxford, where he won the Newdigate Prize for Poetry. In 1820 he became prof. of moral philosophy at Edinburgh, where he had a most stimulating influence on the students. He pub. 2 poems, *The Isle of Palms*, 1812, and *The City of the Plague*, 1816, but is best known for his *Noctes Ambrosianae*, 1822-35, a series of miscellaneous essays appearing first in *Blackwood's Magazine*, to which he was a contributor from its foundation in 1817. Works of fiction are *Lights and Shadows of Scottish Life*, 1822, and *The Trials of Margaret Lyndsay*, 1823. See lives by M. Gordon, 1862, and E. Swann, 1934.

Wilson, John (1804-75), missionary and orientalist, b. Lauder, Berwick, and educ. at Edinburgh for the ministry of the Church of Scotland. He went to India in 1828 as a missionary, and became a leader in social reform, such as the abolition of the slave trade and suttee. He was a profound oriental scholar. Vice-chancellor of Bombay Univ.; wrote *The Parsi Religion*, 1843, *Lands of the Bible*, 1847, *India Three Thousand Years Ago* 1858.

Wilson, Richard (1714-82), painter, b. Penegoes, Montgomeryshire. He studied art in London and afterwards in Italy. His pictures were little in demand during his lifetime, and it was not till many years after his death that he became recognised as the first great Eng. master of landscape painting. When he went to Italy (1760), W.'s intention was to improve his portrait painting, but on the advice of Claude Vernet (q.v.) he decided to abandon it for landscape. The prin. sources of his inspiration during his 5 years' stay in Italy were the 17th-cent. Fr. masters Claude Lorraine and Gaspard Poussin. He returned to England in 1757, and for the rest of his life continued to paint many lt. subjects. He found inspiration in the Welsh mts, and his 'Cader Idris' is one of his best works. He also painted a number of views of country mansions, in which predominance was given to the picturesque setting rather than to architectural considerations. Among the best are 'Croome Court, Worcestershire' and 'Tabley House, Cheshire.' See A. Bury, *Richard Wilson, R.A., The Grand Classic*, 1948.

Wilson, Romer, see **WILSON, FLORENCE**.

Wilson, (Thomas) Woodrow (1856-1924), twenty-eighth President of the U.S.A., b. Staunton, Virginia, of Scots-Irish descent. W. spent the early and formative years of his life in Georgia and S. Carolina, and so saw something of reconstruction in the S. after the Civil war. He graduated from Princeton, and then graduated in law from the univ. of Virginia, practised for a short time at Atlanta, and then went to Johns Hopkins Univ., where he obtained his Ph.D. in 1886. From 1886 to 1888 he was associate prof. of hist. and political economy at Bryn Mawr College, and from 1888 to 1890 held the same post at Wesleyan Univ. In 1890 he returned to Princeton Univ. as prof. of jurisprudence and political economy, and in 1902 became President of Princeton. In 1910 W. was elected Democratic governor of New Jersey and succeeded in effecting many reforms. These made him a prominent public figure, and in 1912, after a sharp contest, W. was nominated Democratic candidate for the presidency. The Republican vote was split, which resulted in W. being overwhelmingly elected. The Democrats had also the control of both Houses of Congress. In his inaugural address the new President outlined a vigorous policy of reform. The prin. Acts of his administration were the Underwood Tariff Bill, the Federal Reserve Act, the Clayton Anti-Trust Act, which gave organised labour its charter of freedom, and the repeal of the Panama Canal Tolls Act. Few administrations in Amer. hist. could point to finer domestic accomplishments. But W. was less fortunate in his foreign policies, and for a time war with factions in Mexico seemed imminent. But greater events turned the country's attention elsewhere, and when the First World War broke out it was the fixed policy of the country to remain free from entangling alliances and

European wars. All that W. was called upon to do was to issue the neutrality proclamation usual in such crises. W. pursued this policy with determination, hoping that, after a time, the U.S.A. might act as mediator to end the conflict. (See further under **WORLD WAR, FIRST**.)

U.S. Information Service,
American Embassy

WOODROW WILSON

At the election of 1916 W. was re-elected. His 'peace without victory' address on 22 Jan. 1917 was his last effort to bring the war to an end by peaceful methods. On 2 April 1917 W. asked Congress to declare war on Germany and her allies. For details of the U.S.A.'s actions during the war see **WORLD WAR, FIRST**; **U.S.A. (HISTORY)**. When the war was ended and the peace conference was to meet at Versailles, W. announced that he would himself lead the Amer. delegation. With Lord Robert Cecil and others he drew up the Covenant of the League of Nations. He returned to America early in 1919 with the draft of the Covenant. He found a hostile and factional Senate controlled by the Republicans. In July 1919 he at once declared that the text of the peace-treaty and the Covenant of the League of Nations were inter-dependent and that one could not be adopted without the other. W. prepared to appeal to the people over the heads of the Senate, and undertook a national speech-making tour. He had a mainly cool reception, and in Sept. he had a serious breakdown. Unable to fight, W. nevertheless intimated that he

would accept a mild reservation to Article Ten of the Covenant. But as reported and voted on in Mar. 1920 it contained stronger reservations than he had been willing to accept. As the controversy went on, the bulk of the people veered into opposition, because of traditional feeling that the U.S.A. should in no way be entangled in foreign alliances or undertakings. The election of 1920 resulted in an overwhelming victory for Harding, the Republican, against Cox, the Democratic candidate. Some consolation came to W. when he was awarded the Nobel peace prize for 1919.

W.'s place in hist. is secure, though his actions and beliefs are still the subject of controversy. He never achieved the kind of popularity his great opponent, Theodore Roosevelt, enjoyed: he had none of Roosevelt's expansiveness and robust vitality, and struck many as cold and aloof. But he was keenly aware of the suffering and fears of ordinary people. He saw beyond the boundaries of his own country and gave inspiration to the ideal of international gov. He failed because he was not enough of a politician to appreciate in his enthusiasm that his own country and most others were not ready to acknowledge his solution. He was the author of a number of books on history and law, including *A History of the American People* (5 vols.), 1902, and *Constitutional Government in the United States*, 1908. See lives by R. S. Baker, 1927-35; W. A. White, 1925; W. E. Dodd, 1932; W. S. Myers, 1947. See also T. A. Bailey, *Woodrow Wilson and the Great Betrayal*, 1945; E. M. Hugh Jones, *Woodrow Wilson and American Liberalism*, 1947; A. S. Link, *Wilson, The Road to the White House*, 1947.

Wilson Cloud Chamber. When fast-moving charged particles, such as α -particles, pass through a gas, they eject electrons from the atoms that they encounter. The result is a large number of ionised atoms which, however, unite very soon with the ejected electrons and return to their normal state. If some means could be devised to make the ions visible, or alternatively, to make visible some condensation on these ions, the tracks of the α -particle would be made visible. While it is impossible to see the ions themselves, it is possible to see a condensation on them by means of the W. C. C., the principle of which is as follows. It is well known that water vapour condenses on small nuclei, such as fine dust or soot in the atmosphere, and ions can play the same part as these particles. If there is a fall in the pressure and a lowering of the temp. in the atmosphere, condensation takes place more easily, and an artificial method for producing favourable conditions for the precipitation of water vapour on ions is accomplished by the C. C. In its simplest form it consists of a metallic cylinder with a glass cover, the other end being closed by a piston which can be moved up and down to change the pressure. The gas or air between the glass cover and the piston is saturated with water vapour,

and a movement of the piston causes an adiabatic expansion rapid enough to cool the gas. Precipitation in the form of very fine drops of water takes place on the ions formed by an α -particle (e.g.), and as these are illuminated by a strong light through a side window, they can be observed and photographed stereoscopically. This simple piece of apparatus first constructed in 1911 has provided most valuable information on the results of nuclear bombardment. It led to the identification of the positron (q.v.) in 1932, and has been used for the study of mesons. By applying a magnetic field—the charged particle is caused to move along a curved track, the radius of which is given by mv/He , where m , v , and e are the mass, velocity, and charge of the particle. This also gives the sign of the charge, and in combination with measurements of the range of the particle, or the number of drops along the track, allows the particle mass to be found. See NUCLEUS; WILSON, C. T. R. See also G. D. Rochester and J. G. Wilson, *Cloud Chamber Photographs of the Cosmic Radiation*, 1952.

Wilton, mark tñ and mun. bor. of Wilts, England, celebrated for its carpets since the time of Elizabeth I. It was the seat of a bishopric until 1075, and was the cap. of Wessex. Wilton House is the seat of the Earls of Pembroke. W. gave its name to the co. Pop. (estimated) 3054.

Wiltshire, SW. co. of England, bounded N. by Gloucestershire, S. by Dorset and Hants, E. by Hants and Berkshire, and W. by Gloucestershire and Somerset. The surface is for the most part hilly, and includes Salisbury Plain (20 m. by 16 m.) in the S., some 4000 ft above sea-level, with the N. Downs forming its N. border, and to the NE. the Marlborough Downs and Savernake Forest. The prin. rivs. are the Kennet, the Lower or Bristol Avon, the Salisbury Avon, and the Nadder. There are also the Thames and Severn canal, the Wilts and Berks canal, and the Kennet and Avon canal. W. is famous for its prehistoric monuments, of which Stonehenge and Avebury are the best known. Some 250 monuments are scheduled for protection. There are numerous eccles. ruins of later periods, including the abbeys of Malmesbury and Lacock. At Edington the priory church is still intact. The Saxon church of St Lawrence at Bradford-on-Avon is also notable. Salisbury Cathedral (q.v.) is a fine example of the Early Eng. style, and many of the par. churches are of great interest. There are castle ruins at Old Sarum; at Marlborough and Devizes only the mounds are visible. At Wardour Castle, dating from the 18th cent., only the chapel retains its former splendour. Longleat and Wilton House are 2 of the great historic houses of England; at Stourhead the gardens are one of the finest examples of 18th-cent. landscape design.

Mixed farming is carried on, and a considerable area of the co. is under permanent pasture. Dairy-farming flour-

ishes, and there are condensed-milk manufs. Cheese and bacon are also produced. At Swindon there are railway locomotive works; at Devizes there are tobacco and snuff, and brewing industries; cloth and carpets are manuf. at Trowbridge, Wilton, and Bradford-on-Avon. Rubber is processed at Melksham and Bradford; gloving is carried on at Westbury; iron is found at Bath, and Portland stone is quarried. There are important engineering works at Chippenham. Other tns are Calne, Warminster, and Malmesbury. The chief tn is Salisbury, but Trowbridge is the centre for co. administration. The co. (including Swindon) returns 5 members to Parliament. Area 860,829 ac.; pop. 346,000. See Sir R. Colt Hoare, *History of Ancient Wiltshire*, 1811-12, and *History of Modern Wiltshire*, 1822; A. G. Bradley, *Round about Wiltshire*, 1907; E. Hutton, *Highways and Highways in Wiltshire*, 1917; H. W. Timperley, *Ridge Way Country*, 1935; A. Mee, *Wiltshire: Cradle of our Civilisation*, 1939; F. Olivier, *Wiltshire*, 1951 (County Books); books on W. by R. L. P. Jowitt (Batsford's Little Guides) and by R. Whitlock, both 1949.

Wiltshire Regiment (Duke of Edinburgh's), The, Eng. regiment, formerly the 62nd and 99th regiments. The 62nd was formed in 1756. The 62nd took part in the defence of Canada and in the Amer. War, 1776-7, fought in the Peninsula under Wellington, then went to the W. Indies and later to India, where it took part in the First Sikh war. It was also in the Crimea. The 99th was raised in 1824. It took part in the New Zealand campaign of 1846-7 and in the China war, 1860, and then went to S. Africa. The 66nd and 99th were linked in 1881 and served in the S. African war, 1899-1902. During the First World War the regiment raised 12 battalions which served in France, Flanders, Macedonia, Gallipoli, Palestine, and Mesopotamia. In the Second World War the regiment fought on the W. front, in the It. campaigns, and in Burma. It took part in the operations of the Second Army in Europe, notably in the heavy fighting of the Rhine operations of Mar. 1945. The Wiltshire and the Royal Berkshire Regiments are to be joined in 1959 to form the Duke of Edinburgh's Royal Regiment (Berkshire and Wiltshire).

Wimbledon, parl. and municipal bor. of Surrey, England. The ann. meetings of the National Rifle Association were formerly held on Wimbledon Common (1860-89). W. is the H.Q. of the All-England Lawn Tennis Club, where international championships for amateurs are held annually. It has interesting remains of an early Brit. earthwork. W. sends 1 member to Parliament. Pop. 58,300.

Wimborne Minster, mkt tn of Dorset, England, 6 m. N. of Poole; it is an agric. centre. The collegiate church or minster, dating from the Conquest, contains the tomb of Ethelred I and has a 14th-cent. clock. Near W. is Canford School, a public school for boys, founded in 1923. Pop. (estimated) 4488.

Wimereux, Fr. seaside resort in the dept of Pas-de-Calais, 3 m. from Boulogne. It was badly damaged in the Second World War. Pop. 3000.

Wimshurst Machine, see ELECTRO-STATIC MACHINES.

Winant, John Gilbert (1889-1947), Amer. diplomat and politician, b. New York and educ. at St Paul's School, Concord, and at Princeton Univ. In 1921 he was elected to the Senate as a Republican. In 1935 he was appointed assistant director of the International Labor Office, becoming its director in 1939. In 1941 Roosevelt appointed him ambas. to Great Britain. In 1943 he attended the Casablanca and Teheran conferences and was named U.S. representative on the European Advisory Commission (see EUROPE, History), and at the first General Assembly of the U.N. in London (1946) he was chief Amer. representative on the Economic and Social Council, a post which he resigned about a year before his death.

Winchburg, vil. of W. Lothian, Scotland, c. 12 m. W. of Edinburgh, with shale mines, brickworks, and an oil refinery. Pop. 3000.

Winchcombe (anc't *Wincelcumbæ*), mkt tn of Gloucestershire, England, in a valley of the Cotswolds, 6 m. N.E. of Cheltenham. W. has a fine church, and Sudeley Castle (15th cent.) and Halles Abbey are near by. There are flour and paper mills. Pop. (estimated) 3000. See C. T. Haigh, *The History of Winchcombe Abbey*, 1948.

Winchelsea, vil. and former Cinque Port of Sussex, England, in the par. of Icklesham (q.v.). New W.'s harbour became choked in the 16th cent. The 14th-cent. church belongs to the par. of St Thomas the Apostle. Old W. was finally destroyed by the sea c. 1287. New W. was founded by Edward I c. 1290. Pop. 500.

Winchester: 1. Cathedral city, co. tn, and municipal and parl. bor. of Hants, England, on the R. Itchen, 12 m. N.E. of Southampton and 66 m. by rail from London. During the Rom. occupation of Britain, W., called *Venta Belgarum*, was a road-centre and the commercial and administrative cap. of a dist. Many Rom. finds from the city are in the City Museum, and remains of Rom. buildings have been discovered during excavations in 1953 and 1954. The Saxon kings of Wessex, who made W. cap. of Saxon England, are said to have been crowned in the old cathedral, of which no traces remain. During this period the W. illuminators became famous. The most notable work they produced was the *Benedictional* of St Aethelwold (c. 975-80), formerly at Chatsworth, since 1957 in the Brit. Museum. Another outstanding book is the 12th-cent. W. Bible, still in the cathedral library. The present cathedral was begun by Bishop Walkelin in 1079. Additions were made by Wm of Wykeham and others, so that the styles of architecture vary from Norman and Early Eng. to Perpendicular. It is the longest cathedral (556 ft) in England,

with the nave of 351 ft. Noteworthy features of the choir are the altar screen, the carved stalls, the roof bosses, and chests containing the bones of Saxon kings. There are several fine chantry chapels, including those of Wm of Wykeham, Cardinal Beaufort, and Bishop Waynflete. Izaak Walton and Jane Austen are buried in the cathedral. Among kings of England crowned or re-crowned at W. were Wm the Conqueror, and Richard I after his return from captivity. Here also Queen Mary was married to Phillip of Spain. Not far from the cathedral lie the 12th-cent. ruins of the episcopal castle of Wolvesey, and adjoining them is the present official residence of the bishops, a building of the late 17th cent. N. of the city was Hyde Abbey, in which King Alfred was buried. Of W. Castle, the only part remaining above ground is the hall, the finest 13th-cent. hall in England, in which is the famous King Arthur's Round Table, made in the Middle Ages. The Westgate, one of the 2 remaining gates of the city, is now a museum, in which is the finest civil collection of old weights and measures in England; the other gate is the Kingsgate, surmounted by St Swithun's church. St Cross Hospital was founded in 1136 by Bishop Henry de Blois. Cardinal Beaufort endowed it in 1446 for the Brethren of Noble Poverty. To-day there are 27 pensioners on the 2 foundations living there, besides many out-pensioners. The church of the Hospital is a fine example of transitional Norman work. Winchester College (q.v.) was founded by Wm of Wykeham in 1394, and St Swithun's School (q.v.) for girls in 1884. The most interesting par. church in W. is St John's, which contains medieval woodwork (screens and pulpit). The old city mill, which for hundreds of years has spanned the Itchen above the City Bridge, has been preserved by the National Trust. On St Catherine's Hill can be seen the rampart and ditch made for its defence by an Iron Age settlement in the 3rd cent. bc.

W. is the home of 3 famous regiments, the Royal Hampshire Regiment, the King's Royal Rifle Corps ('The Sixtieth') 60th Rifles, and the Rifle Brigade. The Rifle Regiments are together known as 'The Greenjackets.' W. is a mkt for agric. produce from the surrounding dist. Pop. 26,300.

See A. F. Leach, *Winchester, its History, Buildings, and People* (3rd ed.), 1933; B. Vesey-FitzGerald, *Winchester*, 1953; Barbara Carpenter Turner, *The Cathedral City of Winchester*, 1954; also *Victoria County History of Hampshire*, section on W. in vol. v; and the *Official Guide*.

2. Residential tn of Middlesex co., Massachusetts, U.S.A., 8 m. NNW. of Boston. It manufs. felt, gelatine, and watch hands. Pop. 15,509.

3. City in, but independent of, Frederick co., Virginia, U.S.A., with manufs. of leather, textiles, paper, hosiery, rubber goods, packing equipment, and asbestos products; there is also flour milling. Pop. 13,841.

Winchester College, founded by Wm of Wykeham in 1394 as 'the College of the Blessed Virgin Mary of Winchester', for the education of 70 scholars and 16 choristers. It is now a public school of 500 boys. A substantial number of the original buildings, including the chapel, the central quadrangle known as Chamber Court, and the cloisters, are still in use; notable additions include the School Hall (1687), built in the style of Wren, and a memorial cloister by Sir Herbert Baker to Wykehamists killed in the First World War. W. C. maintains a close connection with New College, Oxford, also founded by Wm of Wykeham.

Winchester Gallon, see METROLOGY.

Winchilsea, Anne Finch, Countess of (c. 1660-1720), poetess, b. Sidmonton, near Southampton, daughter of Sir Wm Kingsmill. She married H. Finch, who succeeded to the earldom of Winchilsea in 1712. A friend of Pope (q.v.) and other writers, she wrote Pindaric odes, and was a pioneer in nature poetry. Her vols. of verse include *The Spleen*, 1701, *The Prodigy*, 1706, and *Miscellany Poems*, 1713.

Winckelmann, Johann Joachim (1717-68), Ger. archaeologist and art critic, b. Stendal, Brandenburg, the son of a shoemaker. He became librarian to the cardinal-secretary of state in Rome, and in 1763 president of the Collection of Antiquities in the Vatican and Vatican Librarian. He was soon the leading authority of his time. The galleries of Rome and Florence are indebted to him, and his advice was of value in the early excavation of Pompeii and Herculaneum. His main work was a comprehensive study of anc. art in 2 parts. The first part was *Gedanken Über die Nachahmung der griechischen Werke*, 1755. The second part, *Geschichte der Kunst des Altertums*, 1764 (new ed., 1934), became world-famous. This comprised a general theory of art and a hist. of art from the so-called Dadaos Period. See K. Krauss, *Winckelmann und Homer*, 1935; L. Curtius, *Winckelmann und seine Nachfolge*, 1941; and lives by C. Justi, 1866-72, 1923, and B. Valentini, 1931.

Winckler, Hugo (1863-1913), Ger. oriental scholar, b. Grafenbainichen. He studied at Berlin Univ., and was prof. of hist. and oriental languages there from 1904. In 1903-4 he made excavations on the site of anc. Sidon, and from 1906 until 1912 at Boghaz Keui in Cappadocia. Here he discovered valuable remains of a Hittite civilisation, including a version in cuneiform of the Rameses-Hittite treaty.

Wind, movement of the air. The W. is not always horizontal, particularly when convection occurs; near the surface it must, for reasons of continuity, follow the slope of the surface, but it is the horizontal motion that predominates. The W. is never steady, varying from sec. to sec. in gusts, which are frequently as much as 20° in direction and 20 per cent in velocity different from the mean W. Gustiness depends not only on the nature of the underlying surface but also on the time of day and state of the sky, being

least on a clear night. Ignoring surface irregularities, such as buildings, hedges, trees, etc., gustiness decreases upwards, but at the same time the velocity increases until the surface effect is negligible. The W. speed is measured at a height of 10 metres (33 ft), and it is usual to call this the surface velocity, even though it is usually much more than the wind at ordinary eye-level. Above this level (1000-3000 ft according to rate of change of temp.) the wind approximates to that given by a comparatively simple hydrodynamic law which requires it to blow along the isobars with high pressure on the right (in the N. hemisphere) with a speed inversely proportional to the distance between them. This motion is called the gradient W.

and timing of distant explosions such as gunfire. The hydrogen-filled balloon or *Pilot Balloon* is allowed to rise freely; it drifts with the W. so that if its position can be calculated the W. velocity can be measured at all heights to which the balloon can be followed. The method used to-day is to attach a small radar target to the balloon and follow the balloon by radar (q.v.). Upper winds have thus been directly measured up to heights of 100,000 ft.

Windbells. Semi-permanent anticyclones develop over subtropical oceans and consequently the W.s blow more or less steadily round them. These form the trade W.s (q.v.) on the equatorward sides and the prevailing westerlies on the polar sides. In the centres of the anticyclones

Beaufort Number	Beaufort's Description	Land Effect as Devised by Sir George Simpson in 1805	Velocity (at 33 ft)
0	Calm	Smoke rises vertically	m.p.h.
1	Light air	Direction shown by smoke but not by vane	0-1
2	Light breeze	Wind felt on face; leaves rustle; ordinary vane moved	1-3
3	Gentle breeze	Leaves and small twigs in constant motion; extends a light flag	4-7
4	Moderate breeze	Raises dust and loose paper; small branches moved	8-12
5	Fresh breeze	Small trees in leaf begin to sway; crested wavelets form on inland waters	13-18
6	Strong breeze	Large branches in motion; whistling heard in telegraph wires; umbrellas used with difficulty	19-24
7	Moderate gale	Whole trees in motion; inconvenience felt when walking against wind	25-31
8	Fresh gale	Breaks twigs off trees; generally impedes progress	32-38
9	Strong gale	Slight structural damage occurs (chimney pots and slates removed)	39-46
10	Whole gale	Seldom experienced inland; trees uprooted; considerable structural damage	47-54
11	Storm	Very rarely experienced inland; accompanied by widespread damage	55-63
12	Hurricane	64-75
			Above 75

This table has recently been extended to Beaufort numbers 13-17 with respective velocities 83-92, 93-103, 104-114, 115-125, 126-136 m.p.h.

Wind Measurement. Direction is easily measured by a W. vane or, in very light winds, by smoke drift. A change in the W. direction is called veering if it changes clockwise and backing if anti-clockwise. W. strength or velocity is much more difficult to measure: the first, severely practical, method was that devised by Adm. Beaufort in 1805, based on the usefulness and effect of the W. for sea-faring purposes. The table above gives a specification of each of these Beaufort forces, which are still in use. Equivalent W. velocities as measured by anemometers (q.v.) at 33 ft above a level surface are given in the last column.

W.s above surface level can be measured by watching the clouds (or a shell burst), by tracing the ascent of a hydrogen-filled balloon, or, for extremely high levels, by calculations from the audibility

are regions of calms—the Horse Latitudes—whilst between the anticyclones in the N. hemisphere and the corresponding ones in the S. hemisphere is a belt of light winds or calms known as the Doldrums. These regions all move with the sun during the year, but with little more than 20° total movement compared with the sun's 47°. The westerlies on the poleward sides of the anticyclones enter into the region of depressions and frontal surfaces (see METEOROLOGY) so that they are more variable and stronger. In the S. hemisphere (in the 'Roaring Forties,' after their latitude) they are known as the Brave West W.s. In polar regions, which are very disturbed, the W.s are very variable.

Jet Streams. A recent discovery is that at great heights very strong W.s, confined to relatively narrow 'tubes,' can blow over great distances. Such W.s,

called jet streams, usually blow from a W. point and reach speeds up to 200 m.p.h. They are of great importance in military and civil air operations.

The earth's surface consists of land and water distributed irregularly; since the temp. rises and falls more rapidly over land than over the sea, high pressure develops over the land masses in winter and low pressure in summer, and there are therefore large seasonal changes of wind, inflowing in summer, outflowing in winter. They are known as monsoons (q.v.), and are well marked in many parts of the world, chiefly in S. and E. Asia. A similar effect can be observed daily on quiet, sunny days when the sea-breeze sets in.

The physical features of the land also have a marked effect on the W., for it will tend to flow along valleys and round mt ranges rather than across them. Long ravines may even develop strong W.s if a pressure difference is maintained between ends of the ravine; as the W. continues along the ravine its velocity becomes greater. During a clear night the ground cools and the air in contact cools with it. On a slope the air in contact is therefore cooler than the air away from it but at the same level; and, being heavier, it then flows downhill like water. This is called katabatic W., the similar W. in the reverse direction on warm, sunny days being an anabatic W. The katabatic naturally drains into the valleys, and may eventually augment any ravine W. This does occur in the *mistral* of the Rhône valley, which reaches Marseilles as an icy blast, often at gale strength. When a W. is forced to rise over high land it deposits some of its moisture, and consequently when it descends again it appears phenomenally warm and dry. Such W.s coming from the Alps in Austria are known as Föhn W.s, and coming from the Rockies are known as the Chinook. See C. E. P. Brooks, C. S. Durst, N. Carruthers, D. Dewar, and J. S. Sawyer, *Upper Winds over the World, Geophysical Memoirs* (vol. 10, No. 85), 1950; also bibliography to METEOROLOGY.

Wind instruments are of 3 classes: (1) keyboard, e.g. organ, concertina, etc., played by bellows; (2) wood-wind, e.g. flute, oboe, clarinet, bassoon, and other reed instruments, played by mouthpiece; and (3) brass, e.g. horn, trumpet, trombone, and other instruments with cup-shaped mouthpieces.

Wind Sucking, *see* HORSE (DISEASES).

Wind-tunnel, tubular structure in which models and full-sized objects are subjected to artificial winds in order to test their aerodynamic properties. The first W. was made by the Eng. aeronautical pioneers Wenham and Browning in 1871. W.s are used chiefly by designers of aircraft, rockets, ships, bridges, and automobiles.

Windermere: 1. Largest lake in England (11 m. by 1-1½ m. broad), on the boundary of Westmorland and Lancs. Its shores are much indented and wooded. It drains into Morecambe Bay through the Leven. *See also* LAKE DISTRICT.

2. Urb. dist. and resort in Westmorland, England, 4½ m. SE. of Ambleside, on Lake W. Pop. 6500.

Windflower, *see* ANEMONE.

Windham, William (1750-1810), politician, educ. at Eton and Univ. College, Oxford. Under Pitt he was, from 1794 to 1801, secretary for war, and in 1806-7 was secretary of state for war and the colonies in the Grenville administration. He was brilliant and loyal to Pitt, but his changes of opinion earned him the nickname of 'Weathercock W.'

Windhoek, cap. of SW. Africa. It has hot thermal springs, and is connected by railway with Swakopmund, on the coast, and the Keetmanshoop (a distance of 380 m.). There are mineral deposits in the dist. It is the main buying centre for karakul skins. W. was entered by S. African forces in May 1915 when SW. Africa was captured from the Germans. Pop.: (European) 13,000; (others) 26,000.

Windlass, machine used for lifting weights through a considerable distance, as in raising water from a well. It consists of a cylindrical roller made to rotate upon its axis by a crank and handle. The weight is attached to a long rope which is coiled round the roller as the handle is turned.

Windmill Hill, hill 1½ m. NW. of Avebury, Wilts, England, is the site of an earthwork camp with interrupted ditches which has given its name to the earliest culture of the Eng. Neolithic. These farmers bred cattle, cultivated wheat in small plots, specialised in the mining of flint for tools and weapons, and traded in these products, and they introduced, particularly from Switzerland and France, a distinctive type of pottery which in the first instance was derived from leather prototypes. A detailed study of this pottery has suggested 3 distinct migrations in the make-up of W. H. culture. Some of the W. H. area is preserved by the National Trust. *See* T. D. Kendrick and C. F. C. Hawkes, *Archaeology in England and Wales, 1914-1931*, 1932; V. G. Childe, *Prehistoric Communities of the British Isles*, 1940, 1947; Stuart Piggott, *Neolithic Cultures of the British Isles*, 1954.

Windmill Theatre, London theatre, seating 320, situated in Great Windmill Street, W.1. At first a straight playhouse, and then a cinema, it was opened in 1932 by Mrs Laura Henderson and Vivian Van Dam for the presentation of non-stop variety. In 1936 Van Dam took over production. During the Second World War the W. took as its motto 'We Never Closed,' and became famous as the only theatre to remain open during the whole of the London blitz. When she died in 1944, Mrs Henderson left the W. to Van Dam, who then became owner-manager-producer. The *Reverie* production which plays 6 performances a day has a change of programme every 6 weeks, 2 troupes of girls working alternate days.

Windmills. The earliest references to W. in England appeared late in the 12th cent., when a mill could be built only for the lord of the manor. From then until

the 14th cent., W. were of the type known now as post mills. The principle of such a mill is generally as follows: the body is supported on a massive wooden post, upon which it may be rotated to face the wind; and the post rests upon 2 wooden cross-trees with 4 supporting struts or quarter bars. The cross-trees usually stand on 4 brick or stone piers, which are often enclosed in a round-house, which is used for storage. The mill sails are attached to a wooden or cast-iron windshaft, which is usually inclined to the horizontal at an angle of 10° – 15° , and which carries a large

Photograph by D. W. Muggeridge; Society for the Protection of Ancient Buildings

OUTWOOD MILL, SURREY

wood-toothed gear wheel. This gear wheel, called the brake wheel because it has about it a wooden or iron brake band, drives the horizontal millstones through a small pinion or nut. There is sometimes a second large gear wheel on the windshaft known as the tail wheel, which drives a second pair of millstones nearer the tail of the mill. Access to the mill body is by a ladder, through which protrudes a long tail pole used for facing the mill to the wind. Sacks of grain are lifted up inside the mill by a hoist driven from the windshaft, and tipped into hoppers which feed the stones. The meal runs from the stones into bins or sacks, or perhaps into a dresser which makes flour by separating the bran from the meal. One of the earliest mills remaining in England is the post mill at Bourn, Cambridgeshire, research having established that it was there in 1636; the earliest still at work is that at Outwood, Surrey, built in 1665.

About the middle of the 14th cent. the tower mill was invented. In such a mill, the machinery is contained in a round or

octagonal body, and the cap at the top carries the sails and is turned to face the wind. The internal economy of the tower mill is similar to the post mill, except that the brake wheel drives an intermediate gear or wallower at the top of a vertical shaft, which conveys the power to the millstones on the first floor of the mill. The second floor carries the hoppers which feed the stones, and the floors above are used for storage. The body of a tower mill proper is built of stone or brick, but frequently wooden studwork and weatherboarding are used from the first floor, or stone floor, upwards. In this case the mill is known as a smock mill. The cap is made of wood, sometimes protected with canvas, and the shape of the cap is identifiable with the dist. in which the mill is built. A cap shaped like an inverted boat is common in Norfolk, whilst in Lincs, where the tower mill is most highly developed, the graceful ogee-shaped cap is typical. The problem of turning a rotating cap on top of a tall tower was not conveniently met by the use of a tail pole, as in post mill practice. Accordingly, other methods were invented. The top of the tower, on which the cap rests and is rotated, is called the curb. A rack was fixed round the curb, and a gear attached to the cap and meshing with the rack was turned by a chain wheel and a chain hanging down to the ground. This system simplified the operation, and examples remain today. In 1745, however, a method of facing the sails to the wind automatically was patented by Edmund Lee. A fan was placed behind the cap at right angles to the sails. When the sails are facing the wind the fan is stationary, but when the wind changes its direction the fan is turned. The fan is geared to the rack round the curb, and therefore turns the cap until the sails again face the wind. This system has since been applied also to post mills.

The oldest windmill sails consisted of a wooden framework covered with canvas. The canvas hung on rings like curtain rings and was drawn across the sail, like a curtain, to cover the framework partially or completely as required, and tied in place. To carry this out the miller had to climb the sails, which was often hazardous. In 1772 Andrew Meikle invented the spring sail. This had, instead of canvases, a number of shutters similar to a Venetian blind, held shut by springs, the tension of which was adjustable. A further improvement was the 'Patent' sail, invented in 1807 by Sir Wm Cubitt. This is the sail now most commonly seen, and consists of a number of shutters held closed by a weight, which, working through a system of levers and links, hangs on a chain close to the ground at the tail of the mill.

At one time there may have been as many as 10,000 W. working in England. At the present time (1958) there are less than 50, and the number is decreasing steadily. Apart from mills used for grinding corn, some 2000 marsh mills once pumped water off the fenland. Now

none of these is left at work. Considerable improvements in windmill efficiency have been made by Dekker, in Holland, using roller bearings and sails of aerofoil section, but the W. used in contemporary experiments in generating electricity by wind-power bear no resemblance to the traditional corn mill. An important experiment of this kind was carried out with a 1500-kilowatt generator driven by a 200-ft wind turbine having 2 blades of adjustable pitch. This set was built at Grandpa's Knob, near Rutland, Vermont, U.S.A., in 1940-1, and valuable data were obtained. See P. C. Putnam, *Power from the Wind*, 1948; R. Wallace, *Windmills in England*, 1948.

Window (probably from the words 'wind,' 'eye'), a glazed opening in an exterior wall of a building to admit light and air. The Greeks and Romans often used W.s, occasionally glazed in Roman times; but during the Middle Ages they were seldom provided except in churches and important buildings; and glazing became common in dwelling-houses only during the Tudor period. A medieval or Tudor W. may be divided into lights by vertical mullions, by horizontal transoms, or by tracery. The top of a W. opening is the head, the bottom is the sill, the sides are the jambs. Each light may be divided into panes. Before the invention of sash-W.s (properly, 'double-hung sashes') towards the end of the 17th cent., all W.s were wooden or occasionally iron casements, generally side-hung to open inwards or outwards. Modern casements may be of steel, and are sometimes hung at top or bottom. Where leaded glazing in small panes is used these are sometimes called 'quarrels.' They are fixed in narrow strips of lead ('cames'). Leaded casements are usually stiffened by horizontal iron 'saddle-bars.'

See also BAY-WINDOW; CASEMENT; DORMER; FANLIGHT; JESSE WINDOW; JOINERY; LANCET; MULLION; ORIEL; ROSE-WINDOW; SASH-WINDOW; TRACERY; TRANSOME.

Window Gardening. This term is applied to the growing of plants and flowers in pots, bowls, and boxes placed upon the outside window-sills of houses or flats and is practised in tns where space for gardens is non-existent. With careful planning a fine display of colourful flowers may be had for a greater part of the year. Success depends upon the careful planning of a succession of suitable plants; bulbs in spring, daffodils, narcissi, hyacinths; later freesias, nasturtiums, petunias, lobelias, and geraniums, all provide colourful displays. Boxes should be of hard wood and preferably zinc-lined or charred to prevent rotting, and have holes for drainage; the earth should consist of a carefully balanced compost of turf-loam, leaf mould, sand, and manure. Watering should be frequent and the boxes and pots emptied and refilled once in each season. Other plants suitable for cultivation in window-gardens are cacti (some of which produce surprisingly brilliant flowers), various

palms and ferns, fuchsias, marguerites, and chrysanthemums. See W. P. Wright, *Room and Window Gardening*, 1937.

Windpipe, see TRACHEA.

Windscale, atomic plant in Cumberland, England, adjoining Calder Hall (see CALDERBRIDGE). At W. plutonium is produced on a commercial scale from uranium. An accident occurred on 10 Oct. 1957 during a controlled release of stored Wigner energy from the graphite of No. 1 pile. Water was used to extinguish the ensuing fire. As a result radioactive substances, chiefly iodine 131 and strontium isotopes, were disseminated locally. Immediate precautions were taken to protect workers and others in the area, and large quantities of radio-contaminated milk were destroyed over a period of sev. weeks. See H.M.S.O. White Paper, Cmd. 302, 1957. See also NUCLEAR FALLOUT; NUCLEAR POWER.

Windsor, Bessie Wallis Warfield, Duchess of (1896-), wife of H.R.H. Duke of Windsor, formerly Edward VIII (q.v.). She was b. Baltimore, Maryland, U.S.A., and married E. W. Spencer, an Amer. naval officer, in 1916, divorcing him 9 years later. She married Ernest Simpson in 1928, living with him in London. Subsequently the Simpsons became close friends of the then Prince of Wales. They were divorced in 1936, and in June 1937 Mrs. Simpson (who had reverted to her maiden name of Warfield) married the ex-king (now Duke of Windsor) in France. Her memoirs were pub. as *The Heart Has Its Reasons*, 1956.

Windsor, Duke of, see EDWARD VIII.

Windsor, House of. Family name of the royal house of Great Britain, King George V being regarded as the founder, having in 1917 given up for himself and his family all Ger. titles, together with the dynastic names of Saxe-Coburg-Gotha acquired through the marriage of Queen Victoria with Prince Albert. On 17 July 1917 King George V declared by proclamation that thenceforth his family should be known as 'The House and Family of Windsor.' Queen Elizabeth II and her children have retained the surname of Windsor.

Windsor: 1. Mun. bor. (since 1277), in full the Royal Bor. of New Windsor, in Berkshire, England, on the Thames, 22 m. from London. W. adjoins the vil. of Old Windsor, 2 m. to the SE. It contains a tn hall built under the supervision of Sir Christopher Wren in 1686, the church of St John the Baptist (rebuilt 1822), with fine examples of Grinling Gibbons's wood-carving, and a fine Jubilee statue of Queen Victoria; but it owes its importance to the castle, which is one of the prin. royal residences, and the Great Park. Eton College (q.v.) is outside W. The tn was formerly famous for its inns, one of which, the Garter (demolished c. 1680), is frequently mentioned by Shakespeare. The par. church of Clewer St Andrew is a fine example of Norman architecture. W. is a co. constituency. Pop. 23,770.

2. Tn on Hawkesbury R. in Cumberland co., Australia, 34 m. NW. of Sydney. W. is one of the oldest tns in the state, and

includes many mkt gardens growing vegetables to supply the Sydney area. A large air-force station (Richmond) is situated near by. Po. 10,110.

3. City, co. tn of Essex, and lake port of Ontario, Canada, $\frac{1}{2}$ m. S. of Detroit, with which it is connected by the Ambassador Bridge and Detroit-Canada Tunnel, across the Detroit riv., 240 m. W. of Toronto. It is a port for all Canadian steamers on the Great Lakes and is on the Canadian National and Canadian Pacific Railways, and on 3 U.S. railway lines. It has a modern air-

Windsor Castle, Eng. royal palace. It is one of the best-known among the royal edifices of Europe. The first structure on the site was that of the Conqueror, but the plan did not begin to assume its present state and arrangement until the 14th cent., when extensive building operations were carried on under the surveyance of Wm of Wykeham. One of the most impressive features of W. Castle is St George's Chapel, a fine example, though much restored, of Perpendicular architecture, in which many Eng. sovereigns are buried. Under Elizabeth I the terraces

WINDSOR CASTLE

port. It is the centre of Canada's motor-car industry, and also produces some two-thirds of the dominion's pharmaceutical output. It has over 360 factories. Its other industries include tools, adding machines, clothing, paint, forgings, and stampings, etc. W. has numerous public, primary, and secondary schools, and sev. public libraries. There are 3 hospitals and a great many parks. The city is in the midst of a good mixed farming dist. and there are salt mines in the vicinity. Electric power is obtained from the Niagara Falls. Pop. 126,034.

4. Cap. of Hants co., Nova Scotia, Canada, 45 m. from Halifax, centre of an agric. area, which also has gypsum and limestone quarries. W. manufactures textiles, fertiliser, and lumber products. Pop. 3440.

Windsor, Military Knights of, see MILITARY KNIGHTS OF WINDSOR.

were formed, and the castle was thus given one of its most striking and attractive characteristics. George III, among other alterations, renovated the interior of St George's Chapel, but the main work of improvement was left to his successor, under whom extensive alterations were carried out by Wyatt. To the South of the castle is Windsor Great Park, comprising 4800 ac., connected with the castle by a 3-m.-long straight drive known as the Long Walk. To the S. is the Royal Lodge, private home of the royal family since 1932. See H. Bolitho, *Romance of Windsor Castle*, 1947; Sir Owen Morshead, *Windsor Castle*, 1951.

Windt, Harry de, see DE WINT, HARRY.

Windus, W. E., see HOTTEN, J. C.

Windward Islands, group of the Brit. W. Indian Is. between 12° and 16° N. and in long. 61° W. of Greenwich, N.E. of Venezuela, comprising the colonies of

Grenada (the seat of the gov.), Dominica since 1940, St Vincent, and St Lucia, with their dependencies, the Grenadines (q.v.) being divided between Grenada and St Vincent. They were swept by a devastating hurricane in Sept. 1955, but the weather is normally very favourable and attracts tourists. Universal adult suffrage was among the modifications of the constitutions approved in 1950, and ministerial systems were introduced in 1956. Cocoa, rum, sugar, arrowroot, and spices are produced. Area approximately 830 sq. m.; pop. 313,000. *See also WEST INDIES.*

Wine should be defined as the fermented juice of freshly gathered ripe grapes. The term is also applied to alcoholic beverages made from other fruit, as well as to vegetables, which are dealt with under the heading WINES, HOME-MADE. A cluster of grapes consists of the stalk, which contains tannic and other acids, and the berries, which are composed of the skin, which holds both acids and the colouring matter of the W., the pips holding tannin and an astringent resin liable to make the W. unpalatable if they are broken in the pressing, and the juice, which combines sugar and various organic and inorganic acids and salts in solution. The juice pressed from the grapes is set fermenting by yeasts called *saccharomyces* in the bloom of the berry, which supply enzymes to start the process. (*See FERMENTATION.*) When the grapes have been pressed for white W., whether they are black or white, the juice is run off into vats, where it ferments apart from the stalks, skins, and pips. For red W.s, the juice ferments in contact with the skins, which contain the colouring matter, soluble as soon as alcohol has been formed, the pips, and such a proportion of the stalks as experience advises. The time required for the first fermentation varies with various regions; it ceases when it has transformed almost all of the sugar into alcohol, though enough traces remain to keep the yeasts alive and working. Probably the highest alcoholic degree attained by any W. naturally fermented is 17 per cent of alcohol occasionally reached by Châteauneuf-du-Pape; such a W. as Montrachet may show 15 per cent. W., after it has ceased to be must, goes on living with what is left of the fermenting yeasts, which need oxygen for their continued existence. As long as W. is in the cask it receives through the wood enough air to keep it developing, and ordinary W.s which cannot be long-lived are drunk from the wood. Certain W.s, thanks to the quality of their grapes, the conditions of their growth and making, retain after a long spell in the cask sufficient yeasts and traces of sugar to go on improving when they are more completely cut off from the outer air in the sealed bottle in which the air bubble is very sparingly reinforced with oxygen from outside. The principles of fermentation were discovered by Pasteur (q.v.) in the sixties, and he showed that W. after heating to about 140° F. was immune from certain

diseases due to the bad yeasts which accompany the fermentation yeasts in the finished W.; but pasteurisation kills both good and bad yeasts, and after it the W. ceases to mature. Of late, an asbestos filter has been invented to remove from young W. every living organism, with the result that it can be sold younger without danger of secondary fermentation in the bottle; but such W.s only deteriorate with time. In the bad years sugar is added to the must in N. vineyards to increase the alcoholic degree, but chaptalisation, as it is called from the chemist Chaptal (q.v.), dulls the flavour and obscures the bouquet.

EUROPEAN WINE PRODUCTION: 1955

Figures in gallons; those in *italic* estimated.

France	1,321,508,738
Italy	<i>1,230,000,000</i>
Spain	354,530,000

Wine (Cask), *see* WINE; METROLOGY.

Wine Month, *see* OCTOBER.

Wineland, *see* VINLAND.

Wines, Home-made, are fermented mainly from fruits, vegetables, and flowers. All can be equally alcoholic. Grains, e.g., barley, wheat, and rice are used to strengthen these or with added flavours to make wines of their own. To protect flavour only wood, glass, china, or stone is used, and wooden spoons, and constant covering with thick cloths or loose corks is essential to keep out flies and wild yeasts which make wine bitter. Store at least 6 months. *Fruits* are picked ripe and dry in fine weather to preserve flavours and fruit yeasts, crushed, covered with the boiling water, and left for days or weeks, being stirred daily to extract juice and prevent mould. Time can be saved by boiling the fruit, but this destroys the fruit yeasts. To clear, strain through 3 layers of muslin or a hair sieve or both, and throw away pulp without

squeezing. Add 2½-5 lb. sugar and 1 oz. yeast to the gallon and let ferment 5 or 6 weeks or until all buzzing ceases. Stir, let settle sev. days, bottle, and keep in a cold, dry place to prevent ferment re-starting. *Vegetables*, at about 4 lb. per gallon, are cooked tender, strained, and 3-4 lb. sugar and 1 oz. yeast added, plus juice and rind (no pith) of a lemon, ½ oz. crushed ginger root, and from a few oz. to 1 lb. raisins. *Flowers* also follow the process in general. Amounts depend on scent, only ¼ gallon of elderflower to a gallon of water, against gallon for gallon of delicate dandelion. Soak a day or two, use 3-4 lb. sugar and a lemon. Flower wines mature more quickly, and some can be drunk within 4 or 5 months. Weekly tasting of wine as soon as the yeast and sugar are added is recommended by some to test flavour. More lemon, orange, or ginger root can be added, or more sugar if a sweet wine is wanted. Pepper corns give bite to a Burgundy type. Fermenting temp. should be kept steady within 10° at the most, a steady 65°-70° F. being considered the best. If ferment stops too soon it can be re-started by adding a few oz. of sugar and removing to a warmer spot. A thermometer should stand near the fermenting vessel.

Winfield, seat of Cowley co., Kansas, U.S.A., on the Walnut R. It is a trade and shipping centre in a live-stock, grain, and oil region, with flour mills, grain elevators, machine shops, and stockyards. There is dairying, metal products, and poultry packing. Here is the South-western (Methodist) College founded in 1885. Pop. 10,264.

Winfrith, see BONIFACE, St.

Wing Commander, see RANK.

Wingate, Orde Charles (1903-44), soldier, educ. at Charterhouse and R.M.A., Woolwich; gazetted to the Royal Artillery in 1923, and served with the Sudan Defence Force, 1928-33. In Palestine he organised and led a force of soldiers and police for night operations during the Arab revolt (1936-8), and was awarded the D.S.O. in 1938 for his work there as head of the Jewish counter-guerillas. When the Second World War broke out he was selected for special service under Wavell (q.v.), as leader of the Abyssinian partisans, whose force he organised with even more marked success than in Palestine. By the time he went to Burma to organise guerrilla war there he was the man most fitted in the Allied forces to form, train, and lead the 'Jungle Commando.' He was made a maj.-gen. in 1942. His famous brigade of 'Chindits', consisting of Brit. and Gurkha columns with intelligence detachments from the Burma Rifles, penetrated great distances across jungle ranges and valleys. Skillfully infiltrating through the Jap. outposts and garrisons, his force penetrated hostile ter. as far as the Shan States. For this service he was awarded the Royal Central Asian Society's Lawrence of Arabia gold medal (1943). He was killed in a plane accident in Burma, 24 Mar. 1944, during an operational flight. See

W. G. Burchett, *Wingate's Phantom Army*, 1947; L. Mosley, *Gidcon Goes to War*, 1955.

Wings, see BIRD; FLYING.

Winifred, St. (d. c. 650), Welsh virgin. She was beheaded by Caradoc of Harwarden for refusing to submit to his attempted seductions. Miraculous cures at Holywell (Flintshire) are attributed to her intercession. Her feast is on 3 Nov.

Winkelried, Arnold von, Swiss knight and hero of the Unterwalden. During the struggle for independence by the Swiss freemen and peasantry against the Austrian archduke, a battle was fought at Sempach, a small vil. some few m. distant from Luzern, in July 1386, the Austrians being led by their archduke, Leopold. The Austrians, who numbered about 4000, were opposed by 1500 Swiss. The Swiss struggled heroically against the Austrians, but could make no impression upon the phalanx of heavily armoured pike-bearing soldiers. A. von W., seeing that the only way to defeat the Austrians was to open a way through their ranks, rushed upon the spears, and grasping a number of the long pikes in his embrace cleared a road for his companions in arms over his pierced body. At close quarters the Austrians, hampered by their armour, were annihilated, and the independence of Switzerland was won. The anniversary of the death of A. is still observed as a local festival.

Winkin de Worde, Jan van, see WORDE.

Winkle, see PERIWINKLE.

Winnabago, Lake, largest lake (30 m. long and 5-10 m. wide, with an area of 215 sq. m.) in Wisconsin, U.S.A. The Fox R. enters it from the W. at Oshkosh and leaves it on the N. for Green Bay. It is used for lake sports.

Winnington-Ingram, Arthur Foley (1858-1946), prelate, educ. at Marlborough College and at Keble College, Oxford. He succeeded Creighton as Bishop of London in 1901 and resigned in 1939.

Winnipeg, cap. and largest city of Manitoba, Canada, fourth largest city in the Dominion. It is situated at the confluence of the Red and Assiniboine R.s. in the SE. part of the prov., 40 m. S. of Lake Winnipeg, and 60 m. N. of the boundary between Canada and the U.S.A. The altitude is 760 ft. above sea-level. The area of the city includes 15,535 ac. of land and 465 of waterways. Pop. (1956) 256,683; Greater Winnipeg 409,687.

The first white men to stop at this site were Pierre Gaultier de la Verendrye and his party in 1738. The NW. Company estab. the fur-trading post of Fort Gibraltar about 1810. This post was re-estab. by the Hudson's Bay Company as Fort Garry in 1822. Between 1811 and 1815 Lord Selkirk purchased from the Hudson's Bay Company 116,000 sq. m. of ter. known as the Dist. of Assinibois and settled the area around Red R. near its junction with the Assiniboine with families from Scotland. They introduced agriculture into Manitoba (Cree Red River Settlement). In 1821 both the fur-trade companies combined under the name of the Hudson's Bay Company, and the

Selkirk colony was permitted to develop. In the 1850's steps were taken to provide for the transfer of the W. of Canada from the Hudson's Bay Company to the Dominion of Canada. The transfer was finally accomplished in 1870, and in July the prov. of Manitoba was created and its cap. erected at the hamlet of W. W. was chartered as a city in 1873 with a pop. of 1869.

The city's administration is carried on by a mayor and 18 aldermen. The mayor is elected for a 2-year term by a vote of the entire city. Three aldermen are elected annually from each of the 3

flights S. to the U.S.A. Since the advent of commercial aviation W. has become a centre of Canadian and international air traffic and is the air terminal serving N. mining developments.

W. developed rapidly after the building of the first railway lines. Greater W. is now the industrial centre for the Prairie Provs. and is the H.Q. for a number of large wholesale and retail houses. Together with the neighbouring city of St Boniface (q.v.), W. has sev. meat-packing plants. Within the city and its suburbs are various manufacturing industries that produce clothing, cotton, furniture, jute

National Film Board, Canada

WINNIPEG: PORTAGE AVENUE, LOOKING EAST FROM SMITH STREET

wards into which W. is divided and hold office for a term of 2 years. Public schools are controlled and supervised by the Board of School Trustees composed of 15 members, 5 for each of the 3 wards. The Police Dept is administered by a Board of Police Commissioners. W. Board of Parks and Recreation control and supervise the public parks of the city. The first Canadian Pacific Railway train arrived in St Boniface across the Red R. from the S. in 1878, providing a link with E. Canada via St Paul, Chicago, and Detroit. The C.P.R. line arrived in W. in 1881, being completed transcontinentally in 1885. Besides the C.P.R., the Canadian National Railway, which has western H.Q. in W., the Soo Line, the N. Pacific, and the Great N. Railroads serve W. The 3 last connect with the U.S.A. Air terminals include Trans-Canada Air Lines and Canadian Pacific Air Lines. NW. Air Lines operate daily

and fur goods. Food-processing mills produce flour and malt products. Printing and publishing are carried on, and there are railway repair shops. W. is one of the largest grain markets in the world, and contains many wholesale houses which serve as distributing centres. Fur auctions are held annually and draw buyers from all over the continent.

There are 2 extensive natural parks on the city's outskirts. W. is the seat of the univ. of Manitoba and some of its affiliated colleges. The plan of the city is strictly geometrical: the streets are wide and straight, and spacing is good. Since 1912 the hydro-electric power resources of the W.R., 70 m. N.E. of the city, have been increasingly exploited. In 1950 heavy damage was done to the city when the Red R. overflowed its banks.

In 1956, W. held its 38th annual Music Festival. It has a Symphony Orchestra, Little Theatre, Art Gallery and Museum,

and Royal Winnipeg Ballet. See also under MANITOBA.

Winnipeg, Lake, lake in the prov. of Manitoba, Canada. It has a length of 260 m., and is from 5 to 7 m. broad. Elevation 713 ft, area 9094 sq. m.

Winnipegosis, Lake, shallow lake in NW. Manitoba, Canada, extending into Saskatchewan. It has a length of 127 m., an area of 2086 sq. m., and an elevation of 831 ft.

Winona, city, co. seat of Winona co., Minnesota, U.S.A., on the Mississippi R., with railway repair shops and limestone quarries. It manufs. food products, bricks, patent medicines, clothing, and

in 1703. See also EDDYSTONE LIGHTHOUSE.

Winston-Salem, city, co. seat of Forsyth co., N. Carolina, U.S.A. It is a port of entry and the commercial centre of a fertile agric. region, especially noted for its tobacco; the growth of W. is chiefly due to this industry, and the manuf. of cigarettes and flat plug tobacco here is most important. Nylon yarn, underwear, hosiery, furniture, and communications equipment are also manufactured. W. is the seat of Salem College, W. Teachers' College, and the medical school of Wake Forest College. It is the second largest city in the state. Winston and

Manitoba Travel & Publicity Bureau
RAILWAY YARDS AT WINNIPEG

wood products. It is the seat of W. State Teachers' College, St Mary's College, and the College of St Teresa. Pop. 25,000.

Winsford, tn of Cheshire, England, situated on the R. Weaver, 17 m. E. of Chester. The anct bor. of Over, with its 12th-cent. church, is part of the urb. dist. Salt is manufactured from vast resources of underground brine, and agriculture is another main industry. Pop. 12,860.

Winslow, mrkt tn of Buckinghamshire, England, 6 m. SE. of Buckingham. W. was the site of a palace of the kings of Mercia. The church dates from the 13th cent., and W. Hall was built in 1700. Pop. 1500.

Winstanley, Henry (1644-1703), engineer, b. Saffron Walden In 1666 he became clerk of works to Charles II. He began designing the first lighthouse at Eddystone in 1696. It was finished 4 years later, but was destroyed in a storm

Salem were combined in 1913. Pop. 87,811.

Wint, Peter de (1784-1849), landscape painter of Dutch origin and a 'little master' of the old Eng. school, b. Stone, Staffordshire. He studied at the Royal Academy. De W. is best known for his water-colours of lush, tree-lined meadows by the Trent and Thames, and the city of Lincoln and its surrounding countryside.

Winter, fourth season of the year. It commences, astronomically, when the sun has attained its lowest declination, i.e. its lowest noon position in the sky. This occurs for the N. hemisphere when the sun enters the sign of Capricorn, for the S. when it enters the sign of Cancer. The sun's rays falling at the least angle with the horizon, the temp. falls, to rise again towards spring, when the sun passes its mean noon position. Climatically, W. is very varied, corresponding usually with a dry season, but in 'Mediterranean'

regions with a wet season. Biologically, it is the ann. period of suspended animation for many forms of life. See SEASONS.

Winter Berry, or **Black Alder**, shrub (*Ilex verticillata*), of the family Aquifoliaceae, indigenous to eastern N. America; it reaches a height of 6 ft, and has long alternate lanceolate leaves with toothed edges, small white flowers, and red berries. The bark has medicinal properties.

Winter Garden Theatre, theatre in Drury Lane, London. In 1919 the theatre known as the Middlesex music-hall had structural alterations and was then re-opened as the W. G. T. It became famous for its musical comedies. During the Second World War more emphasis was laid on serious drama; there was a Shakespearean season (1945-6), and such plays as *Love on the Dole*, *Saint Joan*, and *No Room at the Inn* were produced.

Winter Sports, open-air athletic sports carried out in snow or on ice. Since the end of the 19th cent., W. S. have been much developed and popularised. They now form a part of the Olympic Games. Switzerland is the chief site of W. S.; but others in Europe include Norway, Sweden, Germany, and Austria, and there are sites in Canada, Australia, S. Africa, and the U.S.A. See further under CURLING; SKATING; SKI AND SKIING; SLEIGH; TOBOGGANING.

Wintergreen, see PYROLA.

Winterhalter, Franz Xavier (1806-73), Ger. portrait painter, b. Menzenschwand in the Black Forest. He studied painting in Munich. He had a facile, popular style, and is best known in England for his paintings of Queen Victoria and the Royal Family.

Winter's Bark, bark of *Drimys winteri*, an evergreen tree (family Magnoliaceae). W. B. resembles cinnamon, and is used as a tonic and as a spice.

Winterthur, industrial tn of Switzerland in the canton of Zürich, manufacturing textiles, locomotives, machinery, and cotton. The present tn was founded in 1180, and for 2 cents. it was under the Hapsburgs; in the 15th cent. it was sold to the city of Zürich. A good wine is produced in the neighbourhood. It has some fine medieval eccles. architecture, and some good civic buildings in the baroque style. Pop. (1957) 73,800, Ger.-speaking.

Winthrop, John (1588-1649), Eng. colonist, governor of the colony of Massachusetts (1630-34 and 1637-49), b. Edwardstone, Suffolk, and educ. at Trinity College, Cambridge, and at the Inner Temple. He sailed in the *Arbella* from Yarmouth to America with sev. hundred persons in 1630, and helped to found Boston. See his *Journal*, ed. by J. K. Hosmer, *The History of New England from 1630 to 1649*, 1853, and *Winthrop Papers*, 5 vols., 1929-47.

Winthrop, Theodore (1828-61), Amer. novelist, b. New Haven, Connecticut. Educ. at Yale, he met an early death in the Civil war. His novels, all pub. after his death, had great popularity. They

include *Cecil Dreeme*, 1861, *John Brent*, 1862, and *Edwin Brothertoft*, 1862. His *Life and Poems* were pub. by L. W. Johnson, 1884.

Winze, see MINING.

Wiping, see SOLDER and SOLDERING.

Wippendorf, see NEUMÜNSTER.

Wire Walker, see ACROBAT.

Wireless, see RADIOCOMMUNICATION; BROADCASTING.

Wireless Direction Finding, see DIRECTION-FINDING.

Wireless Telegraphy, system of radio-communication other than telephony. Intelligence is conveyed either by turning the transmitter carrier wave on and off in accordance with code symbols, by keying modulation on and off to a continuous carrier, by keying both carrier and modulation, or, finally, by carrier shift, i.e. moving the frequency of the carrier a few cycles for the positive code symbols. The codes used may be the International Morse Code or 5-unit teleprinter code for direct operation of teleprinter machines.

See MODULATION; POST OFFICE (TELEGRAPHS AND TELEPHONES); TELEGRAPHY.

Wireworm, see CLICK-BEETLES.

Wiring, Electric, see ELECTRICITY IN THE HOME.

Wirksworth, urb. dist. and mrkt tn of Derbyshire, England, 14 m. NNW. of Derby; it has lead mines, stone quarries, and manufs. of tape and holsery. St Mary's church dates from the 13th cent. Pop. 4927.

Wirral, peninsula of Cheshire, England. It is bounded by the Dee estuary on the W. and the Mersey estuary on the E. An electric railway provides a suburban service for Liverpool through the Mersey Tunnel. The coast of W. contains a number of seaside resorts. W. is also the name of a co. constituency, returning one member to Parliament.

Wisbech, mun. bor. of the Isle of Ely, Cambs, England, on the R. Nene, in the centre of an agric. and fruit-growing dist.; it has manufs. of agric. implements and engineering, beer, oil-cake, baskets, and there are tanning and preserving, timber, can-making, and printing industries. It is a port, vessels up to 2000 tons using it. There are some good examples of Georgian architecture in W. Pop. 17,400.

Wisby, see VISBY.

Wisard, Robert, see GUIRCARD.

Wisconsin: 1. N. central state of the U.S.A., the 'Badger State,' bounded N. by Michigan and Lake Superior, E. by Lake Michigan, S. by Illinois, SW. by Iowa and Minnesota, W. and NW. by Minnesota. It measures 300 m. N. to S. and 280 at the widest E. to W., and has an area of 56,154 sq. m. The St Croix II. and the Mississippi separate it from Minnesota and Iowa. Other rivs. are the Menominee (118 m. long to Green Bay, forming part of the Michigan state line), the Wisconsin (430 m. long from the N. edge of the state S. and SW. to the Mississippi R. opposite Iowa), the Chippewa (200 m. long to the Mississippi SW. of Eau Claire), the Fox (176 m. long to

Green Bay), and the Rock (from the neighbourhood of Fond du Lac to the Illinois border near Beloit). The largest interior body of water is Lake Winnebago (215 sq. m.). There are numerous small lakes; among the best known are Lake Geneva near the Illinois border, Lake Mendota at Madison, and Devil's Lake (with a state park) 40 m. NW. of Madison. W. is no longer heavily forested. Of mineral resources building stone (sandstone, granite, dolomite) is most valuable. Some iron is mined near Lake Superior, and zinc and lead are mined in the SW. corner. In agriculture W. is primarily a dairying state and ranks first in milch cows and the production of hay and of milk and cheese. It grows many vegetables, and cranberries, strawberries, and cherries. In industry the SE. is most important—Milwaukee, West Allis, Racine, and Kenosha—with meat packing and manufs. of automobiles and parts, machinery, fabricated metal products, and beer. There are plants for canning vegetables and fruits in many places. W. has 6300 m. of railways, 86,300 m. of roads, and 169 airports. It has 2 U.S. senators and 10 congressmen. The governor and the 100 state assemblmen are elected for terms of 2 years, the 33 state senators for 4 years. The first French explorer was Jean Nicolet, at Green Bay in 1634. Fur traders and missionaries followed; the first permanent mission was estab. a few miles up the Fox R. from Green Bay in 1671, and the first permanent settlement at Green Bay in 1701. England took W. with the rest of New France in 1763, and ceded it to the U.S.A. in 1783. It became a state in 1848. Among W. educational institutions are the univ. of W. at Madison (established 1848), with 14,000 students, and W. Inst. of Technology at Platteville. Pop. 3,434,600. The largest city is Milwaukee (637,400); other important cities are Madison (the state cap., 96,100), Racine, Kenosha, Green Bay, La Crosse, Sheboygan, and Oshkosh. See R. G. Thwaites, *Wisconsin*, 1908; C. McCarthy, *The Wisconsin Idea*, 1912; E. A. Fitzpatrick, *Wisconsin*, 1928; Federal Writers' Project, *Wisconsin: A Guide to the Badger State*, 1941.

2. Riv. of Wisconsin, U.S.A., 430 m. long, rising in the lake area near the Michigan boundary, and flowing S. and SW. to the Mississippi R. 60 m. below La Crosse. The Portage Canal connects it with Fox R. and Lake Michigan. On it are the famous Dells of the W. and many hydro-electric plants.

Wisden Cricketers' Almanack, ann. handbook dealing with cricket and cricketers. It was first issued in 1864 by John Wisden (1826-84), a cricketer and sports outfitter. It records all scores, averages, and descriptions of first-class matches played in the preceding year and all overseas tours of the penultimate season. There are summaries of important public-school and second-class co. matches. Historical details and statistics cover every aspect of the game, and other articles include the *Five Cricketers of the Year*.

Wisdom, Norman (1920-), actor, comedian, and vocalist, b. London, married Freda Simpson. He served in the Army and made his first stage appearance at Collins' Music Hall in 1946 as a comedian. He continued in variety and concert parties and in pantomime, and appeared in a revue at the Cambridge Theatre, *Sauce Piquante*, 1950. His rise to fame was speedy, and he never looked back. He has starred at the London Palladium in revue and in pantomime and also in big ice shows. He entered films in 1953, and has also done much broadcasting and television work. He has a good singing voice, and his strength is that he is the poor, downtrodden little man with the big heart and determined will—a character always popular. He is also an accomplished tumbler.

Wisdom, Book of, see ECCLESIASTICUS; PROVERBS, BOOK OF; SOLOMON, THE WISDOM OF.

Wise, Thomas James (1859-1937), book collector, bibliographer, and forger. His extensive forgeries of 'rare originals,' perpetrated over a period of 20 years, were exposed in 1934 by John Carter and Graham Pollard (see their *Enquiry into the Nature of Certain Nineteenth Century Pamphlets*, 1934). W. achieved great fame as a book collector, and his Ashley Library, catalogued in 11 vols., is now in the Brit. Museum. This collection of the works of the Eng. poets formed the basis for his numerous bibliographies ranging from Wordsworth to Conrad, still of great value as works of reference. See W. Partington, *Thomas J. Wise in the Original Cloth*, 1947. See also LITERARY FORGERY.

Wiseman, Nicholas Patrick Stephen (1802-65), Rom. Catholic prelate, b. Seville. His father was descended from an anct Eng. family, but had settled as a merchant in Waterford. W. was educ. for the priesthood at Ushaw and in Rome, and became rector of the Eng. college at Rome. He was nominated first Archbishop of Westminster and cardinal in 1850 on the re-stab. of the Rom. Catholic hierarchy in England by Pius IX. He was a distinguished scholar, and as such had a special sympathy with the writers who inaugurated the Oxford movement (q.v.). It was an essay of W.'s on the Donatists (q.v.), in the *Dublin Review*, of which he was one of the founders, which first shook Newman's belief in the soundness of his Anglican position. See Lives by W. Ward, 1897, and D. Gwynn, 1929.

Wishart, George (c. 1513-46), Protestant martyr and reformer. He was early accused of heresy in Scotland, and then travelled on the Continent. He returned to Scotland (1543), preaching Lutheran doctrines and found ardent supporters. Through the enmity of Cardinal Beaton W. was arrested at Ormiston (1545), and burnt at St Andrews on a charge of heresy.

Wishaw, in Lanarkshire, Scotland, 3 m. from Motherwell, with which it became amalgamated to form a joint burgh in 1920. There are blast furnaces, iron and

steel engineering, and railway wagon works. Preserves, confectionery, and textiles are manufactured. Pop. (with Motherwell) 69,600.

Wista, *see* VISTULA.

Wisley (and W. Common and Lake), beauty spot in Surrey, England, between Cobham and Ripley, in which the Fellows' garden of the Royal Horticultural Society is situated.

Wissembourg (Ger. Weissenburg), Fr. tw. cap. of an arron., in the dept of Bas-Rhin, on the Lauter. It was a free Ger.

has remained, but the singular form has changed its sense to quickness of mind, thence to the power of joining ideas in an unusual and humorous way, until now W. is almost synonymous with humour and satire. Strictly speaking, it is not essentially humorous; Hazlitt remarked that lying was a species of W. It is the power to make an intelligent remark arising out of the situation or circumstance; the fact that such apt remarks are usually humorous has led to the narrower meaning, i.e. humorous repartee.

'The Times'

THE LAKE, WISLEY GARDENS, SURREY

city until the end of the 17th cent., when it was ceded to France. The first battle of the Franco-Prussian War was fought here, when the Crown Prince of Prussia defeated the greatly outnumbered Fr. troops under Gen. Douay. There was bitter fighting here in the Second World War (*see* WESTERN FRONT IN SECOND WORLD WAR). There are hosliery and leather manufs. Pop. 4800.

Wisteria, genus of leguminous climbing plants, including *W. sinensis*, the Chinese kidney bean, a popular variety grown on walls, trellis, or garden arches. It has silky, pinnate leaves, and deep lilac flowers in long racemes in May: *W. floribunda* has a white form; and *W. venusta* bears white flowers.

Wit (O.E. *witan*, to know), originally meant simply intelligence and the power to know. In the plural, this meaning

Since the time of Pope, England has been rich in recorded and transcribed W., from Boswell's meticulous reporting of Johnson to the many legends built around Bernard Shaw.

Witangemot (Saxon, *witan*, to know, and *gemot*, assembly), in A.S. times the national Council, consisting of members of the royal family, the archbishops, bishops, abbots, ealdormen, and king's thanes. Its origin is obscure. Stubbs considered that it derived from the Teutonic assembly of freemen described by Tacitus, but this view has been challenged by more modern historians. The *de jure* powers of the W. were very great, but were practically limited by a strong king or ruling clique.

Witch Doctor, or Medicine Man, a practitioner devoted to combating evil, witchcraft, and sickness, found in many

primitive societies throughout the world. He is usually trained with long and elaborate initiation.

Witch-Hazel, genus *Hamamelis*: specifically *H. virginica*, N. Amer. shrub resembling the hazel. It is a shrub between 8 and 12 ft high, with oval leaves and clusters of yellow flowers, blooming in autumn and winter, whence the alternative name Winter Bloom. The bark and leaves have an astringent property useful in medicinal preparations.

Witchcraft includes, broadly, any claim to a power to produce effects by compact with a supernatural power. In Europe W. cults may go back to a fertility cult or group of cults indigenous to Europe since palaeolithic times, its chief festivals being held at Candlemas, May Eve, Lammas, and Nov. Eve. The few direct accounts of its ritual which survive show that a horned god symbolising the fertility of cattle, sheep, goats, or occasionally deer was venerated, and that the local leader of the cult impersonated, and was regarded as the incarnation of, this god. This explains Christian traditions of a 'devil' with horns and tail. Such ceremonies are depicted in the palaeolithic cave-murals of Altamira, Ariège, etc. The object of the seasonal rites was probably to promote fertility by sympathetic magic. In the course of time the original cult received the accretion of discarded beliefs from other cults which tended to obscure its origins. At times it appears to have coalesced with Christian heresies (e.g. certain deviations of the Catharists) and occasionally to have attracted distinguished followers from the ruling Christian class. Possible examples are Wm Rufus and Gilles de Rais, the patron of Joan of Arc (who was accounted a witch).

By the time of the Reformation, W. had assumed the form of a secret society organised in 'covens' or groups of 13 members of both sexes, of which the leader was always a man. By this time it is unlikely that there were many people who believed in the cult; and what had once been a serious enemy of the Church now remained only as a convenient scapegoat, both religious and political. As members of a secret society 'witches' could equally easily be denounced on charges of treason, heresy, or demonolatry. Eng. laws against witches are known from the time of Canute, and eccles. and secular courts had concurrent jurisdiction in cases of W. The former punished by penance and fine up to 1542, when W. was made a common felony (it was already indictable at common law). Written evidence concerning W. trials as far back as the Middle Ages is copious but must be read with extreme care. Very frequently it was taken down by persons who did not understand the implications of what the accused and witnesses said. The earliest reported trial in England before a secular court was in 1324; in that year occurred the famous trial before the Bishop of Ossory of Dame Alice Kyteler (*consult* report by Thomas Wright in the pub. of the Cam-

den Society). Apart from the statutes passed in 1542 and 1562, the Act of 1601, defining and prescribing the punishment for W., remained the prin. Act concerning W. up to the Act of 1736. Under all these Acts the prosecution had to prove that injury to person or property had been done or attempted (but not in the case of love philtres), or that gain had been made. Trials for W. were most numerous in the 17th cent., when the final crisis of W. in Britain took place.

In the hundred years following the accession of James I (himself a devout believer in 'Demonologie') a profound change in the attitude of the educ. classes towards 'witches' occurred, which can best be indicated by saying that whereas a humane and intelligent justice under Elizabeth I could condemn a proven 'witch' to the stake or the pillory for a crime against God and man, a humane and intelligent justice under Anne would on the same evidence either dismiss the case or sentence her to prison for a special type of fraud. The most instructive case reported in the *State Trials* is that of the Suffolk witch at Bury St Edmunds in 1644-5 (*consult* State Trials, vol. vi, p. 647).

By the time of Queen Anne, organised 'covens' of witches had ceased to exist, and the public attitude towards them became less violent, not so much because people became more enlightened as because the element of fear had diminished, the surviving witches being so obviously both mentally and physically impotent for good or harm. The last recorded conviction in England was that of Jane Wenham of Walkern in Herts (1712), but a woman was actually burned alive in Sunderland as late as 1722. As the law now stands any person pretending to use W., tell fortunes, etc., may under the Act of 1736 be imprisoned for a year. Proceedings may also be taken under the Vagrancy Act of 1824 (*see* VAGRANTS).

W. today is found flourishing in many societies, and especially those we call 'primitive.' Modern anthropological studies of W. have shown that witches may not exist in reality, but what is important socially is the belief and the accusations of W. made by one man against another. Witches bewitch those against whom they bear a grudge and against whom they cannot, for one reason or another, bring the ordinary processes of law to act. A man usually believes that his bewitcher is one who is generally disliked, who is a deviant from everyday social behaviour, who is exceptionally wealthy or successful, who has cause to bear grudges. An accusation of W. is a way of personalising misfortune; the accuser then knows how to act against his misfortune, by killing or punishing a supposed witch or by bewitching him in his turn by white magic. In many societies witch-doctors are used to fight against W., and are therefore seen as devout helpers of the social good. An excellent description is given in E. E. Evans-

Pritchard's *Witchcraft, Oracles and Magic among the Asandé*, 1937.

See also MAGIC. See R. Soot, *Discoverie of Witchcraft*, 1584; Ponzinibius, *De Lamiis*, 1592; Wierus, *De Lamiis*, 1577-79; H. Hoquet, *Discours des sorciers*, 1603; Gauscius, *Compendium de Maleficiis*, 1626; T. Potts, *Discovery of Witches in the County of Lancashire*, 1845; Margaret A. Murray, *The God of the Witches*, 1921, 1932. *The Witch Cult in Western Europe*, 1933, and *The Divine King in England*, 1954; H. Ross Williamson, *The Arrow and the Sward*, 1947; R. Trevor Davies, *Four Centuries of Witchcraft Beliefs*, 1947; R. Graves, *The White Goddess*, 1948; P. Hughes, *Witchcraft*, 1952.

Witham: 1. Tn and urb. dist. of Essex, England, on Brnln R. There are anct earthworks round the church of St Nicolas, which contains interesting monuments. Industries include the manuf. of metal windows, gloves, fruit juices, and feeding stuffs; there is milling, seed-growing and malting. Pop. 6200.

2. Riv. rising in Rutland, England. It flows past Grantham and Lincoln, and then SE. past Tattershall and Boston into the Wash above Welland R.

Wither, or **Withers**, George (1588-1667), poet, b. near Alton, Hants. Educ. at Oxford, he studied law at Lincoln's Inn. In 1613 he pub. a bold satire, *Abuses Script and Whipt*, which earned him imprisonment in the Marshalsea. While there he wrote *The Shepherd's Hunting*, a pastoral. *Wither's Motto* was written in 1618, and in 1622 he collected his poems as *Juvenilia*. In the same year he pub. a long poem, *Faire l'Virtue, the Mistress of Philarede*, in which appears the famous lyric 'Shall I wasting in despair.' He joined the parl. side in the Civil war, and at the Restoration was imprisoned for a time. In his later years he wrote many religious poems.

Withering, William (1741-99), physician, b. Wellington, Shropshire, graduated in medicine at Edinburgh, 1766, and practised at Stafford and later at Birmingham. He learned from an old woman her secret recipe for dropsy; its principal constituent was the foxglove, *Digitalis purpurea*. He began to use the remedy in his practice and after 10 years pub. *An Account of the Foxglove, and Some of its Medical Uses*, 1785; facsimile reprint, 1948. Before his time digitalis was occasionally mentioned, but it was due to W. that its action in dropsy and on the heart became generally recognised; it is now one of the most important remedies in certain heart diseases. W. also wrote an important botanical work, *A Botanical Arrangement of all the Vegetables Naturally Growing in Great Britain*, 1776-92, and a treatise on scarlet fever, 1779. See life by T. W. Peck and K. D. Wilkinson, 1950.

Withington, residential dist. of Manchester (q.v.).

Witness, see EVIDENCE; OATH.

Witney, mkt. tn and urb. dist. of Oxon, England, on the Windrush, 10 m. from Oxford. It is famous for blanket making. It also manufs. gloves and other

woollen goods. Among its fine public buildings are a 13th-cent. cruciform church (restored 1867), the grammar school (1683) and Blue Coat School (1723). The small roofed open-air shelter known as the Butter Cross which stands close to the tn hall replaces the old Butter Cross which formerly stood on this site. An inscription on it states that it was erected in 1683 by Wm Blake, a Cogges gentleman. It was provided with a sundial which is still there. A clock has been added more recently. See hist. of W. by J. A. Giles, 1852, and W. J. Monk, 1894. Pop. 7000.

Witt, Cornelius, and Jan De, see DE WITT.

Witte, Sergey Yul'yevich, Count (1849-1915), Russian statesman of Ger. origin. He made a successful career as a railway manager, in 1892 became minister of transport, and from 1892 to 1903 was minister of finance, greatly stimulating the industrial development of Russia through protectionist tariffs, large foreign loans, extensive railway construction, etc. From 1903 to 1906 he was Prime Minister. He negotiated the Portsmouth peace treaty with Japan, and suggested to Nicholas II (q.v.) the granting of a constitution providing for a legislative Duma (see DUMA; REVOLUTION of 1905). A moderate conservative, W. incurred the suspicion of both the Liberals and the extreme Right, including the emperor, who suddenly dismissed him. Later, as an independent member of the State Council, W. opposed Stolypin (q.v.), though the latter was largely continuing his own policy.

Wittenberg, Ger. tn in the dist. of Halle, on the Elbe (q.v.), 40 m. NE. of Halle (q.v.). It was the cap., 1273-1422, of the duchy of Saxe-W. It was one of the strongholds of the Reformation (q.v.), and it was on the door of its 15th-cent. Schlosskirche that Luther (q.v.) nailed his 95 Theses on 31 Oct. 1517; in 1520 he publicly burnt in W. mkt.-place the papal bull which condemned him. The univ. of W., founded in 1502, was incorporated with the univ. of Halle in 1817. There are sev. anct houses, including those of Luther, Melancthon, and Lucas Cranach (qq.v.). Paper, machinery, chemicals, and foodstuffs are produced. Pop. 40,000.

Wittenberge, Ger. tn in the dist. of Schwerin, near the Elbe (q.v.), 45 m. SSE. of Schwerin (q.v.). It has textile, rolling-stock, and oil industries. Pop. 30,000.

Witwatersrand, full name of the dist. in the Transvaal, S. Africa, known for its goldfields, usually known as the Rand (q.v.). It is also more exactly applied to the area which contains the gold reefs, meaning Ridge of White Waters.

Witworth, Matthew, see AYLMER, BARON.

Witz, Konrad (c. 1395-1447), Swiss painter, b. Rottweil, son of a painter employed by the Duke of Burgundy. He went with his father to France and Flanders and was influenced by the Burgundian school. He worked mainly at Basel, where one of his famous altar-

pieces remains; he is also noted for his 'Miraculous Draught of Fishes', 1444 (Geneva), in which the landscape background is said to be the earliest European rendering of a real, and still existing, view.

Wiveliscombe, mkt tn and par. of Somerset, England, 11 m. from Taunton (q.v.). There are ruins of a 14th-cent. episcopal palace. It is an agric. centre. Pop. 1200.

Woad, or *Isatis tinctoria*, cruciferous herb, with yellow flowers and pendulous pods. It was formerly cultivated extensively for the blue dye which it yields by fermentation of the leaves, and is still grown to a small extent. The dye was used by the anc. Britons.

Woburn: 1. Mkt tn of Beds, England. It contains Woburn Abbey, the seat of the Earls and Dukes of Bedford (since 1547), on the site of a Cistercian abbey (1145), the present building dating from 1744. The abbey stands in W. Park, and has a valuable art collection. Straw-plaiting was formerly carried on here. Pop. 950.

2. City of Middlesex co., Massachusetts, U.S.A., 10 m. from Boston. Manufs. include leather, chemicals, fertiliser, food products, and machinery; floriculture is also practised. Pop. 20,490.

Woburn Sands, par. of Buckinghamshire, England, 4 m. N.E. of Fenny Stratford, in the rural dist. of Newport Pagnell. It stands 500 ft above sea-level on sandy, pine-covered hills, and is a well-known health resort. Pop. 1500.

Wodehouse, John, see **KIMBERLEY**, JOHN WODEHOUSE, first KARL OF.

Wodehouse, Pelham Grenville (1881-), novelist, b. Guildford, Surrey. Educ. at Dulwich College, he worked for 2 years in a bank. An early success was *Piccadilly Jim*, 1918, but he became most famous through his creation of Jeeves, the 'gentleman's personal gentleman,' who appears in many books, including the *Jeeves Omnibus*, 1931. Among his best are *Leave It To Psmith*, 1923, *Ukridge*, 1924, *Sam the Sudden*, 1925, *The Small Bachelor*, 1927, *Summer Lightning*, 1929, *Lord Emsworth and Others*, 1937, *Full Moon*, 1947, and *Pigs Have Wings*, 1952. W.'s humour is farcical rather than satirical. He also wrote lyrics for many musical comedies. In 1955 he became an Amer. citizen.

Woden, see **ODIN**.

Woerth (Ger. *Wörth*), Fr. vil. in the dept of Bas-Rhin, on the Sauer, site of a Fr. defeat in 1870 (see **FRANCO-PRUSSIAN WAR**). Pop. 1200.

Woestijne, Karel Van de (1878-1929), Flem. author b. Ghent. At first a journalist, he became prof. at Ghent in 1919. He is one of the outstanding modern poets of the Low Countries. There is a clear influence of the Fr. symbolist movement, especially in his early works. His autobiographical vols. of verses, including *Hel Vader-Huis*, 1903, *De Gulden Schaduw*, 1910, *De Modderen Man* (1920), *God aan Zee*, 1926, and *Het Bergmeer*, 1928, are sensitive analyses of his tortured soul transposed to the human plane. Some

of his lyrical prose has been trans. into French, German, and English. His collected works were pub. in Brussels in 1947. See study by U. van de Voorde, 1934; G. van Severn, *K. v. de Woestijne*, 1944; A. Westerlinck, *De psychologische figuur van K. v. de Woestijne*, 1952.

Woffington, Margaret, or Peg (c. 1714-60), Irish actress, b. Dublin. She played in Dublin from 1732 to 1740. Her London début was at Covent Garden under Rich. in *The Recruiting Officer*, 1740. She excelled in comedy as a lady of high rank (Lady Plyant, Lady Betty Modish, Millamant, etc.), but also acted in tragedy. See C. Reade, *Peg Woffington*, 1853. See also life by J. A. Dally, 1888.

Wöhler, Friedrich (1800-82), Ger. chemist, b. Eschersheim. He studied medicine at Marburg and Heidelberg, completing his chemical studies under Berzelius (q.v.) at Stockholm. From 1836 he was prof. of chemistry in the medical faculty of Göttingen Univ. His discovery of cyanic acid and the preparation of urea from it was his first entry into the realm of organic chemistry. His researches in conjunction with Liebig (q.v.) on cyanic and cyanuric acid founded the theory of isomerism; their joint work led to the discovery of the benzoyl radical. W.'s work on another side led him to the isolation of the elements aluminium, beryllium, yttrium, and titanium. For the philosophical importance of Wöhler's work in relation to the 'Vital Force' theories of the 18th and 19th cents, see **UREA**. Amongst his writings are: *Grundriss der unorganischen Chemie*, 1831; *Grundriss der organischen Chemie*, 1832; and *Praktische Übungen in der chem. Analyse*, 1854. See memorial study by A. Hofmann, 1888.

Wöhler Test, see **METAL TESTING**.

Woking, urb. dist. of Surrey, England, largely residential, with many ac. of commons and parks. There is a Muslim Mission and Literary Trust, which includes a mosque (1889). The dist. consists of a number of attractive vills.: Brookwood (widely known for the London Necropolis Cemetery), Byfleet, Horsell, Knaphill, Old Woking, and Pyrford. Near by are the ruins of the Early Eng. Newark Priory. There are printing and light industries. W. is a parl. constituency. Pop. 52,780.

Wokingham (Oakingham or Ookingham), municipal bor. of Berkshire, England, chief forest in of Windsor Forest, and a mkt centre for over 700 years. There are an anct par church, a Gothic tn hall (1860), and the famous Rose Inn, where Pope, Swift, Gay, and Arbuthnot composed the ballad of *Molly Mog*. Some of the almshouses date from 1451. W. was noted for bull-baitings till about 1821. Pop. (estimated) 9000.

Wolcott, John (1738-1819), satirist, b. near Kingsbridge, Devon. He studied medicine at Aberdeen Univ. He wrote satires and lampoons under the pseudonym of 'Peter Pindar,' which were popular in their day.

Wold, term applied to open, hilly

country. It is used specifically of certain areas in England to which this description applies, e.g. Yorkshire Wolds, Cotswolds.

Woldingham (Surrey) Convent of the Sacred Heart, Catholic boarding school for girls, formerly at Roehampton. It is staffed by Religious of the Sacred Heart.

Wolf, Friedrich August (1759-1824), Ger. classical philologist and critic, b. Hagenrode; prof. at Halle in 1783 and at Berlin in 1810. He is best remembered for his *Prolegomena ad Homerum*, 1795, in which he denied the unity of Homeric authorship. See O. Kern, *Friedrich August Wolf*, 1924.

Wolf, Hugo (1860-1903), Austrian composer, b. Windischgraz. He studied at Vienna Conservatory, where he made the acquaintance of Gustav Mahler. His life was outwardly uneventful but very restless, and was passed in great poverty. W. wrote an opera, *Der Corregidor*, 1895, but it was a failure; and his 2 choral works with orchestra, *Die Christnacht* and *Der Feuerreiter*, are seldom heard; but he is justly famous for his splendid songs, which number over 200, including musical settings for poems of Goethe, Eichendorff, Mörike, and other poets. They rank with the supreme examples of the Ger. Lied. W. d. insane. See lives by E. Newman, 1907; K. Grunsky, 1928; A. Orel, 1947; Frank Walker, 1951.

Wolf, Maximilian Franz Joseph Cornelius, always known as Max Wolf (1863-1932), Ger. astronomer, b. Heidelberg. He studied at Heidelberg and later Stockholm, where he took mathematical astronomy under Gylden. While still a student he discovered in 1884 the comet that now bears his name. He was the first to apply photography to the discovery of asteroids, and about 1300 of these bodies were found by him. His photographs of the Milky Way, his discovery of many nebulae, including a cluster of 108 faint nebulae in the constellation of Coma, and of another group in Virgo, of the absorbing interstellar matter, of variable stars, and a temporary star in Aquila in 1927, made him famous.

Wolf, Rudolf (1816-93), Swiss astronomer, b. Zürich. He is famous for his work on sunspot cycles. He confirmed the work of Schwabe (q.v.) on the 11-year period, and afterwards fixed it more accurately at 11.1 years. The Wolf Relative Number Curve has proved very useful.

Sunspots (q.v.) occur in groups. If at any time there are g such groups, and there are, all together, f individual spots, then W.'s relative number is

$$r = k(10g + f)$$

where k is a constant which varies from observatory to observatory. For each observatory k has a fixed value. For the Mount Wilson Observatory (q.v.), California, U.S.A., $k = 0.5$. The W. number r is plotted against time and gives an indication of the sunspot activity. This activity is found to be cyclic.

Wolf. The various species of W. are included with the dogs, jackals, and foxes in the genus *Canis* of the family *Canidae* in the order *Carnivora*. The W.s, dogs, and jackals are all closely similar, and are distinguished from the foxes by some characteristics of the skull. The European W., *Canis lupus* (*Lupus vulgaris*) was widespread in Great Britain in Saxon times; it persisted in England until the reign of Elizabeth I, and even later (1743) in Scotland and (1770) in Ireland. Its present distribution is Europe, N. Asia, and N. America. Other W.s are *Canis pallipes* of India, *Lupus mexicanus* of the S. states of N. America, and *Lyciscus caagottus*, the cagotte of Mexico. The Dingo, *C. dingo*, is a destructive W. or dog of Australia; whether it is indigenous or was introduced by the natives is not known with certainty. The Prairie W. or Coyote is *C. latrans*; the jackals are *C. aureus* and *C. anthus*.

Wolf, Tasmanian, see THYLACINE.

Wolf Cubs, see BOY SCOUTS.

Wolf-Ferrari, Ermanno (1876-1948), Ger.-It. composer, b. Venice and educ. at Munich, where he settled (1909). He is the composer of sev. successful operas, including the realistic *I gioielli della Madonna*, 1911, and *Sty*, 1927, which throws a new psychological light on the induction of *The Taming of the Shrew*; but it was the light and graceful *Il segreto di Susanna*, 1909, and comic operas based on Goldoni, *Le donne curiose*, 1903, *I quattro rusteghi*, 1906, *Gli amanti sposi*, 1925, *La vedova scaltra*, 1931, and *Il campicello*, 1936, which found favour both in Germany and Italy.

Wolf-fish, or **Sea-wolf**, see ANARRICHAS.

Wolf Rock, rock about 117 ft high, 8 m. from Land's End, Cornwall, England, with a lighthouse.

Wolfe, Charles (1791-1823), clergyman and poet, b. Dublin. Educ. at Winchester and Trinity College, Dublin, he became rector of Donoughmore. He is remembered for one short but universally admired poem, 'The Burial of Sir John Moore.'

Wolfe, Humbert (1885-1940), Brit. poet and critic, b. Milan of Jewish descent. Educ. at Bradford Grammar School, and Wadham College, Oxford, he entered the Civil Service in 1908 and was prin. assistant secretary at the Ministry of Labour from 1918. He was made C.B. in 1925. His poetic works include *Kensington Gardens*, 1923, *The Unknown Goddess*, 1925, *Humoresque*, 1926, *News of the Devil*, 1926, *Requiem*, 1927, *The Silver Cat*, 1928, *The Blind Rose*, 1928, *The Uncles' City*, 1930, and *Kensington Gardens in War Time*, 1940.

Wolfe, James (1727-59), soldier, b. Westerham, Kent, and educ. at Greenwich. He joined the Army in 1741, he and his brother, Edward, taking part in the battle of Dettingen (1743). In 1745 W., now a lieutenant, was sent to Scotland under Cumberland to assist in crushing the rebellion in support of the Young Pretender. During the Seven Years' War W. had charge of Britain's operations in

America under Amherst. In 1758 the task was assigned to W. of taking Louisbourg, and this he accomplished successfully in July. In 1759 he was given the command of the expedition against Quebec, and on 26 June began the 12 weeks' siege. The first attempt at assault on 31 July failed. Later, by distracting the attention of the French by surprise attacks in other quarters, and by using an unguarded path, W. in a night assault succeeded in placing an army on the heights called the Plains of Abraham. Marquis de Montcalm, the Fr. commander, at once gave battle. The English were victorious, and W., 3 times wounded, died in the hour of victory. See lives by B. Willson, 1909; E. Solmon, 1909; W. T. Waugh, 1929; F. E. Whitton, *Wolfe and North America* 1929. See also CANADA; SEVEN YEARS' WAR.

Wolfe, Thomas Clayton (1900-38), Amer. novelist, b. Asheville, N. Carolina. Educ. at the Univ. of N. Carolina and Harvard, he was instructor in Eng. at New York Univ. from 1924 to 1930. He started writing while on a visit to England in 1926, his work being largely based on his own experiences; it was most voluminous, and called for much pruning and editing. *Look Homeward, Angel*, 1929, had a great reception, and was followed by *Of Time and the River*, 1935, *The Web and the Rock*, 1939, and *You Can't Go Home Again*, 1940. All these novels display great power and realism, while *The Story of a Novel*, 1936, is an intimate study in self-analysis. W.'s *Letters to his Mother* were pub. in 1943. See studies by H. J. Muller, 1947; Pamela H. Johnson, 1947; R. Walser, 1953; T. C. Thomas and O. Cargill, 1954.

Wollenbüttel, Ger. tn in the Land of Lower Saxony (q.v.), on the Oker, 7. m. S. of Brunswick (q.v.). It was formerly the seat of a branch of the ducal family of Brunswick, and was the scene of a Swedish victory over the Austrians during the Thirty Years' War (1641). There are fine old churches and houses, and a castle (1570-1691). The library, in which Lessing (q.v.) worked, is rich in MSS. The chief industry is canning. Pop. 35,000.

Wollenden, Sir John Frederick (1906-), educationist, b. Halifax, educ. at Wakefield School and Queen's College, Oxford. In 1934 he became headmaster of Uppingham School, and in 1944 went as headmaster to Shrewsbury School. In 1941 he was director of pre-entry training at the Air Ministry. He was appointed vice-chancellor of Reading Univ. in 1950 and was knighted in 1956. In the same year he was appointed chairman of the Departmental Committee on Homosexual Offences and Prostitution, the so-called W. Report was pub. in Sept. 1957.

Wolfgang, St (924-994), Ger. Benedictine monk and missionary, b. Swabia and educ. at Leichenau Abbey. He became a Benedictine at Einsiedeln, and made the abbey school there famous. In 972 he became Bishop of Ratisbon. He restored abbeys, raised the standard of education, and reformed eccles. discipline.

W. was canonised in 1052; his feast is on 31 Oct.

Wolfhound, Irish, see IRISH WOLF-HOUND.

Wolfhound, Russian, see BORZOI.

Wolfit, Sir Donald (1902-), actor-manager, b. Newark-on-Trent. He began his career as a touring actor, and was for some time with Fred Terry and Julia Neilson. He also gained much experience with Matheson Lang. An actor of great power and force, he found his best outlet in the tragedies of Shakespeare and the Gk drama, and founded his own Shakespearean company, touring it for years with success. He is the finest exponent of the part of 'Lear' the stage has seen for many years. He has also made many successful films. He is almost the last exponent of what is called the grand manner, and his work is both powerful and compelling. Knighted in 1957.

Wolfram, von Eschenbach (c. 1170-c. 1220), Ger. poet, b. of a noble Bavarian family. Little is known of his life, except that he lived at the court of Hermann of Thuringia. He is one of the greatest medieval Ger. poets, possessing a great sense of humour, and an unusual erudition, although he professed to be a knight and not a scholar. His most famous work is the courtly romance *Parzival*, c. 1200-10, a deep, philosophical interpretation of the Holy Grail. He also wrote lyrics of great beauty; an incomplete romance *Wilhelm*, c. 1212-5; and fragments of *Titurel*. His works have been ed. by Lachmann-Hartle, 1930, and Leitzmann, 1900-3, and trans. by J. Weston, 1894. See life by G. Weber, 1928; B. Mergell, *Wolframs Parzival*, 1943.

Wolframite, mineral from which the metal tungsten (q.v.) is extracted. Chemically it is a mixture of iron and manganese tungstates, (FeMn)WO₄. It occurs in dark-brown to black crystals with yellow-brown to black streaks and is widely distributed, the chief localities being the U.S.A., Malaya, and Spain.

Wolf's Bane, see ACONITUM.

Wolfville, tn in King's co., Nova Scotia, Canada, 18 m. NW. of Windsor. W. is a centre for a rich mixed farming and fruit-growing area, and the site of Acadia Univ. Pop. 2313.

Wolgemuth, Michael (1434-1519), Ger. painter, b. Nuremberg. He was the leader of the Nuremberg school, which was largely a factory for the manu. of altar-pieces. W.'s pupil, Dürer, was the only artist of note to issue from his studio.

Wollaston, William Hyde (1766-1828), natural philosopher and chemist, b. E. Dereham, Norfolk, educ. Charterhouse. He took his medical degree at Calus College, Cambridge, and practised at Bury St Edmunds. Later he turned his attention to chemistry, particularly in connection with platinum, palladium, and rhodium, and to optical invention. He received the medal of the Royal Society, of which he was elected fellow in 1794, for his method of manufacturing platinum and rendering it available for

instruments (particularly crucibles). He is noted as the inventor of the camera lucida, the goniometer and the cryophorus (q.v.), and for the discovery of dark lines on the solar spectrum, 1802, now known as Fraunhofer lines (q.v.).

Wollongong, city of New S. Wales, Australia, situated on the coast about 51 m. S. of Sydney. It is the prin. residential area and business centre of the Illawarra dist. (q.v.). There are sev. rapidly expanding industries in the neighbourhood, including iron and steel, copper, fertilisers, oxygen and acetylene, boat building, and coal mining. Greater W., which includes Port Kembla (q.v.), has a total pop. of 95,830.

Wollos, see GALLAS.

Wollstonecraft, Mary, see GODWIN.

Wolseley, Garnet Joseph Wolseley, Viscount (1833-1913), soldier, b. Golden Bridge, co. Dublin, of an old Staffordshire family. He was educ. privately and entered the Army in 1852. A long career of active service commenced with the Burmese War of 1853. He served in the Crimea, with the 90th Light Infantry. He was present at the relief of Lucknow and at other engagements in the Indian mutiny, becoming lieut.-col. at the close of the war. He commanded the Canadian Red R. expedition of 1870, and took part in the Ashanti War of 1873, receiving the thanks of Parliament. In Egypt he won the Battle of Tel-el-Kibir in 1882, and commanded the expedition which attempted to relieve General Gordon in 1884-5. He was made Adjutant General in 1885 and initiated an active reform policy. (He was the prototype of Gilbert's 'Modern Major General' in *The Pirates of Penzance*.) He became commander-in-chief in Ireland in 1890, was made F.M. in 1894, and from 1895 till 1900 was commander-in-chief of the forces. Viscount, 1885. His last years were clouded by mental illness. See his *Story of a Soldier's Life*, 1903; Maj.-Gen. Sir F. Maurice, *Life of Lord Wolseley*, 1924.

Wolsey, Thomas (c. 1475-1530), cleric and statesman, b. Ipswich, the son of a grazier, and said to have been educ. at Magdalen College, Oxford. He took holy orders, was presented to the living of Limington in 1500, and in the next year was appointed domestic chaplain to Henry Deane, Archbishop of Canterbury. Henry VII made him one of his chaplains in 1507, and preferments followed rapidly. He was made dean of Lincoln in 1509, canon of Windsor in 1511, dean of Hereford in 1512, and of York the next year, Bishop of Lincoln in 1514, and later in the year Archbishop of York. Leo X. created him a cardinal in 1515. He had for some time been in the confidence of Henry VIII and had been consulted by the king on temporal matters. It was said that his magnificence outshone the king's, and that, as lord chancellor, he made the Star Chamber more important than the king's court; but in fact it seems that he was always the adviser, and never the dictator, of the young monarch. He directed the plan of campaign against

France in 1512, arranged the treaty of 1512 with that country, and accompanied Henry to the Field of the Cloth of Gold. In 1520, when Charles V became Holy Roman Emperor, W. reversed his policy of alliance with France, and in 1521 entered into an alliance with Charles against Francis, who was defeated at Pavia. W.'s policy was in fact purely opportunist, the constant factor being his wishes to make Eng. influence felt abroad, and to satisfy his own ambition by gaining the papal throne, in which position he would also be able to influence international events in England's favour.

Though opposed to Anne Boleyn, W. conducted negotiations with Clement VII for the annulment of Henry's marriage with Catherine of Aragon (1527) and sat as a judge at the hearing with Campeggio. His failure to solve this question satisfactorily led to his fall from favour. He was indicted in 1529, but pardoned the following year. In the last year of his life he was arrested for high treason, and died on his way to London to refute the charge. W. was undoubtedly arrogant and avaricious, while his diplomatic triumphs were short-lived and gained at immense cost. He was, however, a good organiser, and dispensed justice in his courts with a fairness which won him enemies among the rich. He was a patron of learning: his foundation, Cardinal College, at Oxford, became Christ Church. Though personally worldly, he attempted to make administrative reforms in the Church, and, after his fall from power, administered his diocese of York carefully and well. See lives by M. Creighton, 1888, and A. F. Pollard, 1929.

Wolsingham, tn of co. Durham, England, in an agric. dist., it has steel works and stone quarries. Pop. (estimated) 3000.

Wolstan, see WULFSTAN, ST.

Wolstanton, see NEWCASTLE-UNDER-LYME.

Woluwe-Saint-Lambert (Flem. Sint-Lambrechts-Woluwe), E. suburb of Brussels, Belgium. Pop. (1955) 32,100.

Woluwe-Saint-Pierre (Flem. Sint-Pieters-Woluwe), SE. suburb of Brussels, Belgium. Pop. (1955) 25,700.

Wolverene, see GLUTTON.

Wolverhampton (Handone, Wulfrunahampton), co. and parl. bor., second largest tn in Staffs, England, 13 m. NW. of Birmingham. St Peter's Church was founded in 894, and certain of its present structure dates partly from the 13 cent. Public buildings include the art gallery and museum, public library, Bantock House museum, W. and Staffordshire technical college, school of art and crafts, and the magnificent civic hall opened in 1938. The grammar school was founded in 1515. W. is referred to as the cap. of the 'Black Country' and is essentially an industrial tn, situated on the edge of a rich agric. area and contiguous to some of the most beautiful countryside in the Midlands. Locks and keys have been a special manuf. from early times, and the tn has a great diversity of industry, including pneumatic tyres, rayon, aircraft and components, trolley buses and com-

mercant vehicles, marine, diesel, and petrol engines; also batteries, ball and roller bearings, bicycles, castings, electrical and heavy engineering, machine and edge tools, stampings, forgings, pressings, motor-cycle and car components, hollow-ware, chemicals, and safes and strong-rooms. There are collieries on the fringe of the city. Two members are returned to Parliament. Pop. 161,300. See T. Brennan, *Midland City*, 1949.

'Wolverine State,' see MICHIGAN.

Wolverton, tn of Buckinghamshire, England, near the Ouse, and on the Grand Union Canal. It has railway carriage and wagon shops and printing works. Pop. 5856.

Womb, see UTERUS.

Wombat (*Phascolomys*), burrowing marsupial of S. Australia and Tasmania. *P. ursinus*, the ursine W., is about 3 ft long, with a short tail and a clumsy form. It has stout limbs and a blunt muzzle, and the coat is thick with long and coarse brownish-grey woolly hair. The head is large, flat, and broad, and the W. has small eyes and ears; fore-feet with 5 and hind-feet with 4 digits; soles broad and naked. The pouch is more towards the rear of the body than is usual in the marsupials, the young hanging between the hind legs of the mother. The dentition resembles that of the Rodentia. The W. is nocturnal in its habits, feeds on vegetables, digging up roots with its claws.

Wombwell, urb. dist. and tn of the W. Riding, Yorks, England, with extensive coal mines. Pop. 18,800.

Women's Army Auxiliary Corps, see QUEEN MARY'S ARMY AUXILIARY CORPS.

Women's Auxiliary Air Force, see WOMEN'S ROYAL AIR FORCE.

Women's Institutes, organisation of country women for the 'improvement and development of rural life.' The movement is rural and W. I. are normally formed only in communities having a pop. of under 4000. The H.Q. of the National Federation of W. I. gives help and advice through the county federations, while the actual running of the institute is in the hands of the members themselves. The programmes include talks, demonstrations, competitions, and discussions. Meetings are held monthly, and the members decide on their programme of work. In Scotland there is a similar but quite independent organisation, and the title 'Rural Institutes' is used.

Women's Land Army. A W. L. A. was founded during the First World War in 1917 under the Directorship of Dame Meriel Talbot. 18,000 women and girls were enrolled, and undertook all kinds of agricultural work. In May 1939 W. L. A. Co. Committees in England and Wales were appointed by the Minister of Agriculture and Fisheries, and on the outbreak of the Second World War the organisation came into being. It was administered by the Ministry of Agriculture and Fisheries, with Lady Denman, D.B.E., as Honorary Director. The Scottish W. L. A. was administered by the Dept of Agriculture for Scotland. The W. L. A. Organisation was responsible for the recruitment,

training, and placing in employment of Land Girls, for their welfare and accommodation, and for the provision of their uniforms. Volunteers were originally enrolled for the duration of the war, and did every kind of agricultural and horticultural work, including forestry. The peak strength of the W. L. A. was 80,000 members in Aug. 1943. At the end of the war the W. L. A. was maintained to provide a labour force during the transition to peace-time conditions. It was disbanded on 30 Nov. 1950.

Women's Royal Air Force (formerly Women's Auxiliary Air Force) existed in the First World War as the Women's Royal Air Force and was re-formed as the Women's Auxiliary Air Force (W.A.A.F.) in June 1939. Three years later the W.A.A.F. had been taught and were performing skilled work in more than 80 trades, in most of which women were never employed before the war. The strength of the force was approximately 182,000 at its highest. It was an integral and indispensable part of the R.A.F. In the summer of 1940 the W.A.A.F. co-operated with the R.A.F. in winning the Battle of Britain. During this battle, women working at the plotting tables or as telephonists at Fighter Stations were exposed to the same dangers as men. The W.A.A.F., which became the W.R.A.F. in Feb. 1949, continued on a voluntary basis as a permanent feature of the armed forces. Women in the R.A.F. can now be employed in 18 out of the 22 trade groups available to men, and officers are commissioned in all branches with the exception of those involving flying duties. (See illustration, p. 638.)

Women's Royal Army Corps, title since Feb. 1949 of the Brit. women's army corps, which came into being as the Auxiliary Territorial Service in 1938. By Feb. 1941 some 40,000 women had been enlisted; by Jan. 1942 there were nearly 100,000; and by 1944 some 212,000. Of the women's corps in the Second World War they were the most numerous body. The chief controller had the equivalent army rank of a maj.-gen.: the other ranks, with their equivalent army ranks, were: senior controller (brigadier), controller (colonel), chief commandant (lieut.-col.), senior commandant (maj.), company commander (capt.), junior commander (lieut.), company assistant (second lieut.), senior leader (warrant officer class II), section leader (sergt.), sub-leader (corp.), chief volunteer (lance-corp.), volunteer (private). The women were not directly conscripted, but enlisted through the directive machinery of the Ministry of Labour and National Service. The A.T.S. served in France, Canada, Germany, the W. Indies, Palestine, Egypt, N. Africa, E. Africa, Italy, and Washington. Some 3000 women qualified for the Africa Star. Twenty thousand worked in cookhouses; 30,000 were office, mess, and telephone orderlies; 14,000 were drivers; 10,000 postal workers; 9000 storewomen. Others served as butchers and bakers, ammunition examiners, hairdressers, welders, cine-projectionists, camouflage

modellers, chiropodists, and military policewomen. Others, specially trained, were on operational work as plotters, spotters, predictionists, and in other work as members of gun crews. The girls of the A.T.S. endured many of the perils of war side by side with the soldiers. They were subject to some at least of the military laws, in a way that the W.R.N.S., for instance, in relation to the Navy, were not subject. See E. Bigland, *Britain's Own Army: the story of the A.T.S.*, 1946; D. C. Wadge, *Women in Uniform*, 1947; L. Whately, *No Thoughts Survive*, 1949; V. Doule, *Daughters of Britain*, 1949.

number allowed for in the 1957-8 estimates was 3100.

Women's Services, see NURSING; QUEEN MARY'S ARMY AUXILIARY CORPS; RED CROSS; WOMEN'S LAND ARMY; WOMEN'S ROYAL AIR FORCE; WOMEN'S ROYAL ARMY CORPS; WOMEN'S ROYAL NAVAL SERVICE; WOMEN'S VOLUNTARY SERVICE; etc.

Women's Suffrage. Bills on W. S. passed second readings in the Commons 6 times between 1886 and 1911, but never proceeded beyond that stage. The organised violence of women in the 'suffragette' movement was abruptly

A W.R.A.F. N.C.O. OPERATIONS ROOM CLERK ON DUTY IN AN AIRFIELD CONTROL TOWER

Women's Royal Naval Service. The W.R.N.S. came into existence in 1939, taking its name from an earlier organisation estab. between 1917 and 1919. Through the Second World War this Service performed valuable duties ashore, releasing men for service afloat. Such duties included administrative, domestic, secretarial, and cipher work. 'Wrens' were employed in the various communications depts, in meteorology, air radio, plotting, and many other spheres.

On 1 Feb. 1949 the W.R.N.S. became estab. as a permanent and integral part of the naval service, not subject to the Naval Discipline Act, but having a disciplinary code of its own. It continues to carry out similar duties, and serves both in the U.K. and abroad. The

terminated by war in 1914. Owing to the work of women during the war, opinion turned in their favour. In 1916 a conference recommended that some form of W. S. should be conferred. Early in 1918 a Bill granting limited franchise to women was passed, and 10 years later, 1928, the Bill which equalised the franchise passed the House of Lords.

In the U.S.A. the struggle for W. S. was long-drawn, but finally women over 21 were given the vote on the same terms with men. For many years there had been organisations to obtain W. S. The initial success came in 1869, when Wyoming, then a ter., gave women the suffrage. In 1893 the state of Colorado followed. Then followed Utah, Idaho, and Washington. In 1919 the national

Congress submitted a W. S. amendment to the constitution for action by the states. This became law in 1920.

W. S. has been granted at different times in different countries, e.g. Norway granted W. S. in 1912; Belgium in 1948.

Women's Voluntary Service for Civil Defence was formed in June 1938 at the request of the Home Secretary to stimulate the enrolment of women in Air Raid Precaution services. The scope of its work was later extended to all Civil Defence services and to work for evacuees, bombed people, the Services, etc. Since the war the work has included welfare schemes for old people, children, and hospitals. Its main responsibility is to Civil Defence, and the W.V.S. is prepared to help in emergencies anywhere at any time. Members give voluntary service throughout England, Scotland, and Wales to local authorities and local communities, as well as sending members overseas to do welfare work for the Forces.

'Wonder State,' see ARKANSAS.

Wonders of the World, Seven, see SEVEN.

Wonthaggi, state coal-mine tn in Victoria, Australia, 86 m. SSE. of Melbourne, on the coast. Many fine beaches are within a few miles radius, including Cape Patterson and Inverlock. W. adjoins the fertile Bass Valley dairying dist.

Wood (or a Wood), Anthony (1632-95), antiquary, b. Oxford, and studied at Merton College. Dugdale's *Antiquities of Warwickshire* inspired him to attempt the same task for Oxon., and after 6 years' labour he produced *History and Antiquities of the University of Oxford*. He worked further at *Athenae Oxonienses*, continuing Fell's idea. See L. Powys (ed.), *Life and Times of Anthony a Wood*, 1932.

Wood, Edward Frederick Lindley, see HALIFAX, first EARL.

Wood, Ellen, better known as **Mrs Henry Wood (1814-87)**, novelist, b. Worcester, daughter of T. Price. In 1836 she married H. Wood, a banker. Her greatest success was *East Lynne*, 1861, a novel of middle-class life which sold over half a million copies and was dramatised repeatedly. Other highly popular books were *Mrs Halliburton's Troubles* and *The Channings*, both pub. in 1862. The *Johnny Ludlow Papers*, 1874-90, were contributed to the *Argosy*, a magazine of which she was proprietor and editor. See lives by C. W. Wood, 1894, and A. Sergeant, 1897.

Wood, Sir Henry (1869-1944), conductor, b. London. He received musical instruction from his mother, was assistant-organist at St Mary's, Aldermanbury, in 1879, and St Sepulchre's, 1882; and organist at St John's, Fulham, 1886. He had general musical training at the Royal Academy of Music and benefited from the experience as accompanist to the operatic class, and to the great teacher Manuel Garcia. He gave organ recitals at exhibitions in 1883-9. He first conducted the Rousby Opera Co. in 1889, and afterwards, for Marie Roze, the Carl Rosa

Opera Co., and other opera and concert organisations in London and the provs. W. was engaged by Robert Newman (1895) for Queen's Hall promenade concerts; thereafter he was continually identified with concerts there. He also conducted festivals. He visited America in 1904, 1925, and 1928. Between 1895 and 1919 he produced over 200 Eng. works, many for the first time, and in addition Eng. people owe to W. much of their knowledge of the modern Russian, Ger., and Fr. schools. W. undoubtedly did more than any of his contemporaries to foster a real appreciation of orchestral music, and of the leading musicians of his time. He enjoyed great popularity, and before he had approached his jubilee he had become a national figure. His *Memoirs, My Life of Music*, were pub. in 1938.

Wood, Sir (Henry) Evelyn (1838-1919), soldier, b. Cressing, Essex, and educ. at Marlborough. He first served in the Navy, which he entered in 1852, and was with the Naval Brigade in the Crimea. Transferring his services to the Army, he gained the V.C. during the Indian mutiny, and served through the Ashanti War with the rank of lieutenant-col. He commanded in the Boer War of 1881. In 1883 he raised the Egyptian Army, becoming its commander-in-chief; and he served in the Nile Expedition of 1894-5. In 1903 W. was made a F.M. G.C.M.G., 1882; G.C.B., 1897. See his autobiography, *From Midshipman to Field-Marshal*, 1906.

Wood, Sir (Howard) Kingsley (1881-1943), politician. He practised as a solicitor, and became Unionist M.P. for W. Woolwich in 1918, and in 1931 collaborated in the formation of the National Gov. As postmaster-general he was a great success, introducing many innovations; in 1933 he entered the Cabinet, was appointed minister of health (1935), and secretary of state for air (1938), being responsible for the empire air training scheme in Canada. He was chancellor of the Exchequer in 1940, and introduced the system of deferred credits to offset the effect of reductions in income-tax allowances, which had been made to restrict purchasing power and check inflation. He was responsible for the adoption of the 'pay-as-you-earn' income-tax scheme, but died before it was announced. He was knighted in 1938.

Wood, John, the Elder, commonly called 'Wood of Bath' (1704-54), architect, b. Bath, son of a builder; worked in London and Yorks for a time, and returned to Bath in 1727. He rebuilt and developed much of that city, including Queen Square, the Hospital, N. and S. Parades, and the Circus; also the neighbouring mansion of Prior Park, 1735-48. At Liverpool he designed the Exchange or Tn Hall, 1749-54. After his death, his son John Wood the Younger (1728-91) completed some of his buildings in Bath and also designed the Royal Crescent, 1767-75, and the New Assembly Rooms, 1769-71.

Wood is all that part of trees and shrubs that exists between the pith and the bark.

It consists of cells of sev. kinds, which in turn are composed of 2 substances, cellulose and lignin. The function of these cells is to lend strength to the W. stem, to conduct the sap from the roots to leaves, to conduct sugars in solution from the leaves to all parts of the plant, and to store food materials. W. also contains small quantities of 'extractives,' substances such as gums, resins, oils, and other materials which affect the durability, colour, taste, smell, or working properties of the W. Most trees form a distinct and darker-coloured heartwood in which these extractives are deposited. The outer part of the stem, the sapwood, is used for the conduction of sap up the tree. It is less durable but no less strong than the heartwood. See FORESTRY; TIMBER; TREE.

vent the process of end-grain engravings (as is sometimes thought), he was the first to see its possibilities. Instead of imitating the black lines of copper engravings, he used the white line which is the natural resultant of the process. During the 19th cent. W. sank to the level of a reproductive craft, although used with consummate skill by such men as the Dalziel brothers and Swain to facsimile the works of Leighton, Millais, Keene, Tenniel, and other artists of the time. Eventually photography and the introduction of process-engraving brought about its decline.

Early in the present cent. a number of artists saw in W. a medium of direct expression, and in 1920 they combined to form the Society of Wood Engravers. Since then the medium has flourished as

A WOOD ENGRAVING BY ROBERT GIBBINGS
From *Lovely is the Lee* (Dent)

Wood-carving, see CARVING.

Wood-engraving. Though closely allied to woodcuts (q.v.), W.s differ from them in that, instead of the designs being cut with a knife on the side grain of the wood, they are engraved with gravers on the end grain of a cross-section of the tree. Boxwood is the timber most in favour, having a grain that is close, even, and hard. The small, wedge-shaped gravers used for the work vary in section, to plough out different thicknesses of line. They are known by such names as tint tools, spitticks, scaupers, etc. The term wood-cut has to-day come to be used rather loosely to denote either work with a knife or with a graver, but strictly speaking it should apply only to the former. The chief advantage of engraving over cutting is that it offers infinitely greater possibilities for fine lines and details. Whereas it would be technically possible to facsimile a cut by an engraving, it would be quite impossible to reproduce the detail of an engraving with the knife.

Although Thomas Bewick (q.v.) of Newcastle upon Tyne (1753-1828) did not in-

an art, and is considered by many to be *par excellence* the best for book illustration. The works of Eric Gill, Joan Hassall, Gwen Raverat, Robert Gibbings, and many others have been so used. Wood blocks are prepared 'type-high' so that when engraved they can be locked in a printing forme and printed at the same time as the type, thus producing a decorated book and not a book with plates. See D. P. Bliss, *A History of Wood Engraving*, 1928; R. J. Berdham, *Wood Engraving*, 1936, 1947; I. Macnab, *Wood Engraving*, 1948.

Wood Green, municipal bor. (created 1933) of Middx., England, situated between Hornsey and Southgate. There have been potteries here since the 17th cent. See also ALEXANDRA PARK.

Wood-ibis, see TANTALUS.

Wood-lice, name given to isopod crustaceans of the family Oniscidae. Though they have all become adapted to terrestrial life, they find damp necessary to their existence, and some species, notably *Ligia oceanica*, which is over 1 in. long, are confined to the seashore. The food of W. is entirely vegetarian, and they are

mainly nocturnal in their habits. The oval body consists of a small head, 7-segmented thorax, each segment bearing a pair of legs, and abdomen, the appendages of which are the respiratory organs. *Oniscus aspidochelone* does damage in gardens.

Wood Naphtha, see PYROXYLIC.

Wood-pigeon, Ring-dove, or Cushat (*Columba palumbus*), member of the subfamily of the Columbinae, family of the Columbidae. It receives one of its names from the white patches forming a ring round its neck. It is distributed throughout the Palaearctic region, and has recently multiplied greatly in Britain. Besides the white neck patches, it has also a white wing-bar. The eggs are white, the number being usually two.

Wood-screws, see SCREWS, BOLTS, AND NUTS.

Wood-spirit, see PYROXYLIC.

Wood Swallow, or Swallow Shrike, a genus of insectivorous birds (*Artamus*), indigenous to Australia, India, and Polynesia. They have a long, slightly curved, and sharply pointed bill, long wings, and short tail. General colour, black, blue, and rufous above, and white beneath. They are swift in flight and catch insects on the wing.

Wood Tin, variety of cassiterite (q.v.).

Woodard Schools. The Corporation of SS Mary and Nicolas was founded in 1848 by the late Canon Nathaniel Woodard to afford education according to the doctrines of the Church of England by means of colleges and schools. Its 4 divisional societies now conduct 17 schools, educating a total of 5000 pupils, in various places in England and Wales.

Woodbine, common name of *Lonicera periclymenum*, used by Shakespeare. See LONICERA.

Woodbridge, urb. dist. and mkt tn of Suffolk, England, at the head of the Deben estuary. W. possesses a number of historical buildings, including the Shire Hall, erected in 1570, windmills, a tide mill, and the par. church of St Mary, which was rebuilt in 1450. The tn was once a centre for rope-making, sail-cloth making, and ship-building, but present industries are those of boat-building, small factories, and horticulture. Near by is Sutton Hood, where in 1939 was excavated the ship-burial of an Anglo-Saxon ruler; the treasures it contained are now in the Brit. Museum (see also SAXONS, *Anglo-Saxon Art*). Pop. 5700.

Woodbury Hill (900 ft), prehistoric earthwork in the N. of the Abberley Hills, Worcestershire, England. Owen Glendower camped here during his rebellion against Henry IV.

Woodchuck (*Marmota monax*), popular name of a species of Amer. marmot. It is a small burrowing rodent, 15-18 in. long; grizzled above and reddish below. It has a stout body, broad, flat head, and short, thick legs, and is easily tamed.

Woodcock (*Scolopax rusticola*), Brit. game bird, much valued for the table. The majority occurring in Britain are migrants, arriving chiefly in Oct. It belongs to the long-billed section of the Snipes, in which the culmen is longer than

the tarsus. They have a large eye, placed well back in the head, so that its hinder margin is just above the orifice of the ear. The wing is more rounded than in the Snipes. It has 12 tail-feathers, and the tibia is feathered to the tarsal joint. The adult male is about 14-15 in. long, and its general colour above is rufous, black, and grey, the whole aspect of the upper surface being mottled; the breast and sides of body are buff, the latter having light brown bars, edged with blackish lines. The Amer. W. is *Philohela minor*.

Woodcuts. The art of the woodcut consists of cutting from the surface of a plank of wood, with a short-bladed knife and gouges, the white portions of a design, leaving untouched those parts which are to print black. Proofs are taken by coating the untouched surface of the block with printer's ink and then, either in a printing-press or with a burnisher, pressing a sheet of paper against the inked surface. Unlike engraving or etching on copper, in which the ink is pressed into the lines and the surface of the plate wiped clean so that the lines alone print black, in W. it is the surface from which prints are taken, the lines showing white. Chestnut, pear, and other even-grained woods are most suitable.

Blocks of wood cut in this way were first used for printing on fabrics. The earliest extant examples on paper are believed to date from the 9th cent. in China and from AD 1418 in Europe (see BLOCK-BOOKS). The 16th-cent. W. of Dürer and Holbein (the latter's designs cut by Hans Lützelburger) show an almost miraculous craftsmanship. Cutting on the plank, however, is most suited to simple and broad contrasts of strong blacks and white; where detail and delicacy of tone are required, wood-engraving (q.v.) is the appropriate medium.

Woodcuts, hamlet of Dorset, England, in the par. of Handley, and part of old Cranborne Chase. Excavation disclosed a pre-Rom. site and a Romano-Brit. settlement. Iron and bronze utensils, Samian pottery, and Rom. coins were found.

Wooderson, Sydney C. (1914-), athlete, b. Camberwell, London. He gained his first big success in 1935, when he won the mile at the Amateur Athletic Association meeting; he won this event annually until 1939. An injured ankle stopped his attempt to win the 1500 metres title in the Olympic Games of 1936, but the next year he set up a new world mile record of 4 min. 6.4 sec., which stood until it was beaten by the 2 Swedish runners Haggg and Andersson in 1943 and 1944. W. ran his fastest mile (4 min. 4.2 sec.) when he was beaten by Andersson in Sweden. In 1937 he ran the half mile in 1 min. 49.2 sec.; after the Second World War he took up long-distance running, doing 3 m. in 13 min. 53.2 sec. in 1946. See also ATHLETICS.

Woodford, see WANSTEAD.

Woodhall Spa, urb. dist. of Lincs, England, 6 m. from Horncastle. It is noted for its mineral springs. Pop. 2100.

Woodhenge, see **STONEHENGE**.

Woodpeckers (*Picidae*), family of scan-sorial birds. The *Picidae* have natural attributes for climbing up the bark of trees, and for obtaining from the crevices thereof the insects which constitute their food. The feet, though very short, are unusually strong; the nails are broad and crooked, and the toes placed in pairs, that is, 2 forward and 2 backward. As an additional and powerful support in their ascent of the trunks of trees, their tail

Ronald Thompson

GREEN WOODPECKER AND YOUNG

feathers terminate in points, and are uncommonly hard, so that when they are pressed against the bark they assist the birds in their progress or in keeping their position. W. have an extensile tongue, of enormous length, which is furnished with muscles enabling the bird to dart it forth and to retract it again in a most remarkable manner. The Brit. species of W. are the spotted W. (*Dryobates major*), the Barred W. (*D. minor*), and the Green W. (*Picus viridis*).

Woodruff, see **ASPERULA**.

Woods, Margaret Louise (1856-1945), novelist and poetess, b. Rugby, daughter of G. G. Bradley, dean of Westminster. In 1879 she married H. G. Woods, who was later President of Trinity College, Oxford. Her realistic novel *A Village Tragedy*, 1887, showed rare maturity, while her *Lyrics and Ballads*, 1889, revealed her poetical gifts. Other novels are *The Vagabonds*, 1894, *Sons of the Sword*, 1901, *The Invaders*, 1907, and *The Spanish Lady*, 1927. *Wild Justice*, 1896, and *The Princess of Hanover*, 1902, are poetic dramas, and her *Collected Poems and Plays* appeared in 1913.

Woods, Lake of the, large irregular lake in the SW. of Ontario, Canada, touching Manitoba on the W. and Minnesota, U.S.A., on the S. Its length is 70 m., breadth 10-50 m., and area 1500 sq. m. It is fed by the Rainy R. and discharges

through the Winnipeg R. into Lake Winnipeg.

Woodstock: 1. Mun. bor. and mrkt tn of Oxon., England, on the Glyme. W. was the residence of some of the Eng. kings, and was the scene of the romantic legend of Henry II and Fair Rosamund. After Blenheim (1704), the place was granted to the Duke of Marlborough, Blenheim Palace (q.v.) being erected near by. Glove-making is carried on. Pop. 1800.

2. Co. tn of Oxford, Ontario, Canada, 80 m. SW. of Toronto, 25 m. E. of London, and 32 m. from Lake Erie. It is the co. tn of a rich agric. dist., and has abundant cheap hydro-electric power. Industries include machine-shops, furniture, stock foods, farm tools, organs and pianos, planing mill, stoves, metal signs, concrete machinery, hardware, and truck or lorry trailers. Pop. 16,890.

Woodville, or **Wyddville**, Elizabeth, see ELIZABETH (c. 1437-92), queen of England.

Woodward, Sir Arthur Smith (1864-1944), geologist, b. Macclesfield. He was educ. at Owens College, Manchester, and held the post of Keeper of the Geological Dept, Brit. Museum, 1901-24. He pub. important researches on fossil fishes, amphibia, birds, mammals, and reptilia, including a text-book, *Vertebrate Palaeontology*, 1898.

Woodward, Sir (Ernest) Llewellyn (1890-) historian, educ. at Merchant Taylors' School and Corpus Christi College, Oxford. He was prof. of international relations at Oxford 1944-7; prof. of modern hist. there 1947-51, and has since held a chair at Princeton Univ., U.S.A. With R. D'O. Butler he ed. *Documents on British Foreign Policy, 1919-39*, 1944-55. His other pub. include *The Age of Reform* (Oxford History of England series), 1938. He was knighted in 1952.

Woodwork, see **CARPENTRY**; **CARVING**; **FRETWORK**; **FURNITURE**; **INLAYING**; **JOINERY**; **MARQUETRY**; **POKER-DRAWINGS**.

Woodworm, see **TEREDO**.

Wookey, vil. of Somerset, England, in the Mendip Hills, close to Wells. Pop. 950.

Wookey Hole, vil. of Somerset, England, 2 m. from Wells, with a paper mill. It is noted for the caves, also called Wookey Hole, source of the R. Axe; objects dating from the palaeolithic to Romano-Brit. periods have been found. Pop. 800.

Wool, soft, curly form of hair worn by some animals, useful to them in preventing loss of body heat, and adapted by man to the manuf. of textiles for clothing. From the biological point of view, a distinction can be drawn between W. and hair: W. fibres are solid, i.e. have no internal spaces, whereas hair fibres have a hollow core running up the centre of the fibre. The coats of the merino and Eng. breeds of sheep are known *par excellence* as W., while the term is also applied to the fibres obtained from llama, the alpaca, the Angora goat, and, perhaps more debatably, to cashmere, camel, and

Angora rabbit hair. The W. of the Angora goat, however, is more generally known as mohair. Microscopically, W. is distinguished more by the possession of a scaly surface to the fibre. The scales over the fibre surface overlap one another like tiles on a roof, thus producing the saw-like outline perceptible only under the microscope. The serrations are more numerous in the finest W.s and it is to the existence of these minute irregularities that W. owes its property of matting or felting into a compact mass. This gives W. its unique value in the production of tweed-type fabrics and felts.

Chemically W. consists of a substance called keratin which belongs to the class of chemical substances called proteins and contains carbon, hydrogen, nitrogen, oxygen, and sulphur. It burns slowly, giving off an odour like burning feathers, and leaves a small, bead-like residue. This latter property serves to distinguish it from vegetable fibres, which burn rapidly and leave only a little fine white ash. The properties desired in W. for manufacturing purposes are fineness of fibre, length of staple (a lock of fibres), strength and uniformity of fibre, elasticity, lustre, and freedom from woody seeds (burs), and other vegetable matter. The weaving of woollen fibres appears to have been practised at a very early date. Herodotus mentions that the Babylonians were clothed in woollen tunics, and the Hellenic peoples were well versed in the art of weaving. The Romans understood all the essentials of the W. manufacturer's craft, and they carried their knowledge into the countries conquered and settled by them. Through the Middle Ages the chief centres of the woollen manuf. were on the Continent, notably in Flanders. Efforts were made at various times to estab. the industry securely in Britain (see IRADFORD). Flemish weavers were introduced into Carlisle under royal protection in the reign of William I, and a colony was afterwards founded in Pembroke-shire. Notwithstanding this encouragement, a great proportion of the W. grown in England was exported to Flanders, and Edward III prohibited this export with a view to stimulating house industries. The prohibition was removed by Queen Elizabeth, but again from 1660 to 1825 the export of W. was forbidden. The constant encouragement given to woollen manufacturers led to large areas being turned into pasture land for the provision of the raw material. The development of machinery had the effect of concentrating the greater part of the industry on the N. coalfields, and the S. centres gradually dwindled or persisted as seats for the manuf. of certain specialised products. In later years the supply of the raw material from Britain and Europe has been small (the U.K. wool production in 1955 was about 2.2 per cent of world output), the chief importations being from Australia, New Zealand, and S. Africa. In America W. manuf. was not estab. on factory lines until the end of the 18th cent. The breed of sheep recognised as providing the best W. for fine-quality

clothing purposes is the merino. Originally a Sp. sheep, it has made its way into all quarters of the world. It was introduced into Australia at the end of the 18th cent., and the colonists set about growing W. to supply the European mkt. (See also SHEEP.)

The terms woollen and worsted are used to describe the 2 kinds of yarn which can be spun from W., and the cloths woven from these yarns. In the woollen trade not only are short fibres employed, but all kinds of re-manufactured materials and by-products are used. These comprise noil, the short fibres rejected in the combing operation for worsted-yarn production; mungo, the shreds of previously manufactured clothing; shoddy, the shreds of softer materials, as blankets, shawls, etc.; and flocks, collections of fibre from the machines used in the various processes. Sheep's W. is sometimes washed before shearing; the process rids the fleece of extraneous dirt, but it also removes much of the natural grease. In shearing, the fleece should be clipped off in one continuous piece, the W. being rolled up and secured by a simple knot tied in a wool band put round the fleece. The fleeces are then classified according to general quality, usually on the farm or sheep station. After selling to the W. merchant or manufacturer W. is sorted by the sorter or stapler, who divides each fleece into separate qualities, as the W. varies in quality from the shoulders to the tail of the animal. The operation of sorting requires discrimination and long training. In Britain a wool sorter is apprenticed for 7 years before being considered proficient. The W. (except in yarn production) is then 'scoured' by the use of a detergent (soap or synthetic) and a mild alkali and afterwards dried by steam heat. The next operation is to disentangle the matted fibres of the fleece. To effect this the W. is fed into a 'willey' consisting of a large drum and small cylinders armed with spikes, in such a manner that the entangled fibres are pulled apart as they pass between the cylinders. W. is then usually 'blended', i.e. W.s of different kinds and W. substitutes, in proportions suitable for the purpose in view, are spread in layers forming a stack, each layer being oiled as it is put down. 'Scribbling' or 'carding' is an operation by which the mass of fibres is more perfectly mixed and rendered suitable for spinning. The carder consists of a number of cylinders with an enormous number of teeth which work the W. into a web or continuous film of fibres. In the final section of the carder this film is divided into narrow strips and then subjected to a reciprocating rubbing action so as to give a circular section. The slubbing is now a long rod of pith-like W. with no twist, and therefore capable of being stretched to a considerable extent. The attenuation and twisting required to convert slubbing into yarn (q.v.) of the requisite count are performed by means of the 'spinning-mule,' a machine of somewhat complicated construction, though the operation is simple. For

the preparation of worsted yarns some 16 processes are required. Among these is an operation known as 'combing'. This is performed by a machine which separates from the mass all the fibres above a certain length and imparts a high degree of parallelism to them. After spinning, therefore, worsted yarn presents a clearer, cut appearance than woollen yarn, which remains fluffy. The principles of weaving are similar to those employed in other textiles. Dyeing may be performed at almost any stage of the process, given the necessary cleansing preliminaries. Some finishing operations vary according to the nature of the fabric. Some woollen cloths are known as tweeds, meltons, doeskins, buckskins, etc., and are characterised by softness and fullness. Worsted forms the largest class of suit and dress materials, but to an increasing extent synthetic fibres which claim similar structure and properties (see MAN-MADE FIBRES) are being used either singly or in blends with W. for many fabrics and garments which used to be made entirely of W. In 1918 the Brit. W. industry set up its own research organisation, which is known as the Wool Industries Research Association and has its H.Q. at Torridon, Headingley, Leeds, 6.

See *American Wool Hand Book*; F. Lipson, *History of the English Woollen and Worsted Industries*, 1921; J. W. Hadcliffe, *Woollen and Worsted Yarn Manufacture*, 1950; C. L. Bird, *Theory and Practice of Wool Dyeing*; *British Wool Manual*, 1952; E. Lipson, *Short History of the Wool Trade*, 1953.

Woolacombe, vil., par., and seaside resort of N. Devon, England, 7 m. from Ilfracombe, with 3 m. of sands and the famous Barricade beach of tropical shells. The vil. and par. of Morteohoe forms with W. a single civil par. The Early English church at Morteohoe has interesting carving and the tomb of Wm de Tracy (1321), related to one of the murderers of Becket. The Morte Point, Baggy Point, and Potter's Hill area is a National Trust property. Near Morteohoe is the Bull Point lighthouse; a red light is reflected on to the Morte Stone, where there are dangerous currents. Pop. of W. and Morteohoe 1500.

Woold, see WELD.

Wooler, tn and par. of N. Northumberland, England, 14 m. NNW. of Alnwick. Fragments of the medieval castle remain, and there are a number of prehistoric settlements in the district. It was once a stronghold, guarding one of the principal passes on the Border. W. lies at the foot of the Cheviot Hills; it is now an agr. mkt and a resort. Pop. 1750 (1954).

Woolf, Virginia (1882-1941), novelist, b. London. She was educ. at home, and married in 1912 Leonard Sidney Woolf and at Hogarth House and her husband set up the Hogarth Press. Her first novel, *The Voyage Out*, appeared in 1915, but it had in fact been written some years previously, as is evident from its immaturity. In 1919 she pub. *Night and Day*, but did not achieve a really charac-

teristic work until the production of *Jacob's Room*, 1922, which reveals her qualities of subtle apprehension and delicate balance of taste. Her early works had been realistic studies, but in this she followed Joyce in adopting the 'stream of consciousness' method. Later books which won an international reputation were *Mrs Dalloway*, 1925, *To the Lighthouse*, 1927, *Orlando*, 1929, *The Waves*, 1931, and *The Common Reader*, 1925, the last being a collection of articles for *The Times Literary Supplement*. *Orlando* is perhaps her most outstanding novel; a biography of Roger Fry was pub. in 1940; in 1941 appeared *Between the Acts*, a novel pub. posthumously, and, in 1942, *The Death of the Moth*, which contains a selection from a mass of miscellaneous work left by her at her death. The beauty and sensitivity of her prose, especially in *The Waves*, is unequalled among modern Eng. novelists. See lives by E. M. Forster, 1942; D. Dalches, 1945; J. Bennett, 1945; R. L. Chambers, 1948; B. Blackstone, 1948; also Lord David Cecil, *Poets and Story-Tellers*, 1949.

Woollahra, metropolitan municipality of Sydney, in Cumberland co., New S. Wales, Australia. One of the E. suburbs, it fringes the S. side of Sydney Harbour. Pop. 48,220.

Woolcott, Alexander Humphreys (1887-1943), Amer. journalist, b. Palanx, New Jersey. Educ. at Hamilton College and Columbia, he was dramatic critic of the *New York Times* from 1914 to 1922, and from 1925 to 1928 was on the staff of the *World*. Famous both as a journalist and as a personality, he wrote *Mrs Fiske*, 1917, *Shouts and Murmurs*, 1923, *Mr Dickens Goes to the Play*, 1923, *Enchanted Aisles*, 1924, *The Story of Irving Berlin*, 1925, *Going to Pieces*, 1928, *While Rome Burns*, 1934, and *Long, Long Ago*, 1943. His *Letters* were ed. by B. Kaufman and J. Hennessey in 1944.

Woolens, see WOOL.

Woolley, Sir Charles Leonard (1880-), archaeologist and author, b. London; educ. at New College, Oxford. Later he became assistant keeper in the Ashmolean Museum, Oxford. He went with the Eekley B. Coxo expedition to Nubia, 1907-11; he was in charge of the Brit. Museum excavations at Carchemish until 1914. From 1922-34 he conducted excavations at Ur (q.v.) for the Brit. Museum and the Museum of the Univ. of Pennsylvania. In 1935-9 and 1940-9 he excavated in the Hatay near Antioch (see ALALAKH). During the First World War he did intelligence staff work in Egypt, and was a prisoner in Turkey for 2 years. He was in the Intelligence Dept. of the War Office from 1939, and from 1943 was archaeological adviser to the War Office, responsible for the protection of monuments of artistic and historical interest in the war areas. In addition to many detailed archaeological writings, he has written successful books for the general reader, among which are *Ur: The First Phases*, 1947, *Digging up the Past*, 1950, *Ur of the Chaldees*, 1950, *A Forgotten*

Kingdom, 1953, *Spadework* (autobiographical), 1953, and *Excavations at Ur*, 1954.

Woolley, Frank Edward (1887-), cricketer, *b.* Tonbridge. A left-handed batsman and bowler, he played for Kent, 1906-38, and represented England 64 times. In 1908 *v.* Middx he took 6 wickets for 8 runs; in 1911 he took 7 for 9 *v.* Surrey. Against Worcester in 1909 he and A. Fielder shared a record 10th-wicket stand of 235. His aggregate of 58,969 runs (145 centuries) is second only to Jack Hobbs. He took 2068 wickets, and his 913 catches are a career record. Toured Australia, New Zealand, and S. Africa. Made hon. cricket member of M.C.C., 1949.

Woolley, Richard van der Riet (1906-), *b.* Weymouth, Dorset, Astronomer Royal since 1956. He was educ. at the univs. of Cape Town and Cambridge. Director of the Commonwealth Observatory, Mt Stromlo, 1939-56; prof. of astronomy, Australian National University, 1950-6; F.R.S., 1953. He has pub. (with Sir Frank Dyson) *Eclipses of the Sun and Moon*, 1937, and (with D. W. N. Stibbs) *The Outer Layers of a Star*, 1953.

Woolman, John (1720-72), Amer. Quaker, *b.* Northampton, New Jersey, tailor, preacher, reformer, and essayist. From 1746 he spoke and wrote against slavery and oppression of the poor, persuading many to liberate their slaves. His pioneer work underlies the anti-slavery movement, which triumphed in the next cent. He came to England (1772), visiting Quaker meetings on foot from London to Westmorland; he *d.* in York of smallpox. His jour. and essays, notable for their simplicity of language, breathe a spirit of justice and charity. *See his Journal*, first pub. 1774 (ed. with Whittier's introduction 1871, and many reprints, some with essays), and *Journal and Essays* (definitive ed. by A. M. Gummere), 1922; also Janet Whitney, *John Woolman*, *Quaker*, 1943; Reginald Reynolds, *The Wisdom of John Woolman*, 1948.

Woolner, Thomas (1825-1892), sculptor and poet, *b.* Hadleigh, Suffolk. He studied under Wm Behnes and at the Royal Academy. He was an original member of the Pre-Raphaelite Brotherhood, and wrote poems for *The Germ*. His statues and portrait busts of famous contemporaries are well known, and his statue of John Stuart Mill stands on the Thames Embankment in London.

Woolssack, seat of the Lord High Chancellor (*see* CHANCELLOR) in the House of Lords, being a large square bag of wool, without back or arms, covered with red cloth.

Woolsey, Sarah Chauncy, *see* COOLIDGE, SUSAN.

Woolsorter's Disease, *see* ANTHRAX.

Woolton, suburb of Liverpool (q.v.).

Woolton of Liverpool, Frederick James Marquis, first Earl of (1883-), business man and politician, *b.* Manchester and educ. at Manchester Grammar School and Univ., where he was for a time a research

fellow in economics. He entered business, and became chairman and senior managing director of Lewis's Ltd., Lewis's Investment Trust Ltd., and its subsidiary companies. He was elected chancellor of Manchester Univ. in 1944. He served on sev. gov. committees and became director-general of equipment and stores in the Ministry of Supply from 1939 to 1940; and was minister of food from 1940 to 1943, minister of reconstruction from 1943 to 1945, and lord president of the council in the Churchill 'caretaker' gov. in 1945. After the general election in 1945 W. was appointed chairman of the Conservative party organisation and worked vigorously to strengthen it. He resigned from this position of chairman in 1955, being succeeded by Oliver Poole. From 1951 to 1952 he was lord president of the council; and chancellor of the Duchy of Lancaster 1952-5. W. was raised to the peerage, 1939; made a viscount, 1953, and an earl, 1955.

Woolwich, parl. and metropolitan bor. of London, the easternmost portion of the co. It is the only bor. on both sides of the Thames, the greater part lying S. of the river and 2 small parts on the N. or Essex shore. They are connected by a foot tunnel and the W. Free Ferry. The bor. comprises the anct. pars. of W., Plumstead and Eltham (qq.v.). The name W. implies an early connection with the production or export of wool. In the Middle Ages it was a fishing vil. An important shipbuilding yard was estab. late in the 15th cent. (closed in 1869), and the famous Royal Arsenal (developed from the Royal Laboratory, Carriage Dept. and a Powder House, probably estab. about the same time as the dockyard), caused the growth of W. into a tn. The main gov. foundry was moved from Moorfields to W., 1716-17. The Royal Military Academy estab. inside the Arsenal in 1741 was the first military school in the kingdom. It was amalgamated with the Royal Military College at Sandhurst in 1946. The Crimean War resulted in many more factories and an increase in pop., greatly changing the character of the tn. In the Rotunda, a building designed by John Nash, is a military museum. W. returns 2 members to Parliament. Area 8282 ac. (including 902 ac. of public open spaces); pop. 149,700.

Woolworth Family, Amer. merchants and businessmen. Frank Winfield W. (1852-1919), *b.* Rodman, New York, studied at a nearby business college, and in 1879 opened a '5-cent' store in Utica, New York, that soon failed. In the same year he started again in Lancaster, Pennsylvania, adding 10-cent goods and taking in as partners his brother Charles Sumner W. (1857-1947) and other men. The partnership opened many more 5- and 10-cent stores in other cities, and was incorporated in 1911 as the F. W. Woolworth Company. When F. W. Woolworth died it had more than 1000 stores in the U.S.A. and Canada. He left a fortune estimated at \$65m., which in time descended to his grand-daughter,

Barbara Hutton. His brother C. S. W. succeeded him as chairman of the company.

The basic idea of the W. business was to sell nothing at a price greater than 5 or 10 cents (3d. or 6d. in England); to keep no books, and hence to sell for cash only; to make no deliveries, and hence further to cut the overhead cost; and finally, as more shops were opened, to buy goods from factories in large quantities for low prices and to obtain a large discount through cash payment. The limitation of store prices to 5 and 10 cents was abandoned during the Second World War because of economic conditions. Before that the concern had spread to Germany; and at the end of 1956 there were 1899 stores in the U.S.A., 10 in Cuba, 172 in Canada, 955 in Great Britain, and 68 in Germany. The H.Q. of the business has long been the W. Building in New York, which for many years was the tallest structure in that city.

Woomera Rocket Range, in the desert country of Central Australia, c. 300 m. NW. of Adelaide, the centre of a number of rocket-testing ranges which extend in a NW. direction to the W. Australian coast 1200 m. away and can be extended for a further 1500 m. across the Indian Ocean. W. has been developed since 1946 by the Weapons and Research Estab. in the Australian Dept. of Supply, with H.Q. at Salisbury, c. 15 m. from Adelaide. The first range at W. was operated in 1949. Guided missiles developed in the U.K. are tested at the W. range; laboratories at Salisbury carry out the development of electronic and optical instruments for use at the range during trials, preparation of test vehicles for measuring missile characteristics, and analysis of trial results. Flying programmes demanded by the trials, involving both conventional aircraft and 'Jindivik,' the high-speed pilotless aircraft used as a target for anti-aircraft weapons, are operated from Edinburgh airfield, near Salisbury. The name W. is derived from a primitive but effective implement developed by Australian aborigines to achieve power and accuracy when throwing spears.

Woonsocket, city of Providence co., Rhode Is. (N.), U.S.A., on Blackstone R., about 13 m. from Providence. It is a woollen centre, and also produces cotton and rayon goods, rubber, paper and metal products, glass fabrics, bedding, textile machinery, insulators, leather goods, machine tools, and beverages. It is the seat of Hill College. W. was settled before 1675, and its inhab. are predominantly of French-Canadian descent. Pop. 50,210.

Woorali, name for curare (q.v.).

Wooster, city, co. seat of Wayne co., Ohio, U.S.A., on Killbuck Creek, 30 m. SW. of Akron, in farming area with oil and gas wells. It manufs. rubber and metal products, mill machinery, paint and varnish, etc. The College of W. and Ohio and the Agric. Experiment Station are here. Pop. 14,000.

Worcester, Florence of, see FLORENCE OF WORCESTER.

Worcester. 1. City, mkt tn, co. and parl. bor., and co. tn of Worcestershire, England, 22 m. SW. of Birmingham. It is situated upon both banks of the Severn, though principally on the l. b. W. was important as early as the 7th cent. owing to its situation on a ford in the Severn. The city motto, 'Faithful in war and peace,' commemorates the royalist support given by W. during the Civil wars. In 1651 Charles II lodged in the city, and from the cathedral tower watched his forces routed by Cromwell's troops. Many royalist soldiers were imprisoned in the cathedral after the battle. W. has been an episcopal see since 680, but its early hist. is obscure. In 964 St Oswald founded a new church there for Benedictine monks, and Bishop Wulfstan began rebuilding on a large scale in 1084. King John is buried between the shrines of Oswald and Wulfstan.

The cathedral of Christ and St Mary the Virgin includes a Norman crypt, an impressive Geometrical W. window, and a Perpendicular cloister with a well-preserved lavatorium and some carved bosses on the lierne vaulted roof. The circular Norman chapter house and the original refectory, now used by the King's School, remain. The external length of the cathedral is 415 ft, and the central tower (completed 1364) is 196 ft high. The exterior was extensively restored between 1857 and 1874. The building of the Early Eng. choir and Lady chapel began in 1224, and was effected by Bishops De Blois and Cantelup, whose effigies are in the chapel. The last important addition to the cathedral was Prince Arthur's chantry, with a magnificent Perpendicular screen, erected by Henry VII in memory of his eldest son.

Another interesting building is the Commandery, formerly called the Hospital of St Wulfstan (1085-1541). It was founded by Wulfstan for a master, priests, and brethren, under the Rule of St Augustine. At the battle of W., in 1651, the Commandery was the H.Q. of the Royal forces under the Duke of Hamilton, and the Royal Standard was raised on the hill known as Fort Royal, which at that time was part of the grounds. St Helen's is the oldest church in W., dating back to 680, but rebuilt in the 13th and 15th cents. St Andrew's and St Alban's are other medieval eccles. structures, but these 3 churches are not now used as places of worship. Medieval buildings still remain in New Street and Friar Street, the most important being that built about 1480 by the Grey Friars. In 'King Charles's House' Charles II is said to have hidden after his defeat at W. From 'Queen Elizabeth's House,' in The Trinity, Queen Elizabeth, according to tradition, addressed the people when she visited W. in 1574. W. is rich in Georgian buildings. The Guildhall (1721-3) is the work of Thomas White, a native of W. The Royal Grammar School dates back to the 13th cent., when it was supported by merchants of the Trinity Guild. Elizabeth granted it a charter in 1561. The W. Cathedral King's School was estab.

and endowed out of the monastic funds by Henry VIII in 1541 and reorganised in 1884. More modern buildings include the Shire Hall, the W. Royal Infirmary, and the Victoria Institute.

From medieval times W. was the centre of a prosperous glove trade. The firms of Dent's and Fownes' founded in the 18th cent., carry on this tradition. The Royal W. Porcelain Works were founded in 1751 by 'John Wall doctor of Physic and William Davis Apothecary.' Wall was also connected with W. Royal Infirmary, which opened in a house in Silver Street in 1745. Engineering is the leading modern industry in W., and includes mining and electrical engineering. There are also iron and brass foundries, pattern shops, and machine and fitting shops. Other industries include the manuf. of W. sauce, printing, footwear, furniture, and agric. machinery. *Berrow's Worcester Journal* (q.v.) traces its hist. to 1690. Pop. 63,200.

See V. Green, *History and Antiquities of the city and suburbs of Worcester*, 1796; W. Moore Ede, *The Cathedral Church of Worcester*, 1925; J. Glaisyer and others, *County Town*, 1946; V. Noakes, *The Cathedral Church of Worcester*, 1951; B. Little, *The Three Choirs Cities*, 1952.

2. City, co. seat of Worcester co., Massachusetts, U.S.A., 39 m. from Boston, and the second largest city in the state. The Blackstone, Chicopee, and other rivs. afford a plentiful water supply. There are fine public buildings and parks, loom and envelope manufs., foundries, wire works, wool and silk mills, and manufs. of leather goods, shoes, and carpets. W. is the seat of Clark Univ., Holy Cross College, W. Polytechnic Inst., and a state teachers' college. It was known as Quinsigamond till 1684. Pop. 203,486.

3. Tn and dist. of Cape Prov., S. Africa, 109 m. from Cape Town by rail; the centre of a rich fruit-growing dist. Local industries include dried and crystallised fruits, jam factory, fruit and vegetable cannery. There are also engineering works, a foundry, and brickfields. Pop.: (whites) 9194; (others) 16,181.

Worcester (1751-present day), porcelain factory, in 1752 absorbed Lund's Bristol (q.v.) factory and became the most productive in England, especially for tableware. The best period, 1752-83, is known as the 'Dr. Wall Period' from the name of one of the founders. See PORCELAIN, *Soft-paste*; CHINAWARE. See R. L. Hobson, *Worcester Porcelain*, 1910; A. R. Marshall, *Worcester Porcelain*, 1955.

Worcester College, Oxford, founded in 1283 as a school for Benedictine monks under the name of Gloucester College, received its charter of incorporation in 1714. Many of the monastic buildings remain, and are used as undergraduates' rooms. The head of the college is the Provost. Past members of the college include Thomas Walsingham, Thomas Coryate, Sir Kenelm Digby, Richard Lovelace, De Quincey, and Henry Kingsley.

'Worcester Journal,' see 'BERROW'S WORCESTER JOURNAL.'

Worcestershire, midland co. of England, bounded N. by Staffordshire, S. by Gloucestershire, E. by Warwickshire, and W. by Herefordshire and Shropshire. The surface varies, the S. and SW. being hilly, while through the centre run the riv. valleys, with the Lickey and Clent hills in the N. The prin. range is that of the Malvern Hills in the SW., which reaches a height of 1395 ft in Worcester Beacon. The N. Cotswold Hills and Bredon Hill lie along the SE. border of the shire. The Severn is the chief riv., with its tribs. the Teme, Stour, and Avon, forming the vales of Worcester (Severn), Teme, and Evesham (Avon), the most fertile part of the co. W. is well wooded and contains the 2 anc't forests of Wyre and Malvern Chase. The greater part of the co. was at one time in the hands of the Church, and there were no less than 13 great monastic foundations. Of these there are the ruins at Pershore and Evesham, both dating from the 8th cent., Worcester Cathedral, and the priory church at Malvern also of the same date; and ruins at Halesowen, Bordesley, and Astley dating from the 13th cent. The co. is rich in domestic architecture of the Tudor and Georgian periods, and possesses a number of notable country houses. Famous figures in literature and music associated with W. include the chronicler Florence of Worcester, Wm Langland (author of the *Vision of Piers Plowman*), Samuel Butler (author of *Hudibras*), Richard Baxter, Sir Edward Elgar, and Francis Brett Young.

WORCESTER COLLEGE

The medieval buildings were part of the original monastic foundation.

W. is famous for its orchards and mrkt gardens, and hops are also grown. Almost the whole co. is under cultivation, rather more than half being devoted to permanent pasture; wheat and oats are the main crops. Coal is mined, and ironstone, limestone, and salt are also found. Droitwich and Stoke Prior are noted for their brine springs, and Malvern is a holiday

and health resort. Worcester (q.v.) is famous for the manu. of porcelain and engineering, and Kidderminster for carpets; while in the N. are a group of tns, Dudley, Netherton, etc., included in the Black Country, where iron-work, etc., is carried on. Other manu. are needles and fishing tackle at Redditch, glass at Stourbridge, and gloves at Worcester. Canals connect the Severn with the Midland canal system. Worcester is the co. tn. other tns being Bewdley, Droitwich, Dudley, Levensham, Kidderminster, Pershore, Tenbury Wells, and Upton-on-Severn. Stourport, Stourbridge, Bromsgrove, Oldbury, and Halesowen on the Birmingham fringe. The co. contains 3 co. and 3 bor. constituencies. Area 700 sq. m.; pop. (1956) 545,600. See Thomas Habington (1560-1647). *Survey of Worcestershire*; Thomas Nash (1588-1648). *Collection for the History of Worcestershire*; Victoria County History, Worcester; A. Mawer and F. M. Stenton. *Place Names of Worcestershire*, 1927; A. Mee. *Worcestershire*, 1948; L. T. C. Rolt. *Worcestershire*, 1949.

Worcestershire Regiment, The, Brit. regiment, formerly 29th and 36th Foot. The 29th was raised in 1694, and served under Marlborough and took part in the Amer. War, 1776-7. A detachment served in Lord Howe's fleet on 'the Glorious First of June,' 1794: it was granted the Naval Crown as a badge. The 29th served under Wellington in the Peninsula with great distinction, and took part in sev. Indian campaigns. The 36th was raised in 1701 and was organised for 'sea-service.' It served in Spain, Nova Scotia, Flanders, before going to India in 1783. The regiments were linked in 1881 and took part in the S. African War, 1899-1902. During the First World War they raised 22 battalions, and served in France, Flanders, Italy, Macedonia, Gallipoli, Egypt, Mesopotamia, and Persia. The second battalion of the regiment gained great distinction for saving the Channel ports from capture by Germans at Gheluvelt, 31 Oct. 1914. In the Second World War the regiment fought in France, Freetra, N. Africa, Burma, Italy, and NW. F. Europe, and in the Far E. As a unit of the Second Army it took a prominent part in the Rhino operations of Mar. 1945.

Worde, Wynkyn (or Winkin) de, or Jan van Wynkyn (d. c. 1535), printer, who came to England from Alsace-Lorraine, and helped Caxton from 1476, succeeding him at his printing office (1491). He became naturalised in 1496, and lived in Fleet Street, London, from 1500, removing to St Paul's Churchyard in 1509. He made improvements in the art of printing, especially in type-cutting, his works (over 800 in number) being at times distinguished by elegance and neatness, but often spoiled by carelessness. See F. G. Duff. *Printers, Stationers, and Bookbinders of Westminster and London, 1476-1635*, 1906; H. E. Plomer. *Wynkyn de Worde and his Contemporaries*, 1925.

Worrie, James Mann (1880-), scientist and explorer, geologist and chief of

scientific staff of Shackleton's British Antarctic Expedition, 1914-17 in the *Endurance*. Led expeditions to Spitzbergen, Greenland, Jan Mayen, and Baffin Is. between the wars. Awarded Founder's medal of Royal Geographical Society, 1933. Master of St John's College, Cambridge, 1952. Chairman of Brit. committee for International Geophysical Year, 1957-8.

Wordsworth, Christopher (1807-85), churchman and writer, nephew of the poet, b. London, and educ. at Winchester and Trinity College, Cambridge. He was headmaster of Harrow (1836-44), canon of Westminster (1844), held a living in Berkshire (1850-60), and became Bishop of Lincoln (1868). He was a noted hymn-writer and wrote *Gracious Spirit, Holy Ghost*. His pubs. include: the Bible commentary, *Greek New Testament*, 1856-60, *Old Testament*, 1864-70, *Memoirs of William Wordsworth*, 1851. In 1873-5 occurred his controversy with the Wesleyans, and 'the Great Coates Case.' See life by J. H. Overton and E. Wordsworth, 1888.

Wordsworth, Dorothy (1771-1855), diarist, only sister of the poet, b. Cockermouth, Cumberland. From 1795 she kept house for her brother, accompanying him and Coleridge to Germany (1798-9). She later settled with Wordsworth and his wife at Grasmere, whence they moved to Rydal Mount (1813). The poet acknowledged how much he owed to her inspiring companionship, and dedicated to her the *Evening Walk*, 1793. Her own writings display great powers of description and a keen appreciation of natural beauty. See lives by E. Lee, 1886 and E. de Selincourt, 1933. See also C. M. McLean, *Dorothy and William Wordsworth*, 1927.

Wordsworth, William (1770-1850), Poet Laureate, b. Cockermouth, Cumberland, son of a land attorney. Left an orphan at 13, with the help of uncles he was educ. at Hawkshead School and St John's College, Cambridge. His last summer vacation was spent in a walking tour in France, and after he had taken his degree in 1791 he paid a second visit to that country and was converted to republicanism. He also fell in love with Annette Villon, daughter of a Blois surgeon, and had by her a child, Caroline, whom he acknowledged at her christening. W. wished to marry Annette, but their differing creeds, poverty, and the war were grave obstacles, and he returned home, leaving her and escaping the fate of the Girondist party, with whom he had been about to throw in his lot. His guardians wished him to take orders, but he was averse to any profession. Meanwhile the later excesses of the Fr. republicans had turned his early admiration to horror, and for a time he embraced the rationalist philosophy of Godwin (q.v.). In 1793 appeared his first pub. works, *The Evening Walk* and *Descriptive Sketches of a Pedestrian Tour in the Alps*.

His meeting with Coleridge in 1795 confirmed him in his resolution to devote himself to poetry, and at the same time

by a fortunate chance he was rendered independent by a legacy of £900 left him by his friend Raisley Calvert. With his sister Dorothy, who was to be his lifelong companion, he settled first at Race-down, Dorset, and then at Alfoxden in Somerset near Nether Stowey, where Coleridge was living. During this intimacy the 2 poets planned the *Lyrical Ballads*, that important landmark in Eng. literature. To the vol. Coleridge contributed 'The Ancient Mariner' and W. 'Tintern Abbey' and other pieces. The first ed. appeared in 1798. With the profits from it W. went with his sister and Coleridge to Germany, where they stayed at Goslar and he began the *Prelude*,

WILLIAM WORDSWORTH

a poem descriptive of the development of his own mind. It was planned as the first part of a great philosophic poem to be called *The Recluse*, but the work was never finished. He also wrote sev. shorter poems at this time, including 'Ruth' and 'Lucy Gray.' In 1799 he and Dorothy settled at Grasmere in the Lake District, setting up house in Dove Cottage, and in 1800 the second ed. of the *Lyrical Ballads* appeared, with W.'s revolutionary preface on the principles of poetry.

In the same year the death of Lord Lonsdale, and the settlement of certain claims that the Wordsworths had upon him, supplied enough for them to live on in the simple manner that suited them. In 1802, having first visited Calais to meet Annette, W. married his cousin Mary Hutchinson, who, like his sister, was to give him a lifetime of devotion. In the following year he visited Scotland, and began his friendship with Sir Walter Scott, and in 1805 he completed the

Prelude, which was not, however, pub. till after his death. Two years later he pub. a further collection of *Poems*, which contains some of his best work, including the 'Ode to Duty,' 'Ode on the Intimations of Immortality,' 'Yarrow Unvisited,' and 'The Solitary Reaper.' In 1813 the Wordsworths removed to Rydal Mount, where he spent the rest of his life, and in the same year he was appointed Distributor of Stamps for Westmorland at a salary of £400. In 1814 he pub. *The Excursion*, the middle part of his projected philosophic poem, made another visit to Scotland, and wrote 'Yarrow Visited.' A period of classical influence at this time was responsible for the poem *Laodamia*. Later works were *The White Doe of Rylstone*, 1815, *Peter Bell* and *The Waggoner*, both 1819, *The River Duddon*, 1820, and *Memorials of a Tour on the Continent and Ecclesiastical Sonnets*, both 1822. An annuity left him by Sir George Beaumont enabled him at this time to indulge his passion for travel, and he visited France, Belgium, Switzerland, and Italy, as well as making another Scottish tour, followed by *Yarrow Revisited* and *Other Poems*, 1835. In 1838 he received the degree of D.C.L. from Durham Univ., and in 1843 he succeeded Southey as Poet Laureate. Unhappily, from 1829 onwards his sister's health had been impaired, and in 1847 he lost his daughter Dora, and never recovered from the blow. He was buried in Grasmere churchyard.

W. was not only one of the greatest of Eng. poets, but had an exceptional importance in the development of Eng. literature. The *Lyrical Ballads*, it may be said, ushered in the Romantic Revival and fundamentally changed the whole conception of poetic values in this country. There had, of course, been earlier revolts against the rigid rules of the Augustans, but W.'s famous *Preface* was the first formulation of definite and determined opposition to those canons of taste that had held Eng. poetry in fetters for a cent. and a half. The school of Dryden and Pope followed Lat. models, and used a stereotyped poetic diction derived from them; hence W.'s contention that poetry should use the language of ordinary speech appeared to them the rankest heresy, and his principles were vehemently denounced. It is true that he himself does not always abide by them, but the general impression that his poetry gives is one of unadorned simplicity. Such lyrics as 'To the Cuckoo' and 'I Wandered Lonely as a Cloud' restored to Eng. poetry a clarity and reality from which it had long been divorced. They also illustrate W.'s second great gift to Eng. literature, his philosophy of a return to nature. He reawakened readers to the beauty of birds, trees, and mountains. Nature to him was something to be worshipped, so that even the meanest flower could inspire 'thoughts that do often lie too deep for tears.' This feeling of a mystic union with nature is found throughout his poetry, and above all in his 'Immortality Ode,' greatest of all Pindarics, which embodies the Neo-Platonist doctrine

of a pre-existence of which earthly beauty serves to remind us. With his nature poetry he estab. a tradition which has lasted over a cent. and put all later poets in his debt.

The standard ed. of W.'s *Poetical Works* is by E. de Selincourt and Helen Darbishire (7 vols.), 1940-9; there is also a later ed. by P. Wayne (3 vols.), 1955. The *Prose Works* were ed. by A. B. Grosart (3 vols.), 1876. The *Letters of William and Dorothy Wordsworth* were ed. by E. de Selincourt (6 vols.), 1935-9. See lives and studies by F. W. H. Myres, 1881; W. A. Knight, 1889; E. Legouis, 1896 (trans. 1897); W. A. Raleigh, 1903; H. W. Garrod, 1927; C. H. Herford, 1930; J. C. Smith, 1944; H. Read, 1949; Helen Darbishire, 1950; L. Abercrombie, 1952; also E. de Selincourt, *The Early Wordsworth*, 1936; Frederika Beatty, *William Wordsworth of Rydal Mount*, 1939; N. Lacey, *Wordsworth's View of Nature*, 1948; F. W. Bateson, *Wordsworth: A Re-interpretation*, 1955.

Work, in mechanics and engineering, is the effect produced in any mass by a force acting against inertia or resistance. The effect may result in strain or produce motion of the mass; in all actual cases the whole W. possible is distributed, only a portion of it becoming *useful*, a great deal being expended in overcoming friction, or, as in the case of steam and electricity, 'leaking' owing to the impossibility of controlling the direction of the force. In mechanical W. a ft.-lb. is the unit. Thus if a body of 2 lb. weight changes its level by 5 ft., the W. given out in falling, or received on rising, is 10 ft.-lb., neglecting friction, etc. The W. is measured as the product of resistance and the distance over which it is overcome. This is so whether the motion is direct, inclined, or curved. If in the case of a force of p lb. exerting a pull, the pull be not direct but inclined at an angle of θ to the resultant motion, the effective force is $p \cos \theta$. Power takes account of time; it is the time rate of doing W. One h.p. is the W. of 33,000 ft.-lb. done in 1 min. Energy is the capability of doing W. The metric unit of W. is the kilogrammetre; in the C.G.S. system, the unit is the dyne-centimetre or 1 erg. One joule (q.v.) = 10,000,000 ergs = 0.7373 ft.-lb.; 1 ft.-lb. = 13,563,000 ergs. Resilience is the W. done on a bar in producing stress, or the W. the bar will do in regaining shape when relieved from stress.

Workers' Educational Association, see ADULT EDUCATION; TRADE UNIONS; MANSBRIDGE, ALBERT.

Workhouse, see POOR LAW.

Workington, municipal bor., seaport, and mkt tn of Cumberland, England, 33 m. from Carlisle, on the R. Derwent. Its industries include coal mining, iron and steel manuf., heavy and light engineering, textile and carpet manuf. Harrington was incorporated in the bor. in 1934. Pop. 28,800.

Workmen's Compensation, system in force in England until 1946, whereby compensation was paid to persons injured

at work or, if they were killed, to their dependants. The principle underlying the Workmen's Compensation Acts (all of which are now superseded by the National Insurance (Industrial Injuries) Act, 1946) was that of the provision of weekly compensation in cases of injury at work without proof of negligence. Employers were not compelled to insure, except owners of collieries as from 1935, when the W. C. (Coal Mines) Act came into force. The principle of W. C. was introduced into English law by the Workmen's Compensation Act of 1897, prior to which Act the remedies available to the injured workman were either an action at common law or an action under the Employers' Liability Act, 1880. The Act applied to Scotland.

WORKMEN'S COMPENSATION ACT, 1897. This marked a great advance in the social obligations of masters and employers, and made them in effect insurers of employees against accidents. Proof of negligence was no longer required. The Act provided that a workman might recover compensation for personal injury caused by an accident 'arising out of and in the course of employment.' But it restricted the right to get compensation for injuries sustained in one or other of a list of notoriously dangerous occupations, and a further defect was that it did not apply to injuries to health caused by employment in noxious industries.

WORKMEN'S COMPENSATION ACTS, 1900 TO 1923. The Act of 1900 extended the scope of the Act of 1897 to employment in agriculture, but the earlier Workmen's Compensation Acts were repealed by the Act of 1906, which re-enacted their principles while omitting most of the above-mentioned limitations and exceptions. It gave the right to obtain compensation to all persons in regular employment (except soldiers, sailors, and policemen) whose remuneration was not over £250 a year. It also introduced the principle of including under the notion of 'accident' certain industrial diseases. The only defence left to the employer was where he could prove that the accident was due to the 'serious and wilful misconduct of the workman'—words which have given rise to a great number of decisions which are sometimes difficult to reconcile with each other. This defence did not apply in cases of death or serious and permanent disablements. The Act of 1923 considerably amplified the definition of 'workman' given in the Act of 1906 by including certain accidents happening when the workman was acting *contrary to regulations*.

THE WORKMEN'S COMPENSATION ACT, 1925. This Act consolidated the law and applied to all cases where the accident happened on or after 1 Jan. 1924. It repealed all the previous W. C. Acts, except a few sections of the Act of 1923. There were subsequent amendments.

The W. C. Act of 1925 gave the right to compensation for injury by accident 'arising out of and in the course of employment,' provided the injury disabled the workman for a period of at least 3

days from earning full wages and provided the injury was not attributable to the serious and wilful misconduct of the workman.

The compensation under the repealed W. C. Acts was payable to or for the benefit of the workman, but when death resulted from the injury to or for the benefit of his dependants. The expression 'workman' included any person (subject to certain specific exceptions) who had entered into or worked under a contract of service or apprenticeship with an employer, whether by way of manual labour, clerical work, or otherwise; and also a person engaged in plying for hire any vehicle or vessel which he had obtained from the owner of the vehicle under a contract of bailment (but not under a hire-purchase agreement) in consideration of a fixed sum or a share of the earnings. Nevertheless, the term excluded many other categories of persons. 'Employer' included any body of persons incorporated or unincorporated and the legal personal representatives of the employer; and also, where an employer lent the services of an employee temporarily to another employer, he none the less remained liable to pay compensation for an injury occurring to the workman during his temporary service.

As regards the application of the W. C. Acts to industrial diseases, compensation was recoverable only where the disease was one of those included in Schedule III (anthrax, lead, mercury, phosphorus, and arsenic poisoning, ankylostomiasis, etc.).

BEVERIDGE REPORT. The Beveridge Report (1942) on social insurance recognised that the existing system of W. C. had conferred great benefits in the past. On the other hand, the Report drew attention to many serious disadvantages. It referred to the contentious and costly method for settlement of disputes; the difficulties of the workman who was not assisted by a trade union or approved society in prosecuting a claim; the possibility of improper pressure on him to reduce his claim or to take up work for which he was not fit; the want of complete security for the payment of compensation; the difficulties of demarcation between industrial and non-industrial cases; the unsatisfactory provision made by lump-sum settlements; the high costs of administration over parts of the field; the inappropriateness of the system in cases of industrial diseases which develop over a long period or are of a recurrent nature; and the absence of any provision for medical and post-medical rehabilitation of the injured workman.

NATIONAL INSURANCE (INDUSTRIAL INJURIES) ACT, 1946. This Act, which repealed as from 5 July 1948 all but a few sections of the previous W. C. Acts 1923-45, gave legislative form to the basic principles set out in Cmd. 6551 (pub. Sept. 1944 following the Beveridge Report) for an industrial injury insurance scheme. It changed the whole basis of legislative provision against industrial injury by accident by substituting a

system based on *loss of earnings*. The Act substituted for the W. C. Acts a universal and compulsory system of insurance against personal injury caused by accident arising out of and in the course of a person's employment and against certain specified diseases and catalogued injuries. An accident is deemed to arise 'out of and in the course of' an insured person's employment notwithstanding that he is, at the time of the accident, acting in contravention of any statutory or other regulations applicable to his employment, or of any orders given by or on behalf of his employer, or that he is acting without instructions from his employer, if: (a) the accident would have been deemed so to have arisen had the act not been done in contravention as aforesaid or without instructions from his employer; and (b) the act is done for the purposes of and in connection with the employer's trade or business. A disease or injury may be prescribed for the purposes of the Act in relation to any insured persons, if the minister of pensions and national insurance is satisfied that: (a) it ought to be treated, having regard to its causes and incidence and any other relevant considerations, as a risk of their occupations and not as a risk common to all persons; and (b) it is such that, in the absence of special circumstances, the attribution of particular cases to the nature of the employment can be estab. or presumed with reasonable certainty. The Act covers virtually all persons employed under contract of service, and also some special employments, such as fishermen. In 1957 a National Insurance (No. 2) Act was passed to increase contributions and benefits under (among other Acts) the National Insurance (Industrial Injuries) Act, 1946.

Rates of Contributions and of Disablement Pensions. Under the National Insurance (No. 2) Act, 1957, the basic weekly rate for injury benefit and complete disablement is 85s., with somewhat lower rates for those between 17 and 18, and under 17. The weekly rates of contributions payable by insured persons and employers are:

Description of Insured Person	Employee	Employer
Men over 18	8d.	9d.
Women over 18	5d.	6d.
Boys under 18	4d.	5d.
Girls under 18	3d.	3d.

Injury Benefit. An injured person is entitled to injury benefit in respect of any day on which, as the result of the injury, he is incapable of work during the injury benefit period (a period with a maximum of 156 days from the date of the accident); but he will not be entitled to benefit in respect of the first 3 such days, unless he is incapable of work during the period of not less than 12 days. Injury benefit is defined as an allowance payable at the weekly rate of 85s.; and the amount payable for any day of incapacity is:

one-sixth of the weekly rate (i.e. of 85s.); but if the beneficiary is under 18 and not entitled under the Act to an increase of benefit in respect of a child or adult dependant, his (or her) weekly rate is 63s. 9d. while he is between the ages of 17 and 18 and 42s. 6d. while he is under 17.

Disablement Benefit. An insured person is entitled to disablement benefit if, as the result of an industrial accident or prescribed disease, he is suffering from a loss of physical or mental faculty assessed at 1% or more. Where the assessment is 20% or more a pension is payable proportionate to the degree of the disablement. The weekly rates of disablement pension range from 85s. per week for 100% disablement to 17s. for 20%. When the full extent of disablement is assessed for the period taken into account as amounting to less than 20%, disablement benefit will be in the form of an industrial disablement gratuity, of an amount fixed according to the length of the disablement period and the degree of disablement, but not in any case exceeding £280.

Increase of Disablement Benefit. Where the injured workman, as a result of the relevant accident, is unable to return to his regular occupation or to undertake work of an equivalent standard, disablement benefit may be increased by the payment of a special hardship allowance (maximum 34s. a week). There is also provision for increases of disablement benefit on account of permanent unemployability, hospital treatment, need for constant attendance, and, under certain circumstances, child and adult dependants.

The Act makes special provision for certain increases to claimants under the Workmen's Compensation Act who remain totally incapacitated and who are still in receipt of weekly payments for such incapacity. These increases cover unemployability supplement and the need for constant attendance. In addition, the Workmen's Compensation (Supplementary) Act, 1956, grants a supplementary payment of 17s. 6d. weekly to claimants still in receipt of compensation for total incapacity due to the old injury.

Death Benefits. The weekly rate of pension payable to the widow of the deceased (provided that she was living with her husband at the time of his death) will be at the rate of 56s.: (a) for any period for which she is entitled to an allowance under the Act in respect of a child of the deceased's family or has a young person under 18 residing with her; (b) if she was over 40 years of age at deceased's death or has reached 40 during a period for which she was entitled to such an allowance; or (c) where the widow at the deceased's death was permanently incapable of self-support; and in any other case the rate will be 20s. In the case of a widower the pension for life is 56s. weekly if he was being wholly or mainly maintained by his wife and was permanently incapable of self-support. A parent of the deceased is entitled to

death benefit if at the deceased's death he was being to a substantial extent maintained by the deceased, or would, but for the relevant accident, have been so maintained. Provision is also made for children of the deceased's family, and also for dependent relatives of the deceased, and for women having the care of the deceased's children. Death benefit is also payable to a widow who was not residing with her husband at the date of death, provided that she is receiving, or is entitled to receive, from him periodical payments for her maintenance to the extent of not less than 5s. weekly. The rate of pension payable is the standard rate or the weekly amount she received (or was entitled to receive) for her maintenance, whichever is the less.

DEFENCE OF COMMON EMPLOYMENT. REPEAL OF EMPLOYERS' LIABILITY ACT. DAMAGES FOR PERSONAL INJURY OR DEATH IN A COMMON LAW ACTION. The Law Reform (Personal Injuries) Act, which is related to the National Insurance (Industrial Injuries) Act, 1946, taken with the Contributory Negligence Act of 1945 and the Crown Proceedings Act, 1947, effected a long-needed rationalisation of the law relating to injuries and negligence—though the first-named Act, contrary to the recommendations of the Departmental Committee appointed after the publication of the Beveridge Report, is confined to injuries associated with employment instead of being applied, where appropriate, to injuries of every kind. When 'workmen's compensation' was superseded by a system of benefits provided through compulsory insurance and payable regardless of anyone's 'negligence,' the question naturally arose whether the workman who also succeeds in recovering damages at common law should receive both insurance benefits and damages in full, or whether the latter should be reduced by the amount of his benefits. These and cognate questions were referred to the Departmental Committee, whose recommendations are the basis of the Law Reform (Personal Injuries) Act. That Act abolishes the defence of common employment and repeals the Employers' Liability Act, 1880. The Act also provides that in an action for breach of statutory duty the employer shall not be liable to damages for personal injuries or death if it can be shown 'that it was not reasonably practicable to avoid or prevent the breach.' The third clause of the Act provides that in fatal cases and in those of prolonged or permanent injuries, only half the value of (insurance) benefits under the National Insurance (Industrial Injuries) Act, 1946 (partly amended by the provisions under the National Insurance (No. 2) Act, 1957), up to 5 years from the date of the injury shall be taken into account by the Court in assessing damages in an action for damages for personal injuries (including any such action arising out of a contract). The Act provides that the expression 'personal injury' includes any disease and any impairment of a person's physical or mental condition. The fifth and last

clause provides that the Act shall bind the Crown (i.e. the gov.) as an employer. See Lord Halsbury, *Laws of England*, 1907-17, 1931; A. Wilson and H. Levy, *Workmen's Compensation* (2 vols.), 1939-41; and W. A. Willis, *The Workmen's Compensation Acts, 1925-1943*, 1945, with supplement, 1946.

Works, Ministry of. Although the history of the dept can be traced back through a long period, it was not until after 1852 that it became known as H.M. Office of Works. Its prin. functions were the provision, furnishing, and maintenance of accommodation for civil depts and of the H.Q. of service depts; care and maintenance of royal palaces, the Houses of Parliament, embassies and legations abroad, certain museums and art galleries; the preservation of ant. monuments; and the management and maintenance of royal parks. In 1940 the dept was given new and important responsibilities relating to the building and civil-engineering industries, and received the title of the Ministry of Works and Buildings, subsequently amended to Ministry of Works. In addition to the old 'Office of Works' functions the ministry is responsible for the general oversight of the building and civil-engineering and the building materials industries and for consultation with the representatives of these industries. Its duties include collecting statistical information for the purpose of assessing the load of work and the trends of activity in the building and civil-engineering industries; publicising the results of building research and fostering their application in the interests of increased productivity; and a general responsibility for the supply and distribution (including export) of building materials.

Works Agency, Federal (U.S.A.), created by the President's reorganisation plan of 1939 and executive order 9357 of 30 June 1943, transferring the functions and powers of the Public Works Administration and of the Commissioner of Public Works to the offices of the Federal Works Administrator (where they were put in process of liquidation). The F. W. A. was estab. to consolidate those agencies of the Federal Gov. dealing with public works not incidental to the normal work of their depts and which administered federal grants or loans to state and local govts. or other agencies for the purposes of construction. It was abolished by Act approved 30 June 1949, and its functions transferred to the General Services Administration.

Works Councils, see INDUSTRIAL WELFARE.

Works Representatives, see SHOP STEWARDS.

Workshops Acts, see FACTORY LEGISLATION.

Workshop, mrkt in and bor. of Notts, England, on the Rvtn. Its par. church, which formerly belonged to an Augustinian priory, is a fine cruciform building. W. is a mining centre, with chemical, timber, glass, and malting works and an important cattle mrkt. Pop. 32,590.

World, see EARTH.

World Bank, popular name for the International Bank for Reconstruction and Development (q.v.).

World Calendar. The following is a brief outline of the scheme for the W. C. Each quarter consists of 91 days or 13 weeks, and each year, half-year, and quarter commences with a Sunday and ends on a Saturday. Jan., April, July, and Oct. each contain 31 days; Feb., May, Aug., and Nov. each contain 30 days; and Mar., June, Sept., and Dec. each contain 30 days. This would make a year contain only 364 days, but 31 Dec. is named Worldday and is a world holiday. In Leap Years the additional day is placed on 31 June and is another world holiday. By using these stabilising dates the calendar will be able to have the same day and date arrangement every year, each year being complete in itself.

While economic planning would be greatly simplified by the W. C., there is considerable opposition to it, more especially on the part of certain religious bodies, and it is not very likely that this calendar will be accepted in the near future. Literature on the subject can be obtained in various countries: in Great Britain from 20 Buckingham St., London, W.C.1.

World Council of Churches. Movements towards Christian unity and to promote common action by the Churches are expressing themselves in various organisations, of which the W. C. of C. is one. The H.Q. of the W. C. of C. are in Geneva; the Archbishop of Canterbury (Dr Fisher, q.v.) is a member of the central committee. The general secretary is Dr Visser 't Hooft, and the Council held its first assembly in Amsterdam in Aug. 1948, at which there were representatives from about 150 Churches. The Rom. Catholic Church was not represented.

World Health Organization. International body charged by the U.N. with responsibility for all the international aspects of health. The constitution for the organisation was signed on 22 July 1946, and it came into effect in 1948, its status as a specialised agency of U.N.O. being recognised in 1950. It now has over 80 members. Its constitution states: 'Health is a state of complete physical, mental, and social wellbeing and not merely the absence of disease or infirmity. The enjoyment of the highest attainable standard of health is one of the fundamental rights of every human being without distinction of race, religion, political belief, economic or social condition.' The international quarantine measures to prevent the entry of, e.g., yellow fever, into the U.S.A. of smallpox into Britain are administered by W.H.O. Another important activity of the organisation is to estab. international standards for drugs, sera, and vaccines. Another function of the body is to draw up a common technical language for doctors in all countries. W.H.O. works in an advisory capacity only, its policy being to assist countries—mainly by arranging for the loan of personnel on a temporary basis—in developing their own health programmes. W.H.O. is governed

by a general assembly, representative of member nations, which meets annually, and an executive council, which meets more frequently. In 1956 there were 78 member countries and 1 associate member country. Russia rejoined in 1955, having withdrawn in 1949. Administration of W.H.O. is carried out by an international staff of whole-time officials under a Director-General (Dr M. G. Candau, Brazil). The H.Q. of W.H.O. is in the Palais des Nations, Geneva, Switzerland, and there are regional offices in various parts of the world. It has a library of 27,000 volumes and 1300 current periodicals. Publications: *Bulletin of the World Health Organisation* (monthly), *Chronicle of the World Health Organisation* (monthly), *International Digest of Health Legislation* (quarterly), *Epidemiological and Vital Statistics Report* (monthly), *Weekly Epidemiological Record*, *W.H.O. Newsletter* (monthly).

World Medical Association, founded in 1947. Its objects are to promote closer ties among the national medical organisations and the doctors of the world, to maintain the honour and interests of the medical profession, to study and report on professional problems confronting the profession in different countries, to organise an exchange of information on matters of interest to the medical profession, to establish relations with the World Health Organization (q.v.) and other appropriate bodies, and to assist all peoples of the world to attain the highest possible levels of health. The unit of membership is the national medical association of a country or territory. In 1957, 53 national associations were members. The W.M.A. publishes *World Medical Journal*; it holds an annual meeting in one of its member countries (1957, Turkey). Its H.Q. are at 10 Columbus Circle, New York 19, U.S.A.

'World-Telegram and Sun', New York daily newspaper, which originated as the *New York World*, 1860, and later amalgamated with the *Telegram*, 1931, and the *Sun*, 1950. See 'NEW YORK WORLD.'

World War, First. This account treats of the First World War as a whole. Military operations are treated in detail under the various fronts or theatres of operations. Detailed accounts of European diplomacy and policy during and after the War will be found under EUROPE; while the effect of the War on the internal politics of the different nations is treated under the name of the nation concerned. See also the individual articles on the persons and places named.

CAUSES. Intense Nationalism—Industrial Unrest. In the early years of the 20th cent. the countries of W. Europe had reached a high degree of material progress and prosperity. The great advances of scientific discovery had revolutionised industrial processes and brought great wealth to leading industrialists. There had been a corresponding improvement in the conditions of life of the wage-earners, though the parade of luxury by the rich laid the seeds of a resentment

which was shown in strikes and occasional industrial unrest, and also in political action by the workers.

The political organisation of the workers was becoming identified with their industrial organisation in trade unions, and the entirely material objects of the organisations in the shape of higher wages and better working conditions led directly to an intense nationalism which counteracted the political movements. Trade unionists of one country saw the prosperity of their own trades threatened by the activities of foreign traders, and were ready to support tariffs designed to limit foreign competition. Tariff barriers led to trade jealousies between different nations, and, combined with inherent political jealousies, constituted a latent danger to European peace. A greater element of danger, however, lay in trade expansion and the struggle for privileges in newly developing 'backward countries' such as the Balkans, Asia Minor, N. Africa, and in rival efforts to secure 'the road to the E.'

Balance of Power—Secret Diplomacy. At the beginning of the 20th cent., balance of power in Europe was no longer stable. Since 1870 Germany had rapidly grown in military and industrial importance, and her imperial ambitions were regarded as menacing by Lord Lansdowne, then Brit. Foreign Secretary, who threw over the policy of isolation by concluding in 1902 the Anglo-Jap. Treaty (q.v.)—thereby relieving Great Britain of large naval commitments in the Pacific—and by negotiations with the Fr. Gov., leading to the 'Entente Cordiale' of 1903—a defensive arrangement, at first, rather than an alliance. This was followed by a number of secret agreements between different countries.

German Militarism. Emphasis was laid by the new rulers of Germany on 'blood and iron' and other incidental aspects of Bismarck's (q.v.) creed. The securing once for all of Germany's prestige was equally important to the great Ger. industrialists, for the efficient Ger. trade machine was built up on a none too stable system of credit. The Ger. people were not essentially 'militarist,' but the most pacific of them were uneasy over their country's economic future and predisposed to some great effort to obtain security, and in this they were led by the new class of industrial magnates, the Prussian squirearchy, and the army and navy chiefs, the 3 most potent elements in Germany on the eve of the War, and all of them dominated by ideals of conquest. The countervailing element should have been found in the party of social reform, but the Social Democrats were politically powerless, for the Ger. constitution gave them no means of making their influence a reality. Equally significant from the international standpoint was the Ger. fear of the Russian menace.

The Ger. empire wanted producing grounds for its raw materials, 'a place in the sun,' outlets in colonial possessions for its surplus people. A colonial empire must be guarded by a powerful navy, and

the Navy, in process of expansion, was now an obvious threat to Brit. sea-power. Ger. power must combine Central Europe into a formidable bloc, with an extension of influence into the Middle E., where oil-fields were of rapidly increasing importance. Such were some of the theories underlying Prussian policy as expounded by the emperor; but his spectacular landing in Morocco in 1905 and proclamation of Germany's intention to take the Sultan under her protection was followed by the diplomatic defeat of Germany at the Algeiras (q.v.) Conference, when Germany found herself deserted by every Power save Austria-Hungary. Germany was more successful in 1908 in supporting Austria when, on the overthrow of the old régime in Turkey, Austria seized the Turkish prov. of Bosnia and Herzegovina, which she had long administered. This action roused the apprehensions of Russia and Italy; but neither Russia nor Italy was in a position to take armed action. In 1911 Morocco gave Germany further occasion for self-assertion. There had been a revolt in Fez, and the city had been occupied by Fr. troops. Germany saw her chance to acquire a Ger. sphere of influence in Morocco, and the emperor dispatched the gunboat *Panther* to Agadir in W. Morocco. Britain then sent a warship to Agadir, and under international pressure Germany retired.

Effect of the Agadir Incident. This incident caused resentment in Germany against France and Great Britain, and from that date the war party in Germany was supreme. This fact was not, however, generally recognised. In 1914 the war party was in control of Ger. policy, awaiting a suitable opportunity for war, but the emperor probably did not realise the full implication of its attitude. Germany had to dominate Austro-Hungarian policy if she were to realise her dream of a solid bloc of Ger. influence through Central Europe towards the Middle E., which had been threatened by the successes of Serbia in the Balkan war. The aged Austrian Emperor, Francis Joseph, was content to rest his tottering throne on the might of Ger. arms, and Austria would never have taken the steps which plunged Europe into war if she had not been assured of Ger. support.

The Sarajevo Murder. The actual occasion for war was in itself comparatively insignificant. The Austrian Archduke Francis Ferdinand (q.v.), nephew and heir of the emperor, and his wife, were assassinated by a Bosnian student, Gavriló Princip, at Sarajevo, the Bosnian cap., on Sunday, 28 June 1914. (See also SARAJEVO.) On 5 July a meeting took place at Potsdam, the result of which was that Germany promised to support Austria in whatever demands she might make upon the Serbian Gov. Russia alone of the Entente Powers had taken alarm at the possible international effect of the murders, and about this time a warning was sent to Vienna by Sazonoff, the Russian Foreign Minister, that any unreasonable demands by Austria upon Serbia could not leave Russia indifferent.

But in spite of this warning, and of the report of the official Austrian investigator that the complicity of Serbia in the crime was not proved, the Austrian Gov. presented a drastic ultimatum to Serbia on 23 July, requesting a reply within 48 hrs. On the advice of Russia, Serbia, on the 25th, agreed to all the demands save 2 which clearly conflicted with her authority as a sovereign state. Serbia suggested that these 2 points should be referred to the Hague Tribunal. Austria-Hungary immediately informed Serbia that the reply was not satisfactory. The Austrian minister and his staff left Belgrade, and Austria-Hungary mobilised her S. armies and moved them towards the Serbian border.

EVENTS IMMEDIATELY PRECEDING OUTBREAK OF WAR. Diplomatic Exchanges. The week that followed the Austrian mobilisation was filled with frenzied diplomatic efforts to avert the widening of the area of conflict. Their efforts, however, failed, owing to the refusal of Germany to co-operate.

Mobilisations. Austrian Attack on Belgrade. On 29 July Russia mobilised her forces in the dists. nearest to Austria. On the same day Austria began the bombardment of the Serbian cap., Belgrade; the Ger. High Sea Fleet was recalled from the Baltic; Belgium began to prepare her defences; and concentration of the Brit. fleet began. Germany informed Russia that her partial mobilisation would compel Germany to mobilise, and this was represented by the inep. Ger. ambas. in St. Petersburg, Count Pöhlke, as an ultimatum meaning war. On the same evening the Ger. emperor and his advisers resolved to declare war on France and Russia; but before doing so they offered an assurance to the Brit. ambas. in Berlin that, provided the neutrality of Great Britain was definite, the Gov. 'aimed at no territorial acquisitions at the expense of France should they prove victorious in any war that might ensue.' Sir Edward Grey rejected these terms, as he was bound to do, but still delayed advising the Brit. Cabinet to take any step which might involve Britain in war.

On the following morning, 31 July, news of the general Russian mobilisation reached Berlin, and Germany at midnight presented an ultimatum to Russia. At the same time Germany asked France for a notification by 1 p.m. the following day whether she intended to remain neutral in the event of a Russo-Ger. war. It was essential to the Ger. plan of campaign to involve France at the earliest possible moment, on the confident assumption that one swift blow would crush France and so leave the whole weight of the Ger. armies free to meet the Russians. War was now inevitable.

British Obligations towards Belgium. German Ultimatum to Belgium. When war between Germany and France seemed imminent, Sir Edward Grey asked for renewed assurances from both powers as to Belgian neutrality which both had guaranteed in 1839 (see QUINTUPLE TREATY). France gave the required

guarantee, but Germany's answer was evasive, and contained a suggestion that Belgium had already committed certain hostile acts against Germany. At the Brit. Cabinet meeting on the morning of 1 Aug. it was decided to notify Germany that Britain could not ignore any threat to Belgian neutrality. On the following day Germany committed her first act of war when Ger. troops crossed the frontier into the Grand Duchy of Luxembourg and seized its railway system. This small state was not only practically unarmed, but her neutrality had been guaranteed by France and Germany. That Sunday Ger. cavalry patrols crossed the border into Alsace as far as the vil. of Jönchéry and skirmished with Fr. pickets. Ger. dragoons raided the Fr. vil. of Suarce and took prisoner 9 Fr. peasants. Early on the Monday morning before the declaration of war there was a Ger. raid near Lunéville, and a fight between Fr. troops and Uhlands at Rémeréville. France still behaved with restraint and kept her troops 6 m. behind the frontier. Meanwhile, on Sunday, Germany presented her ultimatum to Belgium in which she made the claim that the French intended to march through Belgium, and Germany must therefore herself demand a passage through Belgium in order to counter this Fr. move. If Belgium would agree to allow passage to the Ger. armies and preserve a benevolent neutrality, Germany would undertake to evacuate Belgian ter. at the end of the war and guarantee Belgian independence. Failing compliance, Germany would reluctantly be compelled to treat Belgium as an enemy. With the news of the Ger. ultimatum to Belgium, a change took place in the attitude of the Brit. Cabinet. At the Cabinet meeting on the Sunday morning, 2 Aug., Sir Edward Grey was authorised to assure France of Brit. naval support if the Ger. fleet came through the N. Sea or into the Eng. Channel to attack the Fr. coast. On Sunday evening the Prime Minister, Asquith, issued orders for mobilisation and summoned the Army Council to meet on Monday morning. On Monday Germany declared war on France. Early that morning Belgium had sent her reply to the Ger. ultimatum, boldly rejecting the Ger. proposals, and stating her intention to resist any attack upon her rights. At the Brit. Cabinet meeting on that morning, Winston Churchill, first lord of the admiralty, announced that the Brit. Navy was ready for war, and Lord Haldane announced the mobilisation of the Army. On the morning of Tuesday, 4 Aug., Sir Edward Grey advised Belgium to resist a Ger. invasion by force, and promised to join France and Russia in supporting her.

German Attack on Liège. Early that morning the Ger. invasion had begun. The frontier had been crossed at Gemmenich, and during the day Visé was burned and the forts at Liège were fired on. That evening Sir Edward Goschen presented Britain's ultimatum to Germany. No formal reply was given and at midnight on Tuesday, 4 Aug. 1914, a state

of war automatically came into being between Germany and Great Britain.

FIGHTING ON THE WESTERN FRONT IN 1914. Fall of Liège. *Arrival of the B.E.F.* The invasion of Belgium met with its first check at Liège, where the Belgians held up the Germans for 2 days in front of the city. The city was occupied on 7 Aug.; the forts around it were by 16 Aug. reduced by Ger. heavy howitzers. During the following week Ger. troops overran half Belgium. The main Belgian army fell back towards Antwerp, leaving Brussels unprotected, and the Germans entered the cap. on the 20th. The fortress of Namur, the last barrier between the Ger. advance and the N. frontier of France, was soon reduced by the Ger. heavy artillery. The greater part of the S. Belgian Army was destroyed in the fall of Namur, and this was the first conspicuous success achieved by the Germans in the War. Meanwhile the Fr. High Command remained in ignorance of the real weight of the Ger. drive. Acting on the Fr. theory that attack is the best defence, Gen. Joffre, the Fr. commander-in-chief, directed offensives into Alsace and Lorraine on 10 Aug. Both failed, and neither proved any distraction either to the Ger. right wing advancing through Belgium or to the Ger. centre advancing by way of Luxembourg and the Ardennes. The French had therefore made no effective plan to meet the threat of the Ger. advance through Belgium when the small Brit. Expeditionary Force of some 150,000 men under Sir John French reached France. The first 2 corps of this force took their place on the left of the Fifth Fr. Army near to Mons on 22 Aug. The first 2 Brit. corps of some 70,000 men came into contact with the Germans on Sunday the 23rd. On the 22nd the Fifth Fr. army had been attacked at Charleroi and had fallen back in some confusion. A breach was thus made in the Fr. line, and on the same day the Third and Fourth Fr. armies farther to the F. had also retreated, leaving the Germans free to attack the British in force. Owing to the confusion, no information of these retreats reached Sir John French, who faced the enemy under the impression that his troops formed part of an unbroken line, whereas they were completely isolated and facing a Ger. force 2 or 3 times the size of the estimate supplied by the French to the British when the latter took up their position.

The Battle of Mons. The British Retreat. The battle of Mons (q.v.) began with a bombardment from between 500 and 600 Ger. guns, and Sir John French, now learning of the withdrawal of the Third and Fourth Fr. Armies, ordered the evacuation first of Binche and then of Mons itself. The Brit. retreat during the night was covered at dawn by a counter-attack by the 1st Div., which suggested to the Germans that the British had been reinforced and intended an offensive. The plan of the Brit. commander was to retreat to a line giving his troops the protection of the fortress of Maubeuge and the R. Sambre on the right;

but the protection of the Sambre was useful only if the French could hold the Meuse and von Kluck could not outflank the British on their left. In fact, von Kluck had seized Journa, and the Meuse had been forced, and the 3 Fr. armies were in full retreat. Sir John French therefore continued to retreat to Le Cateau (q.v.). At nightfall on the 25th the Brit. troops reached a line through Marolles, Landreocis, and Le Cateau to Serain-Villiers near Cambrai. Some fierce fighting ensued, and at last the British were able to regain touch with the Fifth Fr. Army to the E., with a new Fr. corps under d'Amade in the W., and also with another new Fr. Army, the Sixth, under Gen. Maunoury (q.v.) on the Somme. On the evening of Friday, the 28th, the Brit. 2nd Corps reached the R. Oise, and was reunited with Sir Douglas Haig's 1st Corps, which had marched through Guise. The Brit. Army was at last able to rest; by their remarkable endurance much had been saved, but many men, much material, and a considerable area of country had been lost. To the W. Ger. cavalry now swept across Belgium as far as the R. Lys and down towards Lille and Arras, with the object of cutting communications between the Brit. Army and its bases at Boulogne and Dieppe. So serious did the position appear to French, that he moved his base as far S. as St. Nazaire, the port at the mouth of the Loire. The Channel ports (q.v.) as far as the Seine lay open to the Germans; but they had other plans. They were intent on destroying the Fr. armies by a series of hammer blows, and hoped to dictate peace on their own terms before autumn. So far they had made rapid progress towards this object. The fall of Namur, the defeat of Lanrezac's Fifth Army at Charleroi, the battle of Mons, and the defeat of the French on the R. Semois had been followed by the rout of Ruffey's and Langle's armies on the Meuse. On 28 and 29 Aug. the Germans forced the crossing of the Aisne, and Rheims and Châlons were abandoned. On the 30th La Fère and Laon were also evacuated. The Brit. retreat continued through the forests of Villers-Cotterets and Compiègne towards the R. Marne.

British Halt at Grand Morin R. On 3 Sept. the British reached the line of the Marne, but abandoned it farther E. without resistance, and on the 5th the Expeditionary Force was concentrated behind the Grand Morin R. due E. of Paris and close to the city. Von Kluck's right wing began to veer away from Paris towards the SE. His object throughout was to outflank the Allied left, and to avoid the obstacle of Paris until he had accomplished his main purpose. Still there was no certainty that the Marne could be held, and the Fr. Gov. retired to Bordeaux in the SW. The French could feel secure on their right flank for the time being, for they were now in touch with their reserves, while the speed of the Ger. advance was slackened. Joffre decided to launch his offensive on 4 Sept.

Two new armies of reserves had been brought into the line, Foch's Ninth and Maunoury's Sixth, and 2 old armies had new commanders, Sarrail replacing Ruffey and Franchet d'Espèrey replacing Lanrezac. To the E., Castelnau and Sarrail stood almost back to back along the E. and W. heights of the Meuse above Verdun. On Sarrail's left was Langle's Fourth Army behind Vitry-le-François, and the line was continued westward by Foch's Army on the St. Gond marshes. That of Franchet d'Espèrey was linked by cavalry to the British, who were guarded by the Crècy forests; and on the Brit. left, stretching north-westward across the Paris front, was Maunoury's new Sixth Army. Von Kluck erroneously believed he had practically disposed of the British at Le Cateau and of Maunoury on the Somme, and that the Fifth Fr. Army had thus become the left wing of the Allies. By the night of 5 Sept. he had crossed the Marne, the Petit Morin, and the Grand Morin, and his patrols had reached the Seine.

The Battle of the Marne. The German Retreat. On Sunday 6 Sept., the first battle of the Marne began. It reached its climax on the 9th and was over by the 12th. Von Kluck, still acting on his mistaken assumption, invited disaster by marching across the front of the W. armies, which moved out to attack his flank. By the end of the week the Germans were driven back to a line running from the Oise beyond Compiègne to the Aisne, along that riv. to Berry-au-Bac and across Champagne and the Argonne to Verdun. In Lorraine, also, Castelnau took the offensive and drove the Germans back from Nancy to beyond the Meurthe, and out of Lunéville and St. Dié. The Ger. right had fallen back 35 m. and the centre nearly 50; but their losses had been small. The battle was important because it frustrated the Ger. plan to destroy the Fr. armies, and so made certain a long war in which increasing advantage was to be on the side of the Allies. The retreat of the Germans from the Marne had taken them across the Aisne, and the Allies followed up their advantage on 13 Sept. by attacking the Ger. positions along the line of the Aisne.

The battle of the Aisne (q.v.) began on 13 Sept. Both the British and French crossed the riv. at sev. points, but were unable to dislodge the Germans from the high land beyond. The Germans had the advantage in position, and Joffre accordingly extended his left by the creation of 2 new armies holding a line as far as Arras and Lens. At the same time the Germans attempted to get behind the Fr. right in the Verdun area, but only succeeded in establishing a large salient which they were destined to hold for 4 years.

Trench Warfare and Stabilisation of the Front. The lines began now to be stabilised between Rheims and the Alps, and

A map of the First Battle of the Marne is printed in the article
MARNE. BATTLES OF THE

both sides settled down to trench warfare, an almost entirely new method in which all old theories of war were discarded. Between Rheims and the sea the month of Oct. was spent in a struggle to determine where that part of the line would become stabilised. The Germans moved great masses of their best troops to the W. area because they now realised that the Brit. Army was to prove an increasingly formidable opponent. Falkenhayn (q.v.) superseded von Moltke as Chief of the Imperial General Staff. Early in Oct. the Brit. Army was transferred to Flanders, close to its bases, to meet the Ger. threat to the channel ports. During the fortnight of the Brit. transfer, the French had to bear heavy attacks in the W., with varying success. The struggle, which had begun as attempts at out-flanking movement on both sides, soon developed into a race to reach the coast so as to establish the final position at as favourable a point as possible.

Belgian Resistance and German 'Frightfulness.' The Allies hoped to be able to make a connection with the Belgian Army in Antwerp, which all this time had kept large Ger. forces occupied with raids. The Belgian successes so seriously interfered with their plans that the Germans were provoked to vigorous methods, characterised in the Allied press as 'frightfulness,' in order to overawe the Belgians, but the only effect of these methods was to stiffen the Belgian resistance. Among these measures was the systematic destruction of Louvain, with its auct. univ. and library. On 28 Sept. the Germans began the siege of Antwerp.

Fall of Antwerp. First Battle of Ypres. The ring of forts round Antwerp failed to hold up the Germans, and the evacuation of the city began by land and sea on 1 Oct., and on the 10th the Germans entered the almost deserted city. In fixing the lines along which the opposing armies were to remain, with small fluctuations, for 4 years, the Brit. Navy played an important part, for the guns of 3 shallow-draught monitors from 18 to 28 Oct. swept the Belgian coast for 6 m. inland and held up the Ger. advance on Nieuwpoort. But still more decisive in stopping the Ger. advance was the action taken by the Belgians when they opened the sluices of the Yser at Dixmude and allowed the water to flood the country over which the Germans were advancing. The Belgians on the line from Nieuwpoort to Dixmude were protected by an impassable sheet of water. The Germans succeeded in capturing Dixmude on the E. bank of the Yser, but they were unable to cross the riv. Meanwhile a great battle had been waged around Arras, where the Germans tried to break through in the hope of isolating the Brit. Although the town was reduced to ruins, the French finally drove

back the Germans on the 26th. At the same time a prolonged and confused battle was ranging round Ypres. The final attack on Ypres itself began on the 21st (see YPRES, BATTLES OF). With the arrival of reinforcements for the French on 17 Nov., the Germans gave up their attempt to break the line, which now settled down for the winter.

Results of the Campaign. Germany had secured the great mining and other industrial resources of Belgium and some of the coalfields of N. France, and the loss of these was to put a great strain on the Allies and prolong the War. Brit. and Fr. losses had been very heavy, and time was needed to renew them. The chief difficulty for Britain was to train and equip the masses of recruits from all parts of the empire in a short space of time. The Territorial Army, created by Lord Haldane, provided the first line of reserves, its members volunteering almost without exception for foreign service. From all parts of the empire, also, recruits were arriving. Indian troops fought at Ypres, and the first Canadian contingent landed at Devonport on 16 Oct., to be followed by thousands from Australia and New Zealand and finally from S. Africa, where for the moment the task of repressing rebellion and fighting in Ger. SW. Africa kept the S. African volunteers occupied.

THE EASTERN FRONT 1914. *Russian Invasion of East Prussia.* It had been generally assumed that Russia's unwieldy masses could only be moved very slowly, but that later on her immense resources of men and material would prove formidable. In the event Russian troops invaded E. Prussia almost as quickly as Ger. troops invaded France and Belgium, and by the end of the first week in Aug. a flight towards Berlin had begun. Russia's Polish prov. was an almost impossible salient to defend, and her first need, therefore, was to attack on the flanks in E. Prussia and Galicia, in order to straighten her front. The Russian armies were under the supreme command of the Grand Duke Nicholas, who was one of the very few officers of royal blood to prove himself a competent professional soldier, and Rennenkampf was the gen. in command of the Russian First Army in the E. Prussian campaign. On 20 Aug. the Russians captured Gumbinnen, and Rennenkampf occupied an important railway junction at Insterburg, while on the 21st Samsonov, commanding the Russian Second Army operating to the S. in E. Prussia, turned the Ger. right and drove them back on Königsberg to join the fugitives from Rennenkampf's attack. By the 25th E. Prussia was open to the Russians, and alarm in Berlin was intense. Meanwhile, Austria, although she had a million troops in Galicia, had failed to secure more than a strategic retirement of the Russians by her offensive against Lublin, and the Russians under Ruzsky and Brussilov (q.v.) had overrun the E. borders and menaced Lemberg (Lvov). But the Russian advance into E. Prussia had reached its farthest point. The Ger-

WORLD WAR, CAMPAIGNS IN*

mans withdrew the incompetent Gen. von François, and replaced him by Paul von Hindenburg, with Ludendorff as his chief of staff. On the 31st he practically annihilated the Russian forces under Samsonov at the battle of Tannenberg (q.v.).

German Invasion of Russian Poland—Russian Advance into Galicia. Rennenkampff, with his communications now threatened, was compelled to retreat over the frontier and the invasion of E. Prussia had disastrously failed. Hindenburg now advanced across the Russian frontier without encountering any great resistance on a broad front from Wirballen on the left to Augustovo (Augustow) on the right, and occupied Suwalki, the cap. of the frontier prov., without resistance. But in the S. the position was much more favourable to Russian arms. (See RUSSIAN FRONT (FIRST WORLD WAR), CAMPAIGNS ON.) Gen. Brussilov, advancing from the S., captured in succession Tarnopol and Halicz, and forced his way across the series of rvs. guarding the right flank of Lemberg, and on 1 Sept. the battle of Lemberg began. The city fell on 3 Sept., and the whole Austrian Army then fell back behind the Vistula and the San. Von Auffenberg, who had defended Lemberg, withdrew to the fortress of Przemyśl, and the whole of the rest of Galicia was in Russian hands by about the date of the battle of the Marne in the W., so that the combined strategy in E. and W. had achieved substantial results for the Allies. Meanwhile Hindenburg in the N. continued his advance into Russia until he reached the Niemen; but there the vigorous Russian artillery attack and the inability of the Germans to find emplacements for their guns in the marshy ground checked him. The check became a retreat on 27 Sept., a retreat during which the Russians inflicted heavy losses.

The Struggle for Cracow. By 1 Oct. the Russian cavalry were again across the Ger. frontier, Jaroslav fell and Przemyśl was invested, and Hindenburg was called S. to Poland to repel the Russian advance on Cracow. The need was urgent, for the possession of Cracow would open the door to Silesia, and give access to Vienna. Ruzsky was now in command in Poland, and Ivanov, with Brussilov and Dmitriev as his lieutenants, in Galicia. Hindenburg's plan was to attack along the radial railway lines leading to Warsaw from Thorn (Torun), Kalisch (Kalisz), and Czechochowa, while the Austrians made an advance through Galicia, relieved Jaroslav and Przemyśl, and recovered Lemberg. The Grand Duke Nicholas foresaw Hindenburg's intentions, but concealed his own counter-plan by giving the appearance that he was about to retire from the Polish salient. Actually he proposed to hold a position behind the line of the Vistula, except for Warsaw, which stands on the l. b. of that riv., and to counter-attack round the N. of the Ger. left wing under the great fortress of Novo Georgievsk. On 19 Oct. he made this surprise move, forced back the Ger. left, and threatened the Ger. centre.

By 3 Nov. the Germans were in retreat, abandoning even Łódź, and destroying communications as they withdrew. The Austrians whom Hindenburg had come S. to help were more successful in their offensive, recovering Jaroslav, relieving and reinvictualing Przemyśl, and threatening Lemberg; but the Ger. retreat to the N. then compelled the Austrians to retire in Galicia. The Russian advance on Cracow was resumed, and by 9 Nov. their cavalry was only 20 m. from the city. A week before the Prussian Guard made its final attack at Ypres, Belgians had reported the moving of masses of Ger. troops away to the E. The need was urgent, for Cossacks were already across the Silesian border, and Hindenburg required all the help he could get for a counter-offensive. He was planning an attack up the Vistula from Thorn so as to attack the right flank of the Russian advance through Poland on Silesia and Cracow. The command was given to Mackensen. The Germans attacked all along the line on 18 Nov. against Ruzsky. The Russian centre was broken, and the left thrust back upon Łódź. But the wedge driven into the Russian line was not wide enough and the sides held fast, and Ruzsky began to close the Germans into a trap. For 3 days, 24 to 26 Nov., they fought desperately to extricate their forces, and at length the remnant succeeded. Meanwhile the Germans were rushing troops to Mackensen, and on 6 Dec. the Russians withdrew from Łódź in order to straighten their line against the attack Hindenburg was preparing on Warsaw. But the Ger. advance was now held, and the Germans spent Christmas in the trenches, 35 m. from Warsaw. Meanwhile the Hungarian advance in Galicia, which was another part of Hindenburg's plan, met with better success, and the Russians were driven back from Cracow, but with reinforcements they swung forward again.

German Attack on Warsaw. During Jan. 1915 the Russian centre in front of Warsaw was weakened in response to requests from the W. Allies that Russia should divert Ger. troops from the W. front by attacks on the extreme flanks of the Ger.-Austrian lines in the E. There was a fresh advance towards the Masurian Lakes in E. Prussia, and far to the S. Alexeev captured a Carpathian pass. Mackensen took advantage of this dispersal to make a fierce attack on the Russian centre. The attack began on 1 Feb., but the Russians were able to hasten reinforcements by the 2 lines of railway which ran N. and S. of the threatened front, and the Ger. advance was stopped. Hindenburg now gave up the idea of a frontal attack and tried to repeat his attempt on the N. flank to pierce the great chain of fortresses which defended Poland along the line of the Niemen and the Narev from Kovno to Novo Georgievsk. In this he was not successful, and by the middle of Mar. had withdrawn his left and centre to cover the Prussian frontier. On the Carpathian front, Russia, endeavouring to bring

Rumania into the war on the Allied side, sent a force into the Bukovina. On 22 Mar. Przemyśl surrendered to the Russians. After the fall of Przemyśl the Russians were free to make further assaults on the Carpathians, at first with success; but the Germans had taken charge of the Carpathian front and had sent enormous reinforcements there, while the weakness of Russia in guns and material was beginning to make itself felt.

SERBIA IN 1914. Austria's difficulties had not been confined to the Russian front. Her 'punitive expedition' against Serbia (q.v.) had been disastrously unsuccessful. By 6 Dec. the whole Austrian Army was broken and in flight. They suffered 80,000 casualties before they were driven back from Serbian soil, leaving Belgrade once more in the hands of the Serbs.

SOVEREIGNTY OF THE SEAS AND AIR RAIDS. *German Seaborne Commerce Destroyed.* The control of the seas did not ensure complete protection of all the Allied coasts from Ger. raids, but it did ensure freedom of movement for the Allies at sea, and its chief importance was an economic one, enabling the Allies to draw for their supplies upon the whole world, while denying the same advantages in provisioning to the Central Powers. The Ger. High Sea Fleet had withdrawn to its bases on the outbreak of war, and the Ger. plan was to wear down the Brit. Navy by a war of attrition with submarines and mines.

Meanwhile the Brit. Grand Fleet under Adm. Sir John Jellicoe (q.v.) was compelled to operate in the N. Sea from inadequate bases, while the outlying cruisers in various parts of the world cleared the Ger. mercantile marine from the seas. Some Ger. merchant vessels escaped to neutral ports; but hundreds were made prizes. In a very short time Ger. seaborne commerce ceased to exist. A few Ger. cruisers and armed merchantmen were still at large, and one Ger. Dreadnought, the *Goeben*, with a cruiser, the *Breslau*, escaped to take part in the war later on. (See 'GOEBEN' and 'BRESLAU'.)

Mines and submarines proved from the first the greatest danger to Brit. shipping. The Germans adopted the method of laying loose mines, which involved risk to neutrals and belligerents alike. The first serious naval action by the British during the War was the fight in the Bight of Heligoland on 28 Aug., in which Vice-Adm. Beatty's battle-cruisers came up to support Brit. light craft and, successfully penetrating the mine-fields, sank the Ger. cruisers *Mains* and *Köln*. Meanwhile Japan had called upon Germany to evacuate her Chinese naval base at Tsingtao in the Kiao-chow peninsula, and to send her warships out of Far E. waters. The Ger. Pacific squadron under Adm. von Spee left Tsingtao in anticipation of the capture of that port by the Japanese, an event which actually took place on 7 Nov. Already Australian troops had occupied Ger. New Guinea, the Bismarck

Archipelago, and the Gilbert and Caroline Is., while Samoa surrendered to a New Zealand force, and the Marshall Is. to Japan. Von Spee was thus left without a naval base, and he steamed eastwards across the Pacific, detaching 2 of his cruisers, the *Königsberg* and *Emden*, to help the Germans in E. Africa and to raid Brit. commerce in the Indian Ocean. On 20 Sept. the *Königsberg* sank H.M.S. *Pegasus* at Zanzibar, but was soon entrapped in the Rufiji R. The *Emden*, under Capt. Müller, remained to demonstrate the possibilities of a solitary raider commanded with gallantry. (See 'EMDEN'.)

Battle of Coronel—Battle of Falkland Islands. Meanwhile von Spee had gained the S. Amer. coast and found shelter in its harbours and is. His squadron of 2 large and 3 small fast cruisers was opposed on 1 Nov. off Coronel by Adm. Cradock with a mixed squadron of old and slow vessels. Adm. Cradock and 1600 officers and men lost their lives in this action (see CORONEL, BATTLE OF). Lord Fisher (q.v.) as first sea lord of the Admiralty took prompt measures to avenge the defeat. On 5 Nov. he dispatched a squadron under Adm. Sturdee, comprising 2 battle-cruisers and 4 lighter cruisers. They picked up the *Glasgow* in the S. Atlantic, and the *Canopus* at the Falkland Is., which Sturdee reached on 7 Dec. Unaware of the presence of Sturdee's squadron, von Spee approached the Falkland Is. on 8 Dec. to be chased by Sturdee, who sank all his vessels, with the exception of the *Dresden*, which was sunk in Mar. 1915 (see also FALKLAND ISLANDS, BATTLE OF). The last Ger. cruisers outside their own harbours were now destroyed, and naval action was restricted to blocking the exits from the N. Sea and preventing Ger. raids from their bases. Meanwhile on 29 Oct. Bedouins invaded the Sinai Peninsula, while Turkish gunboats raided Odessa, and on 1 Nov. the Brit. ambas. left Constantinople, being unable to outbid the Germans for the support of the Turkish leaders. The first effects were seen in Egypt, where the Khedive threw in his lot with the Turks and was deposed in his absence, the British assuming the protectorate; and in Cyprus, which the British had occupied since 1878, but which they now formally annexed.

German Colonial Empire Conquered. The smallest African outpost of Ger. colonisation, Togoland, surrendered on 27 Aug. The Cameroons, larger in area than Germany, repulsed the first Allied attack; but on 27 Sept. co-operation between Fr. troops and Brit. warships effected the capture of the cap., Duala, and the whole coast-line. The conquest of Ger. SW. Africa was much more difficult, and was delayed by a serious revolt in the Union of S. Africa, organised by the Boer leader, Maritz, with assistance from de Wet and Beyers. Gen. Botha took prompt steps to deal with the outbreak, and after small rebel successes de Wet was captured on 1 Dec.; Beyers was drowned on the 8th while trying to cross

the Vaal R. Attacks on Ger. E. Africa in 1914 met with serious reverses, and it was to take the Brit. forces 4 years to secure its final surrender (see AFRICA, GERMAN EAST, FIRST WORLD WAR, CAMPAIGN IN; AFRICA, SOUTH-WEST; CAMEROON).

German Raids on British Coast. Two Ger. naval raids on the Eng. coast took place towards the end of 1914. On 3 Nov. Ger. cruisers made an abortive attack on Great Yarmouth, but on 16 Dec. Ger. battle-cruisers carried out a bigger raid on the N.E. coast, evidently with the object of scaring the Brit. civilian pop. Scarborough, Whitby, and the Hartlepool were bombarded. On 24 Jan. 1915 Adm. von Hipper came out with battle-cruisers and light cruisers, probably with the object of luring the Brit. fleet on to

Christmas Day 1914, and the French carried out sev. air-raids on military objectives in Germany; but the Germans made use of air-raids over Britain principally to sow panic among the civil pop., and airships were the means generally employed, as they were capable of long cruises and of carrying a great weight of bombs.

ALLIES AND THE NEAR EAST. *British Attacks in the Persian Gulf and the Dardanelles.* The Brit. retort to Turkish attacks on the Suez Canal was made in the Persian Gulf and the Dardanelles. Good use was made of the Indian Army in an attack on the Turks at the head of the Persian Gulf. The Turks made little headway against the Brit. advance, and in April 1915 they suffered a heavy defeat with some 6000 casualties, with

Daily Mail

THE SINKING OF THE GERMAN CRUISER 'BLÜCHER' IN THE NORTH SEA

the mine-fields he had prepared off Heligoland, and an engagement took place near the Dogger Bank between the Ger. cruisers and Adm. Beatty's battle-cruisers. One Ger. cruiser, the *Blücher*, was sunk, and one Brit. cruiser, the *Lion*, was damaged; but the Ger. vessels, after a severe battering, escaped through their mine-field. The result of the engagement was indecisive, but it left no doubt about the command of the seas.

American Attitude towards British Blockade. During the spring of 1915 considerable resentment was aroused in America by the Brit. blockade of Ger. ports, which interfered with Amer. shipping, and there was criticism of America in England; but the situation was radically changed by the sinking of the *Lusitania*. It was on 7 May that this passenger liner was torpedoed off the S. coast of Ireland with the loss of 1100 people, many of them women and children and some of them Americans.

German Air-raids. During the winter and spring of 1914-15 air-raids began to play a part in the War. There was a Brit. seaplane raid on Cuxhaven on

the result that the Arabs became converted into allies of the British, and the way was now open for a Brit. advance on Bagdad. But successful operations in the Persian Gulf were of minor importance compared with the threat to the heart of the Turkish Empire involved in the Dardanelles expedition. Attack on the Dardanelles was the best defence of the Brit. position in Egypt; Allied success there would almost certainly bring in Rumania on the Allied side, with all the advantage of an extended line of attack, and might deter Bulgaria from hostile intervention and even induce her to join a Balkan alliance against the Turkish and Ger. power. Italy's position as a member of the Triple Alliance who had not yet taken up arms with her Allies was also an important consideration. During the winter and spring of 1915 prolonged diplomatic efforts were directed to the task of bringing in Italy on one side or the other.

Italian Diplomacy. Under the terms of the Triple Alliance, Austria and Italy had promised each other reciprocal compensation in case either was forced to

disturb the *status quo* in the Balkans. In Mar. 1915 Baron Burian finally accepted the principle that compensation was due to Italy, and the It. Gov. proceeded to extend its demands to include not only the whole of *Italia Irredenta*, but practically the whole N.E. coast of the Adriatic. It was obvious that these claims could not be met by the Allies if they won the War, because they would involve concessions at the expense of the Serbs and of the other Slav races in Bosnia-Hercegovina (q.v.); but the value of her participation seemed to the Entente worth the risk of later difficulties, and on 26 April the treaty of London was concluded, which conceded to Italy most of her demands. But she still remained at peace with Germany for another year; and although she declared war on Austria on 22 May, she confined her efforts to attempts to secure the ter. at which she aimed. After some slight initial successes Italy did not seriously hamper the Austrian effort, and there were diplomatic difficulties arising from her intervention, particularly in Greece, which had serious consequences to the Entente Powers. King Constantine of Greece, married to the Ger. emperor's sister, and strongly pro-Ger. in his sympathies, was to prove a continual thorn in the side of the Entente, and he was unlikely to assist powers allied with Italy in view of Italy's claims to Gk is. The Serbs showed their feeling against Italy when that country intervened on the Allied side, by making a dash for the Adriatic coast claimed by Italy (see also ADRIATIC QUESTION). In the meantime the Dardanelles expedition had suffered from divided counsels and was to prove a disastrous waste of men and material.

The Dardanelles and Gallipoli. The purely naval attack began on 19 Feb. 1915, and 3 successive squadrons of Brit. and Fr. ships were sent up the straits, only to meet Turkish floating mines and land torpedoes which were so effective that one Fr. battleship, the *Bouvet*, with most of her men, and two Brit. battleships, the *Irresistible* and *Ocean*, were sunk. On 25 April the second attempt to force the straits began, when an Anglo-Fr. force, including 2 Australian and New Zealand divs., under Gen. Sir Ian Hamilton, attempted landings. The result of this first attempt landing was to give Hamilton possession of the extremity of the peninsula and of an exposed ridge of cliffs at Gaba Tepe, which was later named Anzac Cove; but he had failed in the hope of inflicting a surprise defeat on the Turks, and the struggle for Gallipoli resolved itself into a costly attack by inferior forces on land against almost impregnable positions. When a second attack was made on 6-8 May the naval guns of the supporting fleet failed to destroy the Turkish trenches, and an advance of 1000 yds was achieved only at the price of losses in men amounting by the end of May to more than the total Brit. losses in battle during the S. African War. A third attack on 4 June confirmed the impression that nothing short of a large

army could master the position. After further naval losses the naval attempt on the Dardanelles was gradually transformed into a land siege of the peninsula. (See also DARDANELLES and GALLIPOLI CAMPAIGN.)

THE EASTERN THEATRE OF WAR IN 1915. *Mackensen's Galician Drive.* During 1915 the centre of importance in the conflict shifted from the W. to the E. front. Germany saw that the enemy she could most easily defeat was not France but Russia, for Russia was badly equipped with munitions at the outset and had not the industrial organisation to make good the defect. Russia's vast Polish salient was a further weakness: it was protected by the Carpathians on the S., and the passes were extremely difficult for the transport of heavy artillery; but if once the Germans could make an advance in Galicia the Carpathians would be useless and the Russian armies in Poland exposed. Mackensen began his advance on 28 April with an attack on Dmitriev's left at Görnitz (Zgorzeke), so that the Russian gen. was compelled to weaken his centre along the Biala in front of Cieszkowice. Then on 1 May, the Germans began an overwhelming bombardment of the Russian positions. The Russian defences were completely destroyed, and the Russians could make little reply, so that the Germans were able to cross the Biala and to capture Cieszkowice and Görnitz, and to break Dmitriev's line. On the 2nd Dmitriev was in full retreat to the R. Wisłoka, 20 m. in the rear, where no position had been prepared, and Mackensen forced his way across the riv. on the 7th and pushed on still farther. This advance compelled Brusilov's Army to retire hastily from the edge of the Carpathians, and in the retreat his losses were heavy. For the rest of the month Mackensen advanced irresistibly. By the 18th he had captured Kosziowa and seized the line of the San from Sienawa to Jaroslaw, and on 1 June Przemyśl was evacuated.

The Fall of Lemberg. At the battle of Rawa Ruska on 20 June Mackensen cut the Russian communications N. of Lemberg, and the cap. of Galicia once more fell into Austrian possession on the 22nd. After the fall of Lemberg the Russians lost the line of the Dniester as far as Halicz (q.v.) and the country beyond it, including the Bukovina (q.v.). They fell back on the Gnila Lipa, where Ivanov offered a prolonged resistance. But the Ger. advance had achieved all its objects except the complete defeat of the remnant of the Russian armies in Galicia, and their front was now swung round to face N., where the Russian armies in Poland were outflanked. A corresponding advance had been made by von Bülow on the N. of the great Polish salient. Libau had fallen on 9 May, and during that and the following month the Germans occupied the duchy of Courland as far as Windau on the coast and Shavil, half-way to Riga.

German Offensive in Poland. The Germans planned to outflank the Russian

position in Poland by striking at Vilna from the N., with a naval attack on Riga as part of the campaign. Mackensen's Galician armies had first to face N. so as to take their part in Hindenburg's general plan by driving back the Russians across the railway between Lublin and Kovel. Only a few days after the capture of Lemberg these armies proceeded to carry out this turning movement. They were joined on 18 July by von Gallitz, with a movement on the extreme N. of Poland, and on the 30th the Germans captured Lublin and Cholm. The fall of Warsaw could now no longer be avoided. On 4 Aug. the Russians abandoned the lines at Blonie and marched through the city, blowing up the bridges over the Vistula as they went. Next day Prince Leopold made his entry.

Russian Bureaucratic Incompetence. The incompetence and corruption of Russian bureaucracy was beginning to have even more serious effects than the loss of Poland. The shortage of munitions was so great that the artillery of one army was limited to 2 shells a day, while one whole division had on one occasion to face an attack without a single rifle. The withdrawal from Warsaw was the first step in the Grand Duke Nicholas's projected retirement from the whole Polish salient, and he hoped that his flanks would hold out long enough to enable the main retreat to be effected safely. He left a strong garrison at Novo Georgievsk to hamper the Germans; but the most dangerous point was on the line of the Narev, where von Bülow was about to attack the fortresses. On 10 Aug. Lomza was captured, and on the day that Warsaw was taken the bombardment of the most important of the Narev fortresses, Kovno, began. Kovno was the angle of the Russian base, and the loss of it would also make it easier for von Bülow to complete his wheeling movement by way of Vilna so as to threaten the Russian communications. Kovno fell unexpectedly soon, on the 17th.

The Russian Retreat—German Blow at Vilna. After Kovno other fortresses fell rapidly: Novo Georgievsk on the 19th, Ossowiec on the 23rd, and Brest-Litovsk, the centre of the Russian base-line in Poland, on the 26th. On the same day Augustovo (q.v.) was evacuated and Bialystok (q.v.) captured. On 2 Sept. the Russians abandoned Grodno, leaving the whole line from Brest-Litovsk to Kovno in the hands of the Germans. The Russians were driven back into the Pripiet Marshes, which were at their driest at this season, so that they presented few obstacles to the advance eastwards of Mackensen from Brest-Litovsk, with the result that he quickly reached Pinsk on the railway to Moscow. In Galicia Ivanov was driven back to the Serezh, and in the far N. von Bülow was advancing on Mitau and Riga, thus threatening the Vilna-Petrograd railway and forcing the Russians to continue their retreat along narrow lines of communication which would inevitably become congested. The main Ger. effort was now directed towards

Vilna. On the 13th the Russians began to evacuate Vilna, and by the 17th reinforcements of Ger. cavalry had travelled as far as Vileika, nearly 70 m. E. of Vilna, and were threatening the Russians retiring from that city. At this critical moment Ruzsky was restored to command of the N. Russian armies and succeeded in relieving the position, and in gradually straightening the lines so that they ran nearly due S. from Dvinsk by Postavy, Lake Narotch, and Smorgon. In the S. the Ger. forces were also driven back. On 7 Sept. Ivanov counter-attacked Mackensen's advancing forces from Rovno, and Brussilov and Lechitzky counter-attacked on the Serezh.

WESTERN FRONT, 1915. Allies' Spring Offensive. In the W. the old idea that separate attacks would defeat the Germans still persisted, and there was no effective co-operation between the attacks at different points along the front. The Fr. offensive began in the Woëvre, while the British began at Neuve Chapelle, a vil. at the foot of the Aubers ridge. There was a Ger. salient there, and if the ridge could be carried it would threaten the Ger. hold on Lille, and might cut off La Bassée and straighten the line. The attack began on 10 Mar. with a concentrated effective artillery bombardment. On the Brit. centre and right the 4th Corps and the Indian Corps were enabled by this preparation to advance beyond Neuve Chapelle as far as the slopes of the Aubers ridge; but the total gain to the Allies was only a vil. and a strip of land 3 m. by 1. (See NEUVE CHAPELLE.) The French, however, were rather more fortunate, but their successes in the Woëvre and Alsace were local and were of no greater value than the Brit. to the general plan of campaign. Early in April they gained the plateau of Les Éparges and advanced towards Etain on the road from Verdun to Metz, while they made some progress between St Mihiel and Pont-à-Mousson. In Alsace they took Sondernach and advanced during April towards Metzeral and Münster, and recovered the summit of the Hartmannswellerkopf. The failure of the Russian offensive at this time made it essential to try some plan which would prevent the Germans sending more troops from the W. to the E., and the point chosen for the Allied activities was Lille, a great railway centre and important as protecting both the right of the Ger. line along the Aisne and the left on the Belgian coast.

German Gas Attacks. The Germans, however, anticipated this move and began a counter-offensive against Ypres which was probably not intended as a major operation, but gave them the opportunity to try the use of chlorine gas on the evening of 22 April. This proved a formidable surprise to the Fr., Brit., and Canadian troops along the Yser Canal. The gas attack N.E. of Ypres coincided with an attack on Hill 60 (q.v.) at the S.E., which resulted in some of the fiercest fighting of the whole war. By the 23rd the Germans had crossed the canal at Het Sas and Lizerne, and the Canadians

were fighting on 3 fronts between St Julien and Garfenstafel. On the 24th the Germans made another gas attack and St Julien was abandoned. But reinforcements were on the way, and Fr. regulars recaptured Lizierne and Het Sas and secured the W. bank of the canal against a further Ger. advance; while, on the 29th, the Canadians, who had saved the position at considerable loss, were relieved by Brit. troops. Fighting continued for a considerable time longer, and it became necessary to shorten the Allied line, an operation which was safely effected on 3 and 4 May. Heavy bombardments continued until the 24th, when a final gas attack by the Germans concluded the main effect. Crude respirators had by this time been served out, and the gas did less damage than on the earlier occasions. The Ger. offensive around Ypres now slackened to meet Allied attacks beginning on the Ger. positions in front of Lens and Lille. To protect Lens the Germans had constructed massive fortifications at the foot of the SW. slope of the Vimy Ridge, which ran in front of Lens. These fortifications were known as the Labyrinth and the White Work. The French had collected 1100 guns and an immense supply of munitions for the most concentrated bombardment so far made. The bombardment was successful in clearing the way for the infantry, who captured La Targette and the White Work and entered Neuville St Vaast. Not until the 12th did they capture the summit of Notre Dame, and another fortnight elapsed before they secured the Souchez sugar refinery, while the Labyrinth still held out, and for 2 years more Vimy Ridge remained in Ger. hands. The Ger. lines had been broken, but once more the lesson was driven home that small local successes were of little value when the main line was still held.

Coalition Government formed in Great Britain. An outcry over the lack of munitions now led to the reconstruction of Asquith's gov., with Lloyd George as minister of munitions, and at the same time Lord Fisher (q.v.) resigned from the Admiralty. He had been at loggerheads with Winston Churchill over the Dardanelles expedition, and, on his resignation, Asquith formed a coalition gov. in which were included the principal Conservative leaders, and one or two Labour leaders. Churchill left the Admiralty, and Lord Haldane (q.v.) was removed from the post of lord chancellor. By the autumn of 1915 the relative strengths of the Germans and Allies on the W. Front had become much less unfavourable to the Allies, largely on account of the withdrawal of Ger. troops to the E.; while the Allies had secured a still more marked superiority in guns and munitions.

Western Front in the Autumn of 1915. It was this superiority which encouraged the Allies to undertake renewed offensives in Sept. The British had taken over some 30 m. of what had been the Fr. front, and had now 1,000,000 men in the field, while the Fr. had 2,000,000. But the Brit. front was not continuous. Plumer's

Second and Haig's First armies held the line from Ypres to the S. of La Bassée, but d'Urbal's Tenth Fr. Army intervened between Haig and the new Third Brit. Army stretching from Arras to the Somme. On the Brit. front a secondary attack was planned, but the main attack was to take place in Champagne, with the intention of breaking the Ger. communications from E. to W. along the Aisne. (See AISNE, BATTLES OF THE.) The French took most of the Ger. front-line trenches and some of their second line, capturing thousands of prisoners and scores of guns. They captured the Butte de Tabure, commanding the Bazancourt-Challerange railway, which it had been hoped to break; but on 30 Oct. the Germans recaptured this position, and the French were left with the doubtful net advantage of an advance, at some points, of 2½ m., having inflicted, however, greater losses on the Germans than they had themselves suffered. The attacks between Ypres and Arras produced approximately similar results. The battle of Loos (q.v.) was the prin. Brit. effort. The British took and held Loos, but failed in their major object of securing Lens. The defect was partly due to the delay in the advance of d'Urbal's Fr. Army, which failed to make headway until the 26th, when they took Souchez together with most of Givenchy Wood and Thélus. On the 28th they made some progress up the slopes of the Vimy Ridge. Attacks and counter-attacks during Oct. led to little result, and the line was gradually stabilised for the winter with but small changes to compensate for the cost of the great Allied offensive. In Dec. Sir John French was recalled. A brilliant cavalry leader, he was not the ideal commander-in-chief for a war of attrition.

THE NEAR EAST, 1915-16. *Gallipoli and the Dardanelles.* During June 1915 heavy Turkish attacks with fresh troops were repulsed; but Sir Ian Hamilton could do no more than hold grimly the positions already occupied until the end of July, when reinforcements arrived. In July a new type of monitor had been evolved with little exposure to submarine attack, and capable of throwing heavy shells 12 m. These were to take their share in the naval part of the new plan which had been decided on. This plan involved 4 separate actions. A feint was to be made at the head of the Gulf of Saros, as if to take in flank and rear the Turkish lines crossing the neck of the peninsula at Bulair. Next, a strong offensive was to be resumed by the troops in the Cape Helles region against their old objective, Achi Baba. It was hoped that these 2 movements would lead the Turks to send their reserves to Krithia, in front of Achi Baba in the toe of the peninsula. Meanwhile the Anzac Corps were to advance and to attempt to gain the heights of Koja Chemend; while to the left a great new landing was to be made at Suvla Bay, just at the angle of the Gulf of Saros with the Aegean. The preliminaries to the main assault began when the Allied forces at

Cape Helles on 6 Aug. made a general attack on Achi Baba. For the next 3 days fighting continued, principally in the centre. This engagement was intended to distract the Turks, and as such it may be considered to have succeeded. The operations undertaken by the Anzac Corps developed into the most desperate struggle which had so far taken place in Gallipoli. The Australians began the attack against the Lone Pine Plateau in the afternoon of the 6th, and before night the whole Lone Pine position had been won. For the next few days the Australians had to fight to maintain their ground, and in this action alone the Turkish losses were estimated at 5000 men. Meantime the Anzac left wing began to move during the night of the 6th, and the preparatory movements were tolerably successful. The principal operation began at dawn on the 7th. At first the New Zealanders made good progress and carried Rhododendron Ridge to the W. of Sari Bair; but the Indian and Australian troops on their left were held up in the difficult country. At dawn on the 8th the New Zealanders again attacked and carried the crest of Chunuk Bair from which they could just see the Dardanelles. On the 10th the Turks counter-attacked on Chunuk Bair and drove the Brit. forces some distance from the ridge, but were held there. The landing at Suvla Bay had taken place on the 7th with the support of monitors in the bay, but little advance was made, and by the 9th it was too late, for the Turks had already moved reinforcements to the area. For the next 10 days no further advance took place, and the British prepared for a new landing at Suvla, for which the 29th Div. was transported in trawlers from Cape Helles. The attack began on the 21st, but it failed. The Aug. fighting was the most costly part of the Dardanelles campaign. For the first 3 weeks of the month the Brit. casualties were approximately 40,000, and the sole result was to extend the length of the Brit. battle-front by 6 m. and to advance it on the left by a m. or two. After the end of Aug. the 2 exhausted armies abandoned further hope of advance. (See GALLIPLI CAMPAIGN.)

Allied Diplomacy and the Balkan States. During the spring and summer Allied diplomacy had been concentrating on the complicated problem presented by the Balkan States. Ferdinand, King of Bulgaria, demanded as the price of Bulgaria's assistance to either side the return to her of her territory which had been seized by the other Balkan states. As the Allies could satisfy Bulgarian demands only at the expense of the Serbs, who were already their allies, and the Rumanians and Greeks, whom they hoped to make their allies, their promises were but half-hearted. Germany, however, offered Bulgaria Serbian Macedonia, Salonika, and also the Gk Epirus. This

offer was finally embodied in a secret treaty signed on 17 July 1915 between Bulgaria, Germany, Austria, and Turkey. The Germans now undertook a campaign to secure the Balkans and bring in the waverers on their side. Bulgaria being now secretly committed to them, they could hope to control the railway to Constantinople by a successful Balkan campaign, and so bring much needed munitions to Turkey and food and other supplies to Germany. Ger. diplomacy appreciated, too, that Brit. fears for India and Egypt would be increased by a Ger. success in the Balkans, and that these fears might induce the British to divert to the Balkans troops needed on the W. front. Mackensen, the victor in Galicia, was selected to lead the Balkan campaign, and during Aug. the concentration of troops began. On 19 Sept. Mackensen's combined Ger. and Austrian forces opened fire on Belgrade. At first he made little progress. The Entente continued up to the last possible moment to play for Bulgarian neutrality, and even refused to allow Serbia to undertake an aggressive movement against Bulgaria which might have altered the course of events. Venizelos (q.v.), the Gk Prime Minister, was not deceived, and on 21 Sept., after the Ger. attack on Serbia had begun, he asked France and Britain to send 150,000 troops to Salonika.

Allied Expedition to Salonika and German Invasion of Serbia. That day the first steps for Bulgaria's mobilisation were taken, although the official order was dated 2 days later. On the 24th France and Britain agreed to Venizelos' request to send a force to Salonika, and on the same day Greece began to mobilise. On the 25th news came that Bulgarian cavalry was massing on the Serbian frontier. Rumania, already mobilised, announced that she would as yet take no decisive step. On 28 Sept. Venizelos secured the support of the Opposition in the Gk Parliament to his War Credits Bill, and on 5 Oct. Russia broke off relations with Bulgaria, to be followed by Britain and France. Meanwhile the Allied troops were arriving at Salonika. On 4 Oct. Venizelos had announced that Greece must go to war without waiting for a formal declaration by the Central Powers; but the next morning King Constantine told him that his policy had not the royal sanction, and he resigned. Zaimis became Premier, and announced that Greece would retain an armed neutrality benevolent towards the Entente. Mackensen now moved swiftly. On 9 Oct. Belgrade was captured. On the 11th Bulgarian troops crossed the Serbian frontier, and on the 12th Bulgaria declared war on Serbia. On the 15th Britain declared war on Bulgaria. The Allies had only some 13,000 troops at Salonika, and there was no hope of Rumania coming in on the Allied side unless Russia could make a diversion in Bessarabia. The troops at Salonika could hope to do little more than harass the flank of the Bulgarian advance into Syria. Serbia faced the new invasion with an army reduced by

A map of Gallipoli and the Dardanelles is printed in the article GALLIPLI CAMPAIGN

the losses of 1914 to not more than 300,000. Her internal condition was completely disorganised by repeated invasions, but if Mackensen had been the only enemy, they could have hoped to retire again to the hills and keep in touch with the Allied base at Salonika. The intervention of Bulgaria on the E. flank completely altered the situation. The only hope for Serbia was that the Allies at Salonika might be able to turn the Bulgarian flank (*see under SERBIA*); but the Allies were unable to advance, and the Serbians had to fall back after a week to the Albanian borders. Gen. Sarrail, with the Fr. force which had landed first at Salonika, advanced up the railway line towards Mitrovitza as far as Krivolak, while the British were on the Fr. right towards Lake Doiran. The French succeeded in crossing the Vardar R. and occupying the heights opposite Krivolak, but were compelled to fall back from an advanced position across the Tochna into an entrenched camp they had prepared around Kavadar. The Allies had failed to bring help to Serbia while involving their own forces in extreme difficulty. After the capture of Nish, Mackensen, having secured the route to Constantinople, left the advance mainly to the Bulgarians, on whom he relied to complete the rout of the Serbian remnants who were now struggling through the passes to the Albanian coast. By 12 Dec. the Allies had withdrawn within the Gk frontier, without serious losses, and took up a strong position about 30 m. from Salonika. Although the purpose of the Salonika landing had failed, the Allies were determined to hold it, because it would have made a formidable base if occupied by the Central Powers. Accordingly, steps were taken to fortify the lines across the whole peninsula of Chalcidice. The Austrians had now undertaken the conquest of the little kingdom of Montenegro. On 13 Jan. they entered Cetinje, the cap., and announced the unconditional surrender of Montenegro, but it was soon found that there had been no surrender and that the Montenegrin Army was retreating towards Scutari, while King Nicholas of Montenegro had fled to France. On 23 Jan. the Austrians occupied Scutari, and moved S. against an It. force at Durazzo, which they captured on 27 Feb., and the loss to the Allies of this port made it necessary to find some base for retreat inaccessible to the enemy. Fr. and It. troops were landed at Corfu, and the Serbian Army, evacuated from Durazzo, was able to use it as a rest camp.

Evacuation of Gallipoli and its repercussion in Mesopotamia. Meanwhile the Gallipoli campaign (q.v.) had come to a standstill. The heavy losses during the 7 months of the expedition, coupled with the doubt whether supplies by sea could be maintained in the winter storms, decided the Allies to undertake the difficult task of evacuating Gallipoli. The final embarkations from Suvla and Anzac took place on the nights of 18 and 19 Dec., and early on the morning of the 29th the

last troops from these areas began to embark. The evacuation of Cape Helles was still more difficult, and had to be delayed; but the last troops were evacuated 8 Jan.

Their preoccupation with Gallipoli ended, the Turks were now free to turn their attention to other areas, one of which was Mesopotamia. A force from India had captured Basra at the junction of the Tigris and Euphrates in Nov. 1914. Early in Dec. the Turks collected troops at E. Qurnah, 50 m. up the Tigris at the junction with the old channel of the Euphrates, but a Brit. force obtained the surrender of the Turkish garrison on 9 Dec. The British had now obtained control of the whole of the delta and prepared entrenched camps on either side of the Tigris, at El Qurnah and Mezera, to secure their position. At the beginning of 1915 further reinforcements were brought from India under Sir John Nixon, who took supreme command of the operations. During April the Turks attacked the Brit. positions in force, but were beaten off with heavy loss. Towards the end of May they attacked again, and it was decided to drive them N. The important military post of Amara, 75 m. N. of El Qurnah, was captured on 3 June, and the Brit. advance continued in spite of a desire to limit the operations, largely because each advance made necessary some further operation to secure the position reached. Thus the Brit. hold on Amara was precarious so long as they did not hold Nasiriyeh on the Euphrates. A Brit. force from El Qurnah captured Nasiriyeh on 25 July, with large stores of ammunition. By this time the larger project of an attack on Bagdad itself was being developed, and an advance to Kut al Amara (q.v.) was decided upon. By the 29th the Turks were in retreat towards Bagdad and the British, under the command of Maj.-Gen. Townshend (q.v.), entered Kut. By the end of Sept. Townshend was only some 200 m. by riv. and 100 m. by land from Bagdad, with easy country before him and the winter climate, which was favourable to campaigning. But he had little more than a div., he was well over 300 m. from his base on the sea, and had a difficult riv. full of shoals and banks as his sole means of communications. Townshend protested against the advance, but was overruled. On 22 Nov. the Brit. troops reached the Turkish prepared position in Ctesiphon. The battle continued until the 24th, but the inadequate forces of the British could not pierce the strong Turkish positions. Accordingly, at midnight on the 25th the British began their retreat. On 3 Dec. the remnant of the Brit. force reached Kut al Amara, and the historic 5-month-long siege of that tn began. Four Turkish divs. lay around the tn, and on the 7th the Turkish commander, Nured-Din, called upon the garrison to surrender. On Townshend's refusal he opened a heavy bombardment. Relief forces failed to make headway through the floods, and on 29 April Gen. Townshend surrendered.

The Russian Campaign in the Caucasus. The Grand Duke Nicholas, who commanded in the Caucasus, had been preparing for an offensive for some time. The immediate commander of the attacking forces, Gen. Yudenitch, began his advance on a wide front to avoid having his flank turned by the considerable Turkish forces which stretched northwards from Lake Van to the Black Sea. He planned to attack Erzerum by 3 columns converging on the city. The preparations for the advance were entirely unknown to the Turks, and on 11 Jan. Yudenitch's right wing drove back the enemy upon Lake Tortum, and then moved over the mt. passes and encircled the Turkish left, so that it was compelled to fall back towards Erzerum to avoid being cut off. His left followed similar tactics, and the centre made good progress to the vil. of Kuprikei, which commands the bridge over the R. Araxes. Here a fierce battle took place from 16 to 18 Jan., when the Russians forced the bridge in a snowstorm and took the vil. driving the Turks back on the road to Erzerum. On 19 Jan. Yudenitch reached the strong Turkish position of Hassan Kaleh, which it was believed would be held in force; but the Turks had suffered so severely at Kuprikei that they fought only a rearguard action, and again retreated behind the Deve Hoyun hills, which formed the immediate defence of Erzerum on the E. On 10 Feb. the right column, coming down the valley of the W. Euphrates through deep snow and some 50° of frost, reached the fort of Kara Gubek, at the extreme N.E. point of the defences of Erzerum. This fort fell on the 12th, and next day the Russians carried Fort Tafta, some 5 m. farther along the valley, which gave them a position in the rear of the main defences on Deve Hoyun, which they continued to attack frontally. Meanwhile the S. Russian column was forcing its way through the passes of the Palantuken range to the S.E. of the city, and by the evening of the 15th they had carried the position, and on the 16th entered Erzerum. In the whole of the Russian advance some 5 Turkish divs. were completely destroyed. But the capture of Erzerum itself was not of great value without that of Trebizond and of Erzingan, which stood at the opening into the rich plain of Anatolia, from which Turkey drew her main supplies of food. The Turkish troops released from Gallipoli were coming up before Yudenitch could advance much farther, and it was necessary to continue the advance with some caution. On the morning of 18 Mar., Trebizond fell, the garrison retreating southward in the direction of Baiburt. On 25 July Russian cavalry occupied Erzingan. Further advance was delayed for a time by Turkish attacks, but by 25 Aug. Yudenitch had broken these and was once again free to resume his slow progress towards Anatolia. (See also under CAUCASUS.)

The Arab Revolt. Meanwhile in Persia during the spring and summer the Russians had been conducting a campaign

with a small force under Gen. Baratov, which had been sent in Dec. 1916 to counteract the effects of Ger. propaganda there. The Persian gendarmerie under Swedish officers had been encouraged by Prince Reuss, the Ger. minister to Teheran, to rebel against the pro-Entente gov. Prince Reuss collected a total force of some 15,000 and endeavoured to hold certain important points at Kum, a telegraph junction on the road to Isfahan, and at Hamadan on the Bagdad road. Swiftly the Russians attacked these positions and drove the rebels to the hills on the border of Mesopotamia, where they kept in touch with the Turkish Army. In Mar. Sir Percy Sykes arrived at Bunder Abbas and proceeded to organize a military police for S. Persia. Baratov continued to advance and reached the frontier of Mesopotamia in May; but in June Turkish reinforcements attacked him and drove him back finally even from Hamadan, while sporadic revolts began in Persia. Meanwhile, the revolt of the Arabs in the Hejaz (q.v.) considerably upset Turkish calculations. On 9 June 1916 the Sherif of Mecca proclaimed Arab independence of Turkey and occupied Mecca and the port of Jeddah, capturing the Turkish garrisons, and laid siege to Medina, and, later, cut parts of the Hejaz railway to prevent the Turks sending reinforcements from the N. The revolt spread rapidly. The Said Idriss of Asir took the Red Sea port of Kuniyidab. On 27 July Yambo, the port of Medina, was captured, while the revolt spread northwards as far as Damascus. The revolt in the Hejaz delayed the development of the Turk's projected attack on Egypt; but in Aug. they advanced with a force of some 18,000 men towards the Suez Canal from the E. The Brit. forces were drawn up near Romani, about 23 m. E. of the canal. The Turks attacked on 3 Aug. and the fighting lasted throughout the 4th. The Brit. cavalry slowly withdrew, entangling the Turks in the sand dunes, and in the afternoon Brit. reinforcements came up, and the Brit. counter-attack completely routed the Turks, who were pursued until the 9th, when they attempted a stand, but were again routed. It was a decisive defeat, which secured Egypt from further attack.

The Policy of King Constantine. Meanwhile the situation of the Allied troops at Salonika had been considerably affected by the mutations of Gk. policy. After the fall of Venizelos in Oct. 1915 a temporising policy under the king's influence was adopted by the bureaucracy which carried on the gov. The Allies' retort was to proclaim a restriction of supplies of coal to Greece and to Gk ships in Allied ports, with the object of preventing supplies reaching the enemy. The front at Salonika was now held by the British on the right, the French in the centre, and the reconstituted Serbian Army on the left. An Allied offensive was planned for Aug., partly in the hope of taking Monastir, which had great political importance as one of the main objectives of the Bulgarian war policy, while a

further motive for the offensive was to be found in the attitude of Rumania, which was already committed in secret to the Entente. If the Allies could hold a large Bulgarian force on the Salonika front they would prevent Bulgaria attacking the Rumanian flank. Early in Aug. Gen. Sarraill was put in command of the whole of the Allied forces on the Salonika front. On 10 Aug. the French began to bombard the town of Doiran, close to the junction of the Gk., Bulgarian, and Serbian frontiers. On the 11th they occupied Doiran station and a height to the S. of the town, and carried Doidjeli; but on 17 Aug. the Bulgarians began a counter-offensive. Their principal advance took place beyond the extreme right of the Allied line on Kavalla, which neighbourhood was held only by Gk. troops, who were without instructions.

Rumania's Entry into the War. With the Russian advance in the Bukovina in June 1916 (which will be considered in another section) and the Allied advance in the W., the position seemed favourable for Rumania to enter the war on the Allied side. On 27 Aug. Rumania declared war on Austria. She hoped to limit her participation to war with Austria, but the Allies recognised that this would be impossible, and on 28 Aug. Germany declared war on Rumania. On 1 Sept. Bulgaria also declared war. Rumania brought an addition to the Allied sources of some 500,000 men, but her value to the Allies was lessened by the fact that her main purpose in entering the war was to secure Transylvania.

Rumania's Campaign in Transylvania. Rumania's first step was to invade Transylvania on 28 Aug. at numerous points. She gambled on the help of the Russian campaign in the Carpathians to distract the Austrian effort against her, and also on the advance of Sarraill from Salonika to distract the Bulgarians from her S. frontier. At first all went well with the Rumanians, and within a fortnight of the declaration of war all the passes, the strategic frontier railway, and most of the frontier towns had been occupied, and the Magyar people of SE. Transylvania were in full flight. But the appearance of success was deceptive. The Rumanian forces were widely scattered, while the Austrians had fallen back on a shorter and safer line, and behind this line the Germans were making preparations for a counter-attack on a scale entirely unsuspected by the Rumanians. Von Falkenhayn, formerly chief of the Ger. staff, had been sent to Austria to command the new Austrian Ninth Army, which was being prepared for driving back the Rumanian left wing into the Wallachian plains, and farther S., von Mackensen was collecting another army which was to operate S. of the Danube and in the Dobruja. The 2 armies were to converge on Bucharest.

Mackensen's Campaign in Rumania. Mackensen advanced first into the Dobruja, and on 6 Sept. captured Turutukal (important as commanding the ferry across the Danube to Oltenitz on the road to Bucharest), with 100 guns and

the whole of an infantry division. On the 9th Bulgarian troops, occupied Silistria. By the second week in Oct. the Rumanian Army was in full retreat, and von Falkenhayn's pressure was increasing. In the early autumn of 1916 the position of the Entente in the Near E. was not good, while Ger. plans in that area were nearer to realisation than they had been at any earlier period of the War. Ger. communication with Constantinople had been securely established, with the double result of securing supplies of food for Germany from Turkey and supplies of munitions for Turkey from Germany, as well as stiffening the Turkish resistance. Russia was reaching the end of her resources.

THE WESTERN FRONT IN 1916. Résumé of the General Position at the Beginning of 1916. On the W. front, having obtained for her own use the great industrial areas of Belgium and N. France, Germany was accelerating output at the highest pressure, while successfully holding the front with fewer troops than the Allies required to oppose her. In other areas Ger. successes, as shown above, had been immense. Not only was she producing munitions of war in overwhelming quantities, but the whole of her industrial life down to the smallest detail was mobilised for war. Being in a dominant position in relation to her allies, she had no need to fear the disagreements that commonly arise among equals, while she entertained the hope of advantage from possible differences among the Entente Powers. Britain was the most dangerous of her enemies on account of her wealth and her potential manpower; but there were signs that Britain was wasting her resources, and that her ministers had not yet grasped the needs of modern warfare.

The Munitions Act in Great Britain. With the reconstruction of the Asquith ministry as a coalition in 1915, a Munitions Act was passed providing for gov. ownership in full control of munition factories so as to secure rapid production, even at the price of greatly enhanced wages.

The Recruiting Problem in Britain. Meanwhile, in the later months of 1915, the recruiting problem in Great Britain had caused anxiety. There was a growing opinion that the voluntary system operated both wastefully and inequitably. In Aug. 1915 a national register had been taken, which provided information of the man-power available, and it was obvious that some form of compulsory service would soon become necessary unless the rate of voluntary enlistment could be increased. In this emergency the Earl of Derby (q.v.) was appointed director of recruiting. The main proposals of what was known as the 'Derby Scheme' were that men were to be recruited in 46 groups, according to age, the married men filling the last 23 groups. These groups were to be called to the colours as occasion demanded. On 4 Jan. 1916 Lord Derby issued his report. It was then estimated that the total of men available for service would not be more than 830,000. On 5 Jan. Asquith introduced

a Military Service Bill in the House of Commons, and the Bill passed rapidly through all stages in the House of Commons with a very small minority in opposition. (See CONSCRIPTION.)

The German Attack on Verdun. With the object of a final reckoning with the still undefeated Fr. armies, the Germans now prepared a new plan, of which Verdun (see VERDUN, BATTLE OF), the great fortress on the right of the Fr. line, was the objective. The Ger. plan was to attack at advantageous points all along the front so that the Allies would not know whether the attacks were feints or the beginning of a general offensive; and while their enemies were thus fully occupied the Germans would be able to concentrate men and guns behind Verdun. Once the line was pierced there, fresh troops would be available for a final advance on Paris, which should end the war. On the morning of 21 Feb. a short, intense bombardment began. It was by far the fiercest bombardment yet experienced. It completely obliterated the first Fr. lines, broke up the communication trenches, and altered even the shapes of the hills. Close upon it the Ger. infantry moved forward to the attack, some 14 divs. against the 3 Fr. territorial divs. who were holding the 7 m. of centre between Brabant and Herbebois. The French fell back to their second line from which they could make a counter-attack under the fire of their 75s. A counter-attack regained some ground, but on Tuesday, the 22nd, a new bombardment was begun by the Germans, followed by fresh infantry assaults. The French began a general retreat to prepared positions on the highest parts of the plateau, stretching from Vacherauville on the Meuse, along the Côte du Poivre (Pepper Hill), and S. to the gorge of Vaux at the edge of the hills. This position was the last defensive line covering Verdun. In a heavy snowfall on the Friday morning the Germans began their new attack. On the evening of the 25th the Fr. front was pierced in the neighbourhood of the ruins of the old fort of Douaumont. But the victory was destined to be barren. At this juncture the defence was entrusted to Gen. Pétain (q.v.). He stabilised the line and drove the Germans from their position at Douaumont. Then Ger. high command now realised that their frontal attack had failed. They therefore reverted to their more usual method when attacking a salient of trying to drive in the 2 flanks.

The second phase of the battle of Verdun began with an attack from the NW. on 2 Mar., and the French fell back behind the Giseuse's Crest. On the 8th the Germans transferred their main effort to the front at Vaux, but it failed. On the 10th the Germans, heavily reinforced, again attacked, but the Fr. guns prevented them from coming to close quarters. On the 11th the Germans made their supreme effort. The result of this attack on the W. bank of the Meuse was to win a triangle less than a m. deep between the Forges stream and the Béthincourt-Cumières road. The key to the position, Mort Homme, was still in Fr. hands. On the E. bank the Germans had secured most of the Bois d'Hardaumont; but they had made no progress towards the definitive capture of Douaumont. They now prepared a flank attack from the W.

On Friday the 16th the third phase of the battle commenced, when Ger. guns opened a bombardment of the lines between Avocourt and Béthincourt, and on the 20th the first attack was made on the line between Avocourt and Malancourt, and by evening the Germans were on the edge of the hill slopes towards Mort Homme. On the 28th they attacked Malancourt with innumerable waves of troops. But Pétain successfully counter-attacked and withdrew his troops from Haucourt to a position on the slopes of the hills. Fierce fighting continued until 11 April; but the Germans failed to achieve any considerable success, and by the Tuesday it was clear that their main purpose had again failed. They had used some 9 divs. in the attack, and had again suffered the heaviest casualties, out of all proportion to the Fr. losses, while they had secured not a single Fr. key position. Sporadic attacks continued; but the main plan was now abandoned.

Between 3 May and 30 June the second battle for Verdun was fought. It resulted in no permanent advantage for the Germans, who again sustained heavy losses. With the opening of the battle of the Somme, the attack on Verdun lost its vital importance, and the battle gradually relapsed into sporadic engagements.

THE ITALIAN FRONT IN 1916. Austrian Trentino Offensive. Throughout the winter of 1915-16 the Austrians had gradually been strengthening one section of the Trentino front between the Val Lagarina and the Val Sugana. In these valleys accordingly the Italians had made good defensive positions. A great bombardment began on 14 May, when over 2000 guns, of which some 800 were of heavy calibre, destroyed the It. front line over a length of 30 m. In the centre, by 1 June, the Austrians had driven back the Italians from many points on the last ridge of hills between them and the plain, and by the 4th had reached a point only 18 m. from Vicenza. But at last Cadorna's new Fifth Army began to make its presence felt and the Austrian advance was stayed.

Italian Counter-offensive and Capture of Gorizia. On 24 June Cadorna began his counter-offensive, and between the Brenta R. and the Adige he won ground everywhere. (See ISONZO.) From 1 Aug. the It. guns bombarded the whole front from opposite Monte Santo to the Adriatic. On the 4th the Italians feinted from Monfalcone with the object of drawing Austrian reserves to this part of the line preparatory to the real attack on Monte San Michele. On 6 Aug. the It. bombardment was resumed with great intensity in front of Gorizia; the Austrian front position was destroyed, and the It. Third Army under the Duke of Aosta

the Forges stream and the Béthincourt-Cumières road. The key to the position, Mort Homme, was still in Fr. hands. On the E. bank the Germans had secured most of the Bois d'Hardaumont; but they had made no progress towards the definitive capture of Douaumont. They now prepared a flank attack from the W.

began their advance. On the left the Italians carried Monte Sabotino by storm, and before dark, reached a line within $\frac{1}{2}$ m. of the riv. On the right of this section the Italians stormed the strong position of Oslavia, and farther S. they advanced against Podgora. The It. centre operating against the San Michele positions had made equally substantial gains. The Austrians here again offered a desperate resistance; but slowly the Italians forced their way to the key points, and by Tuesday, the 8th, Cadorna held all the heights on the W. bank of the riv. and the key point of San Michele on the E. bank. On the morning of the 9th the main It. Army crossed the riv. and entered Gorizia, while the cavalry pressed E.

The Advance on Trieste. The It. offensive now entered on its second stage, which had for its objective the capture of the port of Trieste. The first move aimed at driving the Austrians from the Vallone. On 10 Aug. the advance began, and by the 12th the whole of the W. end of the Carso was in It. hands. Cadorna continued to press forward into the Carso and occupied the vil. of Oppacchiasella, the hill of Nad Logem, and positions on the W. side of Monte Pecinka. N.E. of Gorizia, the Italians took Tivoli and thus estab. for themselves a footing on the slopes of Santa Caterina. The way was now clear for Italy to declare war on Germany, which she did on 28 Aug. 1916. No movement E. of Gorizia could be successful unless the ridge of Monte Santo were won and the Carso carried, and each was a formidable operation requiring for success full concentration of troops. The next movement was undertaken in the Carso, when on the morning of 14 Sept. a great bombardment began between the Vippacco and the sea, followed on the same day by an It. advance. There was desperate fighting round Nova Vas, but no decisive gains had been made by the 17th, and it was not until 10 Oct. that another attack was made. This was successful in straightening the front, and 5000 prisoners were taken. On the 12th the Italians carried the hill of Pecinka and reached the outskirts of the villa. of Lokvica and Hudi Log. On the 13th in bad weather a further advance was made to the Gorizia-Prvacina road; but a succession of great gales dislocated the advance, and finally compelled the Italians to withdraw to a line a little behind Pecinka, Lokvica, and Hudi Log. For a fortnight heavy rains continued, and the first cold of winter began to be felt. On 30 Oct. an intense bombardment started, the greatest yet employed in the Carso, and on the morning of the 31st the Italians again advanced with considerable success. On a front of more than 2 m. between the N. edge of the Carso and the Oppacchiasella-Castagnavizza road the Austrian line was shattered, numerous batteries were captured together with 5000 prisoners; but the advance had created a considerable salient and on 2 Nov. the Austrian batteries shelled the new It. positions with appreciable effect. An infantry attack followed

on the next day, but it failed and the Italians again advanced, taking another hill and the crowning position on Fajti Hrib, which commanded the vil. of Castagnavizza and also the road across the plateau. Advance towards the S. was still blocked for the Italians by the formidable defensive system of Hermada, a great hill full of concealed batteries which covered the road to Trieste. To take this position meant a great concentration of guns, but meantime winter came on, and although all through Dec. Cadorna waited for open weather, it did not come, and by Christmas he was compelled to postpone further advance until the spring.

THE RUSSIAN FRONT IN 1916. Russian Advance on Pripiet-Pruth Line. By the beginning of Dec. the situation in the Balkans made it necessary for Russia to undertake some stroke which would divert a possible drive by the Central Powers into Bessarabia. Ivanov (g.v.) planned to attack Cernauti in order to cover the Rumanian border and began his advance on 24 Dec. but before he could attain his object heavy snow began to fall and the movement came to a standstill in the middle of Jan. It had, however, been useful to the Allies in bringing Mackensen N. to meet it and so reducing the pressure in the Balkans.

When it became clear that Italy might be overwhelmed if the Trentino attack succeeded, Russia arranged for a preliminary movement to relieve this pressure. On 3 June the Russians under Brusilov opened a bombardment along the whole front between the Pripiet and the Pruth, and on the 4th the Russian advance began. By 6 June Gen. Kaledin (g.v.) was at the gates of Lutsk (g.v.), the H.Q. of the Austrian Army commander, and the Archduke Joseph Ferdinand was compelled to withdraw. By 16 June Kaledin had advanced some 50 m., had captured Lutsk (Luck) and Dubno, had reached the Galician frontier, and was within 25 m. of Kovel. But after this date, formidable Ger. and Austrian reinforcements began to arrive. Ludendorff himself was sent by Hindenburg to restore the position, and 4 Ger. divs. were rushed from France in as many days. Kovel was the danger-point, for its loss would cut communications between the Ger. Army of the centre and the Army of the S. Von Linsingen, who had been brought to the Volhynian front, opened his counter-offensive on 16 June, but he did not receive the reinforcements he expected owing to the Russians having attacked on the centre N. of Baranovitchi, a nodal point on the Ger. railway system between Vilna and Brest-Litovsk. Meanwhile, in the S., the Russians under Lechitzky had made another effective advance. On 17 June they entered Cernanti.

Austrian Retreat to the Carpathians. The Austrians were in full flight towards the Carpathians. By the 23rd the Russians had taken Kimpolung, the most S. tn in the prov., and the whole of the Bukovina was once more in their hands. Early in July the Russian Gen. Leech

carried out another effective advance which secured the right flank of the Volhynian salient, and took him to the banks of the Stokhod R. with 12,000 prisoners and 46 guns among his captures. Kovel was now only some 20 m. distant, but the intervening ground was difficult, and it was obvious that von Linsingen would employ every man he could to defend so important a position. Brusilov discovered von Linsingen's plans for a counter-offensive on the S. of the Russian salient, and anticipated it by sending Sakharov to advance towards Brody. He reached and took the town on 28 July, taking in this movement some 13,000 prisoners. But Sakharov did not rest, and by 10 Aug. he had completely turned the flank of the opposing troops. Meanwhile Lesch and Kaledin had made further attacks and won the whole line of the Stokhod R. Lechitsky in the S. also continued to make rapid progress, and, by the end of June, he had seized the important railway centre of Kolomea. Heavy rain delayed his further advance, but on 10 Aug. his right wing occupied Stanislav. The extraordinarily rapid series of Russian successes led to a complete reorganisation of the Central Powers' commands. Most of the Austrians were replaced by Germans.

IRISH REBELLION—BATTLE OF JUTLAND. *The Irish Rebellion.* What was potentially a great danger to the Brit. campaign was the Easter Rebellion of 1916 in Ireland. On the outbreak of the War the truce between the Ulster and Nationalist leaders had not been accepted by the wilder spirits in S. Ireland, and Germany had made unceasing efforts to stir up revolt among the more extreme Nationalists, and particularly among the members of the Sinn Féin (q.v.) organisation. Of these were formed the Irish Volunteers, whom the gov. at Dublin Castle did little to suppress. Sir Roger Casement (q.v.), had identified himself with this movement, and during the War went to Germany with the object of enlisting readily promised Ger. support for an armed rebellion, but the promises were never kept, and it is obvious that they had been made only in the hope of embarrassing Britain. An attempt to raise an Irish brigade from prisoners taken by the Germans failed miserably; Casement and 2 companions were landed on the Irish coast from a Ger. submarine. The Sinn Féiners failed to meet them, and Casement was arrested on Good Friday morning, the 21st, and taken to England. His capture upset the plans of the other rebel leaders; but it was decided that the rebellion must continue, and on Easter Monday, the 24th, the rebels seized St Stephen's Green, the law courts, the post office, and part of Sackville Street. Troops were brought from the Curragh, and reinforcements were sent from England. By 1 May the revolt had been crushed in Dublin and the local revolts were dying down. Fifteen of the leaders were tried by court-martial and shot. Casement was tried for high treason and executed.

Battle of Jutland. In the early morning of 31 May, the Ger. fleet put to sea, and the Brit. Grand Fleet set out to meet them. Chance brought the Ger. battle-cruisers under Adm. von Hipper into contact with Vice-Adm. Beatty's combined fleet of battle-cruisers and fast battleships at about 2.00 in the afternoon off the coast of Jutland, when Adm. Jellicoe, the Brit. commander-in-chief, with the main fleet, was scouting some distance to the N. At about 3.45 the action began at long range. In spite of his advantage in numbers, Beatty suffered the first and also the most serious losses in this part of the battle. The Ger. battleships under von Scheer appeared at about 4.30; and Beatty turned N. to join Jellicoe. Contact was made soon after 5.30, and Jellicoe's ships came into the fight soon after. Again, in spite of severe damage to the Ger. force, Brit. losses were the heavier. Soon after 7.0 p.m., the Ger. High Sea Fleet received orders to turn away individually, and by 9 o'clock the firing ceased with the complete disappearance of the Germans in the mist. Thus ended, inconclusively, the one great naval action of the war. In its ultimate effects the battle was more nearly a victory for the Allies, since it confined the Ger. fleet to port for many months for repairs. (See also JUTLAND, BATTLE OF.)

Death of Lord Kitchener. Soon after the battle of Jutland Lord Kitchener, who was on his way to Russia to confer on the coming Allied offensive, lost his life at sea. (See KITCHENER, VISCOUNT.)

THE WESTERN FRONT, JULY-NOVEMBER. 1916 *Sir Douglas Haig appointed British Commander-in-chief.* Meanwhile Germany maintained a conciliatory attitude towards the U.S.A., largely owing to the temporarily enhanced influence of Bethmann-Hollweg and his 'politicals.' On the W. front the British had taken over since the beginning of the year a considerable part of the line from the French, at the same time as Sir John French had been recalled and replaced by one of his former corps commanders, Sir Douglas Haig.

Allied Military Conference—Allied Economic Conference. The first general Allied military conference took place in Paris in May, and there, for the first time in the War, was prepared a common plan of campaign. At an Allied economic conference in Paris in June it was resolved to co-ordinate the Allied economic systems, to prohibit their subjects from trading with the enemy directly or indirectly, and to prohibit the export to neutral countries of certain articles which might be re-exported to enemy countries. Further engagements were entered into for the period of reconstruction after the War, and certain permanent agreements for preferential treatment between the Allies were made, with a number of restrictions on the trading activities of enemy countries after the war.

The Battle of the Somme (1916). The plan for an offensive on the W. front involved a joint advance by British and

French, at the point on the Somme where their lines joined. The attack was to be made on a front of 25 m. from Gommecourt, half-way between Albert and Arras, to Fay, 5 m. N. of Chaules. The object of the offensive was to drive the Germans N. towards the coast, and so make it impossible for them to continue to hold the S. part of the great salient. But the Germans had not been idle during the winter, and they had made, in the Bapaume ridge, vast underground chambers, which no artillery could destroy, and these were to be mainly responsible for the failure of the Allied offensive to achieve its object. The battle of the Somme began on 1 July, after a preliminary bombardment since 24 June. The attack by the Brit. part of the line had been anticipated by the Germans, and in the N. part little progress was made; but farther S. Mametz and Montauban were taken on the first day. The French S. of the Somme made progress, reaching Blaches 1 m. from Péronne on the 9th. On 14 July the second stage of the battle opened with a Brit. attack from Contalmaison to Trônes Wood. A successful advance was made, the Germans being driven out of Bazentin-le-Grand and le-Petit and out of Trônes Wood. At the same time, a great advance was made to High Wood (Bois des Fourreaux) and the Germans were driven out of most of Longueval and Delville Wood; but much of this ground could not be held, and it took many days to secure sev. of the points reached on this day. The Australians captured Pozzières on 26 July. During Aug. the French improved their position N. of the riv. Sept. showed better results for the Allies. On the 3rd, in a general attack, Guillemont was carried, and the French carried by storm Le Forest, Cléry, and the Ger. lines up to the outskirts of Combles. On the 5th the British entered Leuze wood between Guillemont and Combles. The French continued to advance both N. and S. of the Somme, and on the 9th Ginchy was captured by the Irish regiments which had taken part in the capture of Guillemont. Thus at last the Allies were beginning to move; but it had taken over 2 months to secure points intended to have been taken in the first few days of the battle, and at the price of appalling casualties. The third stage of the battle, in the Ancre area, opened with a preliminary attack by a brigade of Gough's Fifth Army on 14 Sept., which stormed the Hohenzollern trench and a strong redoubt (*see HOHENZOLLERN REDOUBT*), and diverted attention from the real attack on the 15th. In this attack, for the first time the British made use of tanks, which spread devastation in the Ger. lines. During Oct. and the first half of Nov. more costly but indecisive gains were made, including the capture of Thiepval by Gough's army and that of Combles through Fr. and Brit. movements. Bad weather then set in, and the Germans, who had already begun to prepare what became known as the famous Hindenburg Line (q.v.), far in the rear,

were enabled to cling to the Bapaume salient until such time as they should carry out an orderly retreat. Early in Nov. the British captured the strongly fortified position of Beaumont-Hamel (q.v.), and later in the month they made further advances, but the oncoming winter postponed any further progress. The Brit. casualties in the 5 months' fighting were nearly 500,000. (*See SOMME BATTLES; ANCRE, BATTLE OF THE.*)

French Attack at Verdun. On 24 Oct. the French made another attack at Verdun. Gen. Nivelle (q.v.) entrusted the attack to Gen. Mangin (q.v.), who by the vigour of his attack took the Germans by surprise and, from Fleury to Fort Douaumont, positions which had taken the Germans months to win were recovered in a few hours. On the Fr. right progress was slower, but on 2 and 3 Nov. first Fort Vaux and then the vills. of Vaux and Damloup were recaptured. On 15 Dec. the French gained still greater successes, capturing Vacherauville, Poivre Hill, Haudromont Wood, and Louvemont on the left, Chambrettes Farm and Caurières Wood in the centre, and Hardaumont Wood and Bezonvaux on the right. To the N.E., the Germans had been driven back almost to the positions from which they started in Feb., although to the N. they still retained some of their gains, and the Fr. counter-offensive did not extend W. of the Meuse.

THE COLLAPSE OF RUMANIA. The retreating Rumanians offered strong resistance to von Falkenhayn in Transylvania, and his efforts to advance from the central Carpathian passes towards Bucharest during Oct. were defeated. But by 20 Oct. Mackensen, who had received reinforcements, broke the Russo-Rumanian line, and, on the 21st, cut the railway between Constanta and the bridge over the Danube at Tchernavoda. Constanta was abandoned on the 22nd, its stores of oil and wheat being burned, and on the 25th a span of the Tchernavoda bridge was blown up by the retreating Rumanians, while the Russians hastily withdrew 35 m. to Babatag. Here, on 1 Nov., Sakharov arrived to assume the command with sev. new divs., and a counter-offensive began—but too late, for the Rumanian defence was collapsing in the W. salient. Von Falkenhayn had now transferred his main attack to the Vulean Pass, still farther to the W., and with fresh reinforcements the Germans continued their advance, and, by 21 Nov., entered Craiova on the main Rumanian railway, thus isolating the W. Rumanian armies. On 23 Nov. Mackensen forced the passage of the Danube between Samovits and Sistovo, and by the 27th he had effected a junction with von Falkenhayn, whose Army had now swung E. across the Aluta and was making an advance on Bucharest, which fell on 5 Dec., and for the rest of the year the Germans continued their brilliant progress E., until the Russo-Rumanian forces found a line where they could make a stand—a line formed by the Danube, the Sereth, and the Putna, ascending to the

Oitos Pass. Sakharov had been forced to withdraw from the Dobrudja, and all that was left of Rumania was its Moldavian prov., less than one-third of the kingdom. The Rumanian court and gov. estab. its temporary cap. at Jassy, near the Russian frontier.

Allied Advance into Serbia. Sarrail's campaign in the S. provided inadequate compensation for the Rumanian disaster and moreover the British were confined on the Salonika front to isolated raids which did not result in any permanent gains. The serious offensive undertaken by Sarrail was towards Monastir, and the Serbian Army played the prin. part in it. The Bulgarian offensive from Monastir in Aug. had penetrated a long way within the Gk frontiers, and threatened to turn Sarrail's flank by an advance to the Gulf of Salonika when Sarrail began his own attack on 7 Sept. The first serious fighting took place to the W. of Lake Ostrovo, where, on the 14th, the Serbs. captured Ekshisu. On the 20th they stormed Mt Kaymakchalan and recovered a footing on their own ter. On the 29th the Serbian gen. Mishitch descended the mts towards the bend of the Tchernia R., and by turning the flank of the Bulgar-Ger. Army, forced it back beyond the Gk frontier. By 15 Nov., although delayed by bad weather, Mishitch had mastered the river-bend and thus out-flanked the enemy's left, so that they were compelled to retreat from Kenali to Bistrizta, 4 m. from Monastir, when the French and Russians again attacked. By the 19th the Serbs were threatening the line of retreat from Monastir to Prilep, and accordingly on that day the Bulgars evacuated Monastir. The Allied position was further improved towards the end of the year; but Monastir marked the limit of their advance, and was continually subject to bombardment for another 2 years. Sarrail's campaign had failed to effect a diversion in favour of Rumania; but it had secured Greece from Bulgarian attack.

LLOYD GEORGE AS PRIME MINISTER. Criticism of the Government. In Great Britain towards the end of the year there was increasing irritation over the conduct of the War. The halt on the Somme, the collapse of Rumania, and the failure of Sarrail were all laid at the door of the Brit. Foreign Office and War Office. The rise in the price of food and the apparent failure of the gov. to undertake the necessary methods of controlling supplies gave rise to the fear of famine. It was also felt that the Brit. air organisation was faulty, although the autumn had seen remarkable successes by the Brit. aeroplanes against Zeppelin raiders over Britain. The admiralty was criticised in conjunction with the renewed Ger. submarine campaign and raids on the Channel flotilla. Lloyd George became Prime Minister on 7 Dec., and incorporated in his Cabinet a number of business-men who were to undertake the expert control of various depts.

In France Gen. Nivelle succeeded Joffre as commander-in-chief on the W. front. In Austria the Premier was murdered in

Oct. and his successor compelled to resign in Dec. At the end of Nov. the Archduke Charles succeeded his great-uncle as emperor of Austria. In Germany Bethmann-Hollweg's tenure of office was ending permanently; while in Russia a great disaster was dawning.

THE GERMAN PEACE NOTE. Political Situation in Russia. When the Duma met on 14 Nov., the reactionary gov. of Stürmer was fiercely attacked, and Milukov, the leader of the Cadet Party, accused the Premier of corruption and intrigue with Germany. Stürmer resigned and was succeeded by Trepov, who was handicapped by being compelled to retain Stürmer's prin. lieutenant, Protopopov, at the ministry of the interior. Germany now tried to enlist the inhabitants of the occupied ter. on the E. front in her support. On 5 Nov. she announced that, in conjunction with Austria, she proposed to estab. an independent Poland with a hereditary monarchy and a constitution. The proposal, obviously designed to secure Polish recruits and embarrass Russia, failed of its purpose, while it temporarily stiffened the resistance in Russia even of those elements inclined to show sympathy towards Germany. In Dec. Germany began her first attempt to manoeuvre the Allies into peace. She was becoming apprehensive of the future, with the Allied power growing to ever greater proportions. The Ger. chancellor announced in the Reichstag, on 12 Dec., that he had sent notes to the belligerent powers; the emphasis, necessary for the Germans, on the suggestion that Germany was now victorious in a war forced on her by her enemies, was less convincing to some of the neutrals. It was, moreover, an empty offer, for it specified no terms which Germany would be willing to accept, and these terms could only be deduced from the implicit arrogance of the general statement. On 30 Dec. the Fr. Gov. communicated to the U.S. ambassador in Paris a formal answer, signed by Russia, France, Great Britain, Japan, Italy, Serbia, Belgium, Montenegro, Portugal, and Rumania, in which they declared that there could be no peace until Germany offered reparation, restitution, and guarantees for the future.

INTERVENTION OF THE U.S.A. Effect of the British Blockade on American Trade. On the outbreak of the War, feeling in the U.S.A. on the part of a not inconsiderable element was sympathetic towards Germany. Moreover, the gov. of the U.S.A. was bound by the traditional Amer. policy of avoidance of entangling alliances which dated from the time of Washington. The Monroe Doctrine embodied this policy, and at 2 Hague conferences America had reasserted it. Early in the course of the War, however, the U.S.A. began to realise that she was going to be seriously affected by the actions of the belligerents. The first difficulty arose over the Brit. maritime policy. At the outbreak of war, Great Britain had announced her intention to abide by the Declaration of London (q.v.), which

contained provisions she soon found herself unable to abide by. Presently successive Brit. orders in council altered the Declaration of London beyond all recognition, and the altered conditions were found to interfere with Amer. shipping. America protested; but even thus early in the war the inept Ger. diplomacy in the U.S.A. to some extent counterbalanced ill-feeling against Britain.

In the early months of 1915 the new Ger. submarine policy in answer to the Brit. blockade aroused further ill-feeling against Germany, for Germany had warned the U.S.A. that neutral ships might be sunk during the submarine campaign, and the sinking of the *Lusitania* drew a strong protest from the U.S. Gov. Germany emphasised the justice of the protest by her defiant reply, which led to a further exchange of notes, that presented by secretary of state Lansing, in the middle of July, being particularly stiffly worded. A few days later Ger. submarines sank an Amer. steamer off the Orkneys; but the U.S. Gov. still took no decisive action, partly because her relations with Britain, in spite of much goodwill on both sides, were also reaching an *impasse* over the blockade of Germany declared by the Brit. Gov. in Mar. 1915. The blockade laid down the new claim to seize and confiscate non-contraband goods of Ger. origin, ownership, or destination carried in neutral ships to neutral ports, and during the summer the U.S. Gov. addressed a series of strong protests to the Brit. Gov.

President Wilson's Policy—Effect of German Submarine Campaign—The 'Lusitania'. Feeling in Great Britain at this period was becoming somewhat impatient with America, public opinion being unable to grasp the reasons for Amer. neutrality. During the summer of 1915, the Germans continued to provide the U.S.A. with severe tests of their neutrality. The sinking of the *Lusitania* (q.v.) roused the Amer. people to a true understanding of what Ger. methods of maritime warfare might mean to them, and on 19 Aug. the sinking without warning off Cape Clear of the White Star liner *Arabic* increased their anger, for 26 Americans were among the passengers on the vessel. A week later Count Bernstorff the Ger. ambas., informed Lansing that full satisfaction would be given to America for the sinking and Herr von Jagow, the Ger. Foreign Secretary, announced that Germany had now adopted a new policy which would clear up the submarine difficulty. This policy consisted of a declaration that liners would not be sunk by submarines without warning and without ensuring the safety of non-combatants, provided that the liners did not try to escape or offer resistance. On 4 Sept. another liner, the *Hesperian*, was torpedoed without warning. There was small loss of life, but among the crew were 2 Amer. citizens.

German Agents in America. Relations were being still further strained by extraordinary revelations about the activities of Ger. agents in America. For

a long time there had been rumours of secret activities of Ger. agents financed by the Ger. embassy in Washington. It was alleged that there had been deliberate falsification of passports, particularly by the Ger. naval and military attachés, Capt. Boy-Ed (q.v.) and Capt. von Papen (q.v.), and that dynamite outrages in Canada and various incendiary fires in U.S.A. factories had also been organised from Washington. During Aug. the *New York World* pub. information proving that Count Bernstorff had control of immense funds for propagandist purposes and that Ger. agents were fomenting strikes in Amer. munition works. These interferences with Amer. internal affairs were brought to a head by the Dumba Case, made public early in Sept. On 30 Aug. the steamer *Rotterdam* touched at Falmouth, and the Brit. authorities seized a number of confidential papers and letters in the possession of an Amer. journalist called Archibald. Among the documents seized was one from Count Bernstorff on the subject of the highly compromising revelations which had been made by the *New York World*. In his memorandum Count Bernstorff denied that Germany had tried to organise strikes or to take part in a plot against the economic peace of America. Archibald's dossier also contained communications from Dr Dumba, the Austro-Hungarian ambas. in Washington, and from von Papen, which exposed the falseness of Bernstorff's case. One of Dumba's dispatches to the foreign minister at Vienna contained a full description of the efforts he had made to stir up unrest among munition workers. The U.S. Gov. was compelled to take action, and insisted on the recall of Dumba.

American Note on Allies' Maritime Policy. President Wilson addressed a note of protest against the Allied maritime policy on 5 Nov. It was realised in Britain that such Brit. regulations as that making liable to capture enemy merchandise even in neutral ships was in conflict with previous international agreements, as also was the revised Brit. definition of contraband; but it was generally felt that the necessities of the case justified the action.

Republican Party's Attitude. Up to the end of 1915 President Wilson represented the great body of Amer. opinion in his determination to keep out of any entanglement in the War; but from that time onward the opposing party in the U.S.A., headed by ex-President Theodore Roosevelt and Elihu Root, steadily gathered strength. Germany saw in the note of 5 Nov. hope of a breach between America and the Entente, and when, on 7 Dec., the President's message to Congress denounced Ger. intrigues in America and asked for legislation to deal with them, Germany hastened to repudiate the campaign carried on by her agents in America, and followed this with an offer of settlement of the differences over the sinking of the *Lusitania*. On 15 Feb. Wilson's Cabinet rejected the *Lusitania* proposals and refused to admit a new Ger.

claim to torpedo armed merchant vessels without warning. Two Dutch liners were torpedoed without warning, and on 24 Mar. a submarine sank the Channel steamer, *Sussex*, with a number of Americans among the victims. On 19 April Wilson made a speech in Congress indicting the whole Ger. policy of submarine warfare, which had been embodied in a note to Germany dispatched on the previous day. He concluded with the declaration that 'unless the Imperial Gov. should now immediately declare and effect an abandonment of its present methods of warfare against passenger and freight vessels, the gov. can have no choice but to sever diplomatic relations with the gov. of the Ger. Empire altogether.' This ultimatum drew from the Ger. Gov. the reiterated pleas of self-defence against the illegal conduct of Great Britain, but drew also the concession that such vessels should not be sunk without warning unless they attempted to escape or offered resistance. This was accepted by the U.S. Gov. as a specific abandonment of the policy of unrestricted submarine warfare.

American Presidential Election. During the summer of 1916 the relations of America with the belligerents remained quiescent, largely because foreign affairs were overshadowed by the presidential election, in which Wilson was standing for his second term. Wilson was re-elected in Nov. During the autumn of 1916 Germany, as stated in a previous section, began to prepare the way for peace overtures. On 18 Dec. President Wilson himself issued a note which had been prepared before the Ger. peace overture was issued. He took the opportunity of stating the aims claimed by both Allies and Central Powers in the War and of asserting the expressed willingness of both sides to accept a League of Nations to avoid future wars. He then invited each side to set out in detail their views. The Allies accepted the president's statement of their aims and expressed their adherence to the ideal of a League of Nations. Germany issued various statements claiming that the Allies had now 'dropped the mask,' and admitted their 'lust for conquest.' On 13 Jan. 1917 the Ger. Gov. announced that all sea traffic within certain areas adjoining Britain, France, and Italy, and in the E. Mediterranean would 'without further notice' be prevented by all weapons. This meant clearly that Ger. submarines would sink at sight all vessels found in these areas.

Diplomatic Relations between the U.S.A. and Germany Severed—Message to Congress. On 3 Feb. the Ger. ambas. in Washington was handed his passports and the Amer. ambas. in Berlin was recalled. On the same day the President announced to both Houses of Congress the severance of diplomatic relations with Germany. On 12 Mar. the U.S. Gov. issued an order for the arming of Amer. merchant vessels, and, quickly following this, Ger. submarines sank 6 Amer. vessels. On 2 April Wilson, at a special session of Con-

gress, asked for a declaration of war. The decision to declare war passed both Houses by 6 April, on which date a state of war between America and Germany came into operation. The entry of the U.S.A. into the War was of great immediate value to the Allies, for although no considerable contingent of Amer. troops could be sent to Europe for many months, the whole of the immense industrial organisation and financial resources of the U.S.A. became immediately available for the Allied cause.

Passing of Selective Service Act. On 28 April Congress passed a Selective Service Act, and in 5 months 1,500,000 men were in training camps. On 25 June, 1917 the first contingent of Amer. troops landed in France. Maj.-Gen. Pershing (q.v.) was appointed Amer. commander-in-chief. Meantime, the Amer. Navy had already begun to co-operate with the British. In May a flotilla of Amer. destroyers arrived in Brit. waters under Vice-Adm. Sims, and took part in the protection of Atlantic shipping. But perhaps the most vital contribution made by the U.S.A. during 1917 was the building of new merchant vessels and war vessels to replace tonnage sunk by the Ger. submarine campaign. Since the announcement on 31 Jan. by Germany of blockaded areas in all the waters round Britain, France, and Italy, and in the E. Mediterranean, the submarine campaign had been increasingly successful. During April the Allies lost some 550,000 tons gross of shipping. After April the losses slowly decreased, and in July the gross tonnage lost was no greater than 320,000; but in the first 7 months of the submarine campaign the Allied losses amounted to some 4,500,000 tons, equalling the total Allied losses from the beginning of the War to the opening of the campaign in Feb. 1917. Home production was increased when possible, so that imports from overseas might be reduced. Essential shipping was protected as far as possible by providing escorts and arranging convoys (the system by which vessels travelled in company under escort of warships), and submarines (or 'U-boats' as they were familiarly known) were attacked with vigour and success. From the beginning it was recognised that America must deal with the question of replacement. She would be unable to send her newly trained armies to France unless the necessary shipping were available for their transport and supply. But by the beginning of 1918 this problem was solved. The staff of the Amer. Army took nearly a year to produce any really formidable addition to the Allied forces on the W. front.

THE BALKANS, 1916-17. Result in Crete. In Greece the position was confused. At the end of Aug. 1916 the Bulgars had seized considerable ter., the Gk. garrisons being sent to Germany. This roused the Venizelist party, and a revolution broke out at Salonika on 30 Aug. under Col. Zimbrakakis, a Venizelist deputy. Regiments were enrolled for service against Bulgaria, and in Sept. a

Gk regiment was sent to the front. On 24 Sept. a sympathetic revolt broke out in Crete, Mytilene, and other Gk islands, and Venizelos left Athens for Salonika, where he formed a provisional gov. of insurgent Greeks. This gov., which was gradually recognised by the Allies, at once declared war on Bulgaria. The mainland of Greco SW. of Salonika remained under Constantine's rule. The king's party formed leagues of reservists to oppose war, while the king continued to evade the demands of the Allies.

Allied Landing at the Piræus. On 1 Dec. 1916 detachments of Allied troops landed at the Piræus were driven off with loss. Allied diplomacy played into Constantine's hands, for the councils of the Allies were divided. France and Britain were keenly Venizelist; but the tsar was lukewarm, and Italy feared the emergence of the greater Greece for which Venizelos was working. At the beginning of 1917 the gov. in Athens was, in appearance, in a more reasonable frame of mind. By the end of May Venizelos had 60,000 troops at his disposal. The attitude of the Allies towards Constantine stiffened.

Albanian Independence Proclaimed. On 3 June Italy proclaimed the independence of Albania under her protection, and on the 8th she occupied Janina, thereby cutting communications between Greece and the Central Powers. On the 10th Fr. and Brit. troops entered Thessaly, partly to safeguard the harvest, and partly to occupy certain strategic points, e.g. Volo and Larissa, Sarraïl having long suffered from the attacks of irregular bands of reservists in his rear. On the 11th Fr. troops seized the isthmus of Corinth, and that evening Jonnart, as Allied high commissioner, arrived at Athens, accompanied by Allied transports. In the name of the protecting Powers he demanded the abdication of King Constantine and the nomination of his successor, who was not to be the crown prince.

Abdication of King Constantine of Greece. A crown council was summoned, and King Constantine signed an act of abdication in favour of his second son, Prince Alexander. On the 12th Fr. troops were disembarked at the Piræus and the ex-king and his family left for Switzerland. The most influential of the pro-Ger. party were exiled. On the 14th the Allied blockade of Greece came to an end. On the 21st Jonnart concluded an agreement with Zaimis for convening under Venizelos the Chamber which had been elected in 1915 and illegally dissolved. Accordingly, on 25 June, Zaimis resigned and Venizelos formed a cabinet.

RUSSIA REVOLTS. The Beginning of the Revolution. Famine was now widespread in Russia, and the feeling among the Russian people against their continued participation in the War was fanned by the Russian Council of Labour ('Soviet'). Nicholas II having abdicated, a provisional gov. was formed under Prince Lvov, the gov. being a coalition of Left and Centre party groups. Milliukov, the Russian foreign minister, in the spring

of 1917, sent a note to the Allies affirming the determination of the Russian Gov. to pursue the war to a victorious end. Soon afterwards, a Coalition Gov. was formed with Alexander Kerensky (q.v.) as war minister. This gov. also proclaimed its adherence to the Allied cause, but the newly formed All-Russia Congress of Soviets was determined to obtain the Allies' acquiescence in the 'principles of the Russian Democracy' as a basis of peace. strenuous efforts were still being made by the Russian military leaders. Brusilov worked out the plans for an offensive in Galicia, with the object of outflanking Lemberg. The Russian attack began on 1 July, and at first prospered. The Russians had made a considerable advance on the Galician front and had captured some 18,000 prisoners. By 10 and 11 July the important tns of Halicz and Kalisch had fallen to Kornilov's Army. But this was the limit of the Russian success. Hampered not only by bad communications but by desertion and indiscipline, the Russians began to waver before the attacks of the reinforced enemy, and when floods were added to the Russian difficulties the rout began. On the 16th Kornilov was obliged to evacuate Kalisch and to retire all along his front. On that day disorder had broken out in the cap. On the 19th the Austrian counter-attack had developed; one Russian regiment deserted its position and, before evening, the whole front was in chaos. From the 21st to the 23rd, the advance of the Austrians continued so rapidly that they retook Tarnopol and wiped out the whole of the Russian gains of 1916. By the end of July the Russian armies in the S. were driven back to the frontier of Russia, but Prince Leopold did not advance farther. On 2 Aug. Brusilov was dismissed from the supreme command and his place was taken for a short time by Kornilov.

Kerensky Becomes Prime Minister. Kerensky had become Prime Minister in place of Prince Lvov; but his power was already weakening, and he was falling between the 2 opposing groups: these were the growing forces of Bolshevism and the more nationalist elements including the gens. of the Army, who wished to carry on the War. Kerensky made an effort to secure union between the opposing elements, but without effect. Meanwhile the Germans had taken Riga. Alexiev was sent to organise a hasty defence, and the Germans waited for the coming collapse. Kerensky's vanity caused confusion and unrest among the gens., with the result that when he assumed the position of commander-in-chief and put himself at the head of the Petrograd troops he played into the hands of the Bolsheviks. The more moderate members of Kerensky's Cabinet resigned. A new Council of Five took the place of the former gov. and towards the end of Oct. the Germans had advanced farther so as to threaten Revel. Trotsky had become president of the Petrograd Soviet, and the primary object of the Bolshevik régime was now to get Russia out of the war, and

they continued the negotiations for peace with the Gers.

Trotsky's Repudiation of the Allies. Brest-Litovsk.—Hostilities on the E. front ceased on 2 Dec., and fraternisation between the troops began. The Allied Powers formally protested, and Trotsky made a fiery speech denouncing foreign interference. On the 3rd a Russian deputation arrived at the H.Q. of Prince Leopold of Bavaria at Brest-Litovsk, and on the 5th a preliminary conference opened there under the presidency of Gen. Hoffman, Prince Leopold's chief of staff. The Russian delegates asked for the retirement of the Ger. detachments from the is. in the Gulf of Riga which they had occupied since the revolution, and for a promise that no Ger. forces would be sent from the E. to other fronts. They urged also an armistice on all fronts alike. The Germans refused this request, but finally, on the 15th, a truce was agreed to on the E. front to last from 17 Dec. for 28 days. The meeting at Brest-Litovsk to discuss terms of peace was formally opened on 22 Dec. Von Kuhlmann, the Ger. Foreign Secretary, and Count Czernin (q.v.), for Austria, were the principal representatives of the Central Powers. The Russians proposed a peace without territorial annexations as payment of indemnities. On Christmas Day Count Czernin announced the readiness of the Central Powers to accept such a peace, provided that the Allies pledged themselves to these principles and agreed to join in the negotiations. The conference accordingly adjourned until 4 Jan. 1918 so as to give the Allies time to consider the proposals. On 28 Dec., an agreement was made allowing the resumption of normal diplomatic consular relations between Russia and the Central Powers. Meanwhile, the delegates of Germany and Austria had been preparing drafts for an eventual peace treaty with Russia. In the first draft they declared that as soon as the state of war was at an end and the Russian armies demobilised, the Central Powers would evacuate occupied Russian ter. In the second draft the qualification was introduced that the position of the border provs. was to be referred to a special commission, these provs., being Poland, the Ukraine, Finland, Lithuania, Courland, and part of Estonia, and Livonia.

The Ukraine. The Ukraine was in a different position. Her inhab., the Little Russians, while they had agreed to accept autonomy under the Russian Provisional Gov., did not accept the Bolshevik régime; but they set up an independent rep. establishing peasant proprietors in the land and with nationalist aims, to neither of which the Bolsheviks could agree. The new rep. formed an alliance with Kaledin and the Cossacks, and also with Rumania and Bessarabia. This Ukraine Gov. occupied Odessa, and in the N. and N.E. around Kharkov and Rostov there were numerous engagements with the Bolshevik troops.

Finland—Atlantic Border Provinces. At the opening of the Brest-Litovsk conference the Ukraine was demanding repre-

sentation as a sovereign state. Finland had received autonomy from the Russian Provisional Gov., but had continued to claim full independence, and Kerensky had dissolved the Finnish Diet just before his fall. The Finnish people had thereupon appointed an administration on their own account, which in Dec. decreed separation from Russia. The Bolsheviks had tolerated this declaration, but the Finnish leaders, being of the right and right centre, were exposed to the attacks of left-wing agitators sympathetic to the Bolshevik régime across the border. Strife between 'Red Guards' and 'White Guards' had begun. In the Caucasus and in many parts of Siberia various separatist movements were also in progress, so that everywhere round the border the tendency was towards separate nationalism rather than international Bolshevism.

Separate Peace. On 4 Jan. the period expired within which the Allies were to accept or reject the peace offer. The Allies had made no reply to the proposal. On the 9th von Kuhlmann announced that since the Allies had made no response the offer to negotiate had lapsed, thus compelling the Bolsheviks to negotiate a separate peace, which Trotsky agreed to do on the 10th. On the 11th he agreed to the inclusion of a separate delegation from the Ukraine. On 12 Jan. he laid before the Central Powers the Bolshevik proposals for the evacuation and reconstruction of the Russian ter. now held by the Germans. The Germans refused them, von Kuhlmann declaring that there could be no relinquishment till a general peace had been concluded. Germany was stiffening her terms, as she already saw hope of peace with the Ukraine and with Rumania, which would give her access to the E., and she could then deal with the Bolsheviks at her leisure. On the 16th, in spite of Trotsky's protests, separate negotiations were begun between the Austro-Ger. delegates and the Ukrainians. On the 18th the conference was adjourned and Trotsky returned to Petrograd. On the 18th also the long-delayed Constituent Assembly was opened in Petrograd; but on the 19th it was dissolved by a body of Bolshevik troops. Trotsky, meanwhile, had sent an ultimatum to Rumania on 15 Jan., and another on the 26th to the Ukraine. On the 30th the Brest-Litovsk conference was resumed, and Trotsky made one more appeal against the separation of the Ukraine, and against the Ger. policy with regard to the border provs. Meanwhile Bolshevik troops had taken Kiev and put the Ukrainian Gov. to flight. The Ukraine thereupon turned for help to the Central Powers, and on the 9th peace was agreed upon between the Ukraine and the Central Powers, and the Army of von Linsingen moved E. along the Pripiet to defend the Ukraine. Trotsky surrendered to superior force, and on 10 Feb. announced that the state of war with Austria and Germany was at an end. Von Kuhlmann decided that as the Bolsheviks refused further negotiations they must be compelled to agree to the Ger.

terms. Von Eichhorn was ordered to advance against them. He took Reval, Dylnak, and Pskov and advanced within 150 m. of Petrograd, while von Linsingen relieved Kiev.

German Ultimatum to the Bolsheviks. An ultimatum was presented to the Bolsheviks, demanding acceptance of the Ger. terms, which had now been greatly hardened, within 48 hrs. Lenin declared for surrender, and on 3 Mar. the Bolsheviks were forced into signing the Peace of Brest-Litovsk (q.v.). The Central Powers on 5 Mar. had now also secured a treaty with Rumania, and on the 7th a treaty with Finland. The treaty with the Bolsheviks compelled Russia to evacuate Estonia and Latvia, the Ukraine, and Finland. The dists. of Ardahan, Kars, and Batum were to be handed over to the Turks. Briefly summarised, the results of the Bolshevik foreign policy were that it had lost for Russia a quarter of her total pop., a third of her manufacturing industries, a quarter of her arable land, and some three-quarters of her iron and coal production. For the remaining Allies the Peace of Brest-Litovsk might have the gravest results. Germany had not only disposed of the E. front, but had secured access to large new supplies of oil, foodstuffs, and cotton, and had cleared the way to Central Asia, where she could do incalculable harm to the Allied cause, threaten India, and foment rebellion in Persia. For Rumania the Russian revolution had meant the defection of the Russian contingents. In Dec. she had been compelled to join in the truce, and on 7 May 1918 had to make peace on the most humiliating terms. She had to give up the whole of the Dobruja, the Petrozeny coal basin, and the Carpathian passes, to demobilise her Army, to allow Austro-Ger. transport to pass through Moldavia and Bessarabia to Odessa, and a little later to subject completely the whole of her commerce, including her oilfields, to the control of Austro-Ger. financial groups. (See also RUSSIA, History.)

POLITICAL CRISES IN AUSTRIA-HUNGARY AND GERMANY. German Dream of 'Mitteleuropa' Realised. The overthrow of the old autocracy in Russia produced political crises both in Austria-Hungary and in Germany. For Allied observers the importance of Austria had been overshadowed throughout the War by her dominant partner; but without the active participation of Austria-Hungary the Ger. dream of *Mitteleuropa* could not be realised, nor the vital plan of the *Drang nach Osten*, the creation of a solid block of ter. under Ger. influence stretching from Berlin to Bagdad, by way of counterbalancing Brit. sea-power. By the end of 1916 this dream had become a reality. The Germans had completely broken up the Austrian armies as separate entities, and not only put them under Ger. commanders but associated them with Ger. troops in every theatre of war. Austria had least desire for war of all the associates of Germany, and, in the first 2 years of war, had suffered very severely. Her

armies had borne numerous defeats, and her people were on the brink of starvation. The Ger. hold on the Austrian armies was strong enough to make any prospect of a separate peace with Austria illusory; but the internal condition of the Austro-Hungarian Empire was increasingly dangerous from the Ger. point of view.

Problem of Oppressed Nationalities in Austria-Hungary. The main problem of internal Austro-Hungarian administration was largely the struggle of the other races against the minority Magyar-Ger. rule. It was obvious that if Austria were to reach an understanding with the new rulers of Russia she must adopt democratic methods. Accordingly, after the Austrian peace offer to Russia on 14 April 1917 the Vienna Cabinet decided to summon Parliament, which had not sat since before the War. The Premier resigned, and on 24 June a stop-gap ministry was formed under Dr Seidler. Meanwhile in Hungary Count Tisza had fallen, but his successor faithfully carried on Tisza's policy of co-operation with Germany, and the Ger. hold on Austria-Hungary remained as firm as ever. (See AUSTRIA, Austria-Hungary in the First World War.)

Resignation of Bethmann-Hollweg as German Chancellor. In Germany the consequences of events in Russia were more startling. When in May the chancellor had refused to state his peace terms, he had been supported in the Reichstag by a bloc of the Catholic Centre, the Radicals, and the National Liberals; but in July this bloc went into opposition and joined the Majority Socialists in demanding reform of the Prussian constitution, parli. gov. throughout the empire, and a declaration of war aims, on the lines which had just been laid down in a speech in the Reichstag by Erzberger, the leader of the democratic wing of the Catholic Centre Party. He had demanded a declaration in favour of peace without annexations and indemnities. On 11 July the emperor offered direct and secret ballot for the Prussian Diet, but for a week the Reichstag continued to press its full demands. During that week Bethmann-Hollweg offered his resignation, which was accepted. The emperor ignored the Reichstag in choosing his new chancellor, Dr Georg Michaelis, as likely to be both docile and efficient. But von Kuhlmann, who became foreign minister, was opposed to the military policy. During the summer and autumn of 1917 he showed much skill in trying to estab. Germany's wish for peace both in Allied and neutral countries. But while von Kuhlmann secured certain advantages for Germany by his adroit diplomacy, his path was not made easy by the blunders of the Imperial chancellor, who had failed to conciliate the Reichstag and continually ruined the effect of von Kuhlmann's pacific overtures abroad by his reactionary statements on the success of the submarine campaign and the strength of the Ger. front.

Majority Socialists in the Reichstag. Fall of Michaelis. The errors of Ger.

diplomats in S. America and elsewhere also added to von Kuhlmann's difficulties. In addition, von Kuhlmann was continually opposed by the military chiefs. The collapse of all gov. in Russia, for which von Kuhlmann had worked, was really detrimental to his policy, for it gave fresh hope of 'peace by victory' to the reactionary military party, and revived the flagging hopes of the mass of the Ger. people. When the Reichstag met again in Oct. the Majority Socialists interrogated the gov. on their encouragement of Pan-Ger. propaganda in face of the pacific speeches made by von Kuhlmann and the Austrian minister, Count Czernin. When gov. spokesmen tried to make light of the criticism the Reichstag as an expression of their dissatisfaction referred back a new war vote. The situation was aggravated by an Independent Socialist's reference to a mutiny in the fleet and coupled with an allegation of unjust treatment of the sailors by the gov. Adm. von Capelle averred that the mutiny had been organised in collaboration with Independent Socialist members of the Reichstag. This angered the Socialists, and the chancellor first associated himself with von Capelle's charges and then called for his resignation. Finally, the votes were passed and the Reichstag adjourned, but it was clear that Michaelis could not meet the Reichstag again, and the emperor chose as his successor Count Hertling, leader of the Catholic Centre in the Reichstag.

The Principle of Self-Determination. Meanwhile President Wilson's insistence on the ideal of self-determination for oppressed nationalities was gaining ever wider acceptance as one of the main purposes for which the Allies were fighting, and not only among the Allies themselves but among the subject peoples of Austria and a number of other nations which had hitherto preserved neutrality. Abroad, the ineptitude of Ger. diplomacy, and the continued interference with neutral shipping and supplies by the unrestricted submarine warfare, brought more and more nations into the war on the Allied side. Cuba declared war on Germany on 7 April; Panama followed on 10 April; Siam declared war on the Central Powers on 22 July; China declared war on Germany on 14 Aug. and on Austria-Hungary on 11 Sept., and Brazil declared war on Germany on 26 Oct., while 9 other countries had severed diplomatic relations with Germany. By the end of 1917 only the Argentine and Chile in S. America had not declared war on Germany. There was a strong movement in Spain for a declaration of war on Germany, but a powerful Germanophile party was able to prevent a declaration. The position of all the other European neutrals was becoming precarious since the tightening of the Allied blockade, and their people often suffered as severely from food shortage as the people of some of the Allied countries.

FOOD PROBLEM IN GREAT BRITAIN. Brit. losses on the Somme and the remoteness of any prospect of the end of the war were beginning to affect the temper of the

people. The problem of food supplies was becoming serious with the losses in tonnage from the submarine campaign and the diversion of much of the remaining tonnage to the transport of war material. With the creation of a ministry of food in 1917 and the appointment of Lord Devonport as food controller, steps were taken to meet the serious shortage of grain, and also of sugar and potatoes; but the shortage was followed by high prices, and the situation was not vigorously dealt with until Lord Rhonda took over the food ministry in June 1917. Lord Rhonda instituted an examination of traders' books, and a system of maximum prices for foodstuffs based on this examination subject to weekly revision. Finally, he instituted a compulsory system of food rationing. (See **FOOD CONTROL**.)

The first financial measure of Lloyd George's new gov. was to raise a huge internal loan. The amount raised was £1000m, or £300m. in excess of the provisional estimate of Bonar Law, the new chancellor of the exchequer. Vast sums were urgently needed, for the cost of the war was increasing at an alarming rate.

WESTERN FRONT. January-April 1917

—*German Retreat to the Hindenburg Line.* On the W. front during the first 3 months of 1917 the Allies compelled the Germans to retreat to the strong defensive position they had prepared known to the Germans as the Siegfried Line but to the British as the Hindenburg Line (q.v.). By the end of the first week in April the Germans had been driven back to this immensely strong position. On 9 April the British began their attack along the Vimy Ridge and in front of Arras (see **ARRAS, BATTLE OF**), and by the 11th they had taken the Vimy Ridge, a number of vills., together with numerous prisoners and much war material. A Ger. counter-attack on the 15th failed, and on 16 April the French launched a great attack on the S. part of the Hindenburg Line along the Aisne heights. Nivelle, the Fr. commander-in-chief, had for his immediate objective the S. pivot of the Hindenburg Line at Laon, while to the British had been given the task of attacking the N. pivot of the line around Douai and Cambrai. Nivelle's offensive failed of its main purpose, which was to deal a decisive blow, and after the first few days was abandoned. The second battle of the Aisne (q.v.) lasted for a little more than a month, and was really a failure. In the middle of May Nivelle was replaced in the command by Pétain, who reverted to the old tactics of gradual attrition. In the second half of the year the main fighting on this front was conducted by the British in Flanders.

The Third Battle of Ypres. The third battle of Ypres, also known as the battle of Flanders, consisted of prolonged operations lasting from the end of July to the beginning of Nov., in which the Canadians distinguished themselves in the capture of Passchendaele on 6 Nov. From 20 to 23 Nov. the British also secured considerable gains and many prisoners in an advance at Cambrai (q.v.). But the general results of the Flanders campaign

were small in proportion to the effort, and the actual cost was greater to the British than to the Germans.

NEAR EAST CAMPAIGNS, 1917. *Fall of Bagdad.* In the Near E. Allied prestige, which had waned in 1916, was much restored in 1917. The Allies realised that they must crush the Turks if they were to effect anything in the Balkans. The first movements under the command of Sir Archibald Murray, took place in the Sinai Desert. On 20 Dec. the British entered El Arish, the main enemy position, which had been abandoned by the Turks. On 9 Jan. they captured Rafa, the last Turk stronghold in the Sinai Desert. In

Brit. forces entered Kut without opposition. Gen. Marshall pursued the Turks to Azizleh, half-way to Bagdad, taking some 4000 prisoners. On 5 Mar., after a week's organisation, the advance was resumed, and the following day Ctesiphon was passed without resistance. On the 10th the Turkish position on the Diale R. was captured, and on 11 Mar. the British entered Bagdad. The fall of the city enormously enhanced Allied prestige in the E. By end of April Bagdad was secure from enemy attack, the terminal section of the Bagdad railway was in Brit. hands, and the nearest Turkish forces were 80 m. away. The communications of

GERMAN STORM TROOPS ON MANOEUVRES NEAR SEDAN, MAY 1917

Feb. an expedition against the Grand Senussi (q.v.) on the W. borders of Egypt was completely successful and drove him into the interior, where his forces could no longer menace Egypt on the W. In Mesopotamia, where Sir Stanley Maude had succeeded to the command of the Brit. forces in Aug. 1916, great improvements had been effected in supplies, transport, and communication. The Brit. commander decided to strike at the Turkish centre in Bagdad. Early in Dec. the preparations were complete, and for the next 2 months the British steadily advanced, clearing the Turks from the r. b. of the Tigris. In the middle of Feb. they attacked also on the l. b., and, having effected a brilliant crossing of the swollen riv. on 23 Feb. were in a position to cut off the retreat of the Turkish troops from Kut; but the attempt was unsuccessful. None the less, the continual advance along the l. b. had so weakened the Turkish position that on the 24th the

the enemy with S. Persia were blocked, and the threat to India removed.

British Advance from Sinai. Meanwhile Murray continued his advance from Sinai, from the Wadi el Arish to the Philistian plain. The desert railway was being pushed along the coast to form a Brit. line of communication similar to the Turkish military line from Beersheba. At first it was thought that the Turks would offer resistance close to the frontier at Well Shaikh Nuran; but on 5 Mar. Brit. aircraft reported that they were falling back. Pursuit was impossible, for the Brit. railroad was still too far to the rear, and the Turks took up their new position unimpeded from Gaza to Tel el Sheria, with an advanced post at Beersheba on their left wing. The Ger. gen., Kress von Kressenstein, who was in active command of the Turkish forces, had great difficulties to surmount. The Turks were thoroughly disheartened. Supplies for the troops were very short, and desertion

was common. It was essential to engage the enemy as soon as possible to prevent him falling back to stronger positions farther N.; and Murray decided to advance up the coast, with Gaza as his objective, so as to keep in touch with the sea, secure better water supplies, and leave an easier course for the railway to follow than would have been possible if an attack had been made inland towards Beersheba. The battle opened on 26 Mar., but the early movements were hampered by a sea fog, so that the battle was still undecided when night fell. For 3 weeks the British were occupied in advancing their railroad and in procuring proper supplies of water for the troops opposite Gaza, while the Turks under von Kressenstein were increased from about 2 divs. to 5 divs. of infantry and 1 of cavalry, and the defences of Gaza were considerably strengthened with new trench systems and great quantities of wire. There was no longer any possibility of taking the Turks by surprise; but in the difficult country it was impracticable to revise the plans in the time available so that Murray now prepared for a frontal attack. The attack began on 17 April, and with the assistance of tanks the outer line of defence was taken with but few casualties. The attack on the main position developed on the 19th, but no considerable advance was made and the Brit. losses amounted to some 7000 men. Murray wished to renew the attack on the following day; but his Army commanders disagreed, and urged him to await reinforcements. Thereafter the troops settled down to a long period of inaction, varied only occasionally by cavalry raids. Murray was then replaced by Sir Edward Allenby (q.v.).

General Allenby Appointed to Command in Egypt and Palestine. The check at Gaza was a serious reverse after the brilliant conduct of the Sinai campaign, and for the time it appeared that the British had reached a condition of stalemate similar to that experienced in Gallipoli. The reverse was partly due to the difficulty of the country and partly to the release by the Russian revolution of Turkish troops from the Caucasus, which had been transferred to Syria. It was becoming evident that the capture of Jerusalem must be the ultimate objective of the Palestine force, for while Jerusalem had small military value, the capture of the holy city would be a resounding political triumph. Allenby determined to secure Beersheba first, since he would then be in a position to take the main fortresses in the rear. Meanwhile he proceeded on 27 Oct. to shell Gaza, so as to give the impression that he intended an attack in force on that city. The attack on Beersheba assisted by a cavalry enveloping movement from the NE. was successful, and the town was occupied on 31 Oct., some 2000 prisoners and 30 guns being taken. Before developing the attack on the now exposed left flank of the Turkish defences at Gaza, Allenby began a frontal attack intended to draw off the Turkish reserves to that quarter.

On 1 and 2 Nov. this operation was carried out with such complete success that Gaza was outflanked on the W. and a reserve div. had to be sent to this front from the left flank. Water and transport difficulties now delayed Allenby's main attack, which had outrun the railroad; but by the 7th Gaza had fallen and the Brit. troops were pursuing the retreating Turks up the coast. The enemy had suffered some 15,000 casualties. On the 9th he occupied Ascalon, and through intense heat the troops struggled on towards the junction of the Jerusalem railway, which was captured on the 14th.

Fall of Jerusalem. Jerusalem was now directly threatened, and frantic efforts were made to save the city. Allenby seized Jaffa, but on 22 Nov. the Turks suddenly began a series of vigorous counter-attacks, which continued until the end of the month and prevented the British from making much further advance. But the opportunity was taken to bring up the Brit. guns and improve the roads for the final advance. Meanwhile Jerusalem was in confusion, and when the British attacked on 8 and 9 Dec. the Turkish civilians began to evacuate the city, and on Sunday, 9 Dec., the Turkish garrison retired and Brit. patrols entered. On the 11th Allenby entered by the Jaffa Gate. Meanwhile Sir Stanley Maude had been improving his position in Mesopotamia, but he *d.* suddenly on 18 Nov. of cholera. (*See MESOPOTAMIA, First World War Campaigns in Mesopotamia.*)

INTRIGUE IN WESTERN EUROPE, 1917. Stockholm Conference. The invitations which had been issued to the Stockholm Conference in April had been vigorously discussed by the Socialists of the W. Allied countries. When the Soviets pressed for a conference on the formula 'no annexations or indemnities' there was some weakening in the Allied refusals. A plenary conference was proposed for Aug., and 4 representatives of the Soviets toured W. Europe to prepare the ground. It was soon evident that the Soviets had no interest in nationalities and their sole purpose was to prepare for the international class war. Opinion in the Allied countries on the subject of the conference became still more hopelessly divided, and the Trades Union Congress finally repudiated the idea of any conference at that time. But in Aug. the Pope issued an appeal to the belligerent states to consider concrete proposals for peace, which, however, seemed to the Allies all in Germany's favour. President Wilson on behalf of the Allies issued a reply setting forth their view that such terms would involve unending future conflict and the estab. of an armed confederacy to ensure that Germany observed the terms.

Clemenceau becomes Premier of France. Successive Fr. Ministers had been so complacent towards pro-Ger. Socialists such as Malvy (q.v.), Caillaux (q.v.), and Polo (q.v.), that it was not until Clemenceau (q.v.) became Premier in Nov. that their activities were checked. Promptly on his accession to power he arrested and

tried Polo and the smaller conspirators, exiled Malvy, and finally, in Jan. 1918, had Caillaux arrested and brought to trial before a court-martial on the charge of endangering the safety of the State. The charges against him were, however, never proved.

ITALIAN FRONT, 1917. *Cadorna's Appeal for Allies' Assistance.* In May 1917 Cadorna made a great effort to outflank one great obstacle to his E. advance, the Bosco di Ternova, by seizing the Bainsizza plateau and the valley of Chiapovano; but this difficult advance failed, and he then turned his attention once more to Monte Hermada, where the Italians gained a footing on 23 May, only to be driven off again by an Austrian counter-attack on 5 June. It became clear that Italy could not succeed by her own unaided efforts, and in July Cadorna appealed to Britain and France for help. Britain sent some batteries of artillery, but neither could spare infantry. Hence in Aug. Cadorna resumed his attack alone. In spite of certain initial successes, the Italians were again driven back by Austrians recalled from Russia, and by the end of Sept. Cadorna's main operations were at an end. Ludendorff had for some time been preparing to apply Ger. methods to the It. front, and in Aug. he transferred von Below from the W. front to the It. and gave him command of 6 Ger. and 7 Austrian divs.; the plan was to disperse with the devastating preliminary bombardment, and to rely on picked troops to break through the enemy lines, and to follow up the first of such troops with wave after wave of fresh troops. The part of the line to be selected for this new method was the Isonzo front in the neighbourhood of Caporetto, where the It. troops were reported to be disaffected.

Italian Defeat at Caporetto. It was on this front that von Below intended to attack. The attack began on 24 Oct. in heavy rain and snow, which helped the Germans by increasing the element of surprise. The Second Army, which comprised the disaffected troops, broke immediately, so that by the morning of the 25th the Germans had crossed the Isonzo, had taken Monte Matajur, which was 5000 ft high, and were across the It. frontier. They had nullified in a day all the It. gains of the previous 2½ years. For a full account of this battle see **CAPORETTO, BATTLE OF.**

British Expedition to Italy. The British sent a corps under Plumer and the French sent one under Fayolle. The Austrians, however, captured the heights above the Venetian plain, until in the middle of Dec. they reached the limit of their invasion, from which time the Italians with the Fr. and Brit. contingents began to drive them back. The fighting continued well into 1918 without much change in the position. Nevertheless, it had been a brilliant military success for the Central Powers.

FORMATION OF ALLIED COUNCIL AT VERSAILLES. At a conference at Rapallo on 5 Nov., attended by Lloyd George,

with Gen. Smuts, Sir Wm Robertson, and Sir Henry Wilson, on behalf of Britain, by Painlevé and Gen. Foch for France, and by Orlando, Baron Sonnino, and Alfieri for Italy, it was decided that an Allied Council should sit at Versailles. Cadorna was sent as It. representative to Versailles, while his place as commander-in-chief was taken by Gen. Diaz (q.v.), who had been very successful in the Carso battles. (See also **CADORNA, MARSHAL.**) At the end of this critical year the strong men on the Allied side were Lloyd George, Clemenceau, Orlando, and Wilson. Clemenceau gave valuable support to the newly emphasised war aims of the Allies, to their determination to secure a lasting peace by the eventual estab. of a League of Nations. But at this point the influence of President Wilson was greatest among the Allied leaders, and on 8 Jan. 1918 he issued a statement of America's war aims embodied in 14 points. (See **FOURTEEN POINTS.**)

BRITISH WAR ORGANISATION IN 1918. *Allied Naval Council.* The opening of 1918 found Great Britain shouldering the heaviest burdens she had been called upon to bear during the War. During 1917 the Army had been increased by 820,645 men, and some 700,000 men and 800,000 women had been incorporated in civilian organisations for warwork. A million additional acs. of land had been ploughed, Brit. shipping replacements had reached 624,000 tons during the year, the number of guns available for France had increased by 30 per cent. and the supply of aeroplanes was two and a half times as great as in the preceding year. The ministry of food had regulated the supply of essential foodstuffs, so that in the winter there was no real want. In Dec. an Allied naval council was set up in Paris to co-ordinate naval policy, and by Feb. 1918 the submarine menace seemed to have been largely overcome. Air-raids entered upon a new phase in 1917, when the Zeppelins were largely displaced by aeroplanes which raided various Eng. tns during the summer in daylight, and, after the defences had been improved, on moonlight nights during the autumn and winter. Though there was no lessening of the determination of the Brit. people to carry the war to a successful conclusion, there was considerable bitterness over the prodigal wastage of Brit. troops in the unsuccessful operations on the W. front during the autumn.

GERMAN PREPARATIONS FOR SUPREME EFFORT. *British Western Front Weakened.* Lloyd George's gov. did not fully appreciate the position on the W. front, where Germany was preparing a great spring offensive. Brit. and Fr. strength on that front had been weakened by the It. campaign, and the Brit. front had been further extended with little reinforcement. The Brit. Cabinet continued to keep over 300,000 troops in Britain, possibly because of revived scares of a Ger. invasion of England. Meanwhile, the Germans were able to transport troops from the E. to the W. front to counteract the slight numerical superiority which the

Allies had now secured on that front, and it is probable that they had a margin of about 250,000 men in reserve. On the Allied side there was no chance of any immediate increase. Sev. months must elapse before the Americans could put any appreciable number into the field, and France had reached the limit of her resources.

German Military Plan and the Reichstag. Sometime in Feb., Ludendorff and Hindenburg met the Reichstag in secret session and explained their plan. They promised complete victory in the field before the autumn. It was admitted that

take adequate steps to meet the threat. The essence of the Ger. plan, as of the original Ger. plan at the opening of the War, was speed. At the opening of the attack it was announced that the emperor was in command.

GERMAN OFFENSIVE OF SPRING 1918. Attack on British Fifth Army. The offensive began at dawn on Thursday, 21 March, precisely against that sector of the Brit. front indicated by Sir Henry Wilson 2 months before, and, it would seem, also by Gen. Gough commanding the Fifth Army, who had 14 divs. on the Oise sector, against approximately 40

Canadian troops of the 87th Battalion resting in a trench near Willervall, April.

A patrol of the 1st Cameron Highlanders (1st Division) at Culnchy, 17 April.

THE GERMAN OFFENSIVE OF SPRING, 1918

the great Ger. offensive must necessarily be costly, the Ger. losses being estimated at 1,500,000. The Reichstag approved this plan, which was to be achieved through the isolation of the Brit. Army, effected by separating it from the French on its right and confining it between the Somme and the Channel. This accomplished, the Brit. Army could be held with a few troops, and the main attack could then be directed against the French, who would collapse under the weight of the attack of the whole Ger. force. The first objective, therefore, must be the junction between the French and British, which the Germans assumed would be weak. Owing to the intricate railway system which the Germans commanded behind their lines, they could concentrate troops rapidly at any point in their rear, and send these troops along their railways to any point on the front selected for the attack long before the Allies could

Ger. divs. The Ger. offensive was helped by abnormally dry weather, which reduced the strength of the water defences on the right of the Brit. line, while a dense fog favoured the attack on the Brit. forward positions. Ger. infantry crossed the Oise canal at La Fère unobserved, and many Brit. outposts were surrounded before it was realised that the attack had begun. The Fifth Army suffered severely in the first day's attack, and lost ground W. of La Fère and N. of St Quentin. Byng with the Third Army farther N. had also been compelled to abandon many vils., and the Germans had reached St Leger in their effort to thrust a wedge between Arras and Cambrai. On the 2 following days the Germans made vigorous attacks along the line of the Somme, and the Péronne bridge-head was abandoned. On the 24th the Third Army surrendered Bapaume and nearly all the gains of the Somme campaign of 1916,

while on the 25th they were driven back to their old positions on the Ancre, thus exposing the flank of Gough's Army, whose right and centre had also been driven farther back. On the 26th the Germans broke through the old Brit. line between Beaumont-Hamel and Hébuterne and reached positions they had not occupied since 1914; but here they were finally held. Gough, however, had to give still more ground, and gaps appeared between his line and Byng's on his left, and between his line and the Fruch on his right. On the 27th it appeared likely that the Germans would destroy the liaison between the different armies, but the great vigour of the attack had exhausted the attacking armies, their communications now lay across the devastated area, and rain was hampering their movements. When von Below's comparatively fresh Army (originally disposed opposite the British from Arras southward) resumed the attack on the 28th they could not penetrate the battle-zone at any point.

Failure of German Offensive North of the Somme. This was the decisive failure of the Ger. offensive and, N. of the Somme, the Brit. front was now secure; but S. of the riv. the Germans continued to make some progress. During the next few days the situation continued to be grave for the Allies; but the retreat had now merged into a battle in which they had some successes. A hastily organised Fourth Army reinforced Gough's Fifth Army, which had, however, recovered its equilibrium under extraordinary difficulties; while, at this time, the important decision to appoint Foch as commander-in-chief of the Allied armies on the W. front was taken at a conference on the 25th between Haig, Pétain, Milner, and Clemenceau. On 4 April von Hutier tried to reach Amiens and drove back the Allies some distance farther, but did not reach the city. In the thwarting of the Ger. offensive Canadian troops had played an important part.

Results of the German Offensive. The great Ger. attack had failed in its object of breaking the Allied line; but it had achieved much more than any Allied offensive during the whole war. By 4 April the Germans claimed 90,000 prisoners and 1300 guns, and the Brit. Fifth Army had been partly destroyed. (See FRANCE AND FLANDERS, FIRST WORLD WAR, CAMPAIGNS IN.) This great offensive did not exhaust the Ger. effort, which was resumed on 9 April; but the offensives that followed were not on the scale of the first, and showed signs of indecision in the Ger. high command. Ludendorff now had to choose between the dangerous admission that the chief object of the offensive had failed and the attempt to palliate the true military situation by a fresh onslaught. Anticipating an attack in Flanders, Haig had arranged to relieve the 2 Portuguese divs. which had been holding the front from the Lys to La Bassée, but he could replace them only by tired Brit. divs., and the change had only been half effected when

Ludendorff launched the attack of 9 April (battle of the Lys). The Portuguese broke quickly, the Brit. flanks on either side were turned, and the whole centre had been lost in a few hrs.

Battle of the Lys. Between the 9th and the 12th a considerable advance had been secured by the Germans; but they had lengthened instead of shortened their line and were left in a salient. The necessity of obtaining some commanding positions compelled the Germans to convert this movement from a subsidiary to a major operation, and they continued to hammer away at this sector until the end of the month. Local fighting continued until late in May, but it was clear that Ludendorff's second offensive had met the same fate as his first.

British Counter-measures. Meanwhile, in Great Britain, a new Military Service Act was passed to extend the liability to military service to all men under 51 and to bring Ireland within its scope. But the raising of the military age tended rather to weaken Brit. industrial power than to increase military power, and the extension to Ireland only inflamed that country and delivered it over to Sinn Féin, thereby necessitating the diversion to Ireland of large numbers of Brit. troops to engage in a bitter civil war there. A wiser but belated move was the prompt dispatch to France of the 300,000 troops which had been kept in England.

AMERICAN ARMIES IN FRANCE. Allied Premiers Make an Appeal to America. As quickly as troops could be organised, in the early part of 1918, Americans were sent into line with the Allies. On 19 Jan. 1918 the Amer. 1st Div. took over a sector N. of Toul; the 26th went to Soissons early in Feb., and the 42nd near Lunéville. The 2nd Div. was stationed near Verdun, 18 Mar. Meanwhile a skeleton of the future Amer. Army was being built up with H.Q. at Neufchâteau. The attack on Gough's Fifth Brit. Army alarmed the Allies and the U.S.A. Lloyd George sent an urgent request that Lord Reading, the Brit. ambas. to the U.S.A., should ask President Wilson to accelerate the sending of Amer. troops, the Allies undertaking to provide for the manufacture of the necessary artillery, aeroplanes, and machine-guns, as the Amer. programme of manufacture was still in its early stages.

The Americans and British between them transported safely through mine-fields and submarines some 2,000,000 Amer. troops to France; and 2,000,000 more were being made ready. But the crisis still continued. Foch had presented to the Allied Prime Ministers a statement of the utmost gravity, pointing out the numerical superiority of the Germans in France, where 162 Allied divs. were opposed to 200 Ger. divs., there being no possibility of the British and French increasing the number of their divs. Foch therefore urged that the greatest possible number of infantry and machine-gunners, in which respect the shortage of men on the side of the Allies was most marked, should continue to be transported from

America in the months of June and July to avert the immediate danger of an Allied defeat in the summer campaign. He placed the total Amer. forces required at no fewer than 100 divs. The troops were forthcoming, and during the summer 300,000 men crossed the Atlantic every month.

GERMAN ATTACK ON THE CHEMIN-DES-DAMES. *German Armies reach the Marne.* Ludendorff attacked the French at the Chemin-des-Dames on 7 May, and he was able to achieve the most rapid advance of the War on the W. front. Soon the French had lost all their gains since Oct. 1914 and were back again beyond the Aisne. The Brit. divs. were forced to retire to the Aisne. By that time the French had been driven back from the Aisne nearly to the Vesle, and on the 28th they were driven well S. of the latter riv. On the 29th the Germans broadened their front by taking Soissons, and on the 30th the apex of the salient they had made had reached the Marne between Château-Thierry and Dormans. For 3 days they had advanced at the rate of 10 m. a day, capturing some 40,000 prisoners and 400 guns. From that time, however, the pace slackened, although the Germans continued to drive the French back on the W. of the salient along the Savières R. Amer. troops drove the Germans back SW. of Château-Thierry on 4-5 June, and Brit. troops recaptured Bligny, SW. of Rheims. The next Ger. attack on 9 June, between Montdidier and Noyon, was a failure.

BRITISH NAVAL RAIDS ON ZEEBRUGGE AND OSTEND. The purpose of the Brit. naval raids, which took place on 23 April, on Zeebrugge and Ostend was to block the submarine and destroyer exits from those ports both of which were connected by canals with Bruges. At Zeebrugge a party landed on the mole and destroyed its works, while a submarine loaded with explosives was run under the viaduct and exploded. Meanwhile the block ships were sunk and the survivors of their crews were rescued by the *Vindictive* and her consorts. At Ostend the block ships were sunk outside the centre of the fairway; but on the night of 9-10 May the effort was repeated with better success by the *Vindictive*. These raids hampered the Ger. submarine campaign to some extent and destroyed the residue of Ger. sea-power; results which were proved by the safe transport of hundreds of thousands of Amer. troops across the Atlantic. (See OSTEND, and ZEEBRUGGE.)

THE ITALIAN FRONT. *Austrian Advance.* With the check they had suffered in their offensive on the W. front, the Germans could only hope for success in the Austrian offensive launched against the Italians on the Piave on 15 June. No Ger. troops could be spared for this offensive, and moreover, the Italians had laboured strenuously to strengthen their defences while the front had been quiescent during the spring. The Austrians were in no condition to conduct a successful offensive, but it was hoped that Ger. tactics might supply the place of Ger.

troops. There were 2 battles, one in the mts whose object was to turn the whole It. front on the Piave, and the other a frontal attack across that riv. between the Montello, the pivot of the mt and riv. fronts and the sea. The mt attack was the more promising, but achieved less success. That front was partly held by Fr. and Brit. troops, and an insignificant advance which the Austrians made on the 15th was stopped on the following day. The attack on the Piave was at first more successful; a good deal of the Montello was captured, a serious impression was made on the It. right wing at San Dona di Piave, and 14 new bridges and nearly 100,000 Austrian troops were thrown across the riv. But fortune favoured the Italians, for torrents of rain flooded the riv. and broke 10 of the Austrian bridges.

Italian Counter-attack on the Piave. On the 18th the counter-attack began, and by a brilliant combined movement by soldiers and sailors the Austrian left was turned on the 21st. On the 22nd a general retreat across the riv. was ordered. It was skillfully conducted, and the Austrians escaped with slight losses, considering the precarious position into which they had fallen. Their offensive had been a complete failure, but Gen. Diaz did not follow up his success.

MARSHAL FOCH'S COUNTER-OFFENSIVE. *German Retreat Begins.* Ludendorff had no choice but to proceed with his offensive, which had now become a gamble. His next attack began on 15 July with the object of encircling the Montagne de Rheims, the chief bastion of the line of communications between Paris and the E. front on the Meuse. Simultaneous attacks were made to the E. and to the SW. of Rheims. The first was unsuccessful; but on the SW. the Germans advanced some 3 m. across the Marne. But by the evening of the 17th the Allied forces were successfully counter-attacking all along the line, and at dawn on the 18th Foch delivered the blow which was the turning point of the whole war. His strategical plan was brilliantly conceived. In the forests of Compiègne and Villers-Cotterets, he had assembled reserves in considerable numbers. From the Aisne S. to the Ourcq, Mangin commanded an Army containing the pick of the Fr. colonial troops, and thence to the Marne was Degoutte's Army which included 5 Amer. divs. Before them ran the Ger. flank weakly guarding the line of communications with the Ger. front on the Marne. Led by light tanks, the French early on the 18th broke through the Ger. defences on a front of 27 m. and advanced from 2 to 5 m. towards the Soissons-Château-Thierry road. By the 20th the Germans had regained the N. bank of the Marne, but without serious loss. On the 21st they abandoned Château-Thierry, and on 2 Aug. the French were in Soissons. By the 3rd the Germans had been driven across the Vesle and the salient had been flattened out. Elsewhere there were signs that the Germans were breaking. On 4 July Australians and Americans

together had captured Hamel. On the 19th the British had recaptured Meteren at the apex of the Ger. salient across the Lys, and Merris fell on the 30th. On 4 Aug., the Germans withdrew from all their ground across the R. Avre. But the first great success was Rawlinson's advance with the Fourth Army on the Avre and along the road from Amiens to St Quentin on which the Germans had made their W. drive in Mar. On the first day the Germans were driven back 7 m. Thenceforward the advance continued steadily all along the line.

American Attack on St Mihiel Salient. With Amer. troops now pouring in, Allied superiority in numbers was merely a question of time; for even with their troops drawn from the Russian front, the Germans could not replace their losses. Foch now allowed Gen. Pershing to attack the St Mihiel salient, which had been held by the Germans since 1914. The reduction of this salient would prevent the Germans from placing the Paris-Nancy railway under their artillery fire and would also free the railway leading from St Mihiel to Verdun. The salient was in difficult wooded terrain with the enemy holding the heights of the Meuse. The Allies sent an ample force of heavy artillery. At dawn on 12 Sept. after 4 hrs of violent artillery fire, the attack was launched and was successful; 16,000 Ger. prisoners were taken, as well as 443 guns and a large quantity of material and supplies. On the 15th both Austria and Germany made overtures for peace, but President Wilson returned an unsympathetic reply.

British Advance through Flanders. Meanwhile the British were pushing forward in Flanders. On 27 Sept. the First and Third Armies forced the Canal du Nord and by the 30th the Brit. menace forced the Germans to surrender St Quentin to the French. On the same day Brit. and Colonial troops took points both N. and S. of Cambrai. Of the 4 operations concerted by Foch with Haig, those of the Amer. and Brit. had been successful, and the Belgian attack from Ypres on 28 Sept. equally so, with the capture of Dixmude on the 29th; while the third resulted in the gradual driving back of the Germans in the combined Belgian and Brit. attacks from Armentières, La Bassée, and the whole of the remainder of the Drocourt-Quéant line. The French and Americans had great difficulty in the Argonne and on the Meuse, but progress all along the Fr. front continued during Oct., and on the 11th the French took the Chemin-des-Dames and on the 13th La Fère and Laon. The check to the Americans enabled the Germans to transfer reinforcements to Cambrai and Valenciennes, so that Cambrai did not fall until the night of 8 Oct. On the 10th Le Cateau fell.

Closing Battles of the Western Front. In Oct. Belgian and Fr. troops under Degoutte and the Brit. Second Army under Plumer attacked the whole Flanders front, and by the 17th Ostend had been abandoned, on the 19th Zeebrugge and Bruges, and by the 21st the Germans

had been driven back 20 m. from the sea and were trying to make a stand on the Lys Canal in front of Ghent. To the S., also, the withdrawal was equally complete. Lille and Douai were entered on the 17th, and by the 21st the Brit. Second and Fifth armies had advanced to the Scheldt on a front of 20 m. From the 17th to the 25th fighting continued along the line of the Selle, and these battles yielded 21,000 prisoners. On the 26th Ludendorff resigned. All Germany's other allies had collapsed, and she was left alone to meet the decisive battles of early Nov. The decisive actions took place on the right and left of the Allied line, and were carried out respectively by the Americans and the British. On 1 Nov. the Ger. line on the Meuse was broken, and during the next few days the Americans rapidly followed up their advances, until, on the 7th, they reached Sedan. Pershing's great attack on the Meuse-Argonne Front began on 26 Sept. and lasted almost continuously until the very eve of the armistice, when the Americans had all the Argonne in their hands. (See ARGONNE.) In the meanwhile the Fr. centre was also advancing, and on the morning of 11 Nov. the Allies were converging on Namur. This rapid pursuit of the Ger. centre had been made possible by the final blow given to the Germans by the Brit. forces in the battle of the Sambre in co-operation with Debeney's Army southwards. A great victory was won, which definitely broke the Ger. resistance. By the 9th Maubeuge itself had fallen; Tournai was occupied on the same day, and early on the 11th the Canadians captured Mons. At 11.0 a.m. on that day fighting ceased all along the W. front, according to the terms of the armistice which had been arranged (considered in the next section), and the Brit. Army thus ended its campaign on the W. front where it had begun it 4 years previously.

THE ALLIED VICTORY. *President Wilson's Terms to Germany.* However difficult the Ger. submarine blockade may have made the problem of feeding the Allied peoples, the pressure of the Allies' blockade of the Central Empires was so serious that at times there was serious risk of famine. The food situation had become so alarming in May 1916 that a food dictatorship was set up in Germany with the widest discretionary powers to regulate the supply and consumption of foodstuffs. In the summer of the same year there were riots in Munich and Essen over food difficulties. In these circumstances it is remarkable that the Central Empires avoided famine for 3 years thereafter, though occasionally they had good fortune, as in 1917-18, when, through the collapse of the Russian front, huge stores of grain found their way to the Central Empires. Towards the end of Sept., it was obvious that the Ger. offensive in the W. had failed, while Bulgaria and Turkey were on the verge of defeat and Austria was pleading for peace at any price. The effects of the Brit. blockade were now felt, and starvation

was rampant in the countries of Central Europe. The Ger. high command was compelled to urge the civilian authorities to hasten their negotiations, but it was first necessary to set up a gov. in Germany with which the Allies would agree to negotiate. On 30 Sept. the Emperor accepted the resignation of the secretary, and all the other ministers resigned their posts. The most urgent necessity was to provide an imperial chancellor who would represent the new democratic attitude so essential as a facade for negotiation. The emperor chose Prince Maximilian of Baden, cousin of the Grand Duke of Baden and president of the Upper House of the Baden legislature. On 4 Oct. he sent a note to President Wilson, asking him to undertake the work of restoring peace, and to invite the Allies to send plenipotentiaries to open negotiations. He stated that Germany accepted the president's proposals set forth in the Fourteen Points (q.v.) as a basis for peace discussions. He asked for an armistice. On the same day the Austro-Hungarian Gov. sent a similar message to President Wilson: he asked if Germany now accepted the terms he had previously laid down, and then demanded a complete withdrawal of the troops of the Central Powers from invaded ter. Thirdly, he asked if Prince Max spoke for the authorities of the Ger. Empire who had so far conducted the war. The Ger. reply delivered on the 12th answered the president's first and third questions in the affirmative, and expressed the willingness of Germany and Austria to evacuate invaded ter. if a mixed commission could make the arrangement. But only an armistice involving surrender could secure to the Allies the military advantage won with such great effort. Prior to 14 Oct., on which date Wilson replied, events had occurred which were not without their bearing on the Allies' attitude. On the 10th the Irish mail boat had been sunk with the loss of nearly 500 lives. On the 14th was issued the report of a Brit. committee on the harsh treatment by Germany of prisoners taken in the spring of 1918. Furthermore, in their retreat the Ger. armies were burning and looting to render the Allied pursuit as difficult as possible. Wilson announced that no armistice could be considered while Germany continued these unlawful and inhuman practices. He also asked for some guarantee that the Ger. Gov. was no longer the arbitrary power against which the Allies had been fighting, and emphasised that the conditions of an armistice must be left to the Allies' military advisers, and that no conditions could be accepted which did not absolutely safeguard the Allied military supremacy. On 20 Oct. Germany agreed to these demands, trusting to the president to approve no demand 'irreconcilable with the honour of the Ger. people.' The Ger. Gov. claimed that the new gov. in Germany was free from all arbitrary influence, and had been completely democratised. On the 23rd Wilson rejected this claim. 'The gov. of the United States, cannot deal with any but veritable representa-

tives of the Ger. people, who have been assured of a genuine constitutional standing as the real rulers of Germany.' Acceptance of these terms implied complete surrender, and on the 27th Germany accepted them, declaring that peace negotiations would be conducted by a people's gov.

The Armistice with Germany. At 5 o'clock on the morning of 11 Nov. 1918 an armistice was signed between Germany and the Allies, and fighting ceased on the W. front at 11 a.m. on that day. The terms of the armistice included the immediate evacuation of all conquered ter. and withdrawal behind the Rhine, leaving the whole l. b. and all important bridge-heads open to Allied occupation and a neutral zone on the r. b.; the repatriation of all the transported inhab. and Allied prisoners of war; the quashing of the treaties of Brest-Litovsk and Bucharest, and the withdrawal of all Ger. troops from ters. formerly belonging to Russia, Rumania, and Turkey; the surrender of thousands of guns, locomotives, aeroplanes, of all submarines fit for sea, and of the greater part of the Ger. Navy. The surrender had been forced upon Germany by the imminence of military collapse, and revolution quickly followed. It was precipitated by an order to the Ger. fleet to fight. The crews mutinied and the revolt spread during the first week of Nov. to Kiel and other ports, and thence throughout Germany. Every Ger. throne was overthrown, and on 9 Nov. the emperor abdicated, fleeing with the crown prince to Holland. The crowning humiliation was the peaceful transference of the Ger. Navy to Scapa Flow on 21 Nov., to be scuttled by its own crews on 21 June 1919. Only in one remote Ger. outpost did an audacious commander continue to resist until 25 Nov., namely in Ger. E. Africa, where an entirely isolated force under von Lettow-Vorbeck (q.v.) had carried on a brilliant guerrilla war all through the 4 years of war.

EVENTS IN RUSSIA (1918-19). Bolshevik Relations with Germany. After the treaty of Brest-Litovsk, the Ger. relations with the Bolsheviks varied from equivocal association to open hostility. During April and May Trotsky made abortive efforts to raise a Red Army to drive the Ger. invaders from Russian soil; but with the advance of a Czechoslovak contingent in the SE., Germany was forced to make an agreement with Lenin, by which she undertook not to advance farther E. than a specified line from the Gulf of Finland to the Black Sea, and the Bolshevik forces were therefore able to give their undivided attention to the Czechoslovaks on the Volga. But in Finland, where Germany had hoped for a new outlet for her influence, Red Guards and White Guards continued to fight, and although a Bolshevik ambas. was sent to Berlin, and a Ger. ambas., Count Mirbach, to Moscow, the Count was assassinated on 7 July, and his successor, Helfferich, paid only a hurried visit and departed for Berlin to avoid a similar fate. In the Ukraine Germany pillaged the country of

supplies for her own use, so that everywhere the peasants rose in revolt, and there were many murders and guerrilla warfare, culminating in the assassination on 30 July of F.-M. von Eichhorn (q.v.) in the streets of Kiev. The Ukraine had previously been made into a Ger. prov. administered by an ataman, Gen. Skoropadski, who was nominated by Berlin; Ger. rule was unenlightened, and resulted in this universal rising, which had its effect throughout Russia. Meanwhile in Russia the attacks of the Czechoslovaks and the Allied intervention (*see below*) had put the wildest elements in power. On 16 July the ex-tsar and his family were shot. On 6 Sept. Lenin signed 3 further treaties with Germany, giving every kind of security for the satisfaction of the Ger. claims. The Baltic provs. were to have their frontiers defined as Germany pleased. Baku and its oil region was to be made a Ger. preserve, and immediate payment was to be made by Russia to Germany of £50m. in goods and £300m. in gold, and this from a bankrupt country, where industry was at a standstill. From June 1918 onwards the Bolsheviks were recognised as the declared foes of the Allies; but to bring help to the White armies and to the Czechoslovaks seemed impossible, since all ways into Russia were closed except by the Arctic or the Pacific. These Czechs, now stranded in Russia, had gone there originally to fight against their Austro-Hungarian masters, hoping thus to facilitate the creation of an independent Czechoslovak state.

British Expedition to North Russia. In Feb. and Mar. 1918 the British had effected a landing at Murmansk, at the head of the White Inlet, and at Pechenga, the nearest Russian port to the Finnish frontier. The arrival of Fr. and Amer. cruisers made the occupation international. The local Soviet worked with the Allies, and this landing was in fact approved by Trotsky. Then came the Ger. alliance with Finland, who was promised all the ter. lying between her E. borders and the White Sea. To meet this threat Allied reinforcements arrived in June, under Gen. Poole. Presently the Bolsheviks changed their policy and demanded the departure of all Allied forces from Russia. This demand was refused by the Murman provisional gov., which threw in its lot with the Allies. For 3 months there followed attacks from the Finnish borders which were beaten off by Allied troops assisted by local levies, until Finland finally gave up her desire for conquest and Germany was too fully occupied elsewhere. The isolation of the Murman coast deprived the occupation there of much of its strategic importance, and therefore on 2 Aug. Gen. Poole, by a surprise attack, occupied Archangel. In Archangel there were immense quantities of war material sent by the Allies to Russia, which the Bolshevik Gov. was now commandeering and selling to the Germans, and the Bolsheviks had imposed their gov. by force on the prov., which was in a starving and desperate condition. The Allies therefore undertook to feed the

people, prevent the disposal of the war material to Germany, and estab. a free local gov.; they then attempted to push southward to join hands with the right wing of the Czechoslovaks W. of the Ural Mts. But the Allied troops were far too few and failed to join the Czechs.

The Czechoslovak Armies in Siberia. In Siberia the situation was more hopeful, but also more complicated. There were some 120,000 Czechoslovak troops, some at Vladivostok and some on the W. borders of Siberia, while between them lay the Trans-Siberian Railway, held in places by Bolsheviks and Austro-Ger. prisoners. There were a number of scattered Russian 'white' troops, some in the Far E., some at points along the line, and a considerable number under Alexiev in the Don and Kuban provs., but separated by a wedge of Bolshevik forces from the westernmost Czechoslovaks. The Allied policy vacillated as at Archangel, and in the same way the forces finally sent to the E. were too few to be effective. Japan was willing to intervene in E. Siberia, but was not interested in the W. developments, while America refused to be drawn into the adventure at all except under the most stringent conditions. From first to last the Czechs had to bear the brunt of the contest themselves, and throughout the summer abortive discussions continued among the Allies. On 3 Aug. a Brit. contingent reached Vladivostok to find the Czechoslovaks hard pressed. On 12 Aug. a Jap. contingent followed, while Fr. troops had already arrived, and Americans appeared on the 16th. By 5 Sept. the Czechs with this Allied assistance had cleared the lines of the railway for the whole distance from Vladivostok to the Volga. But the smallness of the numbers of the Allied troops and the continual difficulties with the various local govts. rendered impossible any rapid movement to the help of the Czechoslovaks on the Volga.

OPERATIONS IN THE CAUCASUS, 1917-18. Meanwhile, in the Caucasus, after the revolution of Mar. 1917 a Transcaucasian Gov. had been proclaimed under the influence of the people of Georgia. There was anarchy among the Russian troops in the Caucasus, and Prievalsky, who had succeeded Yudenitch, was compelled to ask Turkey for an armistice. The advance of the Turks began to weaken the allegiance of the Tatars to the new gov., and in Mar. 1918 came the Brest-Litovsk treaty making over Batum, Kars, and Ardahan to Turkey. Later Turkey increased her demands, and at a conference held at Batum in May the Georgian delegates refused to accept them. The Transcaucasian Gov. had ceased to exist and an independent rep. of Erivan was proclaimed for the Armenians, under Turkish protection, and Georgia was compelled to appeal to Germany. Germany was determined to keep control of the Baku oilfields, and therefore decided to use the Georgians as her instruments to this end. Gen. Kress von Kressenstein was recalled from Syria and sent to the Caucasus, and Ger. troops were marched

into Georgia. At a conference at Constantinople in July an attempt was made to settle Germany's differences with her ally, and the Turks were informed that they must abide by the Brest-Litovsk treaty. The Turks ignored this note and continued their advance towards Baku. The rift between Germany and her ally was widening. These events directly interested Britain, for not only did they prejudice the Brit. Mesopotamian campaign, but also the whole future of Persia and the immediate hinterland of India. Events E. of the Caspian were equally disquieting. After nearly a year of contest the soviet of Tashkent had ousted the provisional gov. of Kokhand, and in May Russian Turkestan had been declared a soviet rep. The nearest Brit. troops were the small contingents in Persia and Marshall's Army in Mesopotamia, and their problem was to keep the road from Bagdad to the Caspian open against Turkish attacks from the W. and to check the advance of the Transcaspian Bolsheviks. It was evident, too, that if the E. front were to be restored the Caspian and its shipping must be controlled, which meant that Baku must be held against the Turks. A Brit. force was sent to Transcasplia and after many difficulties succeeded in inflicting a severe defeat on the Bolsheviks. This remote operation had really great political importance for Britain, since the railway from Merv to Kuskh ended within 2 days' ride of Herat, the key to Afghanistan. In Baku itself the Bolshevik Gov. was overthrown on the night of 25 July, and the new gov. asked for Brit. assistance. They had control, for the moment, of the shipping on the Caspian and sent transports to Enzell to fetch the small Brit. force under Maj.-Gen. Dunsterville, which was now more than 1000 m. from its base and had to depend for assistance on the local levies, Armenian and Russian, the former of whom refused to fight on 17 Aug., and soon afterwards went home. Unexpected help, however, came to Dunsterville from the Russian leader, Bicharov, who took Petrovsk on the Caspian 200 m. to the N., and sent help to Baku. After a serious rearward action the British evacuated Baku and reached Enzell.

TURKS DEFEATED IN MESOPOTAMIA AND PALESTINE. Marshall in Mesopotamia spent the summer in consolidating his position, and when he advanced on the Tigris in Oct. it was against a beaten enemy. Although in these confused operations the Allies had failed to recreate the E. front except in isolated parts, they had upset Germany's forecast of events, and it was left to Allenby in his Palestine and Syrian campaign to drive the Turks out of the War, with the resultant collapse of all Germany's E. dreams. On 19 Sept. his troops drove back the main Turkish forces, while his cavalry burst through to the right and then, wheeling, cut off the retreat of nearly the whole of the Turkish forces. By the 25th, co-operating with the Arab forces of the Emir Feisal on the E., Allenby had rounded the Lake of Galilee, the number

of his prisoners reaching 45,000. Damascus fell on the 30th, and the Fr. troops co-operating with Allenby took Beirut on 7 Oct., while the British took Sidon. On 26 Oct. Aleppo fell, and on the 28th Allenby's troops reached Muslimieh, the junction on the Bagdad railway, which was regarded as the nodal point in the Ger. hold on the E. Marshall's advance up the Tigris and his occupation of Mosul now compelled the Turkish Army there to surrender, and on 30 Oct., an armistice was signed. The Allies were now in a position to occupy the forts on the Dardanelles and the Bosphorus and to make free use of the straits.

COLLAPSE OF BULGARIA. Meanwhile in the Balkans events began to move towards the final collapse of Bulgaria. The Allied front in the Balkans had been quiescent since the futile offensive of May 1917, and various adjustments had taken place, the new Gk Army replacing many of the Fr. and Brit. troops, now representing the largest Allied contingent. In June Gen. Franchet d'Esperey succeeded Guillaumat as commander-in-chief. The morale of the Bulgarian troops had begun to fail and desertions were frequent, while King Ferdinand of Bulgaria himself, realising that defeat was imminent, was seeking a way out of his difficulties. During July the French and Italians moved forward, but were repulsed by counter-attacks. There was a lull until the middle of Sept., when the Allies launched a great attack in which the Serbian troops played a notable part. By 22 Sept. the Bulgarians had fallen back from the Doiran front closely pursued by the British and the Greeks. On the 24th Fr. troops entered Prilep, capturing huge quantities of stores. By the evening of the 25th the Serbians had taken the Babuna Pass and the tn of Ishtip; they were close to Veles, and Uskub was almost within their grasp. The Bulgarian front was cut in two, and on 30 Sept. an armistice was signed at Salonika. Meanwhile the Allied armies had been sweeping forward. On the 27th the British took Strumnitza and the Serbians captured Veles, while on the 30th Fr. cavalry entered Uskub. On 4 Oct. Ferdinand abdicated in favour of his son Boris, and retired to Hungary. The Allies advanced to the Danube. On 12 Oct. the Serbians entered Nish, and by the end of the month they were in Belgrade.

DISINTEGRATION OF AUSTRIA-HUNGARY. *Austrian Defeat on the Piave.* These events were the deathblow to the already disintegrating Austro-Hungarian Empire. In the last week of Oct. Count Andrassy, who had taken Burian's place as foreign minister, made a journey to Switzerland to attempt to negotiate with the Allies, but found no approach possible. But the Austrian Army in Italy was still in being, and until that Army was put out of action the Empire remained. Gen. Diaz, the It. commander-in-chief, had now under his command contingents from almost all the chief Allied countries. Diaz aimed at driving a wedge between the Austrian forces in the mts and those in

the plain, after which he could deal with each section separately. The first step was the crossing of the Piave, now in flood, and presenting especial difficulty opposite the It. Tenth Army, commanded by the Brit. gen., Lord Cavan. The riv. here was 1½ m. broad, with innumerable rapid streams between many is., the largest of which was called the Grave di Papadopoli, some 3 m. long. On the night of 23 Oct. the British effected a footing on the is. and held the position for 2 days until on the 25th they were joined by other It. and Brit. troops, and were then able to begin the bridging of the main channel. Meanwhile the Italians had been fighting a costly holding battle on the Grappa, which the Austrians intended as the main attack to distract attention from the Piave, which they believed the flood had made safe. On the 27th the Tenth Army attacked and gained sev. positions on the E. shore of the Piave. Severe fighting continued until the night of the 28th, but on the 29th Cavan (q.v.) moved steadily forward; on that day the Austrians were in full retreat. By the 30th Diaz had driven a wedge securely between the 2 halves of the Austrian front. From this stage the retreat became a rout. On the 31st the collapse was complete, and Czech and Polish battalions surrendered *en masse*. On 1 Nov. the Grappa front gave way. On the 4th the Brit. forces had crossed the Tagliamento, and by the evening of that day the Sixth Army was far over the watershed and in the outskirts of Trento itself. The Austrian armies had collapsed, and left in the Allies' hands more than 300,000 prisoners and 5000 guns.

Armistice with Austria-Hungary. On 4 Nov. an armistice came into effect and hostilities ceased. On the evening of 3 Nov. a detachment of Bersaglieri landed at Trieste, and the city passed into It. control. Thus all Germany's allies were finally beaten. The Piave disaster precipitated the collapse of the Austro-Hungarian Empire. On 18 Oct. Czechoslovakia had proclaimed her independence; now other Slav states within the Empire followed suit, and on 13 Nov. Austria became a rep.

CASUALTIES. The exact total of the casualties sustained during the War will never be accurately known. Some countries kept only approximate or imperfect statistics. The total killed among the military pop. of both sides has been estimated to exceed 10,000,000. Total killed in the Brit. Empire (including Ireland and India) was 1,089,900; France, 1,393,388; Russia (approximately), 1,700,000; Italy, 460,000; Rumania, 335,076; and the U.S.A., 115,660. Total number killed among the Central Powers was: Germany, 2,050,466; Austria-Hungary, 1,200,000; Bulgaria, 101,274; Turkey, 300,000.

THE EFFECTS OF THE FIRST WORLD WAR. The War exceeded, in the scale of its operations, the number of its casualties, and the total of its costs, any previous known human conflict. While the main battleground had been in Europe and Asia Minor, it had involved the peoples

of every continent. It was a global war. It occasioned the collapse of sev. great empires, some of which, like the Ger., were of comparatively recent foundation, others, like the Russian, had been built up through the cents., and, with the emergence of a number of small Central European states after 1918, completely altered the map of Europe and Asia Minor. Its cost, in men and material, was particularly heavy in France and Germany. A burden of reparations was laid on Germany which could never be fully repaid and which, even if partially repaid, would have upset the world economy. The struggle had tended to exalt the power of the military leaders: this was particularly apparent among the Central Powers, but even in England, where parliamentarianism existed as a strong check, there was frequent friction between civil and military depts.

The war was so colossal in its scale that it gave impulse to new ideas, new inventions, new political and social conceptions, so that the world of 1918 emerged in nearly every sense entirely different from that of 1914. In England it did much to further the enfranchisement of women, and to increase the influence of the working-class. In Russia it made possible the successful Bolshevik revolution. The war, unlike previous struggles, involved everyone. Not only did the scale of the military operations make homeless, temporarily or permanently, thousands of civilians, but submarine and aerial warfare ensured that non-combatants and even neutrals far behind the fighting lines might be involved. Results showed that wars could be successfully prosecuted by great armies whose members were, in the main, volunteers or conscripts, hastily trained. The war demonstrated the capacity of endurance of soldiers and civilians alike, and showed that nations could sustain hitherto unprecedented losses, and yet avoid total defeat. The immensity of the destruction, both material and moral, and the sudden transformation of society indirectly caused by it, produced a Europe without the sense of stability and belief in progress which had been characteristic of the Europe of the late 19th cent., while the telling material contribution made in 1917-18 by the U.S.A. to the Allied cause marked the emergence of the U.S.A. as a major world power.

PEACE TREATIES. Treaty of Versailles, signed by the Allies and Germany 29 June 1919, and ratified at Paris 10 Jan. 1920; Treaty of St Germain-en-Laye between the Allies and Austria, signed 10 Sept. 1919, and ratified in Paris 16 July 1920; Treaty of Trianon, between the Allies and Hungary, signed 4 June 1920; Treaty of Neuilly, between the Allies and Bulgarians, signed 27 Nov. 1919, ratified in Paris, 9 Aug. 1920; Treaty of Sèvres, between the Allies and Turkey, signed 10 Aug. 1920, but never ratified; Treaty of Lausanne, between the Allies and Turkey, signed 24 July 1923, and ratified in the same year. (See under the names of the treaties.)

The Second World War began on 1 Sept. 1939, with Germany's attack on Poland, followed 2 days later by declarations of war on Germany by Great Britain and France, both having given pledges to Poland. The prin. cause, however, was the aggressive policy of the Ger. National Socialist Gov., which itself had its origins in the rise of Hitler to the post of chancellor, the repudiation of the Locarno Treaties, and the rearmament of Germany. For some 7 or 8 years before the outbreak of war between Germany and the Allies the Nazi Gov. had subordinated the entire social and internal political life of Germany to the creation of a vast war-machine, which, as it approached completion, enabled Hitler to occupy Austria in Mar. 1938, and Czechoslovakia a year later, both effected without resistance. In the same month the Memel ter. was incorporated in the Reich, and Italy invaded Albania 16 Mar. and in a few days reduced it to subjection.

The milestones along the road of Germany's military and aggressive renaissance were plain for all to see, and there were not wanting a number of warning voices in Britain. Time and again in the period of his exclusion from office Winston Churchill (q.v.) painted in memorable language the picture of Germany's terrible military preparations; but Ramsay MacDonald preferred to follow the *ignis fatuus* of Geneva protocols and international treaties of 'mutual guarantee and assistance' and all the circuitous unrealities of the Covenant of the League of Nations; Mr (later Earl) Baldwin was deceived on the facts of Ger. rearmament and chose to regard Churchill as an alarmist; and Neville Chamberlain preferred the policy of 'appeasement.' Yet none of these statesmen is to be entirely blamed for faults of omission which were at the least merely the political reflection of the popular attitude, not only in Britain but, still more, in France, where the people were weakened by a most pronounced swing to the 'Left' in politics and also by their belief in the absolute physical protection afforded by the Maginot Line.

From about 1937 Britain gradually awoke to the fact that she must rearm; but the rate of her rearmament was so

slow that she found herself at war with Germany without having made up much of the leeway, and actually facing the disaster of a formidable invasion while still farther behind Germany in the rate of rearmament, before calling upon Churchill to assume the reins of power and pursue an energetic policy more calculated to match the fearful menace which now threatened the Brit. Is. It is matter for historical speculation how far the rearmament and will-to-war of the Ger. people grew out of a determination to avenge their humiliating defeat in 1918 and to nullify the fancied injustices of the treaty of Versailles, or, on the other hand, whether this process was largely unconscious. In the mind of the Ger. leader the pattern and scope of his mission to restore the Ger. Empire, to enlarge its confines beyond limit and to acquire Colonial possessions (see COLONIAL QUESTION), were clearly enough conceived, but it is probably also true to say that the Ger. people were by no means so politically conscious as to give practical expression to a policy which, in its gradual realisation, spelt not only privation but the loss of such small measure of social liberty as was commonly extended to the nation. In short, the demagogue Hitler, himself a neurotic and emotional subject, played on the self-same characteristics of his fellow-countrymen, beginning with the negative policy of persecuting the Jews.

This policy was effective in eliminating from the Ger. body politic all such elements of Socialist weakness as might have flowed from a sense of inferiority, besides placing large funds in the hands of the Nazi party with which to organize the *Reichswehr*, the nucleus of the great army it was proposed to build up. In this process of welding a totalitarian machine, Hitler found congenial and often very able coadjutors in Goering (q.v.), who organised the Ger. Air Force; Goebbels (q.v.), who built up a formidable ministry of propaganda; Streicher (q.v.), who carried out the Jewish pogroms; and Himmler (q.v.), who developed the Secret State Police (Gestapo), the symbol of the Nazi spirit. Hitler's dream of *Weltmacht*, however, depended on swift execution, and as soon as his plans were matured he began to use his war machine with ruthless celerity and with an utter disregard for any and every pledge he had given in the past.

The political situation in Europe up to the Ger. occupation of Czechoslovakia is dealt with in the article CZECHOSLOVAKIA. After the seizure of Czechoslovakia the European situation rapidly deteriorated, for it was evident that the Ger. action was in complete disregard of the principles laid down by the Ger. Gov. itself in the Munich agreement between Hitler, Chamberlain, Daladier, and Mussolini. (See CZECHOSLOVAKIA and MUNICH PACT.) On 31 Mar. Chamberlain announced the assurance of Brit. and Fr. support to Poland 'in the event of any action which clearly threatened Polish independence, and which the Polish Gov. accordingly considered it vital to resist' (an Agreement of Mutual Assistance was signed with

Poland on 25 Aug.). Prior to this, Hitler, in April, had denounced the Anglo-Ger. Naval Agreements on the pretext that Great Britain and other Powers were pursuing a policy of 'encircling' Germany. Chamberlain had now abandoned his policy of appeasement, and Britain began to rearm in earnest. A ministry of supply was formed and a Conscription Bill passed. Abroad, the Brit. Gov. gave unilateral guarantees to Rumania and Greece, and concluded a treaty with Turkey for mutual assistance. On 23 May 1939 a treaty of military alliance was concluded between Germany and Italy. From the menacing note in Hitler's oratory it was becoming clear that the next attack was to be on Poland, a country to which it would be geographically impossible for Great Britain and France to send direct help; hence an attempt was made to bring Russia into the 'peace front,' a front which the Nazi Gov. always distorted into the fiction of encirclement, and negotiations with this object went on in Moscow during most of the summer. Meanwhile the Nazi leaders launched a furious campaign of threats and propaganda, demanding that Poland yield up Danzig as a Free City within the framework of the Reich and that Germany should receive a route and railway with extra-territorial status through the Polish Corridor (q.v.) in exchange for a 25-year pact of non-aggression and a recognition of the existing Ger.-Polish boundaries as 'ultimate.' There is little doubt that Hitler was convinced that Great Britain would never fight over Danzig.

The most startling development in the international situation after this was the announcement that Ribbentrop (q.v.), foreign minister, had gone to Moscow to sign a non-aggression pact with the Soviet Gov. Chamberlain sent a personal letter to Hitler stating that 'whatever might prove to be the nature of the Ger.-Soviet Agreement, it could not alter Great Britain's obligation.' If its more specific provisions were kept secret, events soon revealed that Stalin and Hitler had in effect concluded a bargain whereby Russia was to have the Baltic States, and that Poland should be partitioned between them. Still later, Germany acquiesced in the Russian seizure of part of Finland.

The Ger. reply to the letter was given to the Brit. ambas. on 23 Aug. Hitler stated that the Brit. promise to assist Poland would make no difference to the determination of the Reich to safeguard Ger. interests, and that the precautionary Brit. military measures announced in the Prime Minister's letter of 22 Aug. would be followed by the mobilisation of the Ger. forces. In order to gain a strategic advantage over Poland, Hitler resorted to a characteristic piece of diplomatic jugglery. Having refused to guarantee a negotiated settlement with Poland on the ground that 'Polish provocation might at any moment render German intervention to protect German nationals inevitable' (25 Aug.), 4 days later he told Henderson that he was prepared to accept the Brit. proposal for direct

Ger.-Polish negotiations, but counted on the arrival of a Polish plenipotentiary by 30 Aug., to which the Brit. ambas. retorted that the Ger. answer 'sounded like an ultimatum.' In short, without giving the Polish Gov. the slightest opportunity of making contact with Berlin, the Ger. Gov. then broadcast their 'proposals' together with the statement that they regarded them as having been rejected. The proposals had in fact never been communicated to the Polish Gov., and all means of communication between the Polish ambas. in Berlin and the Polish Gov. had been cut off. On 1 Sept. Forster, the Ger. nominee in Danzig, announced in a proclamation to the people of Danzig the reunion of Danzig with the Reich, and on the same day the Ger. armies invaded Poland. Two days later Chamberlain announced in the House of Commons that Great Britain was at war with Germany. France declared war simultaneously. The invasion of Poland, therefore, was the immediate cause of the war between the Allies and Germany.

The general aim of National Socialist Germany was now plainly discernible over many years. That aim was simply and solely the renewal of Ger. imperialism along its previous lines, and the reversal of the Ger. defeat of 1918. The whole purpose of Nazi terrorism was to make the nation internally strong for war, inasmuch as in the Nazi theory the disaster of 1918 was due solely to faulty leadership and to the disintegrating influence of Jews and Socialists. Hence the forcible removal of all potential opponents and the subjection of the nation to a rigid discipline. Ger. imperialism now appeared under the banner of 'Lebensraum' (see further 'MEIN KAMPF'), but its objects were much the same as under the Empire—European hegemony, and later, *Weltmacht* or world domination.

German Invasion of Poland. The Ger. invasion of Poland was Europe's first experience of the *Blitzkrieg* methods, and in addition Poland tried to defend her strategically indefensible W. border. Warsaw was bombed by over 2000 Ger. aircraft; the W. half of the country was overrun by 54 Ger. divs., against which the Poles could oppose only 22 divs. of infantry and 7 brigades of cavalry. They had only 2 tank brigades, few anti-aircraft or anti-tank guns, no armour, and only a horse-drawn supply service. Germany had 7 armoured and 7 motorised divs. Against Germany's 2000 aircraft Poland had 350; and the bombing of Polish airfields, before any actual invasion, destroyed the Polish machines on the ground. In a very short time the Germans obtained complete mastery of the air, which enabled them to destroy communications and very soon to reduce the Polish Army to a mob of disconnected units. The Polish Gov. then left Warsaw and the remnants of the army tried to hold a line on the riv. covering the cap. But a further complication was introduced by the invasion forces of Russia acting evidently under the new Ger.-

Soviet Treaty. Attacked simultaneously in front and in rear, a speedy Polish collapse was inevitable. The Polish Gov. crossed into Rumania on 17 Sept. Warsaw was bombed into surrender, and the partition of the unhappy country soon followed, together with the beginning of the Ger. exploitation and dispersal of the Polish nation.

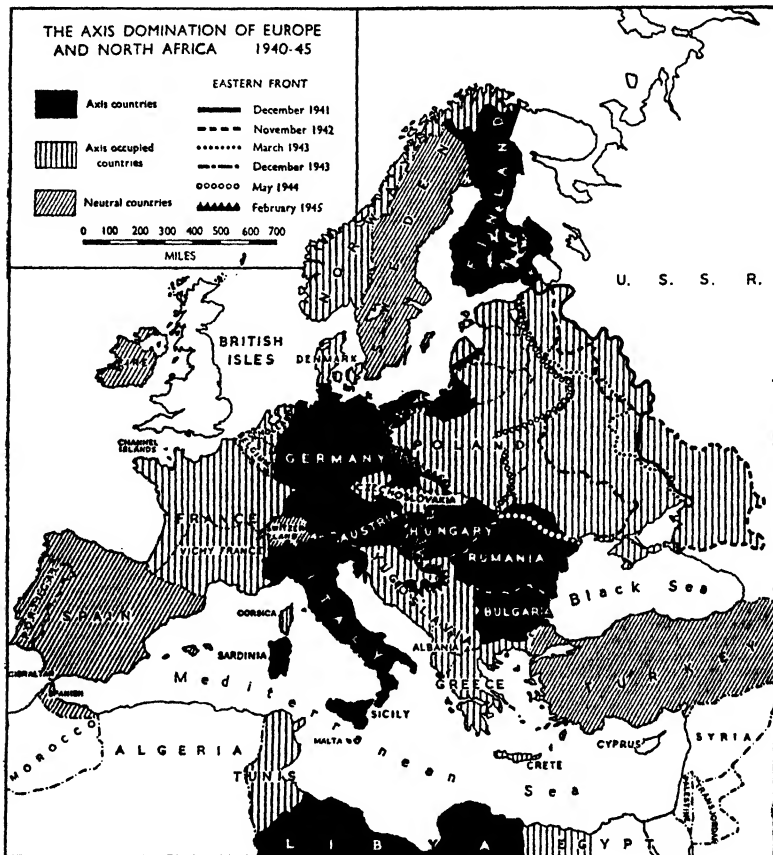

U-Boat Warfare Begins, Sept.-Oct. 1939. Immediately on the outbreak of war Canada, Australia, New Zealand, and S. Africa ranged themselves beside Great Britain. Among the Commonwealth countries, only Eire remained neutral. In the 6 months following the collapse of Poland the only serious fighting occurred at sea, where the Germans began U-boat warfare on the day war was declared and on 4 Sept. sank the liner *Athenia* without warning. On 17 Sept. a U-boat sank the aircraft carrier *Courageous*, while on 14 Oct. another U-boat penetrated Scapa Flow and sank the battleship *Royal Oak* at her anchorage. On the outbreak of war, Churchill, who had been excluded from office since 1929, was appointed First Lord of the Admiralty. The most conspicuous success of the Allies at sea at this date was the battle of the R. Plate and the enforced scuttling of the Ger. pocket battleship *Admiral Graf Spee*, and the fitting of ships with 'de-gaussing' girdles which rendered the Ger. magnetic mines almost ineffective.

British Expeditionary Force in France, 1939. Meanwhile the Brit. Expeditionary Force (B.E.F.) under Lord Gort (q.v.), was sent to the aid of the Fr. Army under Gamelin (q.v.), and took over a section of the Franco-Belgian frontier with Arras as H.Q. and spent the winter in fortifying a position N. of the defences of the Maginot Line. The B.E.F. comprised by winter only 3 corps of 3 divs. each, together with a Fighter Wing and a Bomber-Reconnaissance Wing and an independent Advanced Air Striking Force. During the Polish invasion the Fr. forces made desultory attacks on the Ger. 'West Wall' (q.v.), notably around Saarbrücken; but generally speaking, the W. Front was quiescent throughout the winter. Thus, apart from the bombing of naval objectives on either side, nothing happened on the W. Front before the spring of 1940, a period of inactivity which earned the satiric description of 'the phoney war.'

Russian Invasion of Finland. German Invasion of Denmark and Norway: Nov. 1939-April 1940. After the partition of Poland, Russia sought to implement the secret clauses of the pact with Hitler by obtaining possession of the Baltic States. Finland, however, refused to submit, and on 30 Nov. the Russians invaded that country. In the opening stages the Finns prevailed against their mighty neighbour, and it seemed at one time as if the British and French might render aid to Finland, contingently on securing Scandinavian support generally. This support, however, was not forthcoming, and in the result Russia's overwhelming forces prevailed and Finland, by the treaty of Moscow (13 Mar. 1940), yielded to Russian

demands, and the small expeditionary force prepared by the Allies was dispersed. Meanwhile, on 16 Feb., the Brit. destroyer *Cossack* rescued 299 Brit. merchant seamen from the Ger. prison ship *Altmark* in Norwegian waters, where, very soon, the world was to be given yet

for it was by the instrumentality of this arm that the Germans safely crossed the Skagerrak despite the presence of the Brit. Home Fleet, which was lying off Bergen. After the withdrawal of the 2 small allied forces, the King of Norway and his gov. settled in Britain, being the first of many

another example of long-prepared Ger. aggression. For on 9 April 1940 Hitler launched his *Blitzkrieg* against Denmark and Norway. (See NORWAY AND DENMARK, GERMAN INVASION OF (1940).) Denmark was overrun without opposition, and the prin. ports and airfields of Norway were captured on the first day. Two small Allied forces sent to Norway were foredoomed. Events outside Norway were destined soon to compel their evacuation. The lesson of air power was again exemplified by the campaign in Norway,

allied gov. to carry on the uphill struggle from that country. Following the brief inglorious Allied campaign in Norway, Churchill replaced Chamberlain as Brit. Prime Minister. The new gov. was joined by the leaders of other political parties. It was no time for disunity, for on the day Churchill assumed the reins of gov. Germany struck at Holland and Belgium. (For details of the campaigns in the Low Countries and France, 1940, see WESTERN FRONT IN THE SECOND WORLD WAR.)

German Invasion of the Low Countries, May 1940. Holland was crushed in a few days. The Belgians appealed for Allied support, and the Fr. and Brit. armies on the Belgian frontier wheeled N.E. to the Dyle, as the Germans intended they should. The Germans used parachute and 'fifth column' aid; they were soon able to attack Rotterdam and capture the vital Moerdijk bridges in the heart of Holland. The position of the Dutch Army was hopeless after this loss, but their surrender was hastened by the bombing in daylight of the centre of Rotterdam, in which over 900 inhab. were killed, and the centre of the town very heavily damaged. Queen Wilhelmina and her gov., however, succeeded in escaping to London. The defence of Belgium fared no better. The early loss of the bridges over the Albert Canal prejudiced the forward line of the Belgians and the main line, on which were also the Brit. and Fr. troops and which ran through Antwerp, Louvain, and Namur, was soon gravely compromised by the Germans striking at Sedan, the hinge of the allied wheel. Faced by this threat, Gamelin, commander-in-chief of the allied forces, fell back on the line of the Scheldt while Ger. armour was pouring through a gap in the Fr. Ninth Army between Sedan and Mézières where there was no Maginot Line. This irruption separated the B.E.F. and the Fr. N. armies from the rest of the allied forces on the W. Front and the Germans now wheeled again and made a dash for the Channel coast in the direction of Boulogne. The Belgian Army's supplies were gone, and 29 May King Leopold capitulated to the Germans.

Allied Withdrawal to Dunkirk—Germans cross the Seine and Enter Paris—France Capitulates—Mussolini Declares War, May–June 1940. The encircled allied armies withdrew to the Dunkirk beachhead and on 26 May the historic evacuation began. While the evacuation was in progress, Weygand, who had superseded Gamelin, tried to reform the Fr. armies on the Somme–Aisne line; but nothing could stop the onrush of Ger. armour, which crossed the Seine on 10 June near Rouen. In spite of her own desperate position, Britain sent her own 2 formed divs., the 52nd Lowland and 1st Canadian, to France, but they were withdrawn soon afterwards. The 51st Highland Division and 1st Armoured Division were still behind the Somme, forming a part of the Tenth Fr. Army, which was trying to hold the line of the riv. All these Brit. troops put up a gallant defence; their losses in killed and prisoners were extremely heavy. Eventually the remnants of these Brit. forces were evacuated from St Valéry and Le Havre. With France tottering, Mussolini declared war and attacked France from the S. On 14 June the Germans entered Paris. The French Gov. went to Bordeaux, where Reynaud gave place to a Pétain–Weygand Gov. which at once sued for an armistice. On 21 June at Compiègne, Fr. delegates signed the armistice. It is agreed that Hitler's best chance of defeating England

was in these weeks. (On Ger. plans to invade Britain, see GREAT BRITAIN; OPERATION SEALION.)

BRITAIN STANDS ALONE. *The Battle of Britain—French warships engaged by British Fleet: Aug.–Oct. 1940.* Britain now stood alone against the Axis (see AXIS, ROME–BERLIN). The country was without weapons; the equipped troops available for defence numbered hardly more than 1 div.; Spitfires and heavy anti-aircraft guns were scarce before mid-summer. Coastal defences were, however, soon organised, and the Local Defence Volunteers, later called the Home Guard (q.v.), was already being formed. When the Battle of Britain (q.v.) began, the R.A.F. were badly outnumbered, but they made up for this deficiency by the quality of their aircraft and pilots. Between 10 July and the end of Oct., Brit. fighters brought down 1733 Ger. raiders for a loss of 915 Brit. aircraft. The Ger. losses were too much for the Luftwaffe, and daylight raids, the recognised preliminary of the *Blitzkrieg*, were abandoned for night raids, for which the Germans now had more trained night-bombers, and during the following year London, Coventry, Hull, Plymouth, Southampton, and other big towns were severely damaged.

The surrender of France created fresh problems for Britain. Only de Gaulle (q.v.) and the small band of 'Free Frenchmen' decided to fight on from Britain. Most urgent of the problems was that of the Fr. warships in Brit., Egyptian, and Fr. N. African ports. Those in Brit. ports and at Alexandria were immobilised and those at Oran and Dakar (q.v.) were disabled by units of the Brit. Fleet. Hitler could now draw his submarine blockade fighter, for he was in possession of all the ports of W. Europe from the N. Cape to the Pyrenees. The R.N.'s efforts to break it met with varying success in this and the ensuing years, but they never failed (see NAVAL OPERATIONS IN SECOND WORLD WAR); the menace of a new magnetic mine was quickly overcome, and the estab. of enemy naval and air bases across the Allied traffic lanes was prevented by the Brit. occupation of Iceland and Faeroes.

The Lesson of Sea Power—The Berlin Pact, Sept. 1940. Hitler had supreme confidence in the superiority of armies over sea-power. Hence even if Britain was still undefeated and receiving material aid from another great sea-power, America, he thought that time was on his side and that, provided Germany and Italy could overwhelm continental Europe and the Middle E. (q.v.), their supplies of raw materials, being independent of sea transport, were assured and they could turn round at leisure and overwhelm the W. democracies. Meanwhile, Hitler openly favoured Japan and, while not yet ostensibly turning his back on Russia, was plotting an invasion. The Ten Year Mutual Assistance Pact was signed in Berlin on 27 Sept. 1940 by Germany, Italy, and Japan, the last-named thereby entering the Axis. By recognising Japan's

leadership of the 'New Order' in E. Asia as a *quid pro quo* for Japan's recognition of the leadership of Germany and Italy of a New Order (q.v.) in Europe the Axis was pursuing a long-range policy against both America and Russia. Moscow had (Jan.-Mar. 1941) been warned by the Amer. Gov. that it was Hitler's intention to invade Russia, but the Russian Gov. cautiously declared that the Berlin Pact did not affect the relations of Russia with any of the signatories and that the Russo-Ger. Pact of 1939 remained unchanged. Meanwhile the chief military operations were in the Mediterranean, where the defection of France and the treacherous policy of Mussolini placed Britain in a most awkward situation.

Fighting in North Africa, Dec. 1940-Aug. 1941. Mussolini, confident that the Axis had virtually won the war, had declared war on both Britain and France. Its troops, numbering 300,000, led by Graziani (q.v.) crossed the Egyptian frontier, but were harassed by Brit. patrols and eventually held at Sidi Barrani, until on 9 Dec. Gen. Wavell (q.v.), reinforced by Indians, Australians, and New Zealanders, made the first of 3 great thrusts in the W. Desert. He drove the Italians not only out of Egypt but out of Cyrenaica. His subsequent retreat was not due to any fault of strategy. Two drafts upon his small army weakened him. The first was for Greece, against which country Mussolini, using Albania as a base, had launched an invasion in Oct.; and the second was for the brilliant campaign of Nov. 1940 to June 1941 against the Duke of Aosta which destroyed Mussolini's E. African Empire and freed Abyssinia. While the W. Desert Force was thus weakened, the It. troops of Graziani were reinforced by Ger. troops and Ger. aircraft based on Sicily. Wavell could not resist the counter-thrust, and was driven back again to the Egyptian frontier (April 1941). He left behind a force that held Tobruk until Gen. Auchinleck (q.v.), who succeeded him, made his attack in Nov. 1941. That, too, was brilliantly executed, but it failed, as Wavell's thrust had failed, before El Aghella. Retreating from El Aghella, Auchinleck stood for 4 months at Gazala; but Rommel (q.v.), creator of the Ger. Afrika Korps, mustering greater strength, overran the position, captured Tobruk, and drove him back to El Alamein (May-Aug. 1942). (See AFRICA, NORTH, SECOND WORLD WAR, CAMPAIGNS IN.)

Italian Invasion of Greece—Italian Fleet Crippled at Taranto: Oct. 1940-June 1941. Revolving to events in 1940, the Greeks offered a most spirited and effective resistance to the It. invaders. But Hitler helped his It. ally in the Balkans as well as in Africa. He secured the aid of Rumania and Bulgaria. The Greeks appealed to Britain, who sent an expeditionary force made up partly of troops from Gen. Wavell's army. Here again, however, in the Mediterranean sea-power made its influence felt when on 11 Nov. 1940 Adm. Cunningham (q.v.)

dealt brilliantly with the It. Fleet at Taranto, half the enemy's battle fleet being torpedoed by Brit. naval aircraft. This remarkable victory at one blow restored for a time naval supremacy in the Mediterranean to the Brit. fleet. It was sea-power again which enabled the Brit. transports to land troops in Greece and to evacuate them. The Brit. force in Greece was no more than a token, comprising 1 Australian and 1 New Zealand infantry div. and a Brit. armoured brigade, and the Allies were soon defeated by the overwhelmingly superior Ger. forces. The Germans, advancing S., called upon Yugoslavia to align herself with the Axis, but the Yugoslavs continued resistance under Mihailović (q.v.) and Tito (q.v.) and eventually triumphed. The defeat of the Graeco-Brit. forces was partly relieved by the brilliant night victory of Adm. Cunningham off Cape Matapan (q.v.) on 28 Mar. 1941; but, though this victory over the It. Navy and that at Taranto enabled the troops to be ferried to Crete, Ger. aircraft inflicted heavy losses on Brit. destroyers, artillery, and transport. The Brit. forces then tried to hold Crete, but fared no better there than in Greece, and they were evacuated, with severe losses in men and material, in June 1941. See further CRETE, THE BATTLE OF; GREECE, SECOND WORLD WAR CAMPAIGN IN (1941).

American Lend-Lease, Mar. 1941. In 1939 America's attitude was so strictly neutral that there was a law on the statute book prohibiting the sale of arms to any belligerent. From this isolationist position, however, the country, under Roosevelt's lead, gradually moved into that of 'the arsenal of democracy,' and the embargo gave place to a 'cash and carry system.' In Sept. 1940 America transferred to Britain 50 destroyers in exchange for the lease of certain naval and air bases. In Mar. 1941 the Lend-Lease Bill became law (see LEND-LEASE).

British Action in Syria and Iraq, April-July 1941. Britain now had a third enemy in the shape of Vichy France. (See FRANCE, History; PÉTAIN, HENRI.) Pétain's Gov. allowed Germany the use of her airfields in Syria for the support of a rising in Iraq (q.v.); and when, after its suppression, Brit. and Free Fr. troops entered Syria to prevent other like action, Vichy ordered the troops in the country to resist. They were overcome, however, and Syria passed into the control of the Free French (July 1941).

THE CONFLICT BECOMES WORLD-WIDE, *Bismarck Sunk—Hitler Invades Russia: May-June 1941.* In the Atlantic Germany's last attempt to support her submarine campaign by the use of commerce raiders was crushed by the sinking of the *Bismarck* (q.v.) on 27 May. This notable defeat emphasised Germany's need to make much more use of her armies if she hoped to avoid the stranglehold of Brit. sea-power. Though a great pincer movement through Turkey and N. Africa with the Middle E. oilfields as the objective was a possible Ger. plan, Hitler had decided on the invasion of Russia, but

against the soundest military advice. This was eventually launched on 22 June 1941, with the aid also of Hungarian, other Balkan, and Finnish troops. (See EASTERN FRONT, OR RUSSO-GERMAN CAMPAIGNS IN SECOND WORLD WAR.)

German Victories in Russia, June-Nov. 1941. The Germans and their satellite troops swept forward to Leningrad (q.v.), which they besieged but never took. Their forces overran the agric. Ukraine and the industrial Don Basin. They came within reach of Moscow itself. These gains were the more impressive from the fact that the Germans for the first time were fighting a Power which was prepared for them, both in mobilised man-power and in mass production. But the Germans were superior in the new tactics and strategy of the *Blitzkrieg*, and this experience might conceivably have prevailed but for Russian tenacity and the Russian climate. The buffer states (the 3 Baltic states, Bessarabia, and E. Poland), which Stalin had hoped would effectively cushion the first shock of the Ger. impact, had been wrenched away from his grasp in fierce battles. The Russians followed a desperate 'scorched earth' policy and fought with extraordinary heroism. Their losses and sufferings were enormous, but they never ceased their dogged resistance. The Germans relied largely on superior armour and on aircraft, and the forces employed on both sides were beyond precedent in the records of warfare. Following their great losses, the Russians had to rely for supplies partly on the war factories of the Urals, to which much plant had been transferred, and partly on lavish shipments from Britain and America, which reached them from Murmansk and from Persia after the deposition of the pro-Nazi Shah Pahlevi in Aug. 1941 by Brit. and Russian forces.

Japan Enters the War—British Battleships Sunk—Fall of Singapore, Dec. 1941–June 1942. The struggle now swiftly developed into a world conflagration. Churchill's broadcast of 22 June had certainly enlisted Amer. sympathy for Russia, but the latter's evident plight also excited Jap. acquisitive instincts. With Vichy's concurrence, Japan had already seized Fr. Indo-China as a jumping-off ground for their projected invasion of Burma and Brit. Malaya. (See PACIFIC CAMPAIGNS, OR FAR EASTERN FRONT IN SECOND WORLD WAR.) On 14 Aug., Churchill and President Roosevelt met on the Atlantic in a warship and signed the Atlantic Charter (q.v.), a gesture which irrevocably linked together the fortunes of the 2 great W. democracies. On 7 Dec., while a Jap. mission was negotiating in Washington, Jap. carrier-borne aircraft suddenly bombed Pearl Harbour (q.v.), inflicting serious damage on the Amer. warships there. On the same date Jap. aircraft attacked every Amer. and Brit. E. base within reach. Both Japan and Germany then declared war on America. On 10 Dec. Jap. aircraft torpedoed and sank the Brit. battleships *Prince of Wales* and *Repulse*

off the coast of Brit. Malaya, and so deprived Britain of the command of the sea in the E., this painful loss being due to the ships venturing into the Gulf of Siam without fighter escort. Every blow of the Japanese against Brit., Amer., and Dutch bases in the S. Pacific found its mark; allied troops fought heroically but hopelessly. Manila fell on 3 Jan. 1942, and Hong Kong on 25 Dec. 1941. Singapore fell on 15 Feb. 1942, the evacuation of more than a handful was impossible; most of the newly landed troops were captured by the Japanese, who soon invaded and occupied Burma. The virtual elimination of the Brit., Dutch, and Amer. warships in the Java Sea sealed the fate of the Dutch E. Indies. By the spring of 1942 Japan stood on the E. frontier of India and at the gateway of Australia and held the whole semi-circular archipelago between, with the exception of New Guinea S. of the Owen Stanley Range. But Japan's thrust had spent itself, and further expansion westward was thwarted by the Brit. occupation of Madagascar (5 May 1942). Attempts at expansion eastward were smashed in the battles of the Coral Sea (4–8 May), in which the issue was decided in the air, and of Midway Is. (4–6 June) which broke the spearhead or Jap. naval and air striking power.

British Reverses of 1941–2. Britain was outnumbered by the sea, land, and air forces of Japan throughout the Far E. theatre. A further stroke came on 19 Dec. 1941, when the *Valiant* and *Queen Elizabeth* were seriously damaged by It. limpet bombs in the harbour of Alexandria. Thus Britain had no longer any battle squadron in the Mediterranean. The sea defence of the Nile Valley was confined to submarine and defence flotillas, with a few cruisers and shore-based air forces. This necessitated the transfer of Brit. shore-based torpedo-carrying aircraft to the N. African shore, from the S. and SE. coasts of England, where they were soon to be needed, in the escape of the *Scharnhorst* and *Gneisenau* from Brest. It was not felt that the Japanese would derive great advantages by invading Australia in force since thus they would commit themselves to a very formidable campaign at a great distance from home, but Japan certainly had the ability to overrun a large part of India, take Calcutta and Madras, and make 'very cruel air raids upon defenceless Indian cities.' However, if the British were anxious about the sea, the enemy must be anxious about the air, for the great flood of Amer. reinforcements was soon to give the Allies superiority in numbers.

Japanese Invasion of the Southern Pacific and Burma, Jan. 1942–May 1943. Meanwhile the Americans were employing great naval and air forces in the Pacific against Japan. Here Jap. strategy in 1942 was to work from one captured point on the outer Is. to another until they had isolated Java, the centre of resistance. They pressed these operations as rapidly as possible here and in the Pacific Is.

farther E., so that an allied naval counter-offensive, whether based on India or Australia, would be confronted by a long chain of is. well supplied with airfields behind which their fleet could await attack. Not satisfied with their impressive conquests throughout 1942, the Japanese extended their flanks westward into Burma and eastward to New Guinea and the Solomons. Invading Burma from Siam, which latter country had declared war on Great Britain and America

troops were steadily forced back, but maintained 'hedgehog' and 'bolt positions' which were intended to serve as springboards for their offensive of the next year. The Germans had sustained a severe shock in the winter before Moscow, but with the thaw they reasserted themselves. The Russians anticipated the Ger. spring offensive by a strong attack in the Kharkov region and a long-drawn-out struggle ensued (May-June 1942) but they lost Sevastopol and the rest of the

AT THE TURN OF THE TIDE: SOUTH OF EL ALAMEIN, NEAR BIR GABALLA, 20 AUGUST 1942

Lieutenant-General Montgomery points out various features while talking with officers of the 22nd Armoured Brigade. On General Montgomery's right is Lieutenant-General Horrocks, and on his left Brigadier Roberts, of the 22nd Armoured Brigade.

(25 Jan.), they took Moulmein (31 Jan.), crossed the Salween and Sittang rivs., and compelled the British to abandon Rangoon (8 Mar.). The British evacuated Mandalay on 1 May, weaponless and weary, followed later by Gen. Stilwell's Chinese forces. (See BURMA, SECOND WORLD WAR, CAMPAIGNS IN.)

Moscow Saved—Germans Take Crimea—Siege of Stalingrad: Dec. 1941–Oct. 1942. Meanwhile in Russia, the severe winter of 1941–2 brought a great change. The Germans were no match for the Russians in winter campaigning. Zhukov, issuing from Moscow, raised the siege of the Russian cap. and the Germans were within an ace of repeating the disaster which befell Napoleon in 1812. The Ger.

Crimea early in July, in the great Ger. offensive which began on a 200-m. front towards the Don. By Oct. the Germans appeared to be in the ascendant—their forces closely besieging Stalingrad, and also advancing towards the Malkop oil-fields.

THE TURN OF THE TIDE. Battle of El Alamein—Allies Land in North Africa: Nov. 1942–May 1943. It may be said that Nov. 1942 marked the high tide and the turn of Germany's fortunes. Various factors were co-operating to destroy their illusions of world conquest. Thus, while it is true that, when America entered the war, there was an ominous rise in shipping losses due to the operations of U-boats in Amer. waters and that the menace of these terrible losses was felt

throughout 1942; yet in 1943 this threat to Brit. food and other supplies gradually began to be mastered. It was now, too, that Brit. factories were mass-producing bombers which were destined in the ensuing 2 years to play a decisive part in the whole issue of the War, when, in conjunction with Amer. Flying Fortresses (q.v.) and Liberators, the Brit. Lancasters, Halifaxes, and others destroyed Ger. industrial plants and heavily damaged many of the great Ger. cities. The turn of the tide came swiftly. In Aug. 1942 Gen. Montgomery was appointed to the command of the Eighth Army (q.v.), while Gen. Alexander replaced Gen. Auchinleck as commander-in-chief in the Middle East. On 23-24 Oct. 1942 the Eighth Army lunged forward under its new leader in a third thrust. Alexander's move was timed to precede the landings of Brit. and Amer. armies under Gen. Eisenhower (q.v.) at Casablanca, Oran, and Algiers. The thrust hurled Rommel back to E. Mareth on the Tunis-Tripoli frontier, and Montgomery's army met the forces of Eisenhower. The landings in Fr. N. Africa (8 Nov.) constituted the greatest amphibious operation undertaken up to that time. Hitler sent an army under Gen. von Arnim into Tunisia with orders to hold the country as a bridgehead for further operations in Africa. The result was that this, as well as Rommel's famous Afrika Korps, were all routed or taken prisoners by 12 May. On entering Algeria, the Allies made use of Adm. Darlan (q.v.), but he was assassinated soon afterwards. Free Fr. Forces, earning the confidence that was denied them by their fellow-countrymen, helped heroically in clearing N. Africa, particularly in their brilliant action at Bir el Hakim in the W. Desert.

The Casablanca Agreement, Jan. 1943. Churchill and Roosevelt met at Casablanca to formulate terms on which they would accept the surrender of the Axis nations, and they agreed that the surrender must be unconditional. It was decided that this surrender must be that of all 3 Axis nations and not of their dictators, with whom the Allies had previously stated that they would never negotiate. Russia was not represented at this conference in view ostensibly of Stalin's preoccupations in Russia.

Russian Victory at Stalingrad, Nov. 1942-April 1943. Within a fortnight of the Allied landings in N. Africa, Hitler received another tremendous rebuff, in Russia. Stalin's winter offensive, conducted by such gens. as Zhukov, Konev, Petrov, Malinovsky, and others who had now well learned the lessons of modern strategy and tactics with armour and aircraft, compelled the Germans under von Manstein to withdraw from the coveted Caucasus, cut off the Sixth Ger. Army besieging Stalingrad, and completely destroyed it. The Russian counter-offensive, which thus saved the remains of Stalingrad and wiped out the tragic Army of von Paulus, was begun on 19 Nov. Fearing a second great encirclement, the Ger. High Command ordered the Ger.

army in the Caucasus to retreat. Their withdrawal was skillfully executed, but it involved the abandonment of an immense grain-producing region and of the great oilfields. The Russian activity was not wholly absorbed in the S. The Russian capture in Jan. of Veliky Luki, the pivot of the Ger. fronts towards Moscow and Leningrad, was the initial step in the important phase of reducing the Ger. so-called 'hedgehogs,' such as the nearest to Moscow, Rzhev, which fell on 3 Mar., and Vyasma, on the Warsaw-Moscow railway, which they took on 12 Mar. Moreover, the surrender of the Ger. Sixth Army at Stalingrad released a great Russian army in the S. which at once had a profound effect on operations in S. Russia, Kursk being taken on 8 Feb., Rostov on 14 Feb., and Kharkov on 16 Feb. The Russians, however, then suffered a temporary reversal of fortune through a premature spring thaw, when they lost Kharkov and most of the Donets Basin to a strong Ger. counter-offensive. This left the Germans, in April, in a favourable position for the resumption of an offensive in due season provided they were not forestalled by the extremely confident Russian gens.

Axis Surrender in Tunisia, May 1943. Axis resistance in N. Africa came to an end on 13 May, when the It. commander-in-chief, Messe, ordered the whole force to surrender. Victory yielded the entire N. African coast, besides liberating Malta from further attacks and enabling Allied bombers to fly under fighter escort from one end of the Mediterranean to the other. Now that the Axis power in the Mediterranean was broken, Allied ships were no longer forced to take the long route round S. Africa.

The Atlantic Battle. Promising as was the situation on land, the menace from the U-boats was still very serious, especially as the Germans could produce the boats much more speedily than the Allies could hunt and sink them. Furthermore, Ger. aircraft from W. France could fly far into the Atlantic to transmit reports to the U-boat packs on the position of the convoys. Finally, radio-location, or radar (q.v.) was available to the Germans through the Vichy Gov. of France, for the secret had been entrusted to France in the early stages of the War. The peril was therefore substantial, but constant and effective attacks were launched by the R.A.F. on U-boat pens; long-range Sunderland and Liberator planes roamed great distances in quest of the enemy craft; and Canadian corvettes, produced in great numbers, were valuable convoy escorts. It appears, however, that the turning-point in this great Atlantic struggle was the use of improved radar apparatus with which both surface ships and aircraft were now equipped, so that they could range over immense areas of the Atlantic. The U-boat packs were then reduced to a large area in the middle of the ocean, but the use of carrier-borne aircraft defeated them and the last phase came in Oct. 1943, when the Allies were allowed by Portugal to make use of bases

in the Azores. Some 60 U-boats were destroyed between Aug. and Oct.

Development of Allied Bomber Raids. The Anglo-Amer. bomber attacks on Ger. industrial centres were an integral factor in Germany's downfall. Their weight and effectiveness, small at first, increased gradually, especially after mid-1942; the first all-Amer. raid in Europe being that of 17 Aug. 1942. In 1942 the bombs were increased in size from 2000 to 8000 lb.; 12,000 lb. were first used only in 1944 while 22,000-lb. bombs were used from Mar. 1945. The remarkable 1000 bomber raids on Cologne, Essen, and Bremen, in May-June 1942 were not repeated because quality of machine and bomb-load and accuracy of bombing were of more importance than mere numbers. In the course of the same year accuracy was much enhanced by the 'pathfinder' system of dropping guiding 'markers.' The Germans had no effective answer to these attacks.

Allied Conquest of Sicily—Collapse of Mussolini's Fascist Government: June-July 1943. The sequel to the Axis defeat in Tunisia was the landing in Sicily 2 months after the surrender at Tunis. The landings in Sicily, with fighter cover from Malta and Pantelleria, were made on the S. and E. coasts on 10 July by the Amer. Seventh and Brit. Eighth Armies, the latter being joined by a Canadian div. The 1st. garrison was 11 It. coastal and field divs., and 2 complete Ger. divs., one of which was armoured. The Germans, and some It. field divs., offered very stubborn resistance, and it was not until 5 Aug. that Catania was taken. The hardest fighting took place around Mt. Etna. Messina fell on 17 Aug., but by an intensive use of flak the Germans succeeded in moving most of their troops across the narrow strait to the It. mainland, and only 7000 were captured; yet total Axis casualties were 165,000. The conquest of Sicily after 4 months of preparation and execution left too little time for the conquest of Italy during the remainder of the campaigning season. But the Allied landing caused the collapse of Mussolini and his Fascist gov., and he resigned (24 July) a fortnight after the invasion began. On 26 July he was put under arrest and replaced by Marshal Badoglio (q.v.), who, as executive head under the king, formed a new gov.

Italian Armistice—Anglo-American Landing at Salerno: Sept.-Dec. 1943. Badoglio openly pledged the continuance of It. support of the Axis, but soon afterwards he was secretly negotiating an armistice with the Allies, which was signed on 3 Sept. 1943 but not pub. until 5 days later. On the 3rd the Brit. Eighth Army crossed from Sicily into Calabria and began a methodical advance up the Peninsula. The It. fleet for the most part succeeded in escaping to Malta and Alexandria. The Germans evacuated Sardinia and were thrown out of Corsica. The It. divs. were, however, for the most part disarmed by the Germans. An airborne descent had been arranged for capturing the airfields round Rome, but the Ger-

mans swiftly seized these before the descent could be made. Hence the Allies were not able to secure fighter protection for landings farther N. from Calabria than Salerno and it was there, on 9 Sept., that the Fifth Army of mixed Brit. and Amer. troops was landed under the command of Gen. Mark Clark. The landing facilitated the northward advance of the Allies, but they were halted in terrible winter weather on the Ortona-Garigliano line. The Germans, having fallen back methodically, stabilised a very strong line right across a narrow part of the peninsula, which was the more formidable since it was backed by tortuous mt tracks and rivs. Hopes reposed by the Allies in Crete and the Dodecanese came to nothing, for attacks without air cover were futile; and in the Balkans as a whole the one useful result of the defeat of Italy was that Marshal Tito, now the leader of the Yugoslavs, further developed his remarkable organisation of successful resistance to the Germans. Meanwhile by a daring parachute coup Ger. units rescued the imprisoned Mussolini and took him to Hitler.

Allied Troops Land at Anzio Beachhead, Jan.-June 1944. Operations in Italy were held up by torrential seasonal rains, but on 22 Jan. 1944 Allied troops were landed at the Anzio-Nettuno beachhead, though they failed to cut the Ger. lines of communications and had to hold on for 4 months before they were joined by the main Allied army. In this offensive, opened 12 May, rapid progress was made, and the Allies entered Rome on 4 June and at once continued their dogged advance up the peninsula.

Teheran Conference—Nov.-Dec. 1943. The end of 1943 brought another series of Churchill's visits abroad; at Teheran the exact course of the war was mapped out as to its final phases, culminating in the complete overthrow of Germany and Japan. The dates of this series of conferences were: Cairo, 22-26 Nov.; Teheran, 28 Nov.-1 Dec.; and Cairo, 4-6 Dec.

Russians Seize the Initiative—Kursk-Orel battles: June-Sept. 1943. The Germans, assuming that they could always prevail in summer, launched an elaborately prepared offensive against the Kursk-Orel salient. After some days of heavy fighting the Germans were defeated with huge losses in men and machines. Orel was retaken by the Russians on 4 Aug., and not many days later Kharkov was again recovered. The Russians now altered their whole strategy, from one of dogged but cramped defence to one of all-out attack and drive, and now broadened their offensive: in the Caucasus they took Taganrog on 30 Aug.; from the Kharkov region, they seized Poltava on 23 Sept.; still farther N., near the heart of the whole front, they took the great rail-centre of Bryansk. Smolensk fell to them on 25 Sept.

Battle of Dnieper Bend—Odessa Liberated—Russians Retake the Crimea: Oct. 1943-May 1944. Nothing could now stop the momentum of the remarkable

Russian recovery and forward surge. They took Melitopol on 23 Oct. and proceeded to seal off the Crimea. There was very stiff resistance in the all-important Dnieper Bend, but on 6 Nov. the Russians retook Kiev, and Zhitomir a week later, though Gen. Vatutin had outrun his communications and the position had to be restored by Zhukov, saviour of Moscow. Strenuous and successful efforts were now made by the Russians to improve their whole position in the Leningrad area. In Feb. 1944, following the capture of Nikopol and Krivoi Rog, the Ger. positions in the Dnieper Bend were eliminated. In the ensuing month, Russian armies crossed in succession three rivers of the S., the Bug, the Dniester, and the Pruth. Odessa was liberated on 10 April, but the historic fortress of Sevastopol was not regained until 9 May, by which time the Germans had suffered a loss in the Crimea alone of 110,000 killed or captured.

British Success against U-boats—Möhne and Eder Dams Breached: Sept. 1943–March 1944. The Brit. campaign against U-boats showed increasing success, for by 1943 convoys were losing only 1 ship in 344 as against 1 in 181 in early 1941. Ger. surface ships also fared badly. The *Tirpitz* was heavily damaged by Brit. midget submarines in Altenfjord (Sept. 1943); the *Scharnhorst* was sunk off the Norwegian coast in Dec. But another very important element in winning the supply battle was Anglo-Amer. bombing policy. Many great Rhineland cities were repeatedly and methodically bombed in the first half of 1943, and the Ruhr (q.v.) never recovered from the persistent onslaughts. Other outstanding events in strategic bombing warfare were the heavy damage inflicted in Hamburg (July 1943), the breaching of the Möhne and Eder dams (18 May 1943), and the bombing of Berlin (q.v.) between Nov. 1943 and Feb. 1944; post-war investigations, however, have since led to criticism of both the extent and value of such attacks. The Amer. aircraft, too, had by now developed a formidable daylight bombing technique.

THE WAR IN THE PACIFIC AND BURMA. Japanese Capture New Guinea—Americans Relake Guadalcanal: Jan. 1942–Feb. 1943. In the SW Pacific the Japanese captured Rabaul (22 Jan. 1942), which became their advanced base here, and landed in the Solomons (23 Jan.) and New Guinea (8 Mar.). The first of sev. destructive air raids on Port Darwin (19 Feb.) increased Australian anxiety, which, however, was allayed by the appointment of Gen. MacArthur (q.v.) as Allied supreme commander in the SW Pacific. A successful raid on Tokyo and other cities by Amer. aircraft surprised the enemy, who took reprisals by executing sev. captured Amer. airmen. Early in May a concentration of transports and warships off Tulagi in the Solomons was a signal to attack. In the battle of the Coral Sea (4–8 May) an Amer. naval force under Adm. Fletcher defeated the enemy with severe loss. On 3 June a powerful Jap. fleet was sighted 700 m. W. of Midway Is., an Amer. outpost. Next

day began a battle, fought on the same lines as that of the Coral Sea, in which island-based bombers and carrier-borne aircraft attacked the Jap. ships, while Jap. machines attacked the is. and the Amer. carriers; no surface ships met in combat. These 2 'naval' victories marked the turn of the tide thus early in the Far E. war. (See NAVAL OPERATIONS IN SECOND WORLD WAR, *Naval Operations, July–December, 1942.*) But despite these defeats the Japanese still endeavoured to extend their Pacific conquests by, e.g., occupying the Aleutians (q.v.), and advancing against Port Moresby (July 1942), in New Guinea. But on 7 Aug., the Americans delivered a blow which began to reverse the whole progress of the Pacific war. This was the landing on Guadalcanal Is. in the Solomons of a strong force which captured an unfinished airfield of great importance and stormed and held the Jap. base. The Japanese made a series of intensive attempts to drive out the Americans and landed troops under cover of heavy air support. The Americans were equally pertinacious. After a series of very hard-fought actions off Cape Esperance (11–12 Oct.), off Santa Cruz Is. (16–26 Oct.), and off Guadalcanal itself on 12–15 Nov., where both sides employed battleships, the Americans were solidly estab. on Guadalcanal and on 8 Feb. 1943 organised Jap. resistance ended.

Japanese Held in New Guinea and in Burma: Aug. 1942–Mar. 1943. The Jap. attempt on Port Moresby failed owing to the defeat of a Jap. expeditionary force at Milne Bay (31 Aug. 1942) and the failure of the Jap. army in New Guinea to overcome the doughty Australians only 30 m. distant from Port Moresby. This rebuff and the recapture of the is. of Buna, Gona, and Sananda, whose garrisons were all completely eliminated, put the Japanese thenceforward on the defensive in New Guinea; and the destruction of a large Jap. convoy in the Bismarck Sea (2–4 Mar.), emphasised the Allied command of the sea.

Madagascar Occupied by the Allies—Salamava and Lae Taken: Nov. 1942–Sept. 1943. The conquest of Vichy-controlled Madagascar, which concluded with the armistice of 5 Nov. 1942, removed the danger of a Jap. descent on this important is. and strengthened the Brit. position in the Indian Ocean. In 1943 the Americans destroyed the Japanese on Attu (11–30 May) and compelled them to evacuate Kiska in the Aleutians. In the S. fresh landings in the Solomons were followed by the conquest by Amer. and New Zealand troops of the is. of the New Georgia group in the Solomons (completed in Oct.). The landing of Australian forces in Huon Bay (5 Sept.) and a well-executed air-borne operation inland (6 Sept.) brought about the capture of Salamava and Lae; and landings on Bougainville and New Britain further restricted enemy activities in this vast region.

Allies' 'Island-hopping' Campaign in the Pacific—Americans Take Saipan: Nov.

1942-June 1944. Up to Nov. the Allied command had advanced from one captured vantage point to another, a method characterised as 'island-hopping.' But the great increase of the Amer. Navy in ships and in carriers, the Allied superiority in the air, and improvements in the design of landing-craft, were all contributory factors which now enabled the High Command to concentrate on key points while by-passing less important positions which could be masked and put out of action by its spare strength in ships or aircraft. The struggle for the Gilbert Is., which ended on 20 Nov., showed that in many cases the Japanese were prepared literally to fight to the last man, and this they did at Makin and Tarawa (Nov. 1943). The next westward jump of the Americans was in late Jan., when they landed in the Marshall Is., taking the important airfield of Kwajalein—the first pre-1941 Jap. ter. taken in the war. It provided a base for bombing Truk, the greatest of Jap. Pacific bases. Resistance ended in the Marshall Is. by 4 Feb. Continuing a westward and northward course, the Americans reached the Marianas and in June captured the strong Jap. Is. of Saipan, where for the first time they had won an air-base within long bombing range of the Jap. homeland and of the Philippines.

Burmese Campaign—British Army in the Chindwin Valley: Aug. 1943-Dec. 1944. Meanwhile a remarkable campaign was being fought in Burma. Help for China was the main preoccupation of the military discussions at the Quebec Conference, and in Aug. 1943 it was announced that it had been decided to form a separate SE. Asia Command for operations based on India and Ceylon against Japan. In Oct. Stilwell's mixed Amer. and Chinese forces marched into the most northerly part of Burma together with ancillary troops to construct a road and pipeline from Ledo to Yunnan. The progress made compelled the Japanese to attack the Brit. forces in Manipur State, on the Indo-Burmese border. This was a most critical move, for had it succeeded Stilwell's communications would have been cut. The Japanese also counter-attacked in Arakan. But in Mar. airborne troops under Wingate (who was accidentally killed on 24 Mar. 1944), came down behind the Japanese opposing Stilwell and wrought havoc with their communications for 3 months. The Jap. counter-attack in Arakan was defeated, and the Jap. Manipur offensive, after appearing to be menacing for some time, was brilliantly repulsed by the Fourteenth Army (q.v.) under Gen. Slim. In the N., Myitkyina was entered on 19 May, while the Anglo-Chinese forces seized Mogaung (25 June). In the centre of the country the decision of Lord Mountbatten (q.v.) to fight through the monsoon period brought the Fourteenth Army by Dec. into the Chindwin Valley. The remarkable use of aircraft for the reinforcement and supply of the Allied troops was the outstanding characteristic of this brilliant campaign.

Americans Invade Leyte Island in the Philippines: June-Oct. 1944. The Jap. fleet tried vainly to relieve Saipan (19-20 June). The Americans, having captured the Marianas, were now bombing the Philippines. On 20 Oct. a large Amer. expeditionary force landed on Leyte Is. The Jap. fleet attacked in 3 widely separated but co-ordinated actions the Amer. Third and Seventh Fleets, but suffered heavy losses in ships and aircraft.

OPENING OF THE WESTERN FRONT, AND THE COLLAPSE OF GERMANY. Anglo-American Invasion of Normandy: June 1944. The landing in Normandy (see WESTERN FRONT IN SECOND WORLD WAR), was preceded by systematic bombing of Ger. industrial centres and air factories, even those sited far to the E., the destruction of communications with the coast, and of bridges, radar installations, airfields, and coastal defences. The Allies had devised landing craft which would put men and munitions directly on the beach, and they towed across the Channel the sections of a prefabricated 'Mulberry' port (see ARROMANCHES). They had no need, therefore, to storm a port, and landed between the riva. Orne and Vire on 6 June 1944. The method of attack took the Germans by surprise: they expected attack on a port. The British attracted strong resistance before Caen, thus helping the Americans to break into the Cotentin Peninsula and capture Cherbourg. Some weeks of obstinate positional fighting ended in a double Allied advance—by the Americans towards Le Mans and by the Canadians towards Falaise. When the Americans thrust northwards to Argentan their thrust suddenly assumed the aspect of a vast enveloping movement. The whole Ger. Army in Normandy, into which troops from the rest of France had been drawn during the preceding weeks, was enclosed in a narrow-mouthed pocket from which it could withdraw only under withering fire. Cherbourg fell on 26 June, but even after this loss the Ger. High Command continued to cherish the illusion that they could still hem the invaders within an area too small for manoeuvre. Hence they strengthened their field fortifications at Caen and St. Lô, taking every possible advantage of the tangled difficult bocage country between those tns. The British encountered strong resistance before Caen, but captured most of the tn by 9 July; while the Americans took the important tn of St. Lô on 18 July. The breakthrough began a week later, and soon Amer. columns of the Third Army under Patton (q.v.) were sweeping W. into Brittany and S. to the Loire. The Amer. forces now turned E. and captured Le Mans on 9 Aug.

German Débâcle at the Falaise Gap—Allies Enter Paris: Aug. 1944. The Americans then swung N. towards Argentan whilst the British and Canadians battled towards Falaise. In the Falaise 'pocket' so created, the Ger. Seventh and Fifth Panzer Armies were ruined, and the remnants (chiefly the Panzer divs.), fled headlong to the Seine. The pocket itself

was eliminated on 22 Aug. This disaster, combined with a Fr. national revolt and victorious advance of The Amer. Seventh Army under Patch (q.v.), which landed in the S. of France on the strip of coast between Nice and Marseilles, convinced the Germans at last that France could no longer be held. By 17 Aug. Amer. tanks had seized Chartres and Orleans and were rushing upon Versailles and Mantes. On 24 Aug. a Fr. armoured force under Leclerc, of Lake Chad fame, entered the cap. (see PARIS), and the Ger. commander surrendered on the 25th.

Gen. Alexander's Troops Enter Rome: Feb.-Aug. 1944. Before the great events of D-Day were actually in progress in Normandy, the last great Allied offensive had begun with Alexander's resumption of the offensive against Kesselring's positions between Rome and Naples. The former's armies, the Fifth and the Eighth, contained many different nationalities, and among the most daring were the Fr. Moroccans who captured Monte Majo and pierced the strong Gustav Line in Feb. 1944. This magnificent feat of arms compelled Kesselring gradually to abandon his whole position S. of Monte Cassino, and when Cassino (q.v.) itself was stormed a further advance linked up the troops with those on the Anzio-Nettuno beachhead. Rome (q.v.), which had not been seriously damaged by the Allied bombing of rail and marshalling yards, was entered by the victorious Allies on 4 June. The loss of Rome was due to Kesselring being completely outmanoeuvred in an outflanking drive from the Anzio beachhead and the Alban Hills, and in his retreat he lost many prisoners and much material. By late Aug. Alexander had hustled Kesselring back to the Gothic line, Florence (q.v.) being liberated, with, however, much damage, especially to its bridges.

Russians Resume Offensive—Conquest of White Russia—Capture of Bialystok, Brest-Litovsk, Vilna, Siauliai, and Kaunas: June to Aug. 1944. In the midst of their preoccupations on the W. and S., the Germans found that the Russians had resumed the offensive. The first great blow fell in White Russia around Vitebsk, which fell on 26 June, while the 6 Ger. divs. caught around the town were wiped out. In the ensuing month the Russians took Minsk, Vilna, Polotsk, L'vov, Bialystok, Brest-Litovsk, Przemysl, Stanislaw, and other strongholds. The Russians in the N., having seized Vilna on 13 July in their advance S. of the famous Pripiet marshes, and Grodno, Pinsk, and many other towns in the N., were now seriously threatening the Ger. armies in the Baltic States, with the result that the Germans began 'pulling out' to some extent; thus they abandoned Pskov (23 July) and Narva. But the most dramatic reversal of Ger. fortunes was in Poland, where many towns were captured by the Russians. Lublin, Siedlce, and L'vov fell, and the loss of the rail junction of Siauliai cut off the last escape route into Germany from the more northerly Baltic States, and this loss was followed by that of Mitau (31 July) and

Kaunas on 2 Aug. The Finnish puppet president resigned on 1 Aug., and the Germans then took the opportunity of withdrawing their troops sent to support him.

Attempted Assassination of Hitler. An unsuccessful attempt was made on 20 July to kill Hitler by means of a small bomb in his operations-room, and this affair led to a 'purge' of high-ranking Ger. officers actually, or believed to be, implicated in the plot, and thousands of others who might have led another rising. As the result of this plot Himmler (q.v.) was appointed chief of all security forces, and also to the command of all the Ger. Home Forces.

Rise of the French 'Maquis': Aug.-Sept. 1944. The Ger. difficulty was now to withdraw divs. from the country which the Americans and British, aided by the Fr. *Maquis* (F.F.I.), who rose everywhere, threatened to overrun. For some months the Allies could send troops only through battered Cherbourg and the artificial harbour of Arromanches. This restriction gave the Germans an opportunity of reaching the W. Wall, but, W. of Paris, many were still resisting in the thickly wooded bends of the Lower Seine, while E. of the cap. they were fighting on a line along the Marne, though fully prepared to fall back on Metz, Nancy, Belfort, and Epinal.

Germans Driven out of France and Belgium—Allies Advance against the West Wall: Aug.-Sept. 1944. The Allies made their final assault on Germany in this order: Canadian First Army, Brit. Second Army, Amer. First Army, Amer. Third Army, Amer. Seventh Army, and Fr. Army. On 29 Aug. the First Army took Soissons and the Third Army took Verdun on 1 Sept., and St Mihiel, being in fact already nearly 130 m. beyond Paris, which itself had fallen on 25 Aug. Patton was soon at the outskirts of Nancy and on the banks of the Moselle, but, having outrun his supplies, had to wait and allow the Germans to fortify the riv. line, and it was here that some of the toughest fighting of the W. front took place. Montgomery's advance was equally spectacular. Having estab. a bridgehead over the Seine on 22 Aug., his armour drove northwards for 250 m., liberating in a few days Amiens, Arras, Lille, Brussels (3 Sept.), and Antwerp (4 Sept.), and establishing a line which isolated all the Ger. forces in N.E. France, including Picardy and the Pas de Calais, and also Flanders. This was now a war of manoeuvre following many wearisome weeks of dour conflict in cramped beach and bocage country, and the Allies took full advantage of their great opportunity. The Americans took Namur, Liège, Ostend (both the latter on 8 Sept.), and 2 days later, having traversed Luxembourg, entered Germany and shelled Aachen. The Germans, having now been for the most part expelled from France, it now remained for the Allies to invade the line of the Rhine. *The Battle of Arnhem: Sept. 1944.* Before this line of defence was consolidated the Allies made a bold attempt

to turn it and so shorten the war. This was the ill-fated Arnhem expedition, in which U.S. and Brit. airborne divs., and a Polish parachute brigade, were dropped in the hope of seizing the bridges over the Maas, Waal, and Lower Rhine. Ground forces successfully linked up with the 2 westerly airborne divs. but they were delayed at Nijmegen and arrived too late at the Lower Rhine. On 25-26 Sept. those troops of the Airborne Div. who could be withdrawn were brought back across the Lower Rhine. Just over 2000 were saved, but casualties numbered 7000. Fine weather was essential to employment of the low-flying Tactical Air Force, and very soon the heavy mists combined with the well-organised defence in depth compelled the Allies to face some months of methodical siege warfare against the chief Ger. positions. By Dec., Metz, Strasburg, Aachen, and most of the Channel Ports had been taken, but these latter were too small to be of much use to the Allies, and every effort had therefore to be made to make Antwerp available for use.

Von Rundstedt's Counter-attack in the Ardennes, Dec. 1944-Jan. 1945. On 16 Dec. von Rundstedt launched a desperate but well-conceived Ardennes offensive, taking full advantage of the foggy, snowy weather. For a fortnight the Germans made good progress in the direction of Liège, but extensive counter-measures were swiftly put into effect. The Germans drove a wedge 45 m. deep, but the shoulders were held at Monschau, and, with great gallantry, at Bastogne. Fortunately for the Allies the weather cleared, and from 22 Dec. the superior Allied air strength was thrown in with great effect. The tide of battle was now soon reversed, and by the end of Jan. the Allied line was reformed. Their offensive had been delayed for at least 6 weeks, but Ger. losses were heavy, and the failure of their attack meant that the final issue could now hardly be in doubt.

Capitulation of Rumania—Premature Polish Rising in Warsaw: June-Aug. 1944. The Russian summer offensive, as shown above, lasted from June to Aug. While success had favoured the Russians on every front, the resistance in the Baltic States, E. Prussia, and Poland was much stiffer and more effective than on the rest of the fronts. The Russians occupied all the chief Rumanian towns between 21 and 31 Aug., and during that period Rumania capitulated to the Allies and accepted Russian peace terms. In this way the Germans lost the irreplaceable Rumanian oil-supply and the best of their satellite Armies, while the gate was now open to the Russians to exploit the Balkans generally, and indeed a few days later Bulgaria declared war on Germany. Between Aug. and the end of 1944 the Russians continued to make most progress from the Balkan end of their front. Meanwhile, when Russian tanks and motorised infantry appeared 10 m. E. of Warsaw, the Polish 'Home Army' under Gen. Bor interpreted this as a signal for insurrection, and the order to start it

was given on 1 Aug. But the Russian advance stopped, and the Polish insurgents were left to face the Germans alone, with most tragic consequences.

Athens Liberated—Civil War in Greece: Oct. 1944-Feb. 1945. In the autumn Ger. units began to filter back from Yugoslavia and Greece, attacked everywhere by insurgents, who were emboldened by the rumour of the oncoming Russian avalanche. Athens was liberated by the British on 14 Oct., Belgrade by Tito and the Russians on 20 Oct. Following liberation, the Gk Left partisans, E.L.A.S., or National Popular Liberation Army, E.A.M., or National Liberation Front, and other bodies, fomented a civil war, which was stopped for a time only by the energetic military and diplomatic intervention of Britain, Churchill himself visiting the country. While, however, the Germans were driven out of the Balkans and gradually from Yugoslavia too, the great Russian offensive in the S. had developed into the invasion of Hungary, where the siege of Budapest began in Dec. Hitler now began to reinforce his S. front with armour, which was badly needed elsewhere, for he must save Budapest and the approaches to Vienna at all costs. The Ger. counter-attacks were so effective that the Russians could not conquer Budapest until 13 Feb. 1945.

Germans Launch Flying Bombs and Rockets on England—Effective British War-time Devices. At the beginning of 1945 public opinion in the Allied countries was exercised over the fact that the Germans seemed to have neutralised their defeats in the W. and E. fronts so far, at least, as to be able to reorganise their defences and launch counter-attacks. The Germans started to launch flying bombs (q.v.) on England from Fr. sites in June 1944. Following the capture of the launching sites in the Pas de Calais, the danger from flying bombs (V1) was lessened, although they continued to fall in Belgium (chiefly at Antwerp) until Mar. 1945. But the rockets (V2) could not be warded off.

Brit. ingenuity overcame many difficulties: installations known as 'Pluto' (see PIPELINE), conveyed oil to the W. Armies through pipes laid under the sea. By the help of radar (q.v.), the bombers could hit targets which they could not see, and by the help of 'Fido,' a Brit. device for dispersing fog, they could take off and land in most kinds of weather. The opening of the Scheldt after the capture of Walcheren in Nov. 1944 made the great port of Antwerp available for handling supplies.

Russian Armies Invade the Polish Plains, E. Prussia, and Austria: Jan.-Feb. 1945. With the turn of the year, the Russians swept along a massive front to the plains of Poland, Prussia, and Austria. From the Baltic to Budapest their armies, which had already liberated Warsaw, Radom, Lodz, and Cracow, were tearing great gaps in the Ger. E. front in a grand final offensive on 3 main fronts: in the N. under Rokossovsky, in the centre under Zhukov, and in the S. under Konev; and,

soon afterwards, Rokossovsky's right flank turned to co-operate with Cherniakovsky's forces from the E. in a combined assault on E. Prussia. The Ger. defeat was complete, and in Jan. the Russians captured Tilsit, Insterburg, Allenstein, and Tannenberg; on the 25th they took Gleiwitz in Upper Silesia and shortly afterwards crossed into Pomerania and Brandenburg. Breslau was encircled and besieged in Feb. Poznan fell on 23 Feb. after a month's siege, and Torun had already fallen. It was evident to the Germans that they could not hope to defend both the area of Berlin and that of the Upper Silesian coalfield. Hence they must organise a strong line along the Oder through Stettin and Frankfurt.

Yalta Conference: Feb. 1945. From 5 to 12 Feb., Churchill, Roosevelt, and Stalin, met at Yalta to consider Russo-Polish relations and the allocation of administrative zones in Germany among the major Allies after the War. The conference also considered strategy.

Allies' Final Western Front Offensive—Cologne Taken—Germans Trapped in the Saar Basin—Montgomery Crosses the Rhine—Americans Encircle the Ruhr—Canadians Liberate Holland—Bremen Captured: Feb.—April 1945. Stubborn fighting over the Dutch waterways and for the great Roer dams occupied the early weeks of 1945. Then on 22 Feb. a heavy bombing attack made on over 30 of Germany's chief rail depots heralded the opening of the W. Allies final offensive with 6 armies (1 Canadian, 1 Brit., 3 Amer., and 1 Fr.). The Roer was forced and its chief strongholds, Jülich and Düren, were captured on 24 and 25 Feb. The Allied armies in the N. closed on the Rhine crossings at Xanten, Weesel, and Rheinberg, and on 7 Mar. captured Cologne. On the same day Amer. troops crossed the Rhine at Remagen (the one bridge which the Germans had not succeeded in destroying), and the Germans W. of the Rhine found themselves trapped by a link-up of the forces of Hodges and Patton's armies. The attacks of the Canadian, Scottish, and other Brit. troops, and of the Amer. Ninth Army led to a general retreat on the N. sections of the Ruhr front. In a rapid advance Patton's army crossed the Moselle behind Coblenz, and, sweeping up the Rhine through Ludwigshafen, trapped between his and Patch's army nearly the whole of the Ger. armies in the Saar Basin and Palatinate. This freed the path for the invasion of Central and S. Germany, and the situation was very rapidly exploited by the 2 Amer. gens. whose victorious armies carried all before them. Mainz fell on 20 Mar. and Frankfurt on 26 Mar. On 23 and 24 Mar. Montgomery made a double Rhine crossing with the Second Brit. and Ninth Amer. Armies. Other crossings farther S. resulted in the Ger. abandonment of a 200-m. stretch of the Rhine. The Amer. Ninth Army advanced, by-passing the Ruhr, and with Hodges' Army encircled the whole of that industrial area, trapping 21 divs. and taking 325,000 prisoners. The eventual capture of the Ruhr area proved far

less difficult than was expected. The Brit. Second Army advanced through Osnabrück, with Bremen as its objective, while the Canadians were employed in the liberation of Holland. When the W. Allies reached the Elbe they were ordered to halt, evidently in order not to encroach on a sphere already earmarked for the Russians. When the Allied thrust through Central Germany ceased, Amer. troops were practically on the Czech border. Leipzig and Dresden were all but surrounded, and the Elbe had been crossed S. of Magdeburg. Hanover, Brunswick, Essen, Halle, Weimar, and Stuttgart had already fallen to the Americans. Bremen fell to the British on 26 April. When temporarily halted on the Oder line the Russians pressed forward on their right flank and, on their extreme left, through Hungary. In the N. they took Königsberg on 9 April. On 13 April they captured Vienna. Meanwhile the other Russian armies crossed the Oder and Neisse and the siege of Berlin had begun. Amer. and Russian troops met on the Elbe on 25 April.

Fall of Berlin—Germany's Unconditional Surrender: April–May 1945. The final scenes were swiftly enacted. The Nazi leaders decided to make the final stand in the built-up area of Berlin, but it is probable that the Germans did not hope to do more than hold out for sufficiently long to induce the Allies to grant more favourable terms than those of unconditional surrender or, still more probably, they hoped to divide the W. Allies and Russia. At all events, in the last week of April Himmler (it was assumed that Hitler had perished in the ruins of his Chancellery) offered Germany's surrender to the W. Powers only; but the reply was that the Allies stood together. In Italy Bologna was taken on 21 April; Genoa was reached on 27 April, and Milan on the 29th. It. partisans had previously estab. control in most of N. Italy. On the 28th Mussolini was captured by partisans when trying to escape into Switzerland and executed on the 29th. On 1 May the Hamburg radio announced Hitler's death and Adm. Dönitz (q.v.) proclaimed himself his successor as Führer. On 2 May Berlin surrendered to the Russians. On the next day Hamburg fell to the British. On 5 May the Ger. Nineteenth Army in the S., and on the 6th Army Group G, surrendered. On 5 May all Ger. forces in NW. Germany, Holland, and Denmark, surrendered to F.M. Montgomery. On 7 May, the final capitulation took place at Rheims, effective from midnight of 8–9 May. Formal ratification took place in Berlin on the night of 9 May. With victory in sight, Roosevelt died on 12 April.

THE DEFEAT OF JAPAN: Americans Land in Luzon: Dec. 1944–Feb. 1945. The sole success for Jap. arms in 1944 was in China, where, having at length captured Changsha and cleared the Chinese-held sections of the Peking–Hankow railway, they took the offensive in S. China, and seized the airfields from which the Fourteenth (previously Tenth) Amer. Air

THE LINE OF CONTACT BETWEEN THE WESTERN AND SOVIET ARMIES IN APRIL 1945 IS SHOWN BY THE THICK BROKEN LINE

Force had been raiding as far N. as Manchuria. They then made an ambitious attempt to reach the Burma Road (q.v.), which was about to be reopened, but were repulsed in Dec. by Chinese troops under the Amer. gen. Wedemeyer. Before the end of the year Leyte was practically conquered. Already Super-Fortresses were attacking Japan from Saipan Is., and Amer. progress in the

Philippines indicated that such attacks would increase in vol. whatever might be met in China, whether through Jap. military success or Chinese civil conflict. On 9 Jan. 1945 MacArthur's forces landed in Luzon. Manila was occupied on 4 Feb. Bataan and Corregidor were cleared by the third week of Feb. The invasion of Luzon was accompanied and followed by heavy air attacks on Jap. bases and

airfields in Indo-China and Formosa, which destroyed much of their air power and still further reduced their depleted shipping.

Fall of Mandalay and Rangoon, Mar.-May 1945. In Burma the outlook was equally bleak for the Japanese. The Fourteenth Army (q.v.) now closed on Mandalay, while the 15th Indian Corps seized Akyab and drove the Japanese from Arakan. Mandalay fell on 20 Mar. after a well-executed operation had cut the Jap. S. communications at Meiktila. In Mar. and April the rest of the enemy's army in Central Burma was destroyed or driven, mainly, into the Shan Hills, and on 2 May Rangoon was entered and the remnants of the Jap. army, isolated and faced with intermittent Burmese as well as Brit. attacks, had no hope.

Okinawa Conquered—Atomic Bomb Dropped on Japan—Japan's Unconditional Surrender: Feb.-Aug. 1945. The Jap. counsel of despair was to resist desperately in the belief that the losses they might inflict would induce the Allies not to insist on unconditional surrender, and certainly those they inflicted, through 'suicide planes' carrying loads of explosives and through ground defence, were heavy. The garrison of Iwojima resisted to the last, from 19 Feb. to 20 Mar. The reduction of Okinawa, defended to the death by 100,000 men, cost the Americans, whose Pacific Fleet had been reinforced by Adm. Rawlings's Brit. squadron, 40,000 casualties. Again, in Borneo, where Australian and Dutch forces landed at Tarakan (1 May), in Sarawak (19 June), and Balikpapan (1 July), the Jap. garrisons, cut off from any hope of succour, resisted desperately, as also they did in New Guinea and Bougainville. But defeat became more certain. City after city in the industrial regions of the Jap. homeland was bombed in attacks which almost rivalled in intensity those against Germany. On 6 Aug. the first atomic bomb exploded over Hiroshima (q.v.), destroying 4 sq. m. of the city. On 8 Aug. Russia declared war on Japan, and next day the Red Army invaded Manchuria. On 9 Aug. a second atomic bomb laid Nagasaki (q.v.) in ruins. This proved enough, yet it is to be remembered that Japan was already on the verge of defeat: that day the Jap. Gov. accepted the Allied terms, provided these did not prejudice the prerogatives of the Emperor, a proviso which did not in the interpretation make the surrender other than unconditional. The official surrender in SE. Asia took place on 12 Sept. at Singapore.

CONCLUSIONS. The Ideals of the United Nations—Churchill's Strategy. If Roosevelt was the inspired interpreter of the ideals of the U.N. (q.v.) in this war of conflicting ideologies, in which W. civilisation was itself at stake, it fell to Winston Churchill to play the chief rôle of determining the grand strategy of the alliance. His was the imaginative vision that insisted, even when England lay isolated before the imminent threat of invasion, upon preparing a design of

war that would offer full scope for the existing unity of the Commonwealth and for the larger unity of world powers of which he foresaw it must become the nucleus before victory was won. A strategy concentrated upon the safety of the Brit. Is. would have lost the war. But it needed great courage to act upon that opinion when action meant diverting to the Middle E. the only armoured formation available

THE SURRENDER IN SOUTH-EAST ASIA

Admiral Mountbatten, Supreme Commander, South-East Asia, announcing the signing of the Japanese surrender to the representatives of the fighting services of the Allies and the people of Singapore, 12 Sept. 1945.

to meet the expected descent upon the Channel coasts. 'With a deep knowledge of military hist., Churchill committed his country to the pursuit of its traditional strategy, to maintain the Empire's lines of communications round the globe, to contain the enemy within the ring of seapower, and to challenge him on land at the extreme limits of his dominion until his strength should begin to exhaust itself. Thus would time be won to mobilise the reserves of the Imperial commonwealth and to range in the line for the decisive stroke, the forces of all other nations that would rally to the standard of liberty.' (*The Times*, 8 May 1945.)

It may be freely acknowledged that there was a time when, had the Germans' mastery of the art of war matched the immense superiority of their material power, no human valour or effort could

have defeated them. But in the Second, as in the First, World War Germany failed to achieve an early victory, and the passage of time found her unable to equal the growing strength of the U.S.A., the Brit. Commonwealth, and Russia, even though the first two were burdened by the fight against Japan. The outstanding feature of the Second World War was its totality; the belligerents' resources were developed to the utmost degree, the idea of 'rules of war' was abandoned, and the distinction between civilian and soldier became irrelevant in the face of air-power.

The Second World War marked the emergence of the U.S.A. and Soviet Russia as the major world powers, and within a few years of its conclusion the world was to be divided into 2 blocs based on these 2 powers, each with their deeply conflicting ideologies, with a third, less powerful 'neutralist' bloc, consisting of the newly independent Asian countries. The war left Germany shattered and physically divided; while France and Britain emerged from the struggle considerably weakened. It is ironical that while the Ger. invasion of Poland actually occasioned the outbreak of fighting, Poland emerged from the War within the Soviet sphere of influence and soon became, in theory as well as in fact, a Communist state. For results of the war see further EUROPE, *History*. See also the articles on persons and places named.

World's Classics, The pub. since 1905 by the Oxford Univ. Press, founded in 1901 by Grant Richards, a London publisher, as a series of shilling reprints of standard works in all classes of literature. Among the distinctive features of *The World's Classics* are its pocket size, maintained by the use of India paper for exceptionally long books, the high standard of typography and general production (particularly in more recent years), and the commissioning of new introductions by living authors of repute for many of the vols. In common with all other reprint series, *The World's Classics* has been forced by rising costs to depart progressively from its original price.

Worm Grass, see PINK-ROOT.

Worms, Ger. city in the Land of Rhineland-Palatinate (q.v.), on the Rhine (q.v.), 25 m. S. by E. of Mainz. It is one of the oldest cities of Germany and its Roman name was Borbetomagus. It was important in the time of Arminius (q.v.) and was fortified by Drusus (q.v.) in 14 bc. In the 5th cent. it was a cap. of the Burgundii (q.v.). It early became a bishopric, and it was made a free city of the Empire in the 11th cent. More than 100 Imperial Diets met in the city: at the Diet of 1122 the investiture (q.v.) question was settled between the Emperor, Henry V and Pope Calixtus II (qq.v.); at the Diet of 1521 Luther appeared before the Emperor Charles V (qq.v.). There was severe damage during the Second World War. The impressive Romanesque cathedral dates from the 11th cent., and there is a 13th-cent. synagogue. Monuments in the city include one to Luther and one commemorating the Nibelungen legend (see NIBELUNGENLIED). W. has manufs. of machinery and textiles, and is the centre of an important wine-producing dist.: the well-known *Liebfraumilch* takes its name from that of a 14th-15th-cent. church in the city. Pop. 60,000.

Worms, see ANTHELMINTICS; PARASITES; EARTHWORMS.

Wormwood (*Artemisia absinthium*), tall perennial plant (family Compositae) with silky stems and leaves and numerous small yellow flower heads. It is one of the chief ingredients from which absinthe is derived, and is used as a tonic.

Wormwood Scrub, dist. of W. London in the bor. of Hammersmith, lying N. of Shepherd's Bush. It gives its name to a recreation ground and to a large prison.

Worsborough, urb. dist. and industrial and agric. tn of the W. Riding of Yorks, England, 3 m. S. of Barnsley. It is a colliery centre. Pop. 14,250.

Worsley, urb. dist. of Lancs, England, 6 m. from Manchester, and incorporating the tn of Little Hulton, with extensive coal mines. The dist. has cotton factories and engineering works. Here was begun the Bridgewater Canal in 1759. Pop. of dist. 28,680.

Worsted, see WOOL.

Wörth, see WOERTH.

Worth, vil. and par. of Sussex, England, 8 m. NNW. of Haywards Heath. There is an 11th-cent. church, largely Saxon, with what are probably the first examples of the true arch known in England. To the S. is W. Forest; W. was formerly a centre of the Weald iron industry. Pop. 5000.

Wörther, Lake, see KLAGENFURT.

Worthing, municipal bor. and seaside resort on the Eng. Channel, Sussex, England, 10½ m. from Brighton and 60 m. from London. There is a fine marine parade and numerous parks and public gardens with tennis courts, putting greens, and bowling greens, a pier, 3 golf courses, and good bathing and boating facilities. At Broadwater, within the bor., is the church of St Mary, a fine example of mingled Saxon and Norman ornamental architecture. The new tn hall dates from 1932. Flowers and fruit are grown. One member is returned to Parliament. Pop. 70,000.

Wortley, rural dist. of Yorks (W. Riding), England, lying between Sheffield to the S. and Barnsley to the NE., comprising the pars. of Bradfield, Ecclesfield (q.v.), Tankersley (q.v.), and W. Constituted in 1894, it covers an area of 48,697 ac. and includes 17 vils. Pop. (rural dist.) 45,240.

Wotan, Wuotan, see ODIN.

Wotton, Sir Henry (1568-1639), diplomat and poet, b. near Maidstone. Educ. at Winchester and Queen's College, Oxford, he was secretary to the Earl of Essex during Elizabeth's reign, and under James I was for 20 years in the diplomatic service. W. was the originator of the epigram, 'an ambassador is an honest man sent to lie abroad for the good of his country.' In 1624 he was made provost of Eton. Izaak Walton's life of Wotton was prefixed to the *Reliquiae Wottonianae* (1651). See also life by L. P. Smith, 1907.

Wounds, rupture of the soft structures of the body. They are usually classified as incised, punctured, contused, and lacerated. An incised W. is a clean cut, such as is made by a knife. The blood-

vessels being cut clean, they bleed more freely than other kinds. The opening tends to gape on account of the retraction of the superficial structures. When the edges of such a W. are kept closed together healing generally proceeds by 'first intention', that is, the 2 surfaces soon become united by a film of lymph, which develops into connective tissue. Punctured W.s are those produced by the thrust of a pointed instrument. They are dangerous according to their depth; a deep-seated organ may be injured or the instrument may have carried in septic germs. There is frequently little bleeding apparent, though there may be dangerous internal haemorrhage. Contused W.s are caused by blunt instruments, or by falls. There is usually very little bleeding, though the parts may be extensively bruised. Owing to the injury to the small blood-vessels healing may be protracted. Lacerated W.s are produced by injuries from machinery, the teeth and claws of animals, etc. They are dangerous when extensive, as there is considerable danger of infection by germs. Healing is usually by 'second intention'; a film of lymph forms over the W. and granulations form. A scar ultimately takes the place of the destroyed skin. If tissue has been much destroyed, extensive sloughing may take place. In treating W.s it is necessary first to arrest the bleeding and then close the W. Where there is danger of septic infection, however, the W. should be cleaned and dressed with antiseptics. Penicillin and sulphonamides, both local and systemic, are now much used in the treatment of infected W.s. Skin grafts are employed for closure. In war-time especially prophylaxis against tetanus (q.v.) is important; tetanus antitoxin is also available.

Wouverman, or Wouwerman, Philips (1619-68), Dutch painter, b. Haarlem. He studied under his father, Paul Wouwerman, and under Jan Wynants. His landscapes, hunting scenes, and horses are now appreciated for their meticulous finish, composition, and colour. His brothers, Jan (1623-82) and Peter (1629-66) worked on similar subjects.

Wouw, Anton van (1862-1945), S. African sculptor, b. Drie Burgers, Holland, and studied at the Rotterdam Academy. He went to the Transvaal in 1890, and struggled for a living until he suddenly won a commission for the President Kruger statue in 1899. The work was interrupted by the S. African War and the monument erected only in 1925. Meanwhile van W. had become S. Africa's most outstanding sculptor in the naturalist tradition, and produced fine studies in bronze, principally of the Bantu people.

Wrangel, Carl Gustav (1613-76), Swedish soldier, b. Skokloster, Uppsala. He became a maj.-gen. of infantry at the age of 24, and distinguished himself at the battle of Wolfenbüttel (1641) and Leipzig (1642). He commanded the Swedish fleet against the Danes in 1644-5 and in 1646 succeeded Forstenson as commander-in-chief of the Swedish Army in Germany, playing a prominent part in the

later stages of the Thirty Years' War. He subsequently became a member of the Council of Regency, but failed as an administrator.

Wrangel, Peter Nikolaievitch (1878-1928), Russian soldier, b. St Petersburg. He served through the Russo-Jap. War and the First World War, mainly with the Cossacks. After the war he joined Kaledin (q.v.). Kaledin committed suicide in 1918, and W. joined Denikin's army. Denikin (q.v.), however, was defeated by the Bolsheviks in 1920, and he resigned, leaving W. in sole command of his disorganised army. Supported by the French, W. continued successfully to withstand the Bolsheviks until after they ended the war with Poland. W. was then compelled to evacuate his forces from the Crimea. He went to Belgium, where he lived in exile. See memoirs, 1929.

Wrangel Island, see OSTROV VRANGEL'YA.

Wrangler, term applied in the univ. of Cambridge, England, to those who have attained first-class honours in Part II of the mathematical tripos, i.e. the final examination for honours in pure and applied mathematics. The one who took the first place in Class I was, until 1912, called *Senior Wrangler*. Those in the second class are designated *Senior Optimes*, and those in the third *Junior Optimes*. The term is derived from an obsolete meaning of the verb, *wrangle*, meaning to give a public disputation.

Wrasse, a spiny-finned fish of the family Labridae. The general form of the body is like that of the perch (q.v.), but the back is straighter. There is a single long dorsal, and the ventrals are under the pectorals. Coloration is generally very brilliant. The flesh is of little food value. W. frequent rocky shores and coral reefs, usually in small shoals, and often concealed in seaweed. Also known as rock fish.

Wrath, Cape, most westerly point on the N. coast of Scotland, in the co. of Sutherland. It is one of a series of wild cliffs formed of gneiss, and is 300 ft high.

Wray, John, see RAY, or WRAY, JOHN.

Wrecks. The law on W. is contained in the Merchant Shipping Act (q.v.) so far as territorial waters are concerned. In earlier times flotsam, floating wreck; jetsam, property thrown overboard to avoid wreck; ligam, property sunk and marked with buoys for purposes of recovery; and derelict, or totally abandoned property, were distinguished from wreckage cast on the shore, and were claimed by the Admiralty on behalf of the crown. These are all now included in the one general term. Local receivers are appointed by the ministry of transport, which has taken over the powers of the board of trade (which dept. had itself taken over those of the admiralty), and it is the business of the receiver to take charge of any wreckage found or brought in (except in the case of that brought from extra-territorial waters by a foreign ship). It is the duty of all persons finding wreckage to notify the receiver, who must proceed to the place and take complete charge, not merely of property but of all means of

recovery, and of the work of persons near by, vehicles, means of approach, and so on, as also of public order; he also must notify the nearest customs-house, and, if the value is over £20, Lloyd's. The practical work is, in fact, done by customs personnel though the controlling authority is the ministry of transport. The duties of the receiver, if he be absent, devolve, first, on the chief customs officer; then on the chief officer of the coastguard, inland revenue officer, sheriff, justice of the peace, or officer of the navy or army on full pay. The wreckage, being received, is finally sold, unless claimed within a year by the owner, the proceeds being paid over to the crown or other person having the right, after the salvage (q.v.) claims and expenses have been deducted. These also must be paid before recovery by the owner, if his claim has been established. The authority of the ministry of transport is required for the sale of W. exceeding £5 in value. In any case, duty is also levied on goods so recovered as if they had been imported in the ordinary way. The receiver's duties also extend to cases of ships in distress and any services rendered; he, or a wreck commissioner appointed by the lord chancellor, holds a court of inquiry.

When W. occur in navigable waterways or harbours, the authorities responsible for the safety of such places have power to remove them, and claim expenses from the owners or underwriters if they have entered into possession. The statutory power given to harbour or conservancy authorities to remove or destroy any vessel sunk, stranded, or abandoned in any harbour or tidal water under their control and to sell the wreckage so as to reimburse themselves for the expense does not extend to Her Majesty's vessels (*Christie v. Trinity House*, 1919). The term wreck applies only to tidal waters and to vessels and their contents; in the U.S.A. it applies also to inland lakes and the large rivers. In proportion as ships have become larger and have discarded sails, the number of W. has largely diminished; storm warnings have contributed to the safety of vessels. On the other hand, the value of W. is generally larger and salvage may be very remunerative. The law relating to W. and salvage and to the duty of rendering assistance to vessels applies to aircraft on or over the sea or tidal waters in the same way as it applies to vessels, and, for this purpose, the law includes the Merchant Shipping Acts and other Acts covering the same subjects. In the past forty years, so far as Brit. W. are concerned, there were most losses of life at sea in the years 1912 and 1914: in 1912 a total of 2335, including 673 of the crew and 825 passengers on the *Titanic* (q.v.); and in 1914 a total of 1778, including 171 of the crew and 840 passengers on the *Empress of Ireland*. In 1928 the total was under 300; and in 1929 131 lives were lost. From 1932 to 1945, 952 vessels were lost and 1193 lives, the highest losses being 142 vessels in 1935 and 215 lives in 1936. From 1946 to 1956 some 300 vessels were lost and over 2100 lives,

the highest losses being 36 vessels and 291 lives in 1948. (Losses by hostile action in the two world wars are not included.)

See Board of Trade, *Instructions as to Wreck and Salvage*, for salvage operations. See also SALVAGE.

Wrekin, The, isolated volcanic hill (1335 ft) rising from the N. Shropshire plain, 2½ m. SW. of Wellington. It is composed of pre-Cambrian rocks, and has an earthwork and a beacon on the summit.

Wren, Sir Christopher, M.P., F.R.S. (1632-1723), architect and scientist; b. E. Knoyle, Wilts, son of a clergyman; had a brilliant career at Oxford as a scientist and mathematician; became a prof. of astronomy 1657; and did not turn to architecture until c. 1662, when he designed the chapel of Pembroke College, Cambridge; followed by the Sheldonian Theatre, Oxford, 1664-9. His rebuilding of St Paul's Cathedral lasted from 1675 to 1710. He also rebuilt 52 of the City churches destroyed in the Fire of London in 1666. He prepared a remarkable plan for rebuilding the City, immediately after the Fire, but it was not carried out. In 1669 he became Surveyor-General of the King's Works, and in that capacity built, rebuilt, extended, or altered sev. royal palaces, including Hampton Court, Kensington, St James's, Westminster, Whitehall, and Winchester; and also Windsor Castle, Chelsea Hospital, and part of Greenwich Hospital. Among his numerous other buildings may be mentioned Emmanuel College Chapel and Trinity College Library at Cambridge; 'Tom Tower', and extensions to Queen's College and Trinity College at Oxford; the Royal Observatory, Greenwich; Winslow Hall, Buckinghamshire; Marlborough House; the churches of St Clement Danes and St James, Piccadilly, in W. London; sundry work in the Middle Temple, London; additions to Christ's Hospital, London; the Honeywood Library, Lincoln. He seems also to have furnished designs for Wm and Mary College at Williamsburg, Virginia, U.S.A.

The following buildings are also attributed to him: The Monument, London; Abingdon Tn Hall; 'Upper School' at Eton College; 'School' at Winchester College; Wolvesey Palace, Winchester; the College of Matrons, Salisbury; Bromley College and Morden College, Kent.

He restored Westminster Abbey and reported on the restoration of Salisbury and Chichester cathedrals. At the bicentenary of his death (1923), the 'Wren Society', founded in his honour, began the pub. of 20 large vols. recording his architectural work. His life was written by his son under the title *Parentalia*, 1750. The most recent of many biographies are by G. Webb, 1937; R. Dutton, 1951; M. S. Briggs, 1953; J. Summerson, 1953; V. Furst, 1956; E. F. Sekler, 1956.

Wren, a small passerine bird of the family Troglodytidae. *Troglodytes troglodytes* is the common bird ranging throughout Europe, N. Africa, and Asia. It is about 4 in. long and has short, rounded wings, and usually carries its tail over the back. Its plumage is rich reddish brown

it builds a large domed nest, and additional nests are often built close at hand. Its song is remarkably loud. It feeds almost entirely on insects. The gold crested W. (*Regulus cristatus*) belongs to the family Regulidae.

WRENS

Wrench, Sir John Evelyn (1882-), journalist, b. Brookesborough, co. Fermanagh. Educ. at Eton, he became a journalist under Lord Northcliffe in 1904. Later he devoted himself to Brit. Empire propaganda work. He founded the Overseas League in 1910 and the English-Speaking Union in 1918. He was knighted in 1923.

Wrestling has been practised by almost every nation and in every period since the days of ant. Greece. In Homer's *Iliad* (xxiii. 700 ff.) there is an excellent technical description of an early contest. The Gk wrestling contest was divided into 2 parts: (1) the struggle to throw the opponent; and (2) the struggle on the ground, though on some occasions the simple throw decided the contest. At first the wrestlers wore a girdle, but in later times they wrestled naked. The body was previously rubbed with oil (strictly forbidden in modern W.) to make the muscles supple and to check perspiration, and was then sprinkled with sand to allow of a firm grip being taken. The loser had to be thrown 3 times before he was vanquished. Rom. W. was an imitation of the later form of the Gk sport. Neither must be confused with the modern Graeco-Rom. style, almost identical with Catch as Catch Can (Catch-Can) or Free style, the most popular modern style, except that no hold below the hips is permitted and the legs may not be used for either offence or defence. Throughout the Middle Ages W. (Catch as Catch Can style) was a favourite sport in England, mainly among the common people, though some kings were accomplished wrestlers. The Londoners were particularly distinguished for their skill, though the Cornish and Breton wrestlers were acknowledged as the best in Europe. Various styles were used. Those which have survived until

the present day, little altered in detail, are the Cornwall and Devon and the Cumberland and Westmorland styles. In the former the contestants wear a short, loose, strong jacket by which all holds are taken. The heavy shoes, for kicking purposes, vanished more than a cent. ago. Falls are heavy; a throw is a 'fair back,' i.e. both shoulders and a hip (or 2 hips and a shoulder) on the ground at the same moment. There is no ground W., which is a characteristic of both the Catch as Catch Can and Graeco-Rom. styles. In the Cumberland and Westmorland style the struggle begins when each wrestler has taken the statutory hold and joined hands. For this the left arm of each wrestler passes above the other's right arm, his right arm under the other's left, and hands are then locked across the back. To break this hold is equivalent to defeat. This is the simplest and fairest style of W.; it is on the first down to lose principle. Any part (other than the feet) touching the ground means a fall. If both men fall the one first touching the ground is the loser. The style still flourishes in the N. Eng. cos., and, to a lesser extent, in parts of Scotland. The Japanese style of W., *Judo* (formerly *Ju Jitsu*), is more than a sport; it is a method of self-defence and originally a war exercise. It differs entirely from the national (professional) style called *Sumo*. Based on an accurate knowledge of anatomy, it includes much of ordinary W. with additions which admit of strangulation, dislocation of joints, and blows struck with the edge of the open hand. It has become very popular, as an exercise, throughout America and Europe. Catch as Catch Can includes all that the name implies, but a large number of punishing grips and moves are forbidden in order to exclude the use of brutal or dangerous tricks. It is correct to state that this style is practically universal; 27 nations were represented in the Olympic Games wrestling of 1948. Professional W. in the All-In style still exists on the Continent, in America, and Australasia, and to a diminishing extent in Britain. See G. Hackenschmidt, *Complete Science of Wrestling*, 1929; E. Gruhn, *Text Book of Wrestling*, 1930, 1947; H. A. Oberholzer, *Recreative Wrestling*, 1949; A. W. Umbach and W. R. Johnson, *Successful Wrestling*, 1953.

Wrexham, municipal bor. and mrkt tn of Denbighshire, Wales. Its church of St Giles, rebuilt about 1470, is one of the 'seven wonders of Wales.' Industries include coal mining, brewing, tanning, and textiles. It is an agric. centre. Elihu Yale (q.v.), who was a patron of Yale Univ., is buried here. Pop. 32,400.

Wright, Sir Almroth Edward (1861-1947), physician; b. Middleton Tyas, Yorks; he studied at Trinity College, Dublin, and the univs. of Leipzig, Strasbourg, and Marburg. He was appointed demonstrator of pathology at Cambridge Univ., 1887; and in physiology at Sydney, 1889. He was prof. of pathology at the Army Medical School, Netley, 1892-1902. In 1902 he was appointed pathologist to St Mary's Hospital, where

in 1908 was created, under his direction, the dept of therapeutic inoculation, subsequently entitled the Institute of Pathology and Research. He was also prof. of experimental pathology in the Univ. of London. W. was knighted in 1906. He was the originator of antityphoid inoculation, therapeutic inoculations for bacterial infection, and methods of measuring protective substances in human blood, which proved a great preventive to wound infection in the First World War. During the S. African War he was able to test the results of his laboratory work by immunising troops against typhoid fever; the results were most satisfactory, and similar results were obtained in India. See L. Colebrook, *Almroth Wright, Provocative Doctor and Thinker*, 1954.

Wright, Frank Lloyd (1869-), Amer. architect, b. Richland, U.S.A. who worked in various offices, including that of L. Sullivan (q.v.), and began practice in Chicago 1893. His buildings are mostly dwelling-houses, but also include the Unity Temple at Oak Park, the Midway Gardens Plaisance at Chicago, and the Imperial Hotel at Tokyo. It was partly the original character of his work that made him the leader among Amer. architects by the middle of the 20th cent.; but much of his wide influence internationally has been due to his numerous books, in which his ideas on architecture and sociology are expounded at some length. He was awarded the R.I.B.A. Royal Gold Medal in 1951. See his own *Autobiography*, 1932; a biography by his son John, 1946; a study by B. Zevi, 1947.

Wright, Joseph (1734-97), painter, b. Derby. He is known as 'Wright of Derby.' W. studied under Hudson and Mortimer in London, and returned to work in Derby as a portrait painter. He is best known for his paintings of scenes in which artificial lighting increases depth and contrast of light and shade.

Wright, Judith, see AUSTRALIAN LITERATURE.

Wright, Richard (1908-). Amer. novelist, b. near Natchez, Mississippi, son of a Negro. In 1938 he won a prize of \$500 with his novelette *Uncle Tom's Children*. Later he was awarded a Guggenheim Fellowship. In 1940 his story *Native Son* received the Spingarn Medal, highest award for work done in the Negro interest. *Twelve Million Black Voices*, 1941, is a history of the persecution of the Amer. Negro, and *Black Boy*, 1945, tells of his own youthful hardships. Later books are *The Outsider*, 1953, and *Black Power*, 1954.

Wright, Wilbur (1867-1912) and Orville (1871-1948). Amer. brothers of Dayton, Ohio, who invented the practical powered aeroplane. Influenced by the work and death of Lillenthal (q.v.), they made an exhaustive study of previous work in aviation, and in 1900 made the first of their 3 gliders. After perfecting their patented means of control (which consisted of warping the wing-tips in connection with a rear rudder, as well as using a front elevator for climb and dive)

they designed and built their first powered aeroplane, including the engine, in 1903, and on 17 Dec. near Kitty Hawk, N. Carolina, made the world's first powered, sustained, and controlled flights, Orville making the first and third flights of 4 Wilbur the others. Through a series of almost unbelievable circumstances their work for long remained unknown, despite flights of over 1 hr in their *Flyer No. 3* in 1905. They did not fly again until 1908, when Wilbur flew in public for the first time in Europe and Orville in the U.S.A. Their known work on gliders had already been the largest factor in developing European aeroplanes, and when they emerged in 1908 they further revolutionised aviation. They thereafter constructed many excellent aircraft. Their first *Flyer* (now called the Kitty Hawk) was the subject of a bitter quarrel in the U.S.A., and was sent to England, where it was on loan to the Science Museum, London, from 1928 to 1948. It is now in the National Air Museum, Washington.

Wright, Willard Huntington, see VAN DINE, S. S.

Wriothesley, Henry, third Earl of Southampton (1573-1624), courtier, Shakespeare's patron. He succeeded his father, the 2nd Earl, in 1581, and studied at Cambridge and Gray's Inn. From 1590 he was prominent at court, and Shakespeare dedicated *Venus and Adonis* and *Lucrece* to him. W. was involved in Essex's Irish conspiracy, and was sentenced to death. But the sentence was commuted to life imprisonment, and he was later freed by James I. He d. while serving in the Netherlands. See life by C. C. Stopes, 1921.

Wrist, or Carpus, that portion of the arm between the hand and the lower arm. The joint is made by the articulation of the ulna and radius with the carpal bones, 8 in number. The mobility of the joint is combined with a great degree of strength, so that dislocations and sprains are not common. Fracture of the lower end of the radius is known as Colles' fracture.

Writ: 1. In the literal sense of that which is written. W. is particularly applied to the Scriptures, or books of the O.T. and N.T., and again, in Scots law, the term is sometimes used to denote a writing, deed, or any legal instrument.

2. In Eng. law, a W. is a precept under seal in the name of some executive officer, such as the lord chancellor or a judge, having jurisdiction or authority in the particular matter, and directed to some public officer such as a county sheriff or to some private person, commanding him to do something in relation to a suit or action. In this sense a W. is a legal document which in effect is the first step in legal proceedings, civil or criminal (see SUMMONS). Some of the more important of the multifarious W.s in Eng. law are the W. to the county sheriff to elect a member of Parliament, a W. of habeas corpus (q.v.), and quo warranto (q.v.), W.s of subpoena ad testificandum, and subpoena duces tecum.

Writer's Cramp, see SPASM.

Writers to the Signet, see SIGNET.

Writing is the most important method of record-keeping and of communicating ideas or sounds of the human voice, by marks or significant and convenient symbols, painted or drawn, traced or incised, on paper, stone, metal, or any other material. W. is an integral part of our civilisation; it is, indeed, the main currency of civilisation. It is one of the main aspects of culture which clearly distinguish mankind from the animal world. W. is the graphic counterpart of speech: each element (written symbol or letter, or written word) in the system of W. corresponds to a specific element (sound or group of sounds, such as spoken words or syllables) in the primary system. Although writing is not considered a separate branch of learning, it forms the main basis for 2 important fields of study, epigraphy (q.v.) and palaeography (q.v.); and some of its sections form part of other depts of learning, e.g. hieroglyphics (q.v.) is part of Egyptology, and cuneiform W. (q.v.) is part of Assyriology.

Origin of Writing. We do not know the inventor of W., or when and where arose the knowledge of the art—and we may never know. It is probable that there were periods, ages long probably, during which perishable W. materials (e.g. bark or wood) were employed; we can dig up thousands of inscriptions (q.v.), but it will never be possible to recover earlier documents made of non-durable matter. Yet hist. naturally relates what we know (although there is no doubt that only an insignificant part of the story of mankind is known), and thus the hist. of W. must be based mainly on preserved documents. Many of the earliest records of men have been found in the drawings and paintings left by the cave-dwellers in S. France and in Spain. At some remote time, in the Upper Palaeolithic Age (belonging perhaps to 20,000 bc), primitive man drew pictures of the beasts on whose flesh he fed on the walls of his cave, and painted them with coloured earths and vegetable dyes. He also carved sketches on the bones of the animals he had killed, or upon rude stone surfaces. It is still uncertain, however, whether these realistic pictures represent the beginnings of art or of W., or of both. If these pictures or sketches were done not only for amusement in the long leisure hrs, but also for the perpetuation or transmission of thought, then they may represent the beginnings of W. It is, however, more probable that these paintings or sketches were done for purposes of 'sympathetic magic' or for ritual practices, and not because of the urge to record important events or to communicate ideas. The same may be said of the numerous riv. pebbles of the Azilian culture (Middle-Stone Age), painted with peroxide of iron, with dots and lines, etc.; also of the various 'petroglyphs,' which are geometric signs or conventionalised figures of men, painted or engraved on rocks or on the stones of megalithic tombs and other Neolithic Age (q.v.) monuments, to be found in various

Mediterranean countries, and many others. If these prehistoric pictures and sketches do not represent the beginnings of W., then it is preferable not to attempt a chronological hist. of W., but to classify it according to its nature and to certain recognised terms, on the assumption that these terms indicate types of W. and stages of development which are not necessarily chronological.

Embryo Writing. Prehistoric man did not think about true W.; even nowadays there are primitive peoples who can do without it. Indeed, members of primitive tribes seldom venture beyond the natural boundaries of their tribal ter., and various acoustic and optic devices suffice for communication. Small communities of agric. peoples, living in vils., have developed systems of communication based on the principles of sound or acoustics (war-cries of the Negritos of Luzon; whooping of Creek Indians in N. America, etc.). Pastoral peoples who live scattered over wide areas have developed optic devices of communications (smoke-and-fire signals of prairie tribes of S. America, or similar devices). The simplest form of optical communication is, of course, the gesture, which may be used not only to indicate single key-words representing numbers, objects, moods, or directions, but it may be perfected into an actual substitute for language, e.g. the gesture-language of deaf-mutes (see DEAF AND DUMB), or signalling methods used at sea or in the mts. As man rose from his primitive state towards civilisation, he must have felt a need for recording his knowledge in some permanent form, or of helping his memory in conveying an important message. Primitive systems of conveying ideas are found everywhere in anct. tradition, and some survive in use to-day. Herodotus (ii. 16) describes a 'letter' sent by the Scythians to the Persian king Darius; it consisted of a bird, a mouse, a frog, and 5 arrows; its meaning was as follows: 'Persians, can you fly like a bird, hide yourselves in the ground like a mouse, leap through swamps like a frog? If you cannot, then do not try to go to war with us; we shall overwhelm you with arrows.' Similar codes of tokens for sending messages are still found among various primitive peoples, such as the Niam-Niam (Upper Nile, Africa), the Batak of Sumatra, the Lu-tze on the Tibeto-Chinese frontier (a piece of chicken liver, 3 pieces of chicken fat, and a chill, wrapped in red paper, indicated 'prepare to fight at once'), and other tribes. The most interesting, however, are the symbolical epistles, *aroko* (= 'to convey news'), of the Yebu and other tribes in Nigeria. *Calumet*, the sacred decorated reed tobacco-pipe of N. American Indian tribes, was used as symbol of peace or war. Some Amerindian tribes used to send to the President of the U.S.A. a feather-trimmed ear of corn whose hollowed-out inner part was filled with tobacco, and around its centre a woollen cord was slung, also trimmed with yellow feathers: the message was a declaration of peace ('The pipe shall be

smoked by the President'). The *ndangas* and *bolongas* of the Bangala people (Upper Congo R.) should also be mentioned.

Pictography. While the primitive devices of communication, e.g. mnemonics (in which the employed symbols need the interpretation of the messenger), may be considered preliminary stages of W., pictography or picture-writing is the first stage of true W.: in this, the painted or drawn or traced pictures, known as pictograms, speak for themselves. Pictography (q.v.) may be subdivided into 3 classes:

(i) **Iconography**, which gives a static impression; the pictures are motionless, and they represent the things shown (the sketch of an animal would represent this animal, a circle might represent the sun, etc.). To-day, with action photographs and motion pictures, comic strips and illustrations, the introduction of action into pictures seems a small thing; actually it was a very important development when the 'writer' began to 'write' picture-stories, i.e. when he began to make pictures tell stories. The most famed among the pictorial documents are those of the N. Amer. Indians, so beautifully described by Longfellow in *The Song of Hiawatha* (xiv).

(ii) **Ideography** (see IDEOGRAPHY). There thus arose the synthetic or ideographic writing; this can be best studied in the W.s of primitive tribes of to-day (in Polynesia and Australia, in W. Africa, in N. and Central America, among the Yukaghirs of NE. Siberia, etc.).

(iii) **Analytic Writing**. Neither iconographic W. nor synthetic W. constitutes a complete system of W., as is in fact the case of analytic W.s in which definite pictures, conventional and simplified, selected by agreement or custom from many experimental pictures, became fixed pictorial symbols, constantly used. Only 8 or 9 systems of W. belong to this category, the cuneiform W., the hieroglyphic and hieratic W.s, demotic W. (q.v.), the scripts of the Indus valley people, of the Cretans, Hittites, Chinese, Mayas, and Aztecs, and probably also the mysterious Easter Is. W. These systems, however, are already partly phonetic, and are thus transitional between the pure pictographic and the phonetic W.

Phonetic Writing. It was a long way from the primitive pictography to the phonetic W. In pictography there is no connection between the depicted symbol and the spoken name for it. In phonetic W., which is the graphic counterpart of recording speech, each element corresponds to a specific element (i.e. sound) in the language to be represented. The first steps taken in phonetism may be found in the 'rebus', in which the pictures of objects do not stand for the objects themselves, but for the sounds they recall, i.e. the pictures shown have names sounding like or similar to the word intended: Englishmen, for instance, could in this way represent the name Woodbury by a row of trees (forest, wood) and a picture of a berry. This evolution from concrete representation to abstract symbol—the

thing-picture and idea-picture turning into sound-picture—was part and parcel of the main analytic scripts (hieroglyphics, cuneiform W., Chinese W., etc., see above), which, however, are not pure phonetic W.s, because they continue to employ ideographs and word-characters. Pure phonetic W. may be syllabic or alphabetic.

Syllabary or Syllabic Writing is the less advanced stage of pure phonetic W. Syllabaries existed in ant. times, in Byblos (N. Syria), Assyria, Cyprus; 2 syllabaries derived from Chinese W. have become Jap. scripts; artificial modern syllabaries were, or still are, employed in Africa, N. America, and in China. In syllabic W.s the single symbols represent syllables generally, or vowels, when these constitute syllables.

Alphabetic Writing is the last and most highly developed system of W.; its development constitutes a story in itself (see ALPHABET).

The development of cursive W. is dealt with in the article PALAEOGRAPHY. The origin and the development of the numerals, and the list of abbreviations and of stenography, are other problems connected with W. (see ABBREVIATIONS; NUMERALS; SHORTHAND).

See J. G. Février, *Histoire de l'écriture*, 1948; O. Ogg, *The 26 Letters*, 1949; J. E. Lips, *The Origin of Things*, 1949; D. Diringer, *The Alphabet: a Key to the History of Mankind* (4th impr.), 1953.

Writing, Epistolary, see LETTERS.

Wrocław: 1. Prov. (*województwo*) of SW. Poland, bordering in the W. on Germany, and in the S. on Czechoslovakia. It is crossed SE-NW. by the fertile valley of the Oder (q.v.). In the SW. are ranges of the Sudetic Mts (q.v.). Other rivs. of importance are the Bobrawa (q.v.) and the Kwis. Until 1945 the ter. of the prov. was in Ger. Lower Silesia (q.v.); the Ger. pop. was expelled after the Second World War. Live-stock is raised, and cereals, potatoes, and flax are grown. There are metal, textile, engineering, glass, and paper industries. Coal, galena, and other minerals are found, and there are sev. spas. Area 7320 sq. m.; pop. 2,000,000.

2. (Ger. Breslau) City of Poland, cap. of W. prov., on the Oder at the mouth of the Olawa, 180 m. WSW. of Warsaw (q.v.). It became the seat of a bishopric in the 10th cent., and after 1163 was the cap. of a duchy of Silesia (q.v.). It was razed by the Mongols in the 13th cent., was rebuilt by Ger. settlers, and became a member of the Hanseatic League (q.v.). In 1526 it went to the Hapsburg (q.v.) family, but was ceded to Prussia in 1742. In 1813, during the Napoleonic Wars, it was for a time the Prussian H.Q. Until 1945 it was the cap. of Ger. Lower Silesia. It suffered severely during the Second World War, particularly in the 9 weeks' siege by the Soviet armies in 1945. When it fell to the Russians on 12 May 1945 about two-thirds of the city was in ruins. The Oder divides W. into an old and a new tn: these with their many suburbs are connected by sev. bridges. There are

many old churches, including an archiepiscopal cathedral which dates from the 13th cent. The tn hall was begun in the 14th cent. There is a univ., an airport, and a riv. port. Textiles, machinery, chemicals, foodstuffs, pottery, and tobacco are manuf. Pop. 374,000 (including many post-war immigrants from Lvov and Vilna).

Wrong, George Mackinnon (1860-1948), Canadian historian, b. Elgin co., Ontario, and studied at Toronto Univ. After a course at Wycliffe Hall he was ordained in the Church of England in 1883. He accepted a lectureship in hist. at Toronto Univ., where he proved a successful and popular teacher; he was prof. of hist. at the same univ. from 1894 until his retirement in 1926. W. was especially noted for his writing on the hist. of Fr. Canada. Chief works: *The British Nation, a History*, 1903, *The Rise and Fall of New France*, 1928, *Canada and the American Revolution*, 1935, and *The Canadians, the Story of a People*, 1938.

Wrought Iron, see IRON AND STEEL.

Wroxeter, vil. of Shropshire, England, on the Severn, where it is crossed by Watling Street, 7 m. ESE. of Shrewsbury, was the tribal cap. of the Cornovii, and later as Viroconium an important tn in the urb. lfo of Rom. Britain. It was the fourth-largest tn in Rom. Britain with an area of some 170 ac. Epigraphical and literary evidence points to its foundation about AD 48 as a legionary camp (or possibly fortress) in the campaigns of Ostorius Scapula against the Welsh, and it so continued until under Agricola the Fourteenth and Twentieth Legions were transferred to Chester. It was, apparently, after this that it became the tribal cap. of the Cornovii who had been forced to leave their own hill-city on the Wrekin. The imposing forum was built by AD 130, and followed by a basilica and other public buildings on a grand scale. Much of the tn was destroyed by fire about AD 300. There was subsequent rebuilding of public and private buildings on a smaller scale, and a considerable occupation well into the 4th cent. Excavations were made between 1912 and 1937. The chief remains now to be seen are parts of the forum and basilica, and of the great public baths. The site is protected as an anct monument, and a museum is maintained. See *Research Reports of the Society of Antiquaries, Wroxeter* 1, 2, 3, 1913-16, *Archaeologia*, vol. 88 (1938), 175.

Wryneck, genus (*Iynx*) of small birds of the *Picidae* or woodpecker family, of which only 4 species are known, 3 of which are peculiar to Africa. These are *I. pectoralis* (S. Africa and the Congo), *I. pulchricollis* (Upper White Nile), and *I. aquatorialis* (Ethiopia). The fourth species, *I. torquilla*, is the common wryneck of Europe. Its general colour is brown and grey with black markings; its length 8½ in. It sometimes runs up trees exactly like a true woodpecker. Its name is derived from its habit of twisting its neck as it picks up ants or other insects.

Wszowa (Ger. *Fraustadt*), tn of Poland, in Zielona Góra prov., 28 m. E. by S. of

Zielona Góra (q.v.). In 1706 Charles XII (q.v.) of Sweden gained a victory here over the Saxons. The tn is a centre of a dist. producing sugar beet. Pop. 5000.

Wu Ching-tzu, see CHINESE LITERATURE.

Wuchin, see CH'ANGCHOW.

Wuchow, or T'sangwu, former treaty port of China, on the confluence of R.s Hsün and Kwei, in the prov. of Kwangsi. It is the distributing centre between Canton, Kwangsi, and Kweichow, and exports sugar and various oils. Pop. 90,000.

Wuhan, the triple city on the Yangtse, cap. of Hupei prov., China, comprising the former cap. Wuchang, the port Hankow (q.v.), and the heavy-industry city Hanyang. The NW. bank of the Yangtse at this point is divided into 2 halves by the R. Han, which joins the Yangtse. Wuchang is situated on the SW. bank and the other 2 occupy the corners of the 2 right angles on the other side of the Yangtse. The triple city is linked together by 2 bridges crossing both rivs., built in 1957. In Wuchang there is the National Wuhan Univ., its palatial buildings on top of the Lochia Hill overlooking the E. Lake. The old city wall along the riverside is built partly on Tortoise and Serpent Hills; on top of the wall is the Yellow Crane Tower. Wuchang was the scene of the first revolution which broke out on 10 Oct. 1911, resulting in the overthrow of the Manchu gov. and thereby putting to an end the 2000-year system of monarchy in China. In 1927 the first National Gov. was set up in Wuchang. The first modern iron and steel works began operation at Hanyang in 1890, but it soon fell into disuse. Work was resumed in 1951. W. is now being developed into a heavy-industry centre of Central China, comparable to that in Manchuria. Its light industry, first developed in 1890, has earned W. the name of 'China's Chicago.' The city is served by the Peking-Hankow and Canton-Hankow trunk railways, the Wuchang-Tayeh branch line, and regular airliners to Peking, Canton, Shanghai, and Chungking. Pop. 1,750,000.

Wuhu, former treaty port of China, in the prov. of Anhwei, on an affluent of the Yangtse. It exports rice, cotton, tea, etc. It is also a manufacturing tn, and is noted for its cutlery and steel articles. Pop. 136,000.

Wulfila, Ulfilas, Ulphilas ('little wolf') (c. 311-385), translator of the Bible into Gothic. Consecrated bishop in 348, he was expelled by his heathen compatriots from his native place, and sought refuge in Lower Moesia, where he remained for 30 years. In 385 he went to Constantinople (which he had visited in 360 for a council), and d. there shortly afterwards. He was one of the chief supporters of Arianism. His greatest work, however, is his Gothic trans. of the Bible, a work which fixed the Gothic language and perpetuated Christianity among the Gothic people. See also GOTHIC LANGUAGE AND SCRIPT. See study by C. A. Scott, 1885.

See also H. M. Gwatkin, *Studies of Arianism*, 1882; G. H. Baig, *Uphias*, 1891.

Wulfrundhamton, see WOLVERHAMPTON.

Wulfstan, Wulstan, or Wolstan, St (c. 1012-95), prelate, b. Long Itchington, Warwickshire. He studied at Evesham and Peterborough abbeys. He became a Benedictine at Worcester, and Bishop of Worcester in 1062. Wm I allowed him to retain his see, though an Englishman. W. rebuilt Worcester Cathedral. He was canonised in 1203 and his feast day is on 19 Jan. (See also under WORCESTER.)

Wundt, Wilhelm (1832-1920), Ger. physiologist and psychologist, b. Neckarau, Baden. He studied medicine at Tübingen, Heidelberg, and Berlin, at which univ. he qualified in 1857. He worked for a time with Helmholtz and, after an interval due to ill health, became successively prof. of physiology at Heidelberg (1864), of inductive philosophy at Zurich (1874), and of philosophy at Leipzig (1875). He founded the Institute of Experimental Psychology at Leipzig in 1879, with himself as director; it was the predecessor of many similar institutes. W. did more than anyone else to establish psychology as a serious subject for scientific instruction and research. He considered human knowledge to be built upon simple sensations and feelings, the study of which would reveal the elements of all knowledge and lead to a complete understanding of its structure. He wrote a text-book of human physiology, 1865, and 3 important memoirs on muscular motion, 1858, sensory perception, 1862, and nerves and nerve-centres, 1871-6. His *Grundzüge der physiologischen Psychologie*, 1873-4, was a model text-book; other psychological works were *Logik*, 1880-3, *Ethik*, 1886, and *Völkerpsychologie*, 1904-10. For biography see E. G. Boring's *History of Experimental Psychology*, 1929.

Wuppertal, Ger. tn in the Land of N. Rhine-Westphalia (q.v.), in the valley of the Wupper, 17 m. E. of Düsseldorf (q.v.). It was formed in 1929 by the amalgamation of the tns of Barmen and Elberfeld, and various other smaller communities, including Cronenberg, Vohwinkel, Ronsdorf, and Beyenburg. The tn. which is enclosed by wooded heights, was severely damaged during the Second World War. There is a textile industry which dates from the Middle Ages and is said to owe its location here to the special qualities of the Wupper water for bleaching. There are also dyeing, machinery, metal goods, chemical, electrical, rubber, and brewing industries, and the tn is a printing and publishing centre. Pop. 402,400.

Württemberg, former rep. (until 1918 a kingdom) in SW. Germany, bounded on the E. by Bavaria and on the W. by Baden (qq.v.). Hohenzollern (q.v.) formed an enclave in the SW. of its ter. W. was colonised by the Romans. The counts of W. obtained possessions in Swabia (q.v.) on the death of Conradin V. (q.v.). Those possessions were gradually increased, and in 1495 W. became a duchy. In 1806 Napoleon created a

kingdom of W., which lasted until 1918, when William II of W. abdicated and a rep. was proclaimed. Under the National Socialist regime it was governed by a *Statthalter*. After the Second World War part of W. was combined with dists. of Baden to form the Land of W.-Baden (area 5960 sq. m.; pop. 3,875,000; cap. Stuttgart) in the Amer. zone of occupation; the remainder of the ter. was combined with Hohenzollern to form the Land of W.-Hohenzollern (area 4017 sq. m.; pop. 1,119,000; cap. Tübingen) in the Fr. zone. In 1952 these two Länder became part of the new Land of Baden-W. (q.v.).

W. was for the most part mountainous, the chief ranges being the Swabian Jura, which crossed the rep. SW.-NE., and the Black Forest, which lay on the W. frontier. It was watered by the Danube and the Neckar (qq.v.). Agriculture was the chief occupation of the inhab., but there were many industries, including the manuf. of textiles, iron and steel goods, and beer. There was an important univ. at Tübingen (q.v.). The pop. was predominantly Protestant, a minority of some 30 per cent being Rom. Catholic. Area 7534 sq. m.; cap. Stuttgart (q.v.); pop. (1940) 2,696,300.

Würzburg, Ger. city in the Land of Bavaria (q.v.), on the Main (q.v.), 136 m. NW. by N. of Munich. It was originally a Celtic settlement. Its bishopric was founded by St Boniface (q.v.). Charlemagne (q.v.) held court in the city, and Frederick I (q.v.) was married in it in 1156. It was occupied by the Swedes under Gustavus II (q.v.) in 1631, but the prosperity it had enjoyed during the later Middle Ages revived after the end of the Thirty Years' War (q.v.). In 1945, during the Second World War, it suffered severe damage in a bombing attack. The Marienberg fortress, built on a height on the l. b. of the riv., was formerly the castle of the prince-bishops; it has an 8th-cent. chapel. In the 18th cent. it was superseded as the episcopal residence by a magnificent baroque palace, which contains, among its many treasures, frescoes by Tiepolo (q.v.). Of the city's many fine churches, the most notable is the Romanesque cathedral (1034); it has baroque additions, and has sculpture by Tilman Riemenschneider (q.v.). There is a remarkable 15th-cent. bridge, with 12 baroque statues of saints. The univ. dates from 1527; among its professors have been Schelling, Döllinger, and Röntgen (qq.v.). W. is an important railway junction, is the centre of a famous wine-producing dist. (*Steinwein*), and has machinery, chemical, metal, and paper manufs. Pop. 97,000.

Wusung: 1. Tn of China, in the prov. of Kiangsu, near Shanghai, at the mouth of the Wusung R.

2. Riv. of China, which rises in Lake Tai, flows eastward, joins the Hwangpu by cutting through the N. part of Shanghai, and finally flows N. to enter the Yangtse estuary just below Wusung.

Wyandots, formerly large tribe of N. Amer. Indians, known also as Hurons.

They were discovered on the St Lawrence R. by the first Fr. explorers, with whom, notably with Champlain, they speedily formed an alliance. The Fr. Jesuits maintained flourishing missions among them, until the tribe was destroyed by the Iroquois (q.v.) in 1648-9. In 1600 there were perhaps 10,000 Huron and 8000 Tionontati in the W. confederation, but to-day there are about 800 in Oklahoma and 400 in Canada.

Wyandotte, city in Michigan, U.S.A., on Detroit R. 12 m. SW. of Detroit. It manufs. chemicals (based on local salt deposits), metal toys, and rubber and dairy products, and there is a shipbuilding industry. Pop. 36,800.

Wyandotte Cave, natural formation in Crawford co., Indiana, U.S.A., containing a greater number and variety of stalactites and stalagmites than any other cave in the U.S.A. It has miles of passages on 6 levels.

Wyatt, James, P.R.A. (1746-1813), architect, and son of an architect; studied in Italy c. 1762-8. His first known building was the Pantheon in Oxford Street, London (1770, since demolished). He designed many other important buildings in the classical style, including Heston Hall, Lancs.; Heveningham Hall, Suffolk; Castle Coole, Ireland; Roxhampton Grove, Surrey; and two colossal Gothic mansions—Ashridge Park, Herts, and Fonthill Abbey, Wilts. He acquired the nickname of 'The Destroyer' for his drastic restoration of Durham, Hereford, Lichfield, and Salisbury cathedrals, Westminster Abbey, and Magdalen College at Oxford. His son Benjamin W. (1775-1850) and his distant cousins Thomas Henry W. (1807-80) and Sir Matthew Digby W. (1820-77) were also leading architects. See biographies by A. Dale, 1936, and R. Turner, 1950.

Wyatt, Sir Thomas (1503-42), courtier and poet, b. Allington Castle, Kent. Educ. at St John's College, Cambridge, he was one of the most accomplished men of his day and was held in high favour at court. For a time he appears to have shared the disgrace of Anne Boleyn, being imprisoned for a short time in the Tower and afterwards banished to Allington Castle. He was, however, frequently employed later by the king in positions of trust. In 1540 he received a grant of lands at Lambeth and sat in Parliament as knight of the shire for Kent and was named high steward of the king's manor at Maidstone (1542). His poems were pub. with Surrey's in London (1557), and some of them are remarkable for their grace and elegance. His satires, too, are worthy of mention; but he is chiefly remembered as the pioneer of the Eng. sonnet. In his poetry he is indebted to Chaucer, through whom he harks back to the poetry of medieval England. Some of his lyrics show Fr. influence, though it is rather as the disciple of the Italians, Petrarch, Aretino, and Serafino that W. opens a new era in Eng. poetry. See E. M. W. Tillyard, *The Poetry of Sir Thomas Wyatt*, 1929; K. Muir, *The Collected Poems of Sir Thomas Wyatt*,

1949; also study by E. K. Chambers, 1934.

Wyatt, Sir Thomas (d. 1554), soldier, son of the above. He served at the siege of Landrecies in 1544, and 10 years later was the leader of a plot to prevent the marriage of Queen Mary to Philip of Spain. He raised the Kentish men and marched on London, but was captured and beheaded.

Wyatville, Sir Jeffry, R.A. (1766-1840), architect, b. Burton-on-Trent, son of an architect, and nephew of James W. (q.v.) and Samuel W., both architects. Working first in Samuel's office and then in that of James, he began independent practice in 1789, with great success. He built, altered, or extended a large number of country mansions, but is best known for his work at Windsor Castle, where he remodelled the Upper Ward and heightened the Round Tower, 1824-50. King George IV, in recognition of this work, allowed him to change his name to 'Wyatville' in 1824, and knighted him in 1828. He made Windsor Castle much more comfortable, but destroyed some of the fine rooms decorated in the time of Charles II.

Wycherley, William (1640-1715), dramatist, b. Clive, near Shrewsbury, the son of a loyal Shropshire gentleman of good family. On the outbreak of the Civil war he sent W. to be educ. in France. On the Restoration W. went to Queen's College, Oxford, and left without a degree; he was then entered at the Temple, but preferred a gay social existence and the writing of plays to law studies. His first play, *Love a Wood*, produced in 1671, was followed by *The Gentleman Dancing-Master*, 1671-2, and *The Country Wife*, 1673, a masterpiece of Eng. comedy only excelled, if at all, by *The Plain Dealer*, 1673, or 1674, which was inspired by Molière's *Misanthrope*. W.'s *Miscellaneous Poems* are forgotten. He was privately married to the Countess of Drogheda, a step that seems to have given offence at court. The marriage, owing to Lady Drogheda's violent jealousy, was unhappy. W.'s plays are all of them ingeniously constructed, the situations are amusing, the characters well drawn, and the dialogue witty and sparkling. He was the moralist of his age, making immorality appear ridiculous, and a thorough misanthrope. The best collected ed. of W.'s works is that by M. Summers (4 vols.), 1924. See B. Dobrée, *Restoration Comedy*, 1924; W. Connely, *'Brammy' Wycherley*, 1930.

Wycliffe (spelt also Wyllif, Wicliff, Wicliffe, etc.), John (c. 1324-84), scholar and reformer, b. York, possibly at Hipswell. He studied at Oxford, and some time after 1356 became Master of Balliol College; while there W. accepted a living at Fillingham, Lincs (1361), and in the same year appealed unsuccessfully for a papal provision to a prebend at York but obtained a prebend in the collegiate church at Westbury. In 1373 he received a papal licence to retain his prebend there even after he should have obtained one at Lincoln. He had become

a doctor of theology in 1372. In 1374 he became rector of Lutterworth, and soon afterwards retired from Oxford, living mainly in Lutterworth until his death.

As Master of Balliol and a prominent Realist, W. took part, on the side of the seculars, in the Oxford controversy between the secular clergy and the mendicant orders (who followed the Nominalist school of philosophy). W. also estab. himself as a critic of clerical abuses.

In 1374 he was sent to Bruges in the delegation which discussed the question of papal provisions with papal representatives. After his return he wrote his treatise *De Dominio*. W.'s Realist speculations led him to a belief in predestination, and in the light of this he went on to define lordship. Eventually he decided that the Church had no right to interfere in temporal affairs and denied its right to temporal possessions. Though W. never suggested a spoliation of the Church, such a move was the logical conclusion of his theory, and aroused the hostility of the regular and secular clergy. It fitted conveniently with the views of the Lollards, for it insisted that lay lords had a right to property although churchmen had not, a proposition in support of which W. had to summon all his resources of scholastic dialectic to avoid being obviously illogical. The general theory may well have had a quite unintended influence in the Peasants' Revolt (1381), since the landless would see no reason to distinguish finely between eccles. and civil lordship.

In 1377 W. was summoned to answer charges of heresy before the Bishop of London, but his Lollardian patrons ensured that the meeting ended inconclusively. Bulls were issued against his theories on the relations between Church and State, but seem to have had only negligible effect. He was still supported by his univ., which found him convenient as an additional weapon in its administrative dispute with the episcopal authorities. With the papal schism of 1378, W. took a more revolutionary attitude towards the Holy See, being convinced that its powers were responsible for the disorders of the Church. He challenged the claims of the papacy by asserting that papal decrees were binding only when in conformity with the word of God. Violent attacks on the abuses of sanctuary and pardons (made by the most orthodox) were followed by his Eng. trans. of the complete Bible. He began to turn to the Scriptures as the criterion of Christian doctrine, a practice followed by later reformers. His organisation of itinerant 'poor priests' propagated his beliefs. Soon he was questioning the sacerdotal system, and, by 1380, setting aside the doctrine of transubstantiation in the Mass in favour of something approximating to the later Lutheran doctrine of consubstantiation.

This last conclusion branded W. as a heretic. It sprang directly from his scholastic Realism, and its attendant theory of universals. His heretical views lost him the active support of the Lan-

castrians, whose prestige, however, was sufficient to enable him to end his days in peace. They were officially condemned at Oxford, and never seem to have had any considerable following in England. Their violence secured the failure of the more orthodox aspects of his teaching. After his death Lollardy was eradicated from Oxford by Arundel and Courtenay, and with it the last brilliance of the medieval univ.

In England his movement d. soon after his death. It survived longest among the poorest classes in the Midland dists. The fall of Oldcastle and a series of burnings under the statute of 1410 apparently suppressed the remnants. In Europe, however, W. influenced Huss (q.v.), who, however, never adopted his heretical ideas on the Mass. Through Huss he probably influenced Luther. W. had shown scholasticism to be played out: his extreme conclusions illustrated clearly the practical dangers of hair-splitting dialectic. Though his desire for practical reforms was sincere and justified, he is important largely as a destructive force.

After W.'s example, the Eng. church became afraid of reformers, and viewed the most orthodox suggestions with suspicion. Faithful enthusiasts, from Bishop Pecock to Margery Kempe, were suspected of heresy. Fear of a fresh heretical outburst caused future vernacular trans. of the Bible to be discouraged, and real abuses were allowed to remain. The radicalism of W.'s teaching, therefore, led to a certain crystallisation of Eng. eccles. life, which made the religious revolution, when it came, more sweeping than it might otherwise have been.

See also LOLLARDS. See G. V. Lechler, *Wyclif and his English Precursors* (Eng. trans. 1878); R. L. Poole, *Illustrations of the History of Medieval Thought in Theology and Ecclesiastical Politics*, 1884, and *Wycliffe and Movements for Reform*, 1889; H. Rashdall, *Universities of Europe in the Middle Ages* (vol. II), 1895; G. M. Trevelyan, *England in the Age of Wyclif*, 1899; J. Loserth, *Huss and Wyclif*, 1926; H. B. Workman, *Wyclif*, 1926; W. Butler Bowden (ed.), *The Book of Margery Kempe*, 1936; H. Maynard Smith, *Pre-Reformation England*, 1938; A. Gwynn, *English Austin Friars in the time of Wyclif*, 1940.

Wycombe, High, municipal bor. and mkt tn in Buckinghamshire, England, at the foot of the Chiltern Hills. Furniture making is a major industry; recent developments have also brought in light industries, and postage stamps are printed and paper-making carried on. The fine par. church dates from c. 1275, but it was considerably altered and enlarged in the 15th and 16th cents. The tn contains numerous old houses of the 17th and 18th cents. The Little Market House was built in 1761, and the Guild Hall dates from 1757. The ruined hospital of St John dates from c. 1180; it was converted into a grammar school in 1550. Wycombe Abbey, erected by Lord Carrington in 1795, is now a girls' school. Pop. 41,890.

Wycombe, West, vil. of Buckinghamshire, England, now forming part of the bor. of High Wycombe. Most of the vil., which contains many 17th- and 18th-cent. buildings, belongs to the National Trust. The latter also owns West Wycombe Park, 2 m. W. of High Wycombe on the Oxford Road. On the hill is a curious church, built in 1763, surmounted by a golden ball capable of holding 12 persons, which has associations with Sir F. Dashwood.

Wycombe Abbey School, Buckinghamshire, public school for girls, founded 1896. It stands in extensive grounds.

Wye: 1. Riv. of Welsh border country, which rises in Plinlimmon, and after a course of 130 m. enters the Severn 2½ m. from Chepstow. It has valuable salmon fishery, and is noted for its scenic beauty. See R. Gibbings, *Coming Down the Wye*, 1942.

2. Vil. in Kent, England. Wye Agricultural College and a church rebuilt by Archbishop Kempe in the time of Henry VI are here. Pop. 1500.

Wykeham, William of (1324-1404), Eng. bishop, b. Wickham, near Fareham. He was educ. at the old grammar school at Winchester. W. took deacon's orders at an early age, but was not ordained priest until 1362. In 1364 he became keeper of the privy seal; in 1366 he was appointed Bishop of Winchester, and in 1367 he became lord high chancellor of England, holding office till 1371. Winchester College and New College, Oxford, were founded by him, the former being finished in 1394 and the latter in 1386; he also rebuilt part of Winchester Cathedral. W. was a sound administrator, and a keen builder. He was one of the *episcopi curiales* and was not distinguished as a spiritual leader. See life by G. C. Heseltine, 1932.

Wyld, Henry Cecil Kennedy (1870-1945), philologist and lexicographer, b. of a Scottish family and educ. at Charterhouse, Bonn, Heidelberg, and Corpus Christi College, Oxford (1896-9). He was prof. of Eng. language and literature at Liverpool Univ. (1904-20), and subsequently Merton prof. of Eng. language and literature at Oxford. His publs. embrace phonetics, comparative philology, dialects, place names, rhymes, and the like. He also ed. *The Universal Dictionary*, 1932.

Wylie, Elinor (1885-1928), Amer. novelist and poetess, b. Somerville, New Jersey, daughter of Henry M. Hoyt. She married successively Philip Hichborn, Horace Wylie, and William Rose Benét. Her poems, which combine fantasy with a fine craftsmanship, include *Incidental Numbers*, 1912, *Nets to Catch the Wind*, 1921, *Black Armour*, 1923, *Trivial Breath*, 1928, and *Angels and Earthly Creatures*, 1929. *The Orphan Angel*, 1929, is a novel about Shelley, for whom she had a great admiration. Others are *Jennifer Lord*, 1923, *The Venetian Glass Nephew*, 1925, and *Mr Hodge and Mr Hazard*, 1928. See study by N. Hoyt, 1935.

Wylie, Ida Alexa Ross (1885-), Australian novelist, b. Melbourne. She was educ. at Brussels, Cheltenham, and

Karlsruhe, and lived in Germany till 1911. Her novels include *Towards Morning*, 1920, *The Silver Virgin*, 1929, *To the Vanquished*, 1934, *Furious Young Man*, 1935, *A Feather in her Hat*, 1937, *Where No Birds Sing*, 1947, and *Candles for Therese*, 1951. She was even more popular as a writer of short stories, collections of which are *Happy Endings*, 1915, *Armchair Stories*, 1916, *All Sorts*, 1919, *Some Other Beauty*, 1930, and *Storm in April*, 1946.

Wylie, Philip Gordon (1902-), Amer. novelist, b. Beverly, Massachusetts. He was educ. at Princeton, then after various types of work became a writer and was editor of the *New Yorker*. His most controversial book was *A Generation of Vipers*, 1942, which criticised Amer. civilisation and popularised the word 'momism', meaning sentimentalisation of motherhood. Other novels are *Gladiator*, 1930, *Footprint of Cinderella*, 1931, *The Savage Gentleman*, 1932, *An April Afternoon*, 1938, *The Other Horseman*, 1941, *Night Unto Night*, 1944, *Opus 21*, 1949, and *To-morrow*, 1953. He also wrote a series of books about fishing.

Wymondham, mkt tn and agric. centre of Norfolk, England. The magnificent church of St Mary the Virgin comprises part of the priory founded at W. in 1107, and there is also an interesting old mkt cross. Pop. 6000.

Wynants, Jan (c. 1620-c. 1680), Dutch painter, probably b. Haarlem. He worked exclusively on landscape subjects, the figures and animals in his pictures often being painted by other artists. W. had a meticulous style, and his work possesses a clear, bright tone.

Wynberg, residential suburb of Cape Town, S. Africa. There is a well-known military camp near by.

Wyndham, Sir Charles (né Culverwell) (1837-1919), actor, b. Liverpool and educ. at Bonn and Paris for the medical profession. In 1865 he appeared in Manchester in the role of Charles Surface. In 1884 the Criterion Theatre (q.v.) was re-opened under his management. In 1899 and 1903 he opened his own theatres, Wyndham's (q.v.) with *David Garrick* and the New Theatre (q.v.) with *Rosemary*. He was first 'the irresistible young scapegrace' and then 'the blithe middle-aged homilist'. He was knighted in 1902.

Wyndham, George (1863-1913), politician and man of letters, b. London, was educ. at Eton and Sandhurst. For a short time he served in the Coldstream Guards, and saw service at Suakin in 1885. He resigned in order to enter political life, and in 1898 became Under-Secretary for War. In 1900 he was made Chief Secretary for Ireland, and 2 years later entered the Cabinet. He represented Dover in the Conservative interest from 1889 till his death. He also gained distinction as a scholar and critic. His publs. include *Ronsard and La Pléiade. With Selections from their Poetry and some Translations*, 1906, and *Sir Walter Scott*, 1908. See J. W. Mackail and Guy Wyndham, *Life and Letters of George Wyndham*, 1925.

Wyndham-Quin, Windham Thomas, see DUNRAVEN and MOUNT EARL.

Wyndham's Theatre, London, named after Sir Charles Wyndham (q.v.), and opened in 1899. It was associated for many years with Sir Gerald du Maurier. Notable productions include *Mrs Dane's Defence*, 1900, *Diplomacy* (revival), 1913, *Dear Brutus*, 1917, *The Ringer*, 1926, *George and Margaret*, 1937, *Quiet Weekend*, 1941, and *The Boy Friend*, 1954.

Wynkyn de Worde, see WORDE.

Wyntoun, Andrew of (c. 1350-c. 1420), Scottish chronicler, prior of the monastery of St Serf on Lochleven. He wrote *The Orygynale Cronykil of Scotland*, a work in 9 books or cantos, the last 4 of which are devoted to Scottish hist.

Wynyard, Diana (1906-), actress, b. London. She studied under Gwen Lally and Kate Emil Behnke and made her first appearance on the stage at the Globe Theatre, where she walked on in *The Grand Duchess* in 1925. From 1926 until 1927 she played many parts on tour. She joined the Liverpool Repertory Company, 1927-9; then she came to the St Martin's Theatre, London, and made successes in *Sorry You've Been Troubled* and *Petticoat Influence*. *Sweet Aloes* at Wyndham's, 1934, which ran for over a year, put her right in the front rank of Brit. actresses. Since then she has had a brilliant and successful career. She has been leading lady at Stratford-on-Avon and toured Australia with the Shakespeare Memorial company; her performance as Beatrice in *Much Ado About Nothing* at the Phoenix in 1952 was particularly memorable. Her brilliant film career includes such outstanding films as *Cavalcade* and *Rasputin*. She received the C.B.E. for services to the stage, 1953.

Wyoming, mt. mid-western state of the U.S.A., bounded N. by Montana, E. by S. Dakota and Nebraska, S. by Colorado, SW. by Utah, W. by Idaho. It is known as the 'Equality State.' W. is part of a lofty plateau of about 6000 ft above sea-level traversed by mt ranges, including the whole breadth of the Rocky M. system. Its length E. to W. is 356 m., N. to S. 278 m. Area 97,914 sq. m. Gannett Peak, highest point of Wind R. Range, is 13,785 ft. Yellowstone Park is situated in this state, and is noted for its marvellous scenery and geysers. Yellowstone, Bighorn, and Powder R.s flow E.; Snake R. rises in the N. W. has great mineral wealth: coalfields, silver, gold, copper, petroleum, and iron ore. The quarries yield sandstone, limestone, and phosphate rock. Dry farming is carried on. The state's total farm land is 33,000,000 ac., most of it devoted to sheep and cattle raising. With over 1,000,000 head of cattle and c. 3,500,000 sheep and lambs, W. is a leading livestock region, ranking second to Texas. The crops are alfalfa, sugar-beet, vegetables, and small fruits, also apples.

Certain varieties of wheat and barley flourish. Much of the land is forested. The state owns numerous fish hatcheries. Manufs. in W. are not very important, being mainly for local consumption; industries include petroleum refining, lumber and timber products, dairy products, flour and grain, slaughtering and meat-packing.

There is a large irrigated area, much desert land being thereby rendered fertile, with over 2,000,000 ac. already under irrigation. Reclamation works include Pathfinder, Seminole, and Guernsey dams on the North Platte R. The climate is good, the atmosphere being clear and dry. There is abundance of sunshine, and the state has in consequence become a favourite health resort, particularly for people suffering from lung trouble. There is a state univ. at Laramie. Prin. cities are Cheyenne, the cap., 31,935; Casper, 23,673; Laramie, 15,581; and Sheridan, 11,500. W. was first settled in the 17th cent. by Spaniards. John Colter discovered Yellowstone Park in 1807. In early days there was much fighting with the war-like Indian tribes. There was a great rush of emigrants on discovery of gold in the early seventies. W. was admitted to the Union in 1890. It was the first state in the U.S.A. to grant women's suffrage (1869). Pop. (1950) 290,529. See F. B. Beard, *Wyoming from Territorial Days to the Present*, 1933; Federal Writers' Project, *Wyoming*, 1941; V. Linford, *Wyoming: Frontier State*, 1947.

Wyoming Valley, crescent-shaped valley 20 m. long, 3-4 m. wide, in Luzerne co., Pennsylvania, U.S.A., with rich deposits of anthracite coal; it is noted for its scenery. The massacre of Wyoming, the subject of Campbell's poem, took place here (1778).

Wyrtegeorn, see VORTIGERN.

Wyss, Johann Rudolf (1781-1830), Swiss author, b. Bern. He was prof. of philosophy at Bern Univ. from 1806. He was the author of the national hymn, *Rufst du, mein Vaterland*, 1811, but is best known in Eng.-speaking countries for his novel, *Der schweizerische Robinson*, 1812-13, trans. as *The Swiss Family Robinson* in 1820.

Wyszyński, Stefan (1901-), Polish cardinal b. Zuzela; educ. at Lublin univ. and ordained priest in 1924. After serving as rector of the seminary and canon of the cathedral at Włocławek, W. was consecrated Bishop of Lublin (1946). In 1948 he was appointed Archbishop of Gniezno and Warsaw and Primate of Poland. On the eve of his elevation to the Sacred College in 1953, W. was imprisoned by the Communist gov. of Poland, and was not released until 1956. In 1957 he visited Rome, where the Pope conferred upon him the Red Hat.

Wythenshawe, residential dist. of Manchester (q.v.).

X

X, twenty-fourth letter of the Eng. alphabet, may be considered as redundant: indeed, it can well be denoted by the consonants *ks* or *cs*. This letter did not exist in the N.-Semitic alphabet, but when the Greeks took over this alphabet they had no use for all the Semitic sibilant letters, and having adopted the Semitic *shin* as *s*, they gave it the name *sigma*, which apparently was a transformation of the letter-name *samekh* (perhaps by metathesis, from an Aramaic form, otherwise unknown, *simkha*). The letter *samekh* was adopted in the Thera and Etruscan alphabets, but in the Ionic alphabet (which later became the classical Gk alphabet) it was given the phonetic value of *x* (*ks*) and the name *xei*. According to some scholars, however, the Gk *xei* had not the phonetic value of *ks*, but was merely a guttural aspirate, equivalent perhaps to Scottish *ch*. After the Romans adopted the Etruscan alphabet (which had no *x*) they added *X* to represent the sound *ks*, placing it at the end, for it did not then include *y* and *z*. The *X* passed with the other Lat. letters into the Eng. alphabet, where it retains the same sound (*ks*). The interchanges of *x* with other letters are as follows: (1) *x* with *c*, as in the double form of the Lat. or Gk preposition *ex* or *ec*; (2) *x* with *sc* or *sk*; (3) *x* with *g*, as in Lat. *augeo* compared with the Gk *auxanō*; and *mig-nūm* compared with *miz*, Eng., and *miz-tus*, Lat.; (4) *x* with *ps*, as the Lat. *exilis* compared with the Gk *psilos*. See ALPHABET.

Xanten, Ger. tn in the *Land* of N. Rhine-Westphalia (q.v.), near the l. b. of the Rhine, 33 m. NNW. of Düsseldorf (q.v.). It dates from Rom. times, and was a tn of importance in the Middle Ages. During the Second World War it was very severely damaged. Its massive Gothic cathedral was begun in 1190. *X* was the bp. of St Norbert (q.v.), and, according to legend, it was the home of Siegfried (see NIBELUNGENLIED). Pop. 5000.

Xanthine (2:6-dioxypurine), C₄H₄N₄O₂, uric acid or purine derivative, is a white powder, slightly soluble in water. It occurs in the blood, in urine, and in tea, and may be prepared by reducing uric acid with sodium amalgam.

Xanthus, anct city of Lycia. It stood on the W. bank of the riv. of the same name. Twice in the course of its hist. it sustained sieges which terminated in the self-destruction of the inhab. with their property, first against the Persians under Harpagus, and afterwards against the Romans under Brutus. The city was never restored after its destruction on the second occasion. *X* was rich in temples, tombs, and other monuments.

Xavea, see JAVEA.

Xavier, Francis, St (1506-52). Sp. Jesuit missionary, patron of the foreign missions and 'the Apostle of the Indies,'

b. at the castle of Javier, in Navarre. At the univ. of Paris he met Ignatius Loyola (q.v.) with whom he was associated in the formation of the Society of Jesus (1534). He was ordained in 1537, and for some years preached in Rome. In 1540 he sailed for the E. Indies as a missionary. After having made converts in Goa, Malacca, Travancore, the Banda Is., the Moluccas, and Ceylon, he founded a mission in Japan (1549-51), where, 40 years after his death, it has been estimated that there were 400,000 Christians. For a long time he was forbidden to enter China, and he d. at Sanchian, near Canton, when he had at last received permission to preach in that country. *X* was one of the greatest of all missionaries; he was favoured with extraordinary graces and great practical ability. He was canonised in 1622; his feast-day is on 3 Dec. His letters were pub. in 1631. See lives by Mary McClean, 1896, and E. A. Stewart, 1917.

Xenogamy, see ALLOGAMY.

Xenon (Gk, 'a stranger'), symbol Xe, atomic number 54, atomic weight 131.3, heaviest of the argon group of inert gases (q.v.), obtained by Sir William Ramsay (q.v.) by the fractional distillation of liquid air. It is present in the atmosphere to the extent of 1 part in 20,000,000. The spectrum of *X*. shows prominent red and blue lines in the intermittent discharge, but with the 'far' discharge green lines take the place of the red and blue. See INERT GASES.

Xenophanes (fl. 540-500 bc), Gk philosopher and poet, the founder of the Eleatic school. He was b. at Colophon in Ionia, but settled in Elea, S. Italy, where he wrote sev. elegiac poems, and one poem in hexameters *On Nature*, of which fragments remain. See T. Bergk (ed), *Lyric Graeci*, 1900; J. Burnet, *Early Greek Philosophy* (4th ed.) 1943; J. E. Raven, *Pythagoreans and Eleatics*, 1948.

Xenophon (c. 430-c. 356 bc), Gk historian and Athenian gen. b. Athens. He was a friend and disciple of Socrates. In 401 *X*. entered the service of the Persian prince, Cyrus the Younger, who was fighting his sovereign and elder brother, Artaxerxes Mnemon. The Gk officers were treacherously killed after the battle of Cunaxa, and *X*. with great courage and skill, led the retreat from the Tigris to Trapezus, on the Black Sea. A hist. of the expedition is given in his *Anabasis*. He enlisted his soldiers in the service of Laocadaemon (399). In the latter year or very soon afterwards, *X*. was banished from his home either on account of his Spartan sympathies or because of his friendship with Socrates. In 396 he joined the Spartan army, and fought under King Agosilaus at Coronela (394). He was rewarded with an estate at Scillus. Following the renewal of an alliance between Athens and Sparta (371), the decree of banishment against *X*. was repealed

(369), but he is said to have lived for the rest of his life at Corinth. Besides the *Anabasis*, he wrote a life of Agesilaus; *Hellenica*, a hist. of Greece from 411 to 362 BC; *Memorabilia*, *Apologia*, *Oeconomicus*, and *Symposium*, all of which are expositions of the teachings of Socrates and attempts to vindicate his old teacher and friend; *Hiero*, a dialogue on tyranny; *Cyropaedia*, a political romance; *On Horsemanship*; *Hipparchicus*, on the responsibilities and powers of a cavalry officer; *Cynegeticus*, on hunting; *The Lacedaemonian Constitution*; and *The Athenian Revenues*. The complete works of X. have been ed. by E. C. Marchant (5 vols., 1900-19), and trans. by H. G. Dakyns (1890-94). There are numerous eds. and trans. of separate works and groups of works. See H. Richards, *Xenophon and Others*, 1907.

Xeres, see under JEREZ DE LA FRONTERA.

Xerophytes, plants which live and thrive where water is difficult to obtain, and which are adapted to hot and dry climates, e.g. Cacti.

Xerxes, King of Persia (485-465 BC.), b. c. 519 BC., son of Darius Hystaspes and Atossa, daughter of Cyrus the Great. Prior to his accession X. had been 12 years Viceroys at Babylon. After ascending the throne he suppressed revolts in Egypt and Babylon. He then set out against Greece, at the head of a vast army, which he led across the Hellespont on a bridge of boats (480). Another great feat was the construction of a canal through Mt Athos. He marched S. without meeting resistance until he reached Thermopylae, where he defeated Leonidas and his handful of Spartans. X. then marched through Phocis and Boeotia and at length reached Athens, while his fleet, battered in storm and action, arrived in the Bay of Phalerum. He destroyed Athens and then decided to risk a naval battle with the Athenians, but his mighty armament was defeated and dispersed at Artemisium and Salamis (480). Fearful now for his own safety, he left Mardonius (q.v.) with a large army to complete the subjugation of Greece and, with the rest of his force, retreated homewards, entering Sardis at the end of the year (402). In 479 Mardonius was defeated at Plataea by the Greeks, and at the same time the Persians were also defeated at Mycale in Ionia. Finally, the Greeks gained another victory on the banks of the Eurymedon (468), as a result of which the Persians lost all their W. possessions outside Asia Minor bequeathed to them by Darius. X. was assassinated by Artabanus in 465.

Ximenes (or Jimenes) de Cisneros, Francisco (1436-1517), Sp. cardinal and statesman, b. Torrelaguna, Castile. He studied at Alcalá de Henares, Salamanca, and Rome, and was ordained priest. In 1480 he was appointed grand-vicar of Sigüenza by Cardinal Mendoza. Two years later X. took Franciscan vows, and became confessor to Queen Isabella in 1492. The queen appointed him Archbishop of Toledo in 1495, and on her

death he was appointed regent (1506) to the mad Queen Joanna. He founded the Univ. of Alcalá de Henares (c. 1498), organised the preparation of a new Polyglot Bible (1514-17), and did his utmost to reform monastic life. In 1507 he became a cardinal, and in 1509 led in person an expedition against Oran in Africa. On the death of Ferdinand he again acted as regent (1516-17). See Gomez de Castro, *De Rebus Gestis Francisci Ximenii*, 1569. See also lives by J. Ulrich, 1883, and J. P. R. Lyell, 1917.

Xiphonia, see AUGUSTA.

Xisuthros, see ZIUSUDRA.

Xochimilco, tn of Mexico, 12 m. SSE. of the cap., with Aztec remains. Its floating gardens built on chinampas are famous. Pop. 14,400.

Xosa, see AMA-XOSA. In 1818 the 2 sections of the tribe under Ndlambe and Ngqika fought a great battle and have since been separate. See J. H. Soga, *The Ama-Xosa*, 1932.

X-rays were discovered by Röntgen (q.v.) in 1895 during some experiments on electric discharges through highly evacuated tubes. He employed a fluorescent screen covered with barium platinocyanide in order to detect the presence of ultra-violet light and discovered that his screen continued to fluoresce even when the discharge tube was completely covered with opaque paper; further, he found that heavy objects interposed between the tube and the screen stopped the fluorescence. It was clear, then, that some kind of radiation was emitted from the tube that could penetrate opaque paper and cause the screen to fluoresce, and that this radiation was absorbed by heavy objects. Being ignorant of the nature of this radiation, Röntgen called it X-rays.

Methods of Production. Intensive research on X-rays followed Röntgen's discovery, and the best method of producing these rays was gradually evolved. Until 1913 the most satisfactory X-ray tube was of the design shown in Fig. 1.

FIG. 1

EARLY DESIGN OF X-RAY TUBE

C is the cathode, made of aluminium, concave in shape in order to focus the cathode rays (q.v.) on the metal plate T, known as the target. This target is the anode, but it is found that the discharge takes place more steadily when there is a second anode A present. The target is the source of the X-rays and, as it gets

very hot, it is made of a metal such as tungsten which has a high melting-point. The tube is fairly highly evacuated, requiring a potential difference of about 40,000 volts between the anode and the cathode in order to produce a discharge. The source of this potential difference is the secondary of a transformer or induction coil, the primary of which is connected to a battery of a few accumulators. In course of time the residual gas is occluded by the glass walls, and in order to restore the tube to its former condition the palladium tube *P* is gently heated by means of a Bunsen burner. The palladium tube is gas-tight when cold, but lets hydrogen through quite freely when hot, so that traces of free hydrogen in the Bunsen flame find their way inside the bulb. This type of tube has been displaced by the Coolidge tube, which is vastly superior to its predecessor, both in point of steadiness of running and in the 'hardness' or penetrating power of the X-rays it emits. The Coolidge tube, in-

FIG. 2
THE COOLIDGE TUBE

vented in 1913, is shown in Fig. 2. The tube is highly evacuated, the pressure inside being of the order of 10^{-6} mm. of mercury. The source of the electrons is the flat spiral *S* of tungsten that is heated by means of a small battery of accumulators. The spiral is surrounded by a short tube of molybdenum, and this serves to focus the cathode rays on the adjacent target *T*. The latter is made of tungsten and is sometimes water-cooled, or cooled by exterior fins. The great advantage of the Coolidge tube over the older type lies in the fact that the source of electrons is independent of the potential difference between the anode and the cathode. Thus the stream of electrons can be increased or decreased by adjusting the current through the spiral, while the hardness of the X-rays can be increased by increasing the potential difference between the anode and the cathode. The most satisfactory source of potential difference is a transformer working with an interrupter, and a potential difference of about 70,000 volts is commonly used with these tubes.

Nature and Properties. X-rays are electromagnetic waves (q.v.), identical in character with wireless waves and light waves, but differing in degree, being extremely short waves. The softest or least penetrating X-rays have wavelengths of the order of 2×10^{-8} cm., while the hardest rays produced by the

Coolidge tube are as short as 6×10^{-10} cm. Their peculiar properties are due to the fact that their wavelengths are so minute. They can penetrate bodies opaque to ordinary light because the distance between the atoms of the body is of the same order as the wavelength of the X-rays (see DIFFRACTION). The absorption of X-rays by bodies depends on the nature of the atoms of which the body is constituted; the heavier the atoms, the greater the absorption of X-rays. A thin sheet of lead, for example, will absorb an appreciable amount of a hard beam of X-rays that will penetrate several ft. of wood. A beam of X-rays passing through a human body is less readily absorbed by the flesh than by the bone; hence if a fluorescent screen is placed behind the body the bones will be revealed by the 'shadows' they cast on the screen that is illuminated more intensely behind the fleshy parts. Permanent X-ray records of an examination are obtained by replacing the fluorescent screen by a photographic plate which is sensitive to X-rays. The modern Coolidge tubes reveal the internal structure of the human body in some detail. Closer examination of the organs is achieved by making the patient consume food containing salts of bismuth or barium, as these are relatively opaque to X-rays.

Radiotherapy. X-rays have important applications in therapy as well as in diagnosis. They are used in the treatment of many kinds of cancer because malignant cells are more readily destroyed by X-rays than are normal cells. They are also used for certain skin diseases. Radioactive substances, e.g. radium (q.v.), are also used for radiotherapy, and the action of some of them depends on the gamma-rays, i.e. very hard X-rays, that they emit.

Origin of X-rays. The X-rays are generated by the impact of the high-speed electrons on the target of the X-ray tube. If such an electron penetrates an atom of the target and is deflected by the nucleus (q.v.) of the atom, it cannot take up a permanent residence in one of the inner electronic orbits of the atom, since these are already occupied, unless another electron is ejected. Two things may happen: (a) the electron may disturb the electron configuration and even eject an electron from an inner orbit; (b) it may itself escape with reduced energy after its collision. The remainder of its energy appears as X-radiation, sometimes called *Bremsstrahlung* or 'braking radiation' because the electron is slowed down. The greatest possible frequency of the X-radiation emitted occurs when the electron loses all its energy; the quantum theory (q.v.) then tells us that the frequency of the X-radiation is given by the equation $h\nu = mc^2$, where m is the mass of the electron, v its original velocity on impact, and ν is the frequency of the X-radiation; h is Planck's constant (see QUANTUM THEORY). This result agrees with experimental determination of the wavelengths of X-rays by measuring the diffraction caused when the X-rays pass

through a crystalline substance. Bremsstrahlung consists of a range of frequencies up to the maximum ν , but the radiation consequent upon the rearrangement of a distorted electron configuration consists of discrete frequencies, i.e. a line spectrum, on the continuous Bremsstrahlung spectrum.

X-ray Spectroscopy. In 1921 von Laue suggested that a crystal would act as a diffraction grating for X-rays. A crystal is a conglomeration of atoms arranged on a regular plan at extremely short distances apart—about 10^{-8} cm.—so short indeed that one would naturally expect them to show diffraction for very short waves. The method developed by von Laue in Germany was improved by W. H. and W. L. Bragg in England, and much knowledge has been acquired concerning X-ray spectra as well as important information on the structure of crystals. When a beam of X-rays falls on a crystal and passes through it the transmitted and diffracted beams can be recorded on a photographic plate. Measurement of X-ray wavelengths are made by the rotating-crystal method originated in 1913 by the Braggs, by the powder photograph, the X-ray spectrometer, the Laue photograph, etc., but a description of these is impossible in the limited space, and readers should refer to specialised textbooks for further information on the subject.

Industrial Applications of X-rays are almost unlimited in their range. Wherever and whenever it is highly important to probe the interior of a finished article of manufacture without damaging it in any way, recourse is made to X-ray examination. Modern techniques include the use of gamma-rays (g.v.), the hard X-rays produced by radioactive atoms, many of which are artificially produced, e.g. the isotopes of cobalt, Co⁶⁰. Hidden fractures in metal castings or weldings; defective golf balls and glasses; the discrimination between real and artificial gems; the examination of leather and the fit of boots and shoes: all these are revealed by routine X-ray examination, while fraudulent paintings alleged to be 'old masters' are detected at once by such an examination that has also proved its value in detecting alterations to genuine masterpieces. Application has also been made to the studies of rubber and fibres. X-ray diffraction patterns of diffuse rings for unstretched rubber indicate a random structure, but a definite pattern is revealed for stretched rubber. On releasing the tension, the rubber returns to its amorphous state, suggesting a random arrangement of irregularly coiled chains of isoprene units. Wool and hair show that the protein, keratin, consists of a chain of amino-acid residues, the chains being linked by sulphur atoms. This is apparent

in both the stretched and unstretched cases. The pattern for silk shows that the essential constituent is the protein, fibroin, consisting of glycine and alanine residues. X-rays have been used in collaboration with the electron microscope and standard chemical and spectrographic techniques for the study of large molecules. See W. H. and W. L. Bragg, *X-rays and Crystal Structure*, 1924; 1927; W. L. Bragg, *Atomic Structure of Minerals*, 1937; H. G. Cooper, *Scientific Instruments*, 1946; Kathleen Lonsdale, *Crystals and X-rays*, 1948; B. L. Worsnop and F. C. Chalklin, *X-rays*, 1950.

Xucar, see JUCAR.

Xylography, see BLOCK-BOOKS.

Xylol, commercial name given to the mixture of xylenes obtained from coal-tar. Xylene, or dimethylbenzene, $C_6H_4(CH_3)_2$, exists in *orthometa*-, and *para*-isomeric forms, and the 3 are similar in physical properties (boiling point 138–143° C.).

Xylonite, see CELLULOID.

Xylophagidae, family of flies which suck the juices of plants and the sap of trees.

XYLOPHONE

Xylophone, percussion instrument with a series of wooden sticks or plates tuned in a chromatic scale ranging from middle C about 3 octaves upwards in foreign instruments, but in Eng. ones often only from B₄ above middle C. It is played with hammers and makes a dry, rattling, but perfectly clear and richly sonorous sound.

Xystus, in Classical architecture, an enclosure, colonnade or portico, used for athletic exercises and recreation.

X Y Z Correspondence. President Adams of the U.S.A. used this term in the Congress reports on the letters of Marshall, Pinckney, and Gerry, who were ambas. to Talleyrand in France during a period of strained relations between the U.S.A. and France, 1797–8, and who reported that 3 Fr. agents, to whom they referred as X, Y, and Z, had offered them bribes.

Y

Y, twenty-fifth letter of the Eng. alphabet, has here the phonetic value of a consonantal *i*: with this sound it is familiar to the English as the beginning of words, as in *yes, young, yoke*. This sound, however, was written in Latin by *i*, e.g. *iugum* or *IVGVM*, but when transliterated in modern letters this *i-consonantal* sound is not represented by *i* or by *y*, but by *j*: *iugum* or *IVGVM* is now written *jugum*. A further complication arises in English when the sound *y* is followed by a long *u*: the letter *y-j-i* is then omitted, and we write *union, unity, useful*.

There was no Y in the N.-Semitic alphabet. When the Greeks borrowed it they transformed a form of the Semitic *waw* into the vowel *u*, which they called *upsilon*, but pronounced it like the Fr. *u* or the Ger. *ü*. The Etruscans took over the *upsilon* (then having the form V) as the vowel *u*, and passed it over as such to the Romans, who used it, however, as *v* or *u*. After the Roman conquest of Greece (2nd cent. bc), Gk words were largely borrowed by the Lat. language, and the symbol Y was adopted for the Gk sound *u-y* from the contemporary Gk alphabet in order to transliterate Gk words; it was placed after the letter X. Thus the words in which the *y* occurs are not really part of the Lat. language, but are borrowed from the Greek, e.g. *zeephyrus*. Such forms as *lachryma, hiems, sylva* are errors of modern editors. The Romans themselves wrote *lacruma* or *lacrima, hiems* or *hiemps*, and *silva*. In A.-S. the sound of a *y* was commonly represented by an *e* before *a* or *o*, and by an *i* before *e* or *u*, in which cases the allied languages of Iceland, Denmark, and Sweden for the most part employed a *j*. See ALPHABET.

Y-Alloy, an aluminium base casting alloy containing 4% copper, 2% nickel, and 1.5% magnesium. It can be hardened by quenching from about 500°C. and reheating at about 170°C. The alloy is used where excellent high-temp. properties are required, i.e. in internal-combustion engines for pistons and cylinder-heads. See ALLOY.

Yablonovyy, range of mts in Transbaykalia (q.v.), dividing it into W. and E. parts; length nearly 1000 m. The highest peak is Mt Sokhondo, 8050 ft.

Yacht, generally a vessel used for pleasure-cruising or racing. The first Brit. Y.s were the *Mary* and *Bezan*, both presented to Charles II by the Dutch at his Restoration. Eng. shipwrights were at once set to improve on the Dutch models and were able to do away with the Dutch lee-boards and build Y.s of deeper draught. On 1 Oct. 1661 Pepys, an early convert to yachting, tells how Charles, in the new *Katherine*, raced with the Duke of York, in the new *Anne*, from Greenwich to Gravesend and back for a wager of £100, the first recorded Y. race

sailed in Eng. waters. Soon other wealthy men began to own Y.s. In 1720 the first Y. club was founded in Cork, and in 1775 the Cumberland Fleet, or Sailing Society, was founded, the ancestor of the present Royal Thames Y. Club. Gradually there have evolved types of craft, moderate in size and capable of travelling all over the world. Y.s fall naturally into 2 classes, viz. sailing Y.s and power-driven Y.s, sailing Y.s being capable of further subdivision into cruising and racing types. Power-driven vessels are the more costly to buy, but are more easily handled, and are used mainly for cruising. Steam-engines were the first mechanical means used for the propulsion of Y.s, but the introduction and development of the internal-combustion engine have been responsible for their replacement by engines of the latter class. Small vessels now being constructed are, as a rule, driven by petrol or paraffin engines, whilst Y.s of the larger sizes are almost invariably engine by 'Diesels' or 'semi-Diesels'. When sailing Y.s are designed for cruising it is usual to install an auxiliary engine for use when entering and leaving harbour or when conditions are unsuitable for sailing.

Sailing vessels are described by the manner in which they are rigged. To-day the old-fashioned gaff mainsail is seldom used by either racing or cruising Y.s. Instead almost all sailing Y.s have tall masts and tall, narrow, triangular mainsails which offer a long leading edge of sail to the wind and are very efficient for windward work. Modern Y.s, too, are generally without a bowsprit, and set a variety of headsails from the stem head, which are graded according to the strength of wind and conditions of sailing. As well as jib and forestaysail, Eng. Y.s set a Yankee (masthead jib, once called a jib-topsail) and a Genoa (large jib of light canvas); and both these sails can be sheeted home and used for windward work. A parachute spinnaker is set when running before the wind; it is the shape of an isosceles triangle, and is hoisted before the forestay and has a short spinnaker boom which is hooked into the appropriate clew, or lower corner, according to the side on which the sail is to be carried. To combine lightness with strength, masts and spars are hollow, and masts are carefully stayed. Nylon is beginning to replace hemp, cotton, and flax for both rope and sails. The commonest rig for Brit. Y.s is the cutter, which has a single mast, and whose working canvas consists of a mainsail, forestaysail, and jib. Yawls and ketches add a small mizen mast, stepped in the stern abaft the sternpost in the yawl and before the sternpost in the ketch. Larger sailing Y.s are rigged as schooners, with 2 or more masts. In the schooner the mainmast is the aftermost of the 2 masts, is

stepped nearly amidships and is a taller mast than the foremast. Schooners have bermudan or gaff mainsails but often carry staysails, in place of bermudan or gaffsail, between the masts.

In 1875 the Y. Racing Association was estab. to govern the conditions of racing. Since that date Y. racing has become increasingly a popular sport, and racing Y.s have undergone many changes. We have already noticed the general adoption of the bermudan rig; equally noticeable is the much smaller average size of racing Y.s. Rising building costs and improvements in design, necessitating frequent new building if an owner is to remain successful, have encouraged smaller Y.s.

YAWL

A, jib; B, staysail; C, mainsail;
D, mizzen.

Thus many of the bigger classes, as was the J-class, which included King George V's *Britannia*, have now been either entirely or virtually abandoned. Yet racing in the smaller classes is so keen that probably the sport has never before attracted so many amateurs. Indeed, there are so many one-design classes in use round the coast that it is only possible to mention those which have a national or an international status. The lightest racing craft are the sailing canoes, but their numbers are few compared with the dinghies. Three large classes are the International 14-ft dinghy class, the National 12-ft dinghy class, and the National Firefly 12-ft one-design dinghy class. As well as being comparatively inexpensive and easy to maintain in racing trim, these dinghies give superb sport and school first-class helmsmen and helmswomen. Larger racing Y.s recognized by the International Y. Racing Union and popular in Great Britain are the International 6-metre class and the International Dragon one-design class.

In recent years a new form of Y. racing has attracted more and more attention

and is known as off-shore or ocean racing. The yearly programme caters for different sizes of Y.s, and the courses are of various lengths. Typical courses are from Harwich to the Hook of Holland, Cowes to Dinard and St. Malo, Plymouth to La Rochelle, and from Portsmouth round the Fastnet and back to Plymouth. These races test seamanship, navigation, and Y. construction in all weathers. Although special Y.s are built for this ocean racing, and the Royal Ocean Racing Club have racing rules, it is still possible for cruising Y.s. to win events, and, indeed, cruising Y.s and ocean racing Y.s cannot be treated separately. A remarkable feature of recent years has been the number of small cruising Y.s which have been sailed by amateurs across the Atlantic, or home from the E. across the Indian Ocean and up the Red Sea and through the Mediterranean, or right round the world. The Brit. entry for the America's Cup (q.v.) was the International 12 metre Y. *Sceptre*, having a lead keel and a 90 ft alloy mast, built at Sandbank, Argyll, and launched in April 1958.

Many handsome, comfortable, and seaworthy motor cruising Y.s will be found all round the coast. Some are conversions and others are standard types. Popular for family summer holidays are the so-called fifty-fifty, which are motorboats with sufficient sail to be able to make passages under sail alone in fair winds. H.M.Y. *Britannia* (4000 tons) was built to replace the *Victoria* and *Albert*. She was completed in Jan. 1954, and can be converted into a hospital ship. The ship has an overall length of 412 ft and the complete bridge structure and funnel are of aluminium. The *Britannia*, which is the only R.N. ship to be commanded by an adm., has been much used by H.M. the Queen and other members of the Royal Family. Early in 1957 the ship returned from a world cruise, during most of which H.R.H. Prince Philip was on board. During the cruise, the *Britannia* steamed 39,500 miles, rounded both the Cape of Good Hope and Cape Horn, and visited such out-of-the-way places as the Falkland Is. Dependencies, South Georgia, Tristan da Cunha, and St. Helena.

See E. G. Martin, J. Irving, and others, *Cruising and Ocean Racing*, 1933; K. A. Coles, *Sailing Days*, 1944; P. Heaton, *Sailing*, 1949; B. Heckstall-Smith and E. du Boulay, *The Complete Yachtsman*, 1949; E. C. Hiscock, *Let's Go Cruising*, 1949, and *Cruising Under Sail*, 1950; J. H. Illingworth, *Offshore, A Complete Introduction to Ocean Racing*, 1949.

Yadar, see JADAR.

Yagnaivaikya (fl. c. 350), Hindu sage. He was responsible for a code of laws which is regarded by the Hindus as one of the sacred books.

Yahgans, see FUEGIANS.

Yahweh, see JEROVAH; JAHVIST.

Yahwist, see JAHVIST.

Yak, or Grunting Ox (*Poephagus grunniens*), large Tibetan ox which exists both in the wild and domesticated state. Two of its chief characteristics are the fringe of

long, pendulous hair along each flank and the huge whisk of hair at the end of the tail. In summer the coat is a deep, rich brown; the horns are black, large, and strong. The distinction between wild and domesticated Y.s is the grey hair on the nostrils of the former. They can live at very high altitudes, and the domesticated animal is used as a beast of burden and yields milk and meat.

Yakima, city of Washington, U.S.A., cap. of Y. co., on the R. Y. It is the centre of an agric. area, converted from desert by irrigation. There are canning and timber manufs. Pop. 38,486.

Yakö, a Negro people of the Cross River region of E. Nigeria. They dwell in 5 large vills., growing yams and forest crops. They, like the Herero (q.v.) of SW. Africa, reckon descent in both the male and female lines. Each person belongs to a patrilineal and a matrilineal clan, each being exogamous; land and immovable property are inherited in the former, while movable property passes down the female line. Each clan has its elders and priests. See D. Forde, *Marriage and Family among the Yakö of South-eastern Nigeria*, 1941.

Yakutia, Autonomous Rep. in E. Siberia, mountainous in the E., S., and W. lowland in the N. and centre, traversed by R.s Lena, Yana, Indigirka, and Kolyma, largely covered by coniferous forests, and having an extremely cold climate (see VERKHNOYANSK). There are large coal, iron-ore, gold, and diamond deposits. Activities include gold and coal mining, live-stock breeding, grain growing, and fur trapping. The prin. tns are Yakutsk and Aldan. Y. is an area of banishment (since the 19th cent.) with labour camps, and is the site of important construction projects. Area 1,182,300 sq. m.; pop. (1956) 483,000, mostly Yakuts and Russians (since 17th cent.). See W. Kolarz, *Russia and Her Colonies*, 1952.

Yakuts (own name Sakha), Turkic-speaking people living in the Lena basin and adjacent areas of E. Siberia, the most numerous of the N. peoples of Russia (241,000 in 1926). They are sedentary, mostly live-stock breeders. They have been known since the 14th cent., when they came from the S. and exterminated, expelled, or conquered the previous Tungus and Paleo-Asiatic (q.v.) inhab. The Y. have been subject to Russia since the 17th cent.

Yale, Elihu (1648-1721), patron of Yale Univ. (q.v.). He was b. at or near Boston, Massachusetts, entered the service of the East India Company (1672), and became governor of Fort St George, Madras (1687). He gave £800 and books to the collegiate school at New Haven, and the whole univ. was called after him. He is buried at Wrexham, Wales.

Yale University, one of the 2 oldest and most famous univs. in the U.S.A. (the other being Harvard), is situated at New Haven, Connecticut. It was founded by 10 Connecticut Congregational ministers with a gift of books at Branford, Connecticut, in 1701, and was first called the Collegiate School of the Colony. In

1718 it removed to New Haven and became Yale College, taking the name of Elihu Yale (q.v.), its first great benefactor. More books were secured for it by Jeremiah Dummer, the Colony's agent in London; Bishop George Berkeley gave his valuable library and his farm in Rhode Is. The rent from it provided the young college its first funds for study beyond the bachelor's degree. Its first permanent building, Connecticut Hall, was erected in 1752 and still stands. Schools of medicine, law, and divinity were estab. in the early 19th cent., and at the same time Benjamin Silliman began his pioneer work in the teaching of science. The first art gallery connected with a college in America was built at Yale in 1832, where John Trumbull's paintings of the Revolutionary War are housed. The Ph.D. degree was first granted in America by Yale in 1861. The schools of fine arts, music, and forestry came later; a School of Nursing (for women) was estab. in 1923 by gifts of the Rockefeller Foundation.

Undergraduates as freshmen (about 1000) live together on the Old Campus. In their 3 upper class years they live in 10 residential colleges, each accommodating 250-300. This residential college plan, preserving in a large univ. the values of a small college, was made possible by the gift of Edward S. Harkness ('97), in 1930. The bequest of John W. Sterling ('64), in 1918 provided many professorships and scholarships and buildings, notably those for the schools of medicine, law, and divinity, and the Sterling Memorial Library (approximately 2,849,945 vols.). The Yale Libraries contain more than 4,100,000 vols., with yearly accessions of 100,000 vols., and are especially strong in Amer., Eng., and Ger. literature, linguistics, the hist. of medicine and of the Church. There are famous collections in the Art Gallery and the Peabody Museum of Natural Hist. Before the Second World War there were 5300 candidates enrolled for degrees and a faculty of 1000. After the war the number of students reached nearly 9000 and the faculty 1400. Both figures are now somewhat less. Schools of instruction include the Undergraduate Schools, Graduate School, School of Medicine, Divinity School, Schools of Law, Engineering, Fine Arts, Music, Forestry, and Nursing.

Yale and Harvard athletic contests began with boat races in 1852, and have continued regularly since then, except during wars. The Payne Whitney Gymnasium has facilities for many kinds of competitive sport. Yale alumni are especially well known as first presidents of American colleges—Princeton, Dartmouth, Columbia, and many others. There were 24 Yale members of the Continental Congress and 4 Yale signatories to the Declaration of Independence. The endowment of the univ. in 1956 was more than \$130m.

Yalta, tn on S. coast of Crimea, 55 m. E. of Sevastopol. Since the 1880's it has been the main centre of the Crimean health resorts (c. 300,000 tourists and

patients yearly). There is a famous botanical garden in Nikita near by (founded 1812). Pop. (1956) 34,000. Y. was an anct Gk colony. The Y. Conference took place in nearby Livadiya in 1945.

Yalta Conference, conference held in Feb. 1945 in Yalta between Churchill, Roosevelt, and Stalin to make plans for the final defeat and occupation of Germany. The W. Allies secured Stalin's promise to enter the war against Japan, but the U.S.S.R. did not declare war until 8 Aug., 6 days before Japan's surrender. On the whole, Stalin secured great advantages for the Soviet Union at little cost.

Yalu, riv. of Asia which forms a boundary line between Korea and Manchuria. It rises in Paiktu-San, and after a course of 300 m. empties itself into Korea Bay, near Hainichow. It was the scene of sev. skirmishes during the Russo-Jap. war (1904).

Yam, edible tuberous root of many species of Dioscorea, much grown in tropical countries, where it takes the place of the potato. Some species yield tubers of enormous size.

Yama, in Hindu mythology, judge and ruler of the departed. He is represented as of a green colour, with red garments, crowned, 4-armed, and sitting on a buffalo. He holds a club and noose, with which the soul is drawn from the deceased's body.

Yamagata, city of Yamagataken, Japan; seat of the prefectural gov. It is the centre of a large rice-producing dist., and is famous for its cast-iron products. Pop. 160,000.

Yamal, peninsula in the Kara Sea (q.v.), with the adjacent mainland area forming Y.-Nenets National District, constituted 1930, belonging to the Tyumen' Oblast (q.v.). Area of the District 258,800 sq. m.; pop. c. 50,000, mostly Russians (since 16th cent.) and Nenets (q.v.). There are fishing, reindeer raising, and fur trapping. The cap. is Salekhard. It is an area of banishment and labour camps. *See also* MANGAZEYA.

Yangtsekiang, riv. of China, the greatest in that country and the fourth largest in the world. Its source is in the Payen Kara Mts of the K'un-lun system in SW. Chinghai. It originates in a number of dashing torrents which are more than 16,000 ft above sea-level. It flows in an easterly direction through E. Tibet and Yunnan, and turning N. forms part of the boundary line between that prov. and Szechwan. At this stage it receives the waters of the R. Min from the N. at Yiping. Flowing farther NE., it is increased by the R.s Pei, Chi, and Chialing near Chungking. Having a tortuous course, bending in an ENE. direction, it waters the provs. of Szechwan, Hupeh, Kiangsi, Hunan, Anhwei, Kiangsu, and finally empties itself into the Yellow Sea. Its chief tribs. not already mentioned are the Han from the N., and the Wu from the S. The total length is some 3500 m., of which 1500 are navigable by steamboats. The area drained by the Yangtse is estimated at over 689,100 sq. m. The chief tns on its banks are: Chungking,

Hankow, Wu-chang, Nanking, and Chen-kiang.

In July 1949 there occurred on the Y. the daring exploit of the Brit. sloop *Amethyst*. The sloop was attacked in April by Chinese Communist artillery on the Y. while sailing to Nanking on a humanitarian mission on behalf of the foreign community, and suffered heavy damage and casualties. Her commanding officer was killed. The Communist military authorities refused to give the sloop a safe conduct unless Lieutenant-Commander Kerans signed a document admitting Brit. responsibility for the incident. This was unacceptable, and the sloop was then detained for 3 months under almost intolerable conditions. At the end of July the *Amethyst* slipped her moorings in defiance of her gaolers, and successfully overcoming more than 140 m. of navigational hazards on a pitch-dark night without a pilot, reached the open sea without sustaining casualties in spite of opposition from shore batteries.

Yanina, *see* JANINA.

Yankee, or **Yank**, term often loosely used in modern Europe for anyone b. in the U.S.A. During the War of Independence it was derisively applied by Brit. soldiers to the New Englanders. During the Civil war it was applied by the Confederates to the Union troops, and is still used in the S. as a synonym for 'northerner.' Its origin is uncertain. It has been suggested that it derives from the Old Dutch *Janke* or was a corruption of *English* adopted by the New England Indians.

Yaounde, cap. of the Fr. Cameroons. It is connected by rail to Douala, 191 m. Pop. (1956) 36,000.

Yap, *see* CAROLINE ISLANDS.

Yard, length, *see* METROLOGY.

Yardley, dist. on the E. side of the city of Birmingham (q.v.), England, formerly a vil. The church was built before Columbus discovered America, and the vil. still preserves its medieval atmosphere.

Yare, riv. of Norfolk, England, rising near E. Dereham and flowing E. through the co. to the N. Sea at Yarmouth. It is joined by the Waveney 4 m. SW. of Yarmouth.

Yarkand (now called **Shu-fu**, and **So-chu**), walled city of Sinkiang, China, on the R. Yarkand, about 100 m. SE. of Kashgar. It has many mosques, caravanserais, and bazaars. Leather goods, silk, carpets, and felt are among its manufs., and trade is chiefly with Russia. Pop. 118,600.

Yarmouth: 1. (correctly **Great Yarmouth**) Co. bor., seaside resort, and port of Norfolk, England, 20 m. E. of Norwich and 122 m. from London. Y. has a good harbour at the mouth of the Yare, with shipbuilding yards. The fisheries are a prominent industry, the chief fish caught being herring, mackerel, cod, and white fish. Notable buildings include a modern tn hall; the remains of the cloisters of a monastery and the walls; while other old features are the fishermen's almshouses and the Blackfriars Tower. On the S.

Denes is the Nelson monument, a column 144 ft high. It was on the jetty in the centre of the Marine Parade that Nelson landed after the battle of the Nile. Characteristic of the old in are the 'rows,' a number of narrow lanes often only a few ft wide, some of which were destroyed during the Second World War. Fishermen from the Cinque Ports (q.v.) made a permanent settlement there. The famous Tollhouse in Middlegate Street, which was used as a library museum, was destroyed by Ger. aircraft in 1943. The par. church of St Nicholas, founded in 1101 and the largest in England, was gutted by fire in an air-raid in 1942. There are 2 piers, and a racecourse. Gorleston-on-Sea, part of the bor., is situated on the other side of the R. Yare, and it is at Gorleston that the riv., which runs through the port of Yarmouth, flows into the sea. There are Rom. remains at Burgh Castle. The High Stewardship is an anc't office of the bor. of Y. In former times the High Steward presided as judge in the bor. court and performed the duties which now devolve upon the Recorder. Y. was bombarded by Ger. warships in the First World War. The town suffered heavy damage from air-raids during the Second World War, but since then reconstruction has taken place in the bomb-damaged areas in the town centre, housing schemes have been initiated, and a modern power station is under construction on the S. Denes near the harbour's mouth. Pop. 51,105 (1951).

2. Small seaport on the NW. coast of the Is. of Wight, England, 10 m. W. of Newport, on the mouth of the Yare. There is good yachting. Pop. 1000.

3. Cap. of Y. co., Nova Scotia, Canada, on the Bay of Fundy. A railway junction, formerly an important shipbuilding centre, it is now a shipping point to Boston and other nearby New England cities for blueberries, lobsters, tuna, fresh fish, pulpwood, and lumber. Y. has a cotton factory and fish-processing plants. The Canadian National Railways' car ferry *Bluenose* carries 150 cars and trucks, 500 passengers, and freight to Bar Harbour in Maine. Pop. 8110.

Yarn, spun fibres ready for being woven into cloth. When the fibres are simply twisted together to form 1 thread the material is known as single Y. Cotton Y. is counted by the number of single hanks of 840 yds each in 1 lb. (avoidsupois); thus Y. running 30 such hanks to the lb. would be called 30 counts. Linen Y.s are of 2 kinds, line and tow. They are counted by the number of leas of 300 yds in 1 lb. Woollen Y. is soft, fluffy, and elastic. In the W. of England it is counted by the number of hanks of 320 yds in 1 lb., in some parts of Yorks by the number of yds in 1 oz.; each dist., however, has its own method of counting. Worsted Y., usually spun from virgin wool, is smooth and strong. It is counted by the number of hanks of 560 yds in 1 lb. Net silk may be Organzine or Tram; the former is more twisted than the latter, but both are very strong. Spun silk is made from the silk set aside

in the manuf. of fabrics from the cocoons. Silk Y.s are counted by the weight of 1000 yds in drams, or by the number of deniers in 1 hank, a denier being equal to 0.333 lb. Rayon and other synthetic fibres cut into standard lengths and spun into Y. are usually counted by the system used in the industry concerned. Y.s are folded, i.e. 2 or more single Y.s twisted together, for greater strength and for fancy effects. In the hope of simplifying the methods of designating Y. counts, the Textile Institute has for years attempted to secure the adoption of a single standard method. In this connection mention must be made of the method known as Grex proposed in America, and Tex proposed by the Textile Institute; these are respectively the weight in grams of 10,000 metres and the weight in grams of 1000 metres.

See *British Standards* 946 (1941), 'Designation of Twist in Single Yarns, Folded Yarns, and Cables,' and 947 (1941), 'Yarn Count Systems and Conversions'; *Textile Institute Year Book*, 1956.

Yaroslav I, the Wise, prince of Kiev, see KIEVAN RUSSIA.

Yaroslavl': 1. Oblast in Central Russia, N. of Moscow, adjacent to Rybinsk Reservoir (q.v.). It is a lowland region traversed by the Volga and partly covered with mixed forests. There are peat deposits. Area 14,250 sq. m.; pop. 1,371,000. Russian. It has engineering and textile industries, and there are varied old crafts; the area contains 2 large hydro-electric stations. Flax and potatoes are grown, and there is dairy farming (Y. breed). The prin. tns are Y., Rybinsk, Rostov.

2. Cap., economic and cultural centre of the above, the oldest Russian town on the Volga. It is an important industrial and transportation centre, with large engineering (automobiles), chemical (synthetic rubber), and textile (since 1722) industries, oil refining, and flour mills; it is a riv. port and has 4 railway lines. There are many outstanding architectural monuments of the 13th-17th cents., including 17th-cent. churches in the original Y. style. Pop. (1956) 374,000 (1917, 125,000; 1920, 76,000; 1926, 114,000; 1939, 298,000). Y. was founded in 1024, became cap. of Y. principality in 1216, Muscovite in 1463, and prov. cap. in 1777. It was a flourishing commercial centre on the Moscow-Archangel route in the 16th-17th cents. Its industrial development dates from 1564 (shipyards). Y. was Moscow's Volga port until the construction of the Moscow-Volga canal (1937). The first Russian prov. theatre was founded in Y. in 1750, and one of the first educational institutions of univ. level, Demidov Juridical Lyceum, in 1803 (transformed into Y. Univ. 1918, later abolished).

Yaroslavskiy, Yemel'yan (real name Gubel'man, Miney Izraelievich) (1878-1945), Russian politician of Jewish origin. He joined the Russian Social Democratic Labour party (q.v.) in 1898 and worked in the party's underground organisations as a firm follower of Lenin.

He spent sev. years in prison and banishment. Y. took an active part in the seizure of power (see OCTOBER REVOLUTION) in 1917. In 1918 he belonged to the Left Communists (see LEFT OPPOSITION), and later became a champion of Stalinism (q.v.), particularly in falsifying the party history. Y. was also the most prominent Militant Atheist (see ATHEISTS, MILITANT) and editor of the journal *The Godless*. See his *Religion in the U.S.S.R.*, 1932, *Landmarks in the Life of Stalin*, 1942, *Twenty-five years of Soviet Power*, 1943, and the official *History of the Communist Party of the Soviet Union (Bolsheviks): Short Course*, 1943, which Y. largely wrote.

Yarra Yarra, riv. of Australia, rising in the Great Dividing Range, and flowing thence 115 m. W. past Melbourne, Victoria, to the sea.

Yarrow, see MILFORD.

Yarrow, riv. of Selkirkshire, Scotland, rising in the Moffat Hills and flowing ENE. through the Loch of the Lowes and St Mary's Loch to join Ettrick Water just SW. of Selkirk. It is noted for its literary and historic associations, and for the scenic beauty of the valley through which it runs, described by Wordsworth and Hogg. Length 24 m.

Yassy, see JASSY.

Yatton, par. of Somerset, England, 12 m. WSW. of Bristol. There is a fine church of the 14th and 15th cents., and the vicarage dates from the 15th cent. Pop. (estimated) 3000.

Yavorov (Ukrainian Yavoriv, Polish Jaworów), tn in the L'vov Oblast of Galicia (W. Ukraine), 30 m. W. of L'vov. The castle of Y. was the favourite residence of King John Sobieski of Poland. Pop. (1931) 11,000.

Yawl, see SHIPS AND SHIPBUILDING; SAILS AND RIGGING; YACHT.

Yawning, like sighing, is a deep inspiration, but Y. is accompanied by a stretching movement of the jaws and sometimes also of the limbs. Y. is not invariably a sign of boredom; sometimes it is merely the physiological reaction to high carbon dioxide content of the blood following a long period with the body immobilised or from being in a vitiated atmosphere for some time. Y. may also be induced by the sight of another person in the act or by continually watching a slow, rhythmic movement.

Yaws, or *Framboesia*, tropical disease characterised by the formation of red, raspberry-like tubercles upon the face, toes, and genital organs. It is a contagious disease, and chiefly affects young Negroes, though white men may suffer from it. It is endemic in the tropical parts of Africa, in Ceylon, E. and W. Indies, and many of the Pacific Is. In Ceylon it is known as *parangi*, in the Pacific Is. as *coco*, and in some parts of Africa as *dube*. It is caused by a spirochaete (*S. pertinax*) which is closely similar to, or identical with, the *S. pallida* of syphilis. Penicillin is highly effective against Y., as it is against syphilis. Since 1950 the World Health Organisation (q.v.) and the U.N. Inter-

national Children's Emergency Fund have assisted many countries in campaigns to rid themselves of the disease. In 1956 a long-term campaign was started, sponsored and supervised by W.H.O., to try and rid tropical Africa of Y. W.H.O. is providing technical experts and organising penicillin supplies to aid and augment local resources.

Yazd: 1. Dist. of Persia, bounded on the N. by the Central Desert (Dasht-e Kavir), on the S. by Sirjan and Bavanat, on the E. by the Desert of Lut and Rafsinjan, and on the W. by Nain, Bavanat, and Kuhpayeh.

2. Tn 165 m. ESE. of Isfahan. It is an anct city, and was formerly a centre of the silk-weaving industry. It has small textile industries, match and soap factories. It contains sev. old mosques. It has a Zoroastrian community numbering c. 10,000. Pop. c. 66,500.

Yazoo City, cap. of Yazoo co., Mississippi, U.S.A. Pop. 9700.

Ybbs, Austrian tn in the prov. of Lower Austria, on the Danube, 40 m. E. of Linz. It is at the W. end of the Wachau (q.v.) and has an anct church and castle. Pop. 4500.

Ybo, see NEGRO-AFRICAN LANGUAGES, *Sudanic*.

Yeadon, see AIREBOROUGH.

Year. Astronomers recognise various kinds of Y.s. The most usually employed is the *tropical or equinoctial Y.* This is the time required by the sun to complete a revolution with reference to the first point of Aries. The length of the tropical Y. is 365 days 5 hrs 48 min. 46 sec. Owing to the precession of the equinoxes (q.v.), the sun accomplishes the circuit from spring equinox to spring equinox in about 20 min. less time than it accomplishes the circuit of the heavens with reference to some fixed star, and hence the latter Y.—known as the *sidereal Y.*—is about 20 min. longer than the tropical Y. Its actual length is 365 days 6 hrs 9 min. 9 sec. The *anomalous Y.* is the time required by the sun to return from apogee to apogee or from perigee to perigee, or, expressed in another way, it is the time required by the earth to return from aphelion to aphelion or from perihelion to perihelion. Owing to the slow rotation of the line of apsides (q.v.), the positions of apogee and perigee move forward in the ecliptic by 11'25" a year, so that the sun takes longer to reach each of these points than it does to complete the circle of the heavens with reference to a fixed star. The length of the anomalous Y. is 365 days 6 hrs 13 min. 53 sec. The *eclipse Y.* is the interval between successive returns of the sun to the moon's node, and contains 346 days 14 hrs 52 min. 51 sec. See also CALENDAR; METROLOGY.

Year Books, ann. pubs., usually relating the events of the previous year, as the *Encyclopaedia Book of the Year*, and *Annual Register* (q.v.), or works of reference revised yearly, as *Whitaker's Almanack* (q.v.). *Willing's Press Guide* and *The Year Book of Education* are examples of Y. B. containing up-to-date information on particular subjects. See also ANNUALS.

Yeast is a soft, light-brown, cheese-like material. It consists of a mass of minute single-celled organisms belonging to the fungal group of the plant kingdom. The individual cells are just too small to be seen by the naked eye. Each cell reproduces itself by forming a bud on the surface of the cell which eventually separates as a new individual. The generic name is *Saccharomyces cerevisiae*. Different strains of this are used in top and bottom fermentation, in distilling and in baking. Y.s are sometimes used medicinally and in the preparation of food extracts. They are rich sources of the B vitamins and of ergosterol—a source of Vitamin D. Most wild Y.s are found on the surface of fruits and flowers, but a distinct and different group lives on the skin and causes some types of skin disease. Under adverse conditions some Y.s form ascospores. These are thick-walled cells, usually 4 in number, which form within the parent cell. Under favourable conditions they germinate and eventually give rise to the original vegetative form. Industrial Y.s can be divided into 3 main classes:

1. Baker's Y.s—which are characterised by their strong respiratory and reproductive powers.
2. Brewer's Y.s—which have stronger powers of fermentation and are slow and unsuitable for modern baking.
3. Wine Y.s.

Commercial Y. is prepared from a basis of molasses, to which are added Y. cultures, inorganic salts, and sterile air. The Y. culture is prepared by isolating a single cell of the particular strain of Y. required and allowing this cell to multiply in sterile conditions. Y. is a source of Vitamin B and enzymes—maltase, in vertase, zymase. When given the correct conditions for multiplication—sugar, warmth, and moisture—the growth of the Y.s proceeds and a process of fermentation takes place. When Y. is added to a dough aeration takes place, owing to evolution of carbon dioxide in the following manner. Diastase in the flour converts starch into maltose, maltase converts maltose into glucose; the complex enzymic system formerly called zymase converts glucose into ethyl alcohol and carbon dioxide. In the warm conditions provided the carbon dioxide expands, increases the volume of the dough, and gives lightness and porosity. See BREAD; BREWING; WINE.

Yeats, Jack Butler (1871–1957), Irish painter, son of John Butler Y., a painter, and brother of W. B. Yeats; educ. privately at Sligo. His vigorous portrayals of Irish life and landscape are painted in a colourful and highly individualistic style. His pubs. include *Sailing, Sailing Swiftly*, 1933, and *The Careless Flower*, 1947.

Yeats, William Butler (1865–1939), poet and critic, b. Dublin. His family was Protestant, and his father was a painter. Y. was educ. at Godolphin School, Hammersmith, and Erasmus

Smith School, Dublin. He spent the middle years of his life in London and d. in the S. of France, but his most formative years were spent in co. Sligo. He was deeply influenced and inspired by the literary and mystic-religious heritage of his native land, but Eng. and Continental forms and ideas had much effect on his later work.

Press Portrait Bureau

W. B. YEATS

Y. studied painting, but soon realised that his strongest inclinations were literary. Only in later years, however, did his poetry afford him a comfortable livelihood. Of his earliest pubs. of verse, notable productions are *The Wanderings of Oisín*, 1889, *The Wind Among the Reeds*, 1899, and *In the Seven Woods*, 1903. He ed. the writings of Blake, 1893, and it seems that of all Eng. literary influences upon him, that of Blake was the strongest and the most enduring. He lectured in England and America, and was one of those responsible for the foundation of Dublin's Abbey Theatre, of which he became a director. There is a marked difference between Y.'s early work, full of splendid imagery and simple, spontaneous emotion, e.g. *The Wanderings of Oisín*, and the conscious art which asserts itself in such later work as *The Wild Swans of Coole*, 1917. Y. laboured in his later work to achieve technical perfection. In *The Winding Stair*, 1929, he went back to reminiscence of his whole life as an artist: and in his posthumous

Last Poems, and Plays, 1940, poetic richness is combined with a sombre melancholy.

The greatness of his later work is now beginning to be realised, but his earlier poems still retain a generally wider popularity. 'The Lake Isle of Innisfree' and 'The Rose of the World' showed that Y. could verify the legends of his country with simplicity and fervour. He possessed the power to weave moving images out of the most commonplace suggestions from the things around him. This is notably illustrated in the 'Ballad of Father Gilligan' and 'A Dream of a Blessed Spirit.' Mention may be made of the *Countess Cathleen*, 1892, which is directly from the Fr. source and is one of the finest of the plays of Y. It is somewhat wanting in dramatic power, but contains some of the most finished poetry he produced.

Y. was awarded the Nobel prize for literature in 1923. Ireland acknowledged his greatness by making him a senator of the Irish Free State, and 9 years after his death, his body was brought from France and interred in Drumcliffe churchyard in co. Sligo. His lyrics place him among Ireland's greatest poets; but his genius transcended national boundaries, and critics of many nations agree that in splendour of diction and imagery and clarity of vision he was one of the most outstanding literary figures of his age. See *lives* and studies by J. H. Pollock, 1935; L. MacNeice, 1941; V. K. N. Menon, 1942; P. Ure, 1946; R. Ellmann, 1949; V. Koch, 1951; also T. R. Henn, *The Lonely Tower*, 1950; F. Wilson, *Yeats and Tradition*, 1951; a Yeats bibliography by A. Wade, 1953.

Yeaveering (O.E. *Adgrrin*), vil. of Northumberland, England, 4 m. WNW. of Wooler. Excavations carried out between 1953 and 1957 have revealed the earliest royal residences found in England. Here a great hall, sev. smaller halls, and a large multi-tiered structure were erected in timber by the Anglo-Saxons soon after the beginning of the 7th cent. The township was burnt in 633 by the enemies of Edwin, whose cap. had been Y., but was twice rebuilt before being abandoned at the end of the same cent.

Yecla, Sp. tn in the prov. of Murcia, with manufs. of footwear, and a trade in cereals, wine, and fruit. Pop. 18,000.

Yedo, see Tokyo.

Yegor'yevsk, tn in the Moscow Oblast of Central Russia, 72 m. SE. of Moscow. It has a considerable textile industry (since 1820's). Pop. (1956) 59,000. Y. has been known since 1462 as a vil., and has been a tn since 1778.

Yekaterinburg, see SVERDLOVSK.

Yekaterinodar, see KRASNODAR.

Yekaterinoslav, see DNEPROPETROVSK.

Yelets, tn in the Lipetsk Oblast of Central Russia, 70 m. NW. of Voronezh. It is a local industrial and cultural centre and a railway junction; an old lace-knitting craft still survives. Pop. (1956) 60,000 (c. 1914, 58,000; 1926, 36,000). Y. has been known since 1146; before 1917 it had a flourishing grain trade (first elevator in Russia, 1886).

Yelgava, see JELGAVA.

Yeliasvetgrad, see KIROVOGRAD.

Yelizavetpol', see KIROVABAD.

Yell, second largest is. of the Shetland (q.v.) group, Scotland, consists mainly of peat moorlands, but the coastal dists. and more fertile. Y. is noted for trout and sea fishing, and crofting is carried on. The main centres of pop. are at Mid Yell and Ulsta. Area 81½ sq. m. (with the is. of Hascoasy); pop. 1200.

Yellow, regarded, with red and blue (q.v.), as a 'primary' colour. Artists use as Y. pigments yellow ochre, cadmium and chrome yellow, lemon yellow (chrome, aureolin), and Naples yellow (see also COLOUR; PIGMENTS).

Yellow Atrophy, see LIVER.

Yellow Bird, name for 2 N. Amer. birds, *Chrysomitris iris*, thistle bird, and *Dendroica aestiva*, yellow poll warbler.

'Yellow Book', The, an illustrated quarterly magazine pub. by Matthews and Lane in London in 1894-7. It was distinguished for its literary and artistic contributions by Aubrey Beardsley (who was for a time its art-editor) and Max Heerbohm, both of whom gave free rein to their dynamic powers of caricature. Another leading contributor was Henry James.

Yellow Book of Lecan, now in Trinity College, Dublin, a collection of independent MSS., to one of which the name originally belonged; one of the most important is an early version of *Táin Bó Cuailnge*. The *Yellow Book* was published in facsimile by Robert Atkinson in 1896.

Yellow Cross, see MUSTARD GAS.

Yellow Emperor (Huang Ti) (c. 2700 BC), legendary Chinese emperor who is credited with having made a united kingdom out of all the warring groups under chieftains that were scattered over the whole country. The inventions and discoveries of many cents. have been assigned by tradition to the single reign of the Y. E.

Yellow Fever, **Yellow Jack**, or **Amaryl**, acute infectious virus disease occurring in tropical and subtropical regions except where rainfall is deficient; the region round the Gulf of Guinea and the Caribbean Sea, the noted areas, includes the W. Indies. Y. F. occurs also on the W. coast and the Brazilian coast of tropical S. America, and in Central America. In Africa it extends along the coastal regions from Senegal to the Congo. It has spread as an epidemic farther northwards into the U.S.A., and in 1940 there was an outbreak in the Sudan. Y. F. reappeared in epidemic form in Nigeria in 1946, for the first time for many years; but with the use of D.D.T. and intensive anti-amaryl inoculation, the disease was rapidly controlled. With the usual rise of temp., vomiting and rigor are found after an incubation period usually of from 1 to 4 days. This in slight cases is the whole course. In severe cases, jaundice and haemorrhage are prominent symptoms. Haemorrhage becomes very prominent, stools and vomit being both affected. Both skin and kidneys exhibit haemorrhage and it is also

common from the gums; the urine also contains excessive albumen. The usual treatment for fevers is employed. An effective prophylactic vaccine, using a strain of the virus transmitted through mice, is available. A more recent large-scale production of vaccine has been made possible by cultivating the virus in chick embryo. One attack usually gives immunity; the Negro is not very susceptible. Finlay, in 1881, suggested that the transmission of the disease was effected by mosquitoes. The Amer. Commission of 1900 traced the disease to a virus conveyed by the mosquito *Aedes aegypti*. Bauer has shown that other species of mosquito may also transmit Y. F. Gorgas carried out thorough tests of preventive measures in 1901. These were based on the prevention of breeding by the mosquito, by keeping all water vessels mosquito-proof, and covering puddles and stagnant water with oil; drainage and sanitation were thoroughly inspected and improved with the same purposes. Within 6 months the disease disappeared for the first time in Havana. The similar thorough measures carried out in the Panama Canal Zone completely confirmed the efficacy of the methods. Y. F. has been found to be enzootic in certain species of monkeys. This monkey virus is transmitted to human beings living in or near forests, and there is little doubt that it is the reservoir of infection (q.v.) and is capable of causing epidemics when introduced by some traveller into a community or town where *A. aegypti* is prevalent. Air transport has increased the risk of spread of Y. F. to countries in which it has not previously occurred. See also EPIDEMIOLOGY; TROPICAL MEDICINE.

Yellow Hammer, or Yellow Bunting, see BUNTING.

Yellow Hammer State, see ALABAMA.

Yellow Metal, see MUNTZ'S METAL.

Yellow River, Hoang-Ho, or Hwang-Ho, riv. of China, which rises in the Chishih-shan ranges in the prov. of Chinghai. After an extremely tortuous course it crosses the prov. of Kansu, flows into Mongolia, and then turns almost at right-angles S., separating Shensi from Shansi, passes through Honan, and flows into the Gulf of Chihli. The most important tns on its banks are Lanchow and Kaifeng, and its chief tribs. are the Wei Ho coming from the W., and the Fen Ho from the E. The riv. has come to be known as 'China's sorrow' on account of its tendency to burst its banks and to change its course, thereby causing great disasters, with the loss of millions of lives. In 1938 the Nationalist gov., in an attempt to stop the Jap. advance, breached the dyke on the S. bank. Some 2,000,000 ac. were flooded and 400,000 people perished. Intensive dyke-building since 1949 has kept the riv. under control, and hydro-electricity power stations are now built in the Liuchiyau and Samnen Gorges. The Y. R. is the second longest in China, and has a length of 2600 m.

Yellow Rocket, see CRESS.

Yellow Sea (Hwang-Hai), large gulf of the Pacific Ocean, its length being about

620 m., and its greatest width 400 m. It is divided into the Gulfs of Korea, Liaotung, and Chihli, and to the E. is studded with is. Its waters are shallow, and are discoloured by the yellow mud carried down by the Yellow R.

Yellow-tail, see AMBER-FISH.

Yellow-wort, see BLACKSTONIA.

Yellowknife, tn in the NW. Terrs., Canada, situated in Y. Bay on the N. shore of Great Slave Lake. It is the centre of a gold-mining region. The tn was founded in 1935 after gold discoveries were made in the vicinity. Pop. about 3000.

Yellowstone, riv. of the U.S.A., trib. of the Missouri. Its source is in the Wyoming Rockies. It flows NNW. through Yellowstone National Park and Grand Canyon, then E. through Montana and N. Dakota to join the Missouri. Length 671 m.; it drains 70,400 sq. m.

Yellowstone National Park, U.S.A., U.S. Gov. Reservation in the NW. of Wyoming, projecting about 2 m. into Montana and Idaho. It is less a park than a series of parks formed by different valleys on the two sides of the Rockies, and is subject to great extremes of climate. The whole region is of geologically recent volcanic origin, and the geysers are still active. The scenery is famous for its brilliant colouring, and for natural phenomena, which include boiling springs and petrified forests, etc. There are sev. great herds of wild animals. The first white man to attempt an exploration of the region was a trapper named John Colter, who in 1807 traversed a part of this dist. His tales were disbelieved, but were confirmed 30 years later by the discoveries of James Bridger. In 1870 the first official survey was made, and in 1871 Ferdinand V. Hayden's expedition revealed the glories of the Yellowstone dist. Y. N. P. became a National Park in 1872. Area 3458 sq. m.

Yemen, The, state in the SW. corner of Arabia, bounded N. by Asir (q.v.) and Nejran, E. by the desert, S. by the Aden protectorate, and W. by the Red Sea; area 74,000 sq. m.; pop. perhaps 4,000,000. It consists of a coastal plain, and a double range of mts with a plateau between; the E. slopes are barren, except for occasional valleys, and fade into the desert. The coastal plain is hot and barren, though some oases lie at the foot of the hills; the W. face of the mts gets plenty of rain, is carefully terraced and fertile; the plateau is fertile with summer rains. About 70 varieties of grapes are grown. Before the Christian era Y. was the centre of sev. states which controlled one of the trade routes to the E. and also the incense route (see SABA). The opening up of the Persian Gulf-Palmyra route and of the direct sea route to and from India ruined their trade. The few monuments which are known, and the many inscriptions, show that these states had an advanced civilisation and elaborate organisations. In the Christian era the Abyssinians held Y. for a time, as did the Persians, but the Muslims soon conquered it, and it was first a part of the caliph's realm, then one

or more independent states or a dependency of Egypt and later of Turkey. In 897 Zeidi sectaries (a branch of the Shi'a) under an imam (q.v.) founded a state there which has lasted with vicissitudes till the present day. When the Turks left Y. in 1918 the Zeidi imam Yahya ibn Mohammad made himself master of the whole country. In 1934 Ibn Saud in a short campaign forced the imam to give up all claim to Asir and Nejran. The imam attempted to keep foreigners out of Y., and it was not till 1950 that there was any exchange of diplomatic representatives with non-Arab states. The sacred law of Islam is the law of the land, and there are no concessions to modernity. Slavery still exists. The Jews of the Y., who formerly made up the bulk of the country's artisans, were treated as second-class citizens, but nearly all the Jews (60,000) have now (1958) gone to Israel. In theory the imam Yahya was absolute (within the law), but prov. governors seem to have treated his orders much as they pleased. His family came to monopolise most of the country's trade, and this, combined with his conservatism, led to a rebellion in which the imam with 2 sons was murdered in Feb. 1948; the rebel leader Seyid Abdullah Ibn Al Wazir declared himself king, but the imam's eldest son Ahmad defeated and killed the usurper in Mar. and now rules in his father's stead. Y. joined Saudi Arabia and Iraq in a treaty of brotherhood in 1936, was represented at the London Conference on Palestine in 1939, and joined the Arab League in 1945. Though bound by treaty to Britain (1934 and 1951), Y. has not lost hope of possessing Aden, and during 1956 and 1957 there was increasing tension on the Y.-Aden frontier. There were aggressive incursions by Y. troops into Aden ter. and the Y. Gov. began to adopt a growingly hostile attitude towards Britain, and to strengthen her links with other Arab states. On 8 March 1958 Y. signed an agreement linking herself to the United Arab Republic (q.v.) in a federal union. This would have unified armed forces and a unified foreign policy, but would permit Y. to retain its monarchy, its international status, and separate diplomatic representation.

Trade is being developed; Y. exports coffee, food grains, hides, and raisins; a beginning has been made with irrigation and cotton growing. Oil was discovered in 1947, and coal is reported near San'a (q.v., 7260 ft), one of the caps; the other is Ta'izz (4600 ft); other tns are Dhamar, Ibb, and Yerin, the ports being Mocha, Hodaida, and Loheiyah. As in the Hadramaut, the pop. is divided into sayyids, tribesmen, peasants, and half-castes. The Zeidis live mostly in the mts, while those of the lower ground are orthodox Muslims (Shafi'is). The Ismailis, who once had a stronghold in Y., have disappeared. See also ARABIA. See C. Niebuhr, *Description of Arabia* (first pub. 1772), trans. 1889; F. M. Hunter, *Arab Tribes in the Vicinity of Aden*, 1886; O. Weber, *Edouard Glasers Forschungsreisen in Sudarabien*, 1909; H. F. Jacob,

Kings of Arabia, 1923; H. Scott, *In the High Yemen*, 1942; A. Farouqy, *Introducing Yemen*, 1947.

Yen (Jap. and Chinese *yuan*, round dollar), gold Jap. monetary unit, equal to 100 sen; also a silver coin of the same value, which was formerly current. In Oct. 1897 the gold standard was adopted with a unit value of 0.75 gramme of pure gold, called the Y., then equal to 2s. 0½d., or 49½ U.S. cents, the pieces coined being 20-, 10-, and 5-Y. gold coins. Subsequently these gold pieces were used at double their face value and the 1-Y. silver was withdrawn. The notes of the Bank of Japan are of 3 denominations, 10, 100, and 1000 Y. The exchange rate at the end of 1957 was 1010 Y. to the £ sterling and 360 Y. to the American \$.

Yenakiyevo (from 1920's Rykovo, 1935-1943 Ordzhonikidze), tn in the Stalino Oblast (Ukraine), 28 m. N.E. of Stalino. It has large coal-mining, iron and steel (since 1897), and chemical industries. It was founded in 1883. Pop. (1956) 86,000 (1926, 24,000; 1939, 88,000).

Yendys, Sydney, see DOBELL.

Yenisey, riv. in Central Siberia, rising in the Sayan Mts (in 2 headstreams) and flowing N. into the Y. Bay (long estuary) of the Kara Sea. Length from the confluence of headstreams, 2100 m.; from the source of R. Selenga in the Y. drainage area, 3700 m.; drainage area over 1,000,000 sq. m. In the upper reaches the Y. is a mountain riv. with rocky shores and rapids; from below Krasnoyarsk to Dudinka it divides the W. Siberian lowland and the Central Siberian plateau and is a mighty stream with few is. and a wide valley. The main tribs. are the Angara (q.v.), Podkamennaya Tunguska, and Nizhnyaya Tunguska. Y. is navigable almost throughout its course, and is chiefly used for transportation of timber, grain, and coal; it is accessible to seagoing vessels as far as Igarka (see IGARKA; NORTHERN SEA ROUTE). The chief ports are Dudinka, Igarka, Krasnoyarsk. The Y.'s great energy resources will be utilised with the construction of hydro-electric stations above Krasnoyarsk (3,200,000 kW., building began 1956) and at Yeniseysk (5,000,000 kW., projected). Y. was first visited by the Russians in the 16th cent., and its basin has been colonised by them since the 17th. It is an area of banishment (since the 17th cent.), labour camps, and great construction projects.

Yeniseysk, tn on the Yenisey in the Krasnoyarsk Krai (Central Siberia), 217 m. N. of Krasnoyarsk. Founded in 1618, it was a trading and administrative centre of the Yenisey basin in the 17th-18th cents. A gigantic hydro-electric station (5,000,000 kW.) is planned here. Pop. (1931) 6000 (c. 1914, 12,000).

Yentai, see CHEFEO.

Yeo: 1. Riv. of Somerset, rising in Dorset. It flows past Yeovil and joins the Parret after a course of 25 m.

2. Another riv. of Somerset. It rises near Harptree and flows by way of the Y. Reservoir into the Bristol Channel. Length 17 m. There is also a Y. in Devon.

Yeoman, originally a 40-shilling freeholder intermediate in status between the gentry and the peasantry; qualified to serve on juries and vote for knights of the shire, etc. Later, a small landowner or person of the middle class engaged in agriculture.

Yeomanry, name applied to mounted volunteer corps, not generally so called until 1794. Bodies of volunteer horse were raised before this during the reign of William III and at the time of the 1745 rising. The first 1745 unit was the Northampton Defence Association which raised in that year a strong troop of 200-300 gentlemen and their mounted servants. In that year also certain landowners of Yorks. formed the Royal Regiment of Hunters 'to harass the Rebels in their march.' The first unit of any permanence was the London and Westminster Light Horse Volunteers (1779). Following on the early successes of the Fr. revolutionary armies, a second wave of yeomanry corps came into being in 1794, but was not this time intended to fulfil a guerilla rôle but to replace cavalry regiments of the line drafted overseas. By May of that year 32 corps were in being; the first was the Rutland corps with 3 troops, followed by Kent and Surrey with 7 and 6 troops respectively. A troop had anything between 40 and 80 effectives. By 1798 every co. and sev. large tns had raised Y. to a total for the whole country of 163 troops, each nominally 150 strong, though probably there were only about 16,000 effectives in all.

Regulations for the raising and maintenance of such troops were in general the same as for Volunteers; the gov. provided only ammunition except on actual service, and the Y. were bound to act as mounted police in case of riot (see VOLUNTEERS).

After 1816 the Y. were reduced but not, like the infantry volunteers, disbanded, and for many years, until the estab. of co. police forces, played an important part in the maintenance of public order, being frequently called out to suppress riots and other disorders. Between 1899 and 1918 15 new Y. regiments were raised, of which 2, the Lovat Scouts and the Scottish Horse, served as regiments in S. Africa. The rest provided drafts for the Imperial Yeomanry.

In 1914 there were 53 regiments of Y. Some served dismounted on the W. Front, and 1 cavalry div. of the Egyptian Expeditionary Force (the 74th) was entirely made up of Y.

When the Territorial Force was constituted in 1908 the Y. with the volunteers was merged in it, and when it was revived in 1922 as the Territorial Army it included 55 Y. regiments. Six of these formed the 5th and 6th Cavalry Brigades, there were 8 Army Troops Cavalry Regiments, 8 groups of Armoured Car Companies, 8 Field Brigades R.A., and the remainder were converted to other arms, mostly artillery. In these capacities they served in the Second World War, and still retain their individuality. There were at the beginning of 1958 46 Y. regiments, 19 serving as R.A.C. T.A., 26 as R.A. T.A., and 1 as a Signal Regt. T.A.

Yeomen of the Guard, Brit. royal bodyguard, employed on state occasions as part of the sovereign's retinue, founded by Henry VII in 1485. The bodyguard consists of 6 officers (a Captain, a Lieutenant, an Ensign, a Clerk of the Cheque and Adjutant, and 2 Exons) and 80 men, all selected for long and distinguished service in the regular army, the Royal Marines, or the R.A.F. There has been very little change in the men's uniform since Tudor times, but the officers' uniform was changed by command of William IV from a Tudor style to that of their present uniform of a field officer of the Waterloo period. The term 'Beefeaters,' given to both the Yeomen Warders (q.v.) of the Tower of London and the Y. of the G., is of uncertain derivation, but it seems most likely that the name was applied in the late 17th cent. by a visiting Fr. count on account of the large daily ration of beef given to the Y. of the G. See Sir R. Lennell, *History of the Bodyguard of the Yeomen of the Guard*, 1904.

Harris's Picture Agency

A FORMER CHIEF YEOMAN WARDER,
WITH HIS STAFF OF OFFICE

Yeomen Warders, guardians of the Tower of London (q.v.), presumably in existence as a body since 1078, when Wm the Conqueror began the building of the

White Tower. They were not appointed members of the Yeomen of the Guard (Extraordinary) until 1552, when Edward VI also granted their existing state dress. They do not wear the cross belt of the Yeomen of the Guard. Their blue undress uniform was granted by Queen Victoria in 1858. Candidates for enrolment as Y. W. must be serving warrant officers or staff sergeants of the Army or R.A.F. under 50 years of age; the many other qualifications which are demanded are set out in Queen's Regulations. Y. W. are always on duty while the Tower is open to the public; at other times regiments of the Brigade of Guards normally mount the guard. *See also YEOMEN OF THE GUARD.*

Yeovil, municipal bor. and mkt tn of Somerset, England, on the R. Yeo. The church of St John the Baptist is a 14th-cent. example of the Perpendicular style, and is known as 'The Lantern of the West.' Prin. industries are gloving, leather dressing, aircraft manuf., and food processing. Pop. 23,770.

Yerevan (formerly Russian Erivan'), cap., economic and cultural centre of Armenia. It has large aluminium, engineering, food, and light industries, and manufs. synthetic rubber, tyres, chemicals, and electrical equipment; its brandy is famous. It is the seat of the Armenian Academy of Sciences (1943) and a univ. (1920). Known since the 7th cent., from 1440 it belonged variously to Persia and Turkey; it became Russian in 1827 (prov. cap.), and was cap. of independent Armenia from 1918 to 1920. Pop. (1956) 385,000 (c. 1914, 33,000; 1926, 65,000; 1939, 200,000), mostly Armenians.

Yermak (d. 1584), Cossack ataman (*see* COSSACKS; HETMAN), commonly known as 'the conqueror of Siberia.' At the head of 840 Cossacks and soldiers Y., who was in the service of the merchant family of Stroganovs (q.v.), in 1581-4 invaded the Siberian Khanate (q.v.) and conquered its cap., upon which W. Siberia was annexed by Muscovy. *See also SIBERIA.*

Yevele, Henry (d. 1400), now regarded as the greatest Eng. medieval architect, was given charge of the royal works at Windsor Castle in 1360. Other buildings attributed to him are Westminster Hall; the nave, W. cloister, Abbot's House, and sev. monuments at Westminster Abbey; the nave of Canterbury Cathedral; the W. Gate and City Walls of Canterbury; Cowling Castle; and some bridges. *See* biography by J. Harvey, 1944.

Yevpatoriya (until 1783 Gözlev), tn in the Crimea, on the Black Sea shore, 60 m. NW. of Simferopol'. It is an important beach and mud health resort, particularly for children. An anct. Gk colony, it became Turkish in 1478, and Russian in 1783. It has been the spiritual centre of the Crimean Karaites since 1837. Pop. (1958) 55,000 (c. 1914, 32,000), before 1945 partly Tatar.

Yew, *Taxus baccata*, European evergreen tree, with linear leathery leaves and dioecious flowers, followed by bright, rose-red, cup-shaped fruits or arils. The

tree attains a very great age; its wood is hard and close grained, but splits readily. It was formerly used for making long-bows. Its leaves and seeds are poisonous.

Yezd, *see* YAZD.

Yezhov, Nikolay Ivanovich (? d. 1939), Russian Communist, one of the most sinister figures of the Stalinist regime (*see* STALINISM). He came from a poor family, received little education, and joined the Communist party (*see* COMMUNIST PARTY OF THE SOVIET UNION) after it had seized power in Russia. He emerged from obscurity in 1934, when he became a member of the party's Central Committee and of the Central Committee's Organisational Bureau; and soon afterwards became chairman of the Commission of Party Control (which was referred to as the party's 'intelligence service') and secretary of the Central Committee. In 1936 Y. was appointed Commissar for Internal Affairs (*see* N.K.V.D.) with the express task of carrying out the Great Purge (q.v.), probably the bloodiest period of the Communist regime, known in Russia as the 'Yezhovshchina'. He was dismissed in 1938 soon after becoming a member of the Politburo (q.v.), and succeeded by Beria (q.v.). Y. was appointed Commissar for Water Transport, but has not been heard of since 1939. In his secret report to the 20th Party Congress (1953) Khrushchev described Y. as a degenerate. *See* B. D. Wolfe, *Khrushchev and Stalin's Ghost*, 1957.

Yezhov-Cherkesk, *see* CHERKESK.

Yezidis, or Shemshieh Kurds, religious sect who live chiefly in the Sinjar hills, N. of the Mesopotamian plain, but also found on the Van and Erzerum plateaux in Persia, and in Transcaucasia, near the E. bank of Lake Gokcha. Their beliefs come from Mohammedan, Christian, and various other sources. They are commonly called 'Devil Worshipers.' Their religion is based on the worship of good and evil.

Yezo, *see* HOKKAIDO.

Yggdrasil, Iggdrasil, or Igrdrasil, Nordic 'the tree of Life,' the vast ash-tree which was the entire universe. Y. had 3 roots: one in Nifheim, in the well Hvergelmir, which the dragon Nithhög gnaws ceaselessly; one in Jotunheim, in the well Mimir, the source of all wisdom; the third in Urthabrunn, from the waters of which the Norns sprinkle Y. every day to avert its decay. The branches of Y. are inhabited by an eagle and a hawk; the foliage feeds 4 sacred harts; and Rata-tösk, the strife-making squirrel, goes continuously up and down the trunk to maintain the hostility of the eagle for Nithhög. *See* MYTHOLOGY, *Teutonic Mythology*.

YHWH, *see* JEHOVAH.

Yiddish (Ger. *Jüdisch*, 'Jewish'), the language of E. European Jewry and of its many emigrants in other parts of Europe and overseas (especially in the U.S.A., where there are some 5,000,000 Y. speakers), originated in the Rhineland in the 14th cent. Y. is based on Middle

High Ger. as it was spoken by Jews, who added to it sev. Romance words (Old It. and Old Fr.) and, particularly, many Heb. words and phrases peculiar to Jewish life and observance. Jewish migration transplanted it to various countries (Poland, Russia, Lithuania, Rumania, etc., also to England, the U.S.A., S. Africa), where Y. absorbed other Heb. words as well as words from Polish, Russian, Eng., etc. Y. employs the modern Heb. alphabet (with slight modifications), and is written from right to left; it has a rich literature: the best-known modern Y. writer was Sholem Asch (q.v.).

Yingskow, see NEWCHWANG.

Yinhien, see NINGPO.

Yiping, or Hsüfu, tn of Szechwan, China, on the Yangtse, 130 m. SW. of Chungking. It is a trade centre, chiefly with Yunnan. Pop. 80,000.

Yird-house, see SOUTHERAINS.

Y.M.C.A., see YOUNG MEN'S CHRISTIAN ASSOCIATION.

Ymir, mythical Norse giant formed from the ice of the rivs., called Elivagar when this melts. Y. was nurtured by 4 streams of milk from the cow Audhumla, which created Buri, the grandfather of Odin. He fathered the Jötuns, a race of evil giants (q.v.), but Buri's wonderful grandchildren—Odin, Vili, and Ve—slew Y. and the race of giants, all save Bergelmir and his hideous wife, drowned in his blood. Y.'s body was flung into Ginnunga-gap abyss, and his slayers made from his blood the sea, from his bones the mts and rocks, from his skull the firmament, from his brain the clouds, from his flesh the earth, and from his eyebrows Midgard, where Man was eventually to dwell. Y. is known as the Rime Giant and typifies primeval chaos.

Ymuiden, see IJMUIDEN.

Yodel, primitive, wordless song, or warble, practised in various forms by mt-dwellers in Switzerland, Tirol, Styria, etc., characterised by rapid modulations from chest notes to falsetto, very free in rhythm and metre and using as a rule the restricted scale of the natural harmonics of instruments like the alphorn. The Y. is first mentioned in Acts of Martyrs, AD 397, but is doubtless prehistoric. Probable origin, the *Jauchzer* or whooping cry still used in greeting or warning.

Yoga, fourth of the 6 systems of Hindu philosophy, commonly regarded as a theistic development of the Sankhya, directly acknowledging Ishvara or a supreme being. Its alleged author is Patanjali, and its aim is to teach the means by which, through discipline of the body, the human soul may attain complete union with the Supreme Soul. See S. Dasgupta, *Yoga as Philosophy and Religion*, 1924; K. T. Behanan, *Yoga*, 1938; Sri Aurobindo, *Synthesis of Yoga*, 1948; P. Brunton, *Hidden Teaching Behind Yoga*, 1950; E. E. Wood, *Practical Yoga, Ancient and Modern*, 1951.

Yohimbine, alkaloid (q.v.) of the chemical formula $C_{17}H_{21}N_3O_2$. It occurs in the leaves and bark of the yohimbah tree (*Coryanthe Yohimbe*), and is used, par-

ticularly in veterinary practice, as an aphrodisiac.

Yokohama, chief seaport of Kanagawa, Japan, on Tokyo Bay, with a good and commodious harbour. Y. in 1859 took the place of Kanagawa, which was first appointed as the treaty port on the W. side of Tokyo Bay, and now includes it. The tn grew rapidly and had considerable trade. With Tokyo, it was largely destroyed in a great earthquake, 1923, but was afterwards reconstructed. The chief imports are such raw materials as cottons, woollens, metals, sugar, and petroleum; the chief exports silk, cotton and chemical textiles, machines and tools, furniture, toys, paper, and tinned food. Y. was heavily raided by Amer. bombers in 1945, and suffered severe damage. It was quickly rebuilt, and is now one of the chief industrial cities of Japan. Apart from large shipbuilding yards, it has many factories producing foodstuffs, cloth and clothing, furniture, chemicals, glass, steel, railway carriages, firearms, electrical machines, and machine tools. Pop. 1,144,000.

Yokosuka, seaport and naval station of Kanagawa, Japan, on Tokyo Bay, 14 m. SW. of Yokohama. Pop. 90,000.

Yola, tn of Adamawa prov., Nigeria, Africa, on the R. Benue near the border with the Cameroons. Y. is the cap. of Adamawa. Prin. crops are cotton, rice, and tobacco. Pop. c. 5300.

Yolo Archipelago, see SULU.

Yôm Kippur, or Yôm Ha-Kippurim, see DAY OF ATONEMENT.

Yonge, Charlotte Mary (1823-1901), novelist, b. Otterbourne, Hants. She pub. various historical works, a *History of Christian Names*, 1863, and a monograph on *Hannah More*; but she is chiefly remembered as the author of the sentimental novel *The Hair of Redcliffe*, which she pub. in 1853, and *The Daisy Chain*, 1856, both of which were extremely popular with young and old alike. She wrote over a hundred books in all. See lives by C. Coleridge, 1903; S. Bailey, 1934; G. Battiscombe, 1943. See also Margaret More and Alicia Percival, *Victorian Best-Seller*, 1948.

Yonkers, city of Westchester co., New York, U.S.A., on the Hudson R., N. of and adjoining New York city, of which it is a residential suburb. It has carpet, elevator, and cable manufacturing plants; Y. also makes hats, clothing, chemicals, knitted goods, and food products, and there are printing works. It is the seat of the Boyce Thompson Inst. for Plant Research and of St Joseph's Seminary and College. Tibbetts Brook Park and Empire Race Track are near by. Pop. 157,800.

Yonne: 1. Dept of central France, formed of parts of the anct provs. of Champagne, Orléanais, and Burgundy. It is watered by the R. Y., and the surface is mostly flat. The dept is mainly agric., vines, cereals, beet, and mrkt-garden produce being cultivated, and livestock being raised. The prin. tns are Auxerre (the cap.), Avallon, and Sens (qq.v.). Area 2,892 sq. m.; pop. 266,400.

2. Fr. riv. Rising in the Monts du Morvan, it flows NW. across the depts of Nièvre and Y. to join the Seine near Montereau. Length 183 m.

York, House of, branch of the Eng. royal dynasty of Plantagenet, descended from Lionel, Duke of Clarence, third son of Edward III, and Edmund, Duke of York, fifth son of Edward III. The head of the house was Richard, Duke of York, who was killed at the Battle of Wakefield, 1460. His sons, Edward IV and Richard III, and grandson, Edward V, were kings of England, 1461-85. Henry VII united the houses of York and Lancaster by marrying the daughter of Edward IV, Elizabeth. The title, Duke of York, has in recent times been borne by the second son of the reigning monarch.

York, Frederick Augustus, Duke of (1763-1827), soldier, second son of George III, b. London. He was given the bishopric of Osnabrück at the age of 6 months, so that he might receive its vast revenues. In 1784 he was created Duke of York and Albany. He commanded the Brit. forces in Flanders in 1793-5 and again on the occasion of the Helder expedition of 1799, both being campaigns in which Brit. arms met with little success. He was made a F.-M. in 1795 and commander-in-chief in 1798. He lost this latter appointment in 1809 following scandals connected with his mistress Mary Anne Clarke, but was reinstated in 1811. He was responsible for a number of useful army reforms and founded the Duke of York's Royal Military School. He is commemorated by a column, with his statue on the top, near the Mall. He is also commemorated in the anonymous lines:

'The grand old Duke of York,
He had ten thousand men,
He marched them up to the top of the hill
And he marched them down again,' etc.

See J. Watkins, *A Biographical Memoir of Frederick, Duke of York*; A. H. Burne, *The Noble Duke of York*, 1949.

York: 1. City and municipal bor., cap. of Yorks, England, seat of an archbishopric, on the E. Ouse, 198 m. NNW. of London and 200 S. of Edinburgh. It is one of the most famous of Eng. cities, and contains many varied historical remains.

The Rom. fortress of *Eboracum* was estab. at the junction of the R.s Ouse and Foss in AD 71. During the 300 years of the Rom. occupation 3 emperors stayed here—Hadrian, Severus, and Constantius Chlorus. The 2 last named died in Y., Severus in 211 and Constantius in 306. The son of Constantius, Constantine the Great, was proclaimed here on the death of his father. The chief Rom. remains are the Multangular Tower and adjoining wall, c. 306, and the foundations of the earlier tower, c. 211, near to Monk Bar. Y. was successively a Saxon and a Dan. royal city, and was the cap. of the kingdom of Northumbria. In 627 King Edwin of Northumbria was baptised by Paulinus in a wooden church on the site of the present Minster. In the 8th cent.

Y. was renowned as a seat of learning; Alcuin, the headmaster of its school of St Peter, was called by Charlemagne to found a school at Aachen and a system of education for the Holy Rom. Empire. At the Conquest the pop. was estimated to be 8000, second in size only to that of London. Later it developed into an important commercial city, a centre of the wool trade, the small ships of its Merchant Adventurers sailing from the wharves of Y. to those of the Hanseatic tns. As the tonnage of ships increased the city's European trade declined and Y. lost its commercial importance, whilst retaining its eccles. and much of its political importance. It has at times been the virtual cap. of England; Parliaments have been held here, and Edward I, Edward II, and Edward III made it their base for the wars against the Scots. After the Pilgrimage of Grace Henry VIII estab. here the H.Q. of the Council of the North. The last Parliament held in Y. was called by Charles I. In 1644 the city was besieged by Parliamentary forces, and surrendered after Marston Moor. The 18th cent. saw a revival of its fortunes, when it became the fashionable resort for the northern gentry, and in the 19th cent. its prosperity was again estab. when George Hudson fulfilled his promise to 'mak all't railways come to York.'

The chief glory of the city is the famous Y. Minster (q.v.). There are 17 other medieval churches in Y., but 2 of these are in decay, another has been put to secular use, and one, Holy Trinity, Goodramgate, is used for worship on Trinity Sunday only. This last has some interesting glass, a 'squinet,' and box pews. All Saints', North Street, is famous for its 14th- and 15th-cent. glass and its graceful spire, whilst All Saints', Pavement, has a lantern tower distinguishing it from all the other churches. The last to be built before the Reformation, St Michael-le-Belfrey, 1535, has in its register an entry recording the baptism in 1570 of Guy Fawkes. The medieval Guildhall, built in 1448, was destroyed in 1942 by enemy action and is at present being restored to its former state. Three other Guildhalls remain, that of the Merchant Adventurers, the Merchant Taylors' Hall, and St Anthony's Hall. The last is now the depository for the diocesan archives. It is also the H.Q. of the Y. Academic Trust, which controls 2 centres for advanced research, in St Anthony's Hall the Borthwick Institute of Historical Research, and in St John's Church, Ousebridge, the Y. Institute of Architectural Study. The 13th-cent. walls, built upon earlier foundations, extend for 2½ m., and are pierced by 4 great Bars, or gateways. One of these, Walmgate, retains its barbican, whilst Bootham and Monk each has its portcullis. The fourth Bar, Micklegate, commands the road to London; on it were impaled the heads of those convicted of treason.

The grounds of the Yorks Philosophical Society contain, in addition to the Multangular Tower, the remains of St Mary's

Abbey, c. 1270. There is a museum of antiquities, a richly stocked Rom. museum, and a most valuable museum of mediæval sculpture. The nearby house, formerly that of the abbot of St Mary's, and later that of the Lord President of the Council of the N., is now known as the Yorkshire School for the Blind. It is entered from Exhibition Square, where is also the City Art Gallery. The Gallery has been recently enriched by the Lyceum Green collection of old masters, which provides for the student a continuous series of examples of the development of European art. The Castle, or Kirk, Folk Museum occupies 2 buildings, formerly prisons, built in the 18th cent., which are overshadowed by Clifford's Tower, all that remains of Y. Castle. Of quatrefoil shape, it was built c. 1250, to replace the wooden tower built by the Conqueror. The Treasurer's House, once the residence of the Treasurer of the Minster, is now a period-furniture museum (National Trust). The railway museum, near the station, is the largest and best equipped of its kind in the country. There is a tangled network of narrow streets in the centre of Y., the most famous being Stonegate, and The Shambles—the street of the butchers. The latter contains the house of Blessed Margaret Clitherow, the Y. martyr. It has been restored by Rom. Catholics of Y. as a shrine in her honour.

St Peter's School is one of the oldest public schools in England, and has claims to link it with the school of St Peter founded in 627. It was further endowed by Queen Mary in 1557. Archbishop Holgate's grammar school was founded in 1546, and there are 2 Friends schools, Bootham for boys (1823) and The Mount for girls (1831).

Y. is a great railway centre; its industries include carriage and wagon building, and the manuf. of chocolate and confectionery, beet sugar, scientific instruments, glass, and plastic ware. It has been a military centre since Rom. times, and a parl. bor. since 1295. It has a lord mayor who shares only with London's mayor the title 'Right Honourable' and has also a sheriff. Pop. 106,000. See M. Spence and M. E. Everatt, *A Short History of York*, 1949. C. B. Knight, *This is York*, 1951; J. Rodgers, *York*, 1951.

2. City and co. seat of Y. co., Pennsylvania, U.S.A., on the Codorus River 21 m. from Harrisburg. It originated as a Quaker settlement, and has an 18th-cent. Quaker meeting-house. It has numerous manufs. and is the trade centre for a rich agric. region. Pop. 60,000.

3. Municip. of W. Australia, 77 m. E. of Perth. It is in a dist. which is the prin. source of the sandal-wood supply. Pop. 2820.

York and Lancaster Regiment. The Brit. regiment formerly 65th and 84th Foot Regiments. The 65th was raised in 1758 as the 2nd Battalion, the 12th Foot (Suffolk Regiment), was made a separate corps in 1758, and went to the W. Indies, and from there to America for the War of Independence. Later it again went to the

W. Indies and participated in the capture of Martinique and Guadeloupe, thence to the Cape and India, where it fought with distinction in seven wars. The 84th was raised in 1793; its early service was at the Cape and in India and later in the Peninsula. It served with distinction during the Indian mutiny and at Tel-el-Kebir. The regiments were linked in 1881. During the First World War the Y. and L. raised 22 battalions and served in France, Flanders, Italy, Macedonia, Gallipoli, and Egypt. In the Second World War the regiment fought in France, Norway, Italy, and Germany. The 2nd Battalion took part in the defence of Crete and the garrisoning of Tobruk, and later formed 2 columns of Gen. Wingate's Chindits in Burma. See Col. H. C. Wylie, *The York and Lancaster Regiment, 1758–1953* (3 vols.), 1930–58.

York Cycle. See MIRACLE PLAY.

York Minster. 'the cathedral and metropolitan church of St Peter,' is one of the most famous of Europe's Gothic buildings. Two churches were built on the site in the 7th cent., and are mentioned by Bede. The first was a tiny wooden church dedicated to St Peter, and erected for the baptism of Edwin in 627. The second was of stone and was finished in 642. Bishop Albert built a new basilica on the site of one of these churches in the 8th cent. When Wm I besieged Y. the existing church was severely damaged and Y.'s splendid library was completely destroyed.

Some of the Saxon walls remain in the present crypt. In 1070 the first Norman Archbishop of York, Thomas of Bayeux, restored the Minster, and built the Norman nave and transepts, probably using part of Bishop Albert's church as the choir. The choir and crypt were rebuilt in the 12th cent. by Archbishop Roger. The present transepts were erected between 1220 and 1260, and the Norman nave was taken down and a new one built in the first half of the 14th cent., when the chapter house was built. The fine W. window was glazed in 1338. John Thoresby undertook the building of a new choir in 1361, for the enormous transept and nave, the largest in the country, had dwarfed Roger's structure. In the same year he laid the foundation of a great extension of the Minster to the E. A Lady Chapel was added. These changes made the Early Eng. tower of de Gray unsuitable, and in 1400–23 a central tower was built in its place. The N. and SW. towers were added between 1433 and 1471. This completed the Minster, and in 1472, after many reconstructions and enlargements, its appearance was almost the same as at the present day, although fires in the 19th cent. necessitated considerable repairs. Outstanding features of Y. Minster include the W. front, its nave, its crypt, its stained-glass, and a number of individual monuments. Many critics consider the Gothic W. front to be the best cathedral façade in England. The nave is remarkable for its size and graceful piers. The crypt was mainly discovered after the fire of 1829. It contains part of Archbishop Roger's cathedral and some 'herring-

bone' work. Among Eng. churches Y. Minster is pre-eminent in the amount, range, and quality of its surviving medieval glass of all periods from c. 1150 to c. 1510. A panel of 1160 glass occupies the foot of the middle light of the Five Sisters window in the N. transept. It represents the story of Habakkuk lowered into the lions' den by an angel to succour Daniel. Another 12th cent. panel, now in the nave, formed part of a Jesse tree.

Valentine & Sons Ltd., Dundee

YORK MINSTER: THE WEST FRONT

A fine example of English Gothic.

The Five Sisters window was partly restored between 1923 and 1925 as the Empire's memorial to the sacrifices made by women and girls in the First World War. On the S. wall of the N. transept is a fine rose-window, in the gable, inserted to mark the union of the roses of York and Lancaster by the marriage of Henry VII and Elizabeth of York. But the chief glory of the whole collection of medieval glass at York, even including that in sev. par. churches, is the great E. window (1408). It is the work of John Thornton of Coventry. The window is 80 ft by 30 ft, and each of its 117 panels measures almost 3 ft square and the various panels represent scenes from the O.T. and the Apocalypse. Many of the tombs in the Minster suffered wholesale defacement during the Reformation, and the numerous medieval brasses were reduced to one. Interesting monuments include the tomb of Richard Scrope, archbishop from 1388 to 1403, who was executed outside the city walls, and the tomb of Archbishop Walter de Gray (1215-55). There are sev. curious gargoyles, and the choir-screen (c. 1475-1500) is a fine piece of Perpendicular work. On

1 Nov. 1955 the Duke of Edinburgh unveiled an astronomical clock in the Minster to be a memorial to nearly 20,000 R.A.F. officers and men who were killed or reported missing while operating from bases in N.E. England. The Minster library contains a most varied and ancient collection of written and printed records. The Archbishop's house is at Bishopthorpe. The Archbishop's palace, to the N. of the Minster, was demolished at the end of the 18th cent. See F. Harrison, *Guide to York Minster* (on sale in the Minster), 1926-50; G. Home, *York Minster*, 1936, 1947.

Yorke, Philip, see HARDWICKE, PHILIP.
Yorkshire, N.E. maritime co. of England; bounded on the N. by Durham, S. by the shires of Lincoln, Nottingham, and Derby, E. by the N. Sea, and W. by Lancs and Westmorland.

Y. formed part of the Brigantian kingdom of Deira with the Parali in Holderness. It was conquered by the Romans in the 1st cent. AD, and by the Danes in 875, and came under the rule of Harold of England in 1066 after the Battle of Stamford Bridge. It was devastated by the Normans. Since then the co. has been the scene of many battles. In the wars of the Roses the Duke of York was slain at Wakefield in 1460, and the following year the Yorkists defeated the House of Lancaster on Towton Field. During the Civil war the co. was divided, and the prin. battle was fought at Marston Moor, where the Royalists were defeated. More than 260 ancient monuments, prehistoric, Rom., and medieval, are protected. The co. has been noted for its archaeological interest for sev. cents., and there is a wealth of archaeological literature. Among many castles, the best known are Richmond, Bolton, Skipton, Knaresborough, and Scarborough. Middleham Castle was a residence of Warwick 'The King Maker'; and Richard II was murdered at Pontefract Castle in 1399. Of the eccles. remains the most important are the Cistercian abbeys of Fountains, Rievaulx, Jervaulx, Kirkstall, and Roche; the Augustinian priories of Bolton and Kirkham; and the Premonstratensian House at Easby. At York is the Benedictine abbey of St Mary. There were Benedictines at Whitby. Of York, Beverley, and Ripon Minsters, York is the finest.

Y. is the largest co. in England, and is divided into 3 Ridings, N., E., and W., each forming a separate administrative co. The coastline is fairly even, with cliffs of an average height; the largest indentation is that formed by the mouth of the Humber, which separates Y. from Lincs, others being Bridlington, Filey, and Robin Hood Bays, and the mouth of the Tees, which separates Y. from Durham. At Boulby the cliffs reach a great height (666 ft), and again at Flamborough Head; from this point to Spurn Head, a narrow, flat isthmus at the mouth of the Humber, the coast is low. The surface of the co. is varied; in the W. it is crossed by the Pennine Range, which reaches a height of 2591 ft at Mickie Fell in the extreme N., cut by beautiful dales, the prin. being Teesdale, Wensleydale, and Wharfedale;

while the centre is a vast plain, the plain of York, including the vale of Mowbray. In the N.E. are the Cleveland and Hambleton Hills with small valleys, such as Bilsdale and Farndale, running down to the vale of Pickering, which separates them from the Wolds in the E. Riding. The prin. rivs. are the Ouse (which with the Trent forms the estuary of the Humber, and is itself formed by the junction of the Swale and the Ure) and its tribs., the Wharfe, Aire, Nidd, and Don, with the Derwent on the E. In the N. are the Esk and the Tees flowing into the N. Sea, and in the W. the Ribbles.

Of the attractive holiday resorts on the coast, the best-known are Scarborough, Whitby, Bridlington, Filey, Saltburn, and Redcar. Harrogate is an important inland spa specialising in rheumatic treatments. The E. Riding is the great corn-growing dist., with Driffield as the agric. centre. Oats and barley are the chief crops; and sheep are an important part of the husbandry. Sheep-farming extends over the fells of the N. and W. Ridings, and dairy-farming in the valleys; whilst large poultry-farms are estab. near Keighley. Forced rhubarb is grown widely around Leeds, and liquorice is made at Pontefract. Cleveland Bays and race-horses are bred in the N. Riding. Y. possesses valuable coalfields in the southern half of the W. Riding. In the N. Riding industry is centred at Middlesbrough; and Tees-side is the greatest steel-producing centre in Great Britain. The great woollen manufacturing centres are in the W. Riding at Leeds, Bradford, Halifax, Huddersfield, the Colne valley, etc., where woollens, worsted, flannels, fancy tweeds, etc., are made. Wholesale clothing and leather manufs. are among over 100 industries in Leeds. Sheffield has developed, from small forges situated in the surrounding countryside, into the centre of a vast iron and steel trade specially noted for plate and cutlery. Important fisheries exist at Hull (which has the largest fleets of up-to-date fishing craft in the world), at Scarborough, and at Whitby. Trawlers are built at Selby and cobles at Whitby; and Selby and Hull have large seed-crushing and flour-milling concerns. Communications are excellent: besides arterial roads and railways there is a system of canals which connects with the sea. The prin. ports are Hull, Goole, and Middlesbrough. The co. returns in all 56 members to Parliament. York is the co. tn.

In pop. Y. represents about one-tenth of the total pop. of England and Wales. The area is 3,888,237 ac. (E. Riding, 750,115 ac.; N. Riding, 1,362,058 ac.; W. Riding, 1,776,064 ac.); and the pop. (1951), E. Riding, 510,900; N. Riding, 525,500; W. Riding, 3,586,300; estimated total, 4,622,700.

Yorkshire Coach Horse, see HORSE.

Yorkshire Light Infantry, see KING'S OWN YORKSHIRE LIGHT INFANTRY.

'Yorkshire Post', the chief Conservative paper in the Eng. provinces, beginning as the *Leeds Intelligencer*, a weekly started by Griffith Wright in 1754. The paper remained in its founder's family nearly 65 years, but from 1818 it passed through the hands of various proprietors. It was appearing 3 times a week in 1866, when it was bought by a group of Conservatives. It was then made a daily and re-named the *Yorkshire Post* and *Leeds Intelligencer*. During Neville Chamberlain's (q.v.) Prime Ministership it strongly opposed his appeasement policy. In 1939 the *Leeds Mercury* (q.v.), founded in 1718, was merged with the *Yorkshire Post*. In 1890 the company started the *Yorkshire Evening Post*, now the leading evening paper in Yorks and printed simultaneously in Leeds and Doncaster.

Yorkshire Regiment, see GREEN HOWARDS.

Yorkshire Regiment, East, see EAST YORKSHIRE REGIMENT.

Yorkshire Regiment, West, see WEST YORKSHIRE REGIMENT.

Yorkshire Terrier, small, long-coated dog, classified by the Kennel Club as a toy, with straight, silky hair reaching to the ground from the back of the head to the tail and parted in the middle of the back. It is blue-grey, with tan on the head, ears, and legs. The ears are small, V-shaped, and carried semi-erect; the body is compact and level on top of the back. The weight is about 5 lb. It is a very intelligent dog, probably the result of cross-breeding between the wire-haired black-and-tan terrier (a 'toy' dog) and the Skye terrier. It needs daily grooming, the coat being brushed straight down each side.

Yorkton, city of Saskatchewan, Canada, 140 m. NE. of Regina. A distributing centre in a rich agric. area. Y. has packing houses, flour mills, and an oil refinery. Pop. 7080.

Yorktown, vil. and co. seat of York co., Virginia, U.S.A., on the York R. Here the last important battle of the Revolutionary War was fought in 1781, when Lord Cornwallis surrendered to Washington. Pop. 384.

Yoruba, fertile and densely populated region of W. equatorial Africa, included in the Federation of Nigeria (Br.). The Y. are one of the 4 main linguistic groups of Nigeria, and according to the last census the group numbered (1952) 4,508,000. The Y. region, with an area of about 18,500 sq. m., lies SW. of the Lower Niger (Quorra), adjoining Dahomey on the W. and Nupe on the NE., and reaching from Borgu nearly to the Bight of Benin. Y. is spoken with some uniformity to-day throughout the ancient kingdoms of the SW. of Nigeria and, with

the spread of literacy, is developing a literature of its own. Tribal tradition holds that the Y.s originated in the Ife, where God first created man, and, although the extent of the ter. under the direct control of the Oni of Ife was much curtailed in the 19th-cent. Y. civil wars, Ife is still recognised as the spiritual H.Q. of the race, and the Oni enjoys a position of influence as the custodian of the tribal relics, which are a number of bronze heads of unknown origin (see IFE). The true origin of the Y.s is unknown to anthropologists. Up to the beginning of the 19th cent. the Y. kingdom occupied a large area, but this then crumbled before the Fulani (Mohammedan) invaders, who estab. a Fulani emirate in what had been one of the most prosperous of the Y. provs. Central Y. authority collapsed and the Y. clans entered on a period of civil war which lasted intermittently for 70 years. In the development of native administration in Nigeria following the amalgamation of N. and S. Nigeria the Brit. Gov. found that the Y. area contained strong chieftainships to which the system of native administration already introduced into the emirates of N. Nigeria was readily applicable.

Agriculture, cattle-rearing, and cocoa growing are carried on and there are many handicrafts in the tns, notably textile weaving. The chief tns are: Ibadan, Oyo (the cap.), Abeokuta, and Ogbo-mosho. Organisation is increasing with the growing social amenities. See P. P. Talbot, *The Peoples of Southern Nigeria*, 1926; Lord Hailey, *An African Survey* (revised 1956), 1957.

Yosemite Park, E. central California, U.S.A., national park embracing the Yosemite Valley, U.S.A., and covering an area of 1182 sq. m. The region is composed of granite, and the riv. valley is extremely beautiful, with all kinds of flowering plants and tall trees for the 7 m. of its length. The Nevada, Yosemite, Ribbon, Silver Strand, and Bridalveil Falls are among the finest in the world. Discovered in 1851 by Bolling and his soldiers, it was made a national park by Act of Congress in 1866. It is still inhabited by a few Indians. The Yosemite Falls have a total descent of 2425 ft.

Yoshkar-Ola (formerly Tsar'vokok-shaysk, 1919-27 Krasnokokshaysk), tn in Russia, 80 m. NW. of Kazan', cap. and cultural centre of the Mari (g.v.) Autonomous Rep. It has varied industries. Y. was founded in 1578 by the Russians as a fort, tn and administrative centre in the Mari country. Pop. (1956) 73,000 (1934, 15,000), mostly Russians.

Youghal (pronounced Yawl), urb. district, market tn, and seaside resort of co. Cork, Rep. of Ireland, on the W. side of the Blackwater estuary, 30 m. E. of Cork. St Mary's Church and College were founded in 1464, and at Y. are Raleigh's house, and ruins of Benedictine and Dominican abbeys. There are salmon-fisheries, and exports of corn and livestock. Y.'s main industry is now manuf. of rayon fabrics and cotton spinning, and bricks and earthenware are also made.

Moby Dick was filmed here in 1954. Pop. 5000.

Young, Andrew John (1885-), clergyman and poet, b. Elgin. Educ. at Edinburgh Univ., in 1920 he removed to Hove in Sussex, in 1941 became vicar of Stonegate, and in 1948 a canon of Chichester Cathedral. Writer of many nature poems, he pub. *Songs of Night*, 1910, *Boaz and Ruth*, 1920, *The Bird Cage*, 1926, *The New Shepherd*, 1931, *Winter Harvest*, 1933, *The White Blackbird*, 1935, *The Green Man*, 1947, and *Into Hades*, 1952. In 1952 he was awarded the Queen's Medal for Poetry.

Young, Arthur (1741-1820), agriculturist, b. London, but brought up in Suffolk. Y. was a practical farmer and wrote many books on agric. and political subjects. His works include: *The Farmer's Letters to the People of England*, 1768, *Observations on the Present State of the Waste Lands of Great Britain*, 1773, *A Tour in Ireland*, 1780, and *Travels in France*, 1792. He was elected a fellow of the Royal Society in 1773, and appointed in 1793 secretary to the Board of Agriculture. Y. was a pioneer in his promotion of modern agric. methods, and his ideas were of European influence.

Young, Brigham (1801-77), Amer. Mormon leader, b. Whitingham, Vermont. He joined the sect in 1832, soon became important, and succeeded J. Smith as prophet and first president (1847). Under his leadership the Mormons, when driven from Nauvoo, finally settled in Utah, founding Salt Lake City (1847). Y. proclaimed the doctrine of polygamy (1852). Y.'s capability as an organiser and administrator enabled the Mormon state to survive its early difficulties and become a flourishing area.

Young, Edward (1683-1765), poet, b. Upham, Hants. Educ. at Winchester and Corpus Christi College, Oxford, he pub. 2 poems in 1713, *The Last Day* and *The Force of Religion*. His plays *Busris*, 1719, and *The Rencoe*, 1721, were followed by a collection of satires, *The Love of Fame, the Universal Passion*, 1725-8. In 1727 he took holy orders, and in 1730 became rector of Welwyn, Herts. Next year he married Lady Elizabeth Lee, and on her death wrote his most famous work, *The Complaint, or Night Thoughts*, 1742-4. A mournful meditation in blank verse, it was for long greatly celebrated; though sometimes artificial and forced, Y.'s poetry has passages of sublimity. See H. C. Shelley, *The Life and Letters of Edward Young*, 1914; H. Clark, *The Romanticism of Edward Young*, 1929.

Young, Emily Hilda (1880-1949), novelist, b. Northumberland. In 1902 she married J. A. H. Daniell, a solicitor, and they lived in Bristol, which provided the background of her novels. Writing effectively of ordinary everyday persons, she has been called 'the apostle of quiet people.' Her novel *Miss Mole* gained the Tait Black Memorial Prize for 1930; others are *A Corn of Wheat*, 1910, *Yonder*, 1912, *Moor Fires*, 1916, *William*, 1925, *The Vicar's Daughter*, 1928, *The Curate's Wife*, 1934, *Celia*, 1938, *Caravan Island*,

1940, *River Holiday*, 1942, and *Chatterton Square*, 1947.

Young, Francis Brett (1884-1954), novelist, b. Halesowen, Worcs. Educ. at Epsom College, he studied medicine at Birmingham Univ. and practised at Brixham from 1907 to 1914. In the First World War he served with the R.A.M.C. in E. Africa, and wrote about it later in *Marching on Tanga*, 1918. Many of his novels have his native Worcestershire as background. *Portrait of Clair*, 1927, was awarded the Tait Black Memorial Prize; others are *Pilgrims Rest*, 1922, *My Brother Jonathan*, 1928, *Black Roses*, 1929, *Mr and Mrs Pennington*, 1931, *The House under the Water*, 1932, *White Ladies*, 1935, *They Seek a Country*, 1937, *The City of Gold*, 1939, and *The Man About the House*, 1942. *Poems 1916-1918* appeared in 1919, and in 1944 *The Island*, a long poem about England. His last work was *In South Africa*, 1952, and he died in Cape Town.

Young, Owen D. (1874-), Amer. lawyer and financial expert, who was chairman of an Allied committee which in 1929 devised a scheme for Ger. reparations known as the Young Plan (q.v.).

Young, Thomas (1773-1829), physician, physicist, and Egyptologist, b. Milverton, Somerset. He was a remarkable youth, and before the age of 20 had acquired a knowledge of Latin, Greek, Hebrew, Chaldee, Arabic, Syriac, Persian, French, Italian, Spanish; later he learned German. He began medical studies, 1792, graduated at Göttingen, 1796, and was M.D. Cambridge, 1808. He practised in London from 1799 to 1814, the most highly educ. physician of his time. He was elected fellow of the Royal Society at the age of 21, and was its foreign secretary from 1802 until his death. From 1801 to 1803 he was prof. of natural philosophy at the Royal Institution. In 1811 he was appointed physician to St George's Hospital. Y. gave the first description of astigmatism (1801), was the author of the undulatory theory of light (1801-3), and of the theory that colour vision is due to retinal structures corresponding to red, green, and violet, a theory later modified by Helmholtz (q.v.). In 1804 he stated the theory of capillary attraction, and in 1808 the laws governing the flow of blood in the heart and arteries. An accomplished Egyptologist, and the earliest decipherer of hieroglyphics, he was the first to decipher part of the Rosetta Stone (q.v.). His *Introduction to Medical Literature*, 1813, a list of books which he considered necessary to a complete medical library, contains his classification of diseases. See lives by F. Oldham, 1933, and A. Wood, 1954.

Young, tn in New S. Wales, Australia, 258 m. WSW. of Sydney. It is the centre of a rural area, whose activities include sheep-grazing, orchards, and wheat-growing. Pop. 5570.

Young England, section of the Eng. Conservative party which about 1842 began a movement whose spirit and aim are well shown in Disraeli's *Coningsby*. Disraeli together with Lord John Man-

ners, later Duke of Rutland, was the chief leader of the movement, which aimed at better relations between different social classes, in order to prevent the capture of the working class by the Radicals.

Young Farmers' Clubs, National Federation of, rural youth movement that began with the formation of a few isolated Young Farmers' Clubs shortly after the First World War and in 1957 had a total membership of 67,458, with over 1570 clubs, together with con. federations in nearly all cos. of England and Wales. The aims of the movement are: (a) to provide a country youth service which will bring together the young people of the countryside; (b) to stimulate amongst young people a greater sense of the importance of country life, and of the interdependence of agriculture and industry; (c) to encourage amongst the future generation of country folk the continuance of education where schooling finishes. See FARM; FARMERS' CLUBS.

Young Guard, The (Russian *Molodaya Gvardiya*), underground organisation of young Russian patriots, members of the Komsomol (q.v.), which existed Sept.-Dec. 1942 under the Ger. occupation in the tn of Krasnodon, in Voroshilovgrad Oblast of the Ukraine. After performing heroic feats it was denounced by a traitor, and most of its members (it numbered about 100) were arrested, tortured, and murdered. It is described in A. Fadeyev's novel *The Young Guard* (see FADEYEV).

Young Ireland, Irish political party formed in 1846 by seceders from the Repeal Association of Daniel O'Connell (q.v.). Its aim was to unite the Catholics and Protestants of Ireland in an attempt to sever the union with England (see UNION, IRISH). Among its most prominent members were John Mitchel, Wm Smith O'Brien, Charles Gavan Duffy, Thomas Davis, and Thomas Meagher (qq.v.).

Young Men's Christian Association (Y.M.C.A.) seeks to help boys and young men to accept the Christian faith and live the Christian life, and to transcend the barriers of class, politics, race, and creed by a variety of religious, educational, physical, and social activities designed to develop Christian character. This movement was founded in England in June 1844 by (Sir) George Williams (1821-1905), then a clerk in a London drapery. The associations spread rapidly, especially after the Great Exhibition of 1851 and the estab. of the World's Alliance of Y.M.C.A.s in 1855. The movement in 1955 had a world membership of over 4,000,000 in nearly 10,000 associations in 78 countries. During both world wars the Brit. Y.M.C.A. worked among Brit. and Allied forces at home and overseas; the World's Alliance worked among prisoners of war and refugees, and continues to serve displaced persons in Europe and the Middle E. In 1957 the associations in England, Wales, N. Ireland, and Eire totalled 473, with a membership of over 73,000 boys and young men and nearly 6000 girls and young

women, in addition to a National Women's Auxiliary numbering nearly 5000. The Scottish associations, forming a separate national movement, had over 13,000 members in 68 centres. The largest national Y.M.C.A. movement is in the U.S.A., where there are 1715 centres and 3,150,000 members.

Young Offenders, see CRIMINAL LAW; JUVENILE OFFENDERS.

Young Plan, plan for payment of Ger. reparations after the First World War which superseded the Dawes Plan (q.v.). It was drawn up in 1929 by an international committee of experts, chief among whom was Owen D. Young of the U.S.A. It differed from the Dawes Plan in indicating a definite number of fixed annuities instead of payments depending on prosperity, and, instead of providing any measure of external control, it gave financial autonomy to Germany. The Plan proved unworkable and payments were suspended in 1931. See REPARATIONS.

'Young Pretender', see STUART, CHARLES EDWARD LOUIS PHILIP CASIMIR.

Young Turk Party, see TURKEY.

Young Women's Christian Association (Y.W.C.A.) of Great Britain, voluntary association founded in 1855 to promote the social, physical, intellectual, and spiritual welfare of women and girls. International contacts and the formation of National Associations in other countries led to the institution of the World's Y.W.C.A. in 1894. To-day the World Y.W.C.A., which has consultative status on the U.N. Economic and Social Council, links together over 1,500,000 members, as well as 5,000,000 more who share in their activities in 65 countries. In Britain there are over 300 centres with a membership of 30,000. Clubs are open to any girl whatever her occupation, race, or religion. Hostels accommodate girls in professions, business, and industry, and students. Between 1939 and 1945 the Y.W.C.A. opened over 800 centres for service women in Britain and overseas. Through its International Service Committee, the Y.W.C.A. offers friendship to visitors from overseas, arranges for leaders of other National Associations to train in Great Britain, encourages the interest of members in world affairs, and supports, with personnel and finance, associations in the Commonwealth and overseas. Hostels, once established, aim to be self-supporting, clubs depend upon members' fees and local support, and for the balance the movement depends on public subscriptions and donations and on grants from public and private bodies.

Younger of Leckie, George, first Viscount (1851-1929), politician, eldest son of James Y., head of the brewery of the same name founded by another George Y. in 1722. He represented Ayr as a Conservative in the Commons from 1906 to 1922. He was invited by Bonar Law to assume the chairmanship of the Unionist Party, and was mainly responsible for the success in Dec. 1918 of the Coalition in the 'coupon election.' He was raised to the peerage in 1923.

Younghusband, Sir Francis Edward

(1863-1942), soldier and administrator, b. Murree, Punjab, and educ. at Clifton and Sandhurst. He joined the 1st Dragoon Guards in 1882. He transferred to the Indian Political Department in 1890. Y. won early fame as an explorer and traveller, and was later known as a writer on India and on Indian religion and philosophy, and for his work in connection with the organisation of conferences on world relations. He explored Manchuria in 1886, and travelled from Peking via Chinese Turkestan to India in 1887. He and Bell were the first Englishmen to reach India from China overland, crossing the Himalaya by the Mustagh Pass. Y. was political agent at Chitral, 1893-4, and was special correspondent of *The Times* on the Chitral expedition in 1895. Y. was Brit. Commissioner to Tibet, 1903-4, and Resident in Kashmir, 1906-1909. He was knighted in 1904. He was President of the Royal Geographical Society in 1919. His *South Africa Today*, 1898, was the outcome of his special mission to the Transvaal and Rhodesia, 1896-7, for *The Times*. His celebrated mission to Tibet in 1903-4 led to the unveiling of the forbidden city of Lhasa. His memoirs, *In India and Tibet*, were written in 1910. He was chairman of the Mt Everest Committee.

Young's Modulus, see ELASTICITY; MODULUS.

Youngstown, city in NE. Ohio, U.S.A., on Mahoning R. 55 m. from Pittsburgh. It is a pig-iron and steel centre. It manufs. metal products, rubber tyres, etc., and there are limestone quarries. The Butler Art Institute and Y. College are here. Pop. 168,300.

Youth Hostels. With the increasing popularity of hiking and cycling holidays, there has arisen a need for good overnight accommodation for the traveller of limited means, which the Y. H. organisations aim to satisfy. The International Y. H. Federation comprises nearly 30 associations, and under a reciprocal agreement encourages members to use hostels in any country within the Federation. The movement first assumed an organised form under the direction of Richard Schirrmann in Germany, where the first hostel was opened in 1910. In the 1920's the idea spread to other continental countries, and since 1945 Y. H. have also been estab. in such E. countries as Palestine, India, and Japan. Y. H. are designed primarily for the use of young people, but in most countries there is no upper age limit. The buildings used vary from mansions to mt huts, but all provide simple accommodation, separate dormitories for men and women, cooking and washing facilities.

England and Wales. The Y. H. Association (founded 1930) consists of 19 semi-autonomous regional groups, each administering a number of hostels. In 1955 there were over 185,000 members, and nearly 300 hostels with over 14,000 beds. The National Office is at St Albans, Hertfordshire.

Scotland and Ireland. The Scottish

Y. H. Association (founded 1931)

possessed 92 hostels in 1955, with 6942 beds (30,000 members); the Y. H. Association of N. Ireland (founded 1931) possessed 17 hostels in 1955, with 512 beds (4000 members); and the Irish Y. H. Association (An Oige) possessed 32 hostels in 1955, with 742 beds (4473 members).

Youth Organisations of Great Britain. The Standing Conference of National Voluntary Youth Organisations (with H.Q. at 26 Bedford Square, London, W.C.1) was founded in 1936 by a number of the leading youth organisations, representing a total membership of over 2,000,000 young people under the age of 21. These organisations are self-governing voluntary bodies, free to determine their own policy; they all work directly with young people in organised units under accredited leaders and, while they have great diversity of method, they have one common aim: the spiritual, mental, and physical training of young people. They are all non-political. They come together for joint consultation on the Standing Conference, which acts as a clearing house for the exchange of information, as a forum for examining diverse matters affecting the welfare of young people, and as a means of making joint representations or recommendations to statutory and other appropriate bodies. H.Q. is also a centre for overseas students and visitors. The Standing Conference works in close association with the National Council of Social Service, which provides the secretarial and office facilities.

Yperite, see MUSTARD GAS.

Ypres, John Denton Pinkstone French, first Earl of (1852-1925), soldier; b. Ripple, Kent. He was educ. at a preparatory school at Harrow and Eastman's Naval Academy, Portsmouth. He joined H.M.S. *Britannia* in 1866, and served in the R.N. for 4 years. He was commissioned in the 8th Hussars in 1874, soon transferring to the 19th; he took part in the Sudan campaign, 1884-5, and was present at Abu Klea, Gubut, and Metammah. He fought with distinction in S. Africa, and in 1900 was appointed to the command in the E. Transvaal, and took part in the operations against the rebels in Cape Colony until the end of the war. He commanded the 1st Army Corps at Aldershot, 1901-7, and was promoted Lieut.-gen., 1902. He was made F.M. in 1913, being appointed commander-in-chief of the B.E.F. at the beginning of the First World War. His failure, at Neuve Chapelle and Loos in 1915, to pierce the Ger. line was very costly, and he was recalled and given command of all the forces in the U.K. See also FRANCE AND FLANDERS, FIRST WORLD WAR, CAMPAIGNS IN. He was Lord-Lieutenant of Ireland from 1918 till 1921. He had been created viscount in 1916: he was made Earl of Ypres in 1921. See life by his son, G. French, 1931.

Ypres (Flem. *Ieper*), tn in the prov. of W. Flanders, Belgium, on the R. Yperlée. It was famous in the Middle Ages as a centre of the Flanders cloth trade. Its many fine

medieval buildings, the mrkts, including the famous Cloth Hall (1201-1342), St Martin's Church (13th cent.), the Gothic meat-mrkt, Renaissance tn hall, and Templars' houses, were destroyed during the First World War. Afterwards, many of the buildings were restored. The Menin Gate (1927) is a memorial to Brit. troops missing in the fighting around Y. in the First World War. Y.'s woollens were noted in the 14th cent., but the chief manufs. are now linen and biscuits. Pop. 17,200.

Ypres, Battles of (1st Battle, 19 Oct.-31 Oct. 1914; 2nd Battle, 22 April-25 May 1915; 3rd Battle, 31 July-10 Nov. 1917). Many of the most important actions of the First World War took place in the Ypres sector, which was held continuously by Brit. troops. Gunfire and shells soon reduced the tn to ruins. The British occupied the place in the middle of Oct. 1914, and the first battle lasted for a month, the Germans making great efforts to recover the prestige they lost at the Marne. On 31 Oct. the Worcestershire Regiment defeated overwhelming numbers of Germans, who almost broke through at Gheluvelt, thereby saving the Channel ports from capture. The Germans estab. themselves, however, in sev. rls in the sector. The second battle commenced in the spring of 1915 by the Brit. capturing Hill 60 (q.v.) after it had been heavily mined. The Germans counter-attacked furiously, using poison-gas for the first time. Their much-advertised objective was Calais; they broke the Fr. line N. of Ypres, but were checked by the end of April. During May they launched heavier and heavier attacks with gas, and gained ground, recapturing Hill 60, gaining possession of Polygon Wood, and pushing back the British in the regions of the Roulers railway and Menin road. At the end of the battle the British were still holding Ypres, although the Germans had made some small gains at great cost to themselves. The third battle opened on 31 July 1917 with an attack by the British on a 15-m. front which was very successful. On 16 Aug. another attack on a 9-m. front N. of the Menin road resulted in the capture of Langemarck, and the French on the left also made progress. A few days later the advance was continued in a N.E. direction with further success. On 20 Sept. another attack was launched up the Menin road. The Germans counter-attacked unsuccessfully. The last phase of this battle was the capture of the Passchendaele ridge by the Canadians in Nov.; heavy fighting followed which resulted in the British gaining more ground. See also FRANCE AND FLANDERS, FIRST WORLD WAR, CAMPAIGNS IN; WORLD WAR, FIRST; MENIN GATE; NEUVE CHAPELLE; PASSCHENDAELE.

Ypsilanti, or **Hypsilanti**, noble Gk Phanariot (Fanariot) family of the 18th and 19th cents. who claimed descent from the Comneni, and rose to great power in Constantinople. *Alexander P.* (c. 1792-1828) fought against the Turks in the Gk War of Independence, but after being

defeated at Dragashan (1821) fled to Austria. His brother *Demetrius* (1793-1832) also played a prominent part in the Gk struggle for independence.

Ypsilanti, city in Washtenaw co., SE. Michigan, U.S.A., 30 m. WSW. of Detroit and on Huron R. It is an industrial, commercial, and farm-trade centre, and manufs. paper, stoves, aircraft and auto parts, ladders, tents, awnings, clothing, chemicals, and foundry products. The huge Willow Run plant is near by. Y. is the seat of Michigan State Normal College. Pop. 18,302.

Ysaÿe, Eugène (1858-1931), Belgian violinist and composer, b. Liège, of Walloon stock. In 1886 he became prof. at the Brussels Conservatoire. He was known for his interpretations of the works of Bach, César Franck, and the great It. violinist-composers. In 1929 he produced an opera, *Peter the Coalminer*, in Walloon dialect, with libretto by himself.

Yser, riv. of France and Belgium, which rises 5 m. NNE. of St-Omer, and flows ENE. across the dept of Nord, turning gradually NW. across W. Flanders prov., to the N. Sea 2 m. NW. of Nieuport (q.v.). Length 48 m. It was the scene of a battle, Oct.-Nov. 1914 (see WORLD WAR, FIRST).

Yssel, see IJssel.

Ysselmonde, see IJSSSELMONDE.

Yssingaux, Fr. tn, cap. of an arron., in the dept of Haute-Loire. It manufs. lace and ribbons. Pop. 6100.

Ystad, seaport of Malmöhus (q.v.) co., Sweden, on S. Baltic coast, with a good artificial harbour. It manufs. machinery, tobacco, matches, and chicory, and has shipbuilding yards. Pop. 12,000.

Ytterbium (symbol Yb, atomic number 70, atomic weight 173.5), rare-earth element. Marignac in 1878 obtained what he thought was pure Y. in certain minerals, e.g. gadolinite. Urbain and von Welsbach, 1907-8, split this up into lutecium and neo-ytterbium (i.e. what is now called Y.). Y. forms an oxide, Yb₂O₃, and sev. salts such as the sulphate, Yb₂(SO₄)₃.

Yttrium, symbol Y, atomic number 39, atomic weight 88.92, a rare metallic element allied to aluminium. It yields colourless salts, forms an oxide, Yt₂O₃, and belongs to the rare-earth group.

Yü the Great (c. 2197 BC), Chinese emperor, the last of the 3 famous 'ancient kings' of great virtue, the others being Yao and Shun. He constructed many valuable defences against flood. His reign, which is said to have begun in 2205 BC, marks the beginning of the first, or Hsia, dynasty. The tablet of Yü on mt Hengshan, a stone inscribed with an ancient script, is believed to date from his reign. See HUNAN.

Yuan, Mongol dynasty which ruled China from 1277 to 1367. It was founded by Kublai Khan (q.v.).

Yuan Chi, see CHINESE LITERATURE.

Yuan Shih-kai (1859-1916), Chinese politician, b. Hsiang-Cheng in Honan. In 1897 he was appointed judicial commissioner of Chih-li. When the revolution broke out in 1911 he became president

of the council of ministers, and was Premier for a short time. In 1913 he was elected President of the Chinese Rep., but proved himself a traitor by his self-styled coronation as emperor, fixed for Feb. 1916. But discontent began, the S. revolted, and Y. had to abdicate.

Yuanhing, see CHENGCHOW.

Yucatán: 1. Peninsula of SE. Mexico, geographically including Brit. Honduras and the Guatemalan Petén; length 400 m.; mean breadth 200 m.; coast-line 700 m.; area 55,400 sq. m. The coast on the N. and W. is low and sandy, but higher and more indented on the E. The dist. contains many relics of the Maya (q.v.) civilisation, notably at Chichén Itzá and Uxmal. See W. von Hagen, *Maya Explorer*, 1947; Lilo Linke, *Magie Yucatán*, 1950.

2. State of the SE. part of Mexico, being one of the states forming the Y. Peninsula. It is bounded on the N. by the Gulf of Mexico, E. by the ter. of Quintana Roo, S. by the state of Campeche, and W. by Campeche and the Gulf of Mexico. The land is poor and rocky, with no rivs. but an abundant subterranean water supply. It is mostly flat, but towards the boundary with Campeche and in the S. it is somewhat hilly. The climate is tropical in the summer, but from Oct. to Mar. is equable. There is little malaria in Y. now, and the yellow fever has been exterminated. There is rail communication with Campeche, but communications in Y. are not generally good. The main products are sisal fibre, dyewood, and hardwoods. There are some small sugar mills in the S. Only one crop of corn a year can be obtained, owing to the scarcity of rain. Mérida (q.v.) is the cap., and has been extensively modernised. Area 14,870 sq. m.; pop. 517,000.

Yucca, or **Adam's Needle**, genus of slow-growing evergreen shrubs (family Liliaceae) bearing, when fully-grown, a huge erect panicle with pendulous flowers from the centre of a circle of thick linear leaves. See also JOSHUA TREE.

Yugoslavia (Serbo-Croatian *Jugoslavija*), federal rep. of SE. Europe, the largest country in the Balkan Peninsula (q.v.), bounded N. by Austria and Hungary, E. by Romania and Bulgaria, S. by Greece, SW. by Albania, W. by the Adriatic Sea, and NW. by Italy (q.v.). Part of the Free Ter. of Trieste (q.v.), lying on the border with Italy, is under Yugoslav administration. By the peace treaty of 1947 Italy ceded to Y. most of the It. prov. of Venezia Giulia (Istria), including Fiume (Rijeka), the com. of Zara (Zadar), and some small is. (qq.v.). Area 99,066 sq. m.

Geography. Y. has a long coastline (450 m.) on the Adriatic, running parallel to the E. coast of the It. peninsula. In the NE. (the only low-lying part of the country) there are extensive plains, of which those in the extreme NE. are contiguous with the Alföld (q.v.) in Hungary. These plains are very fertile, and are watered by the Danube, Sava, Tisza, and Drava (qq.v.). In the N. there are spurs of the Alps (q.v.), including the Julian and Karawanken Alps, in the NW. there is the

Karst (q.v.), and running NW.-SE. above the littoral of Dalmatia (q.v.), are the Dinaric Alps (q.v.). The S. is a mass of mt ranges (including, in the SE., offshoots of the Balkan Mts, q.v.), with peaks of over 8000 ft, cut by deep riv. valleys, notably those of the Morava and the Vardar (q.v.). The mts are heavily forested. On the S. frontiers of the country there are sev. large lakes (e.g. Scutari and Ohrid, qq.v.). Lying close to the Adriatic coast there is a great number of is.; these are mostly narrow, elongated, and parallel to the shore of the mainland.

Constitution. Y. was proclaimed a rep. on 29 Nov. 1945. The Constitution declares that the Federal People's Rep. of Y. (*Federativna Narodna Republika Jugoslavija*) consists of the following People's Republics: Serbia (including the Autonomous Prov. of Vojvodina and the Autonomous Region of Kosovo-Metohija), Croatia, Slovenia, Bosnia-Herzegovina, Macedonia, and Montenegro (qq.v.). The federal cap. is at Belgrade (q.v.). On 13 Jan. 1953 the Constitution was amended by a New Fundamental Law, aimed at the decentralisation of the federal administration and intended also to increase the part played by the country's producers in the management of public affairs. All authority is said to derive from the people. The people realises its authority through its elected representatives in the People's Committees, the Assemblies of the People's Reps., the Federal Assembly, the Workers' Councils, and other bodies. Public representatives are elected by universal, equal, and direct suffrage by secret ballot. All citizens are equal, without regard to nationality, race, religion, or sex; no privileges of birth, property, or education are recognised. Church and State are separate. The highest organ of federal authority is the People's Assembly of the Federal People's Republic of Y. It consists of 2 Houses: the Federal Council and the Council of Producers. The Federal Council is comprised of one deputy for each 60,000 inhab., plus 10 representatives of the Council of each People's Rep., 6 representatives of the Council of the prov. of Vojvodina, and 4 representatives of the Council of the region of Kosovo-Metohija. The Council of Producers is comprised of deputies elected by workers engaged in production, transport, and commerce; one deputy sits for each 70,000 workers. The deputies elected by the Councils of the People's Reps., the Autonomous Prov., and the Autonomous Region, have a separate function as the Council of Nationalities when a motion is before the Federal Council concerning the Constitution or the Federal Economic Plan. The Federal People's Assembly serves for a term of 4 years, though this period may be extended in the event of war or national emergency.

The executive organs of the Federal People's Assembly are: (1) The President of the Rep., who is elected by secret ballot from among the members of the Assembly and who is Chairman of the Federal Executive Council and Supreme Commander of the Armed Forces, and (2) the

Federal Executive Council, which consists of 32 members elected from among the deputies of the Federal Council.

The most important political organisation in the country is the Socialist Alliance of the Working People of Y. (formerly the People's Front), which developed during the Second World War and was later joined by most of the pre-war political parties. The main constituent party of the Alliance is the Communist League, which had 624,806 members in 1953, and of which the Secretary-Gen. is Josip Broz Tito (q.v.); other parties are the Republican Party (composed mainly of intellectuals), the Democratic Party (formed originally in opposition to the 1929 régime), the Croat Republican Peasant Party (originally the party of the Radić brothers), and the Peasant Party (representing agric. interests in Serbia).

Local Administration and Justice. In the People's Reps., in the Autonomous Prov., and in the Autonomous Region there are People's Assemblies modelled on the Federal People's Assembly. Each People's Rep. independently enacts a Fundamental Law conforming with the principles of the New Fundamental Law of 1953. The People's Reps. are administratively divided into *oblasts*. There is a Supreme Court of the Federal People's Rep., and there are Supreme Courts in the People's Reps. and in the Autonomous Prov. Judicial functions in these courts are exercised by professional judges elected by the People's Assemblies. The lower courts are styled Co. Tribunals and Dist. Courts, and in them judicial functions are exercised by professional judges and lay assessors.

Population, Religion, Education, Chief Towns. The pop. (census of 1953) is 16,927,275. The pops. of the constituent People's Reps., Prov., and Region are as follows: Serbia, 6,983,544 (including Vojvodina, 1,713,905, and Kosovo-Metohija, 809,234); Croatia, 3,913,753; Slovenia, 1,462,961; Bosnia-Herzegovina, 2,843,486; Macedonia, 1,303,906; Montenegro, 419,625. In 1953 5,236,000 persons were employed in agriculture and forestry, 1,612,000 in industry, commerce, and transport, and 466,000 in governmental and administrative services. The chief national minorities are Albanian, Magyar, Turkish, and Bulgarian. All religions recognised by the State have equal rights. In 1953 the percentages of the pop. belonging to the different churches were: Serbian Orthodox, 41.4%; Rom. Catholic, 31.8%; Moslem, 12.3%; Protestant, 0.9%. 12.3% of the pop. professed itself to be without religion. The Serbian Orthodox (Pravoslav) Church is ruled by a Patriarch and a Holy Synod, composed of 4 bishops. It has 23 bishoprics in Y., and 2 abroad (see ГРЕК КИРЧИ). The Rom. Catholic Church has 3 provs.: Belgrade, with 2 suffragan sees; Zagreb, with 4 suffragan sees; and Sarajevo, with 2 suffragan sees. There are also one archbishopric (Bar) and 7 bishoprics which depend directly upon the Holy See. The Protestant Churches include 4 Lutheran churches, the Reformed

Church of Y., and small groups of Methodists, Baptists, and Adventists. The seat of the Eklezijski Ulem of the Moslem Religious Union is at Sarajevo. The Jewish community has a Grand Rabbi at Belgrade, and has religious municipalities in the chief cities of each rep. Since 1945 the State has at various times exerted pressure on different religious groups, in particular the Rom. Catholics.

Primary education is compulsory and free. In 1954-5 there were 14,044 elementary schools, and 2,106 secondary schools. There were 84 institutions of higher and specialised education, including the univs. at Belgrade, Zagreb, Ljubljana, and Skopje. The national minorities have elementary and secondary schools of their own. The prin. tns are Belgrade (the federal cap.), Subotica, Novi Sad, Priština, Zagreb, Ljubljana, Sarajevo, Skopje, and Titograd (q.v.v.).

Agriculture. In 1954, 9,982,000 hectares of land (39 per cent. of the total area of the country) were under cultivation. Private land holdings are limited to 10 hectares by a law of 1953, and anything above this limit is confiscated; compensation for confiscated land will be paid over a period of 20 years at the rate of 30,000-100,000 dinars a hectare. The chief crops are maize, wheat, barley, oats, rye, rice, potatoes, onions, peas, beans, and peppers. Apples, pears, plums, walnuts, chestnuts, and other fruits are grown in large quantities. Of industrial importance are sugar beet, tobacco, hemp, flax, cotton, hops, sunflowers, and chicory. Good brandies and wines are produced (2,851,834 hectolitres in 1954). The timber resources of the country, chiefly beech, oak, and fir, are valuable; some 30 per cent. of the surface of the country is wooded. Y. is also known for its live-stock; in 1955 there were in the country 12,000,000 sheep, 5,300,000 cattle, 4,800,000 pigs, 1,240,000 horses, and 24,900,000 poultry.

Industry and Commerce. Y. has rich mineral resources, including coal, lignite, bauxite, lead, antimony, copper, mercury, chrome, gold, silver, salt, and magnesite. The most important iron-mines are in Bosnia (Vareš, Ljubljana); copper is found chiefly in Serbia (Bor), as is antimony (Podrinje); chrome is found in Serbia (Kosovo, Metohija) and Macedonia (Skopje); the prin. lead-mines are at Treпча, Mežice, and Litija; and bauxite is mined in Istria and at Bar. Petroleum and natural gas are also found. In 1954 the production of minerals was as follows (in metric tons): lignite, 12,675,000; coal, 988,000; bauxite, 687,000; iron ore, 1,111,000; copper ore, 1,299,000; lead and zinc ores, 1,485,000; chrome ore, 124,000; antimony ore, 75,200; petroleum, 216,300; manganese ore, 9,200. There are numerous spas. Industry is unevenly developed, and processing industries are still of the chief importance. Electrical equipment, motor cars, machine tools, aircraft, munitions, metal goods, jewellery, carpets, and tobacco are among the prin. manufs. The chief country from which Y. imports is the U.S.A., and the chief country to which it exports is

Italy. Trade with the U.K. in 1965 was valued at: imports into the U.K., £7,511,721; exports from the U.K., £9,268,916.

Communications. In 1954 there were 1970 miles of macadamised roads, and 30,534 miles of metalled roads. In the same year there were 7222 miles of railway track. The Yugoslav sea-going fleet in 1954 comprised 206 vessels, with a gross tonnage of 291,539; there were also 887 riv. vessels. The Yugoslav airline, *Jugoslovenski Aero Transport*, carried 63,635 passengers on its domestic routes in 1954, and 16,444 passengers on its international routes. The main civil airports are at Belgrade, Zagreb, Ljubljana, Sarajevo, Skopje, and Titograd.

Defence. The Yugoslav Army has 8 army corps of about 30 divs. The Air Force is being re-organised, and there is a Navy with destroyers, submarines, and minesweepers.

Currency, etc. All banking is in the hands of the State. The unit of currency is the *dinar*, divided into 100 *paras*. One *dinar* equals 2.96223 milligrammes of fine gold. Notes of 1000, 500, 100, 20, 10, 5, and 1 *dinar*(s) are issued, and coins of 5, 2, and 1 *dinar*(s), and of 50 *paras*. The metric system (q.v.) is in use.

National Flag. The national flag is blue, white, and red in horizontal stripes, with a red 5-pointed star in the centre.

History. (For hist. until 1918 see SERBIA; CROATIA; SLAVONIA; MONTENEGRO; MACEDONIA; see also BALKAN PENINSULA.) Y., until 1929 known as the Kingdom of the Serbs, Croats, and Slovenes, was created after the First World War from the former kingdoms of Serbia and Montenegro; Bosnia, Hercegovina, Dalmatia (except a small part which went to Italy), and parts of Styria, Carniola, and Carinthia from Austria; and Croatia, Slovenia, and Vojvodina (parts of Baranja, Baška, and Banat), from Hungary. It was declared a constitutional parl. monarchy under the hereditary king of Serbia, but dissension between Serbs and Croats broke out, and King Alexander I (see ALEXANDER), therefore, in Jan. 1929, abrogated the constitution, dissolved Parliament, and formed a cabinet composed of 16 members, responsible to himself alone. At the same time the country was renamed Y., and a new system of regional administration adopted. This period ended with the dictated constitution of 1931, which vested the legislative powers in the king, the senate, and the chamber of deputies. In 1934 Alexander was assassinated. During his son Peter's (b. 1923) minority, Alexander's brother Prince Paul was regent. Soon after the outbreak of the Second World War the subjugation of Y. became a necessity to Ger. strategy, and under great pressure, Prince Paul's Gov., on 25 March 1941, signed the tripartite anti-Comintern Pact (q.v.). This action was repudiated by the mass of the people. A new gov. was set up under King Peter and Gen. Simović which actively resisted the Germans; but Y. was unprepared for an invasion and the Ger. army penetrated the

Monastir gap and eventually occupied Belgrade (after bombing it heavily) on 13 April (see EASTERN FRONT, OR RUSSO-GERMAN CAMPAIGN IN THE SECOND WORLD WAR). In 1944 the defection of Rumania and Bulgaria, brought about by the Russian victories, put the Ger. armies in Y. and Greece in great danger. These armies began a difficult withdrawal, harassed by partisan forces which had carried out guerilla attacks on the Germans throughout their occupation of the country. The gov. of Peter II in exile had appointed a Serb, Gen. Mihailović

1945 Marshal Tito was acclaimed at the general election, and the exiled Peter II was deprived of his nationality and had his property confiscated. In 1946 the constitution of the Federal People's Rep. of Y. was adopted, and action taken to make Y. a fully Communist state. Industries and commercial undertakings were nationalised.

In 1939 the illegal Communist party had 20,000 members. Many were killed during the war; but by 1950 the membership had risen to over 4 million, including large numbers of peasants, who had

Yugoslav National Tourist Office

BELGRADE: THE YUGOSLAV NATIONAL ASSEMBLY BUILDING IS ON THE RIGHT

(Mihailovich) (q.v.) commander-in-chief of what remained of the Yugoslav Army in the fatherland and had given him the post of minister of defence. A rival force to Mihailović's Cetniks (Chetniks) arose under the leadership of Tito (q.v.) a Croatian Communist. Up to mid-1943 allied assistance was given to Mihailović and then also to Tito, whose influence was increasing. In 1944 allied support was henceforth given exclusively to Tito, whose rise to supreme power was thenceforward uninterrupted, and effected with Soviet aid. In June 1946 Mihailović was tried as a collaborator and shot.

The constitution of 1931 was formally abrogated at Belgrade in Nov. 1944, when the Yugoslav Premier Subasić and Tito for the 'National Liberation Committee of Yugoslavia' signed an agreement recognising the provisional legislative powers of the National Liberation Council. In

fought under Tito against the Germans. Unlike Mihailović, whose bias was not only monarchist but pro-Serb, Tito rallied all sections of Yugoslavs without racial distinction, insisting only on political uniformity, and achieved a unity which the monarchy had never been able to obtain. The poor were undoubtedly attracted by Tito's attacks on the large property-owners. The monarchy had never really attempted to deal with the pressing land problem. The social revolution which was carried out in Y. from 1945 altered the balance of Yugoslav society. The large property owners and some of the professional classes suffered a loss in status as well as income: on the other hand, the need for doctors, skilled engineers, architects and teachers became greater than ever before, and writers and artists enjoyed a privileged position, providing that they conformed to the

gov.'s political policy. Industry has been largely nationalised, and craftsmen encouraged to enter co-operatives. There is limited collectivisation of agriculture. The Five Year Plan launched in 1947 hoped to double the national income of 1939 by 1951, and aimed at the industrialisation of the country on a large scale by exploiting the rich deposits of raw materials and by setting up huge electric plants, etc. Great efforts have since been made to increase output both by modernising equipment and methods, and by giving awards for individual efforts. Sev. ambitious building projects have been carried out by the Communist régime, but in 1958 the housing conditions of many Yugoslavs were still below the general living standards of most countries of W. Europe.

Yugoslav Embassy

A GIRL FROM SLOVENIA

The economic blockade launched against Y. by the Cominform countries in 1948 appeared to threaten the Five Year Plan, but Tito then made trade agreements with sev. W. European countries, and claimed that the plan would not be affected. In autumn 1950, however, it was apparent that a bad harvest had added substantially to the economic difficulties under which Y. was labouring.

The peace treaty with Italy, signed in Paris in Feb. 1947, stipulated the cession to Y. of most of the It. prov. of Venezia Giulia, the commune of Zara, and the is. of Pelagosa. The Free Ter. of Trieste was constituted under section III of this treaty as a compromise to the city and its port. In Oct. 1954, as a result of the agreement initialled in London between

the Brit., U.S.A., It., and Yugoslav Govs., the Trieste ter. administered by the Yugoslav Military Gov. since the end of the Second World War, plus a small additional strip of ter., passed under Yugoslav civil administration, and thus became definitely a part of Y. See TRIESTE.

Early in 1948 a bitter political conflict between Y. and Russia broke out when the Kremlin, acting through the Cominform (q.v.) called on Yugoslav Communists to depose certain of their leaders who refused to be bound by Moscow's discipline. Later, in 1949, the Soviet Gov. directly challenged and threatened the authority of the Yugoslav Gov. Political and economic life in Y., 1948-53 was completely dominated by Tito's quarrel with the Cominform (see also TITO). Early in the dispute the Cominform had expelled Tito and urged the Yugoslav people to throw him out of office if he did not change his policy, but the quarrel had the effect of arousing the nationalism of the Yugoslavs and gave Tito support from sections of the pop. who were probably antagonistic to his economic policy. The Russians then instigated an economic blockade of Y.; Tito therefore sought and obtained economic aid from Britain, France, the U.S.A., and the World Bank. Y. was thus able successfully to assert her independent status against Soviet claims, but while economic necessity forced her to trade with the W., her domestic policy continued to be conducted on generally Marxist lines, though with the emphasis on the 'peasant proletariat' rather than on the urban workers, and with rather less severity than was usual in a Communist state.

Nevertheless, between 1948 and 1953 there were significant modifications in the pattern of Yugoslav Communism. Decentralisation measures affected the structure of industry, agriculture, and local gov., and the revised constitution of 1953 provided in theory for considerably greater local autonomy than had previously been considered permissible. In 1951 Archbishop Stepinac (q.v.) was conditionally released from prison, but 2 years later he was not able to leave the country to receive his cardinal's hat. In March 1953 Tito visited Britain.

After the death of Stalin (1953) relations between Y. and Russia gradually improved, though Tito continued to insist on Y.'s independence of both the E. and the W. blocs. In June 1955 Tito, Bulganin, and Khrushchev signed a declaration of friendship and co-operation. In spite of W. aid, Y.'s economic position remained precarious, and Russia now made tempting offers of generous economic aid.

In Oct.-Nov. 1956, Y. supported the condemnation of Anglo-Fr. intervention in Egypt (see SUEZ CANAL). But Y. gave temporary asylum to thousands of Hungarian refugees after the unsuccessful anti-Russian rising in Hungary (see HUNGARY, History), and there was a noticeable coolness between Y. and the other Communist states for some time after this. In Aug. 1957 Moscow Radio

announced that a meeting had taken place between Khrushchev and Tito, and once again Russo-Yugoslav relations seemed to be improving.

Tito's repeated insistence that Y. was to continue as a Marxist state was underlined by the trial, in Oct. 1957, of his former political associate Milovan Djilas, who was sentenced to 7 years' imprisonment for 'spreading propaganda hostile to the state.' Only the relatively lenient sentence made this trial any different from the political trials held in other communist countries. In Oct. 1957 Y. recognised the Ger. Democratic Rep. of E. Germany; as a result, in Nov. the Federal Ger. Rep. broke off diplomatic relations with Y.

The unique position of Y. in world politics since 1948 is very largely the personal achievement of Tito, whose influence over his country's affairs remains paramount. He has been President of the rep. since 1953.

Yugoslav Languages. Apart from the languages of minorities (e.g. Albanian, Hungarian, Italian), there are 3 languages spoken in Yugoslavia: Slovene, Serbocroatian, and Macedonian (elevated to the status of a language in 1943). They are members of the S. Slavonic group and have developed from the common S. Slavonic language spoken by the first Slav settlers in the Balkans at the beginning of the 7th cent. Slovene and Serbocroatian have a musical accent, Macedonian has a stress accent. Slovene preserves the dual and the supine, Macedonian has several suffixed definite articles. Croatian is the language of the Croats and Serbian that of the Serbs, and the standard forms of the two are now nearly identical, and they are now considered one language, Serbocroatian. Slovene and Croatian are written in the Latin alphabet, most Serbian and Macedonian in Karadžić's modified Cyrillic.

Slovene Literature. The earliest Slovene document dates from about AD 1000, but a literature started only with Primož Trubar, the protestant reformer who pub. the first books printed in Slovenian (1551 in Tübingen). But the greatest work of the reformers was the trans. of the Bible pub. by Jurij Dalmatin, a follower of Trubar's, in 1584. The Counter-Reformation, which destroyed all Protestant hopes in Slovenia, had to continue the work started by the Protestants, providing devotional books in Slovenian. The Austrian educational reform, 1760, led to the appearance of text-books in Slovenian and soon to a Slovene renaissance. Baron Zois (1747-1819) was the leader of a cultured group which included Valentin Vodnik (1757-1819), poet and producer of the first Slovene newspaper; Anton Linhart (1757-85), historian; and Jernej Kopitar, who wrote the first scientific Slovene grammar (1808) and laid the foundation of Slavonic studies. Still, no environment can explain the perfection of Francè Prešeren's poems (collected and pub. 1846). The growing nationalism after 1848 increased Slovene literary activity, but could not raise it to

Prešeren's heights; e.g. J. Bleiweis (1808-81), journalist, S. Jenko (1835-69), Fran Levstik (1851-87) and Josip Stritar (1836-1923), poets. Levstik and Stritar were also novelists. The foundation of the journal *Ljubljanski zvon*, 1881, marked a turning from romanticism towards realism. Its contributors included the fiction writers Tavčar, Kersnik, and Trdina, and the poets Gregorič and Askerc. From 1900 symbolism gathered strength, e.g. the work of Kette, Murn-Aleksandrov, Zupančič, and Ivan Cankar. By 1918 a new psychological realism was taking its place, e.g. the work of I. Pregelj, Francè Bevč, and J. Kozak. The War (1941-45) and the Communist success brought out new trends. Prežihov Voranc (1893-1950), who wrote before the War as well, was the outstanding figure of the post-war period.

Serbocroatian Literature. Medieval Serbian literature, mainly religious and written in Church Slavonic, was cut short by the Turkish conquest. The coast was not conquered; therefore Dalmatia was able to share in the It. renaissance and developed from the end of the 15th cent. a secular literature, strongly influenced by Italian, in Croatian, e.g. Marko Marulić of Split, Hanibal Lucić and Petar Hektorović of Hvar, Petar Zoranić of Zadar, and Šiško Menčetić, Džore and Marin Držić, Dinko Ranjina, and Dominko Zlatarić of Dubrovnik. After Gundulić's death (1638) there was a decline. In Croatia the missionaries of the Counter-Reformation were active in the 17th cent. Their best service to literature was the production of a grammar (1654) and a dictionary (1659). The Serbian revival started in Vienna and Budapest, centres for Serbians who, to escape Turkish rule, had fled and settled in Austria and Hungary. The need for general education was partly supplied by Rajić (1726-1801), the historian; Zaharije Orfelin (1726-85), publisher and writer on practical things, bee-keeping, hand-writing, etc.; and Dositej Obradović (1742-1811), who travelled widely and whose autobiography is still read with pleasure.

The Illyrian movement which aimed at the unification of the S. Slav languages and literatures was Croatian in origin and organisation, and certainly the adoption of the *šćo* dialect, used by Serbs, as the Croatian literary language, made later Serbocroatian unity possible. Among the Illyrians were the poets Stanko Vraz (1810-51), a Slovene, Petar Preradović (1818-72), and Ivan Mažuranić (1814-90). The chief moulder of Serbian was Vuk Karadžić (1787-1864), collector of folk literature (most of which was common to Serbs and Croats), lexicographer and reformer of the alphabet. He secured the adoption of the Serbian spoken by the Serbian peasants of Hercegovina as the foundation of the literary language and the rejection of the archaizing and Russified Serbian written by the Serbs in Austria and Hungary. Space does not allow an adequate review of the many subsequent trends: suffice to mention the following. The outstanding Serbian work

of the cent. was *Gorski Vjémac*, 1847, an epic of patriarchal Montenegro by Petar Petrović Njegoš, the prince-bishop of Montenegro. Zagreb became, with the Bishop Strossmayer's foundation of the Yugoslav Academy (1867) and the Univ. (1874), the cultural centre of Croatia; and August Senoa (1838-81) with his historical novels was the typical, and the greatest, novelist of Zagreb. But romanticism and the succeeding realism gave way in the 20th cent. to more classical conceptions, e.g. in Ivo Vojnović (1857-1929), the dramatist, and Vladimir Nazor (1876-1949). Independently in Serbia a panslavian movement had started with Milan Rakić and Jovan Đutić (1874-1943). After the formation of Yugoslavia, Serbian and Croatian literature grew closer together, and the scene was dominated by Miroslav Krleža (1893-). The Second World War brought great changes, but so far writers seem to enjoy a little more freedom than in some other Communist countries.

Macedonian Literature. The Macedonian language was always considered a dialect of Bulgarian or of Serbian. Isolated religious books had been pub. in it from 1814. Collections of folk material were pub. in Zagreb in 1861 and in Sofia from the end of the 19th cent. Between the Wars there was some original writing, e.g. Iljoski, Racin, Markovski, Nedelkovski. After its recognition as an independent language, and the creation within Yugoslavia of the Macedonian Rep., there has been a great growth in literary activity. See H. G. Lunt, 'Survey of Macedonian Literature,' in *Harvard Slavic Studies*, Vol. I, 1953.

Yukaghir, aboriginal tribe of NE. Siberia, N. of the Verkhoyansk and Stanovoi mts. They hunt reindeer, but do not domesticate them, and are, apart from the Eskimo, the only purely hunting and food-gathering people of Arctic Asia. See D. Forde, *Habitat, Economy and Society*, 1934.

Yukon: 1. Ter. of NW. Canada, with an area of 205,346 sq. m. (land) and 1730 sq. m. (water). The N. and W. are mountainous, but in some places the valleys can be utilised for growing crops. The chief forest trees are spruce, poplar,

birch, cottonwood, and balsam. Y. owed its prosperity to the discovery of the gold mines in the Klondike region, and mining is the prin. occupation. Silver and lead are the other chief minerals. Total mineral output to the end of 1946 was \$242,750,000. All the mining operations take place some distance outside Dawson City in the Klondike valley and its tributaries. In 1947, 47,750 oz. of gold valued at £417,800 was recovered in the Y. Fishing and lumbering are other industries. Fur output averages \$500,000 annually. Within the boundaries of the Klauene Lake Federal Game Sanctuary is the Mt St Elias range, with Mt Logan (19,539 ft). The Y. Ter. was constituted a separate political ter. in 1898. It is governed by a resident Commissioner and an elective Legislative Council of 5 members. The Commissioner administers the gov. under instructions from the Governor-General in Council or the Minister of N. Affairs and Natural Resources. The seat of gov. is Whitehorse.

National Film Board, Canada

YUKON

Panning for gold, near Whitehorse.

(pop. 2594). The pop. of Y. Ter. is about 9000, having declined considerably from over 27,000 in 1901. There are 58 m. of railway, but the Y. River is the greatest channel of communication from the coast to the interior. There are 2000 m. of motor and other roads in addition to the Alaska Highway. (See under ALASKA.) See N. A. D. Armstrong, *Yukon Yesterdays: Thirty Years of Adventure in the Klondyke*, 1906; *Yukon: The Land of the Klondyke*, 1929, and *The Yukon Territory: Administration, Resources, Development*, 1947, both pub. by the dept of Mines and Resources, Ottawa.

2. Riv. of the Yukon Ter. and Alaska, formed by the junction of the Lewis and

Pelly rivs. Length 2300 m. The riv. is navigable, in the summer, for 3-ft-draught steamers from Whitehorse to the Bering Sea (1770 m.). It was first explored from source to mouth in 1883 by F. Schwatka.

Yulan, *see* MAGNOLIA.

Yungchi, *see* KIRIN.

Yungning, *see* NANNING.

Yunnan, SW. prov. of China, bounded on the N. and E. by Szechwan, Kweichow, and Kwangsi, and on the S. and W. by

Road). In addition to the Kunming-Haiphong railway, 2 new ones, one to Chengtu (Szechwan) and the other to Kweiyang, are being built in 1957. The long-standing problem of the frontier between China and Burma was settled in 1956.

Yusuf-ibn-Tashfin, *see* ALMORAVIDES.

Yuzovka, or Yuzovo, *see* STALING.

Yverdon, tn and spa in the canton of Vaud, Switzerland, at the SW. end of

Cliché Combiar à Macon

INTERIOR OF THE CHURCH OF ST PIERRE, YVETOT

Indo-China, Burma, and Tibet. Area 153,864 sq. m. The surface is mainly a lofty, uneven plateau, broken by mt ranges and the gorges of rivs. The mts are highest in the N., where they reach 17,000 ft, sinking to 7000 or 8000 in the S. The chief rivs. are the Salween, Yangtsekiang, and Me-kong. The plains and valleys are fertile, and agriculture and stock-raising are largely carried on, particularly in the S. and SW. Excellent tea, tobacco, and silk are produced. The mineral wealth is considerable and includes copper ore and tin ore, which have been mined for many years, gold, silver, lead, tin, jade, and anthracite. Pop. 17,472,737 (1954). The cap. is Kunming (Yunnan-fu). Among the prin. roads in China is that which runs from Kunming in Y. to Lashio in Burma (the Burma

Lake Neuchâtel. It is built on the site of the Rom. tn *Eburodunum*. At the beginning of the 19th cent. its castle was the home of Pestalozzi's (q.v.) school. Pop. (1955) 14,100, Fr. speaking Protestants.

Yvetot, Fr. tn in the dept of Seine-Inférieure. In the 14th-16th cents. the lord of Y. was called the King; one of the satiric songs of Béranger (q.v.) is entitled *Roi d'Yvetot*. There is a mrkt, and mustard, cotton goods, and hats are manuf. In the remarkable round church of St Pierre, built in 1556, Max Ingrand has executed a great stained glass window forming an almost complete circle, representing Christ on the Cross and all the saints of the diocese of Rouen. Pop. 6800.

Y.W.C.A., *see* YOUNG WOMEN'S CHRISTIAN ASSOCIATION.

Z

Z, twenty-sixth and last letter of the Eng. alphabet. In the N. Semitic alphabet (as well as in modern Heb.) it occupies the seventh place; in the Gk alphabet it occupies the sixth place. The Etruscans took it over from the Greeks, and the Romans borrowed it from the Etruscans. Thus, the early Lat. alphabet contained the letter Z (Z), which then occupied the seventh place, but at a later stage it was dropped, because Latin did not require it, and the letter G, created in 312 BC out of the letter C, was placed in its position. When, after the conquest of Greece (1st cent. BC), Gk words were largely borrowed by the Lat. language, a new *z* (Z) was adopted for the sound *z* (but only to transliterate Gk words) and was placed at the end of the Lat. alphabet, from which it has been transferred to alphabets of W., S., N., and Central Europe. The phonetic value of *z* is that of a voiced sibilant, like the *s* in 'singer,' but in some languages it may have the value of *ds* or *ts*. See ALPHABET.

Zaandam, port and tn in the prov. of N. Holland, the Netherlands, on the R. Zaan, 5 m. NW. of Amsterdam. It has a great number of saw-mills, and manufs. paper, metals, glue, and dyes. Pop. 45,700.

Zabalkanski, Count, see DIEBITSCH.

Zabern, see SAVERNE.

Zabkowice Slaskie (Ger. Frankenstein), tn of Poland, in Wroclaw prov., at the E. foot of the Eulengebirge, 40 m. SSW. of Wroclaw (q.v.). It has a textile industry and nickel mines. Pop. 11,000.

Zabrze (Ger. Hindenburg), tn of Poland, in Katowice prov., 11 m. WNW. of Katowice (q.v.). Until 1945 it was in Upper Silesia (q.v.). It has coal mines, and steel, engineering, glass, and chemical industries. Pop. 133,000.

Zacatecas: 1. State of N. Mexico; area 28,120 sq. m. It is rich in silver and other minerals, including gold, copper, and zinc, Fresnillo being the best-known centre. In the N. and E. are extensive cattle ranches. Every kind of cactus abounds. Pop. 665,524.

2. Manufacturing city, cap. of Z. state, a centre for silver mining. Altitude 8075 ft. It has a cathedral, a mint, and an observatory. It became a city in 1585, being founded in 1546. There is a railway junction and an airfield. Pop. 21,800.

Zachariah: 1. See ZECHARIAH.

2. Father of John the Baptist. All that is known of him is contained in Luke i. He was about to offer incense as priest in the Temple, when the angel Gabriel appeared to him and foretold that his ageing wife Elizabeth should bear a son. Z. for doubting was struck dumb. After the birth of the child he named it John as the angel had commanded, and, recovering his speech, uttered the well-known Canticle *Benedictus*.

Zachary, St (*d.* 752), Pope, b. at San Severino, Calabria, of Gk parentage. He succeeded Gregory III as Pope in 741, and in that capacity exercised considerable political influence. He negotiated peace between the Lombards and the Greeks, confirmed Pepin the Short as King of the Franks, encouraged the missionary work of St Boniface, and did much for the Benedictine order. His feast day is on 22 Mar.

Zachtleven, Cornelis, see SACHTLEVEN.

Zacynthus (It. Zante), one of the Ionian is. and a dept of Greece, 8 m. S. of Cephalonia. Some gypsum is quarried. The chief product is the vine. The cap. is the small port of Z. in the SE., which is a centre of cable communications. Area 155 sq. m.; pop. (is.) 38,000; (tn) 11,100.

Zadar (It. Zara; Rom. Iadera), seaside resort and port in Croatia, Yugoslavia, on a peninsula of the Dalmatian coast. It was conquered by Venice in the 15th cent., went to Austria in 1797, and was ceded to Italy by the treaty of Rapallo (q.v.) in 1920. Under the It. peace treaty of 1947 it became part of Yugoslavia. It was badly damaged during the Second World War, but has been restored. There are Rom. remains, a 14th-cent. cathedral, a palace, and sev. fine churches. Maraschino liqueur, glass, and wax are manuf. Pop. 18,900.

Zadkiel, pseudonym of Richard James Morrison (1795-1874), Eng. astrologer, who founded, in 1831, *The Herald of Astrology*, which, afterwards issued yearly as *Zadkiel's Almanac*, attained great popularity.

Zagan (Ger. Sagan), tn of Poland, in Zielona Góra, on the Bobrawa (q.v.), 25 m. SSW. of Zielona Góra (q.v.). It was formerly in Ger. Lower Silesia (q.v.). It was the cap. of a principality, 1274-1472. There is a 17th-cent. palace built by Wallenstein (q.v.), and there are lignite mines and a textile industry. Pop. 9000.

Zaglul Pasha (1860-1927), Egyptian politician and lawyer. As premier he headed the Wafd which brought about the independence of Egypt. See EGYPT, *Modern History*.

Zagorsk (until 1930 Sergiyev), tn in the Moscow Oblast of Central Russia, 44 m. NE. of Moscow. It is the centre of an old (since 15th cent.) wood-carving and toy-making craft. The famous Trinity Monastery of St Sergius (see TROITSK-SERGIYEVA LAVRA), founded in 1337, is now a museum and residence of the Patriarch of Moscow. Pop. (1931) 24,000. Originally an extra-mural settlement of the monastery, Z. became a tn after 1917.

Zagreb (Ger. Agram), cap. city of the rep. of Croatia (q.v.), Yugoslavia, on the Sava. It has been the cultural centre of the Croats since 1557, and is the second city of Yugoslavia. It is divided into 3 parts, the *Kaptol* (originally an ecclesiastical

colony), and the High and Low tns. and its streets and buildings are a mixture of medieval, Baroque, and modern. It is the seat of Rom. Catholic and Orthodox archbishops, has a cathedral (rebuilt in the 19th cent.), a univ., libraries, museums, and theatres, and fine parks and boulevards. It manufs. textiles, machinery, paper, carpets, asbestos, and electrical equipment, and it is an important centre of communications. Pop. 350,500.

Zaharoff, Sir Zacharias Bastlejos (1850-1936), financier, b. Constantinople, of mixed Russian and Gk parentage, educ. in London and Paris. Little is known of his life, but he amassed a great fortune, giving away considerable sums, establishing chairs of aviation at Paris, Petrograd (now Leningrad), and London Univs., and endowing a professorship of Fr. literature at Oxford and a chair of Eng. literature at Paris. He had extensive interests in armament and engineering companies, banking, and oil concerns. G.B.E. 1918; G.C.B. 1919.

Zahedan, dist. and tn of E. Persia. The tn, formerly called Dozdab, has transit trade with Pakistan, with which it is connected by railway. Pop. (of tn) 17,500.

Zakopane, tn of Poland, in Crakow prov., in the Tatra Mts., 50 m. S. of Crakow (q.v.). It is a popular mt health resort (altitude 2920 ft) and winter sports centre. Pop. 14,000.

Zakynthos, see ZACYNTHUS.

Zala County, see ZALAEGERSZEG.

Zalaegerszeg, tn of W. Hungary, cap. of the co. of Zala, on the R. Zala, 115 m. SW. of Budapest (q.v.). It is the centre of a picturesque dist. called *Gócs* (confusion), and has oil refineries and clothing manufs. Pop. 14,000.

Zalew Szczecinski, see STETTINER HAF.

Zalt-Bommel, charming little tn in the prov. of Gelderland, Netherlands, situated on the R. Waal, 21 m. SSE. of Utrecht.

Zama, anc. tn in Numidia, N. Africa, 70 m. SW. of Carthage, scene of Scipio's victory over Hannibal (202 BC) which ended the Second Punic War.

Zambales, prov. in central Luzon, Philippines. It is crossed by the Zambales Mts. The chief crop is rice, and there are chromite mines. The cap. is Iba. Pop. 138,536.

Zambezi, or **Zambesi**, riv. of Africa, extending mainly through N. and S. Rhodesia—being the territorial boundary between the two countries from near Shesheke to Feira (N. Rhodesia)—and Mozambique, about lat. 16° S. It has a length of about 1600 m., but its navigation is poor in proportion to its size. It has 3 navigable sections, but they are divided by impassable barriers. Its drainage area is about 520,000 sq. m. It rises on sev. streams in NW. Rhodesia, Angola, and the Belgian Congo. Its general course is SE. through the Baroki Valley to the Victoria Falls (q.v.); from here the riv. bends NE. and E. nearly to Tete (Mozambique), when it resumes a SE. course to the delta, situated some 200 m. NE. of Sofala in the Mozambique

Channel. Its volume is greatly increased by the Shire bringing the waters of Lake Nyasa. The riv. is navigable for 120 m. from its mouth, though with difficulty in the dry season, and for special riv. steamers (stern-wheel) up to Tete, and on the R. Shire to Chirimo (Nyasa-land). Below Tete the Lupata Gorge has a width of about 200 yds and a very strong current. Features of the Z. in its upper reaches are the Kanzalo Rapids and the Kariba Gorge (q.v.) in S. Rhodesia. The chief tns or townships on its banks are: Kazombo (in Angola near the source), Balovale, Leahui, Livingstone, Meumba, Boruma, and Feira, all in N. Rhodesia; and in Mozambique: Zumbo, Chikoa, Tete, Benga, Sena, Inyangoma, Mopeia, Chinde, and Quilimane. Livingstone was the first explorer of the upper riv. between 1851 and 1853; he discovered the Victoria Falls (1855) during his descent of the riv. to its mouth. See D. and C. Livingstone, *Expedition to the Zambezi and its Discovery of Lakes Shirwa and Nyasa*, 1865; Lord Hailey, *An African Survey*, 1957.

Zamboanga, cap. and port of the prov. of Zamboanga, Mindanao Is., Philippines. It was originally an old Sp. fortress. Copra, coconuts, rubber, lumber, etc., are exported. Pop. 103,317.

Zamenhof, Ludwig Lazarus (1859-1917), Polish-Jewish inventor of Esperanto (q.v.), b. Bialystok. See life by E. Privat, 1920 (trans. 1931).

Zamia, genus of fern-like palms, family Cycadaceae, mostly of tropical America and W. Indies. The underground parts are sometimes ground into flour and prepared for making cakes, etc.

Zamora, 1. Sp. prov., in León (q.v.), on the Portuguese frontier. It is watered by the Duero (q.v.) and its tribs. Its flocks produce much of Spain's merino wool. Area 4098 sq. m.; Pop. 320,350.

2. Sp. tn, cap. of the prov. of Z., on the Duero. It has a fine 12th-cent. Romanesque cathedral, the bell-tower of which is still unfinished, many other old churches, walls, anc. houses, and a castle. Textiles, pottery, and wine are manuf. Pop. 40,000.

3. Tn in central plateau state of Michoacán, Mexico, on the Z. R., 200 m. WNW. of Mexico City. Pop. 15,450.

Zamora y Torres, Niceto Alcalá (1877-1949), Sp. statesman, b. Prigo and educ. at Granada and Madrid univs. He held office in sev. govts. as a monarchist. Later, he became a republican, and *Libera* leader. Z. was elected first president of Spain in Dec. 1931. With the formation of the 'Popular Front' the moderate and pacific counsels of Z. were ignored, and, in April 1936, a Socialist motion in the Cortes censuring the president was carried and he resigned.

Zancle, see MESSINA.

Zanesville, city, co. seat of Muskingum co., Ohio, U.S.A., on R. Muskingum, 52 m. E. of Columbus. It manufs. tiles, pottery, iron and steel, and glass, and has an Art Institute. Pop. 40,500.

Zangwill, Israel (1864-1926), novelist, b. London of Jewish parentage. Educ. at London Univ., he pub. a series of masterly

studies of Jewish life and history, of which the best known is *The Children of the Ghetto*, 1892; it was followed by *Ghetto Tragedies*, 1893, *The King of the Schnorrers*, 1894, *Ghetto Comedies*, 1907, and *Chosen People*, 1918. *Dreamers of the Ghetto*, 1898, is a collection of essays on notable Jews of history. Z. also wrote a number of plays.

Zante, see ZACYNTHUS.

Zantedeschia, (synonym *Richardia*), family Araceae, genus of S. African marsh plants with thick rhizomes, of which *Z. aethiopica* (synonyms *Calla aethiopica*, *Richardia africana*), with arrow-shaped leaves, and creamy-white spathe, and its varieties, are grown in gardens, and known as Lily of the Nile, Arum Lily, Calla, and Trumpet Lily.

Zanzibar, Brit. protectorate, is, and in off the E. African coast. The protectorate is composed of the is. of Z., the is. of Pemba (q.v.), and sev. small is. The is. of Z. is off the coast of Tanganyika, separated from the mainland by a narrow channel which, at one point, is about 23 m. wide. Pemba is 30 m. to the NNE. Z. is the largest coralline is. on the E. African coast. The climate of Z. is tropical, but the heat is tempered by constant sea-breezes which blow with great regularity except during the change of the monsoons. Pop. (latest figures available, 1948), 264,162 (Europeans, 296; Arab, 44,560; Indian, 15,892; African, 199,860; others, 3554). Distribution between the two prin. is. is Z., 144,575; Pemba, 114,587. (45,300 of the pop. of Z. is. live in Z. tn.) With 250 persons to the sq. m. Z. protectorate is one of the most densely populated countries in Africa. The prevailing native religion is Moslem. There are Christian missions.

Production and Industries. Apart from *entrepot* trade, Z. is mainly dependent on its agric. and marine products. The chief agric. industry is the cultivation of cloves. Cloves are produced by individual Arab, Indian, and African agriculturalists on their own plantations, and picking is done by hired African labour. Export is normally in the form of dried bulbs, or oil distilled mainly from the stems. The spread of 'Sudden Death' disease in clove-trees has been engaging the attention of the gov. during the last few years, and a Clove Research Dept has been set up. The coconut industry is also important, copra being one of the main exports. It is largely produced by the Omani Arabs. Mangrove bark used in the tanning industry is also exported. Other exports are chillies, citrus and other fruits, and opium-tobacco. There are 3 small forests, which yield 'Mvule' timber. Fishing is a prominent activity, the fish being mostly consumed locally, though dried shark is exported. The manuf. of coir fibre and rope by hand is fairly extensive in the coastal areas. Other industries are clove-oil distilling, coconut expression, and the manuf. of soap. In 1953 162,918 cwt. of cloves valued at £6,011,197, copra valued at £403,712, and coconut oil at £465,990, were exported. It is estimated that there are

50,000 ac. under cloves in the protectorate. Percentage of imports from the U.K. (1953) 34.71 per cent; exports to the U.K. 6.18 per cent.

Administration. The gov. is administered by the Brit. Resident, who exercises his functions under the Z. Orders in Council, 1924 and 1925. The Sultan legislates by decrees which, when countersigned by the Resident, have the force of law. The executive council is presided over by the Sultan, and the Legislative Council by the Resident. The Legislative Council consists of 4 *ex-officio* and 5 official members. There are 8 unofficial members: 3 Arab, 2 Indian, 2 African, and 1 European. It is the administrative policy to develop amongst the people a system of local gov. through local councils, which are being set up in suitable areas.

Social Welfare. Primary education is free in the gov. primary schools, which admit only Arabs and Africans. In 1955 there were 8089 boys and 2588 girls in primary schools, and 252 boys and 103 girls in gov. secondary schools.

Law. Eng. common law is administered by the courts where applicable. In the Sultan's courts the law of Islam is regarded as the fundamental law in civil matters. There has been no comprehensive publication of the laws of Z. since 1934.

Z. tn is situated on the W. coast of Z. is. It is the largest tn in E. Africa, and has an Arabic character. It was once the greatest slave-mkt in the world. It has a good harbour, which presents excellent facilities for shipping and trade generally. Pop. (1948) 45,300. Other tns in the protectorate are Wete, Chake Chake, and Mkoani, all in Pemba is.

History. The beginnings of the hist. of Z. are lost in antiquity. It is probable that the is. of Z. and Pemba had a close connection with S. Arabia prior to the Christian era and that Bantu settlers from the mainland of Africa occupied the is. at about the same time. Thereafter traders from Arabia, the Persian Gulf, and the E. coast of India began to visit the place. In about the 10th cent. of the Christian era the inhabitants of Z., Pemba, and the adjacent mainland became converts to Islam. At the end of the 15th-cent. Z. was ruled by a 'king' of 'Moorish' (i.e. mixed African and Asiatic) descent. Pemba was at that date said to be ruled by 5 'kings' of similar origin. In the early days of the 16th cent. the Portuguese set about the conquest of the E. African littoral and made the is. of Z. and Pemba tributary to the Portuguese crown. Although the inhab. were more than once in a state of rebellion, Pemba remained tributary until the final expulsion of the Portuguese. On the other hand, Z. very soon ceased to pay tribute, and thereafter its 'king' was treated as a friendly ruler, who permitted the Portuguese to erect a factory and a church in his dominions.

Portuguese supremacy in E. Africa came to an end in 1698 with the capture of their fort at Mombasa by the Arabs of

Oman. Thereafter Z. and Pemba remained under the nominal supremacy of Oman for rather more than a cent. After the accession in 1804 of Seyyid Said bin Sultan to the throne of Oman, definite measures were taken to assert Omani supremacy in E. Africa. In 1829 Seyyid Said transferred his cap. from Muscat to Z. Thereafter he made Z. his permanent residence and laid the foundations of the prosperity of the is. by promoting trade with European and Amer. countries and with the Lake regions of Central Africa and by the introduction of cloves and other economic crops into Z. and Pemba. At his death in 1856 he left his African dominions to his son Majid and those in Asia to his son Thuwein. A dispute arose between the two brothers which was referred to the arbitration of Lord Canning, governor-general of India, who in 1861 made an award declaring the African possessions of the late Seyyid Said to be independent of Oman.

Majid was succeeded in 1870 by his brother Barghash. In 1873 and 1875 Barghash concluded treaties with Great Britain which declared the sea traffic in slaves within and from Z. dominions to be illegal. In 1886 a *procès verbal* signed by Lieut-Col. (afterwards Earl) Kitchener as delegate of Great Britain and delegates from France and Germany, and subsequently ratified by the delegates' respective govts., defined the maritime, littoral, and continental possessions of the sultan of Z. The is. of Z., Pemba, and Mafia were recognised as being under the sultan's sovereignty and certain strips of the coast between Cape Delgado and Lamu to a depth varying from 5 to 10 m. were recognised as forming part of his dominions. In 1888 Barghash's successor, Khalifa, granted to a Ger. E. African Company a lease of the whole of the coast-line (including Mafia), of what is now Tanganyika. In the same year a similar lease was granted to the Imperial Brit. E. Africa Company (I.B.E.A. Co.) of the sultan's dominions to the N. of the Ger. concession. The Ger. company's concession was eventually taken over in 1890 by the Ger. Gov., who bought the sultan's rights for 4,000,000 gold marks. The I.B.E.A. Co.'s concession was taken over by the Brit. Gov. in 1895, and the ter. comprised therein is now known as the Kenya Protectorate.

In 1890 Khalifa placed his dominions under Brit. protection and also abolished all traffic in slaves within those dominions. In the following year a regular gov. was constituted with a Brit. representative as first minister. On the death of the Sultan Hamed bin Thuwein in 1896, Seyyid Khalid, another member of the family, seized the royal palace, and it was found necessary for Brit. warships to bombard the palace in order to compel his submission. Sultan Hamed was succeeded by Hamud bin Muhammad. In 1897 the status of slavery was finally abolished in Z. In 1906 the Brit. Gov. assumed more direct control over the Protectorate and reorganised the gov. In 1911 Seyyid Ali, who had succeeded his

father Sultan Hamud in 1902, abdicated and was himself succeeded by Seyyid Khalifa bin Harub, the present ruler of Z. In 1913 the control of the Z. Protectorate was transferred from the Foreign Office to the Colonial Office. In 1914 a Protectorate Council was formed with the sultan as president. This body was purely of an advisory and consultative nature and was replaced in 1926 by executive and legislative councils.

Architecture. The architecture of Z. is distinctively saracenic, and in accordance with the wish of the sultan this traditional form has been scrupulously maintained in most of the public buildings. With narrow streets and tall houses, Z. presents a typically Eastern appearance. The houses are embellished with carved doors, for which the is. is justly famous. See R. F. Burton, *Zanzibar, City, Island, and Coast*, 1872; H. N. Ridley, *Spices*, 1912; C. H. Stigand, *The Land of Zinj: Its Ancient History and Present Inhabitants*, 1913; F. B. Pearce, *Zanzibar, the Island Metropolis of East Africa*, 1920; R. Said-Ruete, *Said bin Sultan*, 1929; W. H. Ingrams, *Zanzibar, its History and its People*, 1931, and *Arabia and the Isles*, 1952; R. H. Crofton, *A Pageant of the Spice Islands*, 1936, and *Zanzibar Affairs, 1914-33*, 1953; Sir R. E. Coupland, *East Africa and its Invaders*, 1938; also the following gov. publs.: *Zanzibar Protectorate*, 1931; B. H. Binder, *Report on Zanzibar Clove Industry*, 1936; R. O. Williams, O.B.E., *The Useful and Ornamental Plants of Zanzibar and Pemba*, 1949; *A Guide to Zanzibar*, 1949; and G. E. Tidbury, *The Clove Tree*, 1949.

Zapolska, Gabriela (1860-1921), Polish writer. Her father was a landowner, her mother an opera-singer. After an unsuccessful marriage she spent a few years on the stage, then devoted herself to writing, especially plays. Her works often deal with the position of women and expose the hypocrisy of middle- and upper-class morality. Her best-known work is *Moralność Pani Dulskiej* (*The Morality of Mrs Dulski*), 1907.

Zaporogians, see COSSACKS; SICH.

Zaporozh'ye (Ukrainian *Zaporizhzhya*): 1. Oblast in SE. Ukraine, between the Dnieper bend and the Sea of Azov, largely Black Earth lowland steppe with lignite deposits. There are large metallurgical, engineering, chemical, and food industries; wheat, sunflowers, and cotton are grown, and there is mkt gardening (melons). The prin. tns are Z., Melitopol', and Osipenko. The first non-nomadic pop. was the Ukrainian Cossacks who in the late 16th cent. estab. the Sich community (see SICH) on the Dnieper bend (for further hist. see NEW RUSSIA). From 1917 to 1921 Z. was the centre of the Anarchist movement led by Makhno (q.v.). Area 10,400 sq. m.; pop. (1956) 1,393,000, Ukrainians and Russians (before the war also Jews and Germans).

2. (until 1921 *Aleksandrovsk*) Cap., economic and cultural centre of the above, on the Dnieper. It is a major industrial centre (iron and steel, aluminium, chemicals, combine harvesters). It is also

a transportation centre (riv. port, airport, and possesses 4 railway lines). There is a large hydro-electric station (*see* DNEPROGES). Z. was founded in 1770 as a fortress in the defence line against the Crimean Tatars. It was much fought over in 1918-19, and suffered greatly during the Second World War (occupied by Germans from 1941 to 1943). Pop. (1956) 381,000 (7th in the Ukraine; c. 1914, 51,000; 1926, 56,000; 1939, 289,000).

Zapotec, Amer.-Indian tribe who exercised supremacy in Mexico before the 16th cent. There are now rather less than 200,000 Z.s. living chiefly in Oaxaca state.

Zara, *see* ZADAR.

Zarabanda, *see* SARABAND.

Zaragoza (Eng. *Saragossa*): 1. Sp. prov., in Aragón (q.v.). It is, in general, an open plain, with great extremes of climate, and is watered by the Ebro (q.v.) and its tribs., the Jalón, Huerva, and Arba. In the N. and W. it is bounded by mts. Cereals, live-stock, oil, and wine are produced. Area 6,728 sq. m.; Pop. 628,650.

2. (anc. *Salduba*; Rom. *Caesar-Augusta*) Sp. tn, cap. of the prov. of Z., on the Ebro. It was once a cap. of Aragón (q.v.), but it declined in importance after the union of that kingdom with Castile. In a siege by the French during the Peninsular war (q.v.) half of its inhab. *d.* In the Civil war of 1936-9 it supported the insurgents. It has 2 cathedrals, the old in Gothic style, and the new (begun 1681) a Baroque building with 10 cupolas. There are other noteworthy buildings, and a univ. (1474). Z. is a commercial and railway centre; its manufs. include machinery, glass, and porcelain. Pop. 271,100. *See* IMPERIAL CANAL OF ARAGÓN.

Zarate (formerly *Uriburu*), tn of Argentina in the prov. of Buenos Aires, on the Paraná R., 56 m. by rail NNW. of the cap. It has a refrigerating plant and paper factories. Pop. 33,000.

Zarathushtra, *see* ZOROASTRIANISM.

Zaratite, or *Emerald Nickel*, basic carbonate of nickel. It occurs as emerald green, botryoidal, compact masses, in Galicia, Spain, the Shetland Is., Australasia, etc.

Zaria, dist. and tn of N. Nigeria. It is watered by the Kaduna and its tribs., and its soil is fertile. Chief products are cotton and sugar. It is crossed by the Iddo-Kano railway. Z. is a garrison tn. Pop. 54,000.

Zarudnyy, *Sergey Ivanovich* (1821-87), Russian jurist. In 1861 he became head of the law dept of the State Council, and in 1869 a senator. He played a leading part in the judicial reforms of 1864 (*see* GREAT REFORMS), which completely overhauled and modernised the Russian judicial system, introduced trial by jury, public court proceedings, independence of judges and examining magistrates, etc.

Zary (Ger. *Sorau*), tn of Poland, in Zielona Góra prov., 28 m. SW. of Zielona Góra (q.v.). It was formerly in Brandenburg (q.v.). In the Middle Ages it had a salt mkt. It went to Saxony in 1785 and to Prussia in 1815. During the Second

World War it was very severely damaged. There are lignite mines in the dist., and there are textile manufs. Pop. 10,000.

Zaslón, *see* SABAC.

Zátec (Ger. *Saaz*), Czechoslovak tn in the region of Ústí nad Labem (q.v.), on the Ohře (q.v.). It has a large trade in hops, for which it is famous. Pop. 12,700.

Zaysan, or *Dzalsang*, lake in the East-Kazakhstan Oblast (prov.) of the Kazakh S.S.R., situated between the Tarbagatai and Altai Mts. It receives the waters of the Black Irtysh and empties itself into the Irtysh. Area about 700 sq. m.

Zea, *see* CEOS.

Zealand (Netherlands), *see* ZEELAND.

Zealand (Dan. *Sjælland*, Ger. *Seeland*), largest is. of Denmark, is bounded by the Cattegat, the Great Belt, the Sound, and the Baltic. It has a greatly indented coast, the Roskilde being the longest fjord. The surface of the is. is undulating and the soil fertile. Agriculture, dairy farming, cattle breeding, and fishing are carried on. The chief tn is Copenhagen (q.v.). Area 2709 sq. m.; pop. 1,693,450.

Zealots, The, or *Cananaeans*, a Jewish party implicated in 2 revolts against Rome. They were in full accord with the Pharisees in their devotion to the Law, but in politics much more intransigent and violent. From this party came Simon, one of the Twelve Apostles.

Zebdani, *Ez*, *see* EZ ZEBDANI.

Zebra, the fully striped species of the horse genus, *Equus*. There are 3 species, the largest being Grévy's Z. (*E. grevyi*), which stands some 13 hands at the withers and lives in open, scrub-covered plains in Abyssinia, Somaliland, and N. Kenya. The Mountain Z. (*E. zebra*) extends from SW. Africa into Angola, but was once common in Cape Colony. The Quagga, which form the third species (*E. quagga*), differ from the Mountain Z. in their broader hoofs, stripe pattern, and smaller ears. The S. African race is now extinct, as is Burchell's Quagga of Griqualand West. The Quagga found in E. and N. Africa, such as Grant's Quagga and Crawshaw's Quagga, are completely striped.

Zebrina, family Commelinaceae, genus of branching herbs of Mexico and S. America, akin to Tradescantia (q.v.), and often known as Wandering Jew. Z. *pendula* is most commonly grown indoors.

Zebu, or *Bos indicus*, ox which existed formerly only in a domesticated state in India. Since the 19th cent. it has been introduced into Australia, the U.S.A., etc. It is characterised chiefly by its large hump (sometimes 2), over the withers and by a greatly developed dewlap. It is high at the shoulders, narrow at the hips, with long horns, long drooping ears, and loose skin which hangs from the neck, from the low barrel chest, and from the belly. The ebony skin is thin but dense, and the short, sleek hair may be white, grey, red, or black in colour. The Z.s vary greatly in size and are used in India as beasts of burden. They have been introduced into N. Australia for the

purpose of rejuvenating the languishing cattle there. It was not until the early 1930's that systematic breeding of Z.s began.

ZEBU

Zebulun, sixth son of Jacob and Leah (Gen. xxx. 20), and the reputed ancestor of the tribe of Israel bearing his name. This tribe occupied the centre of S. Galilee. Tiglath-pileser III in 733 bc carried Z. off to Assyria (II Kings xv. 29).

Zechariah, the minor prophet, a contemporary of Haggai, c. 520 bc., cf. Ezra v. 1, and vi. 14, and Neh. xii. 16. His book is generally divided into 2 parts. The first part, chs. i-xiii, is universally regarded as the original work of Z. The second part (chs. ix-xiv), called sometimes Deutero-Zechariah, is placed by some critics in Hellenistic times, while other scholars maintain that some pre-exilic material was used. Z. gives his message largely in the form of visions. His little summary of ethical duties (viii. 16-17), and his picture of the idyllic future Jerusalem (viii. 3-6) are notable. See G. Driver (Century Bible), 1906; Barnes, 1917.

Zedekiah, name assumed as king by Matthias, son of Josiah (597-587 bc), who succeeded Jehoiakim as a puppet of Nebuchadnezzar. He was persuaded by the pro-Egyptian party to reject the inspired advice of Jeremiah, and revolted. Nebuchadnezzar besieged Jerusalem for 2 years. It fell in June 587 and most of its inhab. were deported. Z.'s sons were killed in his presence, and his eyes then put out. He ended his days in captivity, though treated with consideration by Evil Merodach.

Zeebrugge, seaport in the prov. of W. Flanders, on the N. Sea, Belgium, 7 m. N. of Bruges, whose port it is. It has a fine breakwater, and a ship canal (7 m. long), connecting it with Bruges, which was opened in 1907.

During the First World War a Brit. naval raid was made on Z. on 23 April 1918. Its object was to block the submarine and destroyer exits (see also OSTEND). A party landed on Z. mole and destroyed its works, while a submarine

loaded with explosives was run under the viaduct and exploded. Meanwhile the blockships were sunk and the survivors of their crews were rescued by the *Vindictive* and her consorts.

Zeehan, tn of Tasmania, 90 m. ENE. of Hobart. It is the centre of a silver-mining dist. Pop. 816.

Zeeland, or **Zealand**, SW. prov. of the Netherlands. It consists of 5 is. lying in the Scheldt estuary, and the region N. of the Belgian prov. of E. Flanders. The surface is very flat and much of it is below sea-level, protected by dikes. The soil is fertile. Corn, butter, and cheese are produced, and cattle reared. Chief tns are Middelburg (cap.) and Flushing. In Feb. 1953 heavy floods caused great damage to the dikes, and 375,000 ac. of land were inundated with salt water. Reconstruction of the dikes took 9 months. Plans to build enclosing dams in the estuary of the Z. is., which will take about 25 years to be completed, are being worked out. Area 650 sq. m.; pop. (1954) 275,370.

Zeeman Effect. In 1896 the Dutch physicist and Nobel prize winner (1902) P. Zeeman (1865-1943) discovered that the lines of the spectra of atoms (see SPECTRUM) are changed when the atoms are situated in an intense magnetic field. In the simplest case each spectral line appears split into either 2 or 3 components, according as the observations are made on light emitted parallel to, or at right angles to, the lines of the magnetic field; the light is also found to be polarised. The explanation of the effect given by Lorentz, although later shown to be over-simplified, was the first clear indication that the emission of light was to be attributed to electrons within the atom. The phenomenon provides a means of demonstrating that magnetic fields exist in the sun and stars, and allows these fields to be measured.

Zeiss, Carl (1816-88), Ger. optician, b. and educ. at Weimar. He was then apprenticed to various instrument-makers in Weimar, Stuttgart, and Vienna. In 1846 he opened his own workshop at Jena. In 1866 with Ernst Abbe and Otto Schott, he worked upon the microscope, perfecting the homogeneous immersion lens in 1878. In 1889 the firm was incorporated as the Carl-Zeiss-Stiftung, and gained a world-wide reputation, embracing every kind of optical instrument.

Zeist, or **Zeyst**, tn in the prov. of Utrecht, Netherlands, 7 m. ESE. of the city of Utrecht. It is a popular summer resort. Manufs. include porcelain-stoves, candles, and soap. Z. is the Dutch centre of the Moravian Brethren (q.v.). Pop. 47,610.

Zell am Ziller, see ZILLERTAL.

Zella-Mehlis, Ger. tn in the dist. of Suhl, in the Thuringian Forest, 5 m. NNW. of Suhl (q.v.). It has engineering industries. Pop. 17,000.

Zemlya Frantsa-Iosifa (Franz-Josef Land), archipelago in the Arctic Ocean, situated about 250 m. to the E. of Spitzbergen. It is described as a lofty,

glacier-covered land reaching an elevation of 2400 ft. and is comprised of some 60 is. which are volcanic. It was discovered by Payor and Weyprecht in 1873, and was explored by Leigh Smith in 1881 and 1882. In 1894 Alfred Harmsworth (later Lord Northcliffe) fitted out an expedition under the leadership of F. G. Jackson. The party landed near Cape Flora, and spent the summer of 1895 exploring the coast to the NW. They reached Cape Richthofen in 1896, and named the expanse of water to the N. Queen Victoria Sea. In June of the same year they met Nansen on his southward journey, and lent him the *Windward* for his homeward voyage. In 1897 Capt. Robertson of Dundee made discoveries in Z. F. I., and Wyche's Land was circumnavigated by Pike and Crossley. In 1898 an expedition under Wellman landed at Cape Tegetthof and defined the E. extension of the archipelago. In 1899 the Duke of Abruzzi made his way to Crown Prince Rudolf Land and wintered in Teplitz Bay; the party reached 86° 33' N. lat., 240 m. from the Pole. In 1903 the Zeigler expedition went N. by this route. In 1928 Z. F. I. was annexed by the U.S.S.R. and it was temporarily renamed Lomonosov Land. A meteorological observation post was set up in 1929 on Hooker Is. This and 2 others, one on Rudolph Is. (estab. c. 1937), are still maintained. See F. G. Jackson, *A Thousand Days in the Arctic*, 1899.

Zemskiy Sobor ('Assembly of the Land'), in 16th-17th-cent. Muscovy, an assembly of representatives of boyars (q.v.), clergy, merchants, tns, and rural dists. for deciding on important measures of state policy. The Z. S. was first appointed, but later elected. The Z. S. of 1612 put an end to the Time of Troubles (see TROUBLES, TIME OF) and decided to meet regularly in the future; it was finally abolished by Peter the Great.

Zemstvo, local gov. body in Russia from 1864 to 1917. Dist. Z. assemblies were elected by the pop. on a restricted franchise, and in turn elected the prov. Z. assemblies. Assemblies and their executives had authority in economic and educational matters, public health, etc.; their activities were supervised by prov. governors. The Z. was the main field of practical activity for the liberal and radical intelligentsia, and the main vehicle of the constitutional movement before the revolution of 1905 (q.v.). During the First World War the Z. played an important part in the war effort and in the movement for a responsible gov. After the Feb. Revolution (q.v.) in 1917 the authority of the Z. was extended, but after the Bolshevik seizure of power (see OCTOBER REVOLUTION) Z.s were abolished altogether and replaced by the Soviets (q.v.). See P. G. Vinogradoff, *Self-Government in Russia*, 1915.

Zemun (Ger. *Semlin*; Rom. *Taurunum*), tn in Serbia, Yugoslavia, in the angle formed by the junction of the Danube and Sava. It is a NW. suburb of Belgrade, to which it is joined by bridges. It has anct

fortifications, and the remains of the castle of Janos Hunyadi (q.v.). There are textile, chemical, and aircraft manufs. Pop. 40,000.

Zenith, point where a vertical line terminates in the celestial sphere, and thus the opposite of the nadir. It is therefore an important point of reference in astronomy, Z. distance being the angular distance of an object from the Z. and the complement of altitude. The Z. telescope, superseded by the transit instrument (q.v.), was invented for measuring the difference between the Z. distances of a pair of stars, culminating near the Z. at about the same time. See ASTRONOMY.

Zeno: 1. Of Elea (early 5th cent. BC), b. Elea in S. Italy. He was the favourite disciple of Parmenides (q.v.) whom he accompanied to Athens c. 448, and whose doctrine of the One he upheld in a series of famous paradoxes, e.g. Achilles and the Tortoise. Aristotle called Z. 'the founder of dialectic.' See H. D. P. Lee, *Zeno of Elea* (with trans. of the surviving fragments), 1936.

2. Of Citium (335-263 BC), Gk philosopher, founder of the Stoic school, b. Citium in Cyprus. He attached himself to the cynic Crates, but later studied under Stilpo, Diodorus Cronus, and Philo of the Megarian school. He then proceeded to the Academics, Xenocrates and Polemo, and opened a school for himself in the 'Painted Porch,' *Stoa Poikile*. Hence his disciples were called Stoics (q.v.). See A. C. Pearson, *The Fragments of Zeno and Cleanthes*, 1891; E. Bevan, *Stoics and Sceptics*, 1913; M. Pohlenz, *Die Stoa*, 1949.

Zeno (426-491), Byzantine Emperor, 474-491, b. Isauria. He married the daughter of Leo I and became emperor on the death of his son (Leo II) by this marriage. His reign was disturbed by revolts and foreign wars, and from 475 to 476 Z. was forced into exile, Basiliscus seizing the throne in his place, but he was later reinstated. In 487 Z. persuaded Theodoric the Goth to invade Italy in order to save himself and his cap.

Zeno, St (d. 371), b. in Africa; Bishop of Verona from 362 until his death. He is chiefly remembered for his writings on the virgin-birth of our Lord. His feast is on 12 April.

Zenobia, Queen of Palmyra. After the death of her husband, Odenathus (AD 266), she became the regent for her sons and tried to assert her authority over all Syria, Asia, and Egypt. She was defeated by Aurelian in 273, taken prisoner, and carried to Rome, where she adorned her conqueror's triumph in the following year. Z.'s life was spared, and she spent the remainder of her days together with her sons near Tibur.

Zenta, see SENTA.

Zeolites, family of minerals consisting mainly of hydrous silicates of lime, soda, and alumina, which have resulted from the alteration of feldspars and feldspathoids. Being chiefly secondary products, they occur in cavities and veins, and are common in amygdaloidal basalts, where they present a finely fibrous structure. Among

the more common zeolites are analcite, natrolite, stilbite, prehnite, and laumontite. They have a specific gravity of about 2-3, and a hardness of from 3.5 to 5. Artificial minerals resembling Z. in composition are used in water-softening as, for example, in the *Permutit process*.

Zephaniah, the minor prophet, preached during the reign of Josiah (Zeph. i. 1). The 2 chief features of his prophecy are his vivid portrayal of the Lord's Day as a day of disaster (i. 14-18), and his doctrine that a righteous remnant will survive it (ii. 3-7).

Zephyrinus, St. (d. 217), Pope from 199 until his death. His feast is on 26 Aug.

Zephyrus, the W. Wind, son of Astracus and Eos, father of the horses Xanthus and Balius by the harpy Podarge, and of Carpus by his wife, Chloris.

Zeppelin, Ferdinand, Count von (1838-1917), Ger. inventor and designer, b. Constance. He studied at the Polytechnik, Stuttgart, and at the Kriegsschule, Ludwigsburg, afterwards proceeding to Tübingen Univ. He took part in the Amer. Civil war, and also served in the Franco-Ger. War (1870), but from 1897 to 1900 was occupied in the construction of his first airship or dirigible balloon of rigid type, which made its first ascent in 1900. The Zeppelin (and other types based on its form of rigid structure) soon became successful and popular, and from it evolved the whole development of large airships (see AIRSHIP).

Zeppelins, type of rigid airship invented by Count Zeppelin (q.v.). See AIRSHIP.

Zeran, see CERAM.

Zeravshan, or Kara-Darya, riv. of the Tajik and Uzbek S.S.R.s. It rises in the Z. Mts and disappears in the wilderness near the Amu-Darya. Length 480 m.

Zermatt, vil., spa, and winter sports resort in the canton of Valais, Switzerland, at the head of the Visp Valley (5315 ft), and at the foot of the Matterhorn (q.v.), 22 m. by rail from Visp in the Rhône Valley. It is one of the chief summer and winter resorts in the Swiss Alps, having an invigorating climate and impressive scenery. Pop. 1100.

Zero (Arabic *ṣifra*, to be empty), term applied in mathematics to 0, or to quantity so small as to be negligible, and in physics to a point which serves as the base of measurements. 'Z. hr' is the starting time of any planned operation.

Zeromski, Stefan (1864-1925), Polish novelist. Of an impoverished noble family, Z. had a difficult early life until receiving a post as librarian. Among his notable works are *Szyfowe prace*, largely autobiographical; *Popioły* (Eng. trans. *Ashes*), a picture of Poland in the Napoleonic era; and his last work *Przedwiośnie*, 1924, criticising the Poland of the time from a left-wing point of view.

Zeta, or Zero Energy Thermonuclear Assembly, a device constructed at the Atomic Energy Research Establishment, Harwell, England, for the controlled release of energy by a thermonuclear reaction (q.v.). It consists of an aluminium

toroidal chamber, with a bore of 100 cm. and mean diameter 300 cm., containing deuterium gas at very low pressures (c. 10^{-7} atmospheres). A large current (c. 200,000 amps.) is momentarily induced in the ionised gas by making the gas the single turn secondary of a transformer, and discharging up to 500,000 joules through the primary by means of a bank of condensers. The magnetic field produced by the current in the gas 'pinches' the discharge into a region near the axis

'The Times'
ZETA, SHOWING THE MASSIVE TRANS-
FORMER AND THE HORIZONTAL, RING-
SHAPED TUBE

of the torus, and a current flowing in a coil wound on the torus produces an axial magnetic field (c. 200 Oersteds) which stabilises the discharge. Eddy currents in the aluminium torus induced by any 'wriggling' of the discharge give further stability, but insulating gaps are necessary in the torus to prevent the induction of a large current in the aluminium by the action of the primary. The combined effect of the current in the gas and the associated sudden compression produces temps. around 5,000,000° C., leading to the fusion of deuterium nuclei and the consequent emission of energy and neutrons. This was first achieved at Harwell in Aug. 1957, when the neutrons were detected and the temps. measured spectroscopically. Neutrons from non-stabilised discharges were reported by Russia in 1956. For temps. near 100,000,000° the energy produced would be roughly equal to that put in, and for higher temps.

the method should produce nuclear power on a practical and economic basis.

See *SCIENTIA*, a smaller version of Zeta, was developed contemporaneously for the controlled release of energy by a thermonuclear reaction at the Associated Electrical Industries Research Laboratories at Aldermaston, near Reading, England.

See ATOM AND ATOMIC THEORY; HYDROGEN BOMB; NUCLEAR POWER; NUCLEUS; THERMONUCLEAR REACTION.

Zetland, *Lawrence John Lumley Dundas*, second Marquess of (1876–), politician and writer, educ. at Harrow and Trinity College, Cambridge. From 1907 to 1918 he was Conservative M.P. for Hornsey; from 1917 to 1922 he was governor of Bengal. He succeeded to the title in 1929. From 1935 to 1940 he was secretary of state for India, and secretary for Burma, 1937–40. His publs. include official lives of Lord Curzon, 1928, and Lord Cromer, 1932, *Steps Towards Indian Home Rule*, 1935, and his memoirs pub. in 1957.

Zetland, *see* SHETLAND.

Zeugma (Gk *zeugnūnai*, to yoke) is a figure of speech in which 1 word is used with 2 others, to only one of which it is grammatically or logically applicable. Examples are 'With weeping eyes and hearts' (where one would expect 'bleeding hearts') or Pope's line, 'See Pan with flocks, with fruits Pomona crowned.' The term *zeugma* is often used also for the allied figure *syllipsis* (q.v.). *See also* FIGURE OF SPEECH.

Zeus, the greatest of the Olympian gods, was originally the chief deity of the Hellenic invaders of Greece, the personification of the bright sky, and perhaps of the same element as sender of fertilising rain. He was soon identified with the prin. chthonian deity of pre-Hellenic Crete; and from this source, as well as from the Homeric poems, there arose a wealth of hopelessly confused legend. In classical mythology Z. was son of Cronus and Rhea; he was b. in Crete and nursed there, on Mt Dicte, by the Curetes (q.v.). In course of time, assisted by his brothers Poseidon and Hades (qq.v.), he overthrew Cronus and assumed dominion of the world. The sisters of Z. were Demeter, Hera, and Hestia (qq.v.); and by his sev. marriages, incestuous and otherwise, he became the father of Apollo and Artemis, Ares, Athena (qq.v.), and numerous lesser gods and heroes. According to Homer, Z. dwells on Mt Olympus in Thessaly, which was believed to penetrate into heaven itself. He is called Father of gods and men, the most powerful among the immortals. He is the supreme ruler, who with his counsel manages all things; the founder of kingly power, and of law and order. He is armed with thunder and lightning, and the shaking of his aegis produces storms. The eagle, the oak, and the summits of mts were sacred to Z.; his sacrifices consisted of goats, bulls, and cows. The most splendid of all his thousands of temples was that at Olympia, which housed a chryselephantine statue of the god, made by Phedias and reckoned among the 7

wonders of the world. *See* A. B. Cook, *Zeus* (3 vols.), 1914–40; W. K. C. Guthrie, *The Greeks and their Gods*, 1950; C. Seltman, *The Twelve Olympians*, 1952. *See also* JUPITER.

Zeuxis (fl. 425–400 BC), Gk painter, b. Heraclea. He belonged to the Ionic school of art and apparently drew his inspiration from Apollodorus. His rivalry with Parrhasius (q.v.) is the subject of anecdote. His reputed masterpiece was a picture of Helen which he painted for Crotona, combining in the figure the beauties of 5 maidens of that city. That realistic imitation was valued in his time is suggested by the well-known story of the birds pecking his painted grapes.

Zgierz, tn of Poland, in Łódź prov., on the Bzura, 7 m. NNW. of Łódź (q.v.). It has chemical and textile industries. Pop. 24,000.

Zgorzelec, tn of Poland, in Wrocław prov., on the r. b. of Lusatian Neisse (q.v.), 80 m. W. of Wrocław (q.v.). Until 1945 it was an E. suburb of Görlitz (q.v.). It has lignite mines and textile industries. Pop. 7000.

Zhdanov, *Andrey Aleksandrovich* (1896–1948), Russian politician. He joined the Bolsheviks in 1915, and from 1924 to 1934 was head of the party organisation (*see* COMMUNIST PARTY OF THE SOVIET UNION) in Nizhny Novgorod, and from 1934 (after the assassination of Kirov, q.v.) to 1944 in Leningrad; simultaneously from 1934 he was secretary of the party's Central Committee, becoming in 1935 a candidate member of the Politburo (q.v.), and in 1939 a full member. As Central Committee secretary Z. was in charge of ideological matters, and he largely shaped the ideological aspects of Stalinism (q.v.). He introduced Socialist Realism (q.v.) as obligatory, replaced Pokrovskiy's (q.v.) school of historiography by that of Grekov (q.v.), and conducted the post-war campaigns against Western cultural influences, 'formalism' in the arts, and 'objectivism' in scholarship. During the siege of Leningrad in the Second World War Z. played an important part in the defence of the city. In 1947 he played a leading rôle in the creation of the Cominform.

Zhdanov (until 1948 Mariupol), city in the Stalino Oblast of the Ukraine, on the N. coast of the Sea of Azov. It is a major industrial centre, with large iron and steel plants using ore from Kerch, and engineering and other industries. It is the seaport of the Donets Basin (q.v.). Pop. (1956) 273,000 (c. 1914, 45,000; 1939, 222,000), Russians and Ukrainians (before the war also Greeks). Z. was founded in 1775 by Gk colonists, and has been a seaport since 1780; its industrial development dates from the 1890's and was particularly marked during the 1930's. It suffered greatly during the Second World War (occupied by the Germans 1941–3).

Zhitomir (Ukrainian *Zhytomyr*): 1. Oblast in the Ukraine, W. of Kiev, on the Volhynia-Podolia upland in the S. and the Poles'ye lowland in the N., partly covered with pine and oak forests, and

with large deposits of materials used in building. Grain, potatoes, and sugar beet are grown, and cattle raised; there are also food, timber, and metalworking industries. The prin. tns are Z. and Berdichev. Area 11,600 sq. m.; pop. (1956) 1,587,000, mostly Ukrainians, also Russians and Jews (before the Second World War Poles and Germans).

2. Cap. and economic and cultural centre of the above, 80 m. W. of Kiev. It has woodworking and food industries, and it is a railway junction. Known since 1240, it belonged to Kiev principality, became Lithuanian in 1320, Polish in 1569, and Russian in 1793; it became prov. cap. in 1804. Bitter fighting took place there in 1943-4. Pop. (1956) under 100,000 (1891, 70,000; c. 1914, 93,000; 1926, 68,000; 1939, 95,000), before the Second World War half Jewish.

Zhmud', Zhmudes, see SAMOGITIA.

Zhukov, Georgiy Konstantinovich (1896-). Russian soldier, Marshal of the Soviet Union, the most outstanding Russian military leader of the Second World War. He was of peasant origin and joined the Red Army in 1918 and the Communist party in 1919. He first became known for his successful operations against the Japanese on the Mongolian-Manchurian frontier in 1939. During the Second World War he was at first Chief of the General Staff, then Deputy Commissar (Minister) of Defence and Deputy Supreme Commander-in-Chief of the Soviet armed forces. He took a leading part in planning the operations of the Soviet forces, often co-ordinating the actions of a number of army groups in an operation (in the defence of Moscow, 1941, the battle of Stalingrad, 1942, in relieving Leningrad in 1943, and in the advance to the W. in 1943-4), and sometimes personally taking over the command of an army group (e.g. in the final advance to Berlin). In Berlin he received the surrender of the Ger. High Command on 8 May 1945, and headed the Soviet Control Committee in Germany, 1945-6. In 1946 Stalin, resentful of Z.'s popularity, removed him from Berlin, and after a short period of service as Commander-in-Chief Land Forces and Deputy Minister of Armed Forces, Z. was sent into a kind of honourable banishment as commander of a military dist. Upon Stalin's death in 1953 he was again appointed a First Deputy Minister of Defence, and in 1955 Minister of Defence. In 1956 he became a candidate member of the praesidium (see POLITBURO) of the Communist party's Central Committee, the first professional soldier to enter this seat of real power in the country. In the internal struggle in that body he took the side of Khrushchev against Stalin's chief lieutenants Malenkov, Kaganovich, and Molotov (qq.v.), and on their expulsion he became a full member (1957). After a few months, however, he was himself dismissed as Minister of Defence and expelled from the praesidium and the Central Committee of the party for undermining the party's political influence in the armed forces (see COMMUNIST PARTY OF THE SOVIET UNION). Afterwards his role in

the Second World War was again played down by the official propaganda. See EASTERN FRONT, OF RUSSO-GERMAN CAMPAIGNS IN THE SECOND WORLD WAR.

Zhukovskiy, Vasily Andreyevich (1783-1852), Russian poet, head of the Romantic school in Russian literature (the ballad *Svetlana*, 1811). He made excellent trans. of Schiller, Byron, Firdowski, Homer, etc. Z. was tutor to Alexander II (q.v.) and often used his influence at the court to intercede for the opponents of the regime (e.g. Decembrists, q.v.), although he did not share their views.

Ziegfeld, Florenz (1869-1932), Amer. producer and showman, b. Chicago. In 1893 he was a showman at the Chicago World Fair. Two years later he arrived penniless in London, but succeeded in assembling another show and engaging Anna Held, the most popular showgirl of the day, whom he later married. In 1914, a year after his divorce, he married Billie Burke, the actress and film star. Z. was noted for his lavish musical productions, but more especially for his spectacular and exotic revues, the *Ziegfeld Follies*, which he staged for 24 years.

Zielona Góra: 1. Prov. (*województwo*) of W. Poland, bordering in the W. on Germany. It is generally low-lying, and is drained by the Oder, the Lusatian Neisse, and the Bobrava (qq.v.). Before 1945 its ter. was in the Ger. provs. of Brandenburg and Lower Silesia (qq.v.); the Ger. pop. was expelled after the Second World War. Live-stock is raised, and fruit and vines are grown. There are metal and glass industries. Area 5744 sq. m.; pop. 400,000.

2. (Ger. *Grünberg*) Tn of Poland, cap. of Z. prov., 230 m. W. of Warsaw (q.v.). Until 1945 it was in Lower Silesia (q.v.). It was an important commercial tn in the late Middle Ages, and has a medieval church and tn hall. It is a lignite-mining centre, and has a textile industry and a power station. Pop. 20,000.

Ziggurat, Babylonian word for the temple tower which was a characteristic architectural feature of the larger Sumerian, and later Babylonian and Assyrian cities. Z.s were constructed of baked clay bricks and bitumen mortar with 3 to 7 terraces, each of diminishing size and surmounted by a small temple which was used only on special occasions, such as the New Year Festival. Access to the various levels was by stairways, and some ruins show that trees and other plants were grown on the upper terraces and were watered by special water-raising devices (see HANGING GARDENS OF BABYLON). The best-preserved Z. is at Ur (q.v.); the remains of the lower 2 stages measure 200 ft x 150 ft x 70 ft (height). The best known is the Tower of Babel, perhaps the Etemenanki, 'Building of the Foundation of Heaven and Earth,' and its associated temple Esagila. 'Temple whose Top is Heaven.' However, the ruins of other Z.s at Borsippa (q.v.) and Aqar Quf (near Baghdad) have been associated with the story of Genesis xi. 1-9. See C. L. Woolley, *The Ziggurat and its*

Surroundings, 1938: A. Parrot, *The Tower of Babel, 1936.*

Žilina: 1. Region (*kraj*) in Central Czechoslovakia, bordering on Poland, part of the former prov. of Slovakia (q.v.). It lies in the Carpathians (q.v.), is generally mountainous, and is watered by the Váh (q.v.). Area 3192 sq. m.; pop. 509,500.

2. (Ger. *Sillein*; Magyar *Zsolna*) Czechoslovak tn. cap. of the region of Z., on the Váh. It is a road and railway junction, and has textile and paper manufs. Pop. 16,000.

Zillertal, valley of the Ziller, a trib. of the Inn, in the Austrian Alps. Its life centres round the vil. of Zell am Ziller, and it has numerous tourist resorts.

Ziliacus, Konrad Viktor (Konni) (1855–1924), Finnish author and politician; one of the leaders of the patriotic resistance movement against Tsarist Russian oppression at the turn of the cent. He had 2 sons, Konni Z. (1894–), Brit. author and politician, M.P. (Labour); and Laurin Z. (1895–), Finnish pedagogue, head of the 'New Education Fellowship' branch for Finland.

Zimbabwe, site of amazing ruins in S. Rhodesia, 17 m. SE. of Fort Victoria, 120 m. E. of Sofala. They present the general appearance of a fortress. It is thought that they may have been erected by Arabs in search of gold in the area. Other archaeologists have suggested that the ruins are of Indian origin, and another school believes that they are a Bantu masterpiece, representative of the flowering of the Bantu culture in the Middle Ages. In the ruins porcelain of the Ming period has been found and also a large quantity of golden ornaments, most of which have been 'lost.' Z. is said to have inspired Rider Haggard to some degree. In Chicago in 1952 and in London in 1954 wooden lintels removed from the ruins were tested by the radio-carbon process. By process of deduction it now seems certain that these tests have established the probable age of the Z. ruins as about 1200 years.

Zimme, see CHIENG-MAI.

Zimmermann, Johann Georg (1728–95). Swiss author and philosopher. b. Brugg. He was the author of *Über die Einsamkeit*, 1756–85, and *Vom Nationalstolz*, 1758, which count among the best Ger. prose works written in the 18th cent. He was also a famous physician, and in 1763 wrote his useful treatise *Von der Erfahrung in der Arznei*.

Zinc, symbol Zn, atomic number 30, atomic weight 65.38, metallic element generally met with in combinations as the carbonate (calamine), ZnCO_3 , and the sulphide (Z. blende), ZnS . It also occurs as silicate (hemimorphite), $\text{ZnSiO}_3 + \text{H}_2\text{O}$, and as red Z. ore, ZnO . Silver, lead, and Z. are often found together in the same mineral vein, or in the same locality, notable instances being Broken Hill in New S. Wales and Mt Isa in Queensland, both rich Z. areas. Mexico is a large Z. producer; the U.S.A. produces 30 per cent of the world's Z. There are also large reserves of Z. in Canada and Russia, and deposits in Germany, France,

Sweden, etc. The extraction of the metal from its ores is carried out in 2 stages, the oxide being first formed, and in the second stage this is reduced by carbon. Blende is the ore generally employed, and this is converted to oxide by roasting in air. The crude oxide is mixed with coal or coke and strongly heated by gas-fired furnaces, in clay retorts or muffles, and the Z. vapour condensed in an iron box

National Film Board, Canada

ZINC MINING AT FLIN FLON, MANITOBA

Miners steadying the 'Stoper' gun in the mine, which yields zinc, copper, gold, silver, cadmium, and selenium.

(Silésian process). In the Belgian process the mixture is heated in a horizontal fire-clay tube connected by a conical clay tube to a sheet-iron condenser. The crude Z. is melted in a reverberatory furnace and further purified by distillation. Process methods no longer employed are the Eng. method and the Carinthian method. In extraction older intermittent furnaces are being rapidly superseded by continuous vertical retort furnaces. Wet methods of extraction are by electrolytic processes, and by electric reduction furnaces. The latter method is increasingly used in Sweden, the U.S.A., and the Soviet Union, where there are large reserves of hydro-electric power. Z. is a bluish-white brittle metal (sp. gr. 7, melting-point 420°C ., boiling-point 907°C .) which is malleable between 100° and 150°C . It is permanent in dry air at ordinary temp., and is used for galvanizing iron for roofing purposes, etc. A number of alloys are formed by Z. with other metals, e.g. brass (copper and zinc), bronze (copper, tin, and zinc), etc. Z. burns in air, forming the oxide, ZnO (Z. white). The oxide is white at ordinary temp., but becomes yellow on heating.

It is a basic oxide, and the salts of the metal can be prepared from its solution in acids. Z. sulphate (white vitriol) is obtained by dissolving the metal, its oxide or carbonate in sulphuric acid, or is made on a large scale by roasting Z. blende in air.

The sulphate crystallises from water, forming colourless rhombic prisms of the formula $ZnSO_4 \cdot H_2O$ isomorphous with magnesium sulphate (Epsom Salts). It has a metallic astringent taste, is poisonous, and is used as an emetic, in the dye industry as a mordant, and in the manufacture of varnishes. Z. chloride is formed by dissolving the metal or oxide in hydrochloric acid, and boiling the solution down until it solidifies on cooling. It is a white, deliquescent substance, and made into a paste with Z. oxide rapidly sets to a hard mass. This mixture is used in dentistry as a filling. A solution of the chloride is used as a flux in soldering.

Zinc, Extraction of, see METALLURGY.

Zinc Sulphate, see ZINC.

Zincography, see PROCESS WORK.

Zinder, tn of Niger Colony, in the Fr. Sudan, W. Africa, 350 m. from Timbuktu. There is trade in salt, spices, etc., and telegraphic communication with Kayes and Niamey. It is a walled city, and is a centre for trade across the Sahara to Tripoli. Pop. 8000 (estimated).

Zingiber, see GINGER.

Zinke, see CORNETT.

Zinnia, genus of garden-flowers of the family Compositae. *Z. elegans*, from which most of the varieties are derived, is an annual and was introduced from Mexico in 1796.

Zinoviev, see ZINOV'YEV.

Zinovievsk, or Zinov'yevsk, see KIROVOGRAD.

Zinov'yev (real name Radomyslskiy), Grigoriy Yevseyevich (1883-1936), Russian politician of Jewish origin. He joined the Russian Social Democratic Labour party (q.v.) in 1901, the Bolshevik faction in 1903, and was a member of the party's Central Committee from 1907; he emigrated after the revolution of 1905 (q.v.), and from 1909 to 1917 was Lenin's closest collaborator in running the Bolshevik organisation and in factional strife. After the Feb. Revolution (q.v.) in 1917 he returned with Lenin to Russia. He joined with Kamenev (q.v.) in opposing Lenin's policy of seizure of power by the Bolsheviks. After the Oct. Revolution (q.v.) he was chairman of the Leningrad Soviet (see SOVIETS), and in 1919 became a candidate member of the Politburo (q.v.), a full member in 1926, and from 1919 to 1926 was chairman of the executive committee of the Communist International. In 1924 a letter purporting to come from Z., inciting rebellion, was pub. in the London press and possibly helped to defeat the Labour Gov. In the inner-party struggle after Lenin's death, Z. first associated with Kamenev and Stalin against Trotsky, but after the latter's defeat sided with him and Kamenev against Stalin (see LEFT OPPOSITION). Defeated by the opposition of Stalin and Bukharin (q.v.), Z. lost all his offices and was sev. times expelled from the

party. In 1935 he was sentenced to 10 years' imprisonment for 'moral complicity' in the murder of Kirov (q.v.), was retried in 1936 at the first of the big show trials of the Great Purge (q.v.), and executed.

Zinzendorf und Pottendorf, Nikolaus Ludwig, Count von (1700-80), Ger.-Moravian theologian, b. Dresden. He left the Saxon state Church and founded the pietistic colony of Herrnhut for the Moravian Brethren in 1722. Banished from Saxony in 1736, Z. travelled extensively in Europe and America on behalf of the Moravian Church. See life by H. Renkewitz, 1935.

Zionism, or Zionist Movement, movement for the re-estab. of Jewish national life in Palestine (q.v.). It is the modern expression in organised form of the Jewish traditional love for Zion, and of the hope in the ultimate ingathering of Israel from the *Diaspora*. Various proposals for the resettlement of the Jews in their ancestral home were made from the end of the 17th cent. Theodor Herzl (1860-1904), a Viennese journalist and playwright, pub. a pamphlet, *The Jewish State*, 1896, in which he advocated the creation of an autonomous Jewish settlement as the solution of the Jewish question, and in 1897 convened a Congress in Basel to consider his project. This Congress, attended by over 200 delegates from all parts of the world, adopted, as the programme of the movement, 'The aim of Z. is to create for the Jewish people a Home in Palestine secured by public law'. The Congress founded a world-wide organisation, with H.Q. in Vienna, consisting of federations with local societies. After the death of Herzl in 1904 the H.Q. of the movement were transferred to Cologne, under the presidency of David Wolffsohn (1856-1914).

In 1908 the Zionist Organisation began practical work in Palestine by establishing an office in Jaffa and a Land Development Company, and engaged in urb. and agric. colonisation, as well as in educational activity. Progress was slow owing to limited resources. The organisation was maintained by means of the 'Shekel', the ann. contribution which was paid by all members, and which entitled them to take part in the elections to the Zionist Congress. The Congress, the supreme organ of the movement, was held, after 1900 every 2 years. The Jewish National Fund was estab. in 1901 for the purchase of land in Palestine as the inalienable possession of the Jewish people. This Fund was raised entirely by voluntary contributions from Jews throughout the globe, and still exists. In 1911 the H.Q. were moved to Berlin where they remained until the First World War. The Zionist movement was divided in its attitude towards the belligerents, but eventually followed the lead of Dr Chaim Weizmann (q.v.) and Nahum Sokolow, who set up their H.Q. in London and pinned their hopes on the Allied cause. Jewish units were formed, and fought in Gallipoli and Palestine. On 2 Nov. 1917 the Brit. Gov. announced its sympathy with the

cause of Z. in the form of a letter from A. J. Balfour, then Foreign Secretary, to Lord Rothschild, as 'a declaration of sympathy with Jewish Zionist aspirations.' This became known as the Balfour Declaration. The substantive part stated that: 'H.M. Government view with favour the establishment of a national home for the Jewish people, and will use their best endeavours to facilitate the achievement of this object, it being clearly understood that nothing shall be done which may prejudice the civil and religious rights of existing non-Jewish communities in Palestine, or the rights and political status enjoyed by Jews in any other country.' The Balfour Declaration was incorporated in the preamble of the Palestine Mandate committed to Great Britain by the League of Nations in 1922. It would thus seem that Z. had achieved its primary object.

Z. now entered a troubled, if constructive, phase down to the creation of the state of Israel in 1948. It is doubtful whether it commanded the allegiance of the majority of Jews at any rate up to the rise of Hitler in 1933. Such diverse elements as the extremely Orthodox, the Reform and Liberal Jews, as well as the Socialist *Bund* in Poland concurred in condemning Z. The movement itself was split into political and religious factions, and there were some secessions. The leadership of Dr Weizmann was frequently challenged, and in 1946 he was finally forced to make way for the more activist policy of D. Ben Gurion (q.v.), the future Prime Minister of Israel. Relations with the Brit. Gov. became progressively worse. The latter was forced somehow to reconcile the Balfour Declaration with its own commitments to Arab Nationalism. The local administration in Palestine, in its endeavours to safeguard Arab interests, was regarded with suspicion by the Zionists.

Despite these adverse influences, Z. grew in strength. Its financial organisation, the *Keren Hayesod*, played a valuable part in settling Jewish immigrants and in building towns and vills. The estab. of the Heb. Univ. of Jerusalem was a notable achievement. Until 1929, the Zionist Organisation was the Jewish Agency for Palestine recognised by the Mandate, but in that year non-Zionist elements were added to the Jewish Agency. After the estab. of Israel in 1948 the Zionist Organisation abandoned political activity, although the old parties have retained their independence. Its main work is now confined to the raising of funds for settling immigrants in Israel and general cultural activities. See N. Sokolow, *History of Zionism*, 1919; A. Bein, *Theodor Herzl*, 1944; I. Cohen, *The Zionist Movement*, 1945, and *A Short History of Zionism*, 1951; C. Weizmann, *Trial and Error*, 1949; P. Goodman, *Zionism in England*, 1949; O. K. Rabinowicz, *Fifty Years of Zionism*, 1952.

Zips, see SPIES.

Zircon, mineral composition silicate of zirconium, $ZrSiO_4$, found in Ceylon, the Urals, and Indo-China. It forms tetra-

gonal crystals, colourless to yellow, also green and red (hardness 7.5 sp. gr. 4.7). The yellow Z.s of Ceylon are termed 'jargoons' (q.v.), and the red-brown varieties are called 'hyacinths' (q.v.). Z. has high colour dispersion and displays fire.

Zirconium, symbol Zr, atomic number 41, atomic weight 91.22, metallic element which occurs in nature as the silicate (zircon) and as the oxide (Baddeleyite). It has been obtained in 2 forms, crystalline and amorphous, the former variety requiring a high temp. for its combustion, while the latter burns when gently heated in air. The metal is obtained by heating the fluoropotassium compound with aluminium or sodium. The metal melts at about 1700° C. It resembles silicon chemically. The normal salts are prepared from the feebly basic tetravalent hydroxide $Zr(OH)_4$.

Zita, St (1218-1278), b. Monsegreati, near Lucca. From the age of 12 until her death she was a maid-servant to a Lucca family, being noted for her charity to the poor. She was canonised in 1696, and is venerated as the patron of domestic servants. Her feast is on 27 April.

Zither (Ger. from Gk *kithara*), stringed instrument of the dulcimer type, although etymologically connected with the cittern, which it does not resemble. It has many strings (27-40) stretched over a flat sound-box, and is played with the tips of the finger, the bass strings alone being struck with a plectrum fixed to the thumb by a ring. The music played on it, mainly in the mt regions of Austria and Bavaria, is usually akin to types of folk-song and dance. It has a place in many small bands in cafés and inns in Germany and Austria, chiefly in the mt dists.

Zittau, Ger. tn in the dist. of Dresden, near the Polish and Czechoslovak borders, 48 m. ESE. of Dresden (q.v.). It has textile and engineering industries. Pop. 40,000.

Ziusudra, or Xisuthros, Babylonian hero of the Flood (cf. Noah), according to Berossus, who makes him the tenth King of Babylon, afterwards deified. There were many versions of the epic in which the legend was handed down; in the eleventh tablet of the Gilgamesh Epic the hero's name is Utanapishtim. See under Flood. See also R. Campbell Thompson, *The Epic of Gilgamesh*, 1928.

Zizania, a genus of 3 species of water-grasses, family Gramineae, of which *Z. aquatica*, an ann. of N. America, yields grain used as food by Indian tribes, and is sometimes sown in ponds and lakes in Britain for ornamental purposes and to provide food for water-fowl.

Zižka, Jan (c. 1360-1424), Bohemian military commander and a Hussite leader, b. Trocnov, Bohemia. He is said to have been a page in the retinue of Wenceslaus IV of Bohemia, and was certainly connected with the royal household. He became a leader of that section of the Hussites known as the Taborites about 1420 (see HUSSITES, WAR OF THE). He was a superb tactician, and won a number of victories for his party before his death

from plague while commanding a combined Hussite force against Moravia.

Zlatoust, tn in the Chelyabinsk Oblast, 60 m. W. of Chelyabinsk. It is an important industrial centre of the Urals (special steels, tools, precision instruments, agric. machinery). There is a notable metal-engraving craft. Pop. (1956) 143,000 (1926, 48,000; 1939, 99,000). Z. was founded in 1754 as ironworks; it was a centre of side-arms production by 1811. Workers overthrew Bolsheviks here in 1918, and started the shock-workers' movement (q.v.) in 1927.

Zlin, see GOTTWALDOV.

Znaim, see ZNOJMO.

Znojmo (Ger. *Znaim*), Czechoslovak tn in the region of Brno (q.v.). Napoleon signed an armistice here with the Archduke Charles after the battle of Wagram (q.v.). There are pottery and food-processing industries. Pop. 19,700.

Zodiac, belt of the celestial sphere 16° wide, extending for 8° on each side of the ecliptic. Its antiquity is very great, and the region was noted by different peoples independently, a fact explained by its containing all the known planets as well as the sun and moon, and many stars grouped into constellations. It got its name 'zodiac' because many of these constellations were named after animals (Gk *zōdion*, sculptured figure (of an animal), from *zōon*, animal). The division into 12 signs, each extending over 30°, served to mark divisions of the year, each being marked by the entry of the sun, in its westward course, into a group of stars. The names have a seasonal significance intermingled with myth, and differ with the Chinese, Hindu, Chaldean, Egyptian, Greek, and Aztec. As the sun in spring crosses the equator, moving northwards, it travels through Aries, ♈; Taurus, ♉; and Gemini, ♊, respectively; at the summer solstice it is in Cancer, ♋, then commences its descent through Leo, ♌, and Virgo, ♍, these 3 marking the summer; Libra, ♎, Scorpio, ♏, Sagittarius, ♐, are then passed through in autumn, the first of these about 23 Sept.; Capricornus, ♐, is occupied at the beginning of winter, Aquarius, ♒, and Pisces, ♓, 23 Dec., being traversed in the first part of the sun's ascent N. of the equator. The 'ascending' signs are thus those of winter and spring, the 'descending' those of summer and autumn. The tropics of Cancer (q.v.) and Capricorn (q.v.) are the 2 small circles 23° 27' N. and S. of the equator respectively. The signs do not now agree with the constellations bearing their names owing to precession (q.v.). Aries is in Pisces, and so on, the signs 'backing' into constellations to the W.

Zodiacal Light, faint haze of light extending from the sun along the ecliptic, visible just after sunset or before sunrise as a cone extending above the sun's place into the sky. The best time to observe the Z. L. in the evening is about the month of Mar., when it may be seen after sunset in the W.; or in the morning about Sept., before sunrise, in the E. This is because at these times the ecliptic

attains its maximum inclination to the horizon. As the ecliptic is inclined at a large angle to the horizon within the tropics, it is best seen within those regions, when it can be observed under favourable conditions right across the sky. Here the counter-glow or *Gegenschein*, a bright patch of a few degrees in diameter, is seen exactly opposite the sun. The brightness of the Z. L. is sometimes quite conspicuous, though less so than the Milky Way. V. M. Slipher has found that the spectrum of the Z. L. is both reflected sunlight and also partly bright lines and bands, amongst which are the bright auroral lines in the yellow, due to tenuous gases. At the horizon it is 20°–30° broad, and it extends to within about 10° of the zenith. It is most generally supposed to be due to sunlight reflected from clouds of meteoric bodies or very tenuous gaseous molecules extending in a flat disc round the sun to the plane of the solar equator, and beyond the earth's orbit.

Zoetrope, see CINEMATOGRAPH.

Zoffany (or *Zoffani*), Johann (1733–1810), Ger. artist, b. Ratisbon. He studied in Rome, and settled in England (1758), and became an R.A. (1768). His works include portraits of Garrick and other famous contemporaries. He lived and painted in India between c. 1781 and 1788. He was particularly adept at conversation pieces, some of the best examples being in the Royal collections and at the Garrick Club, London.

Zog, see ALBANIA.

Zola, Émile Edouard Charles Antoine (1840–1902), Fr. novelist and journalist, b. Paris. His father, an engineer, was of mixed It. and Gk descent. With the financial help of relatives, Z. was educ. at Aix; the Lycée Saint Louis, Paris, and Marseilles Univ. One of his school friends was Cézanne (q.v.). Later, after living in poverty as a journalist, he worked as a clerk in the publishing house of Hachette; while there he made the acquaintance of Taine, Sainte-Beuve, and Michelet, and became a naturalised Frenchman. He also wrote literary and art criticisms for the *Événement*, as spokesman of the Impressionists, and in 1864 he published his charming if ineffective *Contes à Ninon* and, the next year, *Confession de Claude*, which was reported to the public prosecutor as a dangerous book. He made his name with *Thérèse Raquin*, 1867, a grim, powerful story of remorse. Having thus discovered his real talent, he planned the *Rougon-Macquart*, the story of a family during the decadence of the Second Empire, the 20 vols. appearing steadily over a period of a quarter of a cent. He had the artist's imagination, a unique genius for description, and the power of giving an impressive life to a crowd, a store, a market, or a mine; these collective beings are often more living than the individual characters. In the novels of the *Rougon-Macquart* series Z. proved himself, as an exponent of realism, the master of his age. *L'Assommoir*, 1879, in which he graphically describes the results of drink upon the fortunes of a working-class family, is an example of this type of Z.'s writing, in

the brutality and coarseness of style and language. In many of Z.'s novels the sense of impending doom is all-pervasive: a notable example is *La Débâcle*, 1892, a novel of the Franco-Prussian war. Some of his works subordinate characterisation, and even the story, to the inculcation of the Socialist philosophy, which was Z.'s personal solution to the material, and, to some degree, the spiritual, problems of his age. His *Les Quatre Évangiles*, 1899-1903, exemplify this aspect of his work. (*Justice*, the fourth book, was left unpublished.) Z.

Press Portrait Bureau
ÉMILE ZOLA

earned the gratitude of all opponents of anti-Semitism by his challenge to the Fr. Gov. to give Dreyfus (q.v.) a hearing. This appeared in *L'Aurore* in the form of the celebrated manifesto *J'accuse*. It resulted in Z. fleeing to England, but after Dreyfus's vindication he returned to France, a popular hero (1899). In 1908 his body was removed to the Pantheon. His *Oeuvres complètes* were ed. by M. Le Blanc in 50 vols., 1927-9. See lives and studies by G. de Maupassant, 1898; A. E. Vizetelly, 1904; M. Josephson, 1929; H. Barbusse, 1932; P. W. J. Hemmings, 1953.

Zollverein, literally customs union (Ger. *Zoll*, customs; *Verein*, union). The word is especially applied to the Prussian or Ger. customs union, founded through the efforts of the gov. of Prussia in 1833 from an amalgamation of smaller Z.s, and resulting in a considerable increase in Prussian influence in Germany.

Zomba, tn, Nyasaland Protectorate, of which it is the cap. Situated on lower slopes of Z. mt, 2,900 ft., 42 m. from Blantyre. Pop. (Europeans) 500; (Asiatics) 400; (Africans) 5000.

Zone, geometrically, the portion of the surface of a sphere intercepted between 2 parallel planes. The earth's climatic Z.s are determined by planes at the Arctic and Antarctic circles, and the tropics of Cancer and Capricorn (q.v.). The resulting Z.s are known as the frigid, consisting of the polar caps; the torrid, between the tropics; the temperate, between the tropics and the frigid. They mark out the incidence of the sun's radiation, and are useful as determining that factor, rather than as giving any clue to actual climate. Actual thermometric observations have led to the establishment of *thermal zones* between certain isotherms. The equatorial or tropical regions are marked by climate and vegetation arranged in *vertical zones* between different heights above sea-level. In astronomy many star-catalogues of stellar positions are based on Z.s; thus Bessel's catalogue of 64,000 stars covers from dec. -15° to $+45^{\circ}$; Argelander's, of 40,000, from -37° to $+80^{\circ}$; Gould's, of 73,160, from -23° to -80° ; and so on for many others. The *International Astrogaphic Catalogue*, the *Cape Photographic Durchmusterung*, and Argelander's catalogue are arranged in Z.s of 1° .

Zone Times, see under TIME AND TIME MEASUREMENT.

Zonguldak, important coal-shipping port of Turkey on the Black Sea, and cap. of the ll of the same name. It is a centre of the coal-mining industry acquired by the Turkish Gov. in 1936. Pop. (1950) 41,492,400; (tn) 35,630.

Zoning, a term in town and country planning (q.v.) for the definition of areas in plans for particular uses or limits of use. These may be *Character Zones* (e.g. for residence, industry (heavy, light, or 'noxious'), commerce, public buildings, open space, agriculture, etc.); *Density Zones* (limiting or prescribing numbers of dwellings, rooms, or persons an acre, or ratios of floor-space to land area built on); or *Height Zones*. Zones are often shown as primarily for one use, with other uses by special consent. Within any zone, future building or rebuilding must normally comply with the prescribed use, density, or height.

Zoo-geography, see GEOGRAPHICAL DISTRIBUTION.

Zoological Gardens, park in which wild animals are kept in captivity, for the purpose of zoological study and for public exhibition. Z. G. have existed at least since the 4th cent. BC: sev. Egyptian rulers kept their own Z. G. In England Henry I estab. a menagerie at Woodstock. This was moved to the Tower of London about 50 years later, remaining there until 1834. The Zoological Society (q.v.) opened its Z. G. in Regent's Park in 1828. These Z. G. are now world-famous: they contain sev. hundred animals, reptiles, and birds of all kinds, and cover over 34 ac. In 1927 the London Zoological Society acquired 500 ac. at Whipsnade, which was opened as a 'natural zoo' in 1931. There is a small zoo of the Whipsnade type at Chessington, and there are fine zoos at Edinburgh and Bristol.

Famous foreign Z. G. include the Jardin des Plantes, Paris, and the Berlin Z. G.

Zoological Society, in England, society for the promotion of the study of animal life (q.v.) founded in 1826. It received a royal charter in 1829. Its Zoological Gardens (the Zoo), comprising over 34 ac. in Regent's Park, London, were opened in 1828.

Zoology, branch of biology concerned with the study of animals and subdivided into many divisions, such as embryology (q.v.), histology (q.v.), anatomy (q.v.), and morphology (q.v.), which last deals with the form of the animal as a whole. The study of form is correlated with that of the functions of the parts, that is, with physiology (q.v.), a very extensive field intimately connected with bio-chemistry (q.v.), nutrition, metabolism (q.v.), locomotion, irritability, growth (q.v.), and reproduction. These studies, combined with those of geographical distribution (q.v.) and of ecology (q.v.), lead to an appreciation of the relation of the animal to its environment. In addition to distribution with regard to latitude and longitude, distribution above or below sea-level must be considered (see MARINE BIOLOGY and PLANKTON).

Comparison of animals of the same species shows that there is a variation which is probably due either to heredity (q.v.) or to the influence of environment (see EUGENICS; EVOLUTION; LAMARCKISM; MENDEL, J. G.). Fossilised remains of animals show that evolutionary changes have occurred through long periods of time, and palaeontology yields some elucidation of problems arising in the study of recent species. (See FOSSIL; PALAEONTOLOGY.) Animals are classified in 2 main groups, the Vertebrates (q.v.) and the Invertebrates (q.v.). The Invertebrates are divided into numerous phyla, which are again subdivided; the Vertebrates constitute the bulk of the phylum Chordata. The chief phyla are: (1) Protozoa (q.v., also PARASITOLOGY; TROPICAL MEDICINE), unicellular organisms (all other phyla are Metazoa, multicellular animals); (2) Porifera (Sponges, q.v.); (3) Coelenterata (including corals, jelly-fish, sea anemones, q.v.); (4) Platyhelminthes, the flat-worms (see under CESTODA); (5) Nemathelminthes, the threadworms (NEMATODES, q.v., also ANKYLOSTOMIASIS; BILHARZIASIS; FILARIASIS; TROPICAL MEDICINE), and hook-worms (Acanthocephala). These are now usually divided into 3 separate phyla; (6) Trochelminthes, including the rotifers; (7) Molluscoida, now usually divided into Phoronida (see PHORONS), Polyzoa (q.v.), and Brachiopoda (q.v.); (8) Echinodermata (q.v.); (9) Annelida or Annulata (see EARTHWORMS); (10) Arthropoda, including the classes Crustacea (q.v.), Onychophora (q.v.), Myriapoda (q.v.), Insecta (see ENTOMOLOGY; INSECT; INSECT BITES and STINGS; LOCUST; MOSQUITOES; PARASITOLOGY; SAND-FLY FEVER), and Arachnida, the spiders (q.v.); (11) Mollusca (see MOLLUSCS), including the snails, mussels, oyster, octopus; (12) Chordata, animals with a notochord that may per-

sist throughout life or be replaced by a vertebral column. There are 4 subphyla, the Hemichordata, including Balanoglossus (q.v.), the Urochordata, the Cephalochordata (see AMPHIOXUS), and the Vertebrata or Craniata, including the Cyclostomata, Pisces, Amphibia, Reptilia, Aves (see BIRD), and Mammalia (see MAMMALS). See also separate headings. See *The Cambridge Natural History*, 1896-1909; G. R. De Beer, *Vertebrate Zoology*, 1928; Sir A. E. Shipley and E. W. Macbride, *Zoology* (4th ed.), 1920; C. Singer, *A Short History of Biology*, 1931; Sir J. A. Thomson, *Biology for Everyman*, 1934; and *Outlines of Zoology* (9th ed.), 1944; L. A. Borradaile and F. A. Potts, *The Invertebrata* (2nd ed.), 1935; R. Buchsbaum, *Animals without Backbones*, 1938; A. J. Grove and G. E. Newell, *Animal Biology* (2nd ed.), 1944; P. Grasse, *Traité de zoologie*, 1948 onwards; J. Z. Young, *The Life of Vertebrates*, 1950.

Zor-kul, see VICTORIA, LAKE.

Zoroastrianism, the ancient Iranian religion as reformed by Zoroaster (Zarathushtra) probably c. 800 bc. Probably a Magian, Zoroaster tried to win his countrymen from the nomadic to a settled life of husbandry, and at the same time to purge the old Aryan religion of its polytheism. He preached an intensely ethical Dualism that was virtually monotheistic, since the victory of the Good Spirit, Ahura Mazda (see ORMAZI), over his rival, the spirit of Evil (see AHRIMAN), was assured. He reduced the nature gods of the old pantheon, the *Daevas*, to a subordinate place as the servants of Ahriman, while Mazda was attended by the 7 *Ameshaspendas*, or Ameshaspands, sometimes compared to archangels, or personified divine attributes. In the *ancient Gathas* among the sacred writings of Z. (see AVESTA) we possess ancient verse prophecies probably composed by Zoroaster himself, which have been compared to those of the Heb. prophets, whom in some ways he strongly resembles. He taught a lofty morality, inculcating active charity, especially to the poor, kindness to animals, truthfulness and purity, and the need for man to join with Mazda in his battle against the lying spirit of evil and all his manifestations, if man was to attain immortality and eternal happiness. After death the soul passed over the bridge of judgment, from which the wicked fell to punishment, to be destroyed with all the evil in the final conflagration that would renew the universe. He used parables in his preaching, representing the good as cattle. He was killed by hostile Magi who attacked him as he stood by an altar; but Z. became the national religion of Persia, and remained so until it was driven out (to India, where it survives in Bombay as the religion of the Parsees, q.v.) by the Muslim invaders of the 7th cent. After his day many of the old beliefs returned and were amalgamated with his teaching. The central feature of the Z. ritual was fire-worship, fire being regarded as representing the divine essence and the

source of life. Other lesser deities (the *Yacatas*) were worshipped with Mazda, including Anahita (q.v.) and *Mithras*, the 'eye of Mazda' associated with the sun, as the god of light (see *MITHRISM*), to whom the finest hymn in the Avesta is addressed. See M. N. Dhalla, *Zoroastrian Civilization*, 1922; J. H. Moulton, *Early Zoroastrianism*, 1927; C. Gore, *The Philosophy of the Good Life*, 1930 (In Everyman's Library); A. V. W. Jackson, *Zoroastrian Studies*, 1928; J. D. C. Pavy, *Zoroastrian Doctrine of Future Life*, 1929; A. S. Wadia, *The Message of Zoroaster*, 1938.

Zorrilla y Moral, José (1817-93), Sp. poet and dramatist, b. Valladolid. He studied law at Toledo and Madrid, but soon devoted himself to literature. He is one of the chief exponents of romanticism in the 19th cent., and his work excels in colourful description and exotic atmosphere. He is at his best in his lyrical narrative *Leyendas*. His works include *Cantos del Trovador*, 1841, *Granada* (an incomplete epic), 1852, *El Zapatero y el Rey* (a comedy), 1840, and *Leyenda del Cid*, 1882. Many of his poems have been trans. into English. See N. A. Cortés, *Zorrilla, su vida y sus obras*, 1943.

Zosimus, Saint Pope (417-18), of Gk birth. His pontificate was notable for the condemnation of Pelagianism.

Zouaves, body of infantry troops in the Fr. Army, so called from the Kabyle (Algeria) tribe of Zwawa, from whom Gen. Clausel formed a regiment in 1831. These native troops were at first officered by Frenchmen, and a certain number of Frenchmen were included in the ranks; but this proved unsatisfactory, and the native element gradually died out. The Z. are among the most carefully chosen troops in the Fr. Army. The picturesque Moorish dress is still maintained. The Z. fought in N. Africa under Leclerc in the Second World War.

Zrenjanin (formerly Petrovgrad; earlier Veliki Beckerek), tn in Serbia, Yugoslavia, in the autonomous prov. of Vojvodina (q.v.). It is on the Begej, a riv. port and a railway junction, and has chemical, foodstuff, soap, leather, and mechanical manufs. Pop. 44,200.

Zsigmondy, Richard (1865-1929), Austrian chemist, b. Vienna. He held various lectureships and became prof. of colloid chemistry at Göttingen Univ. in 1907. Z. discovered methods for making colloid-chemical solutions, and constructed the first star dialyser. He was awarded the Nobel prize for chemistry in 1925.

Zsolna, see *ZILINA*.

Zuccaro (Zuccherò) **Federigo** (1542-1609), It. painter, b. Sant' Angelo; brother and pupil of the artist Taddeo Z. (1529-66). He painted huge frescoes in the cathedral at Florence, and worked in Rome for Gregory XIII. In 1574 he visited England for a short time and had success as a portrait painter. A portrait of Queen Elizabeth (Hampton Court) is doubtfully ascribed to him. He also worked in Spain for Philip II.

Zuckmayer, Carl (1896-), Ger. playwright and poet, b. Nackenheim on the

Rhine. After being for some years reader for the Reinhardt theatres, he wrote his first successful comedy *Der fröhliche Weinberg*, 1925. Other well-known plays, many of which have been filmed, include *Der Hauptmann von Köpenick*, 1931, *Des Teufels General*, 1946, and *Das kalte Licht*, 1955, a topical play about the loyalties of a Ger.-Brit. atomic-physicist. His prose works (*Der Bauer aus dem Taunus*, 1929, and *Herr über Leben und Tod*, 1938), as well as his verse, never gained the success of his plays. Z. emigrated to America in 1938.

Zug: 1. Canton of Central Switzerland. It is the smallest of the cantons, having an area of 93 sq. m. Z. joined the Swiss Confederation in 1352. The S. and SE. parts are mountainous, the highest peak being the Kaiserstock. The rest is in the basin of the Reuss, and possessing suitable grazing and pasture produces butter, cheese, etc. Much fruit is also grown, and there are distilleries. Lake Z., with an area of 21 sq. m., lies partly in Z. canton, and partly in Schwyz. Pop. (1955) 45,700, Ger.-speaking.

2. Cap. of the above canton, a picturesque little tn at the N.E. corner of Lake Z., and at the foot of the Zugerberg (3255 ft). There are fine examples of 15th-cent. baroque architecture. Small as Z. is, it has some important factories manufacturing electrical equipment, metal work, and textiles. Pop. 16,700.

Zuider, or Zuyder, Zee (Southern Sea), formerly an arm of the N. Sea, penetrating into the NW. Netherlands. It has now been largely reclaimed. Its area up to 1923 was 2027 sq. m. It then consisted of an oval inner part and a horn-shaped outer part, joined by a strait about 10 m. wide. A chain of is.—Texel, Vlieland, Terschelling, Ameland, and Schiermonnikoog—separating it from the N. Sea are the remains of the original coast-line. The Z. Z. was formed in the 13th cent. by the sea breaking through the sand dunes on the coast and flooding the lowlands between it and a small inland lake, with which the floods united. The Z. Z. always remained very shallow, the depth never exceeding 40 ft and being only 3 ft over large areas. It contained sev. is. and received the R. Yssel. In 1918 a law was passed to provide for the reclamation of the Z. Z. to make a new prov., and work was begun in 1923. An enclosing dam (*Afsluitdijk*, q.v.) was completed in 1932, transforming the Z. Z. into a fresh-water lake, the IJsselmeer. For reclamation of the various polders, see *under* **IJSSELMEEER**; also **NORTH-EAST POLDER**; **WIJERINGEN**; and **RECLAMATION**.

Zuidholland, see **SOUTH HOLLAND**.

Zula, see **ADULIS**.

Zulia, state of W. Venezuela, bordered on the W. by Colombia. It is well-watered, and has a tropical climate. Maracaibo is the cap. The land under and around the lake of the same name is one of the world's most valuable sources of petroleum. Cocoa, sugar, cotton, and coffee are grown, and there are rich timber reserves. Area 24,360 sq. m.; pop. 560,000.

Zuloaga, Ignacio (1870-1945), Sp. painter, b. Elbar. He went to Rome to study architecture but took to painting instead. He is known for his landscapes, genre subjects, and portraits of women. His work shows the influence of Velazquez, and, particularly in his use of the grotesque, that of Goya.

Zulu War (1879) arose out of Zulu-Boer disputes over the possession of lands on the Transvaal border. When the Transvaal was annexed, Cetewayo (q.v.) undoubtedly expected that the British would do justice to him as he conceived the case, on the subject of the land disputes which had been so bitter a source of contention between him and the Boers. But Shepstone (q.v.), Administrator of Transvaal, eventually decided that the Zulu claim was unfounded, and Sir Bartle Frere, the High Commissioner, was led to agree. He then sent an ultimatum to Cetewayo calling upon him to disband his army, and justified this demand on the ground of the oppressive rule of the Zulus. Cetewayo refused and the British crossed into Zululand in 5 columns under Lord Chelmsford. One of these was promptly cut up at Isandhlwana (q.v.). This defeat was followed by the great epic of Rorke's Drift (q.v.). Louis Napoleon, Prince Imperial of France, who was serving with the Brit. forces, was killed whilst on patrol. The Zulus were finally crushed at Ulundi in 1879. Cetewayo fled, but was captured. See F. W. Chesson, *The War in Zululand: A Review of Bartle Frere's Policy*, 1879; H. Mason, *The Zulu War: Its Causes and its Lessons*, 1879; for Cetewayo's story of the Zulu nation and the war see *Macmillan's Magazine* for Feb. 1880.

Zululand, dist. of S. Africa, since 30 Dec. 1897 integral part of Natal; the NE. coastal region. It includes Tongaland, and is bounded by Vryheid on the W., Swaziland and Mozambique on the N., Natal proper on the S., and the Indian Ocean on the E. and SE. The surface is mainly mountainous, but is much flatter in the NE. It is watered by the Tugela, which for about 100 m. forms its S. boundary, the Blood R., a trib. of the Tugela forming the W. boundary, Umhalsi, Umvolosi, and Mkusi R.s. The Mkusi flows into the large shallow St Lucia Lake, and finds its way to the sea at St Lucia Bay with the Umvolosi R. There are large forests, and the land is very fertile, though in recent years signs of soil erosion and exhaustion have become increasingly apparent. Sugar is the most important product, and is exported in quantity; cereals (especially maize), fruits, and vegetables are grown, as well as beans and cotton. Stock-raising is also carried on. Europeans own only about a quarter of Z.: most of it is crown land, held as native reserves. When Z. was annexed in 1897, with a promise of the preservation of its lands, a Lands Commission was instructed to provide liberally for natives in view of their requirements. In the result, about three-quarters of Z. was formed into reserves and placed under the Zululand

Native Trust. The potential mineral wealth is very great: there are considerable gold deposits in the S., and coal, lead, copper, tin, and silver are also found. The climate is healthy except on the coast, where fever is prevalent, the rainfall averaging about 40 in. per year. Modern science, however, has eliminated the tsetse fly from Z. The flat, swampy coastland is not navigable. The prin. tn is Eshowe. Other townships include Umfolozi, centre of a sugar-cane dist.;

South African Railways
ZULU

Matubatuba, from which there is rail connection with the Pongola riv. valley, through a sugar and cotton dist.; Sonkele; Candover; and Nongoma. A railway runs along the coast from Durban to Golel in the SE. corner of the Transvaal, via the St Lucia coalfield, W. of the St Lucia Lake; otherwise there are no railways in Z. The main roads are good. There are increasing educational facilities, even in remote vils. The leading Christian denominations have churches in Z. Z. is governed by a provincial council and an administrator appointed by the governor-general. Area 10,425 sq. m.; pop. 360,000 (including 6000 Europeans). See also NATAL; SOUTH AFRICA; ZULUS.

Zulus (**Amazulus**), S. African people belonging to the Bantu stock. Both physically and intellectually they are a fine race. They are advanced in domestic arts. When industrialised, they have proved skilful artisans. The reverential worship of the dead occupies a large place in the religion of the Z. There is an extensive folklore, and the unwritten code

of laws is well observed. Gov. is by chiefs, through the heads of dists. The importance of the nation dates from the beginning of the 19th cent., when it was organised and led through a series of victorious campaigns by the chief Chaka, whose name was feared as far N. as the Zambezi R. He was murdered in 1829 by his half brother Dingaan, who succeeded him. He, too, was a tyrant, and was defeated by the Boers at Blood R., Dec. 1838. The next rulers were Umhanda (d. 1873) and Cetewayo (q.v.),

Zurbaran, Francisco (1598-1662), Sp. painter, b. Fuente de Cantos of peasant extraction. He went to Seville, and in 1825 he was engaged to paint an altarpiece for the cathedral there; while in 1650 he was appointed one of the painters to the king, Philip IV. His 'Franciscan' (National Gallery) is a famous work expressive of sombre devotion. In recent years respect for Z. as a painter has steadily grown, not only for his figures but also for his admirable still-lives. See M. S. Sovia, *Zurbaran*, 1955.

Swiss National Tourist Office

ZÜRICH, SWITZERLAND: RIVER LIMMAT AND GROSSMÜNSTER

during whose reign war broke out with Great Britain. (See ZULU WAR (1879).) Zululand was annexed to Great Britain in 1887, and became part of Natal in 1897. See J. Y. Gibson, *The Story of the Zulus*, 1911; J. Stuart, *History of the Zulu Rebellion*, 1913; I. Evans, *Native Policy in Southern Africa*, 1935; Sir R. Coupland, *Zulu Battle Piece*, 1948.

Zungaria, see DZUNGARIA.

Zuni, a Pueblo tribe of New Mexico. The Spaniards met them in 1539 and wrote glowing accounts of the 'Kingdom of Cibola'; they were later subjugated by the Spaniards. To-day there are some 2000 remaining. They have been well described in the works of Elsie Clewes Parsons, and in R. Benedict, *Patterns of Culture*, 1934. See PUEBLO.

'Zürcher Zeitung,' see 'NEUE ZÜRCHER ZEITUNG.'

Zürich: 1. Canton of NE. Switzerland, bounded on the N. by the Rhine. Its N. part is open and undulating, while the central and S. portions are hilly, with summits rising to 4000 ft. It forms part of the basin of the Rhine, and is also drained by the Töss, Limmat, Thur, Sihl, and Glatt. The greater part of Lake Z. lies within the canton. Much of Switzerland's heavy, electrical, and textile industry is located in the area. Area 667 sq. m.; pop. (1955) 842,000, nearly half of them being engaged in industry; the pop. is increasingly concentrated in the N. parts of the canton. The official language is German; the spoken language is Z. dialect. The majority of the pop. is Protestant.

2. Cap. of the above canton, situated at the exit of the Limmat from Lake Z. It is the largest and most important tn in Switzerland, and the centre of Swiss commercial life. Manufs. include textiles, machinery, chemicals, paper, printing, etc. Tourism is also important, and there are sev. large hotels. Z. Univ. was founded in 1833, the famous Federal Institute of Technology in 1854. The old part of the tn is very picturesque. The Protestant cathedral, or Grossmünster, contains architecture dating from the 11th to the 18th cent. Zwingli (q.v.), a leader in the Protestant movement, was pastor here in the 16th cent. The Fraumünster is a 9th-cent. foundation, and contains some fine 13th-cent. work with some magnificent modern frescoes by Paul Bodmer. The church of St Peter is noted for its baroque; the Rathaus (tn hall, 1694-8) is a Renaissance building. The Central Library contains many old MSS., including letters of 16th-cent. Swiss reformers. One of the magnificent newer buildings is the Swiss National Museum, opened in 1898, containing a large collection of Swiss antiquities and art treasures. Many modern office blocks have been built in the centre of the tn since the end of the War. The trans-continental airport of Z.-Kloten lies to the N. of the tn.

There was a Rom. settlement on the site of Z. in the 1st cent. BC, known as Turicum. In the 5th and 6th cents. the district was occupied by the Alemanni, but it is not named as a tn until the 9th cent. During the Middle Ages Z. was the most important of the Swiss tns. Rudolf Brun (q.v.), the first burgomaster of Z., overthrew the governing nobility, 1336, and divided the power between the patricians and the craft-guilds. The tn joined the Swiss confederation in 1361. Hans Waldmann, another great burgomaster, led the Swiss to victory in the Burgundian war at Morat, 1476, and strengthened the administration of Z. against the dominance of the Church. At the Reformation Z. followed Zwingli's teaching, and became, like Geneva, a city of refuge for the persecuted. In the 18th cent. it was one of the centres of the Ger. literary revival. It then suffered a slight decline in importance, but this tendency was reversed towards the end of the 19th cent., when Z. became a modern industrialised tn and rapidly developed. Pop. (1957) 426,000. See E. Arnet, *The Book of Zürich*, 1954.

Zutphen, tn in the prov. of Gelderland, Netherlands, at the confluence of the IJssel and the Berkel, 13 m. NE. of Arnhem. The Grote Kerk (St Walburgis) is a 12th-cent. foundation. Other interesting buildings are Wijn Huis Tower, and its pre-Reformation library. In the battle of Z., between the English and the Spaniards, 22 Sept. 1586, Sir Philip Sidney (q.v.) was killed. Industries include metalwork, silk manuf., furniture, and printing. Pop. 24,000.

Zuyder Zee, see ZUIDER ZEE.

Zweibrücken, Ger. tn in the Land of Rhineland-Palatinate (q.v.), 65 m. SW. of Mainz (q.v.), formerly cap. of the

ancient duchy of Z. It has a 15th-cent. church and some interesting baroque buildings. Machinery, footwear, and electrical equipment are manuf. The famous printing press was founded in the 18th cent. Pop. 30,000.

Zweig, Arnold (1887-), Ger. novelist, b. Glogau, of Jewish parents. He studied at Munich, Berlin, and Göttingen. Z. served in the Ger. Labour Corps during the First World War. Later he studied for the Bar and practised law, but subsequently devoted himself to writing novels and plays, including *Die Novellen von Claudia*, 1912. In 1923 he settled in Berlin and became known as an enthusiastic Socialist and Zionist and achieved world-wide fame with his novel of the First World War, *Der Streik um den Serpanten Grische*, 1927. In 1933 he was exiled from Germany, and from 1934 resided in Palestine. Other pubs. include: *Die junge Frau von 1914*, 1932, *Einsiedlung eines Königs*, 1937, *Das Beil von Wandsbek*, 1947. Z. has also written short stories and essays on literature, politics, and Jewish problems.

Zweig, Stefan (1881-1942), Austrian novelist and biographer, b. Vienna, of Jewish parentage, and educ. in Vienna. He acquired a great European reputation as a writer of short stories and incisive studies of great personalities. He became well known through his translations from the French of Baudelaire, Verhaeren, and Verlaine, which were accompanied by critical essays. In 1920 he pub. *Drei Meister*, essays on Balzac, Dostoevsky, and Dickens, psychological in treatment. His later vols. in this genre dwell more on the pathological side of genius, as in his studies of Tolstoy, Nietzsche, Hölderlin, and Kleist. He wrote a number of short stories, technically brilliant but morbid in subject, dealing often with mental derangement and sexual abnormalities, the best, perhaps, being *Amok*, 1923. He gave an unusual interpretation of Mary Stuart and Queen Elizabeth in his *Maria Stuart*, 1935, which might be described as romanticised biography. Forced out of Salzburg by the Nazis, he settled in Britain. His later published work included a novel, *Beware of Pity*, 1939, a striking study of woman's psychology set in Imperial Austria, which ranks among Z.'s finest work. Z. took his own life in Petropolis, Brazil. See his autobiography *Die Welt von Gestern* (trans.), 1943; J. Romains, *Stefan Zweig, Great European*, 1941; life by Friderike Zweig, 1948.

Zwickau, Ger. city in the dist. of Karl-Marx-Stadt, on the Zwickauer Mulde, 20 m. WSW. of Karl-Marx-Stadt (q.v.). It was a free city of the Empire, 1290-1323. During the Reformation the Anabaptist (q.v.) movement spread from here. There are 2 fine Gothic churches (14th and 15th cents.) and a 16th-cent. Rathaus. The dist. has important industries. Pop. 130,000.

Zwingli, Huldreich, or Ulrich (1484-1531), Swiss religious reformer, b. Wildhaus, St Gallen, of peasant extraction;

studied at Bern, Vienna, and Basel. In 1506 he became par. priest at Glarus, and in 1512 and 1515 went on foreign service as chaplain to Swiss mercenaries, for which he received a papal pension. In 1516 he became preacher to the Benedictine monastery at Einsiedeln, where he denounced the pilgrimages to the shrine of the Blessed Virgin there. In 1519 he became preacher at the *Grossmünster*, Zürich. He now began to attack Catholic ceremony and doctrine and declared the Scriptures the sole rule of faith, denying papal authority. Under his influence shrines were desecrated, sacred images destroyed, and all pictures removed from the churches. Z. won over Zürich council in 1523, and in 1525 the Mass was abolished there. Z. declared that the Eucharist was merely symbolic, and on this point he quarrelled with Luther (q.v.). Z. and Luther met at Marburg, only to part as bitter enemies. Z. took an active part in the war between Zürich and the Catholic Forest Cantons and was killed at Cappel, where his party met with a disastrous defeat. His break with traditional beliefs and practices was much more extreme than that of Luther or the Eng. reformers. In many ways Z. anticipated Calvin, as in his views on predestination, and probably Calvin was greatly influenced by Z.'s teaching. The quarrel with Luther ensured that Z.'s ideas would never have much influence in Germany; the defeat at Cappel, and the later rise of Calvinism, limited their influence in Switzerland. See lives and studies by S. Simpson, 1902, and P. Burkhardt, 1918. See also A. Lang, *Zwingli and Calvin*, 1913; W. Hadorn, *Die Reformation in der deutschen Schweiz*, 1928.

Zwinglians, name given to the disciples of the reformer Zwingli, and so to the Reformed Churches of German Switzerland in general. Owing to their controversy with the Lutherans concerning the real presence in the Eucharist, they were also called Sacramentarians. But the name which they themselves assumed was that of Evangelicals, which after a time displaced all others.

Zwolle, cap. of the prov. of Overijssel, Netherlands, on the R. Zwarte Water, 40 m. NNE. of Arnhem. The Gothic St Michael's Church has a famous organ. The tn is an important centre of transit trade, and has manufs. of iron, cotton, etc., and shipyards. Near by is Agnietenberg Monastery, the home of Thomas à Kempis (q.v.). Pop. 53,040.

Zygote, fertilised egg cell formed by the fusion of a male gamete (spermatozoon or male sexual cell) with a female gamete (ovum or female sexual cell).

Zymotic. Term used in medicine by certain authorities to designate the class of acute infectious illnesses. It was originally given a much wider application because of the belief that the mode of action of the causative principle was analogous to, if not identical with, the process of fermentation. Its reference is now restricted to the chief acute infectious and contagious disease, e.g. typhoid, typhus, small-pox, diphtheria, cholera, scarlet fever, measles, whooping cough, erysipelas, etc. Because of the theory which it suggests, its use is now becoming increasingly rare.

Zyryanovsk, tn and mining centre in E. Kazakhstan oblast (prov.) of the Kazakh S.S.R. of the Soviet Union. There are zinc, lead, and silver deposits. Pop. 80 000.

APPENDICES

APPENDIX I

ALPHABETICAL ARRANGEMENT

Throughout this encyclopaedia the British Standards Institution's (*see* STANDARDS INSTITUTION, BRITISH) system of alphabetical arrangement has been followed, *see* INDEXING. *See* also *British Standard* booklet No. 1749: 1951, *Alphabetical Arrangement*.

For the convenience of the reader examples of the system as applied to some difficult or complex cases in this particular work are given below.

'Nothing-before-something'

The 'nothing-before-something' principle: for example, ARABI PASHA precedes ARABIA although the sixth letters are not in alphabetical order.

Entries divided by a comma

When a comma occurs in an entry any words after the comma are disregarded and the entry is arranged as if it consisted only of the word or words before the comma.

LAND
LAND, NATIONALISATION OF
LAND ARMY
LAND BANKS

RAM
RAM, THE
RAM MOHAN ROY

Names beginning with an article or preposition

Proper names beginning with an article or a preposition are exceptions to the 'nothing-before-something' rule and are treated as one word.

LAEVULOSE
LA FARINA, GIUSEPPE
LA FAYETTE, GILBERT MOTIER DE
LA FAYETTE, MARIE JOSEPH
LAFAYETTE (city)
'LAFAYETTE' (Ft. Huér)
LA FERTÉ
LAFITE, JEAN
LA FOLLETTE, ROBERT MARION
LA FONTAINE, JEAN DE
LAFONTAINE, SIR LOUIS HYPOLYTE

DELANY, PATRICK
DE LA POLE
DE LA RAMÉE, LOUISE
DELAREY, JACOBUS HERKLASS

Hyphenated entries

If the word before a hyphen is not part of a name or a prefix, but a separate word in its own right, the entry is to be considered as two separate words.

RAIN AND RAINFALL	}	<i>but</i>	{	CHLOROFORM
RAIN-GAUGE				CHLORO-NITROUS GAS
RAIN-MAKING				CHLOROPAL
RAINBOW CORNER				CHLOROPHYLL
HORN	}		{	LAOIGHIS
HORN-FLY				LAO-KAY
HORN-SILVER				LAOMEDON
HORNBEAM				

People, places, and things

When several entries begin with the same word the order is (1) people, (2) places, (3) things. Titles of precedence are disregarded for the purpose of alphabetisation.

BERRY, SIR EDWARD
 BERRY, JAMES
 BERRY, SIR JOHN
 BERRY, MARY
 BERRY, WILLIAM EWART
 BERRY (province of central France)
 BERRY (fruit)

Christian name and surname

A main entry consisting of a christian name, e.g. the name of a saint, precedes the same word used as a surname.

GEORGE, ST.
 GEORGE I, KING OF GREAT BRITAIN AND IRELAND
 GEORGE II, KING OF GREAT BRITAIN AND IRELAND
 GEORGE III, KING OF GREAT BRITAIN AND IRELAND
 GEORGE IV, KING OF GREAT BRITAIN AND IRELAND
 GEORGE V, KING OF GREAT BRITAIN, IRELAND, AND BRIT. DOMINIONS BEYOND THE SEAS, EMPEROR OF INDIA
 GEORGE VI, KING OF GREAT BRITAIN, IRELAND, AND BRIT. DOMINIONS BEYOND THE SEAS
 GEORGE I, KING OF THE HELLENES
 GEORGE II, KING OF THE HELLENES
 GEORGE V, KING OF HANOVER
 GEORGE, D. LLOYD
 GEORGE, SIR ERNEST

Kings, emperors, and other rulers

Rulers having the same name are arranged in chronological order. *But* the earliest king of all is followed by his successors in that country or empire; these are followed by the next earliest king, whatever the country, with all his successors, etc.

CHARLES I (c. AD 742-814), EMPEROR OF THE WEST, KING OF THE FRANKS
 CHARLES II, THE BALD (823-77), HOLY ROMAN EMPEROR
 CHARLES III, THE FAT (832-88), EMPEROR OF THE ROMANS, KING OF THE FRANKS

CHARLES IV (1316-78), HOLY ROMAN EMPEROR
CHARLES V (1500-58), HOLY ROMAN EMPEROR
CHARLES VI (1686-1740), HOLY ROMAN EMPEROR
CHARLES VII (1697-1745), HOLY ROMAN EMPEROR
CHARLES III, THE SIMPLE (879-929), KING OF FRANCE
CHARLES IV, THE FAIR (1294-1328), KING OF FRANCE
CHARLES V (1337-80), KING OF FRANCE
CHARLES VI (1368-1422), KING OF FRANCE
CHARLES VII (1403-61), KING OF FRANCE
CHARLES VIII (1470-98), KING OF FRANCE
CHARLES IX (1550-74), KING OF FRANCE
CHARLES X (1757-1836), KING OF FRANCE
CHARLES VII (d. 1167), KING OF SWEDEN
CHARLES VIII (d. 1470), FIRST ELECTED KING OF SWEDEN
CHARLES IX (1550-1611), KING OF SWEDEN
CHARLES X (1622-60), KING OF SWEDEN
CHARLES XI (1655-97), KING OF SWEDEN
CHARLES XII (1682-1718), KING OF SWEDEN
CHARLES XIII (1748-1818), KING OF SWEDEN
CHARLES XIV (1763-1844), KING OF SWEDEN
CHARLES XV (1826-72), KING OF SWEDEN
CHARLES I (1226-85), KING OF NAPLES
CHARLES I (1600-49), KING OF GREAT BRITAIN
CHARLES II (1630-85), KING OF GREAT BRITAIN
CHARLES II (1661-1700), KING OF SPAIN
CHARLES III (1716-88), KING OF SPAIN
CHARLES IV (1748-1819), KING OF SPAIN
CHARLES I (KARL FRANZ JOSEF) (1887-1922), LAST EMPEROR OF AUSTRIA-HUNGARY
